KHAJAH KHIZR. In Bengal, the mahomedan women, on the last Thursday of Bhaddon, set afloat a small raft, bearing a paper or tinsel boat, in honour of Khajah Khizr, in fulfilment of a vow. It is sometimes a small lamp, filled with oil of coco and placed in an earthen dish adorned with a wreath of flowers. The lamp is lighted and committed to the stream while the fair devotee anxiously watches its progress down the current. On the banks of the Ganges and Hooghly, along the strand at Calcutta, great numbers thus make their offerings,

The maid or matron, as she throws
Champak or lotus, Hel or rose,
Or sends the quivering light afloat,
In shallow cup or paper boat,
Prays for a parent's peace or wealth,
Prays for a child's success or health,
For a fond husband breathes a prayer,
For progeny their loves to share,
For what of good on earth is given
To lowly life, or hoped in heaven.

—H. H. Wilson *Tr. Hind.*, Vol. ii, p. 404.
See Khizr.

KHAWJA KOOTUB-UD-DEEN, of Ouse, in Persia, has a great name in the chronicles of mahomedan sainthood. He was the guide and apostle of Altamash, and most probably led that prince to make additions to the musjeed.—*Travels of a Hindoo*, Vol. ii, p. 181.

KHAJAH MU'IN-UD-DIN, the oldest mahomedan saint in India. His dargah is in Ajmir. He was born in Sijistan, and died in A. D. 1239, at Ajmir. He belongs to the Chishti sect of mahomedans. The Moghul emperors often visited his tomb, especially Akbar and Jahangir.—*Cal. Rev.*, Jan. 1871, p. 72.

KHAJORA, HIND. Saccharum spontaneum.

KHAJOUN, see Khuzistan.

KHAJUNAH.

KHAJOUR-CHUREE, BENG. *Leonotis nepetifolia*.

KHAJRAO, eighteen miles from Chatarpur, in Bundelkund, has an inscription in Sanskrit verse, in an ambitious inflated style; the verses are polished and elaborate, but some are obscure, and abound with quaint pedantry and punning. The first part of the inscription is of date, Samvat, 1019, A. D. 962; the last part, Samvat 1173 or 1016. The character used is Allahabad No. 3, and therefore resembling the Harsha and Bhambaneswar. In the inscription it is called the Kakuda character, and in the eleventh and twelfth centuries appears to have prevailed from Cuttack to Shekawati. It contains an invocation to Siva, Maheswara, Shambhu, Bharati, Pasupati, Brahma, Maricha and Brahma's other sons, the Muni, Atri, Chandratriya, Vayvarma, Arjuna; and the Puranic heroes Prithuka and Kunda, Sumitra, Bhishma, Upendra, Sagar, and the Puranic origin of the ocean is noticed; Linga, Yuddhistira, Viswakarma, Rudra, and the Veda. The temple is dedicated to Pramatha Nath, and rajas Nannuka, Vag Yate, Vijaya, Vahila, Sriharsa, Yaso, Dharma Deva, Banga, Jaya Varma Deva, are named. The inscription is chiefly in honour of Banga (by his son), who, as is usual, is elevated into a great king. The kings of Ond'h and Ceylon attend to do him homage, and his captives are the wives of the kings of Andra. Rudha, and Anga! (Banga, of course,) eulogized by the brahmans, because he built dwellings for them, and gave them lands, and piously ended his days, aged 109, by drowning himself at the junction of the Jumna and Ganges, as did also the brahman minister of his father and grandfather. The inscription had twice before been engraved in irregular characters, and it was only in A. D. 1016, that it was put into proper Deva Nagari. The story of creation from Brahma and the egg is told. The influence of the moon on the tides is alluded to. The inscription alludes to a passage in the Mahabharata, in which Siva is represented to have given his own flesh to a hawk, instead of a bird which had sought refuge with him. This story is told of Buddha, more than 1,500 years before this time, and is much more suitable to his humane and life-sparing character than to the bloody Siva. Mention is made of a brahman (Sri Rama), whose feet earthly kings adored.—*As. Soc.*, Vol. viii, p. 176.

KHAJRU, HIND. of Multan, a kind of earth.

KHAJU, HIND. *Pyrus malus*.

KHAJUNAH, a dialect spoken on the N. W. frontier of British India where three dialects are in use, called Shina, Khajunah and Arniya. The Shina dialect is spoken by

the peoples of Astor, Gilgit, and, lower down, in Chelas, Darel, Kohli and Palas, on both banks of the Indus. The Khajunah, by the people of Hunza and Nager, and the Arniya in Yasan and Chitral. Astor has an area of 1,600 square miles, on the left bank of the Indus. Gilgit, in Thibetan Gylgyid, has an area of 2,500 square miles on the right bank of the Indus. The Dard or Durd are supposed by Vigne to be the Dadicae (*Δαδικαί*) of Herodotus, and the people who now occupy the country called Dardu. See Dard.

KHAJUR, AR., PER., HIND. A date : also the date tree, *Phoenix dactylifera*, and the wild date *Elate sylvestris* or *P. sylvestris* ; Khajuri, HIND., is the *Phoenix humilis* and Pindi-khajur is *P. acaulis* ; Khajur munj is the fibre of the palm leaf.

KHAJURA, HIND. a concrete or tuffa of lime.

KHAJURAN, HIND. A sweet meat.

KHAK, PERS. Earth, dust ; Khaki of the colour of earth ; Khak-rob, a sweeper. Khaki-dud'hia of the colour of earth : gray colour.

KHAKA, a tribe of Affghans, whose seats are in the hilly regions, on the south-eastern confines of Affghanistan, where they are neighbours of the Baluch. Immediately to the north and north-east of Dadar, are hills, enclosing the valley of Sibi, the abodes of the Khaka, Kadjak, Shilanchi, Barru Zai, Marri, and other mingled Affghan and Baluch tribes. At a little distance from Dadar, a line of jabbal, or low hills, or rather a fracture in the surface, extends from east to west across the country, and separates the particular valley of Dadar from the great plain of Kuch Gandava. The road throughout the fissure is level.—*Masson's Journeys*, Vol. i, p. 340 ; Vol. ii, p. 317. See Kadjak, Khyber, Kandahar.

KHAKAN, see Sassanian Kings.

KHAKHOL, HIND. *Allium rubellum*.

KHAKI, a sect of Vaishnava hindoos founded by Kil, a disciple of Krishna Das. They apply ashes of cow-dung to their dress and persons. They are not numerous and seem to be confined to the vicinity of Furkhabad, at Hanuman-Ghur in Oude, but the Samad'h or spiritual throne of the founder is at Jaypur. The residents in places dress like other Vaishnava, but those who lead a wandering life go either naked or nearly so, smearing their bodies with the pale grey mixture of ashes and earth. They wear the Jata or braided hair, after the fashion of the votaries of Siva. They are derived from Raman and but not immediately.—*Wilson*.

KHAKI, HIND. A quality of hemp resin or charras.

KHAK-I-BALKH, two mounds near to the Bala-Hissar in Kabul.

KHAKKAR, HIND. *Pistacia integerrima*.

KHAKODHA, URIA. A tree of Ganjam and Gumsur, extreme height 30 feet. Circumference 2 feet. Height from ground to the intersection of the first branch, 9 feet. A common tree only used for firewood.—*Capt. Macdonald*.

KHAK ROB, A sweeper, a menial servant of the lowest class, also the sweeper of a village, acting at times as a watchman, a guide, a police spy, one of the village establishment. See Ghair Mulazim.

KHAK-SHI, HIND., PERS. *Abrus precatorius*, *Linn.*, also *Sisymbrium iris*.

KHAKSI of Nepaul, a shrub, the leaf of which answers the purpose of emery or sand paper, giving a fine polish to the harder woods. *Smith's Five Years in Nepaul*, p. 68.

KHAL, a Ladak land measure, being land for which one Khial of seed is sufficient. The word seems to mean only a load of any kind, and is apparently the same as the Indian Khara, or Khari, a measure of 20 bhara.

K'HIAL also K'hala, a water-course, natural or artificial.

KHIAL, HIND. of Muzaffargarh, see Khillu.

KHAL, HIND. A skin or hide.

KHAL, oil cake, the refuse of the mill after expression of the oil.

KHALANG, see Singlipo.

KHALASSAT-UL-AKHBAR, a book written by Kondemir, the literary name of Ghains-ud-din bin Hou-mam-ud-din. One of his books is entitled *Habib-us-sayar-fi Afrad-ul-Bashar*, that is to say, "the curious part of the lives of Illustrious Men." It is a history which he extracted from that which his father Mir Kond had composed, and entitled *Rauzat-us-Safa*, but to which he made augmentations. He dedicated this book to the Secretary of State of the king of Persia, shah Ismael Saffavi, who gave him the name of Habib-Ullah, and for that reason the book had the name Habib given to it in the year A. D. 1508, Heg. 927, in the reign of Lewis XII. He was also author of another history, which is entitled *Khalassat-ul-Akhar*, or the Cream of histories.—*History of Genghis Khan*, p. 422.

KHALAUTI, a low-lying rice country.

KHALATRA, HIND. *Eremostachys viciari*.

KHALATRI, HIND. *Philippa calotropidis*, also *Salvia lanata*.

KHALED. The Beni Khaled in Niebuhr's time were one of the most powerful tribes of Arabia : they conquered the country of Lachsa and advanced to the sea.

KHALEE MUHEENA, the tenth month.

KHALIF.

KHALID, IBN WALID, see Masailma and El Aswad.

KHALIF, the Caliph of Europeans, derived from the Arabic Khalifah, a vicegerent, was the title assumed by the mahomedan rulers at Baghdad, of whom the first successors of Mahomed were Abubakar, Umar, and Ali. Under the Abbas dynasty, they attained to great power. In Central Asia, the sultan at Constantinople is, even now, universally called the Khaliph of Rome. Mahomed or Mahomed bin Abdallah, died in the 11th year of the Hijra era, or A. D. 632. The immediate successors were,

A. H. 11, A. D. 932...Abubakar.

13, 634...U'mar.

23, 644 ..U'sman.

35, 656...A'li.

40, 661...Hasan bin Ali, retired to Medina.

Husain killed at Kerbila.

The khalif ruled sometimes in Baghdad and sometimes in other parts of their conquered dominions.

The race of Ommiah, 16 in all, ruled from Damascus, from A. D. 661-2 to 744-5. The period during which the 16 sovereigns of this Ommiah race ruled, extended from A. H. 41, A. D. 661-2 to A. H. 137, A. D. 744-5; it ended with Marwan II, bin Muhammad, deposed and slain.

The race of Al A'bbas, reigned at Baghdad, from A. H. 132 or A. D. 749-50 to A. H. 656, A. D. 1258-9, when Baghdad was besieged and taken by the Moghul chief Hulagu,—Ali khan, grandson of Jenghiz khan, and the khalif Mustasem put to death.

The Arab governors of Khorasan made their capitals Merv, Nishapur, Bokhara. These rulers held sway from A. H. 129 or A. D. 747 to A. H. 287 A. D. 900. Of this period the Tahir or Taheride held sway from A. D. 819 to A. D. 852, and the Saffavi from A. D. 873 to 900. In A. D. 900, A. H. 287, Amru bin Lais was defeated by Ismael bin Ahmad the Samani.

Some coins of the early Khalifah of Baghdad were struck at Cufa or Kufah, a city near the Euphrates, southward of the spot where Babylon once stood, but it was not from this circumstance that the denomination Cufic has been given to the whole class of these coins; but from the Arabic writing character named after the city.

Kaliph Umar was the second kaliph in succession to Mahomed. His time was a period of great extension of mahomedanism. The battle of Kadesia was fought and won by his general Saad, and put an end to the Persian empire of the Parsi. He imposed the khiraj on Syria, and died and was buried at Jerusalem where his tomb still is.

KHALKHALAN.

The kaliph Mamun, in A. D. 814, caused a degree of the earth's surface to be measured. This was done on the sandy plains of Mesopotamia, between Palmyra and the Euphrates, by which 56·66 miles were fixed as the equivalent of a degree of the heaven's circumference. The khaliph Mamun was the son of Harun ur Rashid. He forced an entrance into the pyramids, and later, Salah-ud-din, the Saladin of Europeans, used their casings, at least, as stone quarries. The successes of Kutaiba, who in the time of khalif Walid overran Bokhara, Samarkand, Farghana, and Kharazm, and even extended his conquests across the Bolor to Kashgar, brought the Arab and Chinese powers into dangerous collision, and the emperor of China seems to have saved himself from an Arab invasion, only by the very favourable reception which he gave to an embassy from Kutaiba, composed of twelve mahomedans, whom he sent back loaded with presents for the Arab general.—*Thomas' Prinsep*, p. 304; *Onseley's Travels*, Vol. ii, p. 199; *Bunsen, Egypt's Place in Universal History*, Vol. ii, p. 150; *Bjornstjerna, British Empire in the East*, p. 97; *Yule Cathay*, Vol. i, p. 80. See Kadesia.

KHALIFAH-UL-AKBAR, God's vicegerent, a title given to Adam.

KHALIPH-ABAD, see Khuzistan.

KHALIL, HIND. A kind of pheasant, Gallopphasis alboeristatus.

KHALIL, a grandson of Timur, on whose demise, Khalil, at Samarcand, declared himself emperor.

KHALIL, an Afghan tribe near the mouth of the Khyber pass. See Khyber.

KHALIL-ALLAH, ARAB. The friend of God, the reverend designation of Abraham. The Messiah is the Ruh-Allah, or spirit of God, and Moses the Kalam Allah or Word of God.

KHALIS, a district and a canal which is cut from the Diala to the Tigris. The district of Khalis is situated to the north of Baghdad, and takes its name from the canal which supplies sixty-two villages, most of which are now become mere nominal ones, with water for agriculture, the Tigris itself being unfit for that purpose. The principal of these villages are Yeughijeh, twenty miles from Baghdad, on the banks of the Tigris, in Rich's time, almost abandoned on account of the great oppression under which the peasantry laboured. Howesh, is a village of a hundred houses, famous for its fruit gardens.—*Rich's Residence in Koordistan*, Vol. ii, p. 156.

KHALK, HIND. Celtis caucasica.

KHALKA, see Kalka : Kouren.

KHALKHALAN, see Karadagh.

KHALL, AR. Acetic acid. Vinegar.

KHALPA or Kalpa, a low caste in Guzerat, whose business is dressing skins and preparing leather, they are sometimes enumerated amongst the inferior village servants.—*Wilson*.

KHALSA, HIND. Land under the direct administration of government.

KHALSA, AR., HIND. The Sikh people : the Sikh theocracy established by the guru Govind, the old prominent division into Khulasa, meaning of Nanuk, and Khalsa, meaning of Govind, which is noticed by Forster, is no longer in force ; the former term Khulasa, is almost indeed unknown in the present day. The word Khalsa, meaning select, is a term equivalent to a state or commonwealth, and is supposed by the Sikh, to have a mystical meaning, and to imply that theocracy or superior government, under the protection of which they live, and to the established rules and the basis of which, as fixed by guru Govind, it is their civil and religious duty to conform.

The Khalasa sect of Sikhs, believe in the Adi-Granth of Nanak, but do not conform to the institutions of guru Govind. The word Khalasa is from Khalis, meaning pure or select, and to mean the purest, or the most select : by others, it is derived from Khalas, free, and to mean the freed or exempt, alluding to the sect being exempt from the usages imposed on the other Sikhs.

The principal of the religious institutions of guru Govind is that of Pahal, the ceremony by which a convert is initiated and made a member of the Sikh Khalsa, or commonwealth. The forms which Govind employed are still observed. The neophyte is told by the officiating Granthi, or priest, that he must allow his hair to grow. When it has grown a month or two, he dresses himself in blue from head to foot, and is then presented with five weapons, a sword, a firelock, a bow, an arrow, and a pike. The candidate and the initiator wash their feet with water in which sugar is put, and this nectar (called pahal) is stirred with a steel knife or dagger ; five quatrains from the scriptures being read. Between each quatrain, the breath is exhaled with a puff, and the beverage stirred as before. The hands of the convert are then joined, and the Granthi, or initiator, pours some of the nectar into them, of which he drinks five times rubbing a little on his head and beard, exclaiming " Wah ! Guru ji ka Khalsa ! Wah ! Guru ji ki Fateh ! " or, " Wah ! Govind Sing, ap hi Guru chela ! " Govind, who instituted the pahal, it is said, went through this form with five of his followers, drinking of the water which had washed each other's

feet. Women are made sikhs in the same manner as men, except that the nectar is stirred with the back instead of the edge of the knife. The children of Sikhs go through this ceremony at an early age.—*Cunningham's History of the Sikhs*, p. 96 ; *Malcolm's Sikhs*, pp. 19, 91, 124-5 ; *History of the Panjab*, Vol. i, pp. 101, 126, 127, 128 ; *Forster's Travels*, Vol. i, p. 309.

KHALWAT, AR., PER. Retirement, privacy. Khalwat-gah, women's apartments, private apartments.

KHAM, HIND., PER. Raw. Revenue is said to be collected kham or land held kham, when done so direct by government, and not through the medium of a farmer or other under-holder.

KHAMACH, BENG. *Mucuna nivea*.

KHAMADRUS, HIND. *Sphæranthus hirtus*.

KHAMBUR, HIND. *Agaricus campestris*, the truffle.

KHAME, HIND. *Macrotonia euchroma*.

KHA-MEN, see India.

KHAMGAON, is the largest cotton mart in Berar, perhaps in all India.

KHAMIR, HIND., PER. Yeast, leaven.

KHAMIRA, HIND. A smoking mixture of tobacco compounded with fragrant spices.

KHAMITIC or Turanian race, was the earliest ruling power in Asia, and Nimrod was of that race.

KHAMJIRA, HIND. *Withania coagulans*.

KHAM MITTI, HIND. In Kurnal, a substance obtained in the process of making sal ammoniac or nashadar.

KHAMOUNG-NEE, BURM. In Tavoy, a heavy wood, not attacked by insects.

KHAMOUNG-PY-ON, BURM. A small-sized, compact, yellowish-grey wood of Tavoy.

KHAMOUNG THIA, BURM. Very abundant in Amherst, Tavoy and Mergui, of maximum girth 2 cubits, maximum length 22 feet.

KHAMPA, a sect of wandering Tartars in Kunawar, who are in some respects similar to the jogi of Hindustan. They visit the sacred places, and many of them subsist wholly by begging. Some are very humorous fellows, they put on a mask, perform a dance, singing and accompanying it with a drum, or they play, sing and dance, all at once, holding the fiddle above the head, behind the back, and in a variety of other strange positions. After the British government got possession of the hills, the Khampa came down in crowds to visit the holy places to the westward.—*Capt. Gerard's Account of Koonawar*, p. 117.

KHAMTI, a race in the distant hills of Assam and in the mountains at the source of the Irawaddy, in lat. 27° 30' N., and long. 97°

KHAN.

30° E. They have the Khunoong on the N. E. and the Shan on the S. W. The Khamti, are a Siamese population belonging to the same stock as the Siamese, their language containing nearly all the Siamese words, and their creed and alphabet is Siamese. They are skilful workers in metal. The Khamti and the Mishmi and the Midhi or Chulkatta Mishmi dwell to the east of the Dihong river, on the north of the Lohit or Erahmaputru river, between the north and east branches. They are divided into several tribes, one of whom is the Chulkatta or Cup-Haired, with them are mixed up Abor tribes and some Khamti tribes.

The Bor Khamti occupy the land about the sources of the Irawaddi.—*Campbell*, p. 149. See India, Siam.

KHAMSIN. The climate of Egypt is characterized by extreme dryness, rain is almost unknown in the upper country, but falls occasionally in the Delta. The cold season extends from October to March, north winds then prevail, and the climate is favorable to the tourist; boats ascend the river with facility. The hot season commences in April and lasts till September. In May and June the Khamsin, called in Arabic the Simoom, a pestilential south wind of 50 days' duration, blows with violence. The Nile begins to rise in June, and subsides in September. In upper Egypt the rise is about 30 feet, and at the Nilometer on Rhoda Island 24 feet. Injurious winds exactly resembling the Khamsin of Egypt, are common throughout the east of Persia, Afghanistan, and the regions lying to the south and east of the Indus as far as Cutch; but, they do not extend southwards of the latter province.—*Burton's Sindh*, p. 376.

KHA MUNG, BURN. *Kæmpferia galanga*, Linn.

KHAN, a large tray. Khaucha, a small tray. Khan-Posh, or Toraposh, a tray-lid.

KHAN, PERS. The lowest of the mahomedan honorary titles in India, but used by all the Afghan or Pat'han races as an honorific suffix to their names as Ahmed Khan, similar to Mr. Ahmed. Khan is also used as the title of the chief of the Beluch tribes, and a considerable portion of Beluchistan is subject to the khan of Kalat, the four subdivisions of whose territories are given by Mr. Masson as,

Western.	Maritime.	Central.	Eastern.
Nushki	Las	Saharawan	Kach Gandava
Kharan	Howmara	Kalat	Harand on the
Mushki	Pessani	Jhalawan	Indus
Panjghar			Dajil do.
Kaj			
Kolwah			
Jbow			

KHANAT.

The whole are nominally subject to the khan as chief of all, but his power appears to vary with his popularity.—*Masson's Journeys*. See Baluch, Khelat.

KHANA, also Khana-pina, HIND. Food. **KHANA**, Amoorah rohituka.

KHANAH-ZAD, PERS. House-born, is the name usually given to the sons of slaves born in the family; and, among the mahomedans, persons of this description are almost deemed relatives. The term is derived from Khanah, a house, and Zaidan, to be born. In Beluchistan, they are always kept near the persons of their chiefs, and employed on all affairs of great trust. Their character and station is considered highly respectable, and even after they are enfranchised, and rewarded with a portion of soil, they retain the appellation. The ordinary term for a slave is ghulam, but for those born in the house Khanahzad, is a respectful appellation.—*Malcolm's History of Persia*, Vol. i, p. 456; *Pottinger's Travels, Beluchistan and Scinde*, pp. 174, 262.

KHANAK, a Beluch tribe. See Kelat.

KHANAK-UL-KALB, AR. Anamirta coeculus, W. & A.; Strychnos nux vomica.

KHANAM, HIND. Cedrela toona.

KHANAM, PERS. A generic suffix to the name of a mahomedan woman of rank. Harm women usually have the names of flowers as Nirgis; Zaffran, Susan. The ordinary women have the designation of Bi, as Khadijah Bi. The higher classes are styled Begum, Khanam, Khatun, Nissa, as Fakkr un Nissa Begum, Jamilah Khanam.

KHANA-PINA, HIND. Food, literally meat and drink.

KHANAT, a territorial term, applied to the kingdoms of Khiva, Bokhara and Kokand in Central Asia. Of these, the khanat of Khiva, is the most fertile. The Tajik, an Iranian race, is met with in largest numbers in the khanat of Bokhara and in Badakhshan, but many have settled in the towns of Kokand, Khiva, Chinese Tartary and Afghanistan. The Tajik is of a good middle height, has a broad, powerful frame of bones, and especially wide shoulder bones, but they diverge from the Iranian, they have the Turanian wider forehead, thick cheeks, thick nose and large mouth. The Tajik originally came from the sources of the Oxus in the steppe of Pamir. The term is from Taj a crown, the fire-worshippers' head-dress, but the Tajik does not so style himself, and regards the term as derogatory. The Turks style them Sart. The Tajik is covetous, unwarlike, and given to agriculture and trade, but fond of literary pursuits and polish, and it is owing to their preponderance in Bokhara, that city

has been raised to the position of the Head Quarters of Central Asiatic civilization, for, there, from pre-Islamic times, they have continued their previous exertions in mental culture, and notwithstanding the oppressions which they have sustained from a foreign power, have civilized their conquerors. Most of the celebrities in the field of religious knowledge and belles lettres have been Tajik, and at the present day, the most conspicuous of the Mullah and Ishan are Tajik, and the chief men of the Bokhara and Khiva court are Tajik, or as the Turk style the race Sart. Vambery considers the Tajik and Sart identical, but he recognizes that in their physiognomic peculiarities, the Sart differs greatly from the Tajik, being more slender, with a longer face, and a higher forehead: but these changes he attributes to frequent intermarriages between Sart men and Persian slaves. In Central Asia, the warrior, the shepherd, the priest and the laymen, youth and old age, equally affect poetry and reciting of tales. The literature of the mahomedans or settled nations, brought from the south, is filled with exotic metaphor and illustration. In the three Khanat, the mullah and ishan, have written much on religious subjects, but their mystical allusions are beyond the reach of the people. The Uzbek, the Turkoman and Kirghis esteem music as their highest pleasure and often break out in song, singing soft minor airs. The Uzbek poetry on religious subjects is exotic, derived from Persian or Arabic sources: the Tartar compositions are tales and relate to heroic deeds, similar to the romances of Europe.—*Vambery's Sketches of Central Asia*, p. 338. See Bokhara, Iranian, Khiva, Kokand.

KHANBALIGH, this city, now called Pekin, was founded or at least rebuilt by Kublai Khan after his conquest of northern China, about A. D. 1280. Marco Polo calls it Cambalu, and says that in magnificence it surpassed every other city he had visited. Khanbalig are two Mongol words signifying the Khan's city. The Chinese capital was still so called by the Turks in the time of P. Ricci, and may probably be so called to this day. The city on this site was originally (multum est vetus et antiqua, as Odoric says) the capital of the kingdom of Yan, B. C. 222; this was conquered by the Tsin sovereigns of China, and the city lost its importance, A. D. 936; it was taken by the Tartar Khitan, and became their "Nan-king" or Southern Capital. In 1125 it fell to the Kin, ancestors of the Mauchu, who gave it the name of "Si-king" or Western Capital. In 1153 it received from the fourth Kin sovereign the name of "Chung-tu" or Central Court. It seems also to have

been known as "Yen-king" under this dynasty. It was captured by Chinghiz in 1215, and in 1264 Kublai made it his chief residence. In 1267 he built a new city, three li to the north-east of the old one, to which was given the name of "Ta-tu" or Great Court, called by the Mongols Daidu, the Taidu of Odoric and Taidu of Polo, who gives a description of its dimensions and the number of its gates. The Chinese accounts give only eleven gates. The circumference of the present Tartar city appears from the plans to be about fifteen miles. Martini speaks of it as having still twelve gates in his time, but he was almost certainly wrong. It has three on the south side and two on each of the others. The circuit of the two cities together is about twenty-two miles according to the scale on the plan given by Panthier, though Timkowski states it at forty versts or 26½ miles. The route followed on the second journey of the Polo relatives into China, was up the Oxus, to its sources, through Budukhsian, whence, crossing the Pamir table-land to Khotun, they went across the Hamil or Shanil desert, to Cambala (Khanbalig), or Pekin. The return was by sea to Singapore, and round Ceylon, to the Persian Gulf.—*Yule Cathay*, Vol. i, p. 127; *Prinsep's Tibet, Tartary and Mongolia*, p. 9. See China, King, Peking.

KHANBAR, see Kol.

KHANCHIA, an Indian weight, ranging from 204 to 225 grains.—*Simmond's Dict.*

KHAND, HIND. Saccharum officinarum, sugar cane; Khandchi, one of the men at a sugar press.

KHANDA, also Piaz, Guz. Onion.

KHANDA, HIND. A double edged sword. The devotion of the Rajput is still paid to his arms, as to his horse. He swears by the steel, and prostrates himself before his defensive buckler, his lance, his sword, or his dagger. The worship of the sword (asi) may divide with that of the horse (aswa) the honour of giving a name to the continent of Asia. It prevailed amongst the scythic Geta, and is described exactly by Herodotus. To Dacia and Thrace it was carried by Getic colonies from the Jaxartes, and fostered by these lovers of liberty when their hordes overran Europe. The worship of the sword in the Acropolis of Athens by the Getic Atila, with all the accompaniments of pomp and place, forms an admirable episode in the history of the decline and fall of Rome; and had Gibbon witnessed the worship of the double-edged sword (khanda) by the prince of Mewar and all his chivalry, he might even have embellished his animated account of the adoration of the scymitar, the symbol of Mars.

—*Tod's Rajasthan, Vol. i Royle's Arts, &c., of India, p. 460. See Kharg, Sword.*

KHANDAGIRI, a hill in Cuttack with jaina caves and temples separated by a narrow ravine from Udyagiri hill on which are the principal buddhist caves. The caves of Udyagiri and Khandagiri hills are about 20 miles from Cuttack and five from Boban Es-wara, and are next in antiquity to those of Behar. They are built on the hills of Udyagiri and Khandagiri, the former are buddhist and the older, the latter probably jaina. Many of the inscriptions are in the Lathi character, and this gives their age as anterior to the christian era. The frieze sculpture in the Ganes gumpna is superior to any in India and resembles that of the Sanchi tope at Bhilsa. In it, there are no gods, no figures of different sizes nor any extravagance. In the buddhist caves here, there are no figures of Buddha, nor any images. In a jaina cave on Khandagiri the 24 thirtankara with their female energies are sculptured. Khandagiri is in the ancient kingdom of Kalinga. The language of its inscriptions is Old Pali. The great inscription is after the raja Dasalath, 2nd, of the Gaya inscription, but before the Junir inscriptions, therefore in the third or fourth century before Christ. The year 1300 is twice mentioned in words, and if this be the buddhist era mentioned by Fa-Hian in Ceylon, then the date is A. D. 215. The character used in the inscriptions is Old Lat. The religion mentioned is buddhist; and opens with salutations to the Arhanta, or buddhist saints; and the sculptures represent figures of Buddha, the worship of the Bo-tree, processions, &c., &c. Merry dancing girls are spoken of, and a chaitya temple and pillars. The Kalinga raja, at Buddha's death, got the left canine tooth, which was afterwards transferred to Ceylon, and is now in British custody. The kings or princes mentioned are—Aira, the great king; and speaks of a raja who was in his 85th year, and just dead, raja Kharavela Sanda. (king of the ocean shore,) Nanda raja. Bhamadatas is on one of the coins of the Ramadata series, and Erahmadatta is said by Mr. Turnour to have received the tooth-relic, at buddha's death, at Kalinga. The inscription makes the young prince learn navigation, commerce and law, as well as other school matters. At his accession, in his twenty-fourth year, he chose the brahmanical faith, but afterwards called about him the buddhist priests who had been settled there under the ancient kings. Subsequent breaks in the inscription interrupt the sense, but the dedication of chaityas is mentioned. Benares is noticed under its Pali name, and it evidently

must have been buddhist, as the king, Arin, distributes much gold there. The Brahman caste is written Paiman caste.—*Beng. As. Soc. Journ. Vol. vi, p. 1085. See Karli.*

KHANDALA, in Lat. 18° 46', Long. 73° 23', a large village on the north-eastern foot of the Bhorgat. The Dak bungalow is 1,768 or 1,744 feet above the sea, a spring, 3 miles east of Khandala is 1,928 feet. Mag-fanni hill, two miles S. W. of Khandala, 2,601 feet.

KHANDAN, HIND., PERS. A term in use in India to designate the relatives of princes.

KHANDAR. In the Peepree and Garvee Dang, a term used by the Bheel and Kunbee cultivators, signifying lopping the trees of their tops and branches for cultivation. Khandar is a destructive system by which acres of young trees are mowed down by the Kunbi cultivators; the parts of the forest in which this system of Khandar mostly obtains are the Dang of Rambaj and Peepree.

KHANDAVA, a forest district occupied by the Naga, at the time of the vedic Aryan. It was set on fire by Arjuna and all the Naga were destroyed, except their rajah Tukshaka, who escaped.

KHANDESH, is an extensive and well watered plain of about 13,000 sq. miles in extent and interspersed with ranges of low barren hills, at the base of which run numerous rivers and rivulets, flowing from the table-land into the river Taptee. It is surrounded by lofty mountains clothed with trees and very unhealthy; on the north are the Satpura mountains, clothed with forest, on the west, is the steep and stoney Sukhein range, with tangled masses of bamboo, and on the south are the ranges of Chandore Saat-mulla and Ajunta, with babul jungle in the dells, and on the east, low sterile hillocks separate it from Berar. Under mahomedan rulers, Khandesh attained to much prosperity, but it was ravaged by Holkar's army in A. D. 1802, followed in 1803 by a famine. Up to this the Bhil race had mixed with the other inhabitants, and been watchmen and policemen of the district, but they then withdrew to the surrounding mountains. The Kunbi are the main body of the cultivating population of Guzerat, Khandesh, Maharashtra and the Central provinces. In Guzerat and Maharashtra, they are the chief owners of the soil and, though quiet and unpretending, are a robust, sturdy, independent agricultural people. Mr. Campbell considers them (pp. 93-5), to be quite Arian in their features, institutions and manners, though their institutions are less democratic than those of the Jat and Rajput, and in the Mahratta villages they have at their

KHANUM.

head, a potail. Few of these men ever enlist as soldiers. Sevaji and his descendants and some of his chiefs were however of this race, but their followers were drawn from the mawal of the Western Ghats, and latterly their armies were composed of soldiers of fortune of every race. The Mahratta chiefs sprung from the people of Sattarah and Poonah, but Holkar was of the shepherd, and the Gaekwar was of the cowherd castes, while the Peshwa who put the descendants of Sivaji aside, were Konkani brahmans. The Kunbi of the Hyderabad dominions are wholly illiterate. Indeed, no effort or attempt has been made to educate the people of the Hyderabad territories, though education is making enormous strides in Berar and in British Mahrashtra. There was no proper school met with in all the editors' journeys amounting to about 9,000 miles, and only occasionally a few lads, children of foreigners, were to be seen learning in a verandah, the elements of the Hindi or Mahratti. In that eastern part of the Mahratta country, a knowledge of reading and writing in any tongue was almost wholly wanting. The Arjanna Kunbi reside in Western India.

KHANDU, HIND. *Pisum sativum*, the garden pea.

KHANDY, a measure of weight and according to locality, varying from lbs. 500 to lbs. 821.

KHANE, see Kelat.

KHANEK-UL-KALB, ARAB. *Strychnos nux vomica*.

KHANGAR, HIND., or Kakkar of Salt Range, &c. *Pistacia integerrima*.

KHANI BHAI, see Jogi.

KHANIKHNOFDE, a Russian traveller who wrote *Travels in Central Asia*.

KHANIR, see Kol.

KHANNA, HIND. *Ephedra gerardiana*.

KHAN NA KHO, BURM. *Croton tiglium*, Croton Oil plant.

KHANOUT, a river near Shah Jehanpoor.

KHANPUR, a town of Bahwalpoor.

KHANPUR, in L. 28° 40', L. 70° 43' in the Panjab, 27 miles S. E. of Mithankote. The mean height of the plain is 329 feet.

KHANSAMAN, PERS., HIND. A house steward, a butler.

KHAN-SHAR, HIND., of Gurgaon, brackish water.

KHANSI, HIND. A bell-metal, see Kansa.

KHANUM, an ordinary mahomedan suffix for a lady, as Khadijah Khanum. Khanum, Khatoon, Bee, Begum, Beebee, Nissa, are honorific suffix appellations for mahomedan women. Mulk Khanum, was the daughter of Kazan, sultan of Samarkand, and

KHARRAK.

mother of Shah Rokh.—*Markham's Embassy*, p. 118.

KHA-NUNG. A wild tribe, only known under the generic Lau term *Kha-nung*, occupy the mountains to the north east of the Kham-ti, apparently in the upper part of the Mi-li, or Nam-Kiu. They are interspersed between the Kham-ti and the Mung-fan, the latter appearing to belong to the Thibetan family (Si-fan or Kham-pa.) The *Kha-nung* may form a link between the Kham-pa and the Singpho or Burman families. See India, Singpho.

KHANZIR, AR. Hog.

KHA-PA-CHAN, see Ladak.

KHA-PA-CHAN-PA, see *Kha-chau-yul*.

KHAPALU, a town of Balti, 8,285 feet above the sea.

KHAPHOK, see Singpho.

K'HAPPAR, see Khozdar.

KHAPYA, see Kassya, Khassya, Cairn.

KHAR, HIND. The soda plant, *Caroxylon griffithii*, also soda, potash, burilla, dry alkali, hence khara, saline. Parkhar, from Par, beyond, and kar or k'har, saline, is synonymous with Looni, the 'salt-river.' There are several Khari Nadi, or salt-rivulets, in Rajpootana, though only one Looni. The sea is frequently called the Looni-pani, 'the salt-water,' or K'hara-pani, metamorphosed into Kala pani, or 'the black-water,' which is by no means insignificant.—*Tod's Rajasthan*, Vol. ii, p. 304.

K'HAR, HIND. *Hyelaphus porcinus*, *Sunder*. The hog-deer.

KHAR, PERS. A donkey; Gor-khar, the wild ass, the Onager; Khar-gosh, the hare, literally the ass-eared.

KHAR, HIND. *Prosopis spicigera*, also *Caroxylon griffithii*, *Moq.*

KHARA, see Khal, Kar.

KHARA MACHI, HIND. Salt-fish.

KHARACK, GUZ., HIND., PERS. ? Dates. See Khorfaken.

KHARADI, HIND. A turner, a carpenter.

KHARAI, HIND. *Heliotropium brevifolium*

KHARAIRA, HIND. Pshtu, a mushroom.

KHARRAK, an island in the Persian Gulf, which lies near the top of the Persian gulf, and while it in a great degree commands the navigation of the entrance of the Bus-sorah river, has an easy communication of a few hours' sail, both with the shores of Persia and of Arabia. Under circumstances so propitious to its prosperity, it is not surprising that Kharruck should have soon become a flourishing settlement. Its population, which amounted to one hundred poor fishermen and pilots when Baron Kniphausen first established himself, increased, within the eleven years that the Dutch held

KHARASM.

it, to upwards of twelve thousand souls. It was neglected and lost, because it was not worth preserving to the nation by whom it had been acquired. It is situated within thirty leagues of the Shat-el-Arab, and half way between the coast of Arabia and Persia. Here ships proceeding to Bussorah generally call for a pilot; it is five miles in length, and between two and three in breadth. The settlement which was formed upon it by the Dutch, was given up by them in 1765. The British occupied it for a few years about the years 1838-41.—*Taylor's Travels from England to India*, Vol. i, p. 353; *Niebuhr's Travels*, Vol. ii, p. 154; *Malcolm's History of Persia*, Vol. ii, pp. 145-6.

• KHARAK, HIND. *Celtis caucasica*.

KHARAN, a western province of Beluchistan, in which lie two small towns, is occupied by a tribe of Persian origin called the Nousherwani, of whom the Alif Zye are one branch. They cultivate a little wheat and barley but insufficient for their own wants. They claim a descent from Noushirwan, similar to the Udipur rajputs.

KHARANJA, HIND. *Quercus ilex*.

KHARANTA, HIND. *Sida cordifolia*, Linn.; *Sida acuta*.

KHARA SAJJJI, HIND. A second quality sajjji.

KHARASANI YELLU, TAM. ? Gingelly seed.

KHARASM or Khiva, is seven hundred and fifty miles long by six hundred broad; and, with the exception of the narrow tract bordering the Oxus, and the well watered sands of Merv, it consists of a wide desert plain, without rivers or springs, woods, or mountains. Between Merv and Khiva, it is a broken surface of deep sand, with a small growth of underwood. In the time of Mahmud of Ghuzni and Masud of Lahore, Abu Rihan was sent from Kharasm to them as an ambassador by the king of Kharasm. The desert of Kharazm, or Regan, from June to September, is liable to destructive hot winds in which man and beast perish, even the hardy camel perishing miserably. The Beluchi call it Julot or Julo, the flame, also Bad-i-Simoom, or the poison wind. There is great heat of skin quickly ending in death. The approach of the wind is ushered in by an oppressive calm in the air, and a degree of heat that affects the eyes; the precaution then adopted by travellers is to cover themselves over, and lie prostrate on the earth. A curious fact is established by this custom, that any cloth, however thin, will obviate the deleterious effects of the Bad-i-Simoom on the human body.—*Markham's Embassy*, p. 21. See Khiva, Abu Rihan, Khamsin.

KHAREO.

KHARASMI, a dynasty in India, which succeeded the Gori in 1214, but after an uneventful brief period ended with Jalal-ud-din in 1231.—*Orme*.

KHARATI, or Kharadi, HIND. A wood turner; also, the colours and colour sticks for lacquer ware, used in the Panjab, by the wood-turner, to colour his ware when the turning process is complete. The stick consists of shellac, melted down with a certain proportion of wax and sulphur, and coloured by various simple or compound colours. They are applied by the hand. The operator holds the colour stick against the turned wood object while revolving rapidly; the heat produced by the friction melts the lac, and the colour is deposited on the surface of the wood. The skill and fancy of the operator directs him either in laying on a uniform layer of colour, or else putting it on in little spots or touches, by allowing the colour stick only very lightly to touch the revolving wood, thus producing either a smooth uniform colour, or the pretty mottled appearance so often observed in lacquered ware. Two or three different colour sticks are often applied, giving the whole a marbled appearance of great beauty. The colour thus applied is spread, fined and polished, by pressing the edge against the turned object while revolving. The final polish is given by a rag with a little oil. The principal colours are of lac, crimson, orpiment, red-lead, green, made of orpiment and Prussian blue, dark blue, indigo or Prussian blue, black, white, brown or gold colour, light blue or ultramarine.—*Powell's Hand-book*.

KHARATIN KHUSK, HIND. Dried earth worms, a drug.

KHARATUN, HIND. *Chenopodium murale*.

KHARAWAY-NU, BURM. A porous, heavy, strong wood, of Tavoy, not attacked by insects.

KHARAWUNE, HIND. *Ehretia aspera*, also *Lanum verbascifolium*.

KHARAZZA, HIND. *Gymnosporia spinosa*.

KHARBUZ, HIND., PERS. *Cucumis melo*, the musk or sweet melon, *Cucurbita melo*.

KHARCHIOF, ARAB. *Cynara scolymus*, Linn.

KHARDAG, HIND. *Scopolia pæalta*.

KHARDAL, HIND. *Brassica campestris*?

KHARDIL, AR., HIND. *Brassica juncea*.

KHARE BUTI, HIND. *Oreosleris lanuginosa*.

KHABDOUR. In the villages of Upper India are to be seen the Khardour or Hardoul mounds studded with flags to avert disease.

KHAREN, HIND. *Rubus rotundifolius*.

KHARENTI, HIND. *Sida cordifolia*.

KHAREO, also Khareu, HIND. *Quercus*

KHARIF.

semecarpifolia. Wood white, and heavy ; subject to insects and liable to warp : used for making charcoal, and for ordinary house-building purposes, produces also good and large timber.—*Mr. Barnes' Kangra Settlement Report*, para. 14, and *Balfour*, p. 204, quoted in *Powell's Hand-book*, Vol. i, p. 540.

KHAREZ, PERS. A system of large wells or fountains, very common in Persia. Shafts are sunk about every fifty yards, and connected by a gallery under-ground, along which the stream is conducted by a tunnel, often for several miles.—*History of the Panjab*, Vol. i, p. 33.

KHAREZA, HIND. *Carthamus oxyacantha*, *Bieb.*

KHARG, PANJ. *Celtis caucasia*, *Willd.*

KHARG, HIND. A sword. The kharg band'hai, or binding of the sword, is a ceremony performed when a Rajpoot is fit to bear arms, as amongst the ancient German tribes, when they put into the hands of the aspirant for fame a lance. Such are the substitutes for the toga virilis of the young Roman. The rana of Mewar himself is thus ordained a knight by the first of his vassals in dignity, the chief of Saloombra. If we couple this martial rite with the demand of jooddan, there is an additional reason for calling the Yadu, Indo-Seythic. Their worship of the sword, is Kharg-thapna.—*Tod's Rajasthan*, Vol. i, pp. 159, 583 ; Vol. ii, p. 259. See Khanda.

KHARGOSH, PERS. A hare.

KHARGOSH, HIND. *Verbascum thapsus*.

KHARI, a rude pagan tribe on the hills of Asam, on the eastern frontier of the Mikir and Cachar. Near them are the Angami, a rude pagan tribe, also on the hills of Asam, on the eastern frontier of the Mikir and Cachar. There are associated with the Namsang, Joboka, Mulung, Tablung, Tengsa, Khari, and Mozome Angami. See India.

KHARI-MITTI, HIND. Pipe-clay.

KHARI, see Khal.

KHARIAN, also Maraghune, HIND. *Solanum xanthocarpum*.

KHARIARA, HIND. *Rubus biflorus*.

KHARIF, crops sown at the commencement of the rains, ripening in autumn. In India, there are two principal harvests, the spring and autumn, with, at some places, an intermediate crop. For the spring harvest, the Rabbi or Fasl-i-Rabbi, the seed is sown in September or October, at the close of the periodical rains. The grains sown consist of wheat, barley and other cereals, different kinds of pulse which do not require irrigation or much water, and the crops are cut in February or March. The autumn or kharif crops consist of rice and other grains requiring irrigation.

KHARKUSA.

For these, the seed is sown at the commencement of the rainy season, and reaped about October or November. Millets and pulses of quick growth are sown at the beginning of the rainy season and form the Bhadoni or intermediate crop. The Kharif is called by the common people sawani, the autumn crop. The Rabbi is the vernal, the kharif, the autumnal crop. The Rabbi is sown in the three autumnal months, brought forward, as in India, by the heavy dews and cool nights of that season, and reaped in the spring. The summer is the time for the Kharif, which is watered by the flooding of the rivers, and cut in the autumn, after the inundation subsides.—*Burton's Sindh*, p. 381 ; *Wilson's Gloss.*

KHARI JHAR, SINDH. *Alhagi maurorum*, *Tourne, W. & A.*

KHARIK, also Khar-khanda, HIND., MAHR. A tribe employed in cultivating salt marshes or saline soils.

KHAR-I-KHUSHK, PERS. *Tribulus lanuginosus* and *T. terrestris*.

KHARI MATCHI, DUK. Salt fish.

KHARI-NUN, HIND. Sulphate of soda.

KHAR-I-SHUTH, PERS. Camel's thorn, *Alhagi maurorum*; in Arabic it is called 'agul,' and all the deserts of the east are covered with it. It is the Jouz of Afghanistan. It is a prickly bush on which the camels browse, and is called Jowassa in the Upper Provinces of India, and Shinz in Beluchistan, and is often used to make tatties, or screens placed at the windows, and wetted for cooling the apartments by evaporation in the hot winds. Pottinger says, the Shinz, though to be seen in Beluchistan, is not in such plenty as in the lower countries.—*Pottinger's Travels, Beloochistan and Sind*, p. 102 ; *Ed. Ferrier's Journ.*, p. 378 ; *Fraser's Journey in Khorasan*, p. 91.

KHARI TALAO, see Thoji-chanmo.

KHARIZ, HIND. *Cotoneaster obtusa*.

KHARJI, properly Kharzi, AR., HIND., PERS. Schismatics ; the sunni mahomedans are so called by the shiah sect. A Kharji, however, is a person who separates himself from a community or religious faith, a seceder. The shiah mahomedan sect regard Ali as the immediate successor of Mahomed : the sunni sect accept Ali as the fourth khalif, in succession to Mahomed.

KHARJURAPU CHETTU, TEL. *Phoenix dactylifera* ; Khajuri is *P. sylvestris*, but in Telingana, it is applied to the edible, imported kind, in contradistinction to the indigenous date.—*L. ; R.*, Vol. iii, p. 786.

KHARK, HIND. *Celtis caucasia*.

KHAR-KHARNAB, HIND. *Verbascum thapsus*.

KHARKUSA, HIND. *Suedia fruticosa*.

KHARLANNE, HIND. *Phelipæa calotropidis*.

KHAR LEI, HIND. *Tamarix orientalis*.

KHARMA, ARAB. Date tree. In Persia, certain trees are reckoned mubarak or blessed, such as the Zeitun or olive, and the Nakhil or Kharma, the date or palm tree. Some mahomedan tradition respecting the angel Gabriel seems to have consecrated the olive; and the date is said to flourish only in the regions of Islam, the land of true believers.—*Ouseley's Travels*, Vol. ii, p. 330. See Kajur, Khorfaken.

KHARMACH, HIND. *Rubus lasiocarpus*.

KIAR-MAHRA, PERS. Cowrie shell, *Cypræa moneta*.

KHARMO, HIND. *Lonicera hypoleuca*.

KHARNAR, HIND. *Verbascum thapsus*.

KHARNUB, HINDI. *Prosopis spicigera*, *Kharnub nubti*, HIND. *Ceratonia siliqua*.

KHAROATI, see Afghani, Purmul or Fermuli.

KIARPALU CHERAI, HIND., PUSHTU. *Quercus ilex*.

KHARPAT, HIND. *Garuga pinnata*.

KHARPATA SEREI, HIND. *Quercus incana*.

KHARRAH, or Indian mackerel, a species of *Thynnus*, is found in abundance off the Burmese coast, and from thence, great numbers, in a dried state, are annually imported into Bengal.

KHARRAH, see Khyber.

KIARRI, a river of Oodeypur, runs near Shuhpoora.

KHARROUB, ARAB. *Ceratonia siliqua*, W., properly Kharnub.

KHARSAN, HIND. *Crotalaria burhia*.

KHARSHU or Kharsui, HIND. *Quercus semecarpifolia*.

KHARSHUF, PERS. Kharsjuf of Egypt. Artichoke. *Cynara scolymus*, Linn.

KIAR-TILAR of Bheels, near Mhow. *Sypheotides auritus*, Latham.

KHARSU or Kharsui, HINDI of Kanawar. *Quercus semicarpifolia*, the alpine oak.

KHARTAKSHO, see India, Maryul, Shigar, Tibet.

KHARTRA, signifies 'true,' an epithet of distinction which was bestowed by Sidraj, king of Anhilwarra Putun, on one of the branches (gatcha), of the buddhist and jain faith in a grand religious disputation (badha) at that capital in the eleventh century. The celebrated Hemachandra Acharya was head of the Khartra-gatcha; and his spiritual descendant honoured Oodipoor with his presence in his visit to his dioceses in the desert, in 1821. Colonel Tod's Yati tutor was a disciple of Hemachandra, and his patravali, or pedigree, registered his descent

by spiritual successions from him. This pontiff was a man of extensive learning and of estimable character. He was versed in all the ancient inscriptions, to which no key now exists, and he decyphered one for Col. Tod which had been long unintelligible. His travelling library was of considerable extent, though chiefly composed of works relating to the ceremonies of his religion: it was in the charge of two of his disciples remarkable for talent, and who, like himself, were perfectly acquainted with all these ancient characters. The pontiff permitted the yati to bring for his inspection some of the letters of invitation written by his flocks in the desert. These were rolls, some of them several feet in length, containing pictured delineations of their wishes. One from Bikaner represented that city, in one division of which was the school or college of the Jain, where the yati were all portrayed at their various studies. In another part, a procession of them was quitting the southern gate of the city, the head of which was in the act of delivering a scroll to a messenger, while the pontiff was seen with his cortege advancing in the distance. To show the respect in which these high priests of the Jain are held, the princes of Rajpootana invariably advance outside the walls of their capital to receive and conduct them to it—a mark of respect paid only to princes. On the occasion of the high priest of the Khartra passing through Oodipoor, as above alluded to, the Rana received him with every distinction.—*Tod's Rajasthan*, Vol. i, p. 518.

KHARTUMA, HINDI of Trans-Ind. *Cucumis colocynthis*, Linn.

KHARA-TUCKA. In the hill districts to the S. W. of Mehur in Sind, is Khāra-Tucka, a pretty valley that overhangs Herar. At a comparatively early era of creation, this valley must have been inhabited, and curious remains of a by-gone age are seen in the Kaffir Kot, regular and evidently artificial ranges like river terraces. The popular belief is, that their huge boulders were lifted into position by the giant race then inhabiting the earth, but they must have been arrested in their descent from the higher ridges by accident or by some artificial contrivance. They are strange and imperishable memorials of an age and race long since passed away. These terraces were for purposes of cultivation; they caught the rain-water running down the face of the hill, also "detritus," thus forming slight soil, in which the people sowed jowaree or wheat, according to season. The practice is common now all over Afghanistan and the Himalaya, and was so throughout Beluchistan when it was more densely populated than at present. The extinct inhabitants

KHAS-BARDAR.

of these days are always styled Kaffir, hence these terraces and other remains are called Kaffir Kot.—*Note by Major Merewether in Bombay Medical Transaction, No. vi, New Series, 1860, p. 273.*

KHARVAR, a measure of 100 Tabrez maund which is equal to six maund and ten seer of India or about 500 lbs. avoirdupois.—*Mohan Lal's Travels, p. 262.* See Kharwar.

KHARVA VARMA, see Inscriptions.

KHARWA, GUZ. HIND. A coarse kind of red cloth, chiefly manufactured in Guzerat.—*Faulkner.*

KHARWALA, HIND. *Salix alba*, also *Mississya hypoleuca*.

KHARWAR, HIND. An ass-load, a measure of weight in Kashmir. See Kharwar.

KHARWA-TEL, HIND. Coarse oil, rape oil, bitter oil from the melia and azaderachta seed.

KHARWE, HIND., PSHTU. *Cotoneaster baccularis*, Indian mountain ash.

KHARWI, MAHR. A caste employed in tiling houses, making plantations.

KHARYA MATTI, properly Khari mitti, HIND., fire clay, white earth. That of the Lahore bazar, is a pale-coloured clay, almost the same as chikni mitti, and used to make crucibles of. The term khari mitti is also applied to chalk.—*Powell's Hand-book. Econ. Prods. Punjab, p. 26.*

KHAR ZAIRA, PERS. Lit. Ass-poison, very common over all India, probably Oleander?

KHAS, PERS. *Andropogon muricatus*.

KHAS, a language or dialect of Hindi, spoken between Kumaon and Nepal. In Nepal it is called Purbatiya or Purbutti. See India.

KHAS, AR. Own, particular, select: Khawas, plural, are women kept by a person, slaves.

KHAS, HIND. *Cymbopogon aromaticus*, also the root of the *Anatherium muricatum*, the "kuskus" root used to make tatties. Khas is much used in the Ambalah district as a packing material. The grass of the plant is called khavi and panui, and the flower izkhar.—*Powell's Hand-book, Vol. i, p. 518.*

KHASA, a people who inhabited Persia and northern India, before the Arian immigration. There is, still, a race in the Indian desert, now mahomedan, and called Khossa. Elphinstone mentions the Khasa-khel. Khasgar is in the region of the Khasa, the Casia regia of Ptolemy. Menu says, that the Saca, Yavana, the Pehlavi and the Khasa of Central Asia, were all Ch'hetttri or Rajpoots.—*Birr.*

KHAS-AAL, a powerful tribe of husbandmen on the east of the Euphrates.

KHAS-BARDAR, a matchlock-man, in a great man's retinue.

KHASSYA HILLS.

KHASDAR, MAHR. A groom.

KHAS-CHELA, HIND. Literally chief disciple. The chief disciple and destined successor of the mahant or head of a religious establishment of ascetics, or mendicants.—*Wilson's Glossary.*

KHASHBAR, HIND. Nima quassioides.

KHASHKHA, PERS. Tika, HIND. The sectarian mark on the foreheads of hindoo.

KHASH KHASH, GUZ., HIND. Poppy seed. Seeds of *Papaver somniferum*. Khash-khash-ka-tel, Poppy seed oil.

KHIAH RUD, the geographers describe this river as taking its rise in the mountains of Siahband, and trace its course from north to south until it falls into the Helmund at Kernasheen, whereas it flows in this direction only as far as Koh-i-duzdan, a village situated between Washeer and Ibrahim; there, it forms an elbow, turning suddenly south-west, and runs from that point straight to the Seistan lake. At the cold season of the year its bed is generally dry and full of reeds, in which are numbers of wild fowl.—*Ferrier's Journ., p. 401.*

KHAS-KHAS, HIND. *Anatherium muricatum*. A fragrant grass, the roots of which are made into door and window-screens. It abounds on the banks of the Multan and Lahore rivers in large quantities.

KHAS-KHELI, HIND. A slave-race at the Bhawalpur court, whose daughters, associated first with the nabobs before being married to other persons. The Gola were another class of slaves, and were principally from Africa, and of the Sidi, Habshi, Khaskheli, Sindi and Zemghur races.

KHIASMI, PERS., PUSHT. of Candahar. A musk-melon.

KHAR MOUNTAIN, see Viswamitra.

KHASRA, a written record of the particulars of a rough map or plan of a village. A field book.

KHIASSAK, see Cossack, Kasak, Kirghis, Viswamitra.

KHASSYA HILLS, lie between the two British provinces of Assam and Cachar, and the north-western portion of the territory of Burmah. It is an immense extent of mountainous country, inhabited by numerous mountain tribes. In this great mountain tract, one or two valleys occur. The largest, that of Munnipore is, from its connection with the British government, and from the tribes around it all admitting its supremacy, the most important. Lying between latitude 23° 50' and 25° 30' north, and longitude 93° 10' and 94° 30' east, the mountain tract in question is bounded on the north and west by the British provinces of Assam and Cachar, and on the east by the Kubbo valley now subject

KHASSYA HILLS.

to Burmah. To the north-east and south, the boundary is not well-defined, and would much depend upon the extent to which the Munnipore government might spread its influence amongst the hill tribes in those directions, but in the north-east it may be denoted by a line drawn north from the north-western corner of the Kubbo valley until it strikes the Assam boundary, and in the south by one drawn west from the source of the Numsailung river, the fixed south-east boundary, till its junction with the Tooyai river. The Cossyah or Khassya country, on the north-east frontier, has iron of great purity, smelted at Pundua; Cassia lignea is one of its principal articles of export, and a variety of parti-coloured cloths, generally known by the name of Sylhet cloths. Some of them are dyed of rich colours and being of a strong durable texture, are well adapted for table covers, to which purpose they are usually applied in the eastern part of Bengal. The Cossyah and Jyntia hill territory is administered by an assistant attached to the Assam commission. The value of the export and import trade of the country is about rupees 30,000 a year with Assam, and with the Bengal plains about 10½ lakhs, the exports being 7 lakhs. The total revenue from lands and taxes in 1857 amounted to rupees 23,023. The first treaty with Jyntia was concluded in 1824. The rajah Ram Sing rendered no assistance during the Burmese war, but he agreed to acknowledge allegiance to the British, and his country was taken under protection. The population of the Jyntia hills is about 40,000 souls, and of the Cossyah hills about 82,400. The Cossyah states are twenty-five in number, of which five, viz., Cherra Poonjee, Khyrim, Nustung, Sungree and Nuspoong are commonly called the "Semi-independent States." The chiefs exercise civil and criminal jurisdiction over their own people in all matters pertaining exclusively to them. The minor states, known as the "Dependent States," are twenty in number, the chief of which are:

Nungklow,	Mowcuram,	Mowyang,
Moleem,	Mowdun Poonjee,	Nobo Sopho,
Murriow,	Mahram,	Jeerung,
Hamrye,	Mullai Chummut,	Syung,
Mowila,	Bhawul,	Moflung Poonjee,
Cheyia,	Seenal Poonjee,	Mowlung do.
Dowarrah Notoor-	Lengkhan Poonjee	Lyksom do.
men,		

Moleem was conquered in 1829, and the rajah of Khyrim ceded, to the British, the territory to the S. E. of the Oomean or Booga Pane river. In 1861 the rajah was deposed, and Malay Singh, a new chief installed. No engagements have ever been made with Nobo Sopho, Syung, Moflung

KHASSYA HILLS.

Poonjee, and Lyksom Poonjee, but agreements were entered into with Mowyang in 1829, Dowarrah Notoorman in 1837, Soopar Poonjee in 1829, and in 1860, with Bhawal. The estimated area of the Cossyah hill is 7,290 square miles. About 16 miles on the Sylhet side, and about the same on that of Assam, it consists of low land interspersed with small hills. In the interior, about 50 miles in extent, is an undulating hilly table land, from 1,500 to 2,500 feet high. Coal is said to abound in the hills of Jynteah. The localities admitting of cultivation are the plateaux of the Cossyah and Jynteah hills, the lower ranges on the Assam border, and the slopes towards the Sylhet plains. The area of the three plateaux is about 3,500 square miles, and their heights vary from 3,000 to 6,000 feet above the sea level. The soil is a ferruginous red clay, with a sub-soil of shingle, little suited for profitable cultivation. In the hollows, however, a fine black mould is found extending often over many acres. On the plateaux, miles upon miles of land are as level as the most highly cultivated portions of Kent and the Lothians. On the middle plateau the temperature averages that of the English summer; rising to 72° during the hottest months. The cold weather is less severe than an English winter. The cultivated land in those hills is very little. A late survey gave 12,221 acres or less than 10 square miles as the total in the Jynteah hills; while within an area of 4,450 square miles among the Cossyah hills only 30 square miles have been brought under crops. The Cossyah hills have a small isolated body of people of the Taic or Siamese race. The Ahom who once ruled Assam, were also of the Siamese race. The Khassya race inter their dead on the undulatory eminences of the country. The tribe habitually erect the dolmen, menhir, cysts and cromlechs, almost as gigantic in their proportions, and very similar in appearance and construction to the so-called Druidical remains of Western Europe. They keep cattle but drink no milk, estimate distances traversed by the mouthfuls of betel-leaf chewed *en route*, and among them the marriage tie is so loose that the son commonly forgets his father when the sister's son inherits property and rank. The undulatory eminences of the country, some 4,000 to 6,000 feet above the level of the sea, are dotted with groups of huge unpolished squared pillars and tabular slabs, supported on three or four rude piers. In one spot, buried in a grove, were found a nearly complete circle of menhir, the tallest of which was 30 feet out of the ground, 6 feet broad, and 2 feet 8 inches thick; and in

front of each was a dolmen or cromlech of proportionately gigantic pieces of rock, while the largest slab measured was 32 feet high, 15 feet broad, and 2 feet thick. The method of removing the blocks is by cutting grooves, along which fires are lighted, and into which, when heated, cold water is run, which causes the rock to fissure along the groove; the lever and rope are the only mechanical aids used in transporting and erecting the blocks. The objects of their erection are various—sepulture, marking spots where public events had occurred, &c. It is a curious fact that the Khasian word for a stone, "man," as commonly occurs in the names of their villages and places as that of man, maen, and men does in those of Brittany, Wales, Cornwall, &c.; thus Mansmai signifies in Khasia the stone of oath, Mamloo, the stone of sult, Manflong, the grassy stone, &c., just as in Wales, Penmaen Mawr signifies the hill of the big stone, and in Brittany, a menhir, is a standing, and a dolmen a tablestone, &c. The resemblance of the burrows and their contents with the cromlechs, &c., to the Druidical remains which are discovered in the ancient seats of the Celtic race in Europe, is too exact and remarkable to be accounted for on any other supposition than that of their derivation from the same origin. Hence the people who introduced Druidical rites into India must have brought them with them from Central Asia, and they must have entered India at a period as early as the introduction of Druidical rites into Europe. The Kasia are the aboriginals of the borders of Assam. Their tribe or race differs very little from that of the Garo. They are arranged in petty rajahships, in the Kasia hills. Nat-worship seems the culture of the Kasia. They dread snakes. They build their houses on piles. They trap fish like the people in Java, Borneo and Sumatra. They distil and drink intoxicating liquors, and between Ringhot and Cherra, and in other places are bridges of the fibres of the India rubber tree, described by Captain Yule. The Khassya hills present in general the aspect of a well-defined plateau with comparatively small, isolated elevation. The plateau is terminated to the north by the valley of the Brahmaputra, to the south by that of the Surma. The Khassya hills lie between the two British provinces of Assam and Cachar, and the north-western portion of the territory of Burmah. The fields of the Khassya people are all closed in with a line fence or with a wall of earth or slate. Khassya hills form a comparatively isolated range, rising suddenly from the great plains of Bengal in the south, and divided in the north by the valley of

Assam from the great Himalaya or Bhotan range. On the southern face this range rises almost perpendicularly from the plains which are continuous from the Bay of Bengal, with scarcely a perceptible change of level to the very foot of the hills, and, with the exception of a comparatively small thickness of metamorphic rocks at the base, are composed of nearly horizontal beds of sandstones, a few shaly layers and limestone, long known for the abundance and beauty of the nummulites it contains. These beds dip slightly to the south, and die out towards the north, when the metamorphic rocks come to the surface in the hills. The age of the sandstones and limestones and the epoch of the coal, which is associated with them, is fixed by their organic contents, as belonging to the great eocene period of geologists. No newer group of rocks is definitively seen in these hills. Along the southern face of the range there is evidence of a great dislocation extending for many miles, and possibly along the entire scarp, which has brought down to the level of the plains, the rocks which are seen at the top of the hills. This line of dislocation has in all probability tended to give the nearly rectilinear direction of the escarpment: its date is fixed as at least subsequent to the formation of all the eocene rocks here seen. An older group of sandstone, considerably altered, is seen further to the north within the hills, and also a series of highly metamorphosed schists and grits resting upon the gneissose and granitic rocks. Cherrapunji is a sanitarium in the Khassya hills, in lat. 25° 14' 2" N. and long. 91° 40' 5" E., about 4,118 or 4,125 feet above the level of the sea. It is 40 miles north of Sylhet, and 60 miles south from Gowhaty. The principal race in the neighbourhood are the Khassya. The climate of Khassya is remarkable for the excessive rainfall. Attention was first drawn to this by Major Yule, who stated, that in the month of August 1841, 264 inches fell, or twenty-two feet, and that during five successive days, thirty inches fell in every twenty-four hours! Dr. Thomson and Dr. Hooker also recorded thirty inches in one day and night, and during the seven months of Dr. Hooker's stay, upwards of 500 inches fell, so that the total annual fall perhaps greatly exceeded 600 inches, or fifty feet. From April 1849 to April 1850, 502 inches or forty-two feet fell. This unparalleled amount is attributable to the abruptness of the mountains which face the Bay of Bengal, from which they are separated by 200 miles of Jheels and Sunderbunds. At 4,000 to 5,000 ft. elevation in the Khasia, Dr. Hooker collected

KHAT KARWA.

upwards of fifty species of Gramineæ alone, in an eight miles' walk, and twenty to thirty Orchidæ. There is only one pine in the Khassya mountains, *Pinus sinensis*, which is not known as a native of the Himalaya. As in all very humid climates, orchids occur in very great abundance in the Khassya mountains constituting there at least one-twelfth of the vegetation, and being by far the largest natural order of flowering plants ! They are equally abundant at all elevations. The Garo, the Khassya and the Jynteah hills are on the south of the Assam valley, and Shilong is the principal summit of the Khassya hills. The Khassya race deem a twin-birth unlucky, and used, when twins were born, to kill one of the infants. They deemed the twin-birth degrading, as assimilating them with the lower animals. The Aino of Japan, also, if a twin-birth occur, always destroy one of the infants, and this idea likewise prevails amongst the Bali races. Many a Khassya word is a sentence as "Bam" eat, "Ka jing," the thing.—*Campbell*, p 149 ; *Col. Yule in Bengal Asiatic Journal* for 1844 ; *Sohla-gintweit's General Hypsometry of India*, Vol. ii, pp. 95-98 ; *Hooker's Him. Jour.*, Vol. ii, p. 282 ; *Lubbock, Origin of Civilization*, p. 21 ; *Treaties and Sunnuds*.

KHASSIA, a great tribe in Kumaon and Garhwal, who claim to be Rajpoots, but this is doubtful, and Rajpoots do not acknowledge the connection. In Kumaon the hill dialect is in the main Hindi, but has some curious grammatical affinities to the Bengali.—*Campbell*, p. 67.

KHASSIAT-US-SALIB, AR., HIND., PERS. *Eulophia virens*, R. Br. ; *W. Ic.*

KHASTA, HIND. See Khista.

KHAT, ARAB. *Catha edulis*.

KHAT, AR., PERS., HIND. A letter ; Khat-i-sharif, a royal letter.

KHATA, a river near the town of Purneah.

KHATAI, HIND. Cathay, China.

KHATAI. Be-braug khatai is *Nepeta ruderalis*, Dedwar khatai is *Cedrus deodara*.

KHATAI, HIND. *Flacourtia sepiaria*.

KHATAK ? a tribe in the Oomrooti district, 1,105 in number.

KHATAKAR, MAHR. A butcher.

KHATAN or Kossye, a river which passes near Midnapoor.

KHATAR, HIND. A sweetmeat.

KHATAW, HIND. of Pangi, &c. *Quercus semecarpifolia*, alpine oak.

KHAT BIRI, HIND. *Rumex vesicarius*.

KHATI-MAR, in Nagpur, the village blacksmith : in Hindustan a wheel.

KHATIP, HIND. *Viburnum cotinifolium*.

KHAT KARWA, HIND. Morel.

KHATRI.

KHATMANDU. At the foot the northern range, situated upon the eastern bank of a small river, called the Bishenmuttee, in lat. 27° 42' N. ; long. 85° E., stands the city of Khatmandoo, the capital of Nepal. It is not the largest of the towns in the valley, but enjoys the eminence of a metropolis, because it is the residence of the rajah, or king, of Nepal. In length, Khatmandoo may measure about a mile ; its breadth is inconsiderable, nowhere exceeding half and seldom extending beyond a quarter of a mile. The name, by which the town is distinguished in ancient books, is Gorgoolputten : the Newar race call it Yindes, whilst among the Parbutia, or mountaineers, it is styled Kultipoor, an appellation which seems to proceed from the same source with Khatmandoo, and derived, it is believed, from its numerous wooden temples, which are among the most striking objects in the city. These edifices are not confined to the body of the town, but are scattered over its environs, particularly along the sides of a quadrangular tank, or reservoir of water. The houses are of brick and tile, with pitched or painted roofs. On the street-side, they have frequently enclosed wooden balconies of open carved-work, and of a singular fashion ; the front piece, instead of rising perpendicularly, projecting in a sloping direction towards the eaves of the roof. They are of two, three, and four stories, and almost without a single exception are of a mean and poor appearance. The streets are exceedingly narrow, and very filthy. See India, Nepal.

KHATMI, HIND., or Bara gul khaira, *Althæa rosea*, Hollyhock. The seed is considered cooling : in medicine one tola is given : the corollæ and pericarps, when fresh are exceedingly mucilaginous and used in sherbets.—*Gen. Med. Top.*, p 143.

KHATMI KOCHAK, PERS. Is the small mallows. It grows in moist ground, and is useful when applied as a cataplasin to parts of the body stung by wasps or hornets.—*Ouseley's Travels*, Vol. i, p. 216.

KHATMI SAFAID, HIND. *Malva mauritiana*.

KHATNA, ARAB., HIND., PERS. Circumcision.

KHATON NIBURI, MALEAL. *Phyllanthus vitis idæa*.

KHATRAW, or Pindrau, HIND. of Sutlej valley and Bassahir. *Picea webbiana*, or *Picea pindrow*, the silver fir.

KHATRI. Amongst the hindoo races the second pure tribe, the soldier and the sovereign caste. The Khatri of India, Chetrya or Kshetrya are a scattered race, a Khatri village is unknown. They, however,

monopolise the trade of the Punjab, of the greater part of Afghanistan and further to the west in Central Asia and even to St. Petersburg. They are the only hindoos in Central Asia. In the Punjab they are almost the sole people who perform the scriptory work, and there they are the chief civil employes of government, and in the villages they keep the village accounts, act as bankers and buy and sell the grain. They are also the gurus of the Sikh sects; both Nanak and Govind were Khatri, and the Sodi and Bidi of the present day are so. They do not usually engage in military pursuits, but the dewan Suwan Mull, governor of Multan, and his successor Mulraj, and very many of Kunjit Singh's chief functionaries were Khatri. It is said that a Khatri was dewan of Badakhshan or Kunduz. Under the Affghans, a Khatri was governor of Peshawar, and Akbar's famous minister Tudar Mull was a Khatri; Joti Persad, the Agra contractor, was a Khatri. The Khatri claim to be descendants of the old Khetriya, written also Chettriya and Kshetriya. They are hindoos, none have ever become mahomedans, and few have become Sikhs. The Khatri of northern India are a very fine, fair, handsome race. Those of the western part of Peninsula India, about Bombay, are equally fair. In Bombay and the adjoining districts, they are part of the writer class, whom Europeans style Purbho, and the Ror or Rora of northern India are said to be Khatri. In Afghanistan they are petty traders and shop-keepers, many of them in the Punjab hold land and cultivate. The Kukka, a handsome race on the east of the Jhelum, are said to have been Khatri, originally and of the Gaddi, an interesting race of fine patriarchal looking-shepherds in the interior of the Kangra hills, the most are Khatri. In Behar is an agricultural class, called Kshatri, Khatri or Chatri, who sometimes serve as soldiers or as the darwan or door-keepers in Calcutta. In Loodianah there is a large number of thriving merchants of the Khatri race with a numerous colony of Kashmir shawl-weavers. Multani, is a term applied to several trading classes in the north-west of India, wandering pathan merchants and others.—*Campbell*, pp. 109, 112. See Kshatriya, Hindoo.

KHĀTRI, MAHR. A caste who are silk-weavers.

KHATTA, HIND. Sour, the acid lime or citron, *Citrus medica*.

KHATTAK, a tribe lying between Attock and Peshawar. The chief town is Akorrah.

KHATTA MITHA, HIND. *Oxalis corniculata*.

KHATTAN, HIND. *Bombax pentandrum*.

KHATTI KAN, HIND. *Rumex acutus*; Khatti mal, HIND., *Rumex hastatus*; Khattitan, HIND., *Rumex vesicarius*.

KHATVAM, SANSC., TEL. The Sanscrit words Khatva and Khatti, mean a cot, but Khatta is said to be *Lipeocercis* (*Andropogon serrata*); also a fragrant grass, which is likewise the meaning of another syn. *Katuka valli*.

KHĀTUN, TURK. A lady. See Khanum.

KHAU, HIND. *Olea europæa*; also, a species of *Allium*.

KHĀUN, HIND. A grass, *Panicum maximum*, of Lahore.

KHAUI, HIND. *Andropogon iwarancusa*.

KHĪOR, a territory south-east of Ladak and eastward of the Byltæ. Its people are supposed to be the Chauranæi Seythæ of Ptolemy.

KHĀVEY, TURK. *Coffea arabica*, Linn. Coffee.

KHĪAWA, HIND. A pass in the Salt Range, scarcely frequented, yet may be considered the most practicable. Timur crossed it on his march into Hindustan.

KHĪAWAK, a pass in the Hindu-Koosh, in lat. 35° 38', long. 70°. About fifteen miles long. The crest is 13,200 feet. The ascent on north side is an uniformly inclined plane.

KHĪAWAN, or Khowan, HIND. of Trans-Indus, *Olea europea*, *O. ferruginea*, *O. cuspidata*. The olive.

KHĪAWAN, see Luristan.

KHĀWE, HIND. *Mulgedium tataricum*.

KHĀWI, or Khavi, HIND. *Cymbopogon iwarancusa*, sometimes applied to *Anatherium muricatum*.

KĀWID, or Khavid, HIND., PERS. Green wheat, cut for fodder, &c.

KHĀ-YAN-KA-YOE, BURM. *Aglaia rohituka*.

KHĀY-PĀLU, see Maryul of India.

KHĀZERIJ, or Khezerj, is a very ancient Arab tribe, and was in possession of Medina when Mahomed fled there. Abu Osaibi was of this tribe. The Rubina, once the most celebrated tribe in Arabia, is now a small broken clan. The Anizeh Arab come of this race.—*Rich's Residence in Koordistan*, Vol. ii, p. 258.

KHĀZYA STRICTA, DeC. Is the Sewur or Sihar of SIND.

KHEALIG, see Kunawar.

KHECHARA, SANSC. From kha, the sky, and chara, going.

KHEDA? an enclosure for capturing wild elephants. See Kraal.

KHEE, HIND. Kotah land broken upon the steep slopes of hills.

KHEEL, the iron pillar of the Pandu race mentioned in the poems of Chund. A

KHEIL

legend relates that an infidel Toar prince wished to prove the truth of the tradition of its depth of foundation: blood gushed up from the earth's centre; the pillar became loose (dhilli), as did the fortune of the house from such impiety, and this is given as the origin of the name of Dehli.—*Tod's Rajasthan*, Vol. ii, p. 31.

KHEELEEN, see Dhan ke Kheeleen.

KHEERI, BENG. *Mimusops kaki*.

KHEER KAY HUNDE, the kheer pot, a mahomedan ceremony.

KHEERNA, BENG. *Mimusops hexandra*.

KHEEROKOLEE, URJA. *Mimusops kauki*? tree. A tree in Ganjam and Gumsur. Extreme height 30 feet, circumference 3 feet, and height from the ground to the intersection of the first branch, 6 feet. A hard wood, used for ploughs and mallets.—*Captain Macdonald*.

KHEESAH, or Flesh Glove. The importance of the condition of the skin to the maintenance of health and the comfort of the individual has been demonstrated by physicians. To preserve its surface free from all extraneous substances, to dislodge all concreted matter, collected dust, the deposit of the fatty secretions, &c., it is of the utmost importance to use ablution, friction, &c. Frictions not of a violent, but of a gentle nature, are universally practised by the natives of the east for that purpose, and as a substitute for exercise, and the glove made of the Burruk, or Persian glove cloth, called, the Kheesah, or Indian Flesh Glove, has been in use from time immemorial throughout the east, where much attention is paid to the purity, softness, and polish of the skin. It is applicable alike to the bath and the dressing-room; the hair-glove, in India, is used only for rubbing down horses. The Kheesah rouses the activity of the skin, removes all impurities, elicits an agreeable and equable action towards the surface, without occasioning the smallest discomfort or irritation.

KHEHIRI, SINGH. *Acacia catechu*, Willd.

KHEIL, or Khel, PERS. A village community, a portion of or even an entire tribe. The Beluchi are a dark-skinned race, residing on the west of the territories of British India. The people are herdsmen, but predatory and resemble the Kurd on the east of Persia, with some of the Iliyat habits. Some live in mud huts, others in fortresses, but the usual lodging is a black felt or camel tent, called gedaun, which is stretched over a tamarisk frame-work. An assemblage of gedaun constitutes a tumun or village, common to the Kheil, and a number of Kheil form a tribe. The western Beluchi make long and rapid predatory excursions on camels for plunder

KHELAT

and slaves. The Khan of Khelat is the chief of the Beluch.—*Latham's Ethnology*, p. 200.

KHEIR, HIND., MAHR. *Acacia catechu*.

KHEIR-ABAD, a large village, now in ruins. The river of Kheirabad issues from the snowy range in an E. N. E. direction. It has a broad and pretty deep bed. It is the Ab-i-Shirin (sweet water) mentioned in Timur's route, perhaps the Arosis of the ancients, and the river of Hindian of the present day, the Hindian also, but erroneously, is called the Tab. From the Kheirabad river to Behbahan, is a distance of three farsangs (eleven miles); the first in a north-west direction, across a very rugged country, abounding in selenite, or foliated gypsum; the two last, westward, over a level well-cultivated country.—*Baron C. A. De Bode's Travels in Luristan*, p. 260-61.

KHEJRA, HIND. *Acacia odula*, Irvine. Esculent acacia.

KHE-AKREN, see India.

KHEKRA, *Cucumis sativa*, Common 'Cucumber.

KHELA, HIND. The plantain. *Musa paradisaica*, also the fibre of the plantain, properly Kela.

KHELANTA JOGI, see Mendicants.

KHELAT, written also Kelat. The territory belonging to the Brahui khans of Khelat extends from the Mekrana coast to a distance of about 400 miles north, and about the same distance from the Sindh frontier to the west of the provinces of Punjgoor and Kej. The allegiance of the outlying provinces to the khan is, however, little more than nominal, and their chiefs omit no opportunity of asserting their independence. The first khan of any note was Abdullah Khan, who, at the commencement of the eighteenth century, affected to be independent of the Delhi empire and reduced several provinces to his rule. From the time of Nusseer Khan the chiefs of Khelat remained faithful in their allegiance to Cabool. In their internal government they acted in concert with the chiefs of Sahrawun and Jhalawun, who held the position of hereditary counsellors. The office of minister was also hereditary. When General Wiltshire's brigade was returning from Cabool in 1839, a detachment was sent to Khelat to punish the khan. The town was taken by storm on the 13th of November, and the Khan fell in battle. After the withdrawal of the British armies from Cabool, the treaty, by which Khelat was acknowledged to be a dependency of Cabool, became a dead letter. Nusseer Khan died in 1857. It was afterwards discovered that he had been poisoned. There were three claimants for the succession, Asim Khan, brother of Mehrab Khan, his son of the

KHERBEK.

same name; and Khodadad Khan, half-brother of the late chief. The last was recognised by the British government as khan of Khelat, and the payment of the subsidy of Rupees 50,000, under the treaty of 1854, which had been suspended during the disturbances in the country, has been revived. In 1863, a convention (No. xviii.) was made with Khodadad Khan, by which he engaged to secure the protection of the Mekran telegraph within the territories of his feudatory chiefs in consideration of a subsidy of Rupees 5,000 a year, to be paid to the chiefs, and authorized the British government, to make their own arrangements for subsidizing his feudatories. During the revolution in Khelat, this convention was declared to be in abeyance.—*Treaties, Engagements and Sunnuds*, Vol. vii, pp. 70, 73, 74. See Kalat, Kelat, Baluchistan.

KHELBENAH, HEBREW. Galbanum.

KHEL, a boat in use in Assam. Its roof is covered with the leaves of the Livistona Jenkinsiana palm. *Simmond's Dict.*

KHELI, HIND. Dioscorea deltoidea.

KHELMA, see Kuki.

KHEM, see Ken.

KHENGAR, the most celebrated man of the Yadu line in Saurashtra, was the personal opponent and rival of the celebrated Sidraj for the hand of the Deora princess. Maudalica, though a proper name, is also titular, viz., Lord of the Region; this and Khengar are the two names best preserved by tradition, and to one or other many things at Joonargurh-Girnar are attributed. Khengar is the name of the prince who erected the palace there.—*Tod's Travels*, p. 511.

KHENTA, of the Vendidad, the modern Candahar.

KHENTI, HIND. Indigofera heterantha; Dug-Kenti, HIND. of Kaghau, is a species of Indigofera, and the I. arborea, a shrub growing to 7,000 feet in the Panjab Himalaya, is also called Kainti.

KHEORA, HIND. Pandanus odoratissimus.

KHEP, HIND. Crotalaria burhia.

KHER, in lat. 18° 59', long. 76° 46', in the Dekhan, on the right bank of the Godaveri. The mean height of the village is 1,293 feet; level of the Godaveri is 1,245 feet. It is also known as Ganga-Khair and Khair. It is enclosed by a strong wall, and was a place of importance until the middle of the nineteenth century, when it was plundered by Rohillas.—*Cullen*.

KHERABA or Kheroa, HIND. Cotonaster obtusa.

KHERBEK, or Kurbek-Aswad, ARAB. Kherbek siab, PERS. Helleborus niger, black hellebore.

KHETRANI.

KHERCHI, an important branch of the Chohan Bajpoot.

KHERD'HUR. The land of Kher, also called Kheraloo, but more properly Kherala, 'the abode of Kher,' the Kher being a shrub of great utility in these regions. It is a remote part of Rajputanah, in which the Bahtor Rajpoots first established themselves, expelling the Gohil tribe. Kherd'hur is named, in all probability, from the superabundant tree of the desert termed kher, and d'hur, 'land.' Its astringent pods, similar in appearance to those of the liburnum, are used in food. Its gum is collected as an article of trade; the camels browse upon its twigs, and the wood makes their huts.—*Tod's Rajasthan*, Vol. ii, p. 303.

KHERI, HIND. A kind of iron.

KHERIAH, an aboriginal tribe settled on the plateau of Chota Nagpur. The Kheriah build substantial, comfortable, houses. They say that their first settlement was Pora, a village on the Koel river. Their language, customs and appearance is sufficiently approximate to those of the Mundah as to evidence a consanguinity, and they are regarded as an offshoot of the Santal or Ho race. They worship their river, the Koel, with rites similar to those with which the Santal or Ho adore the Damuda. The Kherria, Bendkur, Birhore and Bhuhar are described as regularly wild inhabitants of the hills and jungles who have no fixed villages, but move about from place to place, burning down the jungles, sowing in the ashes, and after the harvest, moving elsewhere.—*Dalton*, p. 155; *Campbell*, p. 36; *W. W. Hunter*.

KHERKHAH, a river in Khuzistan.

KHERNIA, BENG. Phaseolus mungo, *Linn.*, Kidney bean.

KHEROOYA, Phaseolus mungo.

KHERSON, the road from Nicolaieff, towards Kherson, is excellent. The views around are all steppe; it holds the remains of the great Howard, the friend of the captive and the miserable. It is a very considerable town, on the right bank of the Dnieper, the ancient Borystenes. It owes its existence to prince Potemkin.—*Porter's Travels*, Vol. i, p. 16.

KHERTIK, AR., also Kherbek and Kurbec-ul-aswad, AR. Helleborus niger.

KHESAREE, BENG. Chickling vetch, Lathyrus sativus.

KHET, HIND. A field.

KHETI-BARI, also Khet-karn, HINDI. Agriculture.

KHET-PAPRA, BENG. Indian madder or five-leaved Mollugo; Mollugo pentaphylla, also Hedyotis burmaniana.

KHETRANI, the occupants of Barkhan, a mountainous district to the north of Beluchistan.

KHILJI.

KHETRI, see **Khatri**, **Kahetrya**, **Surya**.

KHEW, **SINDI**. *Bignonia undulata*, **Roxb.**

KHETTRU-PUTPUTEE, **BENG.** Indian madder or five-leaved Mollugo; Mollugo pentaphylla, also *Hedyotis burmaniana*.

KHEZAIL, a powerful and warlike tribe inhabiting the banks as far as the large village of Semavah, on the Euphrates, where the women are proverbial throughout the country for beauty of feature, and perfect symmetry of form.—*Mignan's Travels*, p. 194.

KHEZERJ, see **Khazerij**.

KHICHA, **HIND.** *Grewia betulaefolia*.

KHICHAR, **HIND.** *Lycium ruthenicum*.

KHICHRA, also **Khichri**, **HIND.** A mixed food of rice and dhol.

• **KHICHUR**, see **Sanataria**.

KHIDR, see **Khizr**, **Khajah Khizr**.

KHIDMATGAR, **PERS., HIND.** A servant, a lacquey, a personal attendant.

KHIDMATI, **HIND.** A sweeper, an attendant of a mosque.

KHIKHI, **HIND.** *Zizyphus jujuba*.

KHILAF-I-BALKI, **PERS.** *Leila-o-Majnun*, **HIND.** *Salix babylonica*.

KHILA HARIVANSA PARVA, a modern supplement to the *Mahabharata*, containing legends about *Krishna*.

KHILAT, **PERS.** A robe or dress of honor bestowed by rulers in Southern Asia, on servants whom they desire to honor. It usually consists of a set of shawls and pieces of silk, *kimkhab*, &c., presented as a mark of honor, but it may be any article of dress presented by the ruling or superior power as a mark of distinction.

KHILJI. **Lieut. Leech**, in his valuable vocabulary of the languages west of the Indus, advances the opinion that the *Afghans* were originally a Turkish or *Moghul* nation, but that, at present, they are a mixed race, consisting of the inhabitants of *Ghaur*, the Turkish tribe of *Khilji*, and the *Perso-Indian* tribes dwelling between the eastern branches of the *Hindoo Kush* and the upper parts of the *Indus*. But though the *Khilji* are *Turk*, by descent, they had been so long settled among the *Afghan* that they had almost become identified with that people; but they probably mixed more with other nations, or at least with their *Turki* brethren, and would be more civilised than the generality of *Afghan* mountaineers. The *Khilji*, or *Khalji*, however, are a *Tartar* tribe, part of which, in the tenth century, was still near the source of the *Jaxartes*, but of which a portion had even then been long settled between *Seistan* and *India* (i. e., in the *Afghan* country). In the tenth century they still spoke *Turki*. They seem very early to have been closely connected with the *Afghan*, with whom their

KHIU PING.

name is almost invariably associated.—*Proceedings of the Bombay Geographical Society for 1838*; *De Guignes*, Vol. iii, p. 9, Note; *D'Herbelot*, article "*Khaladj*;" *Ibn Haukal*, pp. 207, 209; *Elphinstone's History of India*, Vol. i, pp. 528-29, Vol. ii, p. 26.

KHILLU, **HIND.** of *Muzaffargarh*, the pith inside the flower stalks of *Saccharum moonja*, eaten as a diet.

KHIMOR, **HIND.** *Viburnum cotinifolium*.

KHIND-RRAY SHAH, a *mohurrum* fuqeer.

KHI-NIE, a Chinese who travelled in India. There was much intercourse between the buddhists of India and China, for some centuries after the introduction of buddhism into China, but in the 10th century, after A.D. 975, the religious visitors from China became greatly more numerous. Chinese pilgrims passed years in India in studying their religion and wrote narratives of their travels. Of these, there have been published the travels of *Fa Hian* A. D. 399-414; of *Hsien Thsang* A. D. 628-645; of *Hoei Singh* who set out A. D. 518. A later traveller *Khi-Nie*, who journeyed A. D. 964-976, was sent by the emperor of China at the head of 300 monks to seek relics of Buddha and to collect books of palm. These pilgrimages continue, and *Col. Yule* had met pilgrims at *Hardwar*, who had crossed the Himalaya from *Mahchin* to visit the holy plains at *Jawala Mukhi* in the *Panjab*.—*Yule Cathay*, Vol. i, p. xxii, Vol. ii, p. 411.

KHINJAK, **HIND.** *Pistacia terebinthus*.

KHI-OUT-CHI-U-HI KAI-TSI-KIO, see **Kabul**.

KHIU PING. In China, the first civil and military mandarins who distinguish themselves in the administration or in war, receive the titles of *koung*, *heon*, *phy*, *tze*, and *nan*. All the officers, civil and military, of the Chinese empire, are divided into nine orders, the *Khiu-ping*, distinguished one from the other by certain buttons, or rather balls, of the size of a pigeon's egg, which are worn above the official cap. This distinctive ball is of plain red coral for the first order, of carved coral for the second, of a transparent deep blue stone for the third, of pale blue for the fourth, crystal for the fifth, of some opaque white stone for the sixth, and for the seventh, eighth, and ninth, of gilt and wrought copper. Every order is subdivided into two classes, the one active and official, the other supernumerary; but this makes no difference in the balls. All the official personages comprised in these nine orders, are designated by the generic term of *kouang-fou*. The term mandarin is unknown to the Chinese; it was

invented by the first Europeans who visited the country, and is probably derived from the Portuguese word "*mandar*" to command, which they made mandarin. See China.

KHIP or Khif, or Khippi, HIND. A fibrous plant, *Crotalaria burrhea*, but also applied erroneously to *Orthanthera viminea*.

KHIR, HIND. Rice boiled to a porridge with milk.

KHIRA, HIND. *Cucumis sativus*, Linn.; *C. utillissimus*.

KHIRAJ, AR. Tax, tribute, land tax. The land tax is, in all eastern countries, generally the largest item of revenue. In Timur's Institutes, the tax was fixed at a third of the produce on all irrigated land, besides a certain due for using water from the public reservoirs; the land tax has, from the most remote ages, been the chief source of revenue in all Asiatic countries. The Sassanian kings of Persia established the tax at a third of the value of the produce; but when calamity overtook the crops, the cultivators received advances from the treasury. These are still continued in Southern India and are called Takkavi, or support. By mohammedan law the produce of the land is liable to two imposts, namely, the Ashr or tithe, a poor-rate due only on the actual produce of the soil; and the Khiraj or tribute, generally imposed on land within reach of irrigation or running water. No land can be subject to both Ashr and Khiraj at the same time. The Khiraj was imposed on Syria by Omar, and on Egypt by Amru; but Arabia is Ashri, a very small part of it being under the influence of running water. The Khiraj is of two kinds Mukassiamah and Wazeefa. The former is due on the actual produce only, and resembles the Ashr; the latter is due whether there be any produce or not. The kaliph Omar levied the Khiraj in Syria and Persia, the rate varying according to the value of the produce. The hindoo kings exacted one-sixth of the produce, besides a poll tax, which was Mukassiamah; but the mohammedans converted it into Wazeefa in the time of Sher shah; and the emperor Akbar, while adopting the same system, carried it into effect with greater precision and exactness. In Persia, in the days of Timur, the land tax amounted to one-tenth of the produce of the soil; but the husbandman was loaded with a number of other taxes, which altogether exceed half the produce. In India, Timur's descendant, the emperor Akbar, abolished all arbitrary taxes and fixed the revenue according to the value of the different lands, which were divided into four classes:

1. Poolej, which never lies fallow.

2. Perowty, kept out of cultivation a short time, for the soil to recover its strength.

The Poolej and Perowty were each of three kinds; best, middling, and bad. The produce of a beegah of each sort was added together, and a third of the sum was considered as the average produce of Poolej or Perowty land; one-third of it being the revenue. Sher shah exacted rather more.

3. Checher, was land which had suffered from inundations, or excessive rains; and received grants of remissions for five years.

4. Bunjer, was land which had suffered from great inundations, and enjoyed still larger remissions.

Rewards were granted by Akbar for high cultivation, and the land settlement was made for periods of ten years.—*Ayeen-i-Akhbari*; *Neil Baillie on the Land Tax*, quoted in *Markham's Embassy*, p. 31.

KHIRBUNDUM, a river near Terintee in Cuttack.

KHIRBUZAH, DUK., HIND., PERS. *Cucumis melo*.

KHIRCHA of TR., IND. Khircha indzar, PUSHRU; *Grewia betulæfolia*.

KHIRCHANG, ARAB *Sinapis chinensis*. Mustard seed.

KHIRGAI, a circular tent. Moorcroft relates that after his first interview with the pizada, of Talikhan, he was lodged in a khirgah, near Kunduz, the only furniture of which was a few mats, and a clay-stand for a lamp. The wants of a Turkoman are few in number, a tent, called a khirgah, shelters the whole family, and this is of a superior manufacture to anything of the kind made by the nomadic tribes of Persia. They can make these khirgah warmer than the best-built houses—a matter of some consequence to them, seeing how severe the winters are in the country they inhabit. The khirgah is conical in form, the frame-work being made of laths of hard wood interlaced one with the other, which can be opened or folded up at pleasure, according as they wish to camp or decamp; a camel, or at most two, is able to carry this tent. Thick felts are stretched either entirely or partially across this frame-work according as the Turkoman may wish to avoid the burning rays of the sun or protect himself from the rain or cold: they are very commodious, and of all sizes, and a high price is given for them by some of the Persian nobles.—*Moorcroft's Tr.*, Vol. ii, p. 480.

KHIRK, HIND. *Celtis caucasica*, grows to a good height; wood white, light, soft and weak; seldom used for any purpose. Insects attack it.—*Powell's Hand-book*, Vol. i, p. 540.

KHIRNI, or Khirni lod'h, HIND. The fruit or berries of *Mimusops kauki*.

KHIRNUB NUBTI, also *Khirnub shami*,
Ar. *Cerastia siliqua*, *W.*

KHIROBA, HIND., PUSHTU. Waziristan,
Cotoneaster rotundifolia.

KHIBWA, see Chandras.

KHISA, a hand flesh-glove. See Keesah.

KHISHING, or *Khising*, HIND., or *Khanam* of *Kunawar*, *Cedrela toona* var. *serrata*,
hill toon.

KHISMIS, PERS., HIND. Seedless raisins.

KHISHNIZ, HIND.? *Coriandrum sativum*.

KHISHT and *Komarej*, in the 14th century, held a higher rank than at present, although the inhabitants have, probably, retained their character unaltered. *Hamdallam Mastowfi*, describes them as two cities or towns situate in the midst of the mountainous region of the *Garmsair* or warm country; they have running streams, and produce date-trees and corn, watered both artificially, and by rain; the men are thieves and highway robbers, expert in the use of arms.—*Ouseley's Travels*, Vol. i, p. 269.

KHISTA, HIND. *Prunus armeniaca*.

KHITAE, see *Ken*.

KHITAI, is the name by which China is styled to this day by all, or nearly all, the nations which know it from an inland point of view, including the Russians, the Persians and the nations of *Turkestan*; and yet it originally belonged to a people who were not Chinese at all. The people of *Khitai* were a *Manchu* race who inhabited for centuries, a country to the north-east of China, lying east of the *Khingun* mountains and north of the river *Sira*, and whose allegiance was rendered alternately to the *khakans* of the *Turk* and the emperors of China. In the beginning of the tenth century the chief of one of their tribes made himself supreme, first over his own entire race, and then successively over the adjoining nations of Asia from the sea of *Corea* to the *Altai*. The son of this conqueror having assisted to place on the throne *Kao-tsu* of the brief dynasty of the later *Tein*, this prince in return not only transferred to the *Tartar* a large tract of northern China, but agreed to pay him yearly tribute, and to acknowledge his supremacy. The next Chinese sovereign kicking against these degradations, the *Khitai* ruler overran all the provinces north of the *Yellow River*, and established his own empire within them, under the name of *Leao* or the *Iron Dynasty*. This *Khitai* empire subsisted for two centuries in northern China and the adjoining regions of *Tartary*.—*Yule, Cathay*, Vol. i, p. 116.

KHITMI, PERS. *Malva sylvestris*.

KHIU, SINDI. *Bignonia undulata*.

KHIVA. The *khanate* of *Khiva* comprises a vast region along the *Caspian* from *Persia*, north to the *Kirghis Tartar* country and east to the *Oxus* and the lake *Aral*. It has only, according to *Burnes*, a population not exceeding two hundred thousand inhabitants. He describes them as organized bandits; and, according to other authors, they are not generally better than predatory savages. It is agricultural where the ground is sufficiently fertile for cultivation. There are few horned cattle; sheep, goats and horses are numerous, and all these are used as, and considered the chief, food of the inhabitants. There are few manufactures, except some coarse cotton and silk stuffs, made by the women. The inhabitants of *Khiva*, including the *Turkoman*, are, however, estimated by *M. Moravief*, at three hundred thousand: of these, thirty thousand are *Usbek*, lords of the soil by right of conquest. *Khiva*, amongst orientals is generally known by the name of its principal city *Hurghunj*, i. e., *Huri Gunje* (signifying the town or place of the *Huri*) it was so named by *Timur Lang* (*Tamerlane*), either from the beauty of the place, or of the women, and the *Great Desert*, *Sahra*, or plain of *Central Asia*, is usually called by them the *Dhasht*, or plain, of *Kaptchak*. *M. Moravief* describes *Khiva* as a rich oasis watered by irrigation from the *Amu*, or *Oxus*, on which it is situated, and productive. He estimates its length and width at more than one hundred miles, says that it contains five considerable towns and many villages, and that three hundred thousand persons acknowledge the *khan* of *Khiva* as their sovereign. From its centre to the banks of the *Caspian* extends a vast and arid steppe, three hundred miles in extent which is passed by camels in seventeen days. On the north, it is bounded by the course of the *Amu*, on the south-east a steppe separates it from the kingdom of *Bokhara*, and on the south-west it is separated by sandy plains and steppes from *Teke*, which he adds is an oasis refreshed by watercourses swollen by the rain. The latitude of the town of *Khiva* is forty-one degrees, forty minutes, and its longitude, from the *Islands of Ferro*, seventy-eight degrees, ten minutes. The desert between *Khiva* and *Merv*, is a broken and irregular surface of deep sand with a small growth of brush-wood affording excellent fuel, and the thorny herb which the camel loves.

The *Ilayat* families tributary to *Khiva*, were 195,000, viz.:

Yamut... 15,000	Kazzak... 40,000
Goklan... 20,000	Ibdar..... 15,000
Chosdar... 2,000	Sarokh ... 15,000
Kalpak... 30,000	Uzbek.... 40,000

The *Chosdar* are said to have been brought

KHIZR.

from the further borders of the Oxus by Mahomed Rahim Khan. The people of Khivá are estimated at 300,000, of whom are 30,000 Uzbek, 100,000 Sat, or Sart and 100,000 Kara kalpak, south of lake Aral, the remainder are Turkoman a few Kirghiz and Tajik.—*Markham's Embassy*, pp. 116, 117; *Fraser; Ferrier; Dr. Wolff's Bokhara*, Vol. ii, p. 121; *Vigne's A personal Narrative*, pp. 401 and 463; *Bjornstjerna's British Empire in the East*, p. 214; *Moravief Travels in Turkomania*. See Kharism.

KHIYAR, HIND. Cucumis sativus.

KHIYAR or Shambar, HIND. Cathartocarpus fistula.

KHIZA, HIND. Phelipæa calotropidis; Habat-ul khizra, is the Rhus acuminata.

KHIZR. The Hebrew notions about the identity of Phineas and Elias have been adopted and expanded by the mahomedans, who also identify in some way with them, their mysterious prophet Khidr or Khizr. Hermitages or chapels dedicated to Khidr and Elias appear to have been very numerous in mahomedan countries, especially on hill-tops. And the oriental christians and semi-christians also always associate Elias with mountain tops. There seems to be scarcely a prominent peak in the Greek Archipelago with which the name of Elias is not connected. Throughout India, Khizr is a popular mahomedan saint who was, it is said, a servant of Moses, a great prophet, also Phineas, Elijah. The people of Bengal launch boats on the Ganges in his name. He is supposed to be immortal; having on one occasion, drank of the waters of immortality, said to be situated in regions of darkness in a remote corner of the world, and some identify him with Enoch, some with Elijah. He is supposed to perambulate the world, like the wandering Jew, and has occasionally appeared to different people. He is always clad in green, as his name in Arabic indicates. The government of Kassan terminates, and that of Sulmania in Kurdistan commences at the river Leilan: near this is a small building, a ziyarat or place of pilgrimage, called the Makan of Kidder Elias, or resting place of the prophet Elias. The mahomedans believe that Elijah never died, and that he is still on earth, where he is to remain until the coming of Jesus Christ. They call him Khizr, or ever-green, on account of the everlasting life which he enjoys, and by which he is kept ever in a flourishing condition, in a paradise which, say they, might be taken for heaven itself. In reference to this, a Turkish poet observes, "keep yourselves from believing that this world is your home, your home is in heaven alone, strive therefore

KHOGILU.

by the means of virtue to reach that home where Elias dwells, and where a place is perpared for you." These notions of the mahomedans are derived from the Jews. Jesus himself was taken for Elias, re-appearing after nine centuries of concealment. The prophecy that Elijah should come before the great and terrible day of the Lord, has probably given rise to the notion, that he had not yet completed his part on earth. In northern India, on the Fridays of the month Shaban, along the banks of the Jumna and Ganges, mahomedan women launch tiny boats on the rivers in his name.—*Ibn Batuta; Burton's Scinde*, Vol. ii, p. 249; *Rich's Residence in Koordistan*, Vol. i, p. 52; *Yule's Cathay*. See Khajah Khizr.

KHIZRABAD, see Lat.

KHNENTA. The eighth settlement of the Arian was in Khnenta, where Vehrkana is situated. According to Haug, by this country, Kandahar is to be understood: Vehrkana cannot be Hyrcania, as is generally supposed, but is the city now called Urghandab, situated in Kandahar. The curse of Ahriman was pæderastism, a vice known historically to be un-Arian and Turanian.

KHO, is a population of about 400,000 people occupying the delta of the Mekhong, in Kambogia, between Siam and Cochin-China. The remaining 100,000 of the population being Chinese, Cochin-Chinese, Siamese, Malays, Portuguese and mixed races. See Kambogia.

KHO, HIND. Oreoseris lanuginosa.

KHOAI, a river near Sacstagunge in Sylhet.

KHOAJA, properly Khaja, a man of distinction, a gentleman. See Khaja.

KHOBOON, SINGH. Saffron.

KHODON-GARON, a mohurruum faqeer.

KHODRA, GUZ. Paspalum frumentaceum.

KHOGANI, see Khyber.

KHOGEER, a native saddle, a pack-saddle. Khogeer shah, a mohurruum faqeer.

KHOGILU. According to the Jahan Numa, one of the earlier divisions of the province of Fars, was into the five circles or departments called Kureh, and named Istakhr, Darabjird, Shapur, Ardashir and Kobad. At present, it consists of three principal parts, viz., 1, Fars proper (Persis Proper); 2, Laristan near the Persian Gulf; and 3, Behbahan, or the country of the Khogilu, which represents the Kureh of Kobad. Behbahan is bounded on the north by the great belt of mountains which separate Irak Ajem from the southern provinces of Persia: the northern and north-eastern shores of the Persian Gulf form its boundary to the south, Ram-Hormuz and the Ka'b country lie to the west, while

KHOGILU.

Shulistan separates Behbahan on the east from the direct dependencies of Fars. On the east and south-east, Behbahan is surrounded by the Mamaseni tribe: on the north and north-west by the Bakhtiyari, and on the west and south by the Ka'b Arab. Also, the mountainous region to the north and north-east of the plain of Behbahan is occupied by the Khogilu tribes,—and the districts of Lirani and Zeitun, near the Persian Gulf, together with the fortresses of Gul-i-gulab, all come under the control of the governor of Behbahan. On leaving the country of the Mamaseni, we enter the territory of the Khogilu, a tribe as wild and as lawless as their neighbours to the east, and as the Bakhtiyar clans who occupy the mountainous tracts to the west. The Khogilu, together with the two above mentioned tribes, belong to the great family of the Lur, and speak a rude jargon of the Persian language, or, more probably, the corrupted old tongue of Fars—the Farsi Kadim. The other great divisions are the Lek and Kurd. The origin of these three tribes has never yet been satisfactorily ascertained. They are neither of the Arab nor of Turkish descent, and may therefore be looked upon as the aborigines, or at least the oldest settlers of Iran. They seem always to have occupied the hilly country, which runs from the south-east to the north-west of Persia, and served to constitute the kernel of the Zend race. The different dialects spoken by these mountaineers are said to contain a number of words of the old Zend language; and up to the present day there is a clan among the Lek, which bears the name of Zend, and gave, in the last century, a ruler to Persia, in the person of Kerim-khan, Vakil. The Poles, whose true name is Lakh, are said to have descended into the plains from the Caucasus mountains, together with the Chekh, inhabitants of Bohemia. All these tribes are spread over the mountainous range and the intervening valleys, on the southern face of the great chain, which stretches from Hamadan and Zohab, towards Fars, from north-west to south-east. As to their external appearance, De Bode met with fewer tall men among the Khogilu than among the Mamaseni; but they are a very hardy race, and undoubtedly owe much of their vigour and muscular frame to their active pursuits, the simplicity of their diet, and the bracing air which they inhale in their mountain fastnesses. Their chief occupation consists in tending their flocks of sheep and goats, and they resemble in this respect, all the wandering tribes of Persia. Their usual food is the acorn, which is first bruised between two stones, and made into

KHONAR.

flour, by being dried in the sun. The women bake cakes of this flour. Independently of the Khogilu, there are several other tribes, who inhabit these mountains, such as the Jarumi, the Yusufi, and upwards of a thousand families occupying the plain of Behbahan, and settled in villages or dispersed in tents. These are the Juma-Buzurg, the Afshar, and some Arab settlers. The names of the Turkish tribes are, the Karabaghi, Agbaghi, Begdeli, Golebi, and Sheiri, speaking the Turkish language; while the Afshar, although of the same origin, have forgotten their mother-tongue. The Doveti, Ghesi, Mayaz-kuli, Barash, Milosi, and Juleki, are of the Lur race, and speak the Lurish dialect.—*Baron C. A. DeBode's Travels in Luristan and Arabistan*, pp. 275–284.

KHOHAH, HIND. Milk boiled till reduced to one-fifth its bulk and quite thick.

KHOIBU, a rude tribe near the source of the Irawadi.

KHOIRA, URIA? *Acacia catechu*?

KHOIT, see Kalkas.

KHOJ, HIND., literally, information, a system of tracking criminals to their homes and haunts. It rests in India solely on the responsibility of village headmen for the good behaviour of their charge. The men who incur the responsibility also enjoy certain privileges.—*Calcutta Review*, No. lxxiii, Sept. 1861, p. 11.

KHOJA, a tribe of mohamedans in Sind, Guzerat and Western India, said to be converts from the Bhatyn, a hindoo tribe of Cutch: the Khojah profess the sunni, but some the Ismaili doctrines of the shiah, persuasion. See Khajah.

KHOJEIN, see Khumia.

KHOJEND. At or near Khojend is a turquoise mine, but the stones found there are of a greenish hue, and far less esteemed than those of Nishapur, in Khorasan. There is another of very insignificant note somewhere in Kerman: these mines, yield all the true turquoise in the world.—*Fraser's Journey into Khorasan*, p. 105.

KHOKHAN, HIND. *Allium rubellum*.

KHOKAR, HIND. *Salvadora oleoides*, also its dried berries.

KHOLANGA, AR. Galangal.

KHOLASSAT UL AKHBAR, see Khondemir, Vathek.

KHOLENSTOFF, GER. Charcoal.

KHOLLUM DEEMISH, see Kush.

KHOMAN RASA, a hindi work, descriptive of the last sack of Chetore.

KHOMASEE, a particular kind of magic square.

KHOMIYE, HIND. *Macrotomia euchroma*.

KHONAR, see Jelalabad, Kaffir.

KHOND, see **Kond**.

KHOND EMIR, the son of Mirkhond, composed the *Khalasat ul Akhbar*. Khond Emir's second and larger chronicle was the *Habib-us-Siyar* or *Friend of Travels*.—*Ouseley's Travels*, Vol. ii, p. 400. See **Kondemir**.

KHONG, a name of certain Kambojian tribes, see **Ka**.

KHONGANI, see **Affghan**.

KHONG-BONG, a musical instrument of the Siamese, composed of a semi-circle of suspended tongues.

KHONG-JAI, or **Ku-ki**, until lately, occupied the hills to the south of the Koupooce, whilst in this position, little or nothing of them was known, but they caused fear from their vicinity. South of them lay the Poi, Soote, Taute, Loosei, and other tribes, better armed than they were, and of the same gens as themselves, but at feud with them. By these they were driven from their native hills, the task being rendered easier by the internal animosities of the Khong-jai themselves, and the Khong-jai are now scattered around the valley of Manipore, and thence through the hills to north and south Cachar. Thus they broke into distinct tribes, although occupants of the hills to the south of the valley of Manipore their traditions do not give the southern hills as the place of their origin, but rather lead them to the belief that it was in the north. The salique law rigorously prevails amongst the Khong-jai, but the influence of woman is great amongst them.

The Kuki country lies to the south of the Garo, Kasia and Mikir areas, or the hill ranges of Garo, Jaintia and Cachar in Sylhet, Tipperah and Chittagong—among the mountains to the north-east of the Chittagong province. There are new Kuki who came from the ruder parts of Tipperah and Chittagong, and their form of speech is not always intelligible to an old Kuki. The Manipur dialects and the new Kuki are mutually intelligible. In 1848-49, four Kuki tribes,—the Thadon, the Shingshion, the Chungsen and the Lumgum, were driven into north and south Cachar and into Manipur, from their locations by the Lushai people who speak a Kuki dialect but dwell further south. They were driven back by Colonel Lister and his Sylhet light Infantry. He entertained the new Kuki as soldiers, and they formed good outpost soldiers on the frontiers of both the Lushai and the Angami countries. Puthen is their chief deity, he is benevolent: and Ghumvishve is a malignant deity. The Kuki likewise worship the moon. They have no professed minister of religion. The Thempu, their priest and diviner, is not hereditary, and his

office is not coveted from fear of the initiatory rites. The Kuki occupy Sylhet, Tipperah and Chittagong, with an offset in Cachar who are called the Old Kuki. Those in Cachar are skilful in the cultivation and weaving of cotton. The Cachar Old Kuki are under 4,000 and are arranged into three divisions, the Rhangkul, the Khelma and the Betch. The Kuki are also called Lungkta. They are little civilized, are of an active, muscular make, but not tall. The tradition of the Kuki respecting their origin is, that they and the Mug, are the offspring of the same progenitor, who had two sons by different mothers. The Mug, they say, are the descendants of the elder, and the Kuki of the younger son. The mother of the younger having died during his infancy, he was neglected by his step-mother, who, while she clothed her own son allowed him to go naked. According to Coleman, (p. 234,) the Kuki are divided into a number of distinct tribes, totally independent of each other. The rajahships, he says, are hereditary, and the rajahs by way of distinction, wear a small slip of black cloth round their loins; and, as a father-mark of superior rank, they have their hair brought forward and tied in a bunch, so as to overshade the forehead, while the rest of the Kuki leave their's hanging loose over the shoulders. The Kuki arm with bows and arrows, spears, clubs, and the dah, or hand-hatchet, resembling the knife of the Nair on the Malabar Coast, and a most destructive weapon in close combat. They also wear round their necks large strings of a particular kind of shell found in their hills; about their loins, and on their thighs, immediately above the knee, they tie large bunches of long goat's hair of a red colour, and on their arms they have broad rings of ivory, in order to make them appear the more terrific to their enemies. The Kuki are vindictive; blood must always be shed for blood. They have but one wife, but they may, however, keep as many concubines as they please. Adultery may be punished with instant death by either of the injured parties, if the guilty be caught by them in the fact. The Kuki on the eastern frontier, the people are an entirely different race from the Kuki of the Chittagong jungles. The name by which they are commonly known is "Tipperah." In physiognomy some of them are like the Manipuri, but the greater part bear more resemblance to the Khasia tribes having strongly marked Calmuk, or Mongolian features, with flat faces and thick lips, not in general shorter in stature than Bengali, but far more muscular and strongly made. Many of them, with complexions scarcely darker than a swarthy

European. The villages contain perhaps from 100 to 200 inhabitants each, and each house is raised on bamboo piles 4 or 5 feet from the ground. The Kuki race of Assam were much addicted to make inroads on the plains, not for plunder, but to procure heads, and they have been known to carry off fifty heads in a night. On the death of a chief, the body is smoke dried and kept for two months with the family. If a rajah fall in battle, they immediately proceed on a head hunting expedition and bring in the heads of those they kill, hold feastings and dancings and, after cutting the head into pieces, send a portion to each village. This is considered in the light of a sacrifice to the manes of the deceased. In the spring of 1871, they made several inroads into Assam, for the purpose, as was alleged, of obtaining heads for the manes of a chief's daughter.

The Looshai dwell on the southern frontier of Cachar. In 1848-49, they drove up the Kuki, from the south, into Cachar. In their turn, they are being pressed up into Cachar, by the Poi, a tribe who are advancing from the south-east. The Looshai inhabit the hilly tract lying between Cachar and Chittagong, and claim and hold all the tract of country to the south of the parallel of the latitude of Chatter Choorah hill, and east of hill Tipperah to the Tepai river, is Burmese frontier.

Dr. Latham says, Khum means a village; Khumia, a villager. The Khumia and Kuki tribes occupy the hills of Sylhet, Tipperah and Chittagong, the Khumia on the skirts and the Kuki on the top of the hills, the Kuki are the ruder or more pagan, though also tinctured with hinduism. They term their supreme being, Khojein Putiang, to whom they sacrifice a gyal, and an inferior one is named Shem Saq, to whom they offer a goat. Shem Saq, is put up in every quarter of a village, in the form of a rude block of wood. Before this they place the heads of the slain, whether of men in war, or of animals of the chase.

If a Kuki man die at night his body is burned in the morning. Vegetables and rice are placed on the spot where the body was burned, and the relatives of the deceased address the ashes of the consumed corpse thus, "We bid you farewell to-day; whatever money and rice you have acquired, leave with us." On the following day friends resort to the deceased man's house, and offer up a sacrifice of a fowl to the gods Tavas and Sangron. Liquor is freely partaken of, the good qualities of the deceased are recited, and much lamentation is made. When a married man dies, all his friends assemble and bewail their loss. Vegetables and rice are cooked, and placed on the

left side of the corpse with a gourd or bottle of liquor. Amongst the Beli clan of Kuki, soon after death the corpse is washed with warm water, and covered up with a cloth. The principal deities worshipped are the Tavas and Sangron, to them fowls, pigs and spirituous liquor, are offered, in sacrifice, on all occasions of sickness, famine, or other affliction which they conceive is the surest method of averting evil and bringing their wishes and undertakings to a successful termination. The Kuki have no images or temples of any kind. The object of the Kuki inroads on the plains is not plunder, for which they have never been known to show any desire, but they kill and carry away the heads of as many human beings as they can seize, and have been known, in one night, to carry off fifty. These are used in certain ceremonies performed at the funerals of their chiefs, and it is always after the death of one of their rajahs that their incursions occur. The Kuki have been accused of cannibalism, and in one instance the charge seemed substantiated, but they disclaim the imputation with much vehemence. Nothing comes amiss to a Kuki—the elephant, rhinoceros, and beef, being equal delicacies. The new Kuki clans are presided over by rajahs and muntrees, who decide all matters of dispute brought before them; and in such respect do they hold their rajahs that their word is law. One, among all the rajahs of each class, is chosen to be the Prudham or chief rajah of that clan. The dignity is not hereditary, as is the case with the minor atjahship, but is enjoyed by each rajah of the clan in rotation. The Kuki smoke dry the dead bodies of the rajahs. After the death of a rajah his body is kept in this state for two months before burial, in order that his family and clan may still have the satisfaction of having him before them. Should a rajah fall in battle by any chance, they immediately proceed on a war expedition, kill and bring in the head of some individual, hold feasting and dancings, and then, after cutting the head into pieces, send a portion to each village of the clan. This was done on the murder of the Kuki rajah by the Nimzai Naga race. This is considered in the light of sacrifice to appease the manes of the deceased chief.

The Kuki cultivate rice and cotton, but in a manner quite opposed to the system pursued by the Cacharee and Naga, the former of whom raise three crops of rice from the same land, and the latter four. The crop is not cut till November, whereas that of the other hill tribes is cut in August and September; their cotton is also very fine. Besides this they grow tobacco, and all the usual

KHOOLINJAN.

vegetables met with in the hills. The men are powerful and hardy but turbulently inclined. Having been accustomed to war in their own country, they are exceedingly well suited for soldiers, and those that have been enrolled in the Kuki levy at Silchar have turned out well. They are also particularly modest and decent, each man living with his family in a separate house. The widows also live in houses of their own (in this respect like the Naga and Cachareo), built for them by the villagers. The men wear a large cloth, sometimes two, wrapped loosely round the body, and hanging from the shoulder to the knee. Underneath this they wear nothing, the whole body being bare, in which they consider there exists no want of modesty, as such has been their custom from time immemorial. The women wear a short striped petticoat, reaching from the upper part of the stomach half way down to the knee. Married women have their breasts bare, but all virgins are covered, wearing a similar cloth to the petticoat wound round the bosom underneath the armpits. They wear their hair prettily plaited at the back, the two ends being brought round in front and tied just above the forehead in the form of a coronet. Like all hill people, the Kuki are dirty in their habits, very seldom washing their bodies. The sites of the Kuki villages are well chosen on the broadest parts of the highest ridges, with water near at hand, generally a small hill stream. Some of the chief villages contain as many as 200 houses, commodiously built on platforms raised between three and four feet from the ground. Every part of the house is formed of bamboo, there being but few trees of any kind.—*Butler's Travels and Adventures in Assam*, pp. 85, 99; *J. H. Reynold's Embassy*, Vol. of 1864, of B. A. S. J.; *Aitcheson; Latham; McCulloch's Records, Government of India, Financial Department*, pp. 42, 58.

KHONNAY, TAM. Cathartocarpus fistula.

KHOOBANI, BENG. Apricot, Prunus armeniaca.

KHOODA, see Wrightia antidysenterica.

KHOODI-JAM, BENG. Antidesma paniculatum.

KHOODI-OKRA, BENG. Crozophora pilcata, Ad. Juss.

KHOJULEE, BENG. Hibiscus pistus.

KHOOKOONDEAH, URJA? A tree in Ganjam and Gumsur. Extreme height 30 feet, circumference 2 feet, and height from ground to the intersection of the first branch, 9 feet. A common tree, only used for fire-wood.—*Captain Macdonald*.

KHOOLFEE, a class of mushaekh.

KHOOLINJAN, BENG. Alpinia galanga.

KHOOSH-ROZ.

KHOOLJE KI BAJI, DUK. Chenopodium album.

KHOOMAN, see Rajpoots.

KHOONGHO? A tree of Akyab, which grows to a large size, and is plentiful in the Sandoway district. The wood is used for making oars for boats, and sometimes in house-building.—*Cal. Cat. Ex.* 1862.

KHOORD CABUL, a very formidable defile or pass about five miles long, shut in by lofty hills, between whose precipitous sides the sun, in winter, only looks in for a little. It was through this, after the evacuation of Cabul, that 4,500 fighting men, including 700 European soldiers and 12,000 native camp followers, with their women and children endeavoured to retreat, but the Affghans fired on them and 3,000 souls perished in the attempt.

KHOORAPELUM? Cucumis sativa.

KHOORPA, or Karpa, HIND. A weeder.

KHOORUM, afterwards Shah Alam, was son of Aurungzeb, by a Rajput princess of Amber, of the Cutchwaha tribe, and hence probably his name Koorm, synonymous to cutchwa, a tortoise.—*Tod's Rajasthan*, Vol. i, p. 367.

KHOOSII, PERS., HIND. Pleasant, agreeable, hence Khoosh Bash, a well-to-do person; Khoosh Khared, an open market; Khoosh-hal, in good condition; Khooshi, pleasure.

KHOOSHA, HIND. Boiled rice.

KHOOTAN, BURM. A loose-grained light wood of British Burmah, recommended for packing cases: used for black boards in Burmese schools, breaking weight, 114 lbs.—*Cal. Cat. Ex.*, 1862.

KHOOSH-ROZ. The Noroza, or 'New Year's Day,' when the sun enters Aries, is one of great festivity among the mohamedan princes of Persia; but of that alluded to by Pritha Raj, we can form an adequate idea from the historian Abul Fazil. It is not New Year's Day, but a festival especially instituted by Akbar, and to which he gave the epithet Khooshroz, 'day of pleasure,' held on the ninth day (no-roza), following the chief festival of each month. The court assembled, and was attended by all ranks. The queen also had her court, when the wives of the nobles and of the Rajput vassal princes were congregated. But the Khooshroz was chiefly marked by a fair held within the precincts of the court, attended only by females. The merchant's wives exposed the manufactures of every class, and the ladies of the court were the purchasers. His majesty was also there in disguise, by which means he learned the value of merchandize, and heard what is said of the state of the empire and the character of the officers of government. Abul Fuzil

KHOOSROO.

thus softens down the unhallowed purpose of this day ; but posterity cannot admit that the great Akbar was to obtain these results amidst the Pushto jargon of the dames of Islam, or the mixed Bhaka of the fair of Rajast'han. These 'ninth day fairs' were the markets in which Rajpoot honour was bartered, and to which the brave Prithi Raj makes allusion, "bartering their honour on the 'No-roza.'" At these royal fairs were also sold the productions of princely artizans, men and women, and which out of compliment to majesty, made a bounteous return for their industry.—*Tod's Rajasthan, Vol. i, p. 345.*

KHOOSROO. The Tak-i-Khesra, formed part of the royal palace of Ctesiphon. The palace was commenced by Sapor II, the ninth king of the Sassanian dynasty, at the beginning of the fifth century. It was added to about a century later by another king of the same line, Nooshirwan, usually called Koosh-roo I, and was finished by his grandson, Kooshroo Parwez or Khoosroo II. The part remaining is merely a portion of the facade and one of the halls of audience,—not a tenth part probably of the original building. It was covered with brilliant white stucco, and the halls were decorated with historical paintings and figures of the heavenly bodies. It was taken from the Persians by the Arabs in the time of the caliph Omar, in the sixteenth year of the Hijra, and was called by them the 'White Palace.' Its splendour and magnificence as related by the Arabian historians is scarcely credible. The dimensions of the hall are,—105 feet in height, 95 feet in width, and 180 feet in length. The building remained entire till the time of the caliph Al Mansoor, who endeavoured to destroy it in order to make use of the materials in the construction of his palace at Baghdad. At the close of the ninth century, the caliph Muktassi-b-illah regularly unbuilt the White Palace, in order to erect his famous edifice called the Taj, at Baghdad, and merely left this hall as a specimen of the Sassanian architecture. See Khosroo Parviz.

KHOOSROO, a famous poet of Hindustan, near whose tomb, are those of khajah Kutub-din, of Muazzam, son and successor of Aurungzeb, of Bahadur shah, the tomb of Altamsh, whose daughter the sultana Raziah, occupied the throne : the tomb of Imam Mushudee, the spiritual guide of Akbar is west of the mosque of the Kutub-i-Islam. The massive tomb of Toghalaq shah is outside the southern wall of Toghalaqabad, and was built by his son Mahomed. The Leela Burj, a blue tomb near the Humayoon, covers the remains of a holy syed. The poet Khoosroo's

KHORASAN.

tomb is side by side in the same court-yard with the saint, his friend and contemporary. No imaginary being, but a living hindoo princess, Dewilde, inspired the songs of Khoosroo. His honey-tongued muse got him the surname of the Parrot of India. The date of his tomb is 1350.—*Tr. of Hind., Vol. ii, p. 222.*

KHOOTBA, AR. Amongst mahomedans, an oration or sermon, a prayer in behalf of the ruling sovereign.

KHOOTOZE KAUMOOZE, see Kush or Cush.

KHOPALU, see Tibet.

KHOPRA, HIND. Dried kernel of the cocoa-nut. K'hopra ch'hilni ki chouki, an instrument for rasping the kernel of the cocoa-nut.

KHOR, BENG. *Andropogon muricatus*.

KHOR, a territory south-east of Ladak and eastward of the Byltæ. Its people are supposed to be the Chauranai Seythæ of Ptolemy.—*A. Cunningham.*

KHOR, HIND. *Juglans regia*, also the *Hedychium spicatum*, Bau khor is the *Pavia indica*—*Royle.*

KHOR, PERS. A marine lagoon. See Khuzistan.

KHORA, a race in Ghur.

KHORA, HIND. *Cucurbita maxima*.

KHORA, HIND., PUSHTU. Saltpetre.

KHORAH, see Kol.

KHORAN, a tribe who, a little before the birth of Christ, ruled over Affghanistan, the Punjab and Khorasan.

KHORASAN, a province in the S. E. of Persia. Khorasan means the province of the sun, or of the east. Nadir shah who belonged to the tribe of Affshar, one of the seven Turkish tribes that had attached themselves to the family of the Suffavean dynasty, was born of obscure parentage, in the province of Khorasan, A. D. 1688. The emperor Baber tells us, in his Commentaries, that in his time the people of India applied the term Khorasan, to all the regions west of the Indus. Khorasan has for its boundaries the Oxus and country of Balkh to the N.E. and E., Cabul and Seistan to the S., and to the W., the provinces of Irak and Asterabad. Meshed, the capital of the Persian division of Khorasan is situated about two farsang from the ruins of the ancient city of Tous, and is celebrated for a very superb sepulchre, in which repose the relics of imam Raza, and those of the caliph Harun-ul-Rashid. Those provinces which lie immediately north of Khorasan, between the Oxus and the Caspian, and which formed part of the kingdom of Khaurizm, are possessed by a number of tribes, which trace their descent from some

men of a Moghul family, who are represented to have emigrated at a very early period from the northern parts of Tartary to the provinces they now inhabit. They married, according to this account, the women of the country where they settled; and, though their descendants were not deemed worthy of being ranked in the tribes of their fathers, they were, as a robust and warlike race, denominated Turkoman, which signifies "like or resembling to Turks." The ancient Khorasan stretched far into Chinese Tartary and was founded and occupied by several colonies. The kingdom of Persia is bounded to the east by Khorasan, which is upwards of four hundred miles in length, and near three hundred in breadth. This celebrated region contains many fruitful plains, some lofty and irregular ridges of mountains, and several wide tracts of desert. It is, except in its most fertile districts, but partially supplied with water; and from local position, has, perhaps, been more exposed to predatory invasions than any country in the universe. Whenever Persia was distracted by internal factions, or had to sustain foreign attack, the tribes of Tartary crossed the Oxus and spread themselves over Khorasan. It was this province which the valour of Roostum had to defend against the continual inroads of Afrasaib. The Seljuk chiefs invaded it long before their rule was extended over the other parts of the empire to which it belongs. It suffered greatly from the ravages of Chenghiz and of Timur: and, during the reigns of the first Saffavian kings, the Usbeks, who had conquered the country of Bokhara, made annual attacks upon its fields and cities. The genius of Abbas the Great checked these ruinous inroads: and the victorious sword of Nadir made this race of plundering Tartars tremble for their own possessions. But the death of that conqueror left his native province more exposed than ever to hostile invasion: for, while his descendants, spite of the vast inheritance which he had bequeathed them, exercised a mock sovereignty over the city of Mashed, several military chiefs, taking advantage of the distracted state of the empire, seized upon the different forts of Khorasan; and, aided by the confusion of the times, succeeded in establishing a number of small principalities, over which they exercised an almost regal sway; making war or concluding peace with their petty neighbours as it suited their interest; and sometimes defying, and, at others, paying homage and tribute to the powerful monarchs by whom they were surrounded. This province has Irak to the west, the country of Candahar, and Cabul to the east.

It stretches to the north as far as the banks of the Oxus, and is bounded to the south by the arid plains of Seistan. Khorasan is peopled by many races: its warlike inhabitants boast their descent from Arabian, Kurd, Turkish and Affghan tribes, who came into the province at different periods to subdue or to defend it: but neither their having so long inhabited the same soil, nor a sense of common danger, has softened those inveterate prejudices, or abated that rooted hatred, with which these races regard each other: and it had been the policy of the monarchs of Persia to increase divisions, which enable them to keep in subjection a country, whose inhabitants, if united by any feeling that resembled patriotism, would have been dangerous, for the men of Khorasan, from the robustness of their frame, and from their being continually inured to war, are proverbially brave: and Nadir shah, with the vanity of a native, but not without truth, used to term this fine province "the sword of Persia." The Kayn Arabs have long enjoyed the reputation of being the hardiest and the bravest of the infantry of Khorassan. A part of the district of Kayn borders on the desert of Seistan, while it is bounded in another quarter by the territories of the Affghans. The Kayn Arabs are computed at about twenty thousand families. The usual force which their chief maintains, is between two and three thousand infantry, and a few horse. The Iranian races, called also Indo-Atlantic, also Caucasian, have always been known for their refinement, and high civilization, from which Europe borrowed through the Byzantine and Greek culture, and the Persians have long and faithfully retained the features of its national characteristics. Though overrun by the Semitic and Turanian races, the Iranian has borrowed little or nothing from them, but has exerted over them a powerful influence. According to Khanikoff, the Iranian race of Persia came from the east of modern Persia about Segestan and Khorasan and moved to the west in prehistoric ages, and though altered by the attacks of the Turko-Tartar tribes from the north, or, from contact, on the west and south, with Turanian and Semitic elements, the Mede is everywhere recognisable as the same as described by Herodotus and later Greek writers. The arrow-headed writing at Persepolis enumerates the Iranian people of that day. The form of the Iranian is spare, but elegant, even noble, but there have always been differences between the Eastern and Western Iranian. Iron and native steel is met with in Mazanderan, Khorasan and Bactria. The former as well as copper and

lead ores, prevail in different parts of the eastern provinces, but more abundantly in the pashalics of Diyar-Bekr and Sivas, with the addition of gold, silver and precious stones.—*Markham's Embassy*, p. 108; *Townsend's Outram and Havelock*, p. 72; *Tod's Rajasthan*, Vol. ii, p. 282; *Kinneir's Geographical Memoir*, pp. 169–175; *Malcolm's History of Persia*, Vol. ii, pp. 239–240; *Malcolm's History of Persia*, Vol. ii, pp. 215–216, 224–225; 239–240; *Khanikoff "Sur l'Ethnographie de la Perse."* See Arian, Iran, Kirman, Khalif, Kandahar, Kabul, Koolk, Khoran, Khond Emir, Kuvir, Fars, Persia.

KHORASAN, see Istakhr.

• KHORASANI, a name for *Guizotia oleifera*, called also black til, also "Niger" in the English market, and known as "Ramtil" and "Sirgooja."

KHORAT ? of Bombay, *Allium porrum*, W.

KHORDAD, PARSEE, from Haurvatat, completeness, the sixth Amshaspand of the Parsees.

KHORD-I-AVASTA, one of the religious books of the Parsee religion.

KHOREWAH, also written Kharawah, a considerable tribe dwelling near the Oraon and to the north of the Lurka Kol, in the highest hills to the north of Jushpur, and in those between Sargujah and Palamow. They speak much the same language as the Ho, Sontal, Bhumi and Mundah, and they appear to be of the same stock, though much less civilized. They are described as of small stature, with shaggy heads of hair and some beard, and to be of a lighter colour, and better looking than their neighbours. They occupy the hills and highest tablelands of Sargujah and Jushpur, and they possibly were forced into that position by one of the Gond tribes. They are a considerable, ugly, and ill-favoured tribe, in the district of Palamow, in Singrowli, the hilly country of Mirzapore and Rewah, and on the borders of Benares and Behar and westwards in parts of Sargujah and Jushpur, and they are numerous to the N. E. in those parts of the plains adjoining the hills. They are also found on the outskirts of the Patna and Arrah districts. A division of the Kharawa tribe is the Bhogtah. The Kharawa are the dominant tribe of

Palamow and Singrowli. They are labourers, palanquin bearers and porters. The Kharawa are mentioned by Captain Blunt (*Vol. vii, As. Res.*) as, in his time, very savage and speaking quite an unintelligible language, which they now seem to have forgotten as they now speak a dialect of Hindi. The rajahs of Singrowli and Jushpur are Kharawa, though claiming to be Rajput. They have no caste distinctions and eat anything. The Kharawa of Sargujah do not use the plough. The race are mostly short of stature but with well-knit muscular frames, complexion brown, not black, sharp, bright, deep-set eyes, noses not deficient in prominency, somewhat high cheek bones, but without marked maxillary protuberances. The Kharawa of the hills are wild savages, armed with battle axes, bows and arrows. The Kharawa are nomadic and migrate every second or third year. Their villages are therefore mere standing camps, consist of about forty houses built round a large square in the centre of which is the dancing area.—*Dalton*, p. 176; *Campbell*, pp. 36, 40, 378; *Captain Blunt in Bengal As. Soc. Res.*, Vol. vii.

KHORFAKEN, the date trees on the coast of Oman form a continuous grove of Khorfakan, a distance of one hundred and fifty miles, and the Arabs have a saying that a traveller may proceed the whole distance without ever losing their shade. Dates form the principal export from Oman, large quantities being taken to India, where a considerable share is consumed in making the government arrack. The middle classes of the mahomedan and hindoo population of India are very partial to them. The best are brought from Basrah and Bahrein, those from Oman being classed next in excellence. There are several methods of preserving them; some are simply dried and then strung on lines, others, which is the usual plan, are packed in baskets. Notwithstanding their great number, every tree has its separate owner, and disputes between the relations of those who die intestate, are, in consequence, very frequent.—*Wellsted's Travels*, Vol. i, p. 188.

KHOR MUSO, see Khuzistan.

KHOROOGUEZI, TURK. *Abrus precatorius*, Linn.

KHORRAMABAD, see Luristan.

KHORSABAD, see Ken.

KHOR-SA-KA, see Kurmsaq.

KHOSA, a tribe in the delta of the Indus. There are in the delta other pastoral and peaceable classes besides the Jut of mahomedan persuasion, such as the Khosa in upper Sindh, the Sikh Lohana in the delta, and

KHOTEN.

emigrants from the Panjab, who have in many instances become amalgamated with the people of the country. The Khosa occupy the sandy tract called the Jhal between Hindustan and Sindh, and become a predatory tribe on the eastern confines of Sindh, verging towards the Catch territories, where they are very troublesome. There are, also, on the eastern boundaries, Rajputs located as wandering herdsmen. The Daodputra who inhabit generally the country of that name in the north are to be met with in various parts of Sindh. The Sumah are Jut, though they are generally known by the former title, such also are the Machi and numerous other subdivisions of the Jut tribes. Up till the early part of the nineteenth century, the Mair in the south, the Larkhani in the north, and the desert Sahrai and Khosa in the west; carried on a system of pillage in the Rajput countries.—*Tod's Rajasthan*, Vol. ii, p. 155. See Jut, Kosah.

KHOSROO PARVIZ, king of Persia, of the Sassanian dynasty, was the grandson of Khosroos Nushirwan. He married a daughter of the emperor Maurice, who is generally supposed to be the same person as the heroine of the eastern romances of Khosroo and Shirreen, and of Feriad and Shirreen. Khosroo Parviz, waged war with the Roman powers, at first with the greatest success. He invaded the dominions of the emperor, wasted a vast amount of territory, overran the holy land, took Jerusalem and burned the christian churches, carrying off immense booty. He next reduced Egypt and great part of northern Africa. He made the scarp surface of the rock at Be Situn, the back part of his palace, and it is supposed probable that the Syric inscriptions on the surface may then have been erased. He was assassinated, A. D. 529, by his own son, who had conspired against him.—*Rich's Residence in Koordistan*, Vol. ii, p. 264. See Be Situn.

KHOST, see Kush, Uzbak.

KHOTEN, a territory east of Kashgar. According to Lassen, the old original inhabitants of Kashgar, Khoten, Turfan and Yarkand, and of the adjacent highlands are the Tajik, who speak Persian, and are all agriculturists. The Swedish chronicles bring the Swedes from Kashgar, and the affinity between the Saxon language and Kipchak is great. Khoten may be considered the most central and inaccessible state of all Asia, but it was a seat of very ancient civilisation, and was already in friendly relations with China, in 140 B. C. In the fourth century of our era, buddhism was in high development here. Though much of the surface appears to be rugged mountain, it is interspersed with level tracts, which are both fruitful and populous.

KHOZDAR.

At one time, like the other states of eastern Turkestan, it was under a mahomedan chief of Turkish or Mongol descent. Khoten is the subject of a short chapter in Marco Polo. In modern times its only European visitor has been Adolphus Schlagintweit, who never returned to tell his tale. Mr. Moorcroft doubted the existence of the city of Khoten, although referred to by Marco Polo. Its position has been laid down not only by Chinese geographers but by the Jesuits in lat. 37°, and long. 78° 15' 30". The city of Khoten may have some new appellation, but Elchi, or, as it occurs in the maps, Ilitsi, is identified with the city called by older travellers Khoten.—*Bunsen*; *Tod*; *Yule Cathay*, Vol. ii, p. 567; *Ed. Moorcroft's Travels*, Vol. i, p. 367; *Klaproth, J. Asiatique*, No. xvii, *Histoire de la Ville de Khoten*, Remusat; *Quarterly Oriental Magazine*, Calcutta, Sep. 1834. See Kashgar.

KHOUNAY, TAM., also Kakay, MALEAL. CAN. Cathartocarpus fistula, a Malabar and Canara tree, produces the Cassia fistula pod or Banda lotte, which is considered an excellent purgative in habitual constipation. It grows to thirty feet long, and from twelve to eighteen inches in diameter, it is curved in growth; its wood is rather close-grained and heavy; and very much resembles the Maragosa.—*Edye, Forests of Malabar and Canara*.

KHOZDAR, a valley and town in Beluchistan. The valley is extensive, in shape somewhat like a Maltese cross, and through it, from north to south, passes the caravan road to Wudd and Beyla. The portion of the cross runs northward some five or six miles. The village is small, containing, perhaps, 200 houses, and half a dozen buniyah's shops. There are one or two mounds in the valley from which have been obtained bits of copper, glass beads, cornelian ornaments, old coins, &c., and there is a mound near the town surmounted by masonry. As Khozdar was formerly the capital of Jhalawan, this might have been the residence of the chief. Very deep ravines cut up the base of the mountain and run out into the valley, showing that the bed of the valley for some four or five miles is formed of a talus of the debris from the mountain side. These narrow and deep ravines are inhabited by Brahui families, whose presence is totally unseen and unsuspected until suddenly come upon in this manner. The strata of the mountains about Khozdar, frequently dip in two, or sometimes three, directions with an anticlinal axis. Khozdar appears to be the focus where the ranges from the north stop, and those from the south com-

KHUBANI.

mence. In the hills near Khozdar, lead is found, which, being easy of fusion, is smelted by the Brahui tribes to make bullets, but no advantage beyond this is taken or derived from the presence of the metal. Antimony is also said to occur. West by a little north of Khozdar, and distant about ten miles, is the small town of Khappar, capital of the district, inhabited by the Kaidrani tribe. Khozdar, figures in Persian romances, and was formerly beyond doubt a place of note. A considerable tappa, or mound lies north of the town. From Khozdar along the bank of the Rudkhana, the soil is strewed with fragments of burnt brick and pottery, and further on, a rude obelisk of mud, twenty to twenty-five feet in height, the base of cemented stones.—*Dr. Cooke in Bombay Medical Transactions, No. vi, New Series, 1860, p. 64; Masson's Journeys, Vol. ii, p. 44.*

KHUBANI, HIND. *Armeniaca vulgaris, Lam.* Apricots, dried for eating. The term is sometimes erroneously applied to figs. Astak, khustah, kishta and khubani, are varieties of the apricot known in the Panjab and to the westward. This fruit is grown with great success in some of the hill stations of the Panjab Himalaya. It makes an excellent preserve, and large quantities are dried and exported to the plains. The unripe apricot dried hard, forms the "kishta;" which besides forming an ingredient in chutneys, is also extensively used as an acid brightener in dyeing with safflower and other colours that will not bear alum: dried apricots called "pating" in Thibetan, are taken from Balti to Lahul and sold usually at the rate of 4 to 6 seers per rupee. The varieties from Kabul and Kandahar which are brought via Peshawar, are named as follows:—

"Khubani" is the fruit dried for eating, containing the blanched kernels, and sells at 4 seers per rupee.

"Astak-be-magz," is the same but without kernels.

"Khasta" are the best dried apricots and sell at 2 seers per rupee. Kishta, are dried unripe apricots. Apricot trees grow in great luxuriance in Kabul and in Kaghlan; the people have tried grafting, but never prune or take care of the trees. In Kandahar there are eleven varieties of apricots. When dried, without removing the stone, they are there called "taifi." Sometimes the fruit is split open, the stone taken out, and the kernel being extracted is replaced: this forms the khubani, a term sometimes erroneously applied to figs. The taifi is what are called in Lahore, kishta, being made of the unripe fruit and very acid. A hot decoction of these is used by goldsmiths to restore the lustre to old silver and

KHULEEL.

gold ornaments: the article is first heated and then plunged into the kishta solution. Silver coins can be cleaned in this way with great success. Kishta is used also in dyeing.—*Powell's Handbook.*

KHUBAZI, HIND. *Malva rotundifolia*, seeds, see Khatmi, *Malva*. The Persian name is Nan-i-Kelagh, and the Arabic Khabzul-ghrab, signify 'crow's or raven's bread.'

KHUBER, also Ubhul, HIND. Berries of *Juniperus recurva*, Juniper berries.

KHUB KALAN, HIND. *Sisymbrium iris*.

KHUB-KALI, or Khub-Kala, the seed of the yellow fruit of a small tree about Ajmeer: very mucilaginous: considered refrigerant.—*Gen. Med. Top., p. 143.*

KHUD, PERS. Self. Khud-rai, self-opinionated; Khud-pasand, vain, conceited.

KHUD or Khād, HIND. Sometimes means simply a precipice; but its ordinary signification is a precipitous valley, flanked by high and nearly perpendicular rocks or mountains.—*Mrs. Hervey's Adventures of a Lady in Tartary, Vol. i, p. 39.*

KHUDA, HIND. God; Khuda-wand, master; Nao-khuda, a ship-master, the English uakoda.

KHUDAH HAFIZ, may God protect you, a common mahomedan salutation when parting with a friend.

KHUDBAFT, soft silk fabric made for shawls.

KHUD KASHT, HIND. A person cultivating his own (khud) soil, (kasht): land so cultivated.

KHUDUSH, AR., or Shajrat-ul-Khudush, AR., mentioned by Forskal as a tree of Arabia. Perhaps Kndus, blessed, the sacred tree, the olive. Many trees are Kodus.

KHUERA, BENG., HIND., Khuer-Gach, BENG. *Acacia catechu*, Catechu tree.

KHUGURA, BENG. *Saccharum spontaneum*.

KHUJUR, PERS. The date.

KHUKOOR, HIND. *Cucurbita melopepo*.

KHUKR-UL-ASHUR, ARAB. *Calotropis procera*.

KHUL, DUK. *Ærta lanata*.

KHULAM, see Kunduz.

KHULLEE, HIND. Oil cakes.

KHULEEFA, commonly Caliph, a deputy or successor, an usher in a school, a mohur-rum fuqeer, properly Khalifah.—*Gloss.*

KHULEEL, a class of Pathans, dwelling in a portion of the Peshawar valley opposite to the Momund hills. Their chiefs held jagheers on condition of service. During the disturbances they permitted a number of hostile Momund to escape through their fief. For this misfeasance their jagheers were reduced, and they were temporarily exiled, but

KHULM.

have been since allowed to return to their homes.

KHULEN, HIND. *Ulmus integrifolia*.

KHULGI, PERS., or *Khalgi*. The top ornament of the bridle of a man of rank, is usually of silver with a feather, and stands on the head-stall between the horse's ears.—*Malcolm's Central India, Vol. i, p. 229*.

KHULJEH KE BAJI, DUK. *Chenopodium album, Linn.; Roxb.*

KHULK, PERS. The down which grows under the hair of the mountain goat. It is of this that the Kashmir shawls are fabricated.

KHUL-KAJUR, DUK. *Achyranthes lanata, Ainslie.*

KHULL, ARAB. Vinegar.

KHULLU, TAM., TEL. Toddy.

KHULLU, TEL. Arrack.

KHULM, a town near Kunduz with many beautiful gardens, with apricot, cherry and mulberry trees. This country is called Turkistan, but the Qazal Bashi of Kabul have named it Kafristan, or country of infidels, on account of the slave trade. The inhabitants are Turk, or Uzbek. Pity, justice, wisdom and policy are entirely unknown here. The inhabitants are fair, tall, and look as if they were brought up in hardship. They are vulgar, ignorant and dirty. Disputes respecting religion are a frequent cause of tumult among them. They keep their heads entirely shaved, and allow a few hairs to grow on their chins, which does not appear like a regular beard. Khulm receives annually numerous loads of tea, which is plentifully used here, and largely re-exported, to Bokhara. Silk is largely produced in this country, and passes through Kabul in the route to Multan. The sand in the bed of the Oxus yields a great quantity of gold. The caravans of Bokhara and Kabul, which in summer pass successively to Khulm, have rendered it very populous and rich. The prevailing religion at Bokhara is sunni mahomedanism and the followers of other creeds, though not vexed, are scornfully treated. The Qazalbash are shiah. This state exercises a certain influence on those around it, and its preponderance is not inferior to that of Kabul, Herat, or Bokhara; a great majority of the inhabitants are of the Tajik race, but the Mir Wali is an Usbek. The population is reckoned at 700,000 souls, the revenues of the principality amount to 24,000*l.* in silver and nearly 50,000*l.* in cereal produce. Khulm appears to have been at one time in the possession of a family called Khallach or Killich. On the north side of the Oxus in this longitude occupying part of the hill country east of Bokhara, is a poor but independent people of Persian race called Ghalcha. Meyendorff calls them very

KHUMS.

swarthy, but Valikhanoff says expressly: "the Tajik have dark complexion and hair, whilst fair people are found among the Ghalcha." This might explain the yellow-haired people mentioned by Goes, and his use of the expression *Calciensium populos*.—*Mohun Lal's Travels, p. 129; Ferrier's Journal, p. 211; Elphinstone's Caubul, Vol. ii, p. 196; also Burnes' Travels, Vol. iii; Yule Cathay, Vol. ii, p. 558*

KHULOTI. Low-lands.

KHULYAN? Galbanum.

KHUM, HIND. *Lonicera quinquelocularis*.

KHUM, BURM. a village; Khumia, a villager.

KHUM-ALOO, BENG. Wing-staked yam, *Dioscorea alata, Linn.*

KHUMAZARE, HIND. *Withania coagulans*.

KHUMB, HIND. *Hiptage madablota*, also *Morchella semilibera*. Samp ki khumb, **HIND.**, is *Arum speciosum*.

KHUMBAH, HIND. *Agaricus campestris*, the truffle.

KHUMBI, HIND. *Careya arborea*.

KHUMBI KARNA, HIND. To bleach.

KHUMDAN was the name given by the Turkish and Western Asiatic nations to the city of Chhanggan—now represented by Sin-gan-fu in Shen-si—which was the capital of several Chinese dynasties between the twelfth century, B. C., and the ninth century, A. D.—*Yule Cathay, Vol. i, p. 51*.

KIUMEE? A tree of Jubbulpore, yields a light, strong, and easily worked wood, much in request by natives.—*Cal. Cat. Ex. 1862*.

KHUMIA and *Kuki*; these two tribes occupy the hills of Sylhet, Tipperah and Chittagong; the Khumia on the skirts, and the Kuki on the tops of the hills. The Kuki are the ruder or more pagan, though also tinctured with hinduism. They term their supreme being, Khojein Putiang, to whom they sacrifice a gyal, and an inferior one is named Shem Saq, to whom they offer a goat. Shem Saq is put up in every quarter of a village, in the form of a rude block of wood. Before this they place the heads of the slain, whether of men in war, or of animals of the chase.—*Latham?* The Kuki say that they and the Mug are the offspring of the same progenitor. See India, Kami, Kuki.

KHUMR, ARAB. Wine, properly Khāmr.

KHUMS, AR. A fifth part, described in the Koran as the property of God, his prophet and his relations, or men of his tribe, the Bini Hashim, who are poor and destitute. The right of the Bini Hashim to a share in the khums is grounded upon their being excluded from any portion of the zukaat.—*Malcolm's History of Persia, Vol. ii, p. 357*, properly Khāms.

KHURDAH.

KHUN? The date of the moon.
KHUN, PERS. Blood: Khuni, a murderer; Khunrez, bloodshed.
KHUND, or **Khand**, HIND. A pool, a spring, a bath.
KHUNGI? Mallow.
KHUNGUMA-PU, TAM., properly *Kun-kumapu*. Saffron.
KHUN-I-SHAVAM, PERS. Dragon's blood.
KHUNKUMA-PUVVU, TEL. Saffron.
KHUNJURI, a small tambourine, musical instrument.
KHUNNAS, see *Kutri*.
KHUNNIARA, in Kangra, contains inscriptions in Old Pali of date, 1st century A. C. The character used in the inscriptions is Arian Pali. These are of Paliographic importance as showing the transition state of the Arian-Pali character.—*Bengal As. Socy. Journ.*, Vol. xxiii, p. 57.
KHUNOONG, a race or tribe occupying the mountains at the sources of the Irawadi river, in lat. 27° 40' N., and long. 98° E. They dwell to the N. E. of the Khamti race.
KHUNZIR, ARAB. Hog, properly *Khānzir*.
KHUPPAL, HIND. Carbonate of soda.
KHUNSERAI, HIND. *Malcomia strigosa*.
KHUN SIAWASHAN, HIND., PERS., Dragon's blood; *Hirada khun*, HIND., *Damul-akhwain*, also the balsam or resin of *Pterocarpus draco*.—*Powell's Handbook*, Vol. i, p. 412.
KHU NUNG, see *India*.
KHUPPYA BAG, BENG. *Felis leopardus*. F. *Bengalensis*, *Desm.*
KHURA also *Khurar*, HIND. *Andropogon serratus*.
KHURAM, see *Jellalabad*.
KHURASANI AJWAIN, HIND. *Hyosciamus niger*, *Linn.* *Henbane*.
KHURASHI, HIND. *Digitaria sanguinalis*.
KHURBANEI, HIND. *Ajuga bracteata*.
KHUR-BHANGA? Hemp.
KHURBO, BRAHUI. Oleander or almond flower.
KHUR-BUZ, BENG. *Khurbuza*, HIND. *Cucumis melo*. Melon.
KHURAQ, PERS. Food, also a dose of medicine.
KHURDAH, in Bengal is a noted place as the residence of Nityananda, the fellow-reformer of Chaitanya. The latter retired to Nilachull, leaving his colleague at the head of the diocese in Bengal. Nityananda at last took up his abode at Khurdah and married a brahman's daughter.—*Travels of a Hind.*, Vol. i, p. 5.
KHURDAH, HIND. Cash, change of money, small coin.

KHUSHKA.

KHUREEF, the rain or autumn crop. See *Climate*, *Kharif*.
KHURFA, HIND. *Portulaca sativa*.
KHURI, BENG. *Saccharum fuscum*, *Roxb.* *Saccharum semidecumbens*.
KHURJA-NIL, HIND. Indigo from the *Khurja*.
KHURJIN, HIND. The *Philipcea calotropidis*, see *Philipcea*.
KHURJJOR, BENG. Wild date tree, *Phoenix sylvestris*, properly *Khujur*.
KHURM. The inhabitants of Khurm seem to be in more comfortable circumstances than any in their neighbourhood. They call themselves *Tajik*, but have no tradition of their origin. They are evidently a mixed race, some of them with remarkable large heads and features, some with small heads and sharp lineaments. The complexion of the men was dark, but that of the girls and young women fair, although they had all black hair and eyebrows, the latter as regularly arched as if they had been pencilled; they are generally pretty, almost handsome.—*Moorcroft's Travels*, Vol. ii, p. 398.
KHURMA, PERS., GUZ., HIND., MALAY, *Phoenix dactylifera*. Dates, tho dried drupes, also sugar of dates. The name is also given to the dried drupes of *P. sylvestris*.
KHURMOOJ, BENG. Musk-melon, *Cucumis melo*.
KIURPA, HIND. A sort of flat trowel, or short-handled shovel, a weeder used by gardeners, properly *Khārpa*.
KHURPHA, HIND. *Portulacca sativa*, used as a salad.
KHURRA, HIND. Clay.
KHURRAWAN, HIND. Wooden pattens.
KHURRAY-PAN BANTNA, HIND. A mahomedan ceremony.
KHURRI MITTI, HIND. Pipe-clay.
KHURSENG, MAR. *Bignonia xylocarpa*, *Roxb.*
KHURWAR, PERS. A measure of weight for rice, or any other article, is an ass-load or about 180 lbs. English weight.—*Adventures of a Lady in Tartary, &c.*, Mrs. Hervey, Vol. i, p. 25-7.
KHURSOWAN, near the *Colehan*, an estate belonging to a Rajpoot thakur.
KHUS, PERS. *Cuscuta* root.
KHUSB-SINI, ARAB. China root.
KHUSH, PERS. Good; well: *Khush amadai*, you are welcome. *Khush-kharid*, an open market. *Kush-dil*, pleasant-hearted. *Khush bash*, a well-to-do person, living on his property. *Khushi*, pleasure. *Khushbu*, sweet smell.
KHUSHAB, a battle was fought here on the 8th February 1857.
KHUSHKA, HIND. Plain boiled rice, also

KHUTRAN.

the mark of sovereignty placed on the forehead of a hindoo prince. The *Maassar-ul-Umra* states that at the time when it was written the rajahs of Udiapur were exalted over all the princes of Hind. Other hindoo princes, before they can succeed to the throne of their fathers, must receive the khushka, or tilak of regality and investiture, from them. This type of sovereignty is received with humility and veneration. The Khushka of these princes is made with human blood.—*Tod's Rajasthan, Vol. 1, p. 235.*

KHUSH KIUISH, ARAB., DUK., HIND., properly Khāsh-khāsh, seeds of *Papaver somniferum*, Poppy seeds, used in confectionary, as well as to make oil. Khash Khash ka-tel, HIND. Poppy seed oil.—*Riddell.*

KHUS-KHUS, BENG. *Anatherum muricatum*, the cuscus of Europeans. The Karen and Burmese cultivate little bunches of this grass for its fragrant roots. The fibres of the khushkus or vetiveyr, are remarkable for their agreeable odour.—*Mason.*

KHUSREH SURVEY, in India a private survey of land.—*Simmond's Dict.*

KHUSRU PARVEZ, A. D. 591-628.

* **KHUSRU SHAH, the thirteenth and last of the Ghaznavi dynasty.** He was deposed by Hussain Gori in 1151 or 1155.—*Orme.*

KHUSSAK-I-SAGHIR, ARAB. *Tribulus terrestris.* Khussak-i-Kabir, ARAB. *Pedaliom murex.* See Gokeroo.

KHUT, see Kandeher Rao.

KHUTAI, or Dajkar, HIND., of Trans-Indus. *Flacourtia sepiaria, Roxb., W. & A.*

KHUTAN produces jade, emeralds, copper, lead, and sulphur. See Khotan.

KHUTBAH, a part of the mahomedan religious service in the mosque, in which the king of the country is prayed for.—*Elphinstone's Kingdom of Caubul, p. 83.*

KHUTEEB, ARAB. A mahomedan preacher, who reads the Khootba.

KHUTIKA, BENG. *Andropogon muricatus.*

KHUTNA, ARAB. Circumcision, properly Khātna.

KHUTRAN. Behind the Bozdar hills live the Khutran, a Puthan tribe, numbering 3,000 fighting men, of whom 500 are mounted, dwelling in the midst of the Beluch tribes, with whom they are frequently at feud. They are special enemies of the Bozdar and the Murree, their hills scarcely touch the British frontier. Once they sought British alliance against the Murree, and also offered their support, if an expedition were undertaken against that tribe; but the government refused to have any relations of this nature with them, in order to avoid being implicated in the feuds of the hill tribes.

KHUTTUK.

KHUTREE, see Chatrya, Chetrya, Khatri, Kshatrya.

KHUTUM, the seal or conclusion, the end of a book; a term in the science of exorcism.

KHUTUM - I - QORAN, the reading through of the entire Qoran.

KHUTTAB, the father of khalif Umar.

KHUTTUK and Sagree. Between the plain of Peshawur and the Salt Range at Kala Bagh lies the country of the Khuttuk and Sagree Affghans. The Khuttuk have about 6,000 or 8,000 armed men, and are divided into the petty chiefships of Acora and Teree. Acora lies east of the plain of Peshawur, on the river of Cabool. The Khuttuk of Acora live in the hills. The southern division is under the chief of Teree, who is able to assert his independence. Part of the Kohat district consists of the Khuttuk country. This had belonged to the Sikh dominions, and had then been farmed out to khaja Mahomed Khan, a local chief. In the Kohat valley, also, they are the predominating tribe. They hold the Khooshaigurh pass, leading from the Indus into Kohat, and offering the easiest entrance to the valley. On the whole the Khuttuk have been loyal subjects. They are good soldiers and can muster 12,000 fighting men. Many of them are in the British service. They are considered the best conducted and most respectable tribe on this frontier. The Trans-Indus Salt Mines are on the southern Khuttuk hills, situated near the villages of Buhadoorkheyl, Kurruck and Lutumur. There is also a separate mine at Malgeen, a place lying east of Kohat. The headmen of these villages receive a fixed percentage on the collections at the mines to obtain their good will. The Sikh never managed these mines at all. They farmed them out to some local chief, and left him to collect what he could. Under British rule, the control and working of the mines is in the hands of government officers; the salt is excavated and sold at the mine at a fixed duty of two, three and four annas per maund of 80 lbs., covering all expenses. The first Khuttuk of note, and influence regarding whom there is any information is Akore, the founder of Akorah, lying one march on the Peshawur side of Attok. The Khuttuk tribe is said to trace its descent from the Kurtani, from whom also the Orukzye of Thyruh, the Afreedee, Bungush, Mohmund, Khuleel, and Daoodzye, claim descent. The Kurtani were called also Burdooranee, in contradistinction to the Dooranee, now divided into Populzye, Bamizye, Suddozye, Noorzye, Alekozye, Esufzye, Alezye, and Barukzye (divided into Mahomedzye, and Hussunzye). Akore came from Shuwal, near the Wuziri country, to a

place called at that time Hussun Tungee, and now known as Kurbogha, near to Darsum-mund, an independant village of upper Meeranzye, which lies between Hingoo and Khoorum. He is said to have been accompanied by 3,000 of his relations and friends, and 8,000 other men of Shuwal. At that time Kohat and Terce were occupied by the Orukzye. Akore with his adventurers drove the Orukzye from Terce and held that country, their opponents retiring on Kohat, at which place the Bungush, rising on them and joining the Khuttuk, they were driven fairly out of the country to Thyrub. Tuppee, a village lying 3 miles S. E. of Kohat, and on the Kalabagh road, is pointed out as the spot where the engagement took place between the Khuttuk and Bungush on one side, and the Orukzye on the other; after the battle the conquerors distributed the country, making a range of hills, which divides Guddukheil, and Luchee, the boundary between the Khuttuk and Bungush. This range still forms the boundary between the two tribes. The Khuttuk country extended to Resee, a village near to, and above, Mukhud on the Trans-Indus side. There were then two divisions of the tribe, Terce and Buluk. On the country being divided, Chountra, Dullin, and Durrah fell to the former, and from Buluk sprung two branches, Khurram and Sence. Joulaee Ghurzundye, and Unjookhulu lie in one valley, and belong to Khurram, and the Sence branch passes from Terce to Purshai. Akore and his followers having entered the country as adventurers, left their wives and families at Kurbagha, and had difficulty afterwards in bringing them to rejoin them in their new country.—*Selections from the public Correspondence*, p. 62; *Papers, East India, Cabul and Afghanistan*, 1859, p. 21; *Burnes' Cabul*, p. 105; *Records Govt. of India*, No. 11. See Affghan, Khyber.

KHUUR, HIND. A tree of Chota Nagpore, with a hard, yellow timber.—*Cal. Cat. Ex.* 1862.

KHUZISTAN represents the Susiana of Strabo, as well as the Cissia of Herodotus, and is also called Arabistan. Towards the eastern frontiers are the ruins of Rhajoun and Kerdistan in the centre, those of Agines (probably represented by Ahwaz) towards the west. That the geography of the province was well-known before the time of Herodotus may be inferred from a passage in his works, where it is said, that Cissia is watered by the river Choaspes, on which is the city of Susa, and the palace of the great king. It is added, that its waters alone were thought worthy of being drunk by the monarch. Presuming that Alexander, after setting

out from Sirs, made a detour, in order that he might have but one river to cross, four short marches might be required to bring the army, with its supplies, across the Karun; and then both the distance between the Kerkhah and Karun, and the description of the course of the latter, will afford ground to believe that this is the same as the Pasitigris of Quintus Curtius and Arrian, as well as the Eulaeus of Pliny and Ptolemy. The Persian Dictionary, "Burhani Katia" under the words Khuz and Khuzistan, states that these are both names of a country in Persia, of which Shuster is the capital, and that the first signifies, also, sugar and the second any country productive of the sugar cane, or a manufactory of this article.

Khor, in Khuzistan, means a deep inlet, of which several have been, at times, supposed to be the mouths of the Euphrates. Khor Muso, is deep; that of Lusbah is close to the Jerahi, and, there is one near Sarema, on the banks of the Hindian, rather westward of the borders. The inland Khor are those near the towns of Dorak and Mohammedrah, one still more extensive is formed by the overflowing of the river Kerah at the town of Hawiza; and, lastly, the Samidah marshes above Kurnah which appear to be part of the ancient Chaldean lake. One of the most important of the water-courses of Khuzistan is the Kerkhah or Kerah, which begins to flow in three branches, all springing considerably eastward of Kirman-shah. The first, and most considerable, has its commencement about 25 miles west of Hamadan. A little south of the spot where the Kherkhah is joined by the Abi-i-Zal, are the remains of a bridge, and at one mile and a half from the celebrated ruins of ancient Sús, the Kerkhah bends a little west of south, and continues in this direction through the rich plain of Khuzistan, passing through the extensive marches which surround Hawiza, a commercial town of about 12,000 inhabitants: from thence it winds S. W., and falls into the Shatt-el-Arab, below Kurnah, after a course of upwards of 500 miles. The Dizful is an important stream in Khuzistan. The bed of an occasional torrent in ancient Susiana, called Ab-i-bald, which falls into the Dizful, is covered with a peculiar kind of pebble, which being filled with little fossil shells resembling grains of rice, is called Sang-i-birinj, or the rice stone. These stones are also found in the river at Shuster, but of an inferior quality, and they are in much request throughout Persia for the head of the Nargil pipe, which is almost invariably composed of this material, set in silver. The Karun river in Khuzistan is met with in proceeding eastward from the Dizful river. It

rises according to Kinneir (who is followed by Major Rawlinson), at Correng in the Koh-i-zard, or Yellow mountain, at about 40 miles south-west of Ispahan, and runs west by north through a mountainous country. Again, at about 40 miles further, in the previous direction of west by north, and at nearly 20 miles from Shuster, it makes an abrupt bend towards the S. S. W., as it finally breaks through the Zagros range, and pursues its onward course towards that city, a little way short of which and near the upper extremity of the well known bund of Shapur, a temporary bifurcation takes place, so as to insulate the town. The branch last mentioned, which is called the old Karun, after washing the eastern side of Shuster, becomes navigable for boats of considerable size. The bed of this branch is still to be traced at a spot about a mile and a half below the town, and it appears to have come from the north-west. At this place, which is $2\frac{1}{2}$ miles short of Karabuk, the Karun becomes exceedingly tortuous, and thus continues for a distance of 20 miles, in the general direction of south 33° west to Ahwaz. The course of the Karun then becomes less tortuous; and for 29 miles to Ismaili, it runs in the general direction of south 22° west, making a sweep more westward before it reaches the latter place. From hence the river again curves to the westward, previously to forming a great bend in the contrary direction. After this last bend, the windings become more moderate and so continue as far as the castle of Sabla which is situated on the left bank at $60\frac{1}{2}$ miles by the river, south 5° west of Ismaili. The ancient bed of the Karun was followed by the officers of the Euphrates expedition for some distance towards the sea, on which occasion they found it to be about 200 yards broad, running in a south-easterly direction, or nearly parallel to the Bah-a-Mishir, and with every appearance of having contained a large body of water in former times. From Sabla, the main trunk of the Karun pursues a course south 65° west for $10\frac{1}{2}$ miles, by the Hafar canal, to the Shatt-el-Arab, through the rising commercial town of Mohammedah; but $7\frac{1}{2}$ miles distance, and before it reaches the town just mentioned, the derivation called the Bah-a-Mishir takes place. This is a large navigable branch, running 31 miles from the Karun, in the general direction of south 25° east to the Persian Gulf, but making a gentle curve a little eastward of this line; which is, in fact, nearly parallel to that of the Shatt-el-Arab, as will be seen by the maps. After the junction at Kaliphabad, the Kerdistan river flows a little more southward, and then, under the name of the Jerahi, becomes not only navigable for country boats,

but carries a large body of water in a S. S. W. direction towards Dorak. At six miles from this town the river makes a deep short bend to the south; and a great diminution of its water takes place, in consequence of six irrigating canals being cut from it, to fertilize the populous country stretching westward. Dorak, the capital of the district is situated in a marshy plain, and contains about 6,000 inhabitants, who live in houses built with sun-dried bricks, and having sloping roofs. It is defended by a fort and a mud wall, and is surrounded by date plantations. Commerce is carried on by means of the canal with Mohammedah and Basrah, and the people sometimes call it Little Basrah. The Tab River is only partly in Khuzistan. Near Beibahem, now of considerable size, it preserves a western course as far as Indian, a town of about 4,000 inhabitants; up to which, when ascended by Lieut. Whitelock, of the Indian navy, in 1836, it was found to be navigable for boats of twenty tons. From hence the river inclines more southward, and has a tortuous course through an alluvial soil to the Persian Gulf; an extensive population have their dwelling on its banks. A little way northward of the city of Shuster, at the bifurcation of the river Karun, is the famous reservoir called Shadarwan, with the bridge of Shapur, and several deep and fine khanats. While Timur was in the province of Khuzistan, of which Dizful was then the capital, he repaired the famous dyke across the Karun and Shuster, which had been constructed, many centuries before, by the Sassanian king Nourshirwan. It is made of hewn stone, cemented by lime, and fastened together by clumps of iron, and is twenty feet broad and one thousand two hundred long. In the centre there are two small arches, which allow part of the water to flow in the natural bed of the river, while the remainder is led off to irrigate the plains. The dyke was again repaired by Colonel Monteith, under the orders of Mohammed Ali Meerza, eldest son of the shah of Persia, in 1810. In Khuzistan, there is an abundant supply of sulphur; and rock-salt, alum, antimony, and orpiment, as well as mineral waters, are found in abundance in different states.—*Markham's Embassy*, p. 11; *Ouseley's Travels*, Vol. 1, p. 148; *Euphrates and Tigris*; Col. Chesney, p. 205; *Mignan's Travels*, p. 294. See Iran, Tigris.

KHWAGAWALA, HIND., PUSHTU. *Salix caprea*, *S. aegyptiaca*.

KHWAJEH, pronounced Khwajo, Khoja and Khojo, is a small tribe of strangers settled in Sindh, principally at Kurrahee, where there may be about three hundred families. Their own account of their origin is, that they emigrated from Persia. Probably they fled the country when the Ismaili heresy to which they still cleave was so severely treated by Hulaku khan, the grandson of Chinggis khan. They differ from the Ismaili in one essential point, viz., whereas that sect believes in only seven imam, the Khwajeh continue the line down to the present day. They are, therefore, heterodox shiah as they reject Abubakr, Umar and Usman, and reverence Ali, Hasan, Hussain, Zain-el-Abidin, Mohamed-i-Bakir and imam Jafar-i-Sadik. In Sindh they have no mosques, but worship in a Kano, or house prepared for the purpose. For marriages and funerals they go to the sunni kazi, but their Mukhi, or head priest at Kurrahee, settles all their religious and civil disputes. The Khwajeh are termed Tundo by the sunni sect, but the name is considered to be an insulting allusion to their bad habits of abusing the memories of the kalifs.—*Burton's Sindh*, pp. 248-50. See Khajah.

KHYAR-I-BADRENG, PERS. *Cucumis utillissimus*, Roxb.

KHYBER PASS, in lat. 33° 58', long. 71° 30', is about 33 miles long, the crest of the pass is 3,373 feet, and Ali-Musjid is 2,433 feet. The pass rises gradually from the east but has a steep declivity westward. It is called the key of Afghanistan. At Ali-Musjid it is merely the bed of a rivulet, with precipices rising on each side at an angle of 70°. Near Lamdee Khana, it is a gallery 12 feet wide; on one side a perpendicular wall, and on the other, a deep precipice. It was twice forced by the British, once by General Pollock on the 5th April 1842. The Khyber mountains are in length about 50 miles, breadth, about 20 miles, and run between 33° 30' and 34° 20', and 71° 10' and 71° 30'; they connect the Hindoo-Koosh with the Safed-Koh. Sartara summit, the highest point, is 4,800 feet. The Khyber mountains appear at first irregularly grouped, but the distinct arrangement of a chain is afterwards observable. The hills

generally consist of slate and primary limestone, with overlying sandstone. There are four passes through this range. The Khyber pass extends from a collection of caves called Kadam, three miles south-east of the fort of Futtehabad, built by the Sikhs, which again is nine miles west of Peshawar, to within 7½ miles of Duka opposite to Lalpore, on the Cabool river, a distance of 24 miles. These 7½ miles are included in the pass as the road, though not through a plain, is no longer confined by perpendicular commanding heights. Like all roads through ranges of mountains, the Khyber pass is, chiefly, the bed of a torrent liable to be filled by a sudden fall of rain, but at the other times dry, with the exception of a winding rill supplied by springs. It is a formidable pass 18 miles in length, leading from Peshawar to Kabul, and as it approaches the Kabul territory, it becomes more formidable. Nadir shah paid a sum of money to secure his passage through it. Its water is prejudicial to health.

Of the Khyber tribes, proper, there are three great divisions, the Afredi, the Shinwari and the Orak Zyi. Of these, the Afredi, in their present locality, are the more numerous; the Shinwari, more disposed to the arts of traffic and the Orak Zyi, the more orderly, if amongst such people any can be so pronounced. The Afredi occupy the eastern parts of the hills, nearest Peshawar; and the Shinwari the western parts, looking upon the valley of Jellalabad. The Orak Zyi upon the valley of Jellalabad. The Orak Zyi reside in Tirah, intermingled with the Afredi, and some of them are found in the hills south-west of Peshawar. It was a malek of this tribe who conducted Nadir shah, and a force of cavalry, by the route of Chura and Tirah, to Peshawar, when the principal road through the hills was defended against him. The Shinwari, besides their portion of the hills, have the lands immediately west of them, and some of the valleys of the Safed Koh range. More westernly still, under the same hill range, they are found south of Jellalabad, and are there neighbours of the Khogani. There are also some of them in Ghor-band, and they dwell in great numbers bordering on Bajor to the north-west, where they are independent, and engaged in constant hostilities with the tribes of Bajor and of Kafristan.

Tirah and Chura are said to be fertile and well-peopled valleys, enjoying a cool climate, in comparison with that of Peshawar; and it was not unusual for the sirdars, and others, who have an understanding with the inhabitants, to pass the warm weather in Tirah, which, also, has frequently

been a place of refuge to the distressed. At Chura resided Khan Bahadur Khan, Afre-di, who attained eminence amongst his tribe from the circumstance of his attendance at court during the sway of the Sadoz Zyi. Shah Sujah married one of his daughters to, and on more than one occasion, found an asylum with him. The Khyberi, like other rude Affghan tribes, have their malek, or chiefs, but the authority of these is very limited; and every individual has a voice on public affairs, unanimity is out of the question, and it often happens that a nanawati, or deliberation on any business, terminates in strife amongst themselves. The portions of the Afredi and Shinwari tribes who inhabit the defiles of Khyber, through which the road leads from Peshawar to the Jellalabad valley, are but inconsiderable as to numbers, but they are extremely infamous on account of their ferocity, and their long-indulged habits of rapine. Under the Sadoz Zyi princes, they received an annual allowance of twelve thousand rupees on condition of keeping the road through their country open, and abstaining from plunder. They called themselves, therefore, the servants of the king. Though they were in those days little scrupulous still the kafila followed their road,—so manifestly the better and nearer one,—submitting to their exactions and annoyances, and satisfied with being not wholly rifled. They are, in the mass, very numerous, and it is boasted that the Afredi tribe can muster forty thousand fighting-men,—a number, which might be presumed to include every man, woman and child amongst them. On various occasions, when their strength has been exhibited, from two to five thousand men assembled. Jam, is a little village at the entrance of the pass on the Peshawar side. Upon Runjit Singh's excursion to Peshawar, the Khyberi opened the bands, or barriers, of the Bara river, and inundated his camp by night, and profiting by the consequent confusion they carried off much spoil and many horses. The maharaja then precipitately left for Lahore, having made only a stay of three days. The British government has never allowed armed bodies to seek protection in its territories, nor to organise resistance or attack. It has freely permitted hill-people on its frontier to settle, to cultivate, to graze their herds, and to trade in its territories. It has accorded to such the same protection, rights, privileges and conditions as to its own subjects. Its courts have been available and its officers accessible to them. Its markets have been thrown open to them; all restrictions on trade and transit, all duties (except one) which would be imposed under

any native government, have been removed and remitted for them. It has freely admitted them to its hospitals and dispensaries; its medical officers have tended them in sickness, and sent them back to their mountain homes cured. The ranks of its service are open to them, if so inclined. Some of the Khyber races live in miserable caves, and the Momuzye Afridi are said to sell the wives and children of a deceased brother, and interchange their own wives. The Khyber valley is of an irregular form, but the average breadth is about fifteen hundred paces: the hills which border it may be about seven hundred feet high. When Moorcroft passed, each house was enclosed by a high wall, in some part of which was a tower for look-out and defence. They are tall for mountaineers, and of a singularly Jewish cast of features: of the young women whom he saw, none could be regarded as pretty. The men were dressed in long cotton tunics of a kind of plaid, in which blue was the prevailing colour: the women wore an imitation of chintz. Amongst neighbouring tribes, the Waziri, although notorious robbers, regard the descendants of their prophet with awe and a feeling of respectful reverence, and esteem themselves fortunate to receive their benedictions. Further south, the Suliman Khail tribe occupy the district which ranges from north to south on the Ghuzni side of the pass. There are said to be about twelve thousand of them, but not so blood-thirsty or formidable as the Waziri of the mountains near Derabund. The Suliman Khail were in possession, Vigne was told, of a million of sheep. Their country extends from north to south, for seven or eight caravan marches, between Ghuzni and Kandahar, and for two or three from east to west. He describes the Shenwari Khyberi, as a race even more infamous for their robberies than the Afridi Khyberi.

Thus, as will have been seen, in the Khyber pass itself, and stretching away on the north and south, along the north-west frontier of the Punjab, are tribes of barbarous, warlike and predatory habits. This frontier line commences from the top of the Kaghan glen (a dependency of Huzara) near Chelas on the north-west corner of maharajah of Kashmir's territory, and then passes round the north-west boundary of Hazara, on the east side of the Indus to Torbeila; then, crossing that river, it winds round the north and north-west boundary of the Peshawar valley to the Khyber Pass; then round the Afridi hills to Kohat; then round the western boundary of the Kohat district, along the Meeranzye valley and touching the confines of the Kabul dominions; then round the Waziri hills to

KHYBER PASS.

the Bunnoo line and to the head of Sulimani range; and then, lastly, right down the base of Sulimani range to its terminate on the upper confines of Sindh and of the Kelat kingdom. The extent of this frontier is very vast, and its length is full 800 miles. It is also as arduous in its nature as it is extensive. Along the outer side of this frontier line, and, therefore, beyond British jurisdiction, there dwell a series of independent tribes. On the inner side of this frontier up to the right bank of the Indus, there also dwell various tribes, in many respects resembling those first named, but who are British subjects. The topographical position of each tribe, both without and within the frontier, may be enumerated in their local orders as follows:—

Independent Tribes, dwelling along the outer face of the north-west Punjab frontier and inhabiting hills, viz:

Adjoining frontier of Hazara district.—Hussunzye.

Adjoining frontier of Peshawur district.—Judoon, Bunoorwall, Swatce, Ranezye, Osmankheili, Upper Momund.

Adjoining frontier of Peshawar and Kohat districts.—Afreedi.

Adjoining frontier of Kohat district.—Buzotee, Sepah, Orukzye, Zymoosht Affghan, Tooree.

Adjoining frontier of Kohat and Dehra Ishmael Khan districts.—Wuziri.

Adjoining frontier of Dehra Ishmael Khan district.—Sheorani, Oshtermni, Kusrani, Bozdar.

Adjoining frontier of Dehra Ghazee Khan district.—Khutran, Kosah, Lughari, Gorchani, Murri.—Boogti.

British Tribes, within the frontier and British subjects, inhabiting partly hills and partly plains.

Hazara district.—Turnouli, Gukkar, Doond and Sutti, Kaghan Syud and other tribes of Hazara.

Peshawur district.—Eusufzye, Khaleel, Momund of the plains.

Peshawar and Kohat districts.—Khuttuk. Kohat District.—Eungush.

Dehra Ishmael Khan district.—Bunnoochi, Murwuti, Butani, chiefs of Tank, chiefs of Kolachi, chiefs of Dehra Ishmael Khan, Nootkani, Loond.

Dehra Ghazee Khan district.—Dreshuk, Muzari.

General Ferrier gives the following approximately as the amount of the population in Afghanistan. In the provinces of

Herat,	300,000	Affghan	and	600,000	Parsivan or Eimak.
Kandahar,	600,000	do.	„	300,000	do. and Baluchi.
Kabul,	1,600,000	do.	„	800,000	do. and Kaszilibash.

KHYBER PASS.

Total 2,600,000 Affghan, and 1,700,000 Parsivan, Eimak, Baluchi and Kaszilibash, making a general total of 4,200,000 inhabitants.

The Kohistan regions commence from Kaghan, which is a narrow glen stretching upwards from the northern-most part of the Hazara district for a distance of nearly 90 miles, and separating the maharaja of Kashmir's territory from the independent mountaineers. Adjoining Kaghan and reaching the Hussunzye country, separating the Hazara border from the Indus, and adjoining the Agror fiefship in Hazara, is the country of some hill tribes named Kohistani and Swati, who originally came from the Swat valley. Between the extreme northern frontier of the Hazara district and the Indus, in Cis-Indus, that is, on the left bank of the river, there lies a somewhat narrow strip of rugged and mountainous territory—inhabited by the Hussunzye. They could number, perhaps, 2,000 fighting-men. The principal hill is known as the Mahaban, or “Black mountain,” from its dark and gloomy aspect, and is of classic celebrity. In the adjoining tract, within the Hazara border, lies western Turnoulee, the fief of a chief politically dependent on the British.

The Judoon of Mahabun inhabit a tract below the Hussunzye country, and on the right bank of the Indus opposite the British town of Torbeila, and thence stretching westward. Near the base of Mahabun, and on the bank of the Indus, is the Sitana colony of syuds, the remnant of the followers of an adventurer, named Syud Ahmed, who, gathering a handful of “Ghazi,” (warlike devotees,) from various parts of India, raised a formidable rebellion in Peshawar. After winning and losing Peshawar and Eusufzye, the syud was eventually slain at the mouth of the Kaghan glen by Sher Sing, the son of Runjeet Sing. Most of his adherents, chiefly foreigners to the Panjab, dispersed, and the remainder settled at Sitana. These Sitana people are evil-intentioned. They endeavour to rouse the bigotry of the surrounding mahomedan tribes, and especially of the Swati. The king of Swat indeed was elected to his present position from among these very people. They endeavour to intrigue with the Wahabi and such like fanatic religionists among the mahomedan population in various parts of India. More than once, correspondence relating to them has been intercepted, but nothing tangible has been elicited. In 1852, they co-operated with the Hussunzye against Jehandad khan, and actually seized a small fort belonging to that chief, but evacuated it on the approach of

British force with Colonel Mackeson. They harboured murderers and bad characters of all kinds. In 1854 a band of reformed thugs, who were working on the road near Peshawar, fled to Sitana.

Boonere or *Bunoor* is beyond the Judoon country on the north-west. It is a rugged country, extending from the lower range of the Hindoo Kush downwards to hills which command the Chumla valley and the central plain of Eusufzye. On its western frontier lies the Swat territory. The Boonere people could muster a force of some thousands; their neighbours are the Swati.

The Swat country consists of a long valley, running downwards, generally, in a south-westerly direction, but turning half round from east to west as it nears the British frontier, from which it is separated by a lofty range. It is difficult of access to a force moving from British territory. The Lundye or Swat river flows right through and fertilizes the valley, and then debouching through a gorge in the hills, enters the Peshawar valley and joins the Cabul river near Charsudda. The Swat valley is fertile, chiefly growing rice; it contains upwards of 300 villages, and its inhabitants may number 100,000 souls, of whom 20,000 might be fighting men. As soldiers, the Swati rank below several of the most martial tribes. Politically, the Swati consist of various clans, united under a loose federal government, at the head of which is an elective chief, styled padshah or king. In 1855, the king was a Syud, named Akbar, from the fanatic colony of Sitana. The high priest is called the "Akhoond" (equivalent to the term doctor or reader) and is held in great veneration.

Towards the lower extremity of the Swat valley a formidable range of hills bounding the valley runs for many miles from east to west, nearly parallel to the British frontier; and at the eastern extremity of this range stands the Mora mountain. Between this range and the frontier, however, intervene two tracts, named Ranezye and lower Osmankheyl, both quasi dependencies of Swat. The best of the passes leading into Swat is one named Mulakund, which opens from Ranezye. A little further to the eastward of Ranezye, also, there are some passes, leading into the Loondkhor valley, which belongs to British Eusufzye. These latter passes are not available for passage from Swat to British territory, because leading into Loondkhor, they can be stopped by any party holding that valley. The passes via Ranezye and Osmankheyl, if the people of those tracts accord a passage, lead straight on to the British Plains of Hushtnuggur. Above the Loondkhor valley, just beyond the

British frontier, is the strong village of Pullee. The subdivisions of the Peshawar district, adjoining the tribes above described, are Loondkhor or north-west corner of Eusufzye, and then Hushtnuggur.

The Upper or Hill Momund country extends from the south-western Swat border to a little beyond the Cabul river. Both banks of this river are in their possession and their capital, Lalpoora, where the head of their tribe resides, is situated near the left bank. They own allegiance to the Cabul government, though subject to an almost nominal control; and by a treaty, Dost Mahomed Khan undertook to restrain them from hostilities against British subjects. Their militia can muster about 12,000 fighting men. They are tolerably good soldiers, though not equal to the men of the most martial tribes. Their hills overhang the fertile strip of British territory, enclosed between the Swat and Cabul rivers near their confluence, known as Doaba, and this portion of the border is not more than 25 miles distant from Peshawar. The three sections of the tribe that have come in contact with the British are the Pindee Aleo Momund, the Alumzye Momund, and the Michnee Momund.

The Michnee Momund, after annexation, were allowed to hold a fief or jagheer from the British Government in Doaba, the fertile triangle near the junction of the Swat and Cabul rivers, of which they collected the revenue. Many of their clansmen dwell in the plains of Michnee and some in the neighbouring hills. They traded in the Peshawar valley. The Alumzye Momund, whose head quarters are at Gundao, in the hills, also had a fief of Punjpao in British Doaba, chiefly cultivated by tenants. A few of their men lived in the plains and the majority in the hills. These also traded in the valley. The Pindee Aleo Momund, at a former period, had held a similar jagheer in Doaba; but not since British rule. They inhabit a very strong locality in the hills. The fiefs were originally granted by preceding Governments to the Momund as black mail to buy off depredation.

The Afreedi come after the Momund and is the most important tribe of all on the Panjab frontier. Their territory, commencing in the hills between the Cabul river and the Khyber pass, forms the western boundary of the Peshawar valley; then it stretches round the south-western corner and skirts a portion of the southern boundary of the Peshawar district till it approaches the Khuttuk lands. It thus projects abruptly into the British frontier, separates the Peshawar district from that of Kohat, and forms the northern boundary of the latter district. The Afreedi hills,

intervening between the Kohat and Peshawar districts, are crossed by two principal passes communicating from one district to the other, the best of which is the well-known Kohat pass or Gulli, and the other the Jewaki pass. Thus, the frontage of the Afreedi hills towards British jurisdiction extends over a total length of 80 miles, and this territory stretches far back in a westerly direction towards Cabul. Thus, the Afreedi hold a large geographical area and have a long border continuous with the British. The Afreedi are entirely independent. Their hills are lofty, steep and rugged, most arduous for military operations. The villages are strongly posted and difficult of access. The Afreedi are fierce by nature. They are not destitute of rude virtues, but they are notoriously faithless to public engagements. They are split up into factions. The sub-divisions of this tribe are numerous. They can muster 15,000 or 20,000 fighting men. As soldiers, they are among the best on the frontier. They are good shots. Their tactics resemble those of the other tribes. They retreat before the foe as he advances and press upon him as he retires. From the size of their country and the strength of their numbers, the Afreedi, if united, might prove formidable opponents; but they rarely or never combine. If their independence were threatened, or if some peculiar opportunity offered, they might act together, otherwise they will usually be found at war with each other. The Khyber Pass Afreedi, among faithless tribes, are considered the most faithless. A section of these Afreedi, named the Kookeekheyl, manifested symptoms of a friendly spirit towards the British. The Afreedi on the south-western corner of the Peshawar border have not signalized themselves. For the guardianship of the Kohat pass or Gulli and the Jewaki pass, the Afreedi received some kind of consideration from successive dynasties, Ghiznavi, Mogol, Durani, Barukzye, Sikh, and British, and broke faith with each and all. These mountaineers are great traders and carriers. They convey salt from mines in the Kohat district to the Peshawar market. They also cut and sell the firewood of their hills. By these means they procure a comfortable subsistence, which cultivation on their rugged hill-sides would not alone suffice to afford. The British authorities can, by blockading the mouths of the passes, stop the trade and reduce the Afreedi to sore straits. These passes are of importance. The Gulli or Kohat pass is the direct and best route from Kohat to Peshawar. The government post between these two important stations runs usually by this route. The Afreedi of

the Jewaki pass, even among the Afreedi clans, are considered particularly daring and ferocious. Their mountains are very strong. When the Afreedi of the Kohat pass misbehaved, the Jewaki Afreedi offered to engage for that pass, or to conduct the communication through their own pass. The Jewaki pass was actually used for a short time, but the Jewaki Afreedi soon proved themselves to be worse even than their neighbours. They committed numerous raids and murders in the Peshawar and Kohat districts, and even robbed boats on the Indus. They also murdered a British officer, named Dr. Healy, who was travelling towards Kohat, for no other reason than that he was a defenceless christian with a little property about him.

The Bungush tribe of the Kohat valley, are British subjects: they offered to guard the Kothul and asserted that they had a claim stronger than that of the Afreedi to hereditarily occupy the ridge.

Sepah and Buzotee are small, but very brave tribes, numbering—Buzotee, 500; and Sepah, 300 fighting-men. They live in tolerably close connexion with their more powerful neighbours, the Afreedi, and manage to hold their own.

The Orukzye country extends from the Sepah tract (which adjoins the Afreedi hills) round the north-western corner of the Kohat district, and then nearly onward to the top of the Meeranzye valley (which belongs to Kohat) till it joins the country of the Zymoosht Affghan. The tribe is one of the largest of the frontier, and numbers 20,000 fighting-men, most of whom are good hill soldiers. The Orukzye hills stretch a long distance to the west. In the interior of these hills, there is the cool table-land of Terah, where the clansmen resort in the summer, with their cattle, and in the winter return to the pasturage grounds of the lower ranges near the British frontier. The sections of the tribe that have come in contact with the British, are the Shekhan, the Mishtee, and the Raabeuhkheyl. The portions of the Kohat district adjoining the Orukzye hills are the sub-divisions of Samilzye, Hungoo and Meeranzye.

The Zymoosht Affghan tribe come after the Orukzye; they are a small, but brave tribe, numbering about 5,000 fighting men, some of whom are well-mounted. They inhabit a valley leading from western Meeranzye onward to the crest of a range called the "Powar Kothul." Their country of right belongs to the Cabul kingdom. They are usually ready to combine for mischief with the Tooree and Orukzye, and to threaten

Meeranzye ; but they hold some land in the plains, which holding affords some pledge for their good behaviour.

The *Tooree* are a warlike tribe occupying a portion of the valley of the river Khoorrum. In 1856 they could muster 5,500 fighting-men. They are nominally subjects of Cabul, but they are under no real control. They repeatedly leagued with other tribes to harass the Meeranzye valley. They would sow among the Meeranzye people, they would harbour fugitives from either party, they would encourage all to resist the British, they would attack some villages in force. They frequently committed raids on the Bungalush and Khuttuk villages of the Kohat district. In August 1853, Captain Coke seized a *Tooree* caravan on its way to the salt mines, taking the property as security for repayment of value of plundered property, and the men as hostages for their tribes. This measure was soon followed by an embassy from the tribe and an agreement was concluded with the tribe from the commencement of 1854. The value of plundered property was made good, the prisoners were released, and five *Tooree* were made over to the British as hostages ; but in the following March (1854) a serious attack was made by the *Tooree*, with 2,000 men (foot and horse), on a Meeranzye village.

The *Wuzeeree* are one of the largest and most important frontier tribes. They hold the rugged and lofty hills adjoining the south-west portion of the Kohat district (that is the western part of the Meeranzye valley and the hills round Bahadoorkhey), and the north-western border of the Dehra Ishmael Khan, that is, the valley of Bunnoo, and the plains of Murwut and Tank. These hills run down to the point where the great Sulimani range commences ; near this point the Goomul range debouches from the hills almost opposite Tank. The valley of the Goomul forms the Golaree pass, through which a large portion of the traffic to and from Afghanistan and Central Asia enters into India, and is scarcely inferior to the Khyber pass of Peshawar or the Bolan pass of Sindh. The hills on either side of this pass are held by *Wuzeeree*. It will also be seen that the *Wuzeeree* hills form the western limit of the Joorduk pass, which is the main line of communication between Bunnoo and Kohat. Just to the east of this pass lies Bahadoorkhey and also the villages of Kharrah and Lutumur, at which three places the Trans-Indus mines are situated. The *Wuzeeree* hills also command the outlets of the Khoorrum and Goombelie rivers into the Bunnoo valley. The *Wuzeeree* are a numerous tribe, sub-divided

into various sections. The birth-place of this race would seem to be the snowy range, which runs to the south-east of Jellalabad and Kabul. From this range they appear to have moved downwards towards the Derajat border. They are noble savages, of pure blood, pastoral habits, fierce disposition, and wild aspect. They can muster probably (were the whole tribe united), as many as 20,000 or 30,000 fighting-men, and if combined might make themselves formidable. But though they are less addicted to internecine contests than other hill tribes, and are so far united, they are yet not apt to join all these forces together against an external foe. They are bold and ferocious ; but, as soldiers, not equal to the most martial tribes. Many of them live in tents, or in temporary dwellings resembling tents ; in the winter frequenting the more genial clime of the lower ranges, and in summer retreating to feed their flocks in higher altitudes. Some of them have engaged in cultivation and have encroached on the weaker tribes of the plains ; of these, again, many will only cultivate during the cold months ; and as the heat approaches will reap their crops and retire to the mountains. But the tendency to extend their cultivation, and even to settle in the plains, has of late years, been increasing among the *Wuzeeree*. The tribe generally is quite independent, both of the Kabul and the British governments ; but some members of the clan who have taken up their abode as cultivators in the Bunnoo valley have become British subjects.

Many sections of *Wuzeeree* have, ever since British connexion with the frontier, maintained peaceable relations with the British. These people, driving the aborigines of Bunnoo before them, have occupied pasturage grounds on the western border of the valley, and have taken possession of cultivated lands in the same vicinity, amounting to about one-third of the culturable area of the valley. Under the Sikh regime, there were constant disputes between these *Wuzeeree* and the government (inasmuch as revenue could in those days only be collected by force of arms), and also between them and the Bunnoo people, who asserted claims they could not enforce, to a patrimony which had been gradually usurped. In 1848, Major Edwards effected a settlement with these *Wuzeeree* and with all the inhabitants of the valley on behalf of the Sikh government ; he confirmed them in their possessions and arranged with them for the regular payment of their dues to the ruling power. The *Wuzeeree*, for the most part continued as valued agriculturists and tax-payers. The revenue was first collected in kind, and then

money settlements were made. Before 1855, however, three sections of the Wuzerees tribe misbehaved, namely, the Cabulkheyl, the Mushood Wuzerees, (both of which entirely dwell in the hills and have no possessions in the plains,) and the Omerzye Wuzerees, which latter clan originally cultivated in Bunnoo and afterwards rebelled. The Cabulkheyl Wuzerees inhabit the northern portion of the Wuzerees hills, not far from the right bank of the Khoorrum. They are near neighbours of the Tooree. They overlook the western portion of Meeranzye and then adjoin the Buhadoorkheyl sub-divisions of the Kohat district. They are a wild lawless set. They are always ready to join with the Tooree, Zymoosht Affghan, and Orukzye in mischief, such as raids on the Bungush and Khuttuk villages of the Kohat district. In the autumn of 1860 they signalized themselves by an audacious attack on Buhadoorkheyl and its salt mines. For this purpose they assembled in considerable force and induced many of the Khuttuk villages round Buhadoorkheyl itself to league with them. The affairs with the Omerzye have been serious. Like other Wuzerees, they at first cultivated in the Bunnoo valley lands which had been wrested from the Bunnoochees of the neighbourhood.

The Mushood section of Wuzerees is strong and mischievous. They inhabit the most southern of the Wuzerees hills. It is the section which occupy both sides of the Goleeree Pass. Even they are hardly strong enough to attack the caravans of hardy, well-armed traders from Central Asia. But they plundered travellers and carry off the herds of camels chiefly belonging to merchants that graze near the foot of the hills.

Valley of Dour.—Surrounded by the Wuzerees hills, and adjoining the western border of Bunnoo, is the small valley of Dour, inhabited by a distinct race, and containing about 8,000 inhabitants. This valley originally belonged to the Dooranee kingdom. It was, together with other outlying tracts, formally ceded to Runjeet Singh by the tripartite treaty of 1838; but afterwards, in 1847, the British relinquished all claim to it on behalf of the Sikhs. The people of Dour more than once expressed a wish to come under British jurisdiction, but the offer was not accepted. During the treaty negotiations of 1855, the Amer of Kabul's representative urged that the valley once formed an integral portion of the Dooranee empire, and that His Highness then wished to take it, provided that the British did not claim any title. The government replied that the British did not desire to assert any claim, nor to interfere with the amir, if he chose to re-annex it to his kingdom.

The Sheorani.—Below the Wuzerees limits, a little south of the Goomul river, are the Sheorani hills, stretching from the latitude of Dehra Ishmael Khan downwards to nearly the latitude of Dehra Futteh Khan, a distance of fifty miles. In these hills is the lofty square-shaped mountain called Tukht-i-Suliman or Solomon's Throne, which gives its name to the Sulimani range, running parallel for 300 miles to the Indus and forming the western frontier of British India. At the base of this mountain runs the important Zerkunnee pass, the high road for caravans to and from Kandahar. The Sheorani are of Puthan lineage, of inferior stature to the Wuzerees; they are warlike and predatory, and quite independent. The number of their fighting-men has been set down at 10,000 but this is found to be high. They can muster 1,000 men within a day's notice; in the course of three or four days they will muster 3,000 more. They adjoin the British tracts of Tuk (partially) in the north, then Kolachee, then Durrabund, and lastly Choudwan—all in the Dehra Ishmael Khan district, and forming the border plains of the Upper Derajat up to annexation. With all the above tracts, the Sheorani were long at feud. They would attack towns, burn villages, and carry off prisoners and cattle. The people of the plain would make reprisals and retaliation, and thus the feud would be inflamed. The Sheorani were so much feared, that the arable lands skirting the base of the hills were all left untilled, and the neighbouring plain villages paid them regularly one-fourth of their produce to buy off depredation,—the Sikh government being unable to restrain them.

Oshterani.—South of the Sheorani hills, on the conterminous of the Dehra Ishmael Khan and Dehra Gazeer Khan districts, there dwell the small Pathan tribe of Oshterani, mustering about 1,000 fighting-men. They are brave and pugnacious, but not predatory. They dwell chiefly in the hills, and are so far independent; but many of them possess and cultivate lands in the plains at the foot of the hills, and consequently within British territory. Before annexation they used to be quite as violent as their neighbours, especially during the continuance of a deadly feud with the Kusranee. The quarrel was, however, composed by Major Edwards before annexation, and subsequently they evinced a good and friendly disposition.

Vooch Pass.—On the border of the Oshterani hills, and nearly opposite to Dehra Futteh Khan, is the Vooch or Korah pass, faced by the British outposts of Doulalwalla and Vehoe. This point is of some topographical import-

ance, as constituting the boundary line between the Puthan and Beluch tribes.

The border tribes previously noticed are all Affghan or Puthan, those that will follow here, are all (with one exception) Beluch.

The Beluch tribes extend along the lower half of the Derajat frontier. These Beluch tribes are less warlike and interesting, but even more predatory. The Puthan are almost entirely independent; very few of these people are British subjects. The headquarters of Beluch tribes and the majority of the clansmen are generally in the independent hills, beyond the British territory, the boundary line of which runs along the base; but a large number of each tribe also hold lands in the plain and are British subjects. Some of the chiefs will also be found residing there. The Beluchi of the plains have for the most part since annexation behaved as well-disposed subjects but the Beluchi of the hills continued their old habits of plundering. All the tribes continued at feud with each other; they not only fought in the hills, but they carried their contests into the plains; they attacked all villages in the plains, except those belonging to their own tribe. The men of the plains usually resist the attacks with spirit at the time, but they are not allowed to retaliate afterwards, as they used to do under the Sikh rule, and as they would do still, were they not prevented by the British government. To guard British villages and people from their constant aggression, a strong cordon of military posts has been fixed along the base of the Sulimani range. The marauding parties were 50, 100, 200, 300, occasionally even 500 strong. They were often mounted and would fly if hotly pursued for 15, 20 and even 30 miles. Many of the villages and much of the cultivation is close to the hills and in front of the posts, so that the plunderers can, in the shortest time, carry off their booty to the hills before the detachment comes up. The tribes in their topographical order, are as under:

The Kusrani are in the hills which extend from the Korah pass downwards for a distance of about fifty miles; about half the tribe own lands and villages in the plain, a portion lead a wandering life in the front range of hills nearest the plain, and the half desert tract at its base, and the remainder live in the hills. The hill Kusrani can muster some 1,200 fighting-men, of whom 50 are horsemen. They are very thievish, and were in the habit of proceeding through the land of their brethren in the plain to plunder in the villages near Dehra Ishmael Khan. The country round Dehra Futtah Khan was also harassed by them, and

many hundred head of stolen cattle were conveyed through the passes into the interior.

The Bozdar.—From the Kusrani limits the hills of the Bozdar tribe extend along the British frontier for about 15 or 20 miles. The range is intersected by some nine passes leading into the plains, the chief which is the Sungurh pass, through which there is considerable traffic with Kandahar and the Punjab. Opposite these hills lies the Sungurh low-land (forming the upper portion of the Dehra Ghazee Khan district and cultivated by several peaceful tribes) and very much at the mercy of the Bozdar. There is only one Bozdar village in the plains, but there is much scattered cultivation belonging to the tribe. Almost the whole tribe and their chiefs live in the hills. They can muster 3,000 or 4,000 fighting-men, some portion of whom are horsemen. They are probably the most formidable robbers in this part of the frontier. Under the Sikh regime they repeatedly carried fire and sword into the Dehra Ghazee Khan district.

The Khutrani.—Behind the Bozdar hills live the Khutrani a Puthan tribe, numbering 3,000 fighting-men, of whom 500 are mounted, in the midst of the Beluch tribes, with whom they are frequently at feud. They are special enemies of the Bozdar and the Murree, their hills scarcely touch the British frontier. Once they sought British alliance against the Murree, and also offered their support, if an expedition were undertaken against that tribe; but the government refused to have any relations of this nature with them, in order to avoid being implicated in the feuds of the hill tribes.

The Kosah extend from the Bozdar southern border to a point somewhat below the latitude of Dehra Ghazee Khan, distance of 300 miles. The tribe dwells partly in the hills and partly in the plains, and can muster about 1,200 fighting-men. In 1855 they were at enmity with the Bozdar above them and the Lugharee below them; but are on good terms with the Khutrani, who are situated behind them. In 1848 the Lugharee sided with the officials of the rebel Moolraj; but the Kosah rose on the side of the government, under their chief, Kowrah Khan, and his son Gholam Hyder. Kowrah Khan, and his son then joined Major Edwardes' irregular force in the Multan province with a contingent of 400 horse. Kowrah Khan was confirmed in the possession of a jagheer of rupees 1,000 per annum for his own life and for that of his son; he himself was granted a life-pension of rupees 1,000, and a garden at the native place of the family was confirmed rent-free in perpetuity.

The Lugharee, well-affected tribe, come next after the Kosah. They live partly in the hills and partly in the plains. Their country extends from Fidore southwards about 30 miles. In these hills is situated the town of Sukkee Lurwar, a place of some sanctity, and venerated by both hindoo and mahomedans. An annual fair is held there. The pass which runs by this point is one of the chief thoroughfares to Kandahar, and the route traverses the Khutran country to the westward. The enmity of the Khutran with the Kosah has been already mentioned. They were greatly favoured by the government of Sawun Mull, who desired to use them as a counterpoise against other tribes.

• *The Goorchanee* are next in order. They can muster about 2,000 fighting-men. Many of them live in the hills and some in the plains. They are a thoroughly debased and thievish set, and contemptible even as savages. They have no respectable chiefs. One chief was put to death by Sawun Mull. Their hill frontage is not more than 20 miles long, but it is intersected by about 30 passes. Towards their southern limit stands the fort of Hurrund, a strong masonry structure, erected by Sawun Mull for restraining them. Near Hurrund is an important pass leading towards Kandahar, they do not make daring forays. In 1850, one raid of theirs was reported; in 1852, two; in 1853, it was proclaimed that any of their hill-men found in the British territory would be seized and placed in confinement; in 1854, their head-man entered into engagements to protect the passes, and receive an allowance of rupees 1,000 per annum. In the midst of the Goorchanee passes are four passes, which in 1855 were in the separate charge of one Kosah chief, and two chiefs of the Rind tribe, for which they receive rupees 300 per mensem.

The Lisharee are a section of the Goorchanee tribe. The Lisharee is a more degraded creature even than the Goorchanee; his ideas do not extend much beyond robbing. Being in the constant habit of harassing their neighbours, they do not commit many eminent crimes. They are always ready to join in forays with the Murree, a more powerful tribe. In 1850, however, one raid was reported against them; in 1852, one; in 1853, four; and in 1854, four. These raids were not however successful.

Dreshuk.—In front of the Goorchanee and Lisharee hills, and between Hurrund and Mithunkote, are plains inhabited by the Dreshuk, British subjects.

The Murree and Boogtee dwell in the hills forming the continuous boundary of Sindh and the Punjab. Near Hurrund, the

great Sulimani range having run in almost a straight line parallel to the Indus for 300 miles approaches its termination and joins the Mara Mount, which leads on to the Murree hills, behind which lies the table land, where Kahun, the capital of the Murree tribe, is situated. But in front of these Murree ranges, there rise a series of sterile rocky hills, which run towards the Indus, and form themselves into an apex near the Gundheree peak, approaching to within a few miles of the river bank. It is at this point (Shawulla) that the continuous boundary of Sindh and the Punjab has been marked off. These last-named hills, projecting into the Lower Derajat, opposite the cantonment of Asnee, are very thinly peopled. They are crossed by passes leading towards the Murree hills, and are claimed partly by the Murree tribe and partly by the Boogtee tribe, whose hills lie further to the south; but in fact they are not held in strength by any tribe. It is seen, therefore, that the Murree and Boogtee hills, properly so called, are continuous with the Punjab frontier. The head-quarters of both these tribes are situated within the political circle of the Sindh authorities and the relations with both are generally carried on through that medium.

The Murree are a strong Beluch tribe, numbering 3,000 or 4,000 fighting-men. They occasionally committed raids in British territory, in the lower extremity of the Derajat. In 1850, one case was reported against them; in 1853, two; in 1854, one; in 1855, one. They once threatened Rojhan and Kusmora, but dispersed, seeing that preparations were made to receive them. They once attacked a forager's guard from a cavalry regiment at Asnee, and killed several men. Living at some distance in the interior, they cannot well make inroads upon British territory without guides; but the classes who could furnish them such aid can generally be brought under the influence or fear of the British authorities.

The Boogtee do not now give the British any cause of offence. Some of their men are serving in the Punjab cavalry and many are in the Sindh service. They are subjects of the Khan of Kelat.

The following tribes are within the British frontier:

Hazarah.—Their most important political district is western Turnoulee. This petty principality, with a geographical area of 250 miles and a revenue of Rupees 28,000 per annum, is held as a fief from the British government, and the chief possesses independent internal jurisdiction. The tract chiefly lies on the left bank of the Indus,

a portion only being on the right bank, and confronts the Hussunzye country. It is inhabited chiefly by the Turnoulee, a tribe of martial Puthans. Payuda Khan, was a wild and energetic man, and was never subjugated by the Sikh or by the Jummoo rajahs. His son, Jehandad, though loyal and respectable, was wanting in moral and physical force. He behaved well to Gholab Sing at a time when that chief had no friends in Hazara and was confirmed in his fief and received some additional landed grants.

The Syuds of Kaghan claim a brief notice. This long narrow glen, stretching upwards till it nearly reaches Chelas, the latter outpost of the maharajah of Kashmir's kingdom, is a barren dependency of Hazara. It is inhabited by pastoral and aboriginal races, and was given by the predecessors of the British in fiefdom to a family of Syuds who were confirmed by the British. These Syuds exercised international jurisdiction and kept certain members of the family in attendance on the Deputy Commissioner of Hazara, virtually as hostages for good behaviour. The Syuds were summoned to answer numerous complaints preferred by the people of Kaghan: they came, but afterwards fled and assumed an attitude of resistance and intrigued with the Sitana fanatics and with the Hussunzye, then hostile to the British.

The name "Hazarha" or thousands, indicates that the tribes are numerous. The principal of the Hazara tribes are the Turnoulee, Gukkur, Swatee, Doond, Sutte. The petty chieftains are equally numerous. To all were granted jagheers, some for life, some for two or more generations, and some in perpetuity. The liberality of the British government has been very great in Hazara: the landed grants are in the proportion of one-third of the revenue of the district, which amount to less than two lakhs of rupees per annum. Each chief is bound to turn out his contingent of militia, if required; some 40,000 armed men could in an emergency be presented. The principal chieftains are the Gukkur chief of Khaupoor, the Turnoulee chief of Darwazye, the Swatee chiefs of Agore, Mansera and Gurhee Hubeboollah. Under British rule nothing can exceed the loyalty of the Hazara people, who, under the Sikhs, represented by Hurroo Sing Nulwa, and maharajah Golab Sing, resisted cruelty and oppression with the most stubborn contumacy.

The Eusufzye, in the Peshawar district, claim political importance. As soldiers, they are not inferior to any of the independent tribes. They are the most martial of all the British subjects on the frontier, and the

history of many generations attests their military exploits. Participants in every war that has convulsed the Peshawar valley, and always the recusant subjects of the Sikhs they literally turned their swords into ploughshares and became good lieges of the British. Their customs have been respected, the allowances of the chief and their village head-men have been confirmed. Though constantly tampered with by the Swat government to rebel, they only once in 1849 yielded to temptation.

The Khulcel are a class of the Puthan, dwelling in a portion of the Peshawar valley opposite to the Momund hills. Their chiefs held jagheers on condition of service. During the disturbances they permitted a number of hostile Momund to escape through their fief. For this misfeasance their jagheers were reduced, and they were temporarily exiled, but were shortly allowed to return to their homes.

The Momund of the Plains are a section of the Momund tribe who have colonized in the south-western portion of the Peshawar district. They are now respectable cultivators. They maintain friendly relations with their neighbours, the Afredi. Their chiefs hold jagheers, but the support they give to government in return is lukewarm. They have not fraternized with their fellow Momund of the hills; but they have not cordially co-operated against the Afredi, of whose vengeance they are perhaps apprehensive.

The Bungush Puthan are the principal tribe in the Kohat district. They are a large tribe, can muster 15,000 fighting-men, and are fairly good soldiers. They highly appreciated the light money assessments of the British, after what had been long termed the 'robber rule' of sultan Mahomed Barukzye, who up to 1848, he held Kohat as a fief from the Cabul government. It was then taken possession of by the British on account of hostility to the British during the second Sikh war. The late khan of Hungoo in the Bungush country was in the British service as revenue collector, but he was murdered by one of his own relatives, and the khan-ship descended to his son. The Bungush suffered much from the raids of their hill neighbours, Orukzye, Tooree and Cabulkheyl Wuzereee. The inhabitants of the Meeranzye valley are also Bungush. This valley belonged to the fief of sultan Mahomed, but being an outlying locality was overlooked when Kohat was taken possession of. The Cabul government then lost no time in arranging for the occupation of Meeranzye, which appeared to have been vacated; so sirdar Azim Khan, the governor of the

Khoorrum province, in 1851, summoned the Meeranaye to surrender; but they petitioned the British to include them in Kohat, and this request was granted. They were in their hearts hostile to the British government, as indeed they were to any government whatever.

The Khuttuk.—The remainder of the Kohat district consists of the Khuttuk country. This had belonged to the Sikh dominions, and had been farmed out to khaja Mahomed Khan. There were also other jagheers similarly situated, belonging to other Khuttuk chiefs; but two chiefs failed to prevent Afreedi marauders from passing through their lands, to cross the Indus and then to plunder and murder in the Rawul Pindee district. On the whole the Khuttuk have been loyal subjects. They are good soldiers and can muster 12,000 fighting men. Many of them are in the British service. They are considered the best-conducted and most respectable tribe on this frontier.

In the southern Khuttuk hills are the Trans-Indus salt Mines situated near the villages of Buhadoorkheyi, Kurruck and Lutumur. There is also a separate mine at Malgeen, a place lying east of Kohat. The headmen of these villages receive a fixed percentage on the collections at the mines to obtain their good-will. The Sikhs never managed these mines at all. They farmed them out to some local chief, and left him to collect what he could. Under British rule, the control and working of the mines is in the hands of government officers; the salt is excavated and sold at the mine at a fixed duty of two, three and four annas per maund of 80 lbs., covering all expenses.

Derahjat is the term applied to the territories styled Derañ Ishmail Khan and Dehra Ghazi Khan.

The Dehra Ishmael Khan district is divided into two halves by a range of hills running at nearly right angles from the Sulimani range to the Indus. The passage from one part of the district to the other is through the Peyzoo and Mulezye passes which intersect the range. Above the passes there is the valley of Bunnoo. The Bunnoo Wuzerees have been already described. The Bunnoochees themselves were, and are still, to a certain extent, a vicious race. They cultivate with some industry; and are well-affected to the government. Below the valley, and immediately above the range is Murwut. The Murwutees are a fine race, of striking appearance, loyal to government, and both willing and able to check the depredations of their hill neighbours. In Murwut stands the fort of Lukkee. In the hills near

the Peyzoo pass dwell the Butanee: they were once a robber tribe, but have reformed since annexation. Their co-operation against the Muhsood Wuzerees could be reckoned upon.

Below these are two important families, namely, the Gundapoor of Kolachee, and the chiefs of Tank. These two tracts are exposed to attack from the Sheoranees and Wuzerees. The revenues of Kolachee amount to between Rupees 8,000 and 10,000. Of this, up to 1855, the Gundapoor received 25 per cent. on condition of good service in defending the tract. The Tank chief holds a lease of the revenues of that tract; he makes the collections, which amount to Rupees 65,000 per annum, and receives one-third for himself and the establishment he maintains. This lease is conditional on good service in defence of the fief. The chief is a Puthan of good family. There is also the nawab of Dehra Ishmael Khan; he belongs to the princely race of Suddoozye, and was formerly the Lieutenant of the Duranee government in the Upper Derajat and Lower Sindh-Sagur Doab. He was deprived of his power by the Sikhs.

Derah Ghazee Khan.—The principal chiefs in the Dehra Ghazee Khan district, the Nootkancee, Loond and Dreshuk, have been mentioned in connexion with the hill tribes. Those sections of the hill tribes who reside in the plains have usually behaved well, even at times when their brethren of the hills were in a state of hostility against British subjects. The plain tribes are the Nootkancee, Loond and Dreshuk, all of them well-conducted; they can muster a certain number of fighting-men, but they are unable to resist effectually the marauding aggressors of the hill-men, and are victimized by such tribes as the Bozdar and Goorchanee.

The Muzaree formerly dwelt in the hills, but migrated to the plains where they have since remained, and have been a cause of trouble to successive governments. They can muster 4,000 fighting men, and more than a hundred horsemen. Their head-quarters are now at Rojha, below Mithunkote, and near the confines of Sind. When Mithunkote was conquered by the Sikhs, they harassed the new-comers and laid waste the acquisition. The vicinity of Mithunkote still bears traces of desolation. A strong Sikh force moved against them, and thus the lower extremity of the Derajat, down to Shahwullee, was then added to the Sikh dominions, and at annexation became included in British territory. Maharajah Runjeet Sing subsequently received the Muzaree chief at Lahore. The Muzarees are not disloyal subjects, and aid in keeping the Murrees in check, against

KHYBER PASS.

whom they are bitterly opposed. But they were addicted to cattle-lifting and carrying on more or less an organized system of theft, not only in British territory on both sides of the Indus, but also in Bahawalpore territory. To prevent this, a river police was formed and their depredations diminished.

The independent and dependent tribes of the Panjab frontier having been thus described in detail, it may be well to give a summary of their respective forces. The numbers of fighting-men of the independent tribes may be thus estimated :—

Tribes on Hazara frontier and near the Indus north of Peshawar...	8,000
Swat and its dependencies.....	20,000
Momund	12,000
Afredi.....	20,000
Orukzyes and other tribes on Kohat frontier	30,000
Wuzerees.	20,000
Sheoranoo and others in Dehra Ismael Khan district.....	5,000
Beloch tribes on Dehra Ghazee Khan border.....	20,000

Total... 1,35,000

Besides the above, there are other warlike but dependent tribes, within British territory with the following numbers of fighting-men :—

Turnouli (including Jehaudad's)...	8,000
Other tribes of Hazara.....	10,000
Eusufzye... ..	25,000
Khuttuk.	12,000
Bungush.....	15,000
Derajat tribes in British territory..	10,000

Total... 80,000

Only a very small portion of these forces would ever be arrayed at one time and in one place—it is but rarely that even two or three tribes can combine. When one tribe, or section of a tribe, is hostile, it generally happens, that another tribe or section is friendly, and the support of some tribes could be always counted upon in the event of hostilities. Anything approaching to a general combination is a contingency quite beyond the range of probability.

The independent tribes beyond the frontier are savages, noble savages perhaps, and not without some tincture of virtue and generosity, but still absolutely barbarians nevertheless. They have nothing approaching to government or civil institutions. They have for the most part no education. They have nominally a religion, but mahomedanism, as understood by them, is no better, or perhaps is actually worse, than the creeds of the

KHYBER PASS.

wildest races on earth. In their eyes, the one great commandment is blood for blood, and fire and sword for all people not mahomedans. They are superstitious and priest-ridden. But the priests (Moolla) are as ignorant as they are bigoted and use their influence simply for preaching crusades against unbelievers, and inculcate the doctrine of rapine and bloodshed against the defenceless people of the plains. The hill men are sensitive in regard to their women, but their customs in regard to marriage and betrothal are very prejudicial to social advancement. At the same time they are a sensual race. They are very avaricious; for gold they will do almost anything, except betray a guest. They are thievish and predatory to the last degree. The Pathan mother often prays that her son may be a successful robber. They are utterly faithless to public engagements, it would never even occur to their minds that an oath on the Koran was binding if against their interests. It must be added that they are fierce and blood-thirsty. They are never without weapons: when grazing their cattle, when driving beasts of burden, when tilling the soil, they are still armed. They are perpetually at war with each other. Every tribe and section of a tribe has its internecine wars, every family, its hereditary blood feuds, and every individual, his personal foes. There is hardly a man whose hands are unstained. Each person counts up his murders. Each tribe has a debtor and creditor account with its neighbours, life for life. Reckless of the lives of others, they are not sparing of their own. They consider retaliation and revenge to be the strongest of all obligations. They possess gallantry and courage themselves, and admire such qualities in others. Men of the same party will stand by one another in danger. To their minds, hospitality is the first of virtues. Any person who can make his way into their dwellings will not only be safe, but will be kindly received. But, so soon as he has left the roof of his entertainer, he may be robbed or killed. They are charitable to the indigent of their own tribe. They possess the pride of birth and regard ancestral associations. They are not averse to civilization whenever they have felt its benefits; they are fond of trading, and also of cultivating: but they are too fickle and excitable to be industrious in agriculture or anything else. They will take military service, and though impatient of discipline will prove faithful, unless excited by fanaticism. Such, briefly, is their character, replete with unaccountable inconsistencies, and with that mixture of opposite vices and virtues, belonging to savages.—*Mr. Temple in Nos. viii*

KHYEN.

and xii of *Records of Government of India*; *Moorecraft's Travels*, Vol. ii, pp. 352-4; *Vigne's A personal Narrative*, pp. 166-7; *Masson's Journeys*, Vol. i, pp. 162-165, 101.

KHYEN is a name given to several populations,—one tribe who tattoo their skins, dwell on the Koladyn river, in Arracan. Another dwell on the Yuma mountains south of the Koladyn river; the Mru are sometimes called Khyen. Khyen, indeed, as also Kha, are probably, names given to most of the rude tribes of the Arracan and Burmese mountains. Those of the Khyen to the south of the Koladyn river, are Burmese subjects, pay taxes, serve as soldiers, and live a quiet life. But the Khyen on the hills are independent. They say that they fled thither from the plains of the Irawadi. They are ruled by their village chiefs. Their religious chief is the Papin, whose office is hereditary, and is that of prophet, soothsayer and priest. They believe in the metempsychosis. They worship the Subri tree, a thick bushy tree, bearing a small berry; they also worship the thunderbolt. The Khyen grow and spin cotton into cloth, which they dye black and wear. The women tattoo their faces. The true and typical Khyen is the independent mountaineer of the central districts. The Khyeng or Khyen residing to the south of the Koladan, in the Yu-ma range as far as the north border of Pegu, but chiefly in the upper basin of the Lem-yo, have a tradition that they once possessed the plains of Pegu and Ava. The name seems to be the soft Burman pronunciation of Karen, and they may be a remnant of an old horde from the north, pressed into the mountains or restricted to them by the Karen, as the other Yuma tribes probably were. Linguistically, the Khyen are connected with the Yuma tribes to the northward. Physically, they are of the earlier and purer of the Mongolian race of the Irawadi family, like the Nicobarian, Kami and Kuki. Their faces are flatter and less regular than the Burman and consequently than the Karen. Captain Phayre says their manners and appearance are similar to those of the Kumi. They make iron and cloth and have the usual weapons of the tribes of the upper Irawadi. They are interspersed amongst the Burmese and Karen, from lat. 23° N., along both sides of the Arracan range and range southwards to the mouths of the Irawadi, and a few are found eastward. They are most numerous about 20° N. lat. Their women tattoo their faces entirely of a dark-blue colour. The eastern portion of the district from the Yeomadoung to the Lemroo river is mountainous and hilly. The hill tribes living on the eastern frontier are Khyen,

KHY-OUNG-THA.

Mroo-khyen, and Koo. The Khyen differ from the Burmese in dress, language and habits: they occupy both banks of the Lemroo river from the Wah Kheong to the Kheo Kheong, and the low hills west of the Jegaendong range visible from the plains, to the valley of the Taroo Kheong and the low hills and plains within the Tandan, Ganacharain, Prwanrhay and Dainboong circles. They are a quiet, inoffensive people, and number 3,304 souls who pay land revenue and capitation tax to the amount of rupees 3,883. The most northern village occupied by the Mroo Khyen, paying revenue, is Sikchmroa, situated 14 miles north of the junction of the Saeng Kheong with the Lemroo river. The Mroo Khyen occupy the valleys of the Wah Kheong, Saeng Kheong, Mau Kheong and that part of the valley of the Lemroo between Peng Kheong and Saeng Kheong. They number 4,020 souls, of whom 37 cultivators pay an annual revenue of rupees 111. *Khyen* or *Kayn*, or *Chin*, are a considerable tribe on the Yoma mountains that stretch from Arracan to the Naga hills and scattered in small settlements on the north of Pegu as far as Tounghoo. Dr. Mason regards them as Karep, but Yule thought them Kooki, and Phayre regarded them as Burmese. They tattoo the faces of their women, to mar their beauty. They call themselves Shyoun or Shyu or Sho, and the Burmese style them Pwo-meet-khyen, meaning river Khyen.—*Latham*; *Mason, Burmah*, p. 96-97; *Yule*. See Kami, Karen.

KHYEN BOUNG PHYOO, and Tau khyen boung and then-ban, BURM., are species of *Hibiscus*.

KHYENDWEN, a tributary to the Irawadi, in lat. 26° 28', long. 96° 54', runs generally south into the Irawadi, near the town of Anyemmya; length, 470 miles. It receives Myitia Khyoung, 170 miles. See India.

KHYEN RWAE, BURM. *Abrus precatorius*, *Linn.*

KHYET-THWON-NEE, BURM. *Allium ascalonicum*, *Linn.*

KHYONG, BURM. A small river.

KHYOUNG, see Pagoda.

KHYOUNG SHIA, BURM. *Calosanthos indica*, *Blume, W. I.*

KHY-OUNG-THA. The sea board of Arracan and the lower portions of the valleys opening into it, form the country of the Rakhoung-tha or Arracan tribe, of whom the Burmans are a branch. Some are found residing on the banks of the mountain streams and are distinguished by the name of Khyoung-tha. Their language proves that they do not belong to the Yuma group, but are intruders from the north; and their own traditions recognise the Ku-mi as the tribe in

KHYRODA.

possession of the sea board, when they entered Arracan. Amongst the people speaking one of the Yuma dialects, according to Mr. Logan, are the Khy-ong-thu, of Arracan, a rude tribe, speaking the Rakhoing dialect of Burman. The Khy-ong-thu, with the Khu-mi or Ku-mwi (properly Ku-mi), of the middle basin of the Koladyn, belong to the Burman family. The more eastern tribes, such as the Lung-kha (perhaps the Lunkta, a branch of the Ku-ki) of the upper Koladan, and the Heuma of Shindu, and the Khon or Kun who are amongst the feeders and beyond the Koladan, are too little known to be referred with certainty to any particular branch of that family, although it is probable that the latter are allied to the Ku-ki, Ku-mi, &c. The Lungkha are said to be composed of an offshoot of the Heuma of the Shindu (Shentu, Tseindu or Shiandu) and two tribes called Lung-khe and Bowng-jwe, which it subdued. Captain Tickell says that the feeders of the Mi-Khyoung, the principal eastern affluent of the Koladyn, descend from masses of high hills about 21° 50' N. Lat, inhabited by the Kun. See India.

KHYONG-YOOK. *Garuga pinnata*, Roxb.
KHYOUK PHYOO, a town and harbour in the island of Rannce or Yambie.

KHYRALLU, see Kol.

KHYRODA, is a tappa, or sub-division of one of the greater khulisa or fiscal districts of Mewar, and consists of fourteen townships, besides their hamlets. Its land is of three classes, viz., peewul, or watered from wells; gorma, also irrigated land, extending three or four khet, or fields, around the village; and mar or mal, depending on the heavens alone for moisture. There are two harvests, viz., the oonahoo (from oon, 'heat'), or summer-harvest; and the sealoo (from see, 'cold'), the winter or autumnal. The sealoo crop, consists of mukki, or Indian corn, sorghum or joar and bajra, with the different pulses. Its agricultural economy, discovers distinct traces of the patriarchal system. The share of the crown, as in all the ancient hindoo governments, is taken in kind, and divided as follows:—Of the first, or oonahoo crop, which consists of wheat, barley and gram, the produce is formed into kulla (piles or heaps) of one hundred maunds each; these are sub-divided into four parts, of twenty-five maunds each. The first operation is to provide from one of these the seerana, or one seer on each maund, to each individual of the village establishment, viz., the patel, or head-man; the patwari, register or accountant; the shanah or watchman; the bullai or messenger, and also general herdsman; the kat'hi (alias sootar) or car-

KIANG.

penter; the lohar, or blacksmith; the khamar, or potter; the dhobi, or washerman; the chamar, who is shoe-maker, carrier, and scavenger; the nae, or barber-surgeon. This rough sketch of the agricultural economy of Khyroda, may be taken as a fair specimen of the old system throughout Mewar.—*Tod's Rajasthan*, Vol. ii, pp. 595, 598.

KI, the name being also written Ke and Kei or Key, a group of three large and many smaller islands near New Guinea, about 60 miles west of the Arru islands. The Ki appear like so many isolated mountains, thinly peopled, one of them is famous for its potteries. At another are built the prahu, celebrated among the mariners of Banda and Ceram, for their sailing qualities and strength.—*St. John's Indian Archipelago*, Vol. ii, p. 90; *Horsburg*.

KIAB, an Arab tribe of Suzistan. See Ka'ab.

KIABOCA, *Pterospermum indicum*, see Furniture, Amboyna wood, Kyaboca wood.

KIATITU, near the Baikal lake, is 2,400 feet above the sea.

KIAIN, **HIND.** *Elaeagnus conferta*, also *Boletus ignarius*.

KIAKITA, see Pekin.

KIALI, **HIND.** of Bassahir and Kanawar, &c., *Cedrus deodara*, cedar or Himalayan cedar.

KIAMIL, **HIND.** *Odina wodier*.

KIANG, the Kiang, or wild horse (*Equus hemionus*), according to the Messrs. Schlegelweit, has been often confounded with the Gor-khar, or wild ass, though they differ considerably in appearance, and inhabit countries with very dissimilar climates. The Kiang exists in the high cold regions and mountains of Tibet, the ass in the heated sandy plains of Sind and Beluchistan. The Kiang is found in great numbers nearly in the same localities as the yak; he does not, however, go up the mountains so high as the yak, but the range of his distribution is greater than that of the yak. The greatest elevation where they found the Kiang, was 18,600 English feet, whilst they traced yaks as high up as 19,300 feet. The regions where the yak and the Kiang are found are, in a zoological point of view, among the most remarkable and interesting of our globe. The highest absolute elevation coincides here, it is true, with the greatest height of the snow-line, or rather it causes the snow-line to be higher. But those large, high, plateaux and regions, though free from snow and ice in summer, remain a desert throughout the year. The amount of vegetation on them is less than it is in the desert between Suez and Cairo, in Egypt. Nevertheless, these high,

KIAYU.

sterile regions are inhabited by numerous herds of large quadrupeds; and, besides those already mentioned, numerous species of wild sheep, antelopes, and a few canine animals, chiefly wolves, as well as hares, are abundant. The herbivorous animals find here their food only by travelling daily over vast tracts of land, as there are only a few fertile spots, the greater part being completely barren. The great scarcity of vegetation, particularly the entire absence of mosses and lichens, has a very different effect, though an indirect one, on the occurrence of birds. Those small plants are the chief abodes of insects: the want of mosses and lichens, coinciding with a total absence of humus, limits, therefore, to its minimum, the occurrence of insects, the exclusive food of small birds in all extremely elevated parts of the globe, where grains are no more found. They indeed met, travelling twenty consecutive days between heights of 14,000 to 18,200 feet, only with three individuals belonging to a species of *Fringilla*, but occasionally a few large carnivorous birds, as vultures, were met with. Major Hay sent a kiang to the Zoological Society of London. He mentions that the mares are highly esteemed by the Tibetans for breeding with the thorough-bred Chinese stallion, the produce being a horse with great powers of endurance and which, on this account, are much in request by the Zhakpa, a race of hill robbers who inhabit the mountains. The kiang are abundant near the Pangong Tso, and between Chusal and Hanle. They roam on plains 14,000 to 15,000 above the sea. They are shy. See Gorkhar, India.

KIANG, BURM. A fortified city.

KIANG-KHEN, Kiang-tung, see Shan.

KIAONG, BURM. The monastery house of the Phongi, or buddhist priests or monks.

KIAO-YOU, the Chinese christians call themselves by this name.—*Huc, Chinese Empire*, Vol. i. p. 232.

KIAR, HIND. *Capparis spinosa*.

KIAT, HIND. *Pyrus variolosa*.

KIAT, BURM. The tical, a piece of silver money, weighing 10 dwts. 10½ grains.—*Simmond's Dict.*

KIAYN of Arracan, inhabit the mountains of Yumah, which separate Arracan from Ava. These people, upon the skirts of the mountains, are subject to the Burmese; but, in the less accessible districts, have preserved their independence.—*Cole. Myth. Hind.*, p. 326. See Khyen, India.

KIAYU, a pass in China. The great highway, between Pekin and Europe, has from time immemorial been the caravan tract from the western end of the great wall across the desert of Gobi. The route issues from the

KICHA VIRIGI CHETTU.

western end of the great wall, and moving through the Kiayu pass, has to traverse N. W., 500 miles of a desolate sand tract to reach the city of Khamil. At this town the road bifurcates, the upper branch leading through Baykul Urumchi; and Kurkur-usu into Dzungaria; the lower through Pijan, Turfan, Karashar, and Kuchu to Aksa in Eastern Turkistan. While Chinese rule prevailed, Dzungaria and Eastern Turkestan formed the province of Ili.

KIBABEH, or Cabab-chini, PERS. Cubebs.

KIBITKA, a tent made of felt, called in Russia Jourta or Kibitka, is in Mongol called gher; several tents together, forming a kind of village or station, are called ourto. Oulous, or olos, signifies in Mongol, empire, people; Ordo, a chateau, or imperial palace.—*Timkowski's Journey to Peking*, Vol. i. p. 12.

KIBLAH, AR. Signifies point of adoration, and is usually applied to the kaaba or holy edifice of the mahomedans, situated in the bait-ullah or temple of Mecca. All Eastern sects appear to have had some Kiblah, or holy point, to which the face was to be turned during prayer. The Jew looked towards Jerusalem. The Sabæan, according to some, to the north star, or, according to others, towards that part of the heavens in which the sun rises, or towards the meridian, and the Magian to the rising sun. According to the Veda, brahmins should direct their prayers to the east. The early christians chose the east; Mahomed, who recognised the general custom, and found it necessary to adhere to it, appointed the holy Kaaba of Mecca to be the Kiblah of his disciples. Kiblah is, also, a respectful term in common use in India by mahomedan children towards their parents, or inferiors towards superiors, and in this case means the source of honor and esteem. One of the titles of the king of Persia is Kiblah-i-alam, point of the world's adoration.—*Tavernier; Layard's Nineveh*, Vol. i. pp. 300-1, quoting *Hyde's Relig. Vet. Persar.*, p. 8; *Frideaux Connect.*, Vol. i. pp. 3 and 7.

KIBLAH-I-ALAM, ARABO-PERS. Asylum of the world, in letter-writing, is an expression of respect in mahomedan countries from dependents to their masters, children to parents, or servants to a prince, implying towards whom all the world turns with veneration.—*Ouseley's Travels*, Vol. iii. p. 133.

KIBR, or Kabr, HIND. A kind of wheat of Lahore, uncommon and not good.

KIBRIT, also Cholok, ARAB. Sulphur.

KICHAKAI, SINGH., or Bongu veduru, TEL. *Bambusa arundinacea*, Willd. Bamboo.

KI-CHAN, see Koung-kouan.

KICHA VIRIGI CHETTU, TEL. *Cordia latifolia*, R, Vol. i. p. 588.

KICHCHILI CHETTU or *Natija chettu*, **TEL.** *Citrus aurantium*, **L.** *Kichili-pandu*, *Kichili-palam* or *Chollungi-palam*, **TAM.** The orange.

KICHILI-GADDA, **TEL.** *Curcuma zedoaria*, **Rosc.**

KICHIIRI, generally a mixture of lentils and rice, with clarified butter poured over it. This has become common in El Hejaz as well as at Suez, under the name of *El Kajari*, a corruption, which denotes its foreign origin, and renders its name pronounceable to Arabs. — *Burton's Pilgrimage to Meccah*, Vol. i, p. 269.

KICHORION, **GR.** *Cichorium intybus*, **Linn.**

KIDAH, see India, Kedah, Qedah, Semang.

KIDANG, **MALAY.** *Styloceros muntjak*, **H. Smith.** The Kidang of the Javanese, is the *Cervulus vaginalis*, **Bodd., Gray.** See *Kejang*.

KIDARKANTA, in lat. $31^{\circ} 1' 4''$, long. $78^{\circ} 9' 4''$. In Garhwal a peak commanding a fine view, in the ridge between the Tons and the Jamna. The base of the stone pillar there is 12,430 feet above the sea. The top of the highest peak is 12,518 feet according to the Grand Trig. Survey, and is 12,689 feet according to Herbert and Hodgson. The upper limit of conifers is 10,700 feet. The upper limit of oaks on the southern slopes of Kidarkanta towards Aur is 11,442 feet — *Ad. Schl., Gr. Tr. Sur.* See *Kedarkanta*.

KIDARNATH, in lat. $30^{\circ} 45'$, long. $79^{\circ} 4'$, in Garhwal, on the right bank of the Mandagni, near its origin. The entrance to the hindoo temple is 11,794 feet, *Rob., Schl.*, or 11,753 feet, *J. A.*, 66. The upper limit of trees in the Mandagni valley, below Kidarnath is 11,020 feet. The lower end of the Kidarnath glacier, and origin of the Mandagni is 12,372 feet. The confluence of the first glacier on the right side within the main Kidarnath glacier is 13,658 feet. The junction of the three principal branches of the Kidarnath glacier is 15,449 feet. The small glacier lake, right side of the Kidarnath glacier is 13,349 feet, *Rob., Schl.* See *Kedarnath*.

KIDDAH, **HEB.** *Cassia bark.*

KIDDER, a name of Khizr.

KIDI-TSAI, **CHIN.** Mustard seed.

KIE-CHHA, see *Klu-cha-yul*.

* **KIEF** in Morocco. Dried flowers of *Cannabis sativa*.

KIE-KIA-SSE, see *Kedah*.

KIEN, see *Kirghis*.

KIEN-LONG, see *Kalka*.

KIENRUSS, **GER.** Lamp black.

KIEP-DEP. In Amherst, a strong wood, resembling *Kha boung*.

KIEP-MAUP. In Amherst, a superior timber employed for cart-wheel spokes, free from attacks of insects; the tree is said to have an edible fruit.

KIEP-YO. In Amherst, a heavy, good wood, but small; used for house-posts and rafters.

KIERP, **BENG.** *Carallia lucida*, **Roxb.**

KIEW? *Diospyros melanoxylon*.

KIFRI. Near this town, in the pass through which the *Ak-Su* penetrates to the plains is a naphtha pit. The hills are about a mile S. E. of the town of Tuzkurmatti close to the gypseous hills of Kifri and, being in the bed of the torrent, is sometimes overflowed by it, and, for a time, spoilt. The pit is about fifteen feet deep, and, to the height of ten feet filled with water, on the surface of which black oil of naphtha floats, small air-bubbles continually rising to the surface. They skim off the naphtha, and ladle out the water into a channel, which distributes it into a set of oblong, shallow, compartments, made in the gravel, where they allow it to crystallize, when it becomes very good salt, of a fine, white, brilliant grain, without any intermixture of bitterness. Great quantities of this are exported into Kurdistan: and it is worth annually about 20,000 piastres. The oil of naphtha is the property of the village. Part of it is consumed by the *manzil khauch*, or sold for its support, and part for religious establishments, &c. About two jars, each containing six oka, or one Bagdad batman, of naphtha, may be skimmed from this well in twenty-four hours. The spring is at the bottom of the pit or well, and once a year they cleanse the well, on which occasion the whole village turns out, victuals are distributed to all the poor, and sacrifices of sheep are made to the sound of drums and oboe, in order to insure the good flowing of the spring again—a ceremony, in all probability, derived from remote antiquity. The principal naphtha springs are, however, in the hills, a considerable distance south of this, towards Kifri. They are five or six in number, and are much more productive than this pit, but no salt is found there. Indeed, it is probable that naphtha may be found in almost any part of this chain. Near the naphtha pit in the hills are alum (*zak* or *sheb*) and chalk (*tebesir*), of a very fine, close, white, grain, but the natives make no use of these productions. An earth, also, is found, which they employ to give an acid flavour to some of their dishes, no doubt it is vitriolic. Sulphur is also found, and is used by the peasants to cure the itch in their cattle and themselves.—*Rich's Residence in Kurdistan*, Vol. i, pp. 27–9. See *Karu-Oghlan*, *Kerkook*, *Kirkkook*.

KILIGILLIPI.

KIGOGO, see *Somal*, Beer-us-somal.

KIHREM, see *Arian*.

KIHRI, *HIND.* *Spiraea lindleyana*.

KIJANG, or the roe, as it is commonly called by Europeans, in Borneo, is the *Cervus muntjac*, an elegant animal, the points of the horns of which are turned forwards: it is of a light brown colour, about the size of the antelope, which, with the exception of the horns, it resembles in general appearance. The Kijang of the Sumatrans, is, also, the *Cervulus vaginalis*.—*Bodd.*, *Gray*, *Low's Sarawak*, p. 76. See *Kidang*.

KIKUEL an oil, from the seeds of *Salvadora persica*, imported into Bombay from Gujerat, for local consumption.—*Simmond's Diet*.

KIKAR, *HIND.* *Acacia leucophloea*, *Vachellia farnesciana*, *Wilayiti kika* is *A. arabica* var. *cupressiformis*. *Kikar-Gond* is the gum of *Vachellia farnesciana*. *Kikar Safed*, *Acacia cinerea* and *Acacia ferruginea*.

KIL, see *Khaki*.

KILLA, *HIND.* A fort. *Kiladar*, *HIND.* The governor or commandant of a fort.

KILAH or *Kela*, *DUK.* *Musa sapientum*; the plantain or banana.

KILAD-US-SHAM, *ARAB.* Stones of the yellow date, strung on twine and worn as necklaces by the Hodeilah Arabs.—*Hamilton's Senai*.

KILAI, also *Kilar*, *HIND.*, towards the Dhauladar range in Chamba and on the Kavi, is the *Cedrus deodara*, Himalayan cedar or deodar.

KILA-NELLI, *TAM.* *Phyllanthus niruri*, *L.*

KILAR, *HIND.*, *PANGI.* *Fothergilla involucrata*, also *Parotia jacquemontiana*.

KILAWA, *HIND.* *Wrightea mollissima*. **KILDARO**, *Rheede.* *Pandanus odoratissimus*.

KILE, *MALEAL.* *Carissa carandas*.

KILEI, *HIMAL.* *Cedrus deodara*, *Lambert*.

KILGUTCH, *HIND.* *Casalpinia sepiaria*?

KILGUT-CH, *HIND.* *Guilandina bonducella*.

Katkaranja,
Kotkuleja.

| *Bezoari nut*.

The very bitter seed is used very generally as a tonic, febrifuge and deobstruent; at Ajmeer, natives suppose the seed will cure a scorpion sting.—*Gen. Med. Top.*, p. 143.

KILL, *HIND.* *Khel* or *Kheyli*. A clan.

KILIGILLIPI, — *Crotalaria verrucosa*.

KILPATTAR KILLU.

KILIK, *HIND.* *Culm of saccharum semidecumbens*.

KILI-KATR, *Muddikpor* or *Kotaboo*. To this migratory people who dwell in the southern Mahratta country, there have been given many names, but *Kublaira* or *Ferryman*, *Koli* and *Barkur*, are the terms most usually employed, but *Muddikpor* is the designation they apply to themselves. They are generally tall and powerful men, with an olive yellow complexion, and are now very numerous throughout that part of India; they say that their original locality was the village of *Tallicot* near the town of *Sorapoor*, and that however far they have dispersed, all classes continue to speak the *Mahrati* tongue, though it is requisite they should obtain likewise a knowledge of the language of the countries in which they wander to enable them to gain a livelihood. They are wandering minstrels.

KILIMI, *RUS.* Carpets.

KILIOORUM BARK.

Darshishan, *AR.*
Patanni lode, *DUK.*
Kalyphul, *HIND.*

| *Sugundi*, *SANS.*
| *Kilurum puttai*, *TAM.*

A white, slightly aromatic, pleasant tasted bark, found in many Indian bazars. It is held in high estimation by the native practitioners for its stomachic qualities, and bears a strong resemblance in its external appearance to the *Canella Alba*, but is not nearly so warm or pungent. In *Ainslie's* time the botanical name of the tree from which it is obtained, had not been ascertained.—*Ains. Mat Med.*, p. 83.

KILLAH, see *India*.

KILLAH-NUN, see *Kahmuk*.

KILLAR, *HIND.* *Viburnum foetens*.

KILLAH, of *HIMAL.* *Cedrus deodara*, *Lambert*, also *Parotia jacquemontiana*.

KILLARI? *MAHR.* A tribe of migratory shepherds, between the *Tapti* and *Tumbudra* rivers.—*Wilson's Glossary*.

KILMICH, *HIND.* *Viburnum foetens*, *Richthabi kilnich*, is *Viburnum cotinifolium*.

KILON, also *Kilong*, *HIND.* *Quercus dilatata*.

KILOR, *MALAY.* *Hyperanthera moringa*.

KILPATRICK, Major, a brave intelligent officer of the E. I. Company in the time of Lord Clive. In May 1751 he served in the fight of *Volcondah*. In November he marched with a detachment to relieve *Clive* at *Areot*. On the 7th August 1753 he led the attack at *Sugar-Loaf-hill* at *Trichinopoly*, and was desperately wounded. He was frequently engaged in the various parts of the country. He died in October 1757, in command of the *Bengal* troops and Member of Council at that Presidency.

KILPATTAR KILLU, *HIND.* *Acer cultratum*.

KIMEDY.

KILS. AR. *Calcis carbonas.*
KILU, HIND. of Salt Range, *Chamærops*
ritchiana.

KIMEDY, a hill tract occupying the western border of the Ganjam country. It contains the three ancient zemindars of Purlah Kimedy, Pedda Kimedy, (or Vizianuggur) and Chinna Kimedy, (or Pratabgherry). Kimedy had been long subject to the family of Narrain Das, descended from the rajah of Jagganaut, who was formerly sovereign over these countries, and whose sons are said to have separated on their father's nominating a natural son to the succession. Moving southward with a numerous train, one son conquered and established himself in Kimedy, as another brother did at the same time at Vizianuggur in the Itchapoor country. The succession was hereditary and their people regarded them as the offspring of a deity. Kimedy is surrounded by mountains, the valleys extensive and very fertile, having every advantage of tanks, rivers and abundant dews, but the climate is so extremely unhealthy that it proves fatal to most strangers who reside there during or after the rainy season. It is bounded on the east by Purlah and Teckelly, on the north by the lofty hills of the Sowrah people, on the west by those of Palcondah and Courpaum, and on the south by the Chicacole havenly. The greatest length from east to west is about 25 coss, and from north to south 18 coss, including the ranges of hills that intersect in some parts and are its boundaries in others. It is generally believed there are mines of gold in the country north-east from Kimedy, called Mohindramallay, as some of the finest sorts of that metal is brought from thence and is probably picked up in the torrents that come from the mountains, but on this subject the people are extremely secret, pretending to have a method of purifying the gold that comes to them from the low countries. To deter any from going in search of these mines, they relate dreadful tales of the dangers surrounding a mountain far inland which contains a water that transmutes all metals into gold. Kimedy is peopled by the Khond, who up to the middle of the nineteenth century had been repeatedly in rebellion. The hilly tracts of India, from Moorshedabad down to Ganjam, and southwards on the skirts and in the valleys of the mountains as far as Cape Comorin, are peopled by hundreds of small tribes, who form amongst themselves independent nations, who have not yet felt the effects of civilization and, as with the Sonthal, the Sauriah and the Khond, occasionally rise in open rebellion against the British power. It became known in 1833, that the Khond were

KIMIA.

addicted to the Meriah, or sacrifice of human beings,—to the earth-goddess and, ever since then, the British government have made continuous efforts to suppress this rite. Since 1857, the Khond of Kimedy have been surging up, from time to time, the true reasons for which are not known, though the reasons put forward are their hope of renewing the Meriah. A recent insurrection (1858) was neither aided nor led by the Khond, the principal actor in the affair was a man named Danda Sina, of Garbah Goomah, a village occupied by the tribe called Sowrah. This tribe of savages, armed with bows and arrows and battle axes, occupies the hilly tract which extends from Purla Kimedy to Berhampore in Ganjam. It is bounded on the east by the narrow belt which separates the hill tracts from the sea, and on the west by the Khond clans of Chinna Kimedy and Jeypore. The Sowrah are believed to be aborigines, but in habits and barbarism they bear a strong resemblance to the Khond. Danda Sina had, sometime before, been apprehended by the authorities of Ganjam, on a charge of dacoity. He was convicted and sentenced, but the sentence required confirmation, and in the interim he contrived to effect his escape. Flying to his own village, he collected a large body of his clansmen, and with 10,000 followers attacked the manager of Purla Kimedy. Seven persons were killed upon the spot, and though the manager escaped, the whole country was immediately in a state of excitement. The Sowrah had previously been irritated by the execution of two of their number for murdering the headman of a village, and had openly threatened vengeance for their deaths. An old device also was employed to stimulate them to action, and give additional coherence to the movement. As in the Sonthal rebellion, an avatar descended, though he was not, it is true, in the shape either of a cart wheel or of a piece of paper. The Sowrah appear to be advanced beyond that point in theology, and their idol was a little brazen image. But in all other respects the device was identical with that employed among the Sonthal. The avatar issued commands, the active leader is sole interpreter of them, and the commands authorise armed resistance to regular authority. The Kimedy country is one of the most difficult in the world, a hilly tract covered with a jungle as deadly to sepoys as the lowest swamp in the Sonthal pergunnahs. The British were totally in the dark as to the objects or extent of the rising. There was no evidence of any substantial general distress, or of any substantial cause for irritation.—*Oran's Report on Kimedy, p. 5.*

KIMIA, ARAB., PERS., HIND. Chemistry ;

KIMUKHT.

but, among the eastern nations, this has always been considered as closely connected with, or indeed as forming a part of, the search for the philosophers' stone, and of the art of magic, supposed to be the constant and favourite study of Indian sages, enchanters who are much dreaded in Persia. With the Arabic prefix *al*, we have the European word *Alchemy*.

KIMIS, a fermented beverage in use amongst the nomade Tartars.

KIMKHAB, silk brocade, worked in gold and silver flowers. The costly and superb fabrics of cloths of gold and silver or the *Kimkhab*, and the classes of washing satins or *Mushroo* and *Hemroo*, even if European skill could imitate them by the hand-loom, it would be impossible to obtain the gold and silver thread unless it were imported from India. The native mode of making this thread is known, but the result achieved by the Indian workman is simply the effect of skilful delicate manipulation. The gold and silver cloths, or the *kimkhab*, are used for state dresses and trousers, the latter by men and women; and ladies of rank usually possess petticoats or skirts of these gorgeous fabrics. *Mushroo* and *Hemroo* are not used for tunics, but for men's and women's trousers, and women's skirts; as also for covering bedding and pillows; they are very strong and durable fabrics, wash well, and preserve their colour however long worn or roughly used; but they can hardly be compared with English satins, which, however, if more delicate in colour and texture, are unfitted for the purposes to which the Indian fabrics are applied. For example, a labada or dressing gown made in 1842, of scarlet *mushroo* was washed over and over again, and subjected to all kinds of rough usage; yet the satin is still unfrayed, and the colour and gloss as bright as ever. The *kimkhab* or loom-made fabrics of silk and with gold and silver wire, although only employed in India as articles for personal wear, might be used in Britain for covering chairs, couches, &c.

KIMLEEA, see *Kumawar*.

KIMLU, *HIND.* *Odina wodier*.

KIMPURUSHA, in hindoo, the celestial musicians.

KIMRI, *HIND.* *Ficus caricoides*.

KIMSANA, *HIND.* A kind of bronze leather of Kashmir and Peshawar.

KIMSUKAMU, *SANSC.* or *Moduga chet-tu*, *Butea frondosa*, *R.*

KIMU, *HIND.* of *Kangra*, *Morus serrata*.

KIMUKA, *SANSC.* or *Bomma kachchiku*, *Costus speciosus*, *Sm.*

KIMUKHT, Turquoise green leather, made at Yarkand and at Bareilly, much used

KINDLE BELLEROM.

in Kabul and Peshawar. It looks like shagreen, is used for making native shoes, and also for sword scabbards. About 2,000 Rs. worth is annually exported from Bareilly to Delhi and other places.

KINA BALOW, a mountain near Bawang, in Borneo, estimated between 13,000 and 14,000 feet in elevation, properly *Kini-ballu*, the Chinese widow. The interior of Borneo is still almost unknown. The existence of lofty ranges of mountains in the centre is undoubted; and in the north-west so far as the country was penetrated by Mr. Spencer St. John, in 1858, the whole was found to be mountainous, each range becoming more lofty as he approached the interior, but presenting one uniform aspect of jungle covering hill and valley when looking from the summit of the great mountain *Kina Balu*, in the north-east of Borneo, towards the interior in a southerly direction, Mr. St. John obtained a distant view of a mountain peak which he supposes to be very considerably higher than the one on which he stood, and to be situated very nearly in the centre of the island. The land on all sides gradually slopes towards the coast. Borneo may be said to bear the same relation to Eastern India that the continent of America has borne to Europe, being a region in which tribes inhabiting the remoter East have occasionally found a refuge from religious persecution and from the pressure of a superabundant population—*Jour. Ind. Arch.* See *Kini-ballu*, Ambong, Borneo, Kyan.

KINANG, *MALAY.* Sulphuret of antimony.

KINAREE, a stream in the Jubbulpoor district.

KINAR-KA-BIJ, *HIND.* Seeds or stone of *Zizyphus jujuba*.

KINCHINJUNGA, forty-five miles distant from Darjeeling, is the prominent object, rising 21,000 feet above the level of the observer, out of a sea of intervening wooded hills; whilst, on a line with its snows, the eye descends below the horizon, to a narrow gulf 7,000 feet deep in the mountains, where the Great Runget river, white with foam, threads a tropical forest with a silver line.—*Hooker, Him. Jour., Vol. i, p. 122.* See *Mount Everest*.

KINDERSLEY, J. R., a member of the Madras Civil Service, author of a *Manual of the Law of Evidence of the Madras Provinces*.

KINDLE BELLEROM, *TAM.* A wood of Malabar and Canara resembles the *Angely* wood of Cochin and Ceylon. The Company's cruiser, *Aurora*, was built, by way of experiment, of this *Kindle* wood, it was procured from the forests in the north of Malabar; and it appeared to answer its purpose.—*Edgc, Forests of Malabar and Canara.*

Rajah,	"	Sultan, ARAB., TURK.
Nawab,	"	

KING, CHIN. An imperial capital, as in Peking, Nanking ; Tu, Chinese, is a court or imperial residence, as Tai-tu, Shangtu ; Fu, Chinese, is a city of the first class, or rather the department of which it is the head ; Cheu, a city of the second class, or the district of which it is the head.—*Tule Cathay*, Vol. ii, p. 262.

KINGAKO, HIND. Flacourtia sepiaria.

KING CRABS of Achin.

Ikau-mimi, JAV. | Mol-moi, ACHIN.

Two of these crabs join themselves together by their undersurfaces and thus united burrow in the sand. They are eaten by the Chinese and Javanese.—*Bennett's Wanderings*, Vol. i, p. 401.

KING-CROW, *Dicrurus macrocerus* is often seen on the backs of cattle : it is also called the Kotwal.

KING-FISH, *Polynemus sole*, Buch.

P. plebius, Brouss. | P. gelatinosus, McClell.

P. lineatus, Lacep.

Ka-tha, BURM., (the young), O'Riley. | Lukway, ARRACAN.

Polynemus sole, is found from Calcutta to Otaheite. It produces isinglass of the best quality, and Mr. O'Riley estimated that two thousand pounds might be obtained annually off Amherst alone. Its sounds are a constant article of traffic among the Chinese. The largest sounds were exported from Rangoon, and they sell in Tenasserim at about half a rupee a pound. About ten thousand of the fish, large and small, are taken annually in Arracan, and the sounds sell there for about a third of a rupee per pound to the Chinese, who export them to Penang, where they are said to bring more than a rupee a pound. Specimens, prepared in India for the European market were complained of, "as being too thick, if intended to come into competition with the superior varieties of Russian isinglass. The first quantities sent from India brought only 1s. 7d., others have been sold for 3s., and a few samples have been valued at 4s. per pound."—*McClelland, Mason*.

KING-FISHER, a bird of the family Halcyonidæ, of which there are several species in the East Indies. The Tanysiptera nais, of Amboyna, is the racquet-tailed king-fisher, and is one of the most singular and beautiful of that beautiful family. King-fishers are

KINJIK.

numerous in India, one as small as the common English king-fisher, another as big as a jay, and two others very little less. They live on fry of small fish, but their bright plumage is their ruin, for it is saleable, and a class of men make their living by capturing them. In solitary places, where no sound breaks the silence except the gurgle of the river as it sweeps round the rocks, the lonely king-fisher, an emblem of vigilance and patience, sits upon an overhanging branch, his turquoise plumage hardly less intense in its lustre than the deep blue of the sky above him ; and so intent is his watch upon the passing fish, that intrusion fails to scare him from his post. The common king-fisher, (*Alcedo bengalensis*, Gmel.), the black and white species (*Ceryle rudis*), and the Indian king-fisher (*Haleyon fuscus*, Bodd.), are often observed. The first is common in rice-fields, streams, and river banks ; the two latter are not so plentiful ; the Indian king-fisher is a tenant of gardens and pools ; the large black and white king-fisher is the *Ceryle guttata*. Bird's feathers, from the cranes and king-fishers, form a considerable article of trade in south-eastern Asia, the feathers of a large, green king-fisher, are exported from Madras, one lac at a time, to Singapore, to be used by the Malays, Javanese and Chinese. They sell there at 200 per cent. profit.—*Tennent's Sket. Nat. Hist.*, p. 249 ; *Wallace's Eastern Archipelago* ; Adams. See Feathers.

KINGIENA, CAN. *Cocos nucifera*, Linn. Coconut palm.

KINGI, HIND. *Urtica heterophylla*.

KING ISLAND, of considerable size, lies off the entrance of the Tenasserim river ; to its north is a smaller island called Iron island, and Long island, lies E by S. Between King island and Plantain island is a bay, affording shelter for ships.

KING KHAH, HIND. *Artemisia elegans*.

KING-KHIAO, CHIN. Means, literally, luminous religion. A Russian scholar rendered these two Chinese characters most erroneously as orthodox religion.—*Huc*, Vol. i, p. 51.

KINGSHOOKHA, BENG. *Butea frondosa*.

KING WILLIAM ISLAND, in Dampier Strait, lies S. of Gamien.

KINI BALLU, meaning the Chinese widow, is the name of the highest mountain in Borneo. See Kina Balow.

KINJI, HIND., of Hazara, the Himalayan nettle.

KINJIK, HIND. A kind of small pistachio nut.

KINO.

KINJUL, MAHE. *Terminalia alata* and *Pentaptera paniculata*.

KIN-LE-SUNG, one of the finest trees seen by, and quite new to, Mr. Fortune, was a beautiful species of cedar or larch, which Dr. Lindley, to whom he sent specimens called *Abies Kämpferi*. It is called by the Chinese, the *Kin-le-sung* or Golden Pine, probably from the rich yellow appearance which the ripened leaves and cones assume in the autumn. Their stems were fully five feet in circumference, two feet from the ground, and carried this size with a slight diminution, to a height of 50 feet, that being the height of the lower branches. The total height was estimated about 120 or 130 feet. The stems were perfectly straight throughout, the branches symmetrical, slightly inclined to the horizontal form, and having the appearance of something between the cedar and larch. The long branchless stems were, no doubt, the result of their growing close together and thickly surrounded with other trees, for he afterwards saw a single specimen growing by itself on a mountain side at a much higher elevation, whose lower branches almost touched the ground. He procured a large supply its of curious cones which were sent to England in the winter of 1853.—*A Res. among the Chi.*, pp. 266, 274-5.

KINNAB, ARAB. Hemp. *Cannabis sativa*.

Kino is a product of the *Pterocarpus marsupium* of India, Linn. ; *P. erinaceus*, Poir. of Senegambia ; the *P. Wallichii* and *P. Indica* or Padouk of Tenasserim, the *Butea frondosa* of India and the *Eucalyptus resinifera* of Australia. The juices of the *Pterocarpus erinaceus*, and that of the *Eucalyptus resinifera*, have much the same properties as the catochu and have been proposed to be used in dyeing green. Although the colour of kino is a deep-red, it has the power of communicating a green colour to the salts of iron. But the true gum kino is obtained from the *Pterocarpus marsupium* which yields on incision a large quantity of blood-red juice. Though the juice of *P. indicus*, *P. Wallichii* and of *P. dalbergioides* are said to be also dried and exported under the name of kino, and the articles sold as kino are produced from trees of four different families of plants, and come from many opposite parts of the world, it is probable that the properties on which their value depends are of a general nature, and therefore that *P. dalbergioides*, equally with *P. marsupium*, affords the gum kino of India, and this opinion is also entertained by others. *P. dalbergioides* is found in the northern parts of the Pegu province in the Prome district chiefly in the vicinity of towns and inhabited places rarely in the forests. The kino of Botany Bay and Van Diemen's land is the produce of the Iron Bark tree, *Eucalyptus resinifera*. This tree sometimes yields, on incision, 60 gallons of juice. Kino is imported in boxes. A substance chiefly used as east Indian kino, is said to be an extract formed by inspissating a decoction of the branches and twigs of the gambier plant. Vauquelin analysed it, and found it to consist of, tannin and peculiar extractive matter, 75 ; red gum, 24 ; insoluble matter, 1. The east Indian kino, imported from Bombay and Tellicherry, is the produce of *Pterocarpus marsupium*, a lofty, broad-spreading, forest tree, which blossoms in October and November. The bark is of a greyish color, and is upwards of half an inch in thickness on the trunk. When cut, a blood-red juice speedily exudes and trickles down ; it soon thickens, and becomes hard in the course of fifteen or sixteen hours. The gum is extracted in the seasons when the tree is in blossom, by making longitudinal incisions in the bark round the trunk, so as to let the gum ooze down a broad leaf, placed as a spout, into a receiver. When the receiver is filled it is removed. The gum is dried in the sun until it crumbles, and then filled in wooden boxes for exportation. Another species, *Pterocarpus erinaceus*, a tree 40 to 50 feet in height, a native of the woods of the Gambia and Senegal, furnishes kino, but none is collected in or exported from Africa. *Butea frondosa*, or the dhak tree of the East Indies, furnishes a similar product in the shape of a milky-coloured, brittle, and very

KINO.

fera of Australia. The juices of the *Pterocarpus erinaceus*, and that of the *Eucalyptus resinifera*, have much the same properties as the catochu and have been proposed to be used in dyeing green. KIRE PALLE, a very soft, coarse, open-grained, light Ceylon wood.

KIRGANELLI, MALEAL. *Phyllanthus niruri*.

KIRGHIS, a Khassak horde, who inhabit an extensive country to the north-west of the town of Ili. In the twenty-first year of the reign of the emperor Kien Lung (1756), a Chinese army entered their territory. Their khan, Abdoulia (Abnai), came to meet it, and submitted. It is the custom for their widows to marry the brother of their husbands. There are, however, two hordes of Khassak. The Great Kirghis horde is adjacent to Ili and Tarbagutai, is under the dominion of China, and exchanges large quantities of cattle on the frontiers for silk goods. The second horde, which is next to this on the north (the Middle horde), is much more numerous, and not dependent on the Chinese empire. The Kirghis Burut are a nomade tribe inhabiting the western parts of eastern Turkestan. Their vast territory is situated between Andzian and Kashgar. They call their princes Bi. Several of these Bi govern from ten to twenty, and others from twenty to thirty outposts or camps: they treat their subjects as slaves. Kirghis is the general denomination of all these tribes, which are divided into several hordes, each of which has its Bi, whose dignity is hereditary. The Kirghis have the head, and abstain from eating pork. They wear dresses with tight sleeves, and their caps are square, and flat at the top. The women adorn their caps with peacock's feathers. Their language and manners very nearly resemble those of the inhabitants of eastern Turkestan. Their habitations, food and beverage are the same as those of the Eluth or Sungarian. They are fond of Chinese porcelain, tea, silks, linen, tobacco and wine. The Kirghis are poor, courageous, inconsiderate, interested, given to pillage, and valiant in war. They are feared by the

Khassak and Belure, and the Sungarian, even when they were at the height of their power, were never able to subdue them. The Kirghis pillaged eastern Turkestan, as well as the caravans from Great Bucharia, and other countries, which went to Turkestan with merchandize. Kirghis also inhabit the mountains and forests of the territories of Yarkand, Kashkan and Ouchi, where they follow the peaceable occupation of tending cattle. Kirghis inhabit the steppes of Pamer to the north of Hunza Nager beyond the Karakoram range. Southern Siberia is the mother-country of the Kirghis, one of the most numerous tribes of Turko-Tartaric origin. The Kirghis lived originally between the Ob and Yenisei, where Mongolic tribes settled among them. At the beginning of the seventeenth century the Russians became acquainted with the eastern Kirghis then living along the Yenisei. In 1606 they had become tributary to Russia, and after several wars with two neighbouring tribes, they were driven more and more south-westward, till they left Siberia altogether at the beginning of the eighteenth century. They now live at Burut, in Chinese Turkestan, together with the Kirghis of the "Great Horde," near the town of Kashgar, north as far as the Irtish.

Another tribe is that of the Western Kirghis, or Kirghis Kasak, who are partly independent, partly tributary to Russia and China. Of what are called the three Kirghis Hordes, from the Caspian Sea east as far as Lake Tenghiz, the Small Horde is fixed in the west, between the rivers Yemba and Ural; the Great Horde in the east; while the most powerful occupies the centre between the Sarasu and Yemba, and is called the Middle Horde. Since 1819, the Great Horde has been subject to Russia. Other Kirghis tribes, though nominally subject to Russia, are really her most dangerous enemies. The Turko-Tartaric race stretches from the Polar sea to the Hindu Kush, and from the interior of China to the shores of the Danube. Vambery divides the Turks who from east to west occupy this extent into

- | | |
|----------------------------------|------------------|
| 1. Burut, black or pure Kirghis. | 3. Karakalpak, |
| 2. Kirghis, properly Kazak. | 4. Turkoman, and |
| | 5. Uzbek. |

Baron de Bode relates that, going up the Oxus, he reached the Wakhan valley, (the Vokan of Marco Polo) he stumbled on a horde of the Kirghis from Pamer, who that season, for the first time on record, had come down to pass the winter in Wakhan, instead of descending along the table-land of Khokand, &c. The natives of the valley, how-

ever, were no less interesting than these strangers, since all the rulers around professed to be descendants of Alexander the Great.

Burut, pure or black Kirghis, dwell on the eastern boundary of Turkestan, viz., in the valleys of the Thian Shan chain of mountains, and they inhabit, also, several points on the shores of the Issik Kùl, close upon the frontier chain of mountains. They are powerful, thick set, strong-boned, figures, but remarkably agile and have acquired much warlike renown. Their face is less flat than the Mongolian and Kalmuk, and less fleshy, their foreheads somewhat higher, and their eyes less almond-shaped than the Kalmuk, few of them have red or fair hair or a white complexion. The Burut are in contact with the Kalmuk and Mongol, and in consequence their language has many Mongolian words, and now and then they profess themselves more or less mahomedans, but shamanism largely prevails.

The Kirghis and Karakalpak.—In Bokhara, the former occupy the northern portion of the khumat; the latter approach nearer to the cultivated grounds, and roam in preference between Jizah and Uratupeli. They are, generally speaking, poorer than the Kirghis under the dominion of Russia, especially such as wander between Karu-zatai and Kizilkum. Among them the airen is a substitute for the kumis, and camels replace horses. The true occupancy of the Kirghis is Independent Tartary. The Kirghis total 790,000, fall into the Middle Horde, 500,000; the Little Horde 190,000; the Great Horde 100,000.

The Middle Horde belongs almost as much to Siberia as to Tartary; its occupancy being the drainage of the Upper Ishim and the Upper Obi. In 1823, some of its sultans put themselves under the protection of Russia. At first they paid no tribute. Now they pay some. One of its tribes, the Nalman, has a Mongol name. Two others are the Argin and the Turtul, and these names re-appear on the Tshulim.

The Little Horde became, more or less, Russian about the middle of the 18th century. With the exception of Katai, the names of the tribes of the Little Horde are purely Turk.

The Great Horde lies north and east, and reaches the drainage of the upper Yenisei. The name of one of their tribes is Buriat; a name identical with that of the Buriat Mongol.—*Baron Clement A. de Bode's Bokhara, its Amir*, pp. 20-21, 90-2; *Latham's Nationalities of Europe*, Vol. i, pp. 256-7; *Timkovski's Journey to Peking*, Vol. i, p. 217.

KIR-KI-CHALU, HIND. *Arum curvatum*.

KIRKOOK. Naphtha is obtained near here. It is scooped out with ladles into bags made of skins, which are carried on the backs of asses to this town, or to any other mart for

its sale. The profits are estimated at thirty or forty thousand piastres annually. The Kirkook naphtha is principally consumed by the markets in the south-west of Kurdistan, while the pits not far from Kufri supply Baghdad and its environs. The Kirkook naphtha is black; and close to its wells lies a great pool of stagnant water, very muddy, and covered with a thick scum deeply tinged with sulphur. A few hundred yards to the eastward on the summit of the same hill, is a flat circular spot, measuring fifty feet in diameter, full of small holes, to the number of a hundred at least: whence issue as many clear flames without an atom of smoke, but smelling most sulphureously. In fact, the whole surface of this perforated plot of ground appeared a crust of sulphur over a body of fire within; and on digging a hole into it with a dagger, to a depth of ten or twelve inches, a new flame instantly burst forth. From this spot the government derives another source of revenue from the sale of its sulphur. The natives call the place Baba Gurgur, Gur being an Arabic name for naphtha or bitumen. Mr. Rich describes the principal bitumen-pit at Kit (which place must have furnished the builders of Babylon), as having two sources and being divided by a wall, on one side of which the bitumen bubbles up, and on the other the oil of naphtha. The manner of qualifying the bitumen for use as a cement, he observes, is very troublesome, for to render it capable of adhering to the brick it must be boiled with a certain proportion of oil. Its chief purpose, when applied to building, appears to have been in the lower parts as a preservative against damp; and at present it is used for coating cisterns, baths, caulking boats, &c.; in short, to every thing put in the way of injury from water. The black naphtha springs at Baku, on the Caspian, are of similar benefit to the inhabitants of that part of the country; and Jonas Hanway describes their appearance and application to be nearly the same as they exist at the present day. He mentions, that when the weather is thick and hazy, the springs boil up higher; and that the naphtha, sometimes taking fire on the surface of the earth, runs like burning lava into the sea. In boiling over, the oily substance makes so strong a consistency as to gradually become a thick pitchy substance all round the mouth of the pit. The poorer sort of people use it as we would do oil, in lamps, to cook their food. They find it burn best with a small mixture of ashes: but, for fear of accidents, they preserve it in earthen vessels, under ground, and at some distance from their dwellings. There is also a white

KIRMAN.

naphtha, a thinner fluid than the black, and not found in such great quantities. It is sometimes recommended medicinally. Inwardly, for chest complaints and outwardly, for cramps and rheumatism. Both it and the black are used for varnish. When it takes fire by accident, the consequences have often been fatal; and Strabo, who calls it liquid bitumen, asserts that its flame cannot be extinguished by water. The experiment tried by Alexander was horrible in its effects; and with a very little addition made by a poetical fancy, might induce us to believe that the celebrated consuming garments which Medea bestowed, were robes dipped in the naphtha that flowed so near her native land. The flaming soil or everlasting fire, as it is called, of Baku, is not less famous than its naphtha springs. It is now part of the eastern territory of Russia—*Porter's Travels*, Vol. ii, from pp. 440-443. See Kifri.

KIRM, HIND. A worm, any small insect or creature.

KIRMAN. Fars, Pars or Farsistan, is the province of the kingdom of Persia, to which it gives its name. It lies between 27° 20' and 31° 42' N. lat., and 49° 20' and 54° E. long., being nearly square and about 220 miles in length and breadth. It has Kirman and Laristan on the east; the Persian gulf on the south, Khuzistan on the west, and Irak-Ajem on the north, with a superficies of about 44,335 geographical square miles, or nearly one-third of France. In the space intervening between the great mountain chains, in most places, the surface is largely impregnated with salt and saltpetre, which prevail to some extent on the plains of Fars and the contiguous provinces of Irak and Kirman. Kirman fills up the space between Khorasan, Fars, Afghanistan and Mekran. From the eastern side of Cape Jask, it stretches irregularly along Mekran, in the general direction of N. N. E., as far as its northern extremity; in 30° 15' N. lat., and 60° 28' E. long., and from thence it runs N. W. about 90 miles to the south-eastern extremity of Khorasan. The surface of Kirman (including Laristan) contains about 72,741 square miles; but, excepting the information derived from the natives, and the accounts furnished by Tavernier, Pottinger, and some other European travellers, little has been known of the interior of this his province since the time of the ancient geographers. The southern portion of Kirman, viz., Laristan and Moghostan, formed the chief part of the Himyaritic kingdom of Hormuz, through which ran an important commercial line from the capital, Harmozonte. These districts, together with the different islands, formed

KIRMAN.

part of the territory of Mithrophrates at the time of the visit of Nearchus, who learned from this monarch that the tomb on the island of Tyrina (Kishm) was that of Erythras, son of Ariarius, satrap of Phrygia, who was banished to this place by Darius, (*Strabo*, lib. xvi, p. 776), whose name was given to the adjoining part of the sea. Artemidorns, however, thought the name was derived from the reflection of mountains glowing with the heat of a vertical sun (*Strabo*, lib. xvi, p. 779,) which certainly cause a deep tint on the waters in this part of the world. The province of Kirman is bounded on the east by a part of Scistan and Beluchistan; west by the province of Fars; south by parts of Laristan, Mekran, and the Persian Gulf; and north by Irak and Khorasan. It has from the earliest ages been partitioned into the habitable and desert regions, a division proceeding, in the first place, to a consideration of the former, its extreme length, from Regan in Nurmansheer, to Robat on the boundary of Fars, is about three hundred and sixty-five miles; and its breadth, from the southern limit of Irak to the town of Gambaroon or Bunder Abass, on the shores of the Persian gulf, about two hundred and eighty. Even the soil of this tract is in many places very unprolific, and the face of the country barren and waste. Generally speaking, Kirman is a very mountainous province; the principal range of mountains is that which divides Nurmansheer from Laristan, and thence running in a south-westerly direction, approaches within four days' journey of Gambaroon. It here seems to take the turn of the coast, and trending away to the west and north-west, joins the mountains of Fars in the latitude of 29° 40' north, and longitude 54° east. In this course, it throws out numerous ramifications, both to the northward and southward. Many of the former, particularly the more easterly ones, which stretch into the desert, terminate between the thirteenth and thirty-first degrees of latitude; while some of the western arms reach the province of Irak. They are, in some places, from their height, scarcely worthy of being called any thing but hills, and in others are no way inferior to the great mass from which they have their rise. So entirely do they intersect the country, that the plains which they separate, are seldom seen to exceed ten or twelve miles in breadth, though often of an indefinite length. The climate of this province is as varied as the face of the country, and it is accounted the least salubrious of any part of Persia; they have seldom any heavy falls of rain, but snow lies to a great depth on the mountains in winter, and from their loftiness it does not melt for the greater

KIRMAN.

part of the year, so that it is not unusual to see the people in the plains panting from the extreme heat, while it is freezing on the summits of the mountains close to them. To the southward of the great chain of mountains, described above, and between their bases and the sea, lies the Garmsair or Hot country, being a narrow stripe from thirty to ten leagues in breadth, which extends all along the sea-coast of Persia from Meenab, the capital of Laristan, to the mouth of the Shat-ool-Arab or Bussorah river. Within the limits of Kirman this tract is almost solely composed of saline sand, and the climate is peculiarly unhealthy. It produces nothing but dates, which are of a very inferior quality, and is, in consequence, nearly depopulated. The city of Kirman is situated in north latitude $29^{\circ} 56'$, and east longitude $56^{\circ} 6'$, on the western side of a capacious plain, so close to the mountains, that two of them, on which there are ancient decayed forts, completely command it. The population of Kirman is not, now, more than thirty thousand souls, of which a small proportion are the gueber or Parsees; but there are neither Armenians, Hindoos, or Jews, resident in the place. Its manufactures of shawls, matchlocks, and numud, or felts, are celebrated all over Asia, and are said to afford employment to upwards of one-third of the inhabitants, whether male or female. In Kirman, to the northward, there are no towns and Gambaroon or Bunder Abass is the only one to the southward that needs to be mentioned. It lies eighteen munzil, or days' marches from Kirman, which we may average at eight fursukhs each stage. The desert region of the province of Kirman extends in length two hundred and seventy miles from the northern boundary of Nurmansheer, in latitude $20^{\circ} 30'$ north; to the mountains of Khorasan, in latitude 34° north; and, in breadth, two hundred miles from the city of Yazd, in longitude $50^{\circ} 40'$ east, to a range of mountains separating it from Seistan, in 60° east. The soil of this tract is impregnated to such a degree with salt, and so decidedly barren, that it does not even produce grass, or any other vegetation. As above related. The southern portion of Kirman, viz., Laristan and Moghistan, formed the chief part of the Homyaritic kingdom of Hormuz, through which ran an important commercial line from the capital Harmozont. These districts, together with the different islands, formed part of the territory of Mithro-phrastes at the time of the visit of Nearchus. The town of Kirman had, at a former period, been one of the richest and most populous in Persia. When the European

KIRS.

factories were established at Gombroon, it became a great emporium of trade between Europe and India, and the countries of Persia, Cabul and Tartary. The province of which it is the capital was not productive, but it boasted some rare articles of commerce, particularly the celebrated wool of its goats, which approaches nearer than any other in fineness, to that of Cashmere.—*Pottinger's Travels in Beluchistan and Sind*, p. 229; *Euphrates and Tigris*, Col. Chesney, Vol. i, p. 231; *Malcolm's History of Persia*, Vol. ii, p. 206.

KIRRUR, SINDH. *Capparis aphylla*, Roxb.

KIRS, HIND. of Bukhara, Charras of India, resin of the hemp plant, *Cannabis sativa*. Its resin seems to have been employed as an intoxicating substance in Asia and Egypt from very early times, and even in medicine in Europe in former times, as Dr. Royle mentions it as noticed in Dale (*Pharmacologia*, i, 133) and Murray (*Apparat. Medicaminum*, iv, p. 608—620), where it is arranged, in this work, next to the *Humulus*. It has of late years again been brought into European notice by Dr. O'Shaughnessy. The Indian plant has by some, been thought to be a species distinct from the European one; but, Dr. Roxburgh, Dr. Royle and others, have been unable to observe any difference between the plant of the plains and that of the hills of India, nor between these and the European plant. The Indian secretes a much larger proportion of resin than is observable in the European plant, but a difference is observed in this point in India between plants grown in the plains, and those of the moun-

KISHDI.

tains, and also when grown thickly together. The natives plant them wide apart, to enable them to secrete their full powers. In Engope, the thick sowing, and moister, often dull, climate will prevent the due secretion of the peculiar principles of a plant of the Persian region. Hemp leaves are sometimes smoked in India, and occasionally added to tobacco, but are chiefly employed for making blang and subzee, of which the intoxicating powers are so well known. But this peculiar substance is yielded by the plants on the hills, in the form of a glandular secretion, which is collected by the natives pressing the upper part of the young plant between the palms of their hands, and then scraping off the secretion which adheres. This substance is well known in India by the name of churru, and is considered more intoxicating than any other preparation of the plant, which is so highly esteemed by many Asiatics, and serves them both for wine and opium: it has, in consequence, a variety of names applied to it in Arabic, some of which were translated to Dr. Royle as "grass of fakirs," "leaf of delusion," "increaser of pleasure," "exciter of desire," "cement of friendship," &c. *Limonium* was well acquainted with its "vis narcotica, plantastica, dementens," (anodyna et repellens). It is as likely as any other to have been the *Nepenthes* of Homer. The products of the plant are the dried leaves called "blang;" the flower tops with their resin, called "ganja;" and the resin, from the seeds and flower tops, called churru or, in Bokhara, kirs.—*Royle*, p. 569.

KIKSENEH, PERS. Pease.

KIRSHUE, ARAB. *Cynara scolymus*, *Linn.*

KIRTA, see Kelat.

KIRTAN, the relation of the deeds of Rama, during the nine days of the Rama Naumi.

KIRTHIPOOR, occupies the summit of a low hill, about three miles west of Patun. It was at one time the seat of an independent prince; and its reduction cost the Goorkhali prince so much trouble, that in resentment of the resistance made by the inhabitants, he barbarously caused all the males, whom he captured in it, to be deprived of their noses. Chobar is also situated on an eminence, which, with that of Kirthipoor, forms a kind of saddle hill.

KIRWAN, KASHM. A weight equal to 384 lbs. English.

KIS, BENG., HIND. *Costus speciosus*.

KISARI, HIND. *Lathyrus sativa*.

KISCHYIM, ÆTHIOp. Cucumber.

KILHAN, see Kelat,

KISHDI, see Affghan.

KISHM ISLAND.

KISHENGUR and Bikanir, according to Colonel Tod, arose out of Marwar, and Macheri from Amber, to which we might add Shekhawati, which though not separate, is tributary to Amber, now Jeypoor. The Kishengurh family according to Aitcheson is an offshoot from Jodhpore. A treaty was formed with maharajah Kullian Sing in 1818. Pirthce Sing succeeded in 1840; he was granted the right of adoption, and he receives a salute of fifteen guns. His territories cover an area of 720 square miles and contain a population of 70,000 souls. The revenues are about rupees 600,000. The State pays no tribute and contributes nothing to any local corps or contingents. The army consists of 250 cavalry, 300 infantry, and 80 guns.—*Tod's Rajasthan*, Vol. i, p. 420; *Treaties, Engagements and Sumuds*, Vol. iv, p. 103.

KISHEN KOMARI BAI, was born in 1792. Her father, the rani of Odeypur, was the highest prince of Rajputana. Her mother was of the Chawara race of Anhalwara. She was very beautiful and had an engaging manner; both the Jeypore and Jodhpore chief asked her in marriage, and to obtain her overran the kingdom, but to settle the matter, Kishen Komari Bai, when only 16, took poison, and in a few days her mother followed her to the funeral pile. When the Roman father slew the dishonoured Virginia, appeased virtue applauded the deed. When Iphigenia was sacrificed, the salvation of the country was the consolation, and Jephtha's daughter sustained her resignation in her father's fame, but Kishen fell a victim to a false sense of honour.—*Tod's Rajasthan*.

KISHLAQ, PUSHT. Winter station of the pastoral Afghans.

KISHM ISLAND, called Jezirah-at-tul, by the Arabs, and Jezirah-i-Daraz by the Persians, both meaning Long Island, is the Oaracta or Verokithm of the ancients, where Arrian states that Nearchus saw the tomb of king Erythras, after whom the Persian Gulf was named the Erythrean Sea. In the 13th century it was called Jezirah-i-Lasot, and one of its towns is still called Lasot. The whole island and a large portion of the opposite coast, in which are mines of sulphur, was farmed by the imam of Muscat. Kishm town is in lat. 26° 57' N., long. 66° 19' E. at the N. east end of the island. Kishm island is within ten miles of Hormuz, and is the largest by far in the Persian Gulf, being about 55 miles long, but very narrow. It presents the same kinds of rocks as those of Hormuz and Larrack, but in addition to these there is a stratified sedimentary formation upon it of great extent, and upwards of 500

KISHTWAR.

feet in thickness. Its eastern extremity is within ten miles of Hormuz, nearly opposite Gombroon; it runs for sixty miles parallel with the Persian shore, but is in no place more than twelve miles in breadth, and is surrounded with coral reefs. The appearance when sailing along the deep and narrow channel, interspersed with wooded islands, which separates it from the main land, is particularly arid, but the interior produces dates, wheat, vegetables, mangoes and other fruits, including grapes without stones, and the usual abundance of water melons. Bassadore is on a barren spot at the western extremity. The people are chiefly Arabs, subject to the imam of Muscat, and their number may amount to 16,000. Nearhus says its length is upwards of 800 stadia, which, at $1,111\frac{1}{2}$ to a degree, would give 43 geographical miles.—*Onseley's Travels*, Vol. i, p. 162; *Col. Chesney's Euphrates and Tigris*, p. 229; *Kinneir's Geographical Memoir*, p. 14; *Lieutenant Kempthorne*, Vol. v, Part ii, p. 277 of the *Royal Geographical Soc. Journal*.

KISHMIS are the small sweet seedless raisins from a variety of the grape vine, the *Vitis vinifera*, they are called sultana raisins by European grocers. Kishmis Surkh, red raisins, sun dried. Kishmish Sabz, shade dried. Munakka are common dried grapes or pudding raisins.—*Powell's Hand-book*; *Econ. Prod.*, Punjab, p. 16.

KISHINA, see Krishina.

KISHON, a brook in Palestine that rises in Mount Tabor and disembogues into the Bay of Acre. See Caifa.

KISHR, ARAB. A decoction of the husks of the coffee berry, greatly used in Yemen. The decoction of the berry, itself, is not much used there; the natives prefer the husks, and the beverage is called Kishr, it is sometimes flavoured with ginger and other spices.

KISHT, PERS. *Helicteres isora*, Linn.

KISHTA BAHIRA, HIND. *Pyrus communis*.

KISHTAH, HIND. Dried, unripe apricots, brought from the hills and from Kabul, &c. They are used to clean gold and silver, also in dyeing and in making chutney.—*Powell's Hand-book*, Vol. i, p. 453.

KISHTEE, HIND. A boat, ship, vessel, bark.

KISHTEE, or Kuchkole, HIND. A cup or bowl, generally of beggars, a faqeer's wallet, also a kind of tray.

KISHTOKEE, see Kush.

KISHTWAR occupies the middle part of the Chenab valley between Lahul and Jamu. The elevation of the Chenab about the middle of the province is from 6,000 to 7,000 feet.

KISSING.

Kishtwar is separated on the north from the Tibetan valleys of Zaskar and Dras by the axis of the Himalaya which is crossed by the Umañi pass into Zaskar, elevated 18,000 feet, and by other passes from Wardwan into Dras. The Wardwan district is to the west and to the south, Kishtwar is separated from Chamba by a range of 10,000 to 14,000 feet of elevation.—*Hooker, f. et T.*, 209.

KISMIS, see Kishmis.

KISNA, SIAM. Eagle-wood.

KISREE of Bombay. Arnotto.

KISSA, in lat. $8^{\circ} 5' S$, long. $127^{\circ} 7' E$, is a small island, near Timor.

KISSA-I-SANJAN, a work compiled in the year 1599, by one Bahram, a zoroastrian, resident at Nowsarce, a town about twenty miles south of Surat. It details the various emigrations of the Parsees, p. 7.

KISSEA, Rus. Muslin.

KISSILKORUM PASS, in lat. $35^{\circ} 57'$, long. $77^{\circ} 50'$, in Turkistan, in the ridge between Yarkand and Yarakush. The top of the pass is 17,762 feet above the sea. From Kissilkorum, following the direction of the principal chain of the Kuenlun, now turning to the south south-east, Kiukkiul lake is reached. It is slightly salt, and is situated at the northern foot of the Changchunmo. Close to the Kiukkiul lake, is a group of more than fifty hot springs, chiefly containing muriate of soda (common salt) and a great quantity of carbonic acid. Their temperature varies from $25^{\circ} C$. to $49^{\circ} C$. (77° to 120° Fahr.) In the valley of the Nubra, are two other groups, the one near Panamik (hottest spring, $78.1^{\circ} C = 172.6$ Fahr.) the other near Changtung ($74.1^{\circ} C = 165.4$ Fahr.) A march of seventy miles brings the traveller to (S. ?) Pungal, where a route branches off to the valley of Bushia, and to Elchi, the capital of Khotan.—*Report on the Proceedings of the Magnetic Survey of India*, pp. 1 and 2; *Robt. Schlagentweit*.

KISSING is a token of love and affection with most of the nations of the East Indies as of Western Asia and Europe. Kissing of the cheeks and shoulders is noticed in Gen. xxxiii, 4, xlv, 14 and 15; and in Luke xv, 20. Smelling their heads is a mode of expressing intense affection, parental yearning, still common in India, and a very ancient oriental practice, however odd it may appear to European notions. It was perhaps rather the result of this practice than chance that Isaac noticed the smell of Jacob's person: "And he came near and kissed him, and smelled the smell of his raiment, and blessed him and said, see, the smell of my son is as the smell of a field which the Lord hath blessed."—*Hind. Th.*, Vol. ii, p. 45.

KISTNAH.

KISSING COMFITS of Falstaff. *Batatas edulis, Choisy.* Sweet potato.

KIST, ARAB., PERS., HIND. Tribute ; Land-rent ; Instalment.

KISTAPATAM, see Newbold.

KISTEE, Duk. *Bixa orellana.*

KISTNAGHERRI, in lat. 12° 32' 3", long. 78° 12', in the Karnatic, in a plain with hills in the distance. The dāk bungalow is 1,698 feet above the sea.—*Rob. Schl.*

KISTAPA TAMARA or Konda tamara, **TEL.** *Smilax ovalifolia, R.* A local name given from the large leaves, at Devarapalli in the Vizianagarum zamindari.

KISTNAH or Krishna, a river of the peninsula of India, which rises on the Mahabeshwur table-land in the Deccan, in lat. 18° 1', long. 73° 41', and about 40 miles from the Arabian sea, 4,500 feet above the sea. It runs S. E. 145 miles ; N. E. 60 miles ; S. E. 105 miles ; N. E. 180 miles ; S. E. to Chentapilly ; S. E. 70 miles further, then, parting into two arms, one flows S. E. 30 miles, the other S. 25 miles into the Bay of Bengal, after a course of 800 miles. It receives many affluents, viz., Beemah, which is 510 miles long ; Tumbudra or Toongabudra, 325 miles ; Gutpurba, 160 ; Malpurba, 160 ; Warna, 80 ; Dindee, 110 ; Pedda Wag, 70 miles, and 110,000 sq. miles are drained. In consequence of the rapid declivity of its waterway and rockiness of its channel, it cannot be navigated by small craft, even for short distances, but a weir has been thrown across the Tumbudra, to form an extensive system of irrigation, at an estimated cost of £150,000. The weir is thrown across it at Bezwarah. The basins of the Kistnah river and its affluents, the Gutpurbah and Malpurbah and Beemah are occupied by quartzites, slates, limestones, &c., which cover the larger portion of the districts of Cuddapah and Kurnool, westwards through the Raichore Doab by Gogi, Gulburgah, to Kulladghee and Belgaum, and appear to represent the older portion of the great Vindhyan series. Rocks of the same mineral character appear under the great flows of the Dekhan trap, and resting quite unconformably on the gneiss rocks in parts of the Raichore Doab, and the vicinity of Belgaum, and under parts of the ghauts on the western coast. That they belong to the same general series as the rocks in Cuddapah and Kurnool, there is no doubt. Of the rocks of aqueous origin, the sand-stones and limestones, the whole of the valley of the Kistnah and a great part of the valleys of its affluents, the Gutpurbah, Malpurba, Bheema, Toongabudra or Tumbudra, and much of the valley of the Godavery, and of the valleys of its northern affluents, have lime-

KITAB.

stone, clay slate and sandstone rocks, and the houses and more extensive buildings are all built of these. The limestone of Kurnool, westward to the Bheemah is an excellent building material. It is on the banks of the Kistnah that the richest diamond mines occur, and that the sandstones acquire their greatest elevation, amounting to more than 3,000 feet ; the river passing through mural precipices of this rock and of a schistose limestone. It passes through the plains of the Eastern Dekhan amongst the same rocks which are there sometimes a little elevated above the level of the sea, at others forming the caps of granite mountains, or broken up by varieties of greenstone and basalt. Thence, passing through a narrow gorge in the gneiss hills of Bezwarrah, it enters the alluvial plains continuous with the delta of the Godavery. Its waters, however, are more loaded with mud than the last-mentioned beautiful river, and the deposit of new land may be seen, by the inspection of a common map, to be proportionably great.—*Carter's Geological Papers on Western India, p. 3 ; Captain Cullen in Madras Lit. Soc. Journ. ; Report of the Royal Sanitary Commission.* See India, Kistna.

KIST-UL-DURBERA, also Wnj, **ARAB.** Sweet flag.

KISTVAEN, see Chairn, Hindoo, Khassya.

KISUMISU CHETTU, or Draksha chettu, **TEL.** *Vitis vinifera, L.* Raisins. The Sans. syn. is Laghu-draksha.

KIT, see Kirkook.

KITAB, AR., HIND., PERS. A book. Ah'l-i-Kitab, people of the book, meaning the believers in the old or new testament or in the koran. This has the same meaning as Kitabi, a follower of the book, a term applied to Jews, Christians and Mahomedans, as possessing books of revealed religion. In few mahomedan countries, however, will the mahomedan religionists eat with a christian ; to salute him, even in error, with their ordinary salutation salam alaikum, peace be unto you, is deemed unfortunate and he is looked upon as unclean, and a mahomedan of India will rarely return the salutation of alaik-us-salam, and unto you be peace. But amongst the Affghans none of these difficulties or feelings exist. The christian is respectfully called a Kitabi, or one of the book. An invidious distinction of dress, is, however, enforced generally on christians at Bokhara according to an edict of no remote date. It is possible that previously the same liberality of deportment towards christians distinguished Turkistan. Katib, is a scribe, a copyist, a writer ; and Katibat, the act or cost of copying a book.—*Masson's Journeys, Vol. ii, p. 246.*

KITABAT, ARAB. The inscription on a mahomedan tomb.

KITABI-KOOSLUM NAMA, a book put forth by a conclave of seven learned ladies of Persia, on the rights of women. According to these ladies there are three classes of husbands in the world, viz., a proper man, a half a man, and a Hupul pupla. If the wife of the last man absent herself from his house, even for ten days and nights, he must not, on her return, ask where she has been, and if he see a stranger in the house, he must not ask who it is, or what he wants.—*Tr. Hind., Vol. i, p. 399.*

KITAMA KURA, JAPANESE. A fish, *Tetrodon hispidus*, so poisonous, that when eaten, it proves frequently fatal, or according to the signification of the Japanese name, makes the north one's pillow, it being a custom with these people to turn the heads of those that are dying, towards the north.—*Thunberg's Travels, Vol. iii, p. 68.*

KITAY, see India, China, Khitay.

KITCHELLY CAPOOR of China, a scented root, chiefly used in the perfumery powders called sicsa, rautha, and also used for medicine. This is, also, called Kitchelly Kelango in Tamil, sold at from 40 to 60 rupees a candy. That from Malabar, from 28 to 40 rupees a candy.

KITCHILI, TAM. *Citrus aurantium, L.*, the orange. *Citrus decumana*?

KITE or Pattanga, are flown by men and boys of the mahomedans, by all classes, high and low. Kite-flying is a pastime universally practised amongst the Chinese, who excel all other people both in the varied forms of their kites and the heights to which they can make them rise. They are constructed of paper made of refuse silk and bamboo. They assume every possible shape, and sometimes it is impossible when they have reached the culminating point, to distinguish them from birds. By means of round holes, supplied with vibrating cords, on which the current of the air acts, the kites when ascending, issue a humming noise, similar to the hum of a swarm of bees.—*Burton's Sindh, p. 286; Hon'ble Mr. Morrison's Compendious Summary.*

KITE, is a general term applied by the British in India, to many different birds. The Dung kite, or Dung bird, the *Neophron peronopterus, Linn.*, called, in Egypt, Pharoah's Chicken and the Egyptian vulture, is known to all the races in the south of India, in which it is abundant southwards from Bengal, also in N. Africa, W. Asia, S. Europe, and even in England. The male has a dirty blackish brown colour, but the hen-bird is white with yellow about the cheeks. It

walks with ease and with a stately gait and frequents localities where flesh or sweepings are thrown. It builds on cliffs, houses and trees.

Of the Kite Vultures, one species, the tamest, boldest of all, the *Milvago Australis*, is of the Falkland isles. Amongst the *Milvina* or true Kites, of the family of *Falconidae*, are several of the birds known to Europeans as kites.

The Brahmany Kite of India, the *Haliastur Indus, Bodd.*, also one of the *Milvinae*, known to all by its clear maroon-coloured black and white breast and abdomen, and frequenting the river valleys, lakes and sea coasts, wherever wet cultivation is in progress, swarming where fishers throw their nets, and about shipping in the harbours, picking up small fishes, prawns or offal, the frogs from rice-fields, water insects, mice and shrews, and young or sickly birds and wounded snipe. Near towns it is very tame and fearless, and every sunday pious hindoos may be seen calling Hari! Hari! to attract the bird's attention, and then feeding it by throwing to it bits of flesh. The audacity of the Brahmany kite is admirable: Major Moor mentions as one instance, of which he was a witness, viz., stooping and taking a chop off a grid iron standing over the fire that cooked it. It receives its name from Europeans, because brahmins and religious hindoos worship it, and regard it as the type or valan of Vishnu. The birds are expert fishers.

The *Milvus govinde, Sykes*, the common parish kite, extends through all India, Burmah and Malaya, and is one of the most abundant and common birds in India, every town, cantonment, camp and village has its colony of this kite, which ply their vocation from morning till night, picking up fragments of food and garbage. In Calcutta, two or three hundred may be seen at a time. They are bold and fearless. Of all rapacious birds, the govinde-kite is the most useful, and abundant; wherever offal exists there this bird is to be found, hovering over the butcher's shop, the kitchen, or the barrack—now leisurely sailing in circles—now darting like an arrow upon its prey, which it devours while on the wing, uttering a clear shrill cry whenever a companion disputes its possession. Its ordinary name is the Chil, from its peculiarly shrill call. The govinde-kite, Egyptian vulture, crow, Indian jackdaw and minn, may justly be termed “the great scavengers of India.”

The crested black Kite of all India, the *Baza lophotes, Cuv.*, is not abundant. Its very handsome white and black plumage at once attracts attention.

KITTOOR.

The *Lophastur Jerdoni*, *Blyth*, is a kite of Malaya and the isles.

The black-winged Kite of India, the *Elanus melanopterus*, *Daud.*, lives near the skirts of jungles, and is not much on the wing.

The Kite Eagles of India belong to the genus *Neopus* of the *Aquilinæ*. The *Neopus Malaiensis*, *Reinwardt*, the Black Eagle is found in most of the hilly and jungly districts of India, in Burmah and Malaya. It is generally seen circling or questing for prey at no great height. It is a bird of easy and graceful flight. Its chief food is obtained by robbing bird's nests of the eggs and the young.—*Moor*, p. 344; *Adams*; *Jardine's Mammals of India*. See Birds, Garuda, Serpent, Vahan.

KITHI, HIND. *Dioscorea deltoidea*.

KITHU, HIND. *Pyrus variolosa*.

KITKI, HIND. *Agave cantala*.

KITLA, HIND. *Acer creticum*, Jangli kitla is *Edwardsia mollis*.

KITNUZ, PERS. Coriander seed.

KITTOOL, see Hot Springs.

KITSARMA, HIND. *Lycium ruthenicum*.

KITTACINCLA MACROURUS, the Shama. See Bulbul.

KITTALI KAYA or Narija chettu, TEL. *Citrus aurantium*, L.

KITTA NARA, TEL. The fibre of the aloe, *Fourcroya cantala*, *Haw.*; also called Kittali nara.

KITTESOL, or Kittysol, the distinctive name by which China paper summer-heads are known. They are an extensive article of export from China to Bombay, Calcutta, &c. They are a cheap sort of umbrella, made of bamboo frames covered with oiled paper or cheap silk. They are sent to the Archipelago and India in boxes containing 100 umbrellas each, which is estimated to be a pecul. Considering the material they are made of, this sort of umbrella, or parasol, wear a long time (for their use is for the most part as a protection against the sun). This kind of umbrella, or parasol, is made of oiled paper, or cheap oiled silk, and is largely exported by the Chinese to India; the article is durable, considering its material, and its cheapness induces a large consumption.—*Faulkner*; *Morrison*; *Williams' Middle Kingdom*, Vol. ii, p. 401.

KITTAN, TAM., TEL. Canvas.

KITTICUM, HIND. One of the plants with the flowers of which Kama, the Indian god of love, tips his arrows. See Kuma, Hindoo.

KITTOOR, a town of peninsular India. The central parts of peninsular India have several times needed coercion. At Kittoor, a battle was fought on the 23rd October 1824,

KIZIL IRMIK.

and the fort was besieged and taken on the 5th December of that year.

KITTUL, SINGH. *Caryota urens*, *Linn.* Jaggery or native sugar is produced abundantly in the northern districts of Ceylon from the juice of this palm. The sap is drawn off much in the same manner as that from the cocoa palm, but it does not flow so readily, and to remedy this the natives are in the habit of inserting within the surface of the cut flower spike a small mixture of lime, garlic, salt, and bruised pepper. This is left on the incision for a few days, when it is removed and the flower again cut, the sap will then flow readily for several months continuously. The collected juice is boiled in earthen vessels to a certain consistency when it granulates and forms a fair sugar capable of being refined to a good degree of purity. It is a curious fact that the wood of those trees which have been thus tapped is very much harder than that of the unemployed trees in the forests which is quite soft and spongy, the trees longest tapped are much the hardest.

KITU is a form of salutation in Japan, where the inferior, laying the palms of his hands on the floor, bends his body so that the forehead nearly touches the ground, and remains in this position for some seconds. The superior responds by laying the palms of his hands upon his knees, and nods or bows more or less low according to the rank of the other party.

KIU, BENG., HIND. *Costus speciosus*, *Smith*.

KIUN, in the Tartar language, the sun; or according to Abul Ghazi, the sun and moon.

KIUR, HIND. *Allium*, *sp.*

KIU-SIU, or Ximo. The Japanese island of Kiusiu or Kewsew, is well-cultivated and generally fertile, with the exception of its eastern coast. The best known Japanese towns of importance are, Nagasaki, Sanga and Kokoord.—*MacFarlane's Geo. and His. of Japan*, p. 145. See Japan.

KIUTU, HIND. *Astragalus multiceps*.

KIWACH, HIND. Cowhage. *Mucuna pruri*.

KIZAL BASH, see Kazzilbash.

KIZAN, see Tigris.

KIZA UT TAWIL, ARAB. *Cucumis* *nitilissimus*.

KIZIANELLI, TAM. *Phyllanthus niruri*.

KIZIL IRMIK. The elevated plateau which extends from the base of Mount Ararat into northern Armenia, Kurdistan, and part of Asia Minor, contains the sources of four noble rivers, having their estuaries in three different seas, and thus, from Armenia, as

from the centre of a great continent, giving an easy communication to the several nations of Europe and Asia. By following the Kizil Irmak through Asia Minor we reach the Black Sea, from whence there are inlets to Russia, Austria, Turkey, &c. In the same way the Aras, by terminating in the Caspian, opens several routes towards Great Tartary, as well as towards the rest of Central Asia and China; while the Tigris and Euphrates, with their numerous ramifications, afford abundant means of communicating with Persia, India, Arabia, and the continent of Africa. An extensive mercantile intercourse is also maintained with the same regions by means of numerous caravans, which, since the time of Abraham at least, have traversed the countries watered by those four rivers.

KIZIL OZAN, a river of some geographical celebrity, being supposed by Major Rennell to be the Gozan of the Scriptures, II, Kings, xvii, 6, and the following is his description of it in his inquiry concerning the disposal of the ten tribes of the Jews which were carried into captivity to Nineveh. This river springs from the country anciently named Matrene, between Tabriz and Hamadan, and taking its course eastward, falls into the southwest part of the Caspian sea, penetrating in its way the great ridge of mountains that divides Media from the Caspian provinces. Travellers describe with horror the road which leads along the side of the chasm and which is the only one practicable for loaded beasts from Ghilan to Ispahan. It is generally excavated from the steep rocky cliff which impends over the dreadful gulf below, and along it the traveller holds loosely the bridle of his beast while he leads him along, fearing to be drawn after him should a false step be made. This chasm is about 180 miles to the westward of the Caspian sea.—*Rich's Residence in Koordistan, Vol. i, p. 226, quoting Olearius, Hanway, &c.*

KIZ KALASI, see Kara Oghlan.

KIZLA SAFED. To the west of the province of Fars are the ruins of Kizla Safed, and, nearly in the centre, are those of the ancient capital, Persepolis. The territory of Fars represents ancient Persis, which was watered by the Araxes, Gyndes, Oroatis, Arasis, Pelevan and Bagrad. Its cities were Corna, Axina, Arbren, and Artacana; besides many others whose sites are unknown. Persepolis was the capital in the time of Alexander: more anciently, the seat of the government was at Pasargada.—Strabo, lib. xv, p. 729, the Persagadis of Quintus Curtius—Lib. v. cap. vi., but as this historian speaks of the fortress of Persepolis, and the city of Persagadis (qu. Farsa—Gerd?) it is possible

that the extensive ruins in the plain, near the former, may be the Pasargada of Pliny.—Lib. vi, cap. xxvi.—*Euphrates and Tigris, Col. Chesney, p. 210. See Fars.*

KJEYOH? *Vitex, species.*

KLAARE MARAM, TAM.? Cusearia elliptica.

KLABAT; in Celebes, the town of Monado is built on a plain surrounded by mountains, the highest of which, Klabat, is 6,500 feet above the level of the sea. The houses are well built, and neatly thatched; they are all detached, and enclosed in a yard or garden. Klabat is a conical volcanic mountain, in the northern peninsula of this island.—*Murray's Indian Archipelago, p. 44. See Celebes.*

KLABBET LAMA, see Tin.

KLAKKA, see Java.

KLAMANDA, TEL. Aloe indica, *Royle.*

KLAMBA, JAV. Curtains.

KLAPA, MALAY. Coconut, the Calapper nut of the earlier seamen, properly Kalapa. Klapa Muda, MALAY, the soft medulla of the coconut.

KLAPPER ISLAND, see Pulo Tinjil or Trower's Island.

KLASSI, HIND, PERS., ARAB. A seaman, written also Khalassi.

KLATERGOU, DET. Orsidue.

KLAVER-ZAAD, DUT. Clover seed.

KLEEBA, SANS. Morinda umbellata.

KLEESAAT, also Klee, GER. Clover seed.

KLEIN, a christian missionary in the south of India who collected a large herbarium which has been principally described by Willdenow. That of Heyne by Roth, in his *Novæ Plantarum species*: Heyne appears to have been rather a diligent collector than a practical botanist; his collections were either obtained from, and were named by, Roxburgh; or were made in Mysore and the southern provinces, and the names attached by Rottler. Klein, Heyne, and Rottler, were the medicinal men, who formed the Herbarium Madraspatense. Drs. Wallich, McClelland, Irvine, Lindsay, Stewart and Thomson, medical officers of the Bengal army, also Dr. Hooker of the British Navy, have done much for the Botany of Bengal. Drs. Wight, Griffith, and Roxburgh, of the Madras army, for that of all India. Major Beddome, of the Madras army, has done much for the Madras Presidency, and Messrs. Moon and Thwaites for Ceylon.

KLEINHOVIA HOSPITA, one of Byttneriaceæ, a garden shrub with alternate broad cordate leaves and small pink flowers in terminal panicles; capsula pear-shape and inflated.

KLEN-LENBERG, see Lightning Conductor.

KNITTING.

KLESA, or *Klesha*. Evil desire, the love of pleasure, the cleaving to existence.—*Hardy's Eastern Monachism*, p. 438.

KLESIA GRECO-HINDI. A church.

KLEWANG, JAV. A sword, any weapon of war.

KLIE OOROOD, DUK. *Phaseolus max.*

KLING, the Malay term for a native of India, evidently derived from the ancient kingdom of Kalinga Newbold, however, supposes that Kling is a corruption from Teling or Telinga. The chuliah and kling of the Malays comprehend the traders and settlers, both mahomedans and hindoos, from the Coromandel coast. These names have been given to them by the Malays from the earliest times of the ancient commercial intercourse subsisting between this part of Asia and India.—*Newbold's British Settlements*, Vol. i, p. 8. See Dravidian, India.

KLIUNTI, HIND. *Lonicera quinquelocularis*.

KLIWON, JAV. Governor of a capital or chief town.

KLOFF, Captain, author of voyage of the *Douga*, in 1825-26, translated by G. W. Earl.

KLOI, a snow-white root of Siam, used as food, but requires to be steeped, in slices, in water and exposed to the sun's rays, as, in an unprepared state, it is poisonous.

KLOK-SPYS, DUT. Bell metal.

KLUK, also *Kheeraheen*, ARAB. Leeches.

KLUNJI, HIND. *Eriophorum comosum*.

KLUWI, MALAY. *Artocarpus integrifolia*.

KN-BYEN, BURM. *Cerriops roxburghianus*, Arn.

KNEELING. See Dozanoo bythna.

KNEPII, P'tah and Amun, gods of the Egyptians, had no astronomical characters.

KNEVEA, TAM. A Ceylon tree which grows to about eighteen inches in diameter, and fourteen feet long. Its wood is used by the natives in boat and house-work.—*Edye, Ceylon*.

KNIFE-GRINDER, a term applied to a Cicada or grass-hopper of Ceylon from the noise which it makes.

KNIGHTIA EXCELSA, is the Rewa-rewa or honeysuckle timber tree of New Zealand.

KNISS, HIND. *Dioscorea deltoidea*.

KNITMEE ? or *Khatmi*, ARAB. Mallow.

KNITRI, HIND. *Rhus buckiamela*.

KNITTING appears to be unknown to the natives of India, though it is well worthy of being taught to them; as, indeed it has been in the few girls' schools which the natives have allowed to be established.—*Royle Arts, &c. of India*, p. 504.

KOBA, see Tin

KOBAD. According to the Jahan Numa, one of the earlier divisions of the province of Fars was into the five circles or departments called "Kurre" and named Istakhr, Darabjird, Shapur, Ardashir and Kobad. At present, it consists of three principal parts; viz. : 1, Fars proper (Persia Proper); 2, Laristan near the Persian Gulf; and 3, Behbahan, or the country of the Khogilu, which represents the circle of Kobad. Beh-

237

KOBRA TEL.

behan is bounded on the north by the great belt of mountains which separate Irak-i-Ajam from the southern provinces of Persia : the northern and north-eastern shores of the Persian Gulf form its boundary to the south, Ram-Hormuz and the Ka'b country lie to the west, while Shulistan separates Behbahan on the east from the direct dependencies of Fars. On the east and south-east, Behbahan is surrounded by the Mamascni tribe : on the north and north-west by the Bakhtiyari, and on the west and south by the Ka'b Arabs. Also, the mountainous region to the north and north-east of the plain of Behbahan is occupied by the Khogila tribes,—and the districts of Lirani and Zeitun, near the Persian Gulf, together with the fortresses of Gul-i-gulab, all come under the control of the governor of Behbahan.

KOBAD or Kaodes, a Sassanian king, A. D. 488 or 481. See Fars, Sassanian.

KOBAD, or Kei Kobad, an emperor of Delhi, who made his aged father undergo the abject oriental obeisance of kissing the ground before the royal throne. He fitted up a palace at Kilokeree, upon the banks of the Jumna, to enjoy there soft society, but nobody in that village now recollects the site of that palace.—*Tr. of Hind., Vol ii, p. 199.*

KOBARI AKU, TEL. Leaves of Cadaba indica.

KOBBARI CHETTU, TEL. Cocos nucifera, L. ; SANS. Narikela, whence the verse ; Oh ! Narikela strong of body and full of sap, you give not your juice to the Pika (cuckoo or kokila), but you are liberal to him who climbs and maltreats you.

KOBBARI TENGA, TAM. Kernel of coconut. Copra.

KOBBER, DAN. Copper.

KOBI, HIND. Brassica oleracea.

KOBIDAR, BENG. Bauhinia purpuracens.

KOBIN or Jobin, BURM. Melicocca trijuga.

KOBO, or Kubo, or Saigoun, the head of the executive government at Jeddo. The Daiiri, at Miako, is the ecclesiastical head. In this singular government, there were two emperors, reigning conjointly, the Daiiri, or spiritual emperor, who resided at Miako, and the temporal or lay emperor, who usually lived in the great city of Jeddo. The word Kobo does not strictly mean emperor ; and it appears that the Japanese angrily deny that there is any other emperor than the Mikado, or Daiiri. The power, however, of the Kobo was decidedly imperial, and far greater than that of the Daiiri.—*MacFarlane's Geo. and Hist. of Japan, p. 192 ; Titsingh, Illustrations of Japan.*

KOBRA TEL, SINGH. A substance sup-

KOCCH BAHAR.

posed, in Ceylon, to be a virulent poison. In the preparation of this mysterious compound, the ingredients are extracted from venomous snakes, and from the lizard called Kabara-gaya. The receipt for outdoes, in dramatic arrangement, the witch's cauldron of Macbeth.—*Tennent's Sketches of the Natural History of Ceylon, p. 274.* See Kabara-gaya.

KOBRI, CAN. Coconut palms.

KOBUAH, a western section of Beluchistan.

KOBUB-UL-ARZ, ARAB. Talc.

KOCH, the Mufflon, or wild sheep, its horns were found by Vigne intermixed with those of the ibex or chup, and the markhor or rawacheh of Little Tibet.—*Vigne's A personal Narrative, p. 85.*

KOCCH BAHAR, is a native State ruled by a rajah subject to the supervision of a British Resident. It is situated between Bengal and Assam, on the N. E. frontier of British India, and is separated from the highlands of Bhotan by the Dooar. Fallacotta is the most central town, for the Jungsta, Chamoorehee, Bala, Bunna, and Boygoon passes into Tibet and Bhootan. The abolition of slavery in Kocch Behar has recently been formally proclaimed. Up till this proclamation, if a ryot, or peasant, owed a sum of money, and was unable to satisfy his creditor, he was compelled to give up his wife as a pledge, and possession of her was kept until the debt was discharged. It sometimes happened that the wife of a debtor was not redeemed for the space of one, two or three years ; and if, during her residence with the creditor, a family should have been the consequence, half of it was considered as the property of the person with whom she lived, and half that of her real husband. The country has a most wretched appearance, and its inhabitants are a miserable and puny race. Up to a comparatively recent date, the lower ranks without scruple disposed of their children for slaves, to any purchaser, and for a very trifling consideration ; nor was the agency of a third person ever employed. Nothing was more common than to see a mother dress up her child, and bring it to market, with no other hope, no other view, than to enhance the price she might procure for it. The Cocch or Kocch are partially converted to mahomedanism. The pagan portion live in the woods and cultivate the soil with the hoe ; they are well-fed and clothed. They abstain from beef. They sacrifice to the god Pushi and his wife Jago, also to the sun, moon and stars ; to the deities of the rivers, hills and woods, and to their deceased parents. The Deoshi, their sacrificing priest, marries and works, and the office

KODAL

is not hereditary. The blood of the sacrifice goes to the deity, the flesh to the worshippers. Polygamy, polyandry, concubinage and adultery, are punished by fines. The husband resides with his mother-in-law, is the property of the wife, and after her to her daughters. They keep the dead two days and then burn them at the river side. Their name is written Kocch, Koktsh, Koksh, or Kuksh. In the Yogini Tantra, they are named Kavach and are there styled mhecha. When the mahomedan power was established in Bengal the Koch (Kocch or Kavach) kingdom extended from 88° to 93° E. L., and from 26° to 27° N. L. from the south-eastern extremity of Nepal along the southern extremity of Sikkim and Butan into Assam, with Kocch Bahar as its capital, and the people consisted of the present Kocch, Dhimai and Bodo. They dwell in the Sal forests with impunity. The Kocch, are called Hasa by the Assamese Bodo, and the Dhimai style them Kanul. The northern parts of Rungpur, Pnruca, Dinajpur, and Mymensing are the chief Kocch localities. The Kocch and Bodo serve a fixed period for their brides, and they marry within the tribe.—*Turner's Embassy*, p. 11; *Treaties, Engagements and Sumnuds*, Vol. vii, p. 367; *Latham's Descrip. Ethn.*; *Hodgson*. See Aborigines, Bodo, India, Kocch.

KOCHAN, HIND. *Cornus macrophylla*.

KOCHIANI, URIA. A woman who lives by selling salt in small quantities.

KOCHLA or Kachla, DUK. *Nux vomica*.

KOCKSI, a river of Gowlhatty.

KODA, HIND. *Eleusine coracana*, *Gaertn. Roxb.*

KODAGA. The Coorg or Kodaga language is spoken in the small principality of this name, lying on the western ghats, and has hitherto been regarded as Canarese, modified by the Tulu. But Mr. Mögling states that it is more nearly allied to the Tamil and Malayalam than to the Canarese. See Coorg, Dravidian.

Koel, HIND.

Chule, MALAY.
Cowde-choa, SINGH.,
TAM,
Kokila pika, TEL.

The Indian cuckow, *Eudynamis orientalis*, the male is of a deep black, and the female of a dusky green mottled white. Like the cuckow, the koel lays its eggs in some of the nests of other birds: because the koel

KOENIG.

song is especially heard at the season of spring, it is called the friend of love :

Sweet bird, whom lovers deem love's messenger
 Skilled to direct the god's envenomed shafts
 And tame the proudest heart; oh, hither guide
 My lovely fugitive or lead my steps to
 Where she strays.

It is a bird of the family Cuculidæ. It inhabits Ceylon, India, the Malay countries and China, all of its names are obtained from its ordinary call, which closely resembles the word "koel." Like the cuckoo of Europe, this bird is, in India, the harbinger of spring, and its call, though shrill and disagreeable, is associated with all the joys and labours of husbandry of that season, and is quoted in the rhymes and proverbs of the people. Thus "Koel bolce, Sebundee dolce," the cry of the Koel, is the grief of the Sebundy soldier, meaning that the disbanding of the armed men gathered together for collection of revenue depend on the Koels note. Sebundee being a corruption of Sipah Hindce, in distinction to Moghul or foreign troops, who were always kept up. The Koel indeed occupies much the same place in India that the cuckoo does in Europe. The European names, even, are all derived from the Sanserit name Cuculus. Pliny says, that the vine-dressers deferred cutting their vines till the cuckoo began to sing. We have the Cuckoo-Ale of England, to partake of which the labourers leave their work when the first cuckoo's note is heard. There is also the vulgar superstition that it is unlucky to have no money in your pocket when the first cuckoo of the season is heard, and the amorous Hobnoblia tells us, that in love omens its note is equally efficacious. The female lays its eggs in the nest of the common crow or of the carrion crow, *Corvus splendens* and *C. culminatus*, but a company of the birds called seven brothers, have been seen at Secunderabad assiduously feeding a young Koel.—*Elliot; The Hero and the Nymph*, p. 267. See Kameri.

KOEL, a stream from the watershed of Chota Nagpore which unites with the Sunkh in Gangpur and takes the name of the Brahmaui, and enters the Bay of Bengal at Point Palmyras.—*Dalton*, p. 155.

KOELA, IND. Charcoal.

KOENAR, HIND. A tree of Chota Nagpore with a soft, white wood.—*Cal. Cat. Ex.* 1862.

KOENIG, John Gerard, a native of Courland and pupil of Linneus, travelled in Iceland in the year 1765, and arrived at Tranquebar in India, in the end of 1768 or beginning of 1769. He was physician to the Tranquebar mission in the Carnatic, but his enthusiasm, defiance of bodily fatigue, spare meals, the

scorching climate, and his simplicity of manners and benevolence, soon made him known to and beloved by the Dutch, French, and British, with whom he met. He became naturalist to the nawab Mahomed Ali, and while at Madras, made the acquaintance of Dr. James Anderson. In 1778, the government of Madras granted him a salary to enable him to carry on his researches, and with this aid he visited the Straits of Malacca and Siam, towards the end of 1779, and made known the occurrence there of tin ore. His salary was again increased in 1780, and he then visited Ceylon. He travelled along the coast to Calcutta from which he was returning in 1785, when he was attacked with diarrhœa or dysentery, and died on 26th June. He bequeathed all his plants to Sir Joseph Banks. His example and instructions diffused a similar taste among his companions, and hence originated the botanical labours of the society of "United Brothers." But, although it may be said that scientific botany took its rise in India from Koenig, the flora of the East Indies had not been entirely neglected by European botanists prior to that period, as the works of Rhœde, Rumphius, Plukenet, the two Burmanns, and finally a large and well preserved, yet unfortunately almost unknown, collection of Indian plants in the Oxford herbarium, formed in the early part of the eighteenth century, amply testify.

KOERI, HIND. In Hindustan, vegetable gardeners and agriculturists. In Bahar they grow the poppy, they are in general very respectable.

KOES? or Jack tree? *Artocarpus integrifolia*? yields a moderately hard, but rather coarse and open grained, though heavy, Ceylon wood, of a beautiful saffron yellow colour, emits a peculiar, but by no means unpleasant odour.—*Edye, Timber of Ceylon.*

KOET, HIND. *Feronia elephantum*, *Roxb.*

KOEUR-TAN, see *Kalka*.

KOFE, Rus. Koffe, also Koffebohnen, *GER.*, Koffy, also Koffiboonen, *DUT.* Coffee. *Coffea arabica*, *Linn.*

KOFTGARI, HIND., is steel inlaid with gold in patterns which, in former days, was carried on to a considerable extent in various parts of India. It was chiefly used for decorating armour; guns, coats of mail, helmets, swords, and sword handles. These, however, are not the manufacture of the present day. Since the rebellion in India of 1857, the manufacture of arms has been generally discouraged, and koftgari work is, consequently, now chiefly applied to ornamenting a variety of fancy articles, such as jewels, caskets, pen and card trays, paper weights, paper knives, inkstands, &c. The process is exactly the

same as that pursued in Europe, and the workman can copy any particular pattern required. The work is of high finish, and remarkable for its cheapness. Koftgari is chiefly carried on in Guzerat and Kotli, in the Sealkote district. Several admirable specimens of inland metal work by the native artizans of Bhooj were likewise found in the collection of arms contributed to the Exhibition by H. H. the Rao of Kutch. Some of the cutlers still remain at Lahore, but many of them went to Nizamabad in the Gujranwalla district; others to Guzerat, and the koftgar artizans, also, have mostly left Lahore to reside in the Kotli Loharan in the Sealkote district.—*Cat. Universal Exhibition, 1862; Powell.*

KOGAR of Chenab. Holarrhena anti-dysenterica, *Wall.*

KOGHANI, an Affghan tribe occupying Gandamak. They formerly held the country in the west, but were expelled by the Jabbar Khel Ghilji. They claim to be Ghilji.

KOGHILU, see *Lur*.

KOH, PERS. A mountain, a prefix to many solitary mountains and hill ranges from west of the Himalaya and the Indus even to the Caspian sea. The Koh-i-Kush or Caucasus, one of these, is the great stony belt that separates northern from southern Asia. In traversing the kingdoms of Hindustan and Cabul, from the east of Bengal to Herat, we find them everywhere bounded on the north by a chain of mountains, which is covered with perpetual snow, for almost the whole of that extent, and from which all the great rivers of both countries appear to issue. This chain commences near the Brahmaputra, and runs nearly north-west as far as Cashmeer, during this part of its course it is (from hima Sanscrit, for snow), called the Himaleh by the natives of the neighbouring countries, and is the Himalaya of the English (hima, snow; alaya, abode). From Cashmeer, its general direction is a little to the south-west as far as the high snowy peak of Hindoo Coosh, nearly north of Cabul. From this peak its height diminishes, it no longer bears perpetual snow, and is soon after lost in a group of mountains, which stretch in length from Cabul almost to Herat, and occupy more than two degrees of latitude in their breadth. Some ranges issue from this mass on the west, and extend so far into Persia, as to justify, if not completely to establish, the opinion of the ancients, which connected this range with mount Caucasus on the west of the Caspian sea. From Cashmeer to Hindoo Coosh, the whole range is known by the name of that peak. From thence to the meridian of Herat, the moun-

tains have no general name among the natives, but that of Paropamisus has long been applied to them by European geographers. As seen from the plains of Peshawar the fourth is the principal range of the Indian Caucasus, and is always covered with snow. It is conspicuous from Bactria, and the borders of India, and is seen from places far off in Tartary. Elphinstone says that the ridge of Imaus or Himalaya, is seen for a distance of 150 and even 250 miles. The Paropamisan chain, which bounds the Kohistan on the west, extends three hundred and fifty miles from east to west, and two hundred from north to south. The whole of this space is such a maze of mountains as the most intimate knowledge would scarcely enable us to trace; and, though it affords a habitation to the Eimauk and Hazarah, it is so difficult of access and so little frequented, that no precise accounts of its geography are to be obtained. It is certain, however, that the range of Hindoo Coosh is no longer so lofty, as to be conspicuous among the mountains by which it is surrounded, and that no continued line of perpetual snow can any more be traced. The eastern half of this elevated region is inhabited by the Hazarah, and is cold, rugged and barren: the level spots are little cultivated and the hills are naked and abrupt. The western part which belongs to the Eimak, though it has wider valleys, and is better cultivated, is still a wild and poor country. The northern face of these mountains has a sudden descent into the province of Balkh: their acclivity is less on their other extremities, except perhaps on the west or south-west. On the north-west they seem to sink gradually into the plain which borders on the desert. The slope of the whole tract is towards the west.

Rennell (pp. 125-6) suspects Emodus and Imaus to be different readings of the same name; and Imaus or Himaus, to be derived from the Sanscrit word himal, signifying snowy; and Pliny knew the circumstance, well. That vast ridge bears the same name at present. A chain, anciently named Taurus, which rises in lesser Asia, and runs eastward through Armenia; from thence deviating to the S. E., shuts up the south coast of the Caspian sea, was continued by Ptolemy, under the names of Coronus, Sariphi, and Paropamisus, dividing Hyrcania and Tapuri, from Parthia; Margiana from Aria; and Bactria, from the province of Paropamisus: or, according to modern geography, dividing Mazanderan, or Taberistan, from Cumis; the countries of Dahlistan, Corcan, and Karasm, from Korasan; Balk, and Gaur, from Segistan or Seistan: and finally was made to join

that ridge, which, under the name of Indian Caucasus, divided India from Bactria; and afterwards took the names of Imaus and Emodus, separating India from Scythia. The ridge that Mr. Forster crossed, near the Caspian sea, had a north and south direction; and answers to the mountains Masdoramus of Ptolemy, which shut up the eastern side of Parthia proper, situated on the S. E. of the Caspian. The modern name of the ridge is Kana-hoody; and Mr. Forster remarks, that the elevation of it, is far greater on the west, than on the east; so that the lands of Korasan, are, in general, more elevated than those towards Ispahan. The Kana-hoody mountains are those which M. D'Auville has extended to Herat and Cabul.

Mr. Vigne thinks the word Paropamisus is formed from the very commonly used Hindustani word "pahar," which signifies a "hill" or "mountain," and which was perhaps the word meant by Mr. Masson, and the other word "pam," a "roof," that is, a flat roof, such as is used in the east. Mr. Masson informed him that the Paropamisan range is a good deal broken into mountains, with table-lands on their summits.

The Hindoo Coosh mountains, was called by the Arabs, "the stony girdle of the earth."

The Paropamisus west of Afghanistan is now occupied by intrepid and hardy nomades, the Eimak and Hazarah; and the Afghan races, whether coming from Balk, Cabul, Kandahar or Herat, never venture into their mountain districts. The Eimak are shiah and occupy that part of the range nearer Persia and the Caspian, while the Hazarah (from Hazar, persian, a thousand,) are sunni, and dwell in the mountains adjoining Afghanistan.—*Elph. Cabul; Rennell's Memoir*, pp. 125, 126, 190; *Vigne's A personal Narrative*, pp. 195-6; *Markham's Embassy*, p. 46; *Masson's Journeys*. See Koh-i-kus.

KOHANU, MAHR. A tumbler, a rope-dancer, an acrobat.

KOHAREE, a river near Birgowah in Gwalior.

KOHAT, in lat. 33° 32' 5", long. 71° 22' 9", in the Panjab, 40 miles south of Peshawar is 1,745 feet above the sea. Kohat is in a valley five miles long, and averaging four miles broad, girdled by hills. To its south is Bunoo; to its west the Wuzzeere and the Bun-gush country; to the east the ridges which overhang the Indus. It is an expensive encumbrance, but politically indispensable to the British government, as connecting Peshawar with their other Trans-Indus districts. Kohat is only approachable from Peshawar by two passes, both passing through the Afreed-i hills. The Khuttuk and their chief were

refractory, and if pressed, betook themselves to the hills. Those portions however which are held by the hill-tribe of the Khuttuk were usually quiet. The Khuttuk indeed have, in their neighbourhood, been uniformly faithful and obedient. The valley is famous for its salt mines, the chief of which, at Bahadoor Kheyl, is guarded by a fort. At Kohat itself there is also a force with a cantonment and a fort. In the Kohat district, the principal tribe are the Bungush Puthan. They are a large tribe, can muster 15,000 fighting-men, and are fairly good soldiers. They highly appreciated the light money assessments of the British after what had been long termed the "robber rule" of sultan Mahomed Barukzye. Up to 1848, he held Kohat as a fief from the Cabul government. It was then taken possession of by the British on account of hostility to them during the second Sikh war. The conduct of the Bungush in reference to the Kohat pass needs to be noticed. The late khan of Hungoo in the Bungush country was in the British service as Revenue Collector, but he was murdered by one of his own relatives, and the khanship descended to his son. The Bungush suffered much from the raids of their hill neighbours, Orukzye, Tooree, Cabulkheyl Wuzeece. The inhabitants of the Meeranzye valley are also Bungush. This valley belonged to the fief of sultan Mahomed, but being an outlying locality was overlooked when Kohat was taken possession of. The Cabul government then lost no time in arranging for the occupation of Meeranzye, which appeared to have been vacated; so sirdar Azim Khan, the governor of the Khoorrun province, in 1851, summoned the Meeranzye to surrender; but they petitioned the British to include them in Kohat. Under the circumstances this request was acceded to. They were in their hearts hostile to the British government, as indeed they were to any government whatever. Near Kohat indifferent coal is found, generally on the surface. Specimens of asbestus, occur in veins parallel with the coal strata at Kanigoram; and both are stated to be in a hill. Jet, and other bituminous products, are also brought from the neighbourhood of Kohat, as well as fluid bitumen, or mumia. Hangu is a dependency of the province of Kohat. The plain of Kohat and the valley of Hangu are well-cultivated and populous. Wheat is grown, but the stony soil in many parts seems more adapted to the culture of maize, or as here called juari, the quality of which is excellent, and the returns large, while its flour makes admirable bread, and is the general food of the inhabitants. The great command of water, in many situations, is made avail-

able for the irrigation of rice lands. The inhabitants of the villages in the valley leading from Hangu to Kohat are principally shiah, as are all the tribes of the Turi, their neighbours, although not so bigotted as these; or, being under control, they are compelled to conceal their fervour. The Turi, when they see a stranger, ask him if he be straight or crooked, putting at the same time the forefinger to their foreheads, and holding it first in a perpendicular position, and then in a contorted one. If desirous to be civilly received, the stranger had better reply that he is straight by which they understand he is a shiah. The plain of Kohat appears on all sides surrounded with hills; on the summit of one of which, to the north, is seen a watch-tower, by which the road to Peshawar leads. The hills south of Kohat, and the districts of Tank and Bunnoo are likewise peopled by genuine Affghan, as the pastoral Waziri and others, or by agricultural tribes claiming such a descent, and indeed, throughout the mountains on either side of the Indus, every valley has its separate tribe or family, always opposed in interest, and sometimes differing in speech and manners. Generally it may be observed, that on the north, the Affghan on one side, and the Toorkaman on the other, are gradually pressing upon the old, but less energetic Durdoos. The British government has been concerned chiefly with the Afridi of the two passes to Kohat *i. e.*, the Kohat pass or Gullee and the Jewakee pass. For the guardianship of these passes the Afridi have received some kind of consideration from successive dynasties, Ghiznivide, Mogol, Dooranee, Barukzye, Sikh, and British; and have broken faith with each and all. These mountaineers are great traders and carriers. They convey salt from mines in the Kohat district to the Peshawar market. They also cut and sell the firewood of their hills. By these means they procure a comfortable subsistence, which cultivation on their rugged hill-sides would not alone suffice to afford. This is a fortunate circumstance, inasmuch as the British authorities can, by blockading the mouths of the passes, stop the trade and reduce the Afridi to sore straits. These passes are of importance. The Kohat or Gullee pass is the direct and best route from Kohat to Peshawar. The government post between these two important stations runs usually by this route. Kohat contains numerous mines of different metals, including sona-makhi and pitalmakhi. A high range of neighbouring hills abounds with mines of coal. The Peshawari bring it in great quantities, and often burn it for the purpose of smelting iron, but do not

succeed : naphtha, is also found, which the villagers generally use for lamps. Momyai, deemed in India a useful and valuable medicine, is dug out of the hills of Kohat ; it is black, and resembles gum. It is very dear in India, and scarce. The Afridi lie between Peshawar and Kohat and the Derajat strip of land extends from the hills and valleys of Kohat to the Sind frontier.—*Mohan Lal's Travels*, p. 358 ; *Schl., Ad. ; Rec. of G. of I., No. ii ; Masson's Journeys, Vol. i, pp. 114 to 117 ; Cunningham's History of the Sikhs*, pp. 6-7.

KOHATAR, see Kohtar, Korambar.

KOHEE, female. Koheela, male ; also called shaheen, black-eyed hawks, found in Sindh.

KOHEN, HIND. *Edwardsia hydaspicæ*.

KOHER, HIND. *Sageretia brandrethiana*.

KOH-I-BABA, a remarkable snow-clad ridge in the Hindoo Kush, the peaks of which are about 18,000 feet in height. It is the great continuation of the Hindoo Kush, is about 60 miles long, in lat. $34^{\circ} 30'$, and between long. $67^{\circ} 30'$, and $68^{\circ} 30'$. It is at the S. W. extremity of Hindoo Kush, with which it is connected by the transverse ridges of Kaloo and Hajeguk. According to Burnes and Lady Sale, it is about 18,000 feet in height ; Outram, 20,000 feet ; Humboldt, 2,800 toises, or 17,640 feet ; the most probable is 16,000 feet. The highest accessible point is in lat. $34^{\circ} 40'$, long. $67^{\circ} 30'$; and is 13,200 feet ; Hajeguk pass is 11,700 feet. It is a vast rounded mass, the culminating ridge ascending in lofty peaks, covered with perpetual snow, stretching as far as the eye can reach : further to the west it sinks into the maze mountains forming the Hazarah highlands. It is supposed to be the Paropamisus of the Greeks.

KOH-I-DAMAN, Charekar, at the head of the Koh-Daman valley, north of Kabul, is famous for the gallant defence made there by Eldred Pottinger and Haughton, during the Kabul outbreak. It is mentioned by Ibn Batuta as Charkh. Leech, in his Report on the passes calls it Charka.

KOH-I-DUZDAN, see Khash Rūd.

KOH-I-HAMON, see Kashmir.

KOH-I-KAF, PERS. The Kaf mountain.

KOH-I-KAS, or Koh-i-Kush or Caucasus, is the great stony belt that separates northern from southern Asia. In traversing the kingdoms of Hindustan and Cabul, from the east of Bengal to Herat, we find them everywhere bounded on the north by a chain of mountains, which is covered with perpetual snow, for almost the whole of that extent, and from which all the great rivers of both countries appear to issue. This chain com-

mences near the Brahmaputra, and runs nearly north-west as far as Cashmeer : during this part of its course it is (from hima, Sanscrit, for snow), called Himaleh by the natives of the neighbouring countries and is the Himalaya of the English (hima, snow ; alaya, abode). From Cashmeer, its general direction is a little to the south-west as far as the high snowy peak of Hindoo Coosh, nearly north of Cabul. From this peak its height diminishes, it no longer bears perpetual snow, and is soon after lost in a group of mountains, which stretch in length from Cabul almost to Herat, and occupy more than two degrees of latitude in their breadth. Some ranges issue from this mass on the west, and extend so far into Persia, as to justify, if not completely to establish, the opinion of the ancients, which connected this range with mount Caucasus on the west of the Caspian sea. From Cashmeer to Hindoo Coosh, the whole range is known by the name of that peak. From thence to the meridian of Herat, the mountains have no general name, among the natives, but that of Paropamisus has long been applied to them by European geographers. As seen from the plains of Peshawar the fourth is the principal range of the Indian Caucasus, and is always covered with snow. It is conspicuous from Bactria, and the borders of India, and is seen from places far off in Tartary. Elphinstone says that the ridge of Imaus or Himalaya, is seen for a distance of 150 and even 250 miles. The Paropamisan chain, which bounds the Kohistan on the west, extends three hundred and fifty miles from east to west, and two hundred from north to south. The whole of this space is such a maze of mountains as the most intimate knowledge would scarcely enable us to trace ; and, though it affords a habitation to the Eimank and Hazarah, it is so difficult of access and so little frequented, that no precise accounts of its geography are to be obtained. It is certain, however, that the range of Hindoo Coosh is no longer so lofty, as to be conspicuous among the mountains by which it is surrounded, and that no continued line of perpetual snow can any more be traced. The eastern half of the elevated region is inhabited by the Hazarah, and is cold, rugged and barren : the level spots are little cultivated, and the hills are naked and abrupt. The western part which belongs to the Eimank, though it has wider valleys, and is better cultivated, is still a wild and poor country. The northern face of these mountains has a sudden descent into the province of Balkh : their acclivity is less on their other extremities, except perhaps on the west or south-

KOH-I-SAFED.

west. On the north-west they seem to sink gradually into the plain which borders on the desert. The slope of the whole tract is towards the west. See Koh.

KOH-I-MEERIAH, a hill north of the Oxus which produces coal of good quality. It is near Baljavar, one day's journey north of the Oxus river.—*Wood's Journey to the Oxus*. See Baljavar.

KOH-I-MUBARIK, a rock which British sailors call Bombareck. Koh-i-mubarak, means blessed mountain, but it is also called Ras mubarak, the fortunate or auspicious head land.

KOH-I-NOKREH, or Silver Mountain. Mines were formerly worked, near the villages of Sahr Rud, Hassa and Mahomedabad. This mine had probably been abandoned, like many others in Persia, when the produce was found inadequate to the labour of working; or when, as the peasant significantly said, deh kharch, nuh hasel, the expense amounted to ten with only nine of profit.—*Ouseley's Travels*, Vol. ii, p. 106.

KOH-I-NUR, or Mountain of Light, a celebrated diamond, said to be the immemorial heirloom of Indian sovereignty from the days of the Pandu. Colonel Sleeman would have it that this great diamond was first found in Golconda by Meer Jumla, and presented by him to Shah Jehan, as a nuzzur for a passport to his aggrandizement. But Baber states that on his capture of the palace of Ibrahim Lodi at Agra, he found 'one famous diamond, which had been acquired by sultan Allahood-deen. It is so valuable, that judges of diamonds valued it at half the daily expense of the world.' Most probably this gem was no other than the famous Koh-i-Nur, which is said to have been an inch and a half in length, and an inch in width. Being carried off by Nadir shah, it was afterwards seized in the plunder of that monarch's tents, by Ahmed shah, from whom it descended to his son, Shah Shooja, and is now in London. His highness the Guicowar of Baroda purchased the celebrated diamond Star of the South for the sum of eight lacs and three-quarters of rupees, £87,000 sterling. The Star of the South is next to the Koh-i-Nur, the largest diamond in the world; weighing 125 carats, and is a gem of extraordinary purity and lustre.—*Tr. Hind.*, Vol. ii, p. 318. See Diamond.

KOH-I-RUD, an artificial reservoir at Isfahan.

KOH-I-SAFED, or White Mountain, forms a most majestic boundary to the southern side of a plain, at a distance of about fifteen or twenty miles from the town. Its height, at a guess, is about seventeen thousand feet, and along the whole southern side of the

KOHISTAN.

Himalaya, from the Hindoo Koosh to Nipal, the Safed Koh is visible. Its snowy top, is also visible from Peshawar, but it cannot be seen from Cabul, even from the top of the Tukht-i-Shah, which rises behind it.—*Vigne's A personal Nar.*, p. 234.

KOH-I-SAFI. Behind, or east of the Shiah Koh, is a hilly tract, not mountainous, although waste and desolate, named Koh-i-Safi, from the tribe that pasture their flocks in it; and this tract intervenes between the Shiah Koh and the valley of Taghow; moreover, through it meanders the river of the Kohistan.—*Masson's Journeys*, Vol. iii, p. 151.

KOHISTAN, literally, hill country, but commonly so applied to mountain tracts on the N. W. frontier of British possessions in India.

In the Kohistan of Cabul, the people occupy partially the valleys of Ghoribund, Punjir, Nijrou, Tagow, Alishang, Alighur and the lower Kuner. To the south-east, the Kohistan extends to the hills of Tagow, and farther away, to Lughman, the Lamghan of Baber, and so called, according to him, because the tomb of Lamech, the father of Nuh or Noah, is to be seen there. From Charikar to Jellalabad the road is open, and it is supposed that Alexander, whether he re-crossed the mountains at Bamian, or at Beghrum, marched by this route towards India. On a detached and comparatively low hill, a whitish streak is observed, extending from the summit to the foot of it. This is the Reg-rawan, or running sand mentioned by Baber. The natives say that it runs up again, and that it is never diminished; and that there is a cave at its foot where noises are heard. It has been described by Burnes, Vigne and other travellers.

The Kohistan of Jullandhur is interesting ethnologically. The revenue of the rajah of Mundi is reckoned at four lacs of rupees a year, much of which is derived from salt and the half is paid to the British Government. The hamlets in Kooloo, near the Tiri pass, in the Jullandhur Kohistan, seldom contain more than from fifteen to twenty houses. Single houses are numerous, and, from being scattered amongst the fields, give an agreeable variety to the bold landscape. This distribution of houses arises from lands available for cultivation being usually of small extent and widely separated, and consequently unable to support large communities. It is also imperatively necessary for the husbandman not to place a ravine or any other impediment between his hut and his fields, as all communication with them would probably be cut off during the greater part of the rains, an important season of the year in India. The

natives of Sookeyt, Mundec, and Kooloo, in the Kohistan of the Jullandhur, have sallow complexions and appear to be of the same race as the inhabitants of Bueahir. In fact many of the coolies employed in carrying baggage between Simla and Kalka are men from these states, who are attracted there by the wages, which average one anna a day in their own districts, but from four to six annas on the left bank of the Sutlej. The men are generally tall and strong, but few of them are handsome. Many of the young women are pretty, but at the age of 20 or 25 become coarse and stout. The dress of both sexes is nearly the same. It consists of a drab-coloured woollen frock, trowsers of the same, or of leather, and a flat skull cap, generally black, with sandals made of coarse grass. The woollen cloth called puttoo is manufactured by themselves and resembles thick coarse blanketing. It is sold in pieces of 10 inches in width and about 21 feet in length at 2 Rs. 8 As., or 3 Rs. a piece, according to the quality. Both sexes wear a girdle around the waist, and the men generally go bare-legged during the hot weather. They seldom, if ever, wear shoes, the richer classes, however, wear worsted stockings and shoes when they go out. The women, instead of the cap, sometimes have a coloured piece of cloth tied round the head, and occasionally twist their hair into one long plait, the end of which is then ornamented with slips of coloured cloth or shreds of worsted. The plait is by no means unbecoming to the young. The dress of the women on the western side of the Seukundir range consists of a tightly fitting body and sleeves with a full petticoat having a broad border at the bottom. Their favorite colour is a light yellowish chocolate, whilst the border is generally of a deep blue or of some other dark colour. A veil is thrown over the head and shoulders, as in the plains. If they meet a European they stop and turn their backs to him until he have passed. The men dress pretty much in the same manner as those on the plains. The women of Kooloo and the adjoining states are inordinately fond of ornaments. These are of the usual description, with the exception of mother o'pearl amulets, which both men and women use, consisting of small thin plates of mother o'pearl of various sizes and engraved with mystical figures. Several of these are hung around the neck and hang conspicuously on the chest. Polyandry is said to be unknown amongst them, nor are they guilty of infanticide, but polygamy is general. Travelling is generally performed in the jaupan by those who can afford it. The janpan is like a large tray with a pair of bamboo shafts behind as well

as in front. Ladies have theirs covered over with scarlet cloth. All agricultural labors, with the exception of ploughing, are performed by the women, while the men sit idling at home, grain crops are cut with the sickle, and burdens are usually carried in the kiltia or large conical baskets hanging over the shoulders on to the back, which is the general mode of carrying loads in the Himalaya mountains. The mountaineers of those parts had long been in the habit of ill-treating their wives, and on the introduction of English laws the desertion of their husbands by the women was pretty general. The men of Kulu laid their grievances before the proper authority, by whom they were told that since, before the British rule, they valued their cattle more than their wives, they must now reverse the custom, and take greater care of their wives, a system of valuation they evidently could not appreciate, as wives were more plentiful than cattle. About Subathoo one sometimes sees infants wrapped up like little mummies and laid in such a position that a small rill of water falls on their heads. These infants are usually watched by some elderly female whilst their mothers are employed in the fields. The natives believe that this ordeal strengthens the children and renders them hardy, and that it cures dysentery and various other diseases. But the common object is to keep them asleep, and this is found to be the most effectual means of so doing. It is not known whether the inhabitants of the mountainous district on the right bank of the Sutlej adopt this plan or not. They dread the evil eye, and have recourse to witch finders, who feign the power of discovering evil spirits which wander over the mountains in the tangible form of witches. If a cow or any other living creature die, its death is immediately attributed to some evil eye, and a witch finder is employed to discover it. This impostor having selected some old woman who had no means of propitiating him by gifts, placed his victim in the centre of a group, whilst all interested in the case sit around her in a circle. He then dances round the poor creature, and ultimately nods his head towards her, whereupon all the lookers on do the same, which coincidence is deemed a sufficient proof of guilt. Formerly she was subsequently condemned to be burnt to death! But since that district became a British province and these inhuman proceedings have not been allowed to take place, they declare the victim of their superstitious credulity an outcaste, and refuse her the commonest necessities of life, thus she is abandoned to her fate, and would probably starve to death, but for the timely gift of a goat or a

sheep by some one of her relatives to the witch finder, who forthwith fastens the guilt on some other person in the hope of extorting in a similar manner from the relatives of the last accused.

The inhabitants of the Chumba range appear to be a different race of men. They are shorter and appear much stronger, and are certainly cleaner about their persons. They call themselves Rajpoots, and say they belong to the Guddeejat. They are sharp and able to impose upon their less knowing neighbours. Most of the witch-finders are of the Chumba Guddee. When Europeans made their first appearance in the Kangra valley, these men had very slight notions of caste and would eat or drink any thing the former gave them, whereas, since their contact with the natives of the plains, they have become as bigotted as any hindoo. The Chumba Guddee may always be known by their peculiar conical caps, with lappets to turn down over the ears like an English travelling cap. As the traveller proceeds from the plains into the interior, it is very interesting to remark the gradual change in the features, from the Hindoostani to the Tartar-like countenance of the Lahouli. These last are a totally distinct race from the people of Kulu or the Chumba Gaddi range. The Lahouli are a short sturdy set of men, very ugly and filthily dirty. The women are decidedly plain. The costume of both sexes consists of a pair of loose woollen drawers, with a frock of the same material, whilst a wrapper is also often wound around the body by being thrown over the shoulders and fastened by a brass clasp in front. Their dress, generally of a black colour, is of a kind of plaid, and their caps are of the same. The women wear their hair either in long plaits fastened at the back of the head with a profusion of red wool and coloured threads, or comb it back off the forehead, tying it in a lump behind, and adorning it in a similar manner. Around the flat circular caps are strung large white shells like cowries, glass beads, and pieces of amber. Around their neck, both men and women wear amulets of mother o'pearl, pieces of amber, turquoises and other precious stones. Each man has hanging to his belt, a timber pouch and a brass instrument for striking fire; with many other non-descript implements. They spend six months of each year in Kulu on account of the severity of the winter season in Lahoul. The greater part of that time they pass in dancing and drinking. On their jubilees, they set off fireworks and make a tremendous noise, whilst the women dance. These exhibitions do not terminate until they are all too drunk to continue them. All the

mountaineers are fond of spirituous liquors, especially of brandy, but do not often drink to excess. In their orgies, the women are ridiculously decked out, especially the aged dames. Many of the young damsels have beautiful eyes, of which they make the utmost use. Their characteristic costume, their long cues of hair, and felt caps stuck coquettishly on one side, and the peculiar bunchy knot peeping out behind, to say nothing of the ornaments, produce a most ludicrous effect, whilst they shuffle and wriggle their bodies about in the dance. The men continue either quietly looking on or beat tom-toms and other instruments. It is a custom to add the names of adjacent towns, villages, or places of note, thus the place and town are spoken of as Shujanpoor Tira; the Bul Dhoon is called Sookeyt Mundi; also Kangra Bhawan; and Pallam Puttiar, &c., are terms commonly used. The following elevations obtained from Capt. A. Cunningham are to be taken as approximations. They may be 100 feet either more or less than the truth:—

Adinanagar, ft. 1,200	Hoshiarpour, ft. 1,200
Pathankot..... 1,200	Kumleh-gurh... 4,258
Noorpoor... .. 1,665	Nari Ghant..... 2,009
Kotila..... .. 1,370	Rajpoor ditto... 2,500
Kangara.... .. 2,647	Sekunder do.... 5,480
Joala Mukhi... 1,805	Jaintri ditto.... 5,632
Tira..... .. 2,470	Gogar pass..... 4,900
Mundi..... .. 2,637	Tiri ditto..... 6,485
Sultanpoor..... 4,584	

Kohistani.—Kaghan, is a narrow glen stretching upwards from the northernmost point of the Hazara district for a distance of nearly 90 miles, and separating maharajah Golab Sing's territory from the independent mountaineers. Adjoining Kaghan and reaching the Hussunzye country, separating the Hazara border from the Ludus, and adjoining the Agroro fiefship in Hazara, is the country of some hill tribes named Kohistani and Swati, who originally came from the Swat valley.

The Paropamisar chain, which bounds the Kohistan on the west, extends three hundred and fifty miles from east to west, and two hundred from north to south. The whole of this space is a maze of mountains, and though it affords a habitation to the Eimak and Hazara, it is so difficult of access, and so little frequented, that no precise accounts of its geography are to be obtained. — *Moorcroft's Travels in Journal Beng. As. Soc., p. 387; Journal of the Asiatic Society of Bengal, No. ccii, April, p. 408. See Kuvir, India, Affghan, Kafir, Khyber, Koh, Kush, Kabul.*

KOH-I-TAK, the Sulimani range is finished by the Pahar, or hills of Koh-i-Tak; and to the north-west is the Koh-i-Kondi,

with a little snow upon its summit. The Kayser mountain arises in front in a southern direction.

KOH-I-ZÂRD, see Khuzistan.

KOH KIRANA, HIND. A hill just within the boundaries of the Jhang district, yielding iron ore of good quality.

KOH-KOOT, a high and level island in lat. 11° 36' north, long. and 102° 34' east. It has a high conical hill on the south-west.

KOHL or Kohol, AR. Lamp-black, used by women for staining their eyelashes. It is collected by holding a knife over the flame of a lamp, and is applied with a glass, leaden, or wooden needle, called a mil, to the edges of the eyelids. This is the fuligo of the Roman ladies, the Persians have not yet tried it. The Arab and Indian women all use it. Women do not use surma or antimony which men only apply to their eyes.—*Burton's Sind*, Vol. i, p. 276.

KOHLÉN SAURE, GER. Carbonic acid.

KOHLÉNSAURE BITTERERDE, GER. Magnesia alba.

KOHLÉNSAURES NATRON, Sodæ sesquicarbonas. Soda, the Natron of the Greeks.

KOHLÉNSAURES-ZINK OXYD, GER. Calamine.

KOHLU, HIND. of Simla. The pulse *Cajanus indicus* or *C. flavus*.

KOHLU, also Anjancle? TAM. Sulphuret of antimony.

KOHOMBA, SINGH. *Azadirachta indica*.

KOHOON, SINGH. *Crocus sativus*, Linn.

KOHTAR, or Kohatar, a race on the Neilgherries who occupy many of the elevated parts of the mountains. They have no distinction of caste, and differ as much from the other tribes of the mountains as they do from all other natives of India. They cultivate a considerable quantity of the different kinds of millet and of the poppy, and sometimes a little barley. They are the only artisans of the hills, being goldsmiths, silversmiths, potters, shoemakers, &c., &c. They worship ideal gods of their own, which, however, they do not represent by any image. Many of their villages are very prettily situated, and generally on a hill; and every hill thus occupied is called kohatagiri, or, as more commonly pronounced, kotagiri. These people the Toda race call kuv,—their term for a mechanic. As this tribe kill and eat a great deal of beef, it was no doubt intended by their hindu neighbours that they should be called Gohatar, from the Sanscrit Go, a cow, and Hata, slaying, &c. They are in number about 2,000. Every Kohatar village has, belonging to it, a circle of Burgher hamlets or villages, from which they claim at periodical seasons the payment in kind of certain fees or dues; and

for which they in return furnish the Budaga or Burgher race with, or rather make for them (the latter supplying the material), their implements of woodcraft and husbandry. These fees are generally paid in a certain quantity of whatever grain the Budaga has cultivated, for each plough of land, besides incidental dues on marriages, &c. On one occasion, when many miles from one of the Kohatar villages, there was observed, within a copse at a short distance, a group of Kohatar, men, women and children, sitting round a fire from which the little smoke that was still rising first attracted attention. They had taken possession of a dead bullock, made their repast, cut it up and soddened the remainder which was suspended to each end of little poles. The Kohatar always attend the funerals and obsequies of the Toda, &c., receive from them the carcasses of the buffaloes that are offered in sacrifice, allowing from a half to a quarter of a rupee for some; and others they receive in return for the assistance they afford on these occasions or for services which may have been performed for the family of the deceased. If they cannot supply themselves with flesh by any of these means, they kill some of their own herd, or purchase for that purpose from the other tribes. The Kohatar burn their dead, collect the bones on the following day, and bury them in a hole, marking the spot where they have done so. This they do in order to the performance of the obsequies. On the night of the first Monday after the first new moon in the month of March, all the friends of the deceased assemble, and preceded by music, go to the place of burning. The Kohatar, in figure and habits, resemble the Chakili or chuckler, and are workers in leather, iron, brass, silver, pottery and woods. They will not perform labourer's work, except in building. Their language is a corruption of the Canarese. They eat the flesh of animals, of whatever distemper they die; but, in 1825, this proved fatal to several men. Their stature is low, 4 or 4½ feet, but they are stout and healthy. They eat opium. They live in villages all over the naads. Their numbers, in 1825, were 187 men, women 156, boys 75, girls 79 = 497, villages 5, houses 188. They never milk their cows. They are not polyandrous.—*Dr. Shortt; Harkness Neilgherry Hills*, pp. 30, 81.

KOHTUL is the Persian word for a pass or defile; Lukh is the Belooch term. It may be a contraction of Koh, mountain, and tel, a rising ground, a hill, a tumulus, &c. But tel is by some regarded as Arabic, and the Burhan-i-Katia dictionary spells it Kutel. Yet, in a Persian translation of sultan Baber's Commentaries, composed by himself in the Moghul

language: The spelling is two or three times Kotal.—*Ouseley's Travels*, Vol. i, p. 268; *Pottinger's Travels in Beloochistan and Sind*, p. 151.

KOHU, HIND. *Olea europæa*.

KOIA MARAM, TAM. *Psidium pyriferrum*, also *P. pomiferum*, the white and red guava trees.

KOIA PIPOLI, TEL. *Salicornia indica*, Willd.

KOIDA CHIKA, MALAYAL. Pine apple, the *Ananas sativus*, Schult.

KOIKARA or Kykara, a race who make baskets. The name may mean Kaikara, or handicraftsmen.

KOI-KOPAL, i. e., Gond Gopal, a settled race of Gond who are cow-keepers.

KOIL, HIND. The Indian cuckoo, *Eudynamis orientalis*, see Kameri, Koel.

KOIL, TAM. A temple, thus Kali kōil, a temple of Kali.

KOILA-BHUTAL, a wandering Gond tribe, whose women are dancing girls.

KOILASHA, SANS. From *kelas*, to shine in water. This is the Kailas of the Himalaya.

KOILI AVARI, TAM. *Canavalia obtusifolia*

KOILU, TEL. *Salicornia bractiata*, Roxb.

KOIR-PAH, the Malayala name of a tree which answers the purpose of small spars for native vessels: it is said to be strong and durable for such purposes.—*Edye, M. and C.*

KOIT, DUKH. *Feronia elephantum*, Corr.

KOITOR, a section of the Gond, including the Raj Gond, the Raghuwal, the Daduvi and Katulya. The Koitor is the Gond par excellence: and some suppose the term derived from the Persian 'Koh,' a hill.

KOITABHAJIT, SANS. Jit, signifies victory.

KOJAGARA-LAKSHMI, SANS. From *kah*, who, and *jagri*, to awake.

KOJAH, see Khajah, Khojah.

KOJLA JAMUN, DUK. *Calyptanthus caryophyllifolia*.

KOK, HIND. *Ficus caricoides*.

KOKAI RANG, HIND. Dull mauve colour.

KOKALLA, see Inscriptions.

KOKALLAK, HIND. *Tribulus alatus*.

KOKAN, a small territory west of Kashgar, with capital of same name, the paternal kingdom of Baber. It is ruled by an Uzbek khan or chief of the tribe of Yooz who claims a lineage from Baber. It is famed for its silk. The inhabitants wear skull caps. The position of Kokan has been shifted in the most recent Russian maps from 41° 23' by 70° 30' to 40° 18' by 71° 1'. The name is also written Kokand and Khokand. In Balk and near Andkhui, the harvest is at the beginning of June; in the oasis countries in July, in

Kungrat and in the north of Khokand not till the beginning of August. Of the rivers, in that central region, the Oxus is the most important, and the Zarafshan, Shahr-Sabz and Jaxartes follow, and Kokan an Uzbek chiefship, is situated on the Sir or Jaxartes. It possesses considerable celebrity in being looked on as the capital of Afrasiab, and is historically connected with the campaigns of Chengiz and Timur; but it is better known as the birth-place of Baber, from which he raised himself, first to the throne of Kabul, and ultimately to that of Hindustan. The once fertile kingdom of Ferghana has again taken its place among the nations of Toorkistan. Kokan is not only the key of Toorkistan, it is on the high road to the Chinese settlements of Kashgar, Yarkand and Khoten, with which it carries on a very considerable traffic, and where the khan exercises much influence. Also there is an open and regular communication from Yarkand to Cashmeer and Ladak, so that, with an influence in Kokan, the ramifications of commerce become infinite, extending into Tartary, China proper, and even India. Herat is valuable as an emporium further to the south and west. Herat has been stated to be the entrepot of Persia, Toorkistan, Cabul and India. Kokan will be found to be emporium of Tartary and China, of Russia, and the northern frontiers of Hindustan. If Russia and England abandon in the east the policy of friendly communication which they maintain in the west, and directly or indirectly urge the nations which intervene between the Indian borders to make war on each other, they will not be fulfilling their duties as civilized powers, nor can they derive any benefit from such a proceeding. With irritating causes at work, Yarkand and Kokan must come into collision, and Kokan, backed up by Russia, would succumb to Yarkand, and Russian officers and Russian merchants will occupy the towns of Yarkand and Khoten. Kokan and Yarkand intervene between Russia and Hindustan.—*Papers, East India, Cabul and Affghanistan*, pp. 120, 136-31.

KOKAN BER, HIND. Fruit of the wild ber, *Zizyphus vulgaris*, and *Z. nummularia*.

KOKA PANDIT, author of a work, in Sanscrit verse, *De modis coeundi aliis que rebus veneris*. There is no book in eastern literature, except the *Hitopadesa*, which is to be found in such variety of languages. In Persian, Hindustani and Panjabi, it is called *Lazzat-un-Nissa*: in Arabic, the *Marifat-un-Nayk*: in Sindhi, the *Farhat-el-Ashikin*. The original is in Sanscrit verse, and translations are to be found in the vernacular dialects of India, as the Mahratti, Telugu, &c.

KOKRI.

KOKAR, see Jet.
 KOK-BURADEE, BENG. *Salvia plebeia*.
 KOKELAR, an artificial lake in Ceylon, 20 miles in circumference.
 KOKEMAR, a decoction of poppy heads, in use in Persia.
 KOKHUR, HIND. *Myrsine africana*.
 KOKI, see India.
 KOKILA, HIND. *Eudynamis orientalis*, Linn. Himalayan black-bird.
 KOKILAKSHAMU or Golimidi, TEL. Coix barbata, R.
 KOKKA PAYALA TIGE, TEL. See Kukka pala tige?
 KOKKISA CHETTU, TEL. *Bignonia suaveolens*, R.
 KOKKITA or Kar inguva, TEL. *Gardenia latifolia*, Ait.
 KOKKITA YARALA or Gudama tige, TEL. *Vitis adnata*, Wall.
 KOKKITA or Kokkiti, or Samudra pala, TEL. *Argyrea speciosa*, Swt., also *Desmodium gangeticum*, DC.
 KOKLAS, a pheasant of the Himalaya.
 KOKNA of the Kol, *Haliastur fulviventer*, Vell.
 KOKNAB, HIND. *Papaver somniferum*.
 KOKNI BER, HIND. *Zizyphus nummularia*. The Jangli Kokra, HIND., is a species of *Hibiscus*.
 KOKOI. *Albizia*, species.
 KOKO KIOTON, here are five great Lama serai, in each of which are more than 2,000 Lama, besides fifteen smaller serai; 20,000 is thus a low estimate for the number of Lama in this famous city.—*Prinsep's Tibet, Tartary and Mongolia*, p. 51.
 KOKO-NOR, MONGOL. The Blue Lake or Blue Sea, is an immense reservoir of water more than four hundred miles in circumference. According to popular tradition, in Tibet, this vast body of water once occupied what is now the site of the city of Lha-Ssa, and found its way by a subterranean course to its present bed.—*Hue's Recollections of a Journey*, p. 224.
 KOONKUSSE, GER. Cocor-nut palm.
 KOOKNA ZEYLANICA, Thw.
 Kookoon-gass, SINGP.
 This tree is not uncommon on the banks of streams in the Saffragam and Ambagamowa districts, at an elevation of 2,000 to 4,000 feet. The inner yellow bark is employed by the natives medicinally as a sternutatory, and an oil is expressed from the seeds, which is used for burning in lamps. Wood unknown.—*Thw. En. Pl. Zeyl.*, p. 52.
 KOKOORD, see Kiu-siu.
 KOKOS, RUS. Coconut palm.
 KOKOSNOOTEN, DUT. Coconut.
 KOKRI, MAHR. A fox.

KOL.

KOKOSNUSSE, GER. *Cocos nucifera*, Linn.
 KOK-SHIM, BENG. *Celsia coromandeliana*.
 KOK-SINGHA, a renowned pirate chief who in A. D. 1661, with a fleet and force of 25,000 men attacked and destroyed the Dutch settlements in Formosa.—*Collingwood*.
 KOKSH, Koktsh, see Kocch.
 KOKUL, TAM. *Balsamodendron roxburghianum*, Wall.
 KOKUM, of Bombay, *Garcinia purpurea*, Roxb.
 KOKUN or Farghana, see Kokan, Kaffir.
 KOL is the term applied to the aborigines of the hill country of Chota Nagpur, Mirzapur and Rewah. Europeans apply the term to the Dravidian Oraon, as well as to the others, but perhaps erroneously, and most of the tribes have other distinctive names. In the south of the Chota Nagpur country, about Singhbhum, it is applied to the Lurka Kol. The Kol of Chota Nagpur, are in two tribes, Mundah and Oraon. These are occupying the same villages, cultivating the same fields, and their festivals and amusements are the same, but they are of entirely distinct origin and cannot intermarry without loss of caste. The Mundah were the prior occupants. The Kol, Lurka Kol, and the wilder Lurka Kol of the hills to the west of the Singhbhum district, speak nearly the same language as the Ho, Sontal, Bhumij and Mundha. The Kol, the Kur of Ellichpur, the Korewah of Sargujah and Jampur, the Mundah and Kheriah of Chota Nagpur, the Ho of Singhbhum, the Bhumij of Manbhum and Dhulbhum and the Sontal of Manbhum, Singhbhum, Cuttack tributary mahals, Hazaribagh and the Sontal Pergunnahs, are kindred peoples numbering several millions. Amongst the Kol, man and wife eat together as is the custom with some christian and mahomedan races. The Kol, the Mundah and Oraon tribes and all those cognate to the Mundah are passionately fond of dancing, which they commence in very early life and regard as an accomplishment. They also sing well and have musical voices and a great variety of simple melodies. Their dancing assumes a national character at their great periodical seasonal festivals and fairs called Jatra, at which the young men treat their partners with fairings. The Kol have a belief in, and greatly dread, witches, and have killed many persons whom they believed to be so. Chota Nagpur, properly Chuttia Nagpur, is the country on the eastern part of the extensive plateau of Central India, on which the Koel, the Subunreka, the Damudah and other rivers have their sources. It extends into Sirgujah and forms what is called the Upar-

ghat or highland of Juspur, and it is connected by a continuous chain of hills with the Vinudhya and Kymor ranges from which flow affluents of the Ganges, and with the highlands of Amerkantuk on which are the sources of the Nerbudda. The plateau is, on the average, about 3,000 feet above the level of the sea with an area of about 7,000 square miles. It is on all sides difficult of access, is a well wooded, undulating country, diversified by ranges of hills, and it has a genial climate. The population, in 1866, was estimated at about a million, and is formed of a number of non-Arian tribes who had fallen back to that refuge from the plains, more than half of them, however, being the race known to Europeans as Kol, the other races in Chota Nagpur and its adjoining tracts are, the Lurka Kol, Ho, Bhumi, Mundah and Sontal. The Kol, in former times, possessed the whole of Chota Nagpur, which may now be said to be divided between them and the Dhangar or Uraon, who came from Rotasghur. The chief men in most of the villages are still, however, of the old Mundah or Kol tribe, and they do not intermarry with the Dhangar. The greater part of Singhblum is inhabited by Kol, and we find them numerous in Bamanghoty, and dispersed to the vicinities of Cuttack and Midnapore.

The *Lurka Kol*, as they are termed, inhabit those extensive tracts, which go under the name of the Kolehan. Part of these wilds is situated in the Singhblum district, and the inhabitants pay a nominal obedience to the maharajah of that province, but the greater proportion of this population is more under the influence of the rajah of Mokurburj than of any of the other powerful chiefs in that part of the country. But even his orders are obeyed only where they are supposed to tend to the advantage of the Kol themselves. Upon the whole it may be said of this singular people that, living in a primeval and patriarchal manner under their Moonda and Manki, they have managed to preserve a sort of savage independence, making themselves dreaded and feared by their more powerful and civilized neighbours. The Kolehan with its wilds and jungles is divided into different peer, as they are termed, or pergunnahs. These peer are, generally speaking, not of any great extent, two or three moderate marches carry a traveller through each of them. There can be little doubt, and such is the tradition among the people themselves, that the Lurka Kol came originally from Chota Nagpur, and are descendants of the old Moonda or Moondari of that district. They emigrated finding the romantic hills and valleys of Chota Nagpur too confined for their increasing numbers.

The same cast of countenance prevails in the two races, though, perhaps, tinged with a wilder and more fierce expression in the Lurka Kol. The Uraon, who inhabit great part of Chota Nagpur, regard the Kol as a tribe inferior to themselves, and do not intermarry with them. The villages in the Kolehan are ruled by Moonda and Manki as in Chota Nagpur. The former, the Moonda, is the proprietor of one village; while the latter holds six, eight, or twelve. These village potentates used frequently to wage fierce war with one another, and bitter and long existing feuds have often prevailed amongst them. There is this peculiarity in the Kol character, however, that serious and bloody as may be the domestic quarrels, no sooner are they threatened with hostilities from without, than all their animosities are laid aside and forgotten for a time. The villages are generally built on some elevated spot surrounded by trees, and, at some little distance from the principal entrance to the villages, the Kol standard or ensign, a pair of buffalo horns, is suspended in a conspicuous situation. The dress of both sexes is alike, a strip of cloth brought round the loins and passed between the thighs forming their only covering; the women wear a profusion of coloured beads suspended from their necks, and have their ears pierced with a number of small brass rings. Their diet is of a very promiscuous nature; every thing almost that can be considered eatable being relished by them, and much of what we consider carrion is eagerly sought for. In this respect they do not differ from the Kol of Chota Nagpur. They are greatly addicted to drunkenness; the religion of the Lurka Kol is nothing but a superstition of the grossest kind. The great divinity is the sun (suruj), next to the sun ranks the moon (chandoo), and then the stars, which they believe to be the children of the latter. They uniformly, upon solemn and great occasions, invoke the sun, and by him many of these lawless men at times, swore allegiance to the late E. I. Company. Another form of oath used by them is that of swearing upon a small quantity of rice, a tiger's skin and claws, and the earth of the white ants' nests; besides the sun and moon, other inferior divinities are supposed to exist, to whom the Kol offer up sacrifices of various kinds. These spirits are supposed to inhabit the trees and topes in and around the village. The belief the Kol entertain of the power and influence of the Bhonga must be considerable, as they will on no account allow those trees to be denuded of their branches, and still less cut down. It is the universal custom in the various Kol villages that when a woman is

seized with the pains of labour, she is immediately removed to a lonely hut, the door is shut upon her, offerings of various kinds are suspended near it to propitiate the Bhonga, and no one ventures near till all is over. The women, it may be observed, are not secluded or shut up. When a Kol youth has fixed his affection on a lass, generally the inhabitant of some neighbouring village, she is waylaid and carried off to his house by himself and his friends. So soon as information of this reaches the parents of the girl, they proceed to the village of the ravisher, not however, in general, with any hostile purpose. Interviews take place between the friends on either side, and at length matters are brought to a final settlement; the new husband paying to the father of his spouse a certain number of cows, goats, or buffaloes, according to his means, or the beauty and comeliness of his bride. After this a scene of feasting and intoxication generally follows, in which women and children as well as men participate. The Kol burn their dead, carefully collecting the bones and ashes and bury them with offerings of rice in or near their villages, placing perpendicular or horizontal slabs of stone over each particular grave. Those grave stones form a remarkable object, and strike the eye of every stranger on approaching a Kol village. The only weapons used by the Kol, whether in war or hunting, are the bow and arrow, and the tulwar or axc.

The Mundah Kol or Ho, comprise about two-thirds of the population of the five pergunnahs of Silli, Tamar, Barundah, Rabey and Bundu, all others being recent settlers. But many of the Mundah Kol have been dispossessed of their ancestors' lands, by middlemen, brahmans, and rajputs. Mundah settlements are chiefly in the eastern and southern parts of Chota Nagpur. The Mundah and Sontal are amongst the ugliest of mankind, the Sontal being remarkable for good nature and ugliness. They are more like Hottentots than Negroes. The extreme features of the Mundah race have high cheek bones, small orbits often with an oblique setting, flat faces, without much beard or whisker, and in colour from brown to tawny yellow. Mundah features are flat and broad. The richer people of the Mundah, who aspire to be zemindars, wear the poita, reverence brahmans and worship Kali, but the mass continue in their original faith. The great propitiatory sacrifices to the local deities are carousals, at which they eat, drink, sing, dance and make love, and the hindoos settled in the province propitiate the local deities. The Mundah country is arranged into Purha or divisions, each consisting of twelve or more villages under a chief, and the chiefs

meet at times for consultation. Many of the Oraon and some of the Mundah clans or Kili, are called after animals, the eel, hawk, crow, heron, and the clans do not eat the animal whose name they bear. The Mundah and Ho dead are placed in a coffin along with all the clothes and ornaments used, and all the money the deceased had, and all burned. The larger bones are preserved till a large monumental stone can be obtained, and the bones are interred below it, the Ho near the houses, the Oraon separate from the village. They are taken to the tomb in a procession, with young girls with empty and partly broken pitchers, which they reverse from them to him to show that they are empty. The collection of these massive grave stones under the fine old tamarind trees is a remarkable feature in Kol villages. The stones are sometimes so large that the men of several villages are required to move one. The bones are put with some rice into a new earthen vessel, deposited into the hole prepared for them and covered with the big stone. The Mundah and Oraon races are fond of field sports, and all game, large and small, disappear from near them. They form great hunting parties. Fishing and cock-fighting are also resorted to. The Mundah and Ho have a shamanite religion. They have no worship of material idols, but Singbongu, the sun, is the supreme being, the creator and preserver, a beneficent deity, and they have secondary gods all invisible, and generally malevolent. Sacrifices to Singbongu are made of fowls, pigs, a white goat, the ram and buffalo. The Kol and Sura dwell towards the north of the Gond and Kond in Central India; their languages contain Dravidian words, but they belong to a totally different family of languages. The Kol also inhabit the forest and mountain tracts of Benares, south Bahar and Chota Nagpur on the north of the Kond, in Ghondwana, and border on the people in the Rajmahal hills, dwelling in the east at Sumbulpur, Sirgajah, Gangpur, Chota Nagpur, Ramgurih and Mongir. The Kol were described by Lt. Tickell in 1840, in the Bengal Asiatic Society's Journal. One tribe called Oraon, was driven at an early period from the neighbourhood of the Ganges, and found the Mundah Kol tribe in possession of Chota Nagpur. The Mundah call themselves Ho, though more generally known as Kol. The Kol and Male-Oraon are physically Ultra-Indian more than Dravidian, and the occupation of the eastern Vindhya and hills on the opposite side of the Gangetic valley, by Ultra-Indians, implies that the valley itself was at one time possessed by the same race,—the simplest conclusion is that the Kol were an extension of the ancient Ultra-Indo Dravidian popula-

tion of the lower Ganges and of the highlands on its eastern margin. The Kol, and Lurka Kol and Sura, in Singhbhum, north of the Gond, are regarded by all writers as of the prior Scythic stock.

The Lurka Kol were subdued in 1821, and an agreement was made with them by which they bound themselves to be subject to the British government, and to pay a fixed tribute to their chiefs. In 1857, a large number of the Lurka Kol espoused the cause of the rajah of Porahat, a rajput chieftain near the Kolehah, but on the restoration of order they reverted to peaceful pursuits. The estate of the rajah of Singhbhum, afterwards styled the rajah of Porahat, was then confiscated for rebellion. The total revenue from the district is about Rupees 45,000. The expenditure including a police battalion, amounts to about Rupees 30,000. Kol arms are the bow, a piece of bamboo with bamboo string, the arrow barbed and battle axe. The Kol intermixed with the Gond on the Sumbulpur borders, are said to be called Kirki. In British India and on its borders are four distinct branches of the family of languages spoken by members of the Turanian race. In the north are the Himalayan tribes, with their dialects, occupying from the Kanawars on the Sutlej to the Boti of Bhutan in the extreme east. Then there are the Lohitic class of languages, comprising with the Burmese and others of the Malay Peninsula the dialects of the Naga tribes and of the Mikir in Assam, and of the Bodo, Kachari, Kuki and Garo in Eastern Bengal. Nearly related to this class is the Kol or Munda family of languages, including the Kol, Sonthal and Bhumi of Singhbhum and Western Bengal and the Mundala of Chota Nagpur, the Kur or Muasi and the Korku in Hushangabad, and westward in the forests of the Tapti and Nerbudda until they come in contact with the Bhil of the Vindhya hills and the Nahal of the Khandesh belong to this family; indeed Mr. Hislop held that the word Kur is identical with Kol.

The fourth branch is Tamulic or Dravidian, to which belong the Brahui of Baluchistan, the Gondi, the Tuluva of Kanara, the Karnata of the Southern Mahratta country, the Todava of the Nilgherries, the Malayalam of Travancore, the Tamul and the Telugu.

The Kur and the Sonthal are closely related, and are separated from the Dravidian. The Kur or Muasi and the Korku or Kurku, to the north-west and west of the Mahadeva hills, are, in language at least, quite distinct from the Gond tribes.

Mr. Hodgson is of opinion that the Tamulian, Tibetan, Indo-Chinese, Tangus, Chinese,

Mongol and Turk are so many branches of the Turanian family, and he regards the aborigines of British India, as northern of the Scythic stem, but he remains undecided whether they owe their Scythic physiognomy to the Tangus, the Mongol or the Turk branch of the Tartars or Scythians, and whether they immigrated from beyond the Himalaya at one period and at one point, or at several periods and at as many points. All writers are of opinion that when the Aryans entered India, they found the country occupied by prior Scythic races, to whom their writers apply such contemptuous expressions, as Dasya, M'hlecha &c. These prior races seem to have been driven largely out of northern India into and through the Vindhyan mountains into the Peninsula of India and Ceylon, where their idiom, the Tamul, Telugu, Malayalam and Karnatica are sister dialects of one speech, and Dr. Pritchard concurs in opinion with Professor Rask who regards the languages of the mountain tribes of India, the Bhil, the Gond, the Toda and others, as also of the Tartar stock, and mentions that some curious analogies have been observed between the Tamulian and other dialects of the peninsula and the languages of Australia. Mr. Logan, however, who has had great opportunities of contrasting and comparing the Dravidians from various parts of India, inclines to call them South Indian. He remarks that, physically, the population of Southern India is one of the most variable and mixed, which any ethnic province displays. A glance at a considerable number of Kling (Telugu) and Tamular of different castes and occupations, shows that the varieties when compared with those of similar assemblages of men of other races, such as Europeans, Ultra-Indians or Indonesians (including negroes in the last two cases) are too great to allow of their being referred to a single race of pure blood. Some are exceedingly Iranian, some are Semitic, others Australian, some remind us of Egyptians, while others again have Malaya, Polynesian and even Simang and Papuan features. This varied character of the races of the south of the peninsula may be seen daily, in Madras, to which all the races from the south of India resort.

The Ho differs from the northern languages not only in its greater fluency and agglutinative and inchoate flexional tendency, but in its dissyllabic character, its profusion of dual and relative forms of the pronouns, and in the position of the qualitative before the substantive.

Three lists of words were obtained by Captain Houghton from Chyebassa in Central India, and two by Colonel Ouseley from Chota Nagpore, all of which Mr. Hodg-

son regarded as dialects of the great Kol language, and by means of the Oraon speech he further traced, without difficulty, the connection of the language of the Kol with that of the hill men of the Rajmahal and Bhagalpur ranges. He considers that between those several Kol tongues and that of the Gond of the Vindhya there are obvious links, and Mr.

Elliot showed that much resemblance both in vocables and structure existed between that Gond language and the cultivated tongues of the Dekhan. The Sontal call the Kol, Ho-lar-Ka. Marang Booroo is a god of the Kol, of the Ho and Oraon tribes, the Sontal, Bhoomij and Munda. Booroo means a mountain, and every mountain has its spirit.

From the geographical distribution of the Kol and Dravidian languages, Mr. Hislop concludes that while the stream of Dravidian population, as evidenced* by the Brahui in Baluchistan, entered India by the north-west, that of the Kol family seems to have found admission by the north-east and, as the one flowed south towards Cape Kumari, and the other in the same direction towards Cape Romania, a part of each appears to have met and crossed in Central India. This hypothesis rests on the presence of the Brahui where they are, a fact which is not inconsistent, however, with the supposition that the Dravidian tribes may also have entered India from the north-east or even across the Himalaya, as the Kanawar, Newar, Chepang, and other tribes have done, while the Kol tribes were an offshoot from a later horde, the main body of which entered the eastern Peninsula. The Brahui may have been driven westward

by the invading Arya from the upper Indus. To the early Arya the prior tribes were known as Dasi, who Dr. J. Wilson tells us, were not altogether barbarians, for they had distinctive cities and other establishments of at least a partial civilization. Then, as now, they were darker than the Arya: and, according to Dr. Wilson, the more marked Turanians in Gujerat and other provinces are still denominated the Kali Praja (corrupted into Parej) or black population. In former times the Kol or Col possessed the whole of Chota Nagpur, which may now be said to be divided between them and the Dhangar or Oraon, who came from Rotasghur. The chief men in most of the villages are still however of the Munda or Kol tribe, and they do not intermarry with the Dhangar. The greater part of Singhboom is inhabited by Kol, and we find them numerous in Bamanghoty, and dispersed to the vicinities of Cuttack and

Midnapore. The Lurka Kol, as they are termed, inhabit those extensive tracts as yet but little known, which go under the name of the Kolehan.—*Balfour in Journal of Beng. As. KOLACHEE, see Khyber.

KOLADYN, the chief river in Arakan, along the banks of which are several tribes professing a creed partially buddhist and partially pagan. The Mru on the Koladyn river in Arakan do not exceed 2,800 souls. The races dwelling in the valley of the Koladyn and its affluents are the Kuki, the Mru, the Sak, the Niru Sak, the Ka-mi, the Ku-mi, the Ra-Khyen, the Kin-ni, Shenda, and the Prou-ka-nij, all of them professing a creed partially buddhist and partially pagan. The more eastern tribes, such as the Lung-kha (perhaps the Lunkta, a branch of the Kuki) of the Upper Koladan, and the Heuma or Shindu, and the Khon or Kun who are amongst the feeders and beyond the Koladan, are too little known to be referred with certainty to any particular branch of that family, although it is probable that the latter are allied to the Kuki, Kumi, &c. The Lung-kha are said to be composed of an offshoot of the Heuma of the Shindu (Shentu, Tseindu or Shiamdu) and two tribes called Lung-Khe and Bowng-jwe which it subdued. Captain Tickell says that the feeders of the Mi-Khyoung, the principal eastern affluent of the Koladyn, descend from masses of high hills about lat. 21° 50' N., inhabited by the Kun.

The Bom-zu or Buu-zu (Bom-du) of the Rakhoing, dwell north of the Koladan, inhabiting chiefly the upper basin of the Kurmful or eastern branch of the Chittagong river. To the north of the Bom-zu or Bun-zu (Bom-du), are closely allied tribes termed collectively Lung-kta, Kung-ye, or Ku-ki, who occupy the highlands of Tipperah and extend S. E. towards the head of the Koladan. Both the Bun-zu and Ku-ki, appear like the

Ku-mi, to belong to the Burman family. The Ku-ki represent its most archaic and barbarous condition. The tribes that have been exposed on the sea board of Arakan and in the basin of the Irawadi, to the influence of the Chinese, Shan, Mon, Bengali and more distant commercial nations, have attained a comparatively high civilization. The Sing-pho, although much behind the Burmans, are greatly in advance of the Ku-ki, and the Burmese seem at a very ancient period, when their condition was similar to that of the Kuki and perhaps in many respects more barbarous, to have spread themselves from the upper Irawadi to the south and west as far as the highlands of Tipperah on the one side, and Pegu on the other. Wherever the stock from which they have been derived was originally located, they probably first appeared on the Ultra Indian ethnic stage as a barbarous Himalayan tribe, immediately to the eastward of the Mishmi, if indeed they were not identical with the Mishmi of that era. The upper Irawadi was probably then occupied by the ruder and inland tribes of the Mon-Anam alliance. See *Burmah*, India, Kami, Khyen.

KOLAM, or Kolamb, a Gond tribe, along the Kaudi Konda or Pindi hills, on the south of the Warda and along the table land stretching east and north of Manikgudh and thence south to Dantanpilly, running parallel to the right bank of the Pranhita. The Kolam and Kurku hill tribes bring wood and forest fruits for sale. The Kolam race are found in the Oomraoti, Woon and Maiker districts as a wild race. They were formerly predatory, occupying the Mailghat and southern skirts of the Vindyha hills, along with the Andh, Gond and Kurku. These four resemble each other in appearance, but each speaks a different language, and in their features they are distinct from the villagers. There are 1,800 Kolam in Oomraoti.

KOLA MAVAM, TAM. *Anacardium occidentale*. Cashew-nut.

KOLANG KOVAY KILANGU, TAM. *Bryonia epigæa*.

KOLA NUTS are the product of central and western Africa. The plant producing them might be introduced into India.

KOLANJANA, SANS. Galangal.

KO-LAOU, CHIN. The civil government of China is conducted by the Nuy-ko, or Interior Council Chamber, in which there are four chief councillors, two of them Tartar and two Chinese, who bear the titles of Choung-

thang and Ko-laou. The Tartar minister presides. The Loo-poo are six boards for the conducting of government business, and the provinces of the country are each under a governor, or, where two provinces are united, a governor-general. Every province is divided into a certain number of districts, called a "Fu," "Ting," "Chow," and "Heen." A "Fu" is a large portion or department of a province under the general control of a civil officer, immediately subordinate to the head of the provincial government. A "Ting," a smaller division than, and sometimes a portion of, a Fu, when separate it is governed as a Fu, and called a "Chuh-le." A "Chow" is similar to a Ting, as also a Heen, but each is a smaller division; each Fu, Ting, Chow, or Heen, has one or more towns, or walled cities, under its guidance, one of which takes its name and rank as "Kwang-Chow-Fu" and "Shang-Hae-Heen," which latter, although of that subordinate rank, is the largest maritime city in the empire, and the greatest resort of the native ships or junks. According to Mr. Sirr, the entire Civil government is under the direction of two councils, attached to the person of the emperor; the Nei-ko, and Kiun-ke-tchou. The first is charged with the preparation of plans, and the despatch of current business. Its duty is, according to the official book, "to put in order, and to make manifest the thoughts and designs of the imperial will, and to regulate the forms of administrative decrees." It may be regarded in some measure as the secretaryship of the empire. The second council, named Kiun-ke-tchou, deliberates with the emperor concerning political affairs. The Chinese distinguish, first, the great prefecture named Fu, which have a special administration under the inspection of the superior government of the province; secondly, the prefecture called Tchou, the functionaries of which depend sometimes on the provincial administration and sometimes on that of the grand prefecture; and, finally, the sub-prefecture Hien, below both the Fu and the Tchou. Each of these three, the Fu and Tchou and the Hien, possess a kind of chief town.—*Forbes' Five Years in China*, pp. 10-11; *Sirr's China*, Vol. i, pp. 211, 223; *Huc, Chinese Empire*.

KOLAPEE or Kalapee, a river in Purnoea.

KOLA PONNA, or Angbri parnika, TEL. *Uraria lagopodioides*, DC. *Hemionites cordifolia*, R.

KOLA POKA, or Poka chettu, TEL. *Areca catechu*, L., var. with long nuts.

KOLAPORE, a small State in the southern Mahratta country. Buddhist caves occur in the ravine of Pandoodureh in Kolapore, and

in many other places in southern India. The Belgaum division of the Bombay army in the province of Bejapore, is from 2,500 to 3,000 feet above the level of the sea, but has had soldiers in the Concan beneath the ghauts and on the sea shore, at Kolapoor, Sawuntwari, Malwan, Viugorla and Rutnagherry. See Inscriptions, Kanneri, Karli.

KOLAR, HIND. *Bauhinia variegata*, Linn.

KOLARIAN, a term which Mr. Campbell invented to include races which he considered of similar origin, from their speaking similar languages, but Lieut.-Colonel Dalton points to considerable differences in the type of the Mundah, Ho, Sontal and others. The Kolarian races are simple, truthful, ready to receive the christian religion and manners of the British, possessing much industrial energy, powers of labour and ductibility. The Kolarian tribes burn their dead.—*Campbell*, p. 150.

KOLA SAHAJO, URIA? A tree of Ganjam and Gumsur, extreme height 50 feet, circumference 4 feet and height from the ground to the intersection of the first branch, 18 feet. Its wood is burnt for firewood and potash. The bark is used in tanning.—*Capt. Macdonald*.

KOLA TUNGA MUSTE, TEL. *Cyperus pertennis*? R., Vol. i, p. 198.

KOLAVATI, see Inscriptions.

KOLCUTTAY TEAK MARAM, TAM. *Premna tomentosa*.

KOLE-BALLOO, MAHR.? Near the Chumbul, an aged, mangy, worn-out jackal, that has either left or been expelled his pack. It is supposed that being prevented by his infirmities from earning his own living or hunting along with his followers, he devotes himself to the service of some tiger. It is at night, mostly, that its discordant yell is heard, seemingly to give the tiger warning of its discovery of prey, the remains of which it is supposed to feed upon.—*Rice, Tiger-shooting in India*.

KOLEE KOURADEA, URIA? A tree of Ganjam and Gumsur, extreme height 25 feet, circumference $1\frac{1}{2}$ feet, height from the ground to the intersection of the first branch, 8 feet. Tolerably common and burnt for firewood, the leaves are applied to wounds. The fruit is eaten.—*Captain Macdonald*.

KOLEHAN, a part of Singbhum occupied by the Ho as their proper country, hence called, also, Ho-desham, The Kolehán is divided into Pirhi or districts, each under a manki or chief, and each village has its mundah or headman. Gangpur is a tributary estate S. E. of the Kolehán. With the exception of Gangpur and Bunnie, all the districts in the Sumbulpore and Patna groups

were put under the administration of the superintendent of the Outack Tributary Mahals about the middle of the nineteenth century. — *Dalton*, p. 163. See Dravidian, Koli, India, Saurah, Singbum.

KOLETTA VITLA, MALHAL. *Barleria prionitis*, Linn.; *Rheede*; *Roxb.*; *W. Ic.*

KOLE-POT? *Decaisnea*.

KOLHENA, HIND. A rice of Kangra.

KOLHU, HIND. A pestle-mill for oil seed, sugar-cane, or *Saccharum officinarum*.

KOLI, the birth-place of Gotama Buddha's wife, *Hardy, Eastern Monachism*, p. 438.

KOLI, TAM. Fowls.

KOLI, the name given to the lower class of cultivators in the Simla hills.

KOLI, on all the western side of the nizam of Hyderabad's territories, also to the N. W. and S. W. in British territories, are numerous clans of the Koli race. In the autumn of 1867, a small body of Koli settled even at the village of Kulloor about 9 miles south of Hominabad. They erected small huts for themselves outside the village, the men engaged themselves in mat-making from the leaves of the date tree, and the women in disposing of these and in begging. They were well made men, darkened from exposure, but very poor. They called their tribe Haravin or Helavin, but asserted that they were Kol, Kabliri and Ganga waki. The villagers stated that they were honest. But they are alleged to engage in dacoity and thieving. The Koli, according to Captain Mackintosh, are to be found on the west in every part of Guzerat, constituting a large part of the agricultural population, in several parts of that province. They are numerous in Attaveesy and there are many settlers in the northern Konkan. In the hilly tract of country lying between Moosa, S. W. of Poona, and the hill fort of Trimbuck, the source of the river Godavery, the inhabitants are chiefly Koli, and a few are scattered over the districts of Kandesh, Ahmednuggur, Poona and Sholapore, and along the Balaghat on the western frontier of the Hyderabad territory. They seem to have early occupied Guzerat and the Attaveesy, and part of the latter country is still called Kolwan. They are arranged into many separate tribes, but all of them retain the appellation of Koli. The Raj, Salesi, Tonkri, Dhour and Dunggali Koli reside in the Attaveesy, Wun, Dandory and Nassik districts, and worship the hindoo deities Khandoba, Bhairu and Bhawani. A few Raj Koli are settled in the Konkan and Jowair. They are the same people, an offshoot of the Mahadeo Koli, and said to have been expelled for some offence. They are farmers and labourers, but the Dhour are the lowest in

civilization, are the greatest drunkards and eat the flesh of animals which have died a natural death. They are ruled by chiefs termed naik. The Koli have, in some instances, attached themselves to the Bhil, and taken the name of that race. The Mullar or Panburri or Choomli Koli, is respectable. He is employed in every Dekhan and Kandesh village as a member of the third division of the Balottah and supplies water to travelers, wearing on his head the choomli or twisted cloth, hence the name, on which to rest the water pot. This Koli is also found in the Hyderabad Balaghat, extending eastward to Khanbar, Indore and Bodin, between the Godavery and Hyderabad, also near Naldrug, and down the banks of the Bhimah and Kistnah even to Alpur near Kurnool.

The *Ahir Koli* of Kandesh reside along the banks of the Girna and Tapti rivers and are employed as watchmen.

The *Murvy Koli* is one of the Balotta in every village in the northern Konkan, and, in Bombay families, they are employed as palanquin bearers. Some Koli are settled as soldiery in Angria Kolaba, and at Bombay and Kolaba, in 1837 were 1,000 families and 500 to 600 families at Bassein, employing themselves as fishermen and seamen. At their meetings, whether for congratulation or condolence, they consume large quantities of spirits. Many are wealthy.

Mettah Koli, who reside in Bombay, are fishermen and seamen, and many have wealth.

In Bombay, Tannah, Bhewndi, Kallian, Bassein, Damau, &c., are a great number of christian Koli, said to have been of the Sone section and to have been forcibly converted by the Portuguese, but, terrified by the cholera in 1820-21, a portion reverted to paganism.

Chanhy Koli are farmers and labourers, settled in Bombay, who came from Junaghar in Kattiwar.

In Guzerat, the Koli are of three sections; the most numerous are the Tullabdah, then the Puttunwaria, the Kahrez, the Dhandur and Bhabria. They are in the Baroda district north to Khyrallu and Massanah in the Mahi Kanta, and form a large portion of the population. In 1837, in the Khanir district alone they were 70,000. They are labourers and watchmen, and a few under the name of Selotah, form escorts of treasure.

The *Mahadeo Koli* reside in the valleys of the Syhadri range, extending from Moosa, S. W. to Poona, northwards to Trimbuk, the source of the Godavery river, between lat. 18° 15' and 20° N. and long. 73° and 74° E. These small valleys are known as Mawli Khorah, Nahir and Dang, i. e., valleys, glens, straths and wilds. They are classed into 2

Kula or clans, each of which has many subdivisions. Their numbers in 1837, were estimated at about 50,000 souls. The members of the same Kula, do not intermarry. With the exception of the cow and village hog, the Koli eat all other animals. The women are generally slender and well formed with a pleasing expression of features and some are very pretty. They are chaste and have large families. The Koli are fond of charms and amulets. Colonel Tod describes a lofty three peaked mountain, on which is a temple dedicated to Aya Mata, also called Isani, the tutelary divinity of the Koli. This, and the effigy of the horse, are the only objects of adoration among this aboriginal race. This was the first time Tod had seen a personification of Mother Earth; for such is Isani, from Isa, 'goddess,' and Anani, 'earth,' the universal nurse mother (ayamata). Whether the worship of the horse be typical of the sun, "the swiftest of created representing the swiftest of uncreated objects" he says he does not know, but in this they resemble the other forest tribes, the Bhil and Surya.

The Koli are not so numerous now as they were in the early part of the 19th century, and this is attributed to the internal commotions which ravaged them since that period. They are now spread over various parts of Hindustan, and owing to the opening of the "Emigration Trade" a few years back, between India and the Mauritius, a great number of them repaired thither to better their circumstances. Several tribes of Koli are met with, each having a different name, which is generally descriptive of its vocation; hence we have the Tonkry Koli, so termed, from the occupation they follow of cutting down bamboos—a large bamboo being called tonkry. The Dongri Koli so called owing to their residing on hills,—the term for a hill being Durgur, &c. &c.

The fishermen settled along the coast from Gheriah to the north, near Surat, and at Colaba, in Bombay, are Koli of the Sone tribe; a few of them, notwithstanding, enter on board of vessels, as mariners, but the vessels must be manned by natives, the Sone fearing to lose caste, which would take place did they sail with Europeans. The chief Patel of this tribes resides at Angria; he is looked on as a legislator, being endowed with power to adjust the affairs of the Sone Koli, settle their disputes, &c. The women of the Sone Koli wear choli, or jackets, and have a number of glass bangles on their left-hand; they are frequently seen in Bombay assisting their husbands in fishing and importing fish into the fort and outside market. When they marry, the ornaments which were

intended to adorn their right wrists are consecrated, and thrown into the sea, as an offering to the deity who presides over that element, and an invocation to defend her husband from the dangers of the ocean. Not a caste meeting of the Sonee Koli can take place without large potations of mawa flower arrack being imbibed; and they frequently give any quantity of fish for half a tumbler of raw brandy. The chief tribes of Koli are: the Raj Koli; Solesy Koli; Tonkry Koli; the Dhour Koli; Dugry Koli; the Bhil Koli; Mullar Koli; the Aheer Koli; Murvy Koli; the Sone Koli; and a few others. The Mullar Koli are looked on as the most respectable tribe, and the Dhour the most degraded: the latter do not scruple to eat the flesh of animals that have died natural deaths. In Bombay island, as well as in Bassein, Salsette, Tanna, &c., are christian Koli who formerly belonged to the Sone, but were converted to the christian faith by the Portuguese during the time the latter had possession of Bombay. These Koli are cultivators, toddy-drawers, &c., and a great many of them sell game, which they snare and import into Bombay. They are generally habited in a coarse jacket, which extends down to their back, and a small skull cap, cut in front, in the shape of a cone, with a lungoti to hide their persons.

The Attaveesy is a district in the west of India, largely occupied by Koli, and part of Attaveesy is called Kolwan.

The Koli, in the southern Mahratta countries, arrange themselves into several sections. The Koli inhabiting the hills of the Syadry range, from the fort of Trimbuk to Bhermashunker, are cultivators, but at the same time were enterprising and determined robbers as also were the Koli in the Attaveesy. The village Koli supplies the inhabitants and travellers with water. The boatmen and fishermen on the Bombay coast are Koli, and many of the Sirsee Koli are seamen. The Koli in Berar is a water-carrier.

Several of the Turanian races of India, the Dhangar, Dher, Mang, Koli and Munurwara and occasionally even the higher hindoo castes, under various vows, devote their girls to their gods. The deity to whom the girl is more frequently vowed, is some incarnation of Siva and his consorts. Amongst the Mahratta people, on the western side of India, Kandoba, is the usual Siva avatar, to whom the girl is devoted and his chief shrines are at Jejuri, Kharapur near Beder, and at Malligaum? The ordinary people believe that from time to time, the shadow of the god comes on the devotee, (deo ki chaya ati, ang-par)—and possesses the devo-

KOLITA.

tee's person (murli ki-ang ko bhār deta). These devotees are called Murli, in Mahratia, Jogui or Joguidani in Canarese, and Basava in Telugu. They, at times, affect to be or are possessed, during which they rock the body, and people then make offerings to them as to an oracle or soothsayer, laying money at their feet, and await the possession to hear a decision enounced from them.

The female deity to whom those near the Blima river are devoted is Yellamah: the Bhooi-Koli race, devote their murli to Mata. Boys also are devoted, and styled Waghia, from 'wag' a tiger. Near Oomraoti it is to Amba and to Kandoba, that the Murli and the Waghia are devoted. The Waghia does not associate with the Murli. At Oomraoti, the people say that Kandoba particularly moves on Sunday and selects a clean tree (clean murli) whose body he fills.

Dionysius (Peregr. 1148) mentions the Κωλι, and Ibn Khurdad (ob. a. n. 912) alludes to the Kol as north of Malabar. The ferrymen on the rivers in the peninsula are of the Koli race, stalwart men. The Kili-Katr or Maddakpore race, are also Kabi-gira or ferry men. The Koli are the labourers and lower cultivators in Guzerat. The Olgaun and Dher are outcastes of Guzerat.—*Elliot's supplemental Gloss.*; *Mr. Campbell, p. 125. Captain Mackintosh in Madras Lit. Soc. Journ.*; *Tod's Travels, p. 137.*

KOLI MOLI CHEDDI, TAM. *Dilivaria ilicifolia, Juss.*

KOLINDU MANIL? TAM. Glass.

KOLINJI PALAM, TAM. Properly Konji Palam, Citrus aurantium; the orange.

KOLI NIL, MALEAL. *Tephrosia purpurea, Pers.*

KOLINJI SEED, ANGLO-HIND. *Nigella seed.*

KOLITA, a race in the west of Bengal and in Assam, good-looking and considered to be high caste hindoos. The Bibor, Jubar and Kultra or Kolita, are populations to the north and east of the Abor and Mishmi localities, on the drainage of the Brahmaputra. In the end of 1861 the Meyong Abor attacked and plundered a village in the British territory, but the tribe expressed a desire to renew friendly relations, and begged that their offences might be overlooked. On the 5th November 1862, an agreement was made with them binding them to respect British territory, and the same engagement was subscribed on the 16th January 1863 by the Kelong Abor. On the 8th November 1862, a similar engagement was concluded with the Abor of the Dihong-Dibang duar. The Abor Miri language belongs to the old Assam alliance, but it has been greatly modified by Tibetan. It has a

KOL NARAWA.

strong ideologic resemblance to the Dhimal, Bodo, Garo and Naga, but with some specific Tibetan traits.—*Journal of the Indian Archipelago, Nos. iv and v, April and May 1863, p. 190; Treaties, Engagements and Sunnuds, Vol. vii, p. 343; Indian Annals; Latham's Descriptive Ethnology; Campbell, p. 54.*

KOLIUNG, MONGOL. *Gossypium indicum, Lam.*

KOLLA KORAWA, see Korawa.

KOLLAN, TAM., MAL. A blacksmith, also in Malayala, a tanner, a worker in leather, a turner in wood.

KOLLAR or Collieri are a tribe in the Tondiman country, in the Vasanga district, in the eighteen pallems or districts, and throughout the Madura district. Until the nineteenth century they were so predatory that in the south of the Peninsula of India, Collieri became the designation of a thief and their name is really derived from "Kallara," thieves, plunderers. In ancient times they seem to have inhabited the woods from Trichinopoly to Cape Comorin. Orme, writing of them, describes them in the middle of the 18th century as expert thieves and plunderers, and the Jesuit, Father Martin, says they were very cruel. Pennant writing of them in the 18th century says the adjacent countries are covered with thick forests and little cultivated by reason of the savage inhabitants, the Polygar and Collierie, who may be truly styled sylvestres homines, they are predatory, and in their government, as also that of the Polygars, feudal. They are thirty or forty thousand in number. Their country is hilly; they generally sided with mahomedans and the British in the wars against the French in the times of Clive and Dupleix. They have a first and second marriage, like the Maravar of Ramnad. The titular surname of all Kollar is Ambalakaren. Calicoil was the stronghold of the lord paramount, the rajah of Tondaimandalam, the country of the Tondiman, which was an ancient division of the peninsula of India, of the part now occupied by the Arcot and Chingleput collectorates. H. H. the rajah Tondiman, of Poodocottah, is now a petty chief, and his country is a small tract near Trichinopoly.—*Pennant's Hindustan, Vol. ii, p. 11; Orme's Hindustan; Wilson.*

KOLLATI. The Dumur or Kollati army, called by themselves Bhatu, are wandering acrobats, and their women are common.

KOLLU, TAM. *Dolichos uniflorus, gram.*

KOLLI, TEL. *Pharbitis nil, Ck.—Ipomoea coerulea, R., Vol. i, p. 501.*

KOLO, a Mongolian or Bhot race.

KOLOKLNAJA-MJED, Rus. Bell metal.

KOL NARAWA, see Kashmir, India.

KOLOQUINTEN, GER. *Colocynth*.

KOLOUR or Colloor or Barkalor, is a diamond mine on the southern bank of the Kistna and not far from Condavir.—*Rennell*, quoted in *Cal. Rev.*, Jan. 1871.

KOLPA, MAHR. An agricultural implement for rooting up weeds.

KOLSA, HIND. Charcoal.

KOLSI, DUK. *Solanum indicum*, *Linn*.

KOLT or Kolth, HIND. *Dolichos uniflorus*.

KOLU also Velu of Simla. *Cajanus Indicus*.—*Spreng.*; *W. & A*.

KOLUKUNTHOIS, GREEK. *Citrullus colocynthis*, *Schrd*. *Colocynth*.

KOLUMBA WURZEL, GER. *Colombo* root.

KOLUNJUN, DUK. *Nigella* seed.

KOLUPU or Siri jana, TEL. *Grewia rothii*, *DC.*; *W. & A*. *G. salvifolia*, *R.*, Vol. ii, p. 587.

KOLUNGA-KOVAY, TAM. *Bryonia epigœa*.

KOLUWALA, SINGH. *Alpinia galanga*, *Suz*.

KOLWAH, in Baluchistan, four or five days' journey from the coast, has several villages and castles, and is occupied by the Mirwari, Rodahi, Homerari and Nousherwani tribes, who interchange their commodities with the coast, sending wool, ghi, hides and bdellium. See India.

KOLWAN, the hills east of Guzerat.

KOMADU, SINGH. *Cucurbita citrullus*, *Linn*.

KOMAL, HING. *Prangos pabalaria*.

KOMAMAT, see *Kenissat-ul-kiamat*.

KOMAN. Klaproth thinks that the word Turkoman is derived from Turk and Koman, and given to that part of the Koman nation which remained on the east of the Caspian Sea, under the domination of the Turk of the Altai, while another part, which was independent, came and established itself in the vast plains to the westward of that sea, and to the north of the sea of Azof, and afterwards pushed forwards into Hungary.—*Note by M. Klaproth, in Voyage de Mauraviev*, p. 394, quoted by *Ferrier*.

KOMAR, a chief, a prince, a first-born, hence also Komari, a virgin, from which, according to a legend, is derived the name of Cape Comorin. Komari is also a term given to all forts until they stand an assault.

KOMAR. The law of primogeniture prevails in all Rajput sovereignties; and has rarely been set aside. The inconclusive dicta of Menu, on this as on many other points, are never appealed to by the Rajputs of modern days. Custom and precedent fix the right of succession, whether to the gadi of the state, or to a fief, in the eldest son, who is styled Raj-

komar, or Pat-komar, or simply Komar-ji, 'the prince'; while his brothers have their proper names affixed, as komar Jowan Sing, 'prince Jowan.' Seniority is, in fact, a distinction pervading all ranks of Rajput life, whether in royal families or those of chieftains; all have their Pat-komar, and Pat-rani, or 'head child,' and 'head queen.' The privileges of the Pat-rani are very considerable. In minorities, she is the guardian, by custom as well as nature, of her child; and in Mewar (the oldest sovereignty in India), she is publicly enthroned with the rana. Seniority in marriage bestows the title of Pat-rani, but so soon as an heir is given to the state, the queen-mother assumes this title, or that of Mah-ji, simply 'the mother.' In the duties of guardian, she is assisted by the chiefs of certain families, who with certain officers of the household enjoy this as an established hereditary distinction. On the demise of a prince without lawful issue of his body, or that of near kindred, brothers or cousins, there are certain families in every principality (raj) of Rajwarra, in whom is vested the right of presumptive heirship to the gadi. In order to restrict the circle of claimants, laws have been established in every state limiting this right to the issue of a certain family in each principality. And in Jeypoor, in the branch Rajawut (according to seniority), of the stock of raja Maun, there is a distinction between those prior, and those posterior, to raja Madhu Sing; the former are styled simply Rajawut or occasionally conjoined, Mansingote; the other Madhani. The Rajawut constitute a numerous frêrage, of which the Jhulaye house takes the lead; and in which, provided there are no mental or physical disabilities, the right of furnishing heirs to the gadi of Jeypoor is a long-established, incontrovertible, and inalienable privilege.—*Tod's Rajasthan*, Vol. ii, p. 381.

KOMARAM, MALEAL. A tribe of barbers who shave the lower classes.

KOMARASAMY, a hill south of Ramanmalai hill, 30 miles west of Bellary, overlooking the valley of Sundoor.

KOMAREE, at Ahmednuggur, is 80 miles from source, and at Koilaghat, 41 miles from mouth, it is crossed by fords during the dry season, and ferries during the rains.

KOMARETTI, TEL. ? *Musa paradisica*, *Linn*.

KOMARI, SANS. *Aloe perfoliata*, *Linn*.

KOMARI, SANS. A virgin, Cape Comorin. See Komar.

KOMARIKA, SINGH. Aloes.

KOMARPAL, a sovereign of Guzerat.

The astrologers having foretold that he would have a son born in Mula Naashitra, who would cause his father's death, the lad was sent as an offering to the shrine of Bageswara Mata, by whom he was not only preserved from destruction, but she herself, in the form of a tigress (bag), suckled the young Solankhi, whence his issue, which spread over the country, obtained the distinctive name of Bagela. The princes of Baghelcund are of this race, and there are many petty chieftainships of this tribe in Guzerat, as Lunawarra, Mandvie, Mahera, Godra, Dubboye, &c. Komarpal was born in S. 1145; and in the words of the Charitra, "in S. 1222 (A. D. 1160) Komarpal became a ghost. He left this world, poisoned by his successor, Ajipal." It was during the reign of Komarpal that the celebrated Arabian geographer, El-Edrisi, visited the kingdom of the Ballhara, and from his work Bayer and D'Anville gleaned much information.—*Tod's Travels*, pp. 184-191.

KOMARPAL-CHARITRA, a history of the kings of Anulwarra.

KOMARSAMI, 15° 1'; 76° 35'; in Mysore, a pagoda west of Hirahall, a peak near the pagoda, is 3,400 feet above the level of the sea.—*Cullen*.

KOMATI, claim to be pure Vesya, are occupied as traders and in other peaceful avocations. The term is applied in the west of India to shop-keepers, and petty dealers and clerks, who claim to be the pure Vaisya. In Madras they are called Chettyar or Chetty; in western India, Seth; the latter a term also applied to Parsi and mahomedan tradesmen.

KOMATTI KIRE, TAM. Momordica charantia.

KOMBALMIR, See India.

KOMBHUGRAS, root of a small plant from Delhi: tasteless; but is heating: one tola is given as a tonic or aphrodisiac.—*Gen. Med. Top.*, p. 143.

KOMBU, TAM. Horn.

KOMBURRUKI, TAM. Lac.

KOMEN, see Kambogia.

KOMERKOLLI, or Comer-colli, a river or creek in the Gangetic delta. Herdsmen at the mouth of the Comer Colli wrap great turbans round the head and neck, and use longer and warmer mantles than are usual in Bengal. They are a caste by themselves, tall, robust men, many with long beards, and all wilder-looking than the majority of their countrymen. They reminded Bishop Heber of Crim Tartary, but he missed the long spears, the huge dogs, the high-mettled horses, and covered carts of those noble shepherds.—*Heber's Journal*, Vol. i, p. 174.

KOMINIAN, MAL. Benjamin.

KOMLA-NEEBOO, BENG. Citrus aurantium.

KOMMA, TEL. Branch of a tree.

KOMMA CHETTU, or Korivipala, TEL. Ixora parviflora, Vahl.

KOMMAL, TAM. An article of female jewellery.

KOMMU POTLA, Trichosanthes dioica, R. iii, 701.

KOMOL, BENG. Nelumbium speciosum. —Willd.

KOMOON KOOS, MALAY. Piper cubeba.

KOMPASS, GER., TAM. Kompass Kora Belnui, Rus. Kompassu, TEL. A Compass.

KOMRI, TAM. ? Poinciana pulcherrima, L.

KOMSALA, also Komsallar, an artificer in metals, from Kansa, a metal. In British India there are, amongst the hindoos, five artificer races: (1) The Gold and Silversmith; (2) The Brazier; (3) Blacksmith; (4) Carpenter, and (5) Stone-mason or stone-cutter. These worship the hindoo gods, but they do not reverence brahmins, and their marriage and funeral customs differ from those of the brahmins. The goldsmiths regard it as a disgrace to have any of their daughters growing up, without being married. See Hindoo, India.

KOMUTTI MADALAM PALLAM, TAM. Citrus medica.

KOMYN, DUT. Cumin seed.

KON, POL. Horse.

KONADI MARI, see Kurumbar.

KONAGAMA, the second Budha previous to Gotama.—*Hardy's East. Mon.*, p. 438.

KONAJI ANGRIA, a person of low origin who long carried on a piratical warfare on the Western coast of India, and rose to princely power. Gheria was his head quarters, but Severndroog and every creek were fortified. Gheria was captured by Clive and Admiral Watson in 1755. See Angria.

KONAKAN, MAL. A class of predial slaves in Malabar, a subdivision of the Vettavar, or forest and hunter tribe: they are employed in agriculture, also as boatmen and salt makers.—*Wilson's Glossary*.

KOND.

KONAPLI, Rus. Hemp.
KONCHI PALLAM, Tam. ? Limonia
pentaphylla.

KONCHKARI, Hind. Mucuna prurita.

KOND, Khond, Kund, or more properly the Ku, is the language of a people who are commonly called Kond or Khond but who designate themselves Ku. They dwell in the country surrounding the Urya in Sumbhulpur, and to the south they inhabit the upper parts of Gondwana, Gumsur and the hilly ranges of Orissa, and practice the horrid rites of offering children and young people in sacrifice. Kimeidy is peopled by Khond, who, during the past thirty years have been repeatedly in rebellion. The hilly tracts of India from Moorsheadabad down to Ganjam, and southwards on the skirts and in the valleys of the mountains as far as Cape Comorin, are peopled by hundreds of small tribes, who form amongst themselves independent nations, who have not yet felt the effects of civilization and—as with the Southali,—the Sauriah and the Khond occasionally rise in open rebellion against the British power. It became known in 1833, that the Khond race were addicted to the meriah, or sacrifice of human beings,—to the earth-goddess; and, ever since then, the British government have made continuous efforts to suppress this rite. Since 1837, the Kond of Kimeidy have been surging up, from time to time, the true reasons of which are not known, though those alleged are their hopes of renewing the meriah. Kond savages occupy the eastern parts of the highlands between the Godavery and the Mahanaddi. Those near Berhampoor average in height 5 ft. 5½ in., and in weight 8 stone, with well-developed muscles and tendons standing out hard and firm. They are wiry and active, have an upright gait, carry their heads erect, straight noses, narrow nostrils, thin lips, black eyes, not high cheek bones, slight, projecting lower jaw, white and regular teeth with oval faces, as if of a mixed Caucasian and Mongolian origin. Their ordinary food consists of the wild farinaceous products of the hills. They are social, but easily excited, and more truthful than natives of the plains. Animal food and palm wine are only used on festive occasions. The deities of the Khond are the same as those of the S. E. Gond. Pen and Pennoo are common to Khond, and Gond: Dula deo was a bridegroom who perished in the marriage procession and has received divine honours.

The Khond, Kund or Ku according to Dr. Caldwell, are a primitive race who are supposed to be allied to the Gond. The two people by whom the Gond and Ku languages are spoken are supposed to amount to 500,000

KOND.

souls. Dr. Caldwell estimates the proportionate numbers of the several races by whom the Dravidian languages and dialects mentioned above, are spoken, to be as follows:—

Tamil	10,000,000	Tuda	} 500,000
Telugu	14,000,000	Kota	
Canarese	5,900,000	Gond	
Malayalam	2,500,000	Ku	
Tulu	150,000	Total.....	32,150,000

About 20,000,000 of these are British subjects, and the remainder are under the native states of Hyderabad, Travancore and Cochin. In this enumeration, there has not been included the idioms of the Ramusi, the Korawar, the Lombadi, the Vedar, the Male-Asasar, and various other wandering predatory or forest tribes. The Lombadi speak a dialect of the Hindi tongue. The Ramusi and the majority of the Korawar, a patois of the Telugu. The tribes inhabiting the hills and forests speak corrupted dialects of the languages of the contiguous plains. The Malai-Arasar, 'Hill Kings' called in Malayalam Mala-Arasar, the hill tribes inhabiting the Southern Ghauts, speak corrupt Malayalam in the northern part of the range, where the Malayalam is the prevailing language, and corrupt Tamil in the southern, in the vicinity of Tamil-speaking districts. From the mountainous tracts known as Khondistan, and the valley of Chokapaud, revenue is derived. The term Gond, seems identical with Khond, and the latter has been supposed to be derived from the hindoo word Kond or Konda, a hill, indicative that they were regarded as a hill people. According to Professor Wilson, Kond is derived from the hindí word Kodo plural Kollu and Koudru.

The *Sourah*, *Sour* or *Saur*, identical with Sairea is a term applied to populations occupying the fastnesses of the Eastern Ghauts, along with the Kond and Kol. The Sourah are wholly within Telingana, and extend from the Godavery to the southern frontier of the Khond. A large district and dependency of Bustar, in Central India, is surrounded by the Tiling in the south, Khond, and Mári Gond on the east; and hindoos to the north.

The Kond dwell in the country surrounding the Urya in Sumbhulpur and to the south. They inhabit the upper parts of Gondwana, Gumsur and the hilly ranges of Orissa. Kimeidy is peopled by Khond, who, during the past thirty years have been repeatedly in rebellion. The Kond savages who occupy the eastern parts of the highlands between the Godavery and Mahanadi are notorious for their human sacrifices. Those near Berhampore average in height 5 feet 5½ in. and in weight 8 stone, with well-de-

veloped muscles and tendons standing out hard and firm. They are wiry and active, have an upright gait, carry their heads erect, straight noses, narrow nostrils, thin lips, black eyes, not high cheek bones, slight projecting lower jaw, white and regular teeth with oval faces, as if of a mixed Caucasian and Mongolian origin. Their ordinary food consists of the wild farinaceous products of the hills. They are social, but easily excited, and more truthful than natives of the plains. Animal food and palm wine are only used on festive occasions. The deities of the Khond are the same as those of the S. E. Gond, Pen and Pennoo are common to Khond and Gond. Dula deo was a bridegroom who perished in the marriage procession and received divine honours. The Kond language was reduced to writing by Captain J. P. Frye of the Madras N. I. The Khond language of Gumsur appears to be merely a dialect of the Gond. The Khond, if not identical, probably agrees with it more than with Kol, and the basis of the latter is Dravidian.

The Khond, says General Campbell, regard it as degrading to bestow their daughters in marriage on men of their own tribe, and consider it more manly to seek their wives in a distant country. Major McPherson also tells us that they consider marriage between people of the same tribe as wicked and punishable with death. The Kalmuck, according to De Hell, are divided into hordes and no man can marry a woman of the same horde. The bride, says Bergman, is always chosen from another stock, among the Dubet, for instance from the Torgot stock and among the Torgot from the Dubet stock. The officers whom the Government of India and the Madras Government employed to suppress the Meriah sacrifices of the Kond races were Captain Millar, of the 43rd Regt. M. N. I. in 1836, Mr. Stevenson, Mr. Russell, Madras Civil Service, Asst. Surgeon Bannerman, Madras Army, Captain Campbell in 1841, Captain Macpherson in 1844. It was in 1836-7, during military operations in Upper and Lower Gumsur, that the cruel rite of immolating human beings was first brought to light among the neighbouring hill tribes. Captain Millar of the 43rd Regiment M. N. I., succeeded in rescuing twelve victims. Previous to the year 1837, Mr. Stevenson had succeeded in rescuing many victims, and the information he obtained regarding the Meriah sacrifice, was afterwards embodied by Mr. Russell. Asst. Surgeon Bannerman of the Madras Army did much good service in the cause and offered many most valuable suggestions relative to the mode of legal procedure in the case of the Panwa

detected in kidnapping and selling children for sacrifice. Lieut. Hill acquired extensive information regarding the Khond race and their country. Captain McPherson in 1844, found the Khond in precisely the same state of mind, with reference to the sacrifice, as when Captain Campbell left them in 1841. Before the end of 1841, Captain Campbell had put an end—as far as an end has ever been put to the public performance of the Meriah among the Khond of Gumsur, though the desire to perform it was still strong in their minds.

An insurrection in 1858 in the Khond districts was however neither aided nor led by Khond, the principal actor in the affair was a man named Danda Sina, of Garbah Goomah, village occupied by the Sowrah race, savages armed with bows and arrows and battle axes, who occupy the hilly tract which extends from Purla Kimedya to Berhampore (Ganjam). It is bounded on the east by the narrow belt which separates the hill tracts from the sea, and on the west by the Khond clans of Chinna Kimedya and Jeypore. The Sowrah are believed to be prior occupants, but in habits and barbarism they bear a strong resemblance to the Khond.

Danda Sina had sometime before been convicted by the authorities of Ganjam, on a charge of dacoity, but he contrived to escape, and flying to his own village, he collected a large body of his clansmen, and with 10,000 followers attacked the manager of Purla Kimedya. Seven peons were killed upon the spot, and though the manager escaped, the whole country were immediately in a state of excitement. The Sowrah had previously been irritated by the execution of two of their number for murdering the headman of a village, and had openly threatened vengeance for their deaths. An old device also was employed to stimulate them to action, and give additional coherence to the movement. As in the Sonthal rebellion, an avatar descended, though he was not, as with Sonthal, in the shape either of a cart wheel or of a piece of paper. The Sowrah appear to be advanced beyond that point in theology, and their idol is a little brazen image. But in all other respects the device was identical with that employed among the Sonthal. The avatar issued commands, the active leader was sole interpreter of them, and the commands authorised armed resistance to regular authority. The Sowrah country is one of the most difficult in the world, a hilly tract covered with a jungle as deadly to sepoys as the lowest swamp in the Sonthal Pergunnahs. The Kond, Bhuil, Santal, Mair, Kol, Bengi, Dom, Bhut, are in all about 20,000,000.—*The Khond Agency*,

Konda tummi, TEL. *Leucas*, sp. A very soft, velvety, creeping sp. growing on hills in Vizagapatam.

Konda tunga, TEL. *Cephaloschœnus articulatus*, Nees ; *W. contr.* 115 ; *Schœnus* ar., R., i, 184.

Konda tungaru, TEL ? *Inga xylocarpa*, DC.

Konda veltu or *Konda japhara*, TEL. *Rottlera dioeca*, R.

Konda vempali, TEL. *Tephrosia suberosa*, DC. ; *W. & A.*, p. 652 ; *Ill.*, p. 82.

Konda ulava or *Karu ulava*, TEL. *Cantharosperrum pauciflorum*, W. & A.

KONDAI, TAM. A knot of hair at the back of the head, in which form the Tamil and Teling women, and the men and women in the southern and central provinces of Ceylon, bind up their hair.

KONDEK, JAV. Chignon.

KONDEMIR, the takhalus or literary title of *Ghais-ud-din-bin-houmam-ud-din*. His book is entitled *Habib-us-sayar-fi-afraad-nlbashar*, that is to say, the curious part of the lives of illustrious men. It is a history which he had extracted from that which his father *Mircoud* had composed and entitled *Rauzat-us-Safa*, but to which he made augmentations. He dedicated this book to the secretary of state belonging to the king of Persia, *shah Ismael Safavi*, who gave him the name of *Habibullah*, and for that reason the book had the

KONKAN.

name of *Habib* given it in the year 1508, Heg. 927, in the reign of *Lewis XI*. He was also author of another history which is entitled *Khalasat-ul-Akhbar* or the *Cream of Histories*.—*History of Genghis Khan*, p. 422.

KONEI, a river near *Peergunge* in *Rangpoor*.

KONE KAI, MALEAL, TAM. ? Fruit of *Cassia fistula*, syn. of *Cathartocarpus fistula*.

KONFUCIUS, or *Confucius*, a Chinese sage, of the 6th century, before Christ 551-479. His Chinese name is *Koong foo tse*. He was a cotemporary of *Pythagoras* and wrote on the *Philosophy of Morals and Politics*. His Chinese name is also written *Kong-fu-tse* and *Kung-fu-tze*. His writings are rather of morals than metaphysics. *Confucius* visited *Lao-tse*, after his political downfall. See *China*, *Confucius*, *Kung-fu-tse*, *Mencius*.

KONGA, see *India*.

KONGILIUM MARAM ? TAM. *Canarium strictum*, Roxb.

KONGI PUTRI, DUK. *Pisonia inermis*.

KONGKIANG, see *India*.

KONG, HIND. *Crocus sativus*.

KONG-WHA, a variety of *safflower* or *Carthamus tinctorius* which grows in *China*. It is held in high esteem by the Chinese, and is used in dyeing the red and scarlet silks and crapes which are so common in that country, and so much and justly admired by foreigners of every nation. Large quantities are annually produced in the *Chekiang* province near *Ningpo*.—*Ains. Mat. Ind.*, p. 195 ; *O'Shaughnessy*, p. 411 ; *Drs. Mason, McClelland*.

KONHA, HIND, PUSHU. Stone, sandstone.

KONI, TAM., or *Goni*, HIND. Ghunny or gunny.

KONI, BENG. Smooth meadow grass, *Poa unioloides*.

KONIBAR, see *Aiou* or *Yowl*.

KONIGSWASSER, GER. Nitro-muriatic acid, *Aqua regia*.

KONIKA, MALEAL. *Terminalia bellorica*.

KONIYALAN (?) MAHR. Predial slaves in *Malabar*.

KONK, ENO. Chank shells.

KONKAN or *Concan*, a narrow strip of land on the western coast of the *Peninsula* of *India* lying between the western *ghats* and the sea coast. The low land in the *Concan* and *Guzerat* is traversed by many rivers and smaller streams running to the sea, and is indented by numerous creeks and channels of the ocean. The cold weather is clear and bracing, but the hot season of *April* and *May* is succeeded by the deluging rains of the south-west monsoon, when 150 inches fall from *June* to *September*, and render much of the already

humid lands, impassable swamps; the atmosphere is then very damp, and the sensation experienced is similar to that in Calcutta at the same period of the year. The Concan districts extend from Goa to Daman, or very nearly to the Tapti river. Like Malabar, which it greatly resembles in general aspect, it is comprised between the western ocean and the ghauts, and consists of a narrow belt near the sea with salt water inlets, and a succession of mountain spurs. In the northern parts of the Bombay Presidency, the chain separating the Concan from the Dekhan is called the northern ghauts, or Syhadri mountains, a term which may conveniently be extended to their whole length. Throughout the Concan, the Syhadri form a continuous chain of hills, interrupted, however, by deep depressions. Their summits rise to the height of 4,000 to 5,000 feet, but the mean elevation is very much less. The station of Mahabaleshwar is 4,700 feet. In the latitude of Daman $20\frac{1}{2}^{\circ}$ N. the chain begins to sink abruptly into the Tapti valley, and changes its course, or sends off a spur of considerable elevation in an easterly direction, as the Chandor hills. At Mahabaleshwar, the rain-fall amounts to 248 inches annually. In the southern Concan, especially in the Sawant Wari district, the rains are as heavy as in Canara. At Bombay, the rains last from June till the end of September, and the fall is only 80 inches, which is considerably less than any point further south on the coast. At Tannah, however, the average fall is more than 100 inches. In the Bombay Presidency, the provinces of Aurungabad and Beejapore, are arranged into two portions termed the Poona and the southern districts, the latter with its head-quarters at Belgaum; but to each of these two divisions there is likewise allotted the command of the immediately adjoining portions of the level land of the Concan. The Belgaum division of the army, in the province of Beejapore, is from 2,500 to 3,000 feet above the level of the sea, but has had soldiers on the sea shore at Kolapoor, Sawuntwarie, Malwah, Vingorla and Rutnagherry. The Poona division is similar to that of Belgaum in the distribution of its force: of the soldiers in the command nearly the whole of them are in the provinces of Aurungabad from 1,700 to 2,300 feet above the level of the sea. In the table-lands, above the ghauts, the climate is more dry, and the rains and temperature moderate, the range of the thermometer being from 55° to 92° , and the troops, European and native, in the Poona division particularly, enjoyed comparatively good health. Konkana is an ancient name of the country between Devagarh and Sadasegarh; hence, perhaps, the

modern Konkan. The mixed Konkani tongue, appears to be only Marathi with a large infusion of Tulu and Canarese words, the former derived from the indigenous inhabitants of Tuluva of Canara; the latter, from the long subjection of this part of the Konkan to Canarese dynasties above the ghauts. Mr. H. Mogling however mentions that the Konkani-speaking brahmins of Mangalore, consider it quite distinct from, though cognate with, Marathi. Its limits extend from Goa below the ghauts, to a village north of Upi. From this part of the coast, in northern Canara, a diagonal line running in a north-eastern direction towards Beder, marks the boundary between Marathi and Canarese, of the latter at least above the ghauts.—*Flora Indica by Drs. J. D. Hooker, M. D. and T. Thomson, M. D.* See India, Kol, Rutnagherry, Jain.

KONKI or Embudi chettu, *Pisonia villosa*, *Poir.*; *P. aculeata*, *R.*, ii, 217; *W. Ic.*, 1763-4. Konki is a hook, referring to the thorns which are aculeate backwards and very preheusile.

KONKUDU, TEL. ? *Sapindus emarginatus*, *Vahl.*

KONLA, HIND. *Citrus aurantium*, *Linn.*

KON-NAY-ZOW, Heritiera minor, *Lam.*, *DC.*, *Roxb.*

KONNAY-MARAM, also Sarakonna, maram, TAM. ? *Cathartocarpus fistula*, *Pers.*

KONNI, *Abrus precatorius*.

KONO. Potash.

KONOPE, POL. Hemp.

KONOPEL, RUSS. Hemp.

KONRU, TEL. *Flacourtia sepiaria*, *Roxb.*

KONSAGARA WANLU, TEL. Goldsmiths; workers in metals. See Kansa, Poitu, Zonar.

KONSSENEL, RUSS. Cochineal.

KONTABAOLO, URIA. A tree of Ganjam and Gumsur, extreme height 30 feet, circumference 2 feet, and height from the ground to the intersection of the first branch, 7 feet. The tree abounds and is chiefly used for firewood, though ploughshares are occasionally made of the wood. The bark is used medicinally.—*Captain Macdonald.*

KONTASHA, see Kalkas.

KONYER, MALAY. *Crocus sativus*, *Linn.*

KON-ZO-ZA-LOO, BURM. *Heritiera littoralis*, *Ait.*, *DC.*; *Roxb.*

KOO or Ku, a race who occupy the mountainous country near the sources of the Lemroo river and its principal feeder the Peng Kheong, within the 22nd parallel of north latitude, westward of the Yomadoung range; they have never paid any revenue, and it is only after entering the hills for 8 or 10 days that the first villages of these wild people are met with. The approximate number of houses

KOOKA.

is 2,897, and allowing 5 persons for each house, the number of inhabitants may be estimated at about 14,485. Those living on the Peng Kheong have intercourse with the neighbouring Ku-mi of the Koladyn circle, from whom they differ but little in their habits.—*J. H. O'Donel, Esq., in Vol. xxxii of 1864 of B. A. S. Jour.*

KOO, HIND. *Celtis eriocarpa*.

KOOA, HIND. *Curcuma angustifolia*, Starch; arrow root.

KOOBEDAR, HIND. *Bauhinia variegata*.

KOOBELL, HIND. *Andropogon martini*.

KOOCH BAHAR. The Praja of Cooch Bahar are cultivators almost in a state of serfdom. See Cooch Bahar.

• KOOCHI-KANTA, BENG. *Mimosa rubicaulis*.

KOOCHILA, BENG., HIND. *Strychnos nux vomica*.

KOOCHILA-LUTA, BENG. *Strychnos colubriana*.

KOOCHINAL, HIND. *Bauhinia variegata*, Linn. Its beautiful flowers are eaten in some parts of Bengal as a delicate vegetable.—*Ainslie's Mat. Med., p. 260.*

KOO-CHUNDUNA, HIND. *Adenantha pavonina*.

KOOCHURI, BENG. *Exacum tetragonum*, KOODALIYA, BENG. *Desmodium triflorum*.

KOODA PALLI MARAM, TAM. *Holarrhena codaga*, *W. Icon*.

KOODOO-KOOROONDOO GAS, SINGH. *Cinnamomum litseifolium*.

KOODUPELAH, *Holarrhena codaga*.

KOOFFA, a round wicker basket, towed astern of each boat for the purpose of communicating with the shore; these are covered with naphtha, and are in use on the Tigris, Euphrates and the Diala. Their shape and construction belong to the most remote ages, being mentioned by Herodotus.—*Mignon's Travels, p. 55.*

KOOFEE, or Cufa, the name of a town.

KOOHRYA and Perja, see Bertha.

KOOHU, a river near Raeseen in Rhopal.

KOOJA, SANS. From koo, the earth, and jan, to be produced.

KOOKA, a sect of reformers of the Sikh religion. They care little about the body after death. They hold that after the soul has left the body, the remains require no more attention and may be put out of sight in any way convenient. They feast, give sweetmeats, and read the granth, incessantly, when one of their sect is about to die, and after he is dead they read the granth day and night, relieving each other at the task, for thirteen days, after which they give a feast. Bishon Singh, a fanatic leader, was executed

KOOKEL.

in 1872, but his granth, which was to be sent to the gooroo was left in the Kooka temple in Lahore, and read by the men of his sect, who performed his obsequies. His ashes were given up on condition that there should be no demonstration by the relatives, and they were committed to the Ravee by his son, who took the remaining bones to Hurdwar, according to hindoo, and not Kooka, fashion.—*Indian Public Opinion.*

KOOKEE, a mountain race in northern Cachar, south of the Assam valley, dwelling at elevations of 4,000 and 5,000 feet above the sea; in lat. 25° 20' N., and long. 92° 40' E. A race of the same name dwell 60 miles further south in the north of the Tipperah rajah's territory: their name is written also Ku-ki. To the north of the Bom-zu or Bun-zu or Bomdu, are closely allied tribes termed, collectively, Lungkta, Kungye, or Kuki, who occupy the highlands of Tipperah and extend south-east towards the head of the Koladyn. Both the Bun-zu and Kuki appear like the Kumi, to belong to the Burman family. The Kuki represent its most archaic and barbarous condition. The tribes that have been exposed on the sea board of Arakan or in the basin of the Irawadi, to the influence of the Chinese, Shan, Mon, Bengali and more distant commercial nations, have attained a comparatively high civilization. The Singpho although much behind the Burmans, are greatly in advance of the Kuki, and the Burmeso seem at a very ancient period, when their condition was similar to that of the Kuki and perhaps, in many respects more barbarous, to have spread themselves from the upper Irawadi to the south and west as far as the highlands of Tipperah on the one side, and Pegu on the other. Wherever the stock from which they have been derived was originally located, they probably first appeared on the Ultra-Indian ethnic stage as a barbarous Himalayan tribe, immediately to the eastward of the Mishmi, if indeed they were not identical with the Mishmi, of that era. The upper Irawadi was probably then occupied by the ruder and inland tribes of the Mon-Anam alliance. The Loo Chai clan of Kuki, on the frontier of Sylhet and Cachar, in January 1868 attacked Monier Khal, 25 miles east of Silchar and sacked it. The Kooki of Chittagong have no idea of hell or heaven, or of any punishment for evil deeds, or rewards for good actions. Similarly according to Bailey, the Veddah of Ceylon have no idea of a future state of rewards and punishments. In a slight notice of the Grammar of the Kooki language, by Lieutenant R. Stewart, 22nd Regiment B. N. I., he says that the people to whom the term

KOOLI.

Kooki is given by the inhabitants of the eastern frontier of Bengal, occupy, together with other tribes, the hilly tracts lying to the north, south and east of Cachar and Manipoor: they are divided into numerous clans, each under a petty hereditary chief or rajah. The appellation of Kooki is unknown among themselves, and they have no title embracing their whole race, but they call one another by the names of their different clans. They all speak the same language, with very slight modification in the dialects, and it is called among them Thadou Pao, from the name of one of their principal clans.—*Jour. Beng. As. Soc.*, No. 3 of 1858; *Lubbock's Origin of Civil.*, p. 268.

KOOKEE-KHEYL, an Affghan Kheil or tribe near the Khyber pass.

KOOKOOL, TAM. *Commiphora madagascariensis*, Linn.

KOOKOORA-CHOORA, Pavetta indica.

KOOKOOR-ALU, BENG. *Dioscorea anguina*.

KOOKOORA-NEJA? *Gloriosa superba*.

KOOKOOR-CHHIT-KI, BENG. *Lcea staphylia*.

KOOKOOR-CHITA, BENG. *Tetranthera apetal.*

KOOKOOR-CHIOORA, BENG. Pavetta indica.

KOOKOOR-JIIVA, BENG. *Lcea staphylia*.

KOOKOOR-SHOONGA, BENG. *Torniflea-bane*, *Blumea lacera*.

KOOKSPURA, HIND. *Celosia asiatica*.

KOOL, BENG. *Zizyphus jujuba*.

KOOL, TAM. A kind of gruel, made of various grains.

KOOLA-DEVATA, SANS. From kula, race, and devata, a god. In hinduism, the deity worshipped by the family.

KOOLAHEE, or Koolay, a river near Kutowah in Goalparah, in Lower Assam.

KOOLAN, see Gorkhar.

KOOLAR, a river near Burrumporee in Nagpore.

KOOLAR, a river near Race in Bhopal.

KOOLEE BENGAN, HIND., or Koolibegoon, *Solanum longum*. Cylindrical egg-plant.—*Riddell*. See Brinjal.

KOOLGACHH, BENG. Jujube, *Zizyphus jujuba*.

KOOLI, HIND. *Sterculia urens*.

KOOLIE, or Coolie, a term in use amongst the British in India, and amongst the Tamil races to designate a labouring man, also a labourer's hire, or wage of any kind. A Kooli bandy, or Kooli gari means a hired carriage.

KOOLI, TURK, a "slave;" Nadir means "wonderful," and is used as an epithet to

KOOLUTTHO-KULAY.

describe the Almighty. The name of Nadir shah therefore signified "the slave of the wonderful, or of God." When he was promoted by the favour of shah Tamasp to the dignity of a khan, he took the name of that monarch, and was called Tamasp Kooli khan; but, on reaching the throne, he styled himself Nadir shah, resuming his original name of Nadir.—*Malcolm's History of Persia*, Vol. ii, p. 46.

KOOLIMITAN? *Ocimum hirsutum*.

KOOLIN, a race or tribe of brahmins in Bengal, who are considered to be of pure and high descent. They take the suffix honorific names of Mookerji, Chattrji, Banrji, Gangooly. The hindoos of Calcutta styled Ghose, Bose, Dutt, and Mitra, are sudra tribes who accompanied the Koolin brahmins into Bengal. See Brahmin, Coolip, Hindoo, Kulin; Marriage, Polygamy.

KOOLINA, SANS. From Kula, a race.

KOOLK, in Khorassan, a fine goat's wool; goat's hair enters extensively into the coarser woollen manufactures of Khorasan; beneath the coarser external hair of these animals, a down called "Koolk," is obtained, little inferior to the fine wool of Thilet, and from which various articles of clothing are made.—*Fraser's Journey into Khorassan*, p. 390. See Kourk.

KOOLMARA, CAN. *Calysaccion angustifolia*.

KOOLOO. There are some very singular domestic institutions prevalent in Ladak, regarding marriage, not at all unlike those of Kooloo. The principal difference is, that in the former, mutual consent is requisite, where there are several brothers about to take one wife amongst them, and all the offspring are looked upon as the property of the eldest. As soon as the first is of marriageable age, he is provided with a wife, and Mrs. Hervey was informed that the entire property of his parents descends at once to him, he being from that time charged with their maintenance. One or more of the younger sons of a family is always made a Lama, or priest.—*Mrs. Hervey's Adventures of a Lady in Tartary*, Vol. i, p 193. See India, Kohistau, Kulu.

KOOLOO or Koolpée, MAHR. A harrow.

KOOLSOOM, the name of Hosein's sister. Koolsoom Bi is a familiar name of the women of the mahomedans in the south of India.

KOOLTHEE, Madras horse-gram, BENG., HIND. *Dolichos uniflorus*.

KOOLUMEE, see Kush.

KOOLUNJUN, BENG. The greater galangal, *Alpinia galanga*.

KOOLUTTHO-KULAY, BENG. *Dolichos uniflorus*.

KOOMBA.

KOOMAR or Kumhar, **HIND.** A potter, the village Kumhara.

KOOMARA, **SANS.** A boy, from Koomara, to play; from ku, evil, and mri, to beat.

KOOMAREE, **BENG.** *Aloe indica*.

KOOMARIKA, **BENG.** *Smilax ovalifolia*.

KOOMB-KA-MELA, **HIND.** A sacred fair at Hardwar, held every twelfth year. See Mela.

KOOMBHA, **MAHR.** also Koombeo and Koombhi, **HIND.**, **URIYA.** *Careya arborea*, *Roxb.* Its fibre is employed in the Himalaya as slow match for their matchlocks, *Royle*.

KOOMBHAR, also Goombar, Gumar. Koombar, is *Gmelina arborea*, yields a valuable timber, it is spread over a wide extent of India, and it attains great size. It squares into logs of from 18 to 24 inches, occasionally nearly 30 feet long. The wood resembles teak, the colour being the same; the grain rather closer, but it is somewhat lighter. It is valuable for situations where it is exposed to the influence of both air and water. One experiment was made by placing part of an outside plank in the river Hoogly, a few miles below Calcutta, a little above low-water mark, exactly where the worm is thought to exert its greatest power. After remaining three years in this situation, the piece was cut, and found as sound and every way as perfect throughout as it was when first put into the river. In another experiment this wood remained good for seven years, while teak, similarly placed, required to be replaced after six years.—*Roxb. Fl. Ind.*, Vol. iii, pp. 84-85.

KOOMBHAKARU, **SANS.** From koombha, an earthen jar, and kri, to do; Koombha-Karna, from koombha, a jar, and karna, the ear.

KOOMBHA-PAKU, **SANS.** From koombha, a pot, and paku, ripe.

KOOMBOOROO WELL, **SINGH.** Guilandina bondué, *Linn.*, *W. & A.*

KOOMHARSEIN. A hill state which was formerly a feudatory of Bussahir, but was declared independent after the Nepal war. It pays Rs. 1,440 as tribute. Its revenue, Rs. 7,000, and population, 7,829. The family is Rajpoot, of not very high pretensions.

KOOMLA, **MAHR.** *Cratæva roxburghii*, *Br.*, *W.*

KOOMLAH RIVER runs near Soorie Puttee in Muzaffurnuggur.

KOOMOOD, **BENG.** White esculent lotus, *Nymphaea lotus*.

KOOMOODA-BANDUVA, **SANS.** Koomooda, a lotus, and bandhoo, a friend.

KOOMOODENEE, **BENG.** Tufted brack beam, *Menyanthes cristata*.

KOOMRA, **BENG.** Squash or vegetable

KOONHIAN.

marrow, the pumpkin or white gourd. *Benincasa cerifera*.

KOOMURKA ? *Smilax ovalifolia*.

KOON or Khon, a tribe of the head-waters of the Koladan river, beyond the Arakan boundary.

KOONBEE, a race of sudra hindooes, of the Mahratta country, largely engaged in agriculture and in horticulture. They are strong-built sturdy men, their women uncomely. See Kunbi, Hindoo, India, Kurmi.

KOONCHI, a pergunnah in Bundelkhund.

KOONCH, **BENG.** Wild Jamaica liquorice, *Abrus precatorius*.

KOONDA ? *Jasminum hirsutum*.

KOONDAH, the mountain tracts of the Neilgherry hills.

KOONDON or Koonda, **HIND.** A large earthen pot.

KOONDOOR, **HIND.** See Balsamodendron.

KOONDOORI, **HIND.** *Coccinia indica*.

KOONDOOZ, a territory on the east of Balkh. Its river, in the valley of Bamian, rises in about lat. 34° 52', long. 67° 40', is about 300 miles long, runs easterly, northerly, north-easterly, northerly and north-westerly, into the Amoo or Jihoon river. It receives the Inderah, 65; and Khanah-i-bad, 90 miles. Koondooz, during the years 1812 to 1830, considerably increased its power by conquests which Mahomed Moorat Beg, made in Badakhshan, Khulom, Balkh, &c.; so that, in A. D. 1830, it included all the northern side of the Hindoo-Koosh, and extended to the valley of the Oxus. Its military force was not, however, more than 20,000 undisciplined cavalry, without infantry. Koondooz is separated from India by the great chain of the Hindoo-Koosh.—*Bjornstjerna's British Empire in the East*, p. 213.

KOONDOLU-ROOMEF, **BENG.** *Pistacia lentiscus*.

KOOND-PHOOL, **BENG.**, or Koondul, Downy jasmine, *Jasminum hirsutum*.

KOONDUL, **BENG.** Blue lotus, *Nymphaea cyanea*.

KOONDUL or Pogool, large ear-rings, worn by hindooes.

KOONER, an affluent of the Kabul river.

KOONG, a species of Civet, which inhabits the Chinese borders of Thibet. It is mottled rather than striped.

KOONGHILYARA, **TAM.** A Tinnevely wood, of a light brown colour, used for building purposes, yields dammer.

KOONGOOMA-PU, **TAM.** *Crocus sativus*, *Linn.*

KOONHET, **MALAY.** *Curcuma longa*, *Roxb.*; *Rheede*.

KOONHIAN, a small state which pays

KOORKOO.

Rs. 180 in lieu of begar; revenue, Rs. 3,000; population 1,906.

KOOPAY-MAYNI, TAM. *Acalypha indica*.

KOONKOOM, BENG. Saffron plant, *Crocus sativa*.

KOONNOOR, HIND. Lote tree.

KOONO PASS, see Kunawer.

KOONTEE, a river of Burdwan.

KOONT'HA, SANS. A groan, from koon'th, to groan.

KOONTI, the mother of the Pandu brothers, see Mahabharata, Pandu, Polyandry.

KOOPOOKONDA, a stone resembling the Ayr stone, or Snake stone, occurs at Koopookonda, 8 miles west of Vinacondah in Guntoor. Good substitutes for Turkey stone, occur at Cuddapah, Woottimetta, Chellumacoor and Humpsagur, and varieties of green and gray granular felspar at Seringapatam, Nellore, and on the banks of the Godavery. The latter are well-suited for putting a fine edge on razors and gravers.

KOOPPI, HIND. *Acalypha indica*, Linn.

KOOR, an extinct hindoo practice for extorting a debt, it was called erecting a 'koor,' meaning a circular pile of wood which was prepared ready for conflagration. Upon this, sometimes a cow, and sometimes an old woman was placed by the constructors of the pile, and the whole was consumed together. The object of this practice was to extort payment of a debt or to intimidate the officers of government, or others, from importunate demands, as the effect of the sacrifice was supposed to involve in great sin the person whose conduct forced the constructor of the koor to this expedient.—*Mrs. Elwood; Cole. Myth. Hind., p. 148.*

KOORCHEE WANLOO or Coorchee wanloo, a race of basket-weavers, also makers of house mats of palm leaves.

KOORCHI? *Wrightia antidysenterica*.

KOORDISTAN, see Kurd, Kurdistan, Kelat, Kellek.

KOORHAREE, a river near Bundail in Sumbulpore.

KOORI, MAHR. A drill.

KOORIA MOORIA, a group of islands, in lat. 17° 27', long. 55° 36'.

KOORINEE, a river near Bunkhere in Hoshungabad.

KOORINJA, the *Tylophora asthmatica*, a plant of the order Asclepidaceæ, which yields a strong, white, silky fibre, resembling flax.

KOORKOO, a race occupying, along with other races, the hills and forests about the Vindhya and Satpura ranges of mountains. There are about 4,000 of them in Woon and Oomraoti. Along with the Andh, Gond and Kolamb, they occupy the Mailghaut and the southern skirts of its hills. They resemble

KOOREKOO.

each other in appearance though they each speak a different tongue, and in their features they differ from the villagers. In the Central Provinces, the Gond inhabit the tract of hill country between Ummurkuntuk, the source of the Nurbudda on the east, and Mukrye, an independent Gond state in the Hoshungabad district on the west. The Koorkoo have their head-quarters on and around the Nurbudda hills, and extend westward through Baitool and Hoshungabad as far as Burhampoor and Asseergurh. The Bhoomeah are intermixed with the Gond from Sehetakree in the west to Ummurkuntuk in the east. They have a few villages in Seonee, north-east of Ummurkuntuk. Along the banks of the Chota Mahanuddy and Seonee rivers are found the Kol, and south-east through Sumbulpore are the tribes of Ooriah. The Koorkoo are said to be a distinct race from the Gond; the latter worship the "lingam" and their language is distinct. The Gond eat cow's flesh at most of their festivals, whilst the Koorkoo hold such a practice in abomination. There are other points also of difference. Some of the Koorkoo hold purwannahs from the Mogol emperors, in which they are styled Rajpoots. The Gond are known among themselves from the number of gods they worship, and in their marriage customs the young men of the Gond often serve for a wife for periods varying from four to ten years. Seven years is a common period. This custom is called lumjunna; during the period of service the father of the girl is bound to feed the youth and to treat him as one of the family. He also presents him with clothing every year; the youth meanwhile giving his services to the father. The Gond marriages and funerals are chiefly drunken orgies; a cow is invariably sacrificed and eaten. After the birth of a child the Gond woman is unclean for five days; at the purification there is a feast when all get drunk; the mother is then allowed to join the family. There is a class of outcastes among the Gond who are said to worship the excrement of swine, they are called Doorgam. The Bhoomeah are dreaded all over the province as necromancers, and on account of this, servants from the north-west are afraid to go towards the Raepore districts; they believe the women to be witches, and to live on human flesh, the natives in the jungly tracts of the provinces are particularly subject to diseases of the liver and spleen. From those affections children pine away and die without showing any external marks of disease. Their death is then attributed to witchcraft; and any querulous old woman, who has been in the habit of murmuring at slights and ill-treatment in the neighbourhood, is immediately

KOORNAH.

set down as the cause. Men who practise medicine are very commonly supposed to be at the same time wizards; they seek to inspire confidence in their prescriptions by repeated prayers and incantations over the patient or over the medicine they give him, and make him believe they derive aid from supernatural power; the patient of course concludes that those who can command the power to cure, can, if they wish, command them to destroy also. In former years, as shown among the record of the Judge's Court of the Saugor and Nerbudda territories, many instances occurred of medical practitioners having been put to death for not curing young people for whom they were required to prescribe. There is one case in particular, showing how the father stood over the "doctor" with a drawn sword by the side of his child's bed, and cut him down and killed him the moment the child died, as he had sworn to do when he had found the patient sinking under his prescriptions.—*A visit to the strongholds of Manickghur and Gooraghur in the Simbulpore District, by Captain F. G. Stewart, Depy. Insp.-Genl. of Police.*

KOORMENAAD. Gold exists more or less abundantly in the whole of the country on the western side of the western ghats in every stream which takes its rise from the Koondah, Neilgherry, and Wynad mountains, and in the sands of the sea-shore along the whole of South Malabar. It is throughout in the form of minute grains. The principal washings are in the Ernaad, Wynad, Neddinganaad, Koormenaad, Calicut, and Shernaad taluqs.

KOORNAH. Apamea, daughter of Artabazus, the Persian, was married to Seleucus, who gave her name to three towns and Koor-nah, one of these three Apamea, was built by Seleucus in honour of his first wife: it is situated at the point of a triangle, formed by the confluence of the rivers Euphrates and Tigris, and although now dwindled into a petty town, it was formerly a place of consequence. It is situated on a low flat, with apparently a rich soil, and along the river are low banks to prevent the country being flooded. At this spot some oriental traditions have fixed the Garden of Eden. The junction of the Tigris and Euphrates occurs at this town which is prettily situated upon a point of land well-wooded, and admirably calculated for a fort. Koor-nah itself is an insignificant village, but remarkable for its important and picturesque situation. It commands the mouths of both the Tigris and Euphrates, and looks directly down the "Shat-el-Arab," or river of the Arab. Suaib, a station with a fort of the same name, is opposite to Koor-na, on the eastern bank of the

KOORUNTAKA.

Euphrates, and near Sahal. After the junction of the two magnificent streams, which for some distance are clearly discernible from each other (the waters of the Euphrates being much the clearest), a striking change takes place in the character of the scenery. On entering the Tigris, from the south, the belt of date trees almost immediately terminates; patches of cultivation show themselves more frequently, and the country (though still a dead level) has a fertile and less desert look. About one hundred miles above Koor-nah, on the right bank of the river, stands the tomb of the prophet-scribe Ezra, a pretty mosque of tessellated brickwork, surmounted by a green cupola.—*Townsend's Outram and Havelock*, p. 308; *Malcolm's History of Persia*, Vol. ii, p. 141; *Skinner's Overland Journey*, Vol. ii, p. 266; *Mignan's Travels*, p. 290. See Koor-nah.

KOORNAS, ARAB. Allium porrum, *W.*
KOORNISH, AR., HIND., PERS. A humble form of salutation.

KOOROOT. When well-made this is excellent, though unknown in Europe. In Persia it is called Kesht, and is thus prepared. Some butter-milk is boiled in a very large saucepan, by which means the watery particles escape in the form of steam, and the solid ones are deposited at the bottom of the vessel; when sufficiently thickened, the mass is divided and made into little balls about the size of a pigeon's egg, which are dried in the sun and will keep for years. When required, these balls of concentrated butter are continuously stirred in hot water, and in a metal dish, till completely dissolved; the epicures add a quarter of a pound of fresh butter, which gives the sauce an exquisite flavour. It is poured over the bread, maize, or meat which it is intended to season.—*Ferrier's Journeys*, p. 279.

KOORPA, see Kunawer.

KOORSEE, HIND. The eighth heaven of the mahomedans.

KOORTA, HIND. An article of dress.

KOORU, one of the great families who settled in Hindustan. Many of them were dispersed over India and Central Asia, amongst whom may be placed the Utooru kooru (Northern Kooru) of the Pooran, the Ottorocura of the Greek authors. See Kuru.

KOORUH, HIND. of Bombay. Cedrela toona.—*Rozb.*; *Cor.*; *W. & A.*

KOORUM, see Khyber.

KOORUMBUR, a race who occupy the highest range bordering on the Neilgherries and are probably the aborigines. See Kurambar.

KOORUNTAKA, SANS. *Barleria prionitis*, *Linn.*

KOOTUB MINAR.

KOOSBUDRA, a river in Pooree.

KOOSH, the Hindoo Koosh mountains was called by the Arabs "the stony girdle of the earth."—*Markham's Embassy*, p. 46. See Kush.

KOOSHA, BENG. Meadow grass, *Poa cynosuroides*, from the SANS. to lie down.

KOOSHANABHA, SANS. From Koosha, sacred grass, and nabhee, the navel.

KOOSHI, SANS. A small kind of kosha grass.

KOOSHMANDU, BENG. Pumpkin, *Benincasa cerifera*.

KOOSHROOM or Koosroom, HIND. Safflower or bastard saffron, *Carthamus tinctorius*, *Linn*.

KOOSHITA, SYRIAC. *Aucklandia costus*, *Falconar*.

KOOSHT-I-SHIRIN, PERS. *Cossyphus*?

KOOSROOM or Koosroombha, BENG. Safflower, *Carthamus tinctorius*, the beautiful red dye called Koosumba rung, largely used by the dyers, is a product of the *C. tinctorius*.

KOOSOOMESHOO, SANS. Koosooma, a flower, and ishoon, an arrow.

KOOSROOM, URIA? A tree of Cutlack, its wood is used for the handles of tools and native cart axles; and might be applied to other purposes.—*Cal. Cat. Ex.* 1862.

KOOST, ARAB., SANS.

Koosthu,	BENG.	Koostum,	SANS.
Koot,	Guz.	<i>Aucklandia costus</i> .	
Koot'h,	HIND., KASH.		

Aucklandia costus, see Koot.

KOOSUM or Koosumbha, BENG., HIND. *Carthamus tinctorius*.

KOOSUMBH, HIND.? A tree of Chota Nagpore with a hard, whitish red timber.—*Cal. Cat. Ex.* 1862.

KOOSUSTHULLIDWARICA, the capital of Krishna. The *Bhagavat* states its founder was Anirt, brother of Ikshwaku.

KOOT, GUZ., HIND. *Aucklandia costus*, *Falconar*, or *Costus speciosus*, the putchuk or costus root.

KOOT, KASHM. *Cossyphus*.

KOOT, see Kandeh Rao.

KOOTAYA, HIND. *Solanum jacquini*.

KOO-THAN, BURM. A loose grained light wood, recommended for packing cases, used for black boards in Burmese schools. Breaking weight 114 lbs. A cubic foot weighs 28 lbs. in a full grown tree on good soil, the average length of the trunk to the first branch is 40 feet, and average girth measured at 6 feet from the ground is 6 feet. It sells at 4 annas per cubic foot.—*Dr. Brandis, Cal. Cat. Ex.* of 1862.

KOOTHOO-KUNDEN-KUTHREE, *Solanum indicum*.

KOOTUB MINAR. This column, stately

KOPATA VARAM.

in its structure and gigantic in its dimensions, is a great feature of attraction at Delhi, and arrests the eye of the traveller from afar. It towers majestically over every thing around, and from a distance its conical point seems to pierce the sky. It is from 225 to about 250 feet high, has 378 steps, and the diameter at the base is about 50 or 55 feet. It is reputed to be 700 years old, and is in excellent order. About A. D. 1830, it suffered a little from an earthquake, but under the directions of the British government a part of the resources of the state were devoted to the restoration of this emblem of antiquity and it now stands in just as great perfection as ever. It throws out three ranges of circular balconies at different heights and is surmounted by a cupola palisaded by a brass railing, an evidently modern improvement made when the edifice was repaired under European superintendence. This colossal piece of architecture is a polygon, fluted cylindrically as well as angularly in alternate order, and wreaths of Arabic inscriptions entwine its massy circumference, the letters being displayed in high relief of about a foot or more in length. The material of the building is a kind of red sandstone, but a portion of the upper part is composed of white marble. It is yet a point at issue whether this singular and stately column owes its origin to the hindoo or mahomedan. It wears a perfect semblance to the mahomedan style of architecture, but the old dilapidated and crumbling hindoo ruins in its immediate vicinity raise strong doubts on the subject; added to which, there is a peculiar column of bell metal which stands close by it, with an inscription of some buddhist or hindoo character, bearing the impression of a cannon ball fired at it, some say by Aurungzebe, and others by the Jauts in one of their early expeditions into Delhi.—*Tour of India by French*, p. 20. See Inscriptions: Kutub-minar.

KOOVERA, SANS. From koov, to cover.

KOOYIL, TAM. Cuckow. See Koel.

KOOZEEN, a kind of saddle bags, either for horses or camels, made of coarse carpet.—*Pottinger's Travels in Beluchistan and Sind*, p. 96.

KOPAIVA-BALSAM, GER. *Copaiva*.

KOPARI TENGAI, TAM. Copra, HIND., the hard medulla of the cocoanut.

KOPASSEA, URIA. A tree of Ganjam and Gumsur, extreme height 20 feet, circumference 2 feet, height from the ground to the intersection of the first branch, 7 feet. Useless except for firewood.—*Capt. Macdonald*.

KOPATA VARAM, in Malabar, a kind of land tenure, where an estate is granted for life, or in perpetuity, or on conditions.

KOPHEN

KOPEH, of South Seas, *Colocasia antiquorum*, Schott.

KOPER, Dut. Copper.

KOPERA, from the Tamil term *kobbarai*, dried coconut kernel.

KOPH, HEB.

Ape,	ENG.	Kaki,	SINGH.
Koph,	HEB.	Korangu,	TAM.
Band'r,	HIND.	Kothl,	TEL.
Kapi,	SANS.		

An ape, a monkey. The various kinds of ape seem to have been made known to the Hebrews, Greeks and Romans by specimens brought from Africa and India; those of the Hebrews probably from India, the Hebrew name *Koph* being almost the same as the Sanscrit *Kapi*.

KOPHEN, a valley in the Kohistan of Cabul. The *Kophen* River is mentioned in the *Vendidad* under the name of *Kubha*. The *Kophones* river, named in Alexander's marches is supposed to be the river of Cabul. The history of the country of the *Kophones* river, i. e., Bactria, Aria and Kabul, as shown by their coins is as under:

Many of the coins have bilingual inscriptions, the one Greek on the obverse, some of excellent workmanship often of very barbarous forms, the other on the reverse in that called Arian, Arianian, Bactrian and Kabulian. According to Lassen, James Prinsep, Professor Wilson and others, this language is said to be Sanscrit. It is written from right to left.

The first Theodotus or Diodotus, B. C. 256, reigned about the same time as Arsaces I.

Theodotus II, B. C. 240, is said to have reigned in the Kabul valley.

Euthydemus, B. C. 220, reigned in the time of the expedition of Antiochus the Great, and was defeated in battle near Merv by the united Syrian and Parthian armies. He then urged Antiochus to receive him in alliance and so extend the Greek influence to the Indus. A peace was concluded, and Euthydemus led the Syrian army through Bactria, i. e., by the route north of the mountains to the Kabul valley and across the Indus in B. C. 206. There, Antiochus made peace with Sophaganeus (Asoka), which that sovereign recorded by edicts on rocks and pillars in various parts of India, in characters exactly resembling those on the coins of Agathocles. In B. C. 205, Antiochus returned by way of Arachotia. The translation of the edicts of Asoka, is in the Asiatic Society's Journal for 1838, and that on the Girnar rock names Antiochus (*Antiochia Yona Raja*).

Agathocles, B. C. 190, coined with Greek and Sanscrit, is supposed by Lassen to have ruled Kabulistan to the Indus, and Mr. H. T. Prinsep supposes him to have been the Go-

KOPPA CHOR

vernor left by Antiochus in Kabul, after his treaty with Asoka.

Pantaleon, B. C. 195, coined in Greek and Sanscrit.

Eukratides, B. C. 178; (Prinsep, B. C. 181, Bayer, Wilson, B. C. 165, Visconti: B. C., Lassen 175). He seems to have made an expedition to India in 165 B. C., and on his return from it, to have been murdered by his son. Numerous of his coins have been found in Bactria and Afghanistan, and Mr. H. T. Prinsep considers that he ruled originally in Bactria, subsequently made conquests in and south of Parapamisus in Kabul and, first of all the Greeks, coined in the bilingual Arian inscription. The first use of two languages, however, is also ascribed to Agathocles, who used Greek and Sanscrit while Eukratides used Greek and Arian. Eukratides was, certainly, amongst the earliest of the Greek kings of Bactria, Kabul and Aria, who adopted bilingual inscriptions on his coins, and his so doing is supposed consequent on his conquest of the Parapamisus, after assumption of the title of Great King. On his death, his wide dominion is supposed to have been broken into several independent kingdoms.

Heliocles, B. C. 155, the parricide of Eukratides, used bilingual inscriptions on coins in pure Greek and Arian. His rule though short, extended over Bactria and the Parapamisus.

Antimachus, B. C. 150, coined with Greek and Arian. See Bactria, Semiramis, Kabul.

KOPI, BENG. Cabbage, *Brassica oleracea*.

KOPI, MALAY. *Coffea arabica*, Linn. Coffee.

KOPIA, a skull cap of Celebes, made of Pandan leaf, and worn by the mussulman inhabitants.

KOPI KACHU, SINGH. *Mucuna pruriens*.

KOPI KOTTA, SINGH. Coffee.

KOPNA, a river near Sylhet.

KOPPA CHOR. Leaving the Bhotshah tribe, and proceeding eastwards, the following are the races on the north of the Brahmaputra river:—

Cachari; Akha; Koppa-chor; Mechoe; Dofa; Miri; Abor; Bor-Abor; Khamti and Mishmi.

The races south of the Brahmaputra, are:—

Garo; Mikir; Khasya; Jynteh; Kaki of N. Kachar; Kutcha; Angamee and Aroong Naga; Munnipuri; Singpo; Muttuk; Bor Khamti; Khunung and Shan.

Of those, on the north, the Akha and Koppa Chor occupy the slopes of the Himalaya to the north of the Durrung and Luckimpur districts, and more to the eastward in the same range, are the Dofa.

Further eastwards from the Dofa are the Miri, who live on lower land all along the

KORAN.

north bank of the Brahmaputra river, eastwards from the Dofia up to the banks of the Soobun-seeree river.

KOPPER, Sw. Copper.

KOPRA, Guz., Hind. From TAM, Kobbarai, dried kernel of cocoanut.

KOPRA or Sonar, a river of Dumoh, near Chandpoor, Jeitpoor and Nuggur.

KORA-KORA, a boat of the Malay Archipelago, near Batchian, some of them of 4 to 5 tons burthen, they are open, have bamboo outriggers five feet on each side which support a bamboo platform, they are low in the water. — *Wall.*, Vol. ii, p. 35.

KORA, MALEAL. *Cyperus hexastachyus*, *Rottler*.

KORAALEN, Dut. Korallen, GER. Korallu, Rus. Coral.

KORA CHARU, a tribe in the Carnatic, who make bamboo baskets and bamboo mats. Professor Wilson writes their name also Korcharu, Korvara, Korsam, &c., and adds that they carry betel-nuts from market to market, but this, as an avocation of the Korawa race, is unknown, they live in the hills and forests.

KORAH, a short but heavy Nepal sword of a half-moon shape, the edge of which is on the inner side like that of a scythe. Oliphant, in his journey, mentions that the brother of Jung Bahadur, with one blow of a korah decapitated a bullock : down came the korah with crushing force, and passed right through the animal's neck : the headless trunk tottered for a second, and then fell heavily over.

KORAKAN, SINGH. Eleusine coracana, *Gartn.*, Roxb.

KORAKE, Hind. *Atriplex hortensis*.

KORA KORAM, a pass in the Kouen Lun chain at an elevation of 18,300 feet. It is also a name of the Kouen Lun chain.

KORAL, BENG. *Halietus fulviventer*, *Viell*.

KORALLEN, GER. Coral.

KORALLU, Rus. Coral.

KORAMANI, TAM. Koramanu, TEL. *Briedelia spinosa* ; Koramanu or Pedda anem is also *Briedelia crenulata*, *R.*, Vol. iii, p. 734.

KORAMBAR, a race occupying the Neilgherry hills. See Curumbar, Koorumbar, Kurumbar.

KORA-MIN-GEDDA, TEL. *Pandion halietus*, *Linn*.

KORAN, the religious book of the mahomedans, who call it Al-Kuran also Kuran-i-Sharif. It is generally diffused amongst the people of this religion in Arabic, but it is also translated into English, Latin, German, Italian, French, Spanish, Turkish, Persian, Hindustani, Tamil, Burmese and Malay, though the more strict mahomedans reject translations. It has numerous commentators, amongst whom

KORAN.

are Al-Beidawi. The Koran inculcates the existence of one true God and obedience to his laws, and to this religion they give the name of "Islam," and its followers mussulmain. It contains doctrines and positive precepts as to faith and religious duties and institutions in civil affairs. It commands certain months to be kept sacred and sets apart Fridays for the especial service of God. It is arranged into 144 chapters distinguished by their subjects, the first of which is called the preface, or Al-Fatihah, which is a prayer, and is often venerated by all mahomedans, who often repeat it in their private and public devotions, as christians do the Lord's prayer ; its words are, "Praise be to God, the Lord of all creatures, the most merciful, the king of the day of judgment. Thee do we worship and of thee do we beg assistance. Direct us in the right way, in the way of those to whom thou hast been gracious ; not of those against whom thou art incensed, nor of those who go astray." The Koran recognises men, genii, and angels, heaven and hell, and an intermediate spot and two gardens where beauteous damsels shall await the good. The Arabic Koran is generally in use, but so little are mahomedans acquainted with its language, that in Madras, with 70,000 of this religion, it is supposed that only four or five can read to understand the Arabic Koran. Of all the mahomedan rulers in India, only one of any power, now remaining, is the nizam subahdar of Hyderabad in the Deccan. The Koran does not contain words known as the mahomedan creed. The Koran has been translated into most tongues in India, but the Arabic is deemed the more sacred language, although so very small a number of them can read that tongue so as to understand it. The idea of a heavenly place enunciated in the Koran is the grossest that any race has ever promulgated or given credence to. The wild hunter tribes of America have sublime notions of a future life ; Hebrews were in conflict as to the immortality of the soul, buddhists believe in absorption or annihilation as a release from all the troubles and trials of a mundane existence ; christians believe that the future will be a spiritual life, but the doctrines taught in the Koran as to the occupations in heaven are wholly confined to that book and its believers. For, there, the Koran says, (Ch. lv., pp. 393-94,) "They shall repose on couches, the linings whereof shall be of thick silk, interwoven with gold : and the fruit of the two gardens shall be near at hand to gather. Which, therefore, of your Lord's benefits will ye ungratefully deny ? Therein shall receive them beautiful damsels, refraining their eyes from beholding any besides their spouses, whom no man shall have

deflowered before them, neither any genius; (which, therefore, of your Lord's benefits will ye be ungrateful?) having complexions like rubies and pearls. *** And besides these, there shall be two other gardens: *** of a dark-green. In each of them shall be two fountains pouring forth plenty of water. ** In each of them shall be fruits and palm trees and pomegranates. ** Therein shall be agreeable and beauteous damsels: ** having fine black eyes; and kept in pavilions from public view: ** whom no man shall have deflowered before their destined spouses, nor any genius. ** Therein shall they delight themselves, lying on green cushions and beautiful carpets." Nevertheless, Mahomed was a monotheist and an iconoclast, and when about to die, before the final struggle, lifting up his voice he exclaimed, "May God be far from those who make the tombs of his servants places of prayers." The very last words he was heard to utter as he expired, as if in answer to an unseen visitor, were, "In the company of the blest on high." The mahomedan when about to die, has his spirit calmed by the "Yasin" chapter of the Koran being read to him, and the body is either washed (ghussal) at his own house, or taken within a few hours to a ghussulkhana, specially built for the purpose near the cemetery, and where men or women-washers perform the duty and then put on burial clothes and apply camphor and antimony. The body is conveyed in a box with much solemnity, with wreathes of flowers and perfume laid over the covering: the coffin is carried on men's shoulders, and from time to time is heard the Ty-eb part of the mahomedan creed, "There is no deity but God, and Mahomed is the prophet of God," and on reaching the grave, funeral service is read, consisting of the four portions of their creed (takbir) and a blessing (dua), asked which all present, repeat. After the Fatiha, the body is lifted from the coffin and gently lowered into the grave, laid with the head to the north and feet to the south, and turned on its side with the face towards Mecca. Each person then takes a little earth, and repeating the words in chap. cxii. of the Koran, "we created you of earth and we return you to earth, and we shall rise you out of the earth on the day of resurrection," he puts the earth gently into the grave. The body is then protected with wood and covered in. The Fatiha is again repeated, and again at the door of the cemetery and at this juncture, two angels, Moonkir and Nikir approach the dead, make him sit up and inquire who his God and prophet are and what his religion is. If he had been a good man, his answers are satisfactory and odours from paradise are diffused

around the departed. But, if bad, he is bewildered and the angels torture him. They believe that the dead continue in a conscious state, and dogs and horses or other polluting animals are not allowed within the cemetery; women, also do not enter lest the repose of the dead be disturbed. Mahomedans do not speak of a person as dead; they say he has passed away; has taken his departure, and the living all believe in and hope for resurrection in a future state. "They who believe and do that which is right, shall enjoy blessedness, and partake of a happy resurrection." ** Paradise ** is watered by rivers; its food is perpetual and its shade also; this shall be the reward of those who fear God; (Koran, ch. xiii.)" Therein are rivers of uncorruptible water; the rivers of milk, the taste whereof changeth not; and rivers of wine pleasant unto those who drink; and rivers of clarified honey and therein shall they have plenty of all kinds of fruits; and pardon from their lord. (Ch. xlvii). There shall be gardens with shady trees; with fountains flowing, couches of silk interwoven with gold; beauteous damsels with black eyes lying on green cushions and beautiful carpets, fruits, palm trees and pomegranates. (Ch. lv). The christian doctrine that man, in all that he can do of good, is still without merit, is not shared in by the mahomedan, the buddhist or the hindoo sects; who all consider that a personal merit is gained by their good-doing, and a mahomedan passing the funeral of a mahomedan, turns with it a short way and lends his shoulder to convey the body to the grave, to bring a merit on himself. The Koran was orally delivered by Mahomed, but was collected by the khalif Oomar. The Koran recognizes, though it travestises, the christian views of the resurrection from the dead and the life to come. But the histories and legends, precepts and ceremonial of the Old Testament and traditions of the Rabbi are largely adopted in it. The commentaries on it are called Maltika. The commentator, Hanifi, was born at Kufa A. H. 80, died at Baghdad, in prison, A. H. 150, nearly 70 years old. Shafi, born at Ghaza, in Palestine, A. H. 150, died in Egypt A. H. 204, nearly 50 years old. Han-Balli, born A. H. 164 at Baghdad, died there, A. H. 241, nearly 70 years old. Maliki, born at Medina, A. H. 95, died there, A. H. 179, nearly 84 years of age. Mahomedan school-boys are instructed, almost when in their infancy, to intone the Koran. The Koran is utterly inadequate to provide for the legislative wants of the remote lands and times, which it accidentally reached, and throughout Islam, the Roman or ancient practice of the country is held

KORAWA.

sacred by the people, always when not in direct opposition to revelation, sometimes even when it is so. The law of the Koran does not necessarily settle a disputed point between mahomedans, and it is by no means an easy operation to adjust the balance between the good sense of the ancient practice and the discrepant decrees of the inspired volume. The Koran says that a man of the name of Dujjul will appear at Ispahan, who will arrogate to himself the attributes of the Supreme Being, and establish a sect of his own. The Koran is also understood to say that Mehdy is the twelfth Imam or regular successor of Mahomed, who is yet to come; and for whose coming the mahomedans are still looking out with anxious expectation.—*Hamilton's Sinai, Hedjaz, London, p. 99; Richard F. Burton's Sindh, p. 413; Duff's Indian Rebellion, p. 179; Sale's Koran; Wilson.* See Kalamah, Khajah, Somal, Kabeer, Kyans, Khyber, Taviz, Wahabi, Semitic races.

KORASANA CHETTU, TEL. Ficus demouum, Kōn.; R. iii, 562.

KORASHAM, TAm. Calculus cysticus.

KORAT, a small district between Siam and Kambodia. See Karen.

KORAWA, a broken nation scattered throughout the south of India, in the peninsula, their sub-divisions are: (1) the Bajantri called Gaon Korawa, or Sonai Kolawuru; (2) Tiling Korawa or Kasbi Korawa or Koonchee Korawar; (3) Kolla Korawa, and (4) Soli Korawa, a race of the southern Mahratta country. The Yerkal Korawa or Koonchee Kooree, are a race of wanderers of whose original country they themselves retain no knowledge in their traditions. They are darker than the usual tinge of hindoos around them. In their own communities they style themselves 'Yerkal,' and the same appellation they give to the language in which they hold communication with each other: their ostensible occupation is bird-snaring. They seem to have been converted to the brahminical faith, and are now of the vaishnavite sect. With the exception of the cow, almost all animals are used by them as food. Their dead are burned. A wild tribe called Korawar, dwell near the Pakhal lake and the Godavery. The race are in Canarese called Kora-varana, Koram-a-ravanu, or Koravannu, and are there in three branches, Kalla-korammar, who are professed thieves; Walaga-korammar, who are musicians; and Hakki-korammar, who are a migratory race, and subsist by making baskets, catching birds, &c. In Mysore the Koravar

KORAWA.

are hill and forest tribes, and have a dialect of their own.

In the south, the Yerkala are recognized as Koraver, and are sometimes from their roving habits, termed wandering gipsies. They eat game and flesh meat of all kinds, in which they are by no means nice; the jungle herbs, roots, and fruits, also, furnish them with food. The majority of them pretend to fortune-telling, to which practice both men and women are addicted. They also take to basket, mat, and wooden comb-making—for the former two, they use the mid-ribs and leaves of the date palm—and occasionally work as coolies; sometimes wealthy men of the tribe settle down in places, engage in cultivation, and hold land in puttah like other ryots. There appear to be many sub-divisions among them, which chiefly consist in the variety of their occupations: most of them confine themselves to particular ones, such as firewood-sellers, salt-sellers, basket-makers, and coolies, &c. There is nothing very remarkable in their physical conformation; they are usually dark-coloured, average a very dark-brown. In physique and intelligence they are superior to the Yanadi, and inferior to the other low caste hindoos, who are supposed to be more civilized. Their bodies are usually very filthy, and, as a rule, they wear no clothing, except a small piece of cloth. As a race, they are low in the scale of civilization, and, while they pretend to a show of industry during the day, there is no doubt, from the large proportion they form as inmates of jails, that their habits at night are decidedly of a predatory nature. They form bands of dacoits and thieves, and prefer living by theft than by honest industry. The crimes they are addicted to are dacoity, highway robbery and robbery. They are said to be the most troublesome of any of the wanderers. The men are of a spare, light make, and possess a hardy constitution; they tie their hair in a knot over the forehead—forehead low, eyes small, nose comparatively short, and their general appearance indicates more of cunning than intelligence. Their huts comprise mats set upon three sticks, and, when on the move, these they roll up, and place on the backs of their donkeys, and are thus easily transported from place to place. They rear pigs, and are extremely partial to their flesh; they also keep poultry and dogs. Their pack animals consist chiefly of donkeys; occasionally some of them have a few horned cattle, and perhaps a few goats also. The same wandering, erratic, and lawless habits seem to prevail among this tribe wherever met with in any part of the Presidency. A similar tribe under the name of Oopoo-koraver is described by Dr. Bilderbeck as

KORDULLA.

found in South Arcot. Their language seems to be a medley of Tamil and Telugu. They have rude ideas of religion, and will worship any hindoo deity: their old men are the priests of their community. Most of them have some household god, which they carry about with them in their constant travels. Polygamy prevails among them, and the number of their wives is according to the means of the husband; the marriage string is always tied round the neck of the wife. Marriages are only contracted between adults. The ceremony is usually conducted on a Sunday, preceded by a poojah on the Saturday. Rice mixed with turmeric is bound on the heads of the married couple, and when the marriage string is tied the ceremony is complete. Marriages within certain degrees of relationship are not allowed, and widow re-marriages not permitted; they may occasionally live in concubinage. A custom prevails among them, by which the first two daughters of a family may be claimed by the maternal uncle as wives for his sons. The value of a wife is fixed at 20 Pagodas. The maternal uncle's right to the two first daughters is valued at 8 out of 20 Pagodas, and is carried out thus:—If he urge his preferential claim, and marry his own sons to his nieces, he pays for each only 12 Pagodas, and, similarly, if he, from not having sons, or any other cause, forego his claim, he receives 8 Pagodas of the 20 paid to the girl's parents by anybody else who may marry them. The value of a wife differs in different places: in some places they are very much less, and in others again only nominal. There is a kind of clanship among these people. Each gang or community comprises many distinct families, each having their own family names, and, like the hindoos they form undivided families. Brown and Campbell define the word Yerkalavandla. Wilson defines Kulaver, Yeraver and Kuvaver, &c.—*Dr. Shortt, Madras Journ. Literat. and Science, Vol. xvii, Jan. to June 1851, p. 4, by Asst. Surg (now Inspector-Genl.) Edward Balfour, Madras Army; Wilson's Glossary.*

KORAY KILANGU, TAM. *Cyperus juncifolius*.

KORAY-PILLOO, TAM. *Cyperus perennis*.

KORBAN, AR. A sacrifice.

KORBAN BEIRAM, a name of the Bakreed festival.

KORBE, GER. Baskets.

KORDAD-SAL, a Parsee festival day, the anniversary of the birth of the prophet Zoroaster.—*Parsi, p. 61.*

KORDULLA, or Kurdora? a string tied round the waist, to which a lungoti is fastened. (Dori is a string.)

KOREA.

KORE, TAM. *Cyperus hexastachyus, Rottler.*

KOREA, is a large peninsula of Asia, formed on one side by the Yellow Sea, and on the other by the sea of Japan. It is situated immediately to the east of China; and its length may be estimated at 400 miles, by 150 in average breadth. A great part of what was formerly supposed to be its western coast was found by Captains Hall and Maxwell to consist of an immense archipelago of small islands, which have since been sub-divided into several groups, and are known as Amherst's islands, the Korean, and Hall's Archipelago. The largest of these is the island of Quelpaert, called by the natives Musa, in the centre of which there is a mountain peak about 6,000 feet above the level of the sea. Though rocky and bare, these groups are for the most part inhabited. The peninsula itself is divided from the Japanese island of Kiusiu by the Straits of Korea, and by a high mountain range called the Shanalin or Champeshan, from the country of the Manchoo. It embraces an area of about 95,000 miles, with a population of about eight millions. The interior of the country is rugged and mountainous, being intersected by a lofty branch of the northern range; which in turn sends off numerous offshoots to the sea. The principal valleys lie towards the western and southern coasts, and these districts alone enjoy a temperate climate. The eastern coast is bleak and precipitous, while the northern frontier is cold and desolate, and thus subverts the purposes of despotism by cutting off all friendly communication with the mainland. The principal products of the country comprise wheat, millet, rice, ginseng, tobacco, silk, cotton and hemp. The three last are exported both in the raw and manufactured state. Timber and cattle are plentifully supplied from the forests and pasture grounds, as well as furs from the northern jungles. Its mineral wealth is said to include gold, silver, iron, rock-salt and coal; and from the tribute sent to the emperor of China—consisting both of bullion and manufactured articles—the precious metals seem to be wrought to a considerable extent. The Korean resemble the Japanese and Chinese in dress, habits and religion, but are said to be as inferior to either of these in mental vigour as they are superior in strength and stature. Their mode of writing is alphabetic, and they are said to possess an extensive literature; but as all ingress into the country is denied to Europeans and all egress to natives, little is known of these particulars. They keep up considerable commercial inter-

course with China and Japan, whence they import pepper, aromatic woods, alum, and goods of Dutch manufacture; but most of the trade is managed by a circuitous overland route, and, being discouraged by the government, is carried on with secrecy and at considerable risk. The kingdom of Korea, although tributary to China, is governed at will by its own king—the Chinese emperor doing little more than formally ratifying his decrees. It is divided into eight provinces; and contains, according to Chinese accounts, 161 towns. Korea, is called by the Chinese Kao-li. Although under the same degree of latitude as Italy, the climate of Korea is very cold. The Koreans have flat faces, oblique eyes, broad cheek-bones, strong black hair, and scanty beard, they are strongly made, their skin varies from tawny or yellow to brown, wheat or straw colour and reddish yellow. They have a mixture of the Chinese and Japanese physical features. Their religion is buddhist. Their alphabet and language differ from the Chinese. The Mantchu call the Korean race Solgo. There exists probably two populations intermixed. The people use rice, barley meal, flour of millet. The Korean were driven out of east Tartary into the peninsula which they now occupy. They have since been conquered by the Japanese. Their country was subsequently invaded by the Mongol, on which occasion the Siogour Yoritomo defeated Kabbai khan. From this province of Japan sailed, by way of Iki and Tsushima island, the two expeditions of Japanese catholics who, between 1590 and 1610, were banished, upon a crusade against Korea, and through Korea, China. The then emperor, Taikosama, took this means, thinking, if his 150,000 catholics perished, he would be rid of a faction dangerous to his supremacy; should they succeed, he would push them forward to conquer China. The Japanese expedition in three months fought their way to the Ping Yang river, in other words, gained two-thirds the length of the kingdom. But then, abandoned by Taikosama to their fate, they were driven by winter, cold and snow, and by the Chinese troops who came to the aid of Korea with matchlocks, of which the latter then knew not the use, to relinquish step by step the ground they had so rapidly won. The Japanese account (see Klapproth's *Glance at Three Kingdoms*) aptly quotes "after the rain the earth becomes hard." The wars with the Japanese cultivated among the Koreans a warlike spirit which has prompted the exclusive policy that has thus far succeeded so well. It is said that overtures were made to the Korean authorities by the Russian frontier about

the middle of the nineteenth century, for commercial intercourse across the frontier. Admiral Roze, with six French vessels of war, after two months' stay about the mouth of the Han river, leading to the Korean capital Seoul, retired, having accomplished a rather detailed reconnaissance.

Klapproth thus enumerates Korean productions in the middle of the eighteenth century. White cloth from the fibre of *Urtica japonica*, embroidered taffetas, cotton cloth, mats, rice, deer and wolf skins, swords, gold, silver, iron, rock crystal, salt, oil, inks, fans and a yellow varnish which resembles gilding when used. Besides these, small horses, fowls with tails 5 feet long, honey, fox and panther skins, fish, oysters, seaweed, sulphur, ginseng and other medical roots. Report speaks highly of the capacities and qualities of the Koreans, and represents them as a brave people,—excellent friends, but dangerous foes. China is at present the only country trading with Korea, and even her intercourse at the three trading places is barred and restricted by absurd regulations.—*Adams*; *Nagasaki*, 12th May 1871; *N. C. Daily News*; *Overland China Mail*; *Latham*; *Encyclopædia Britannica*; *Huc's Christianity*, Vol. ii, p. 354.

KOREAH, HIND. A wild grain, a species of *Panicum*, from Dera Ghazi khan.

KOREANS, see Korea, Solgo.

KOREE, the name given to the eastern branch of the Indus. It is also known as Sunkra (narrow) and, further up, as the Phran.

KOREH, HEB. Crystal. The crystal alluded to in Genesis xxxi, 40, is ice, and in Job. vi, 16, is frost: and the Hind., Pers. word Balur, seems to be applied indifferently to ice, crystal and rock crystal.

KOREN, MALEAL. *Cyperus juncifolius*.

KORENG, a rude tribe near the source of the Irawadi.

KORESH, an Arab tribe in the Hijaz. They were the descendants of the mixed Arabs, al-Arab-ul-Mostareba, lineal descendants of Ishmael. This was the Arab tribe to which Mahomed belonged. The Koreshi have, in Sind, many tribal names. They are cultivators, kasi and scribes, and originally came from Syria, Iran and Irak, and claim descent from Ali, Abas, Abubakar, Umar and Usman styling themselves Alvi from Ali, Abasi from Abas, Sidiki from Abubakar, Farooki from Umar, Usmani from Usman. See *Adnan*, Juktan, Iran.

KOREYALA, HIND. The hen bird of *Eudynamis orientalis*, *Lin.*, the Koel.

KORI, TAM. *Cyperus hexastachyus*, *Rottler*.

KORK.

KORI, *koli*, or weaver, and the Teli or oilmen of northern India take a low place amongst the hindoo castes. All the weaver caste throughout Hindoostan are stated by Colonel Tod to be Koli. They call themselves Julai, but are sometimes styled Kori. The Koli of the Simla hills are merely inferior castes living amongst the other populations.—*Tod*.

KORI, *HIND.* In the lower part of Kaghan valley, *Quercus ilex*.

KORIA, *HIND.* A wild grain.

KORIAN SAAMAN, *GER.* Coriander seed.

KORI GADDI, *TEL.* A kind of grass.

KORI KIRE, *TAM.* *Portulaca oleracea*, *Linn.*

KORIMIDI or Golimidi, *TEL.* *Coix barbata*, *Roxb.*

KORIMI PALA or Korivi pala, *TEL.* *Ixora parviflora*, *Vahl.*

KORINAR, see Kattyawar, India.

KORINCHI, the people of this name in Sumatra, border on Menangkabau. Their alphabet has 29 characters and consists of horizontal or slightly raised scratchings. See India.

KORENDAM, *TEL.* *Acacia intsia*, *Willd.*

KORINDA, *TEL.* *Mimosa intsia*, *Roxb.* ii, 565.

KORINGI MARAM, or Horingi-maram, *TAM.* The soap-nut tree, grows to about eighteen inches in diameter, and twenty feet long. It is used by the carpenters for many purposes. The sort named Horingi Tanga Maram, the jungle or wild soap-tree, has the apple very inferior in size and quality to the former, and the tree nothing more than jungle or underwood. The soap-apples are gathered and sold in the bazaar at all seasons of the year.—*Edye, M. and C.*

KORINKA, *RUS.* Currants.

KORINTHEN, *GER.* Currants.

KORIN TOWARE, *TAM.* *Dalbergia latifolia*, *W. & A.*, *Roxb.*

KORION, *GER.* *Coriandrum sativum*, *Linn.* Coriander seed.

KORITI CHETTU, or Goriti chettu. *Plecosperrum spinosum*, *Tric.* ; *W. Ic.* 1963, *Batis spin.*, *R.* iii, 762.

KORIVE, *TEL.* *Sapiindus tetraphyllus*, also *Molinda canescens*.

KORIVI PALA, or Korimi pala, *TEL.* *Ixora parviflora*, *Vahl.* This is properly the name of the *Ixora* used over the whole of southern India for fire-sticks. The cognate names in Tamil, Korankatte ; and in Canarese, Gorivi, are nearly the same.

KORJASHTAM, or Bhavanji chettu. *Psoralea corylifolia*, *L.*

KORK, also Kurk, also Vlothout, *DUT.*

KOROS.

Korkowoe and Derewo, *RUS.* ; Kork, *GER.* Cork.

KORKUR, or Korku, a hill tribe dwelling to the N. W., and west of the Mahadeva hills, speaking a language quite distinct from the Gond. They belong to the Kol or Munda family.

KORKURA, see Kerkook.

KORKHOROS ? *Corchorus olitorius*.

KORLA, or Kora, a lash of one tail. *Kora-kora-marna*, to flog.

KORN, *DAN.*, *GER.* Corn.

KORNA NIBU, *BENG.*, *HIND.* *Citrus limonum* ; limes, *Riss.* *C. medica*.

KORNA-GANDU, *CAN.* Hyana.

KORNEGALLE, or Kurunai-galla, was the capital of the sovereigns of Ceylon from about 1319 till some year after 1347. During this period, the dynasty was in extreme depression, and little is recorded except the names of the kings Bhuwaneka Bahu II, Pandita Prakrama Bahu IV, Wannu Bhuwaneka Bahu III, Wijayabahu, V.—*Yule, Cathay*, ii, p. 423.

KORN GETREIDE, *GER.* Corn.

KORNU-NEBOO, *BENG.* Lemon, *Citrus limonum*.

KORNUTTEE, a river near Cherapoon-gie.

KORO, see *Holothuridae*.

KORO-MONGA, *TEL.* *Averrhoa carambola*, *Linn.*

KOROO of Surat ? and Assam ? Neilgherry nettle.

KOROS. Alexander Csoma de Koros, also written Csoma Korosi, spent much time in one of the convents of the Lamas near Ladak, he made researches into the origin of the Hungarian language and of the Hun. This extraordinary man set out in 1826, for this purpose, from Paris, and went viâ Constantinople to Persia, in the disguise of a dervish. On his arrival at Teheran, he received the kind hospitality of Sir Henry Willock. Thence he went to Bokhara, Lahore and Calcutta. He wrote the only dictionary of the Tibetan language, extant, and then died. He was a Hungarian, travelled in many parts of Asia between 1820 and 1830 and resided for several years at Kanum in Tibet, where he translated from the Tibetan language, a *Cyclopædia* of Tibetan knowledge. An account of this traveller and scholar, furnished by himself to the political agent at Sabathu, in January 1825, has been published in the *Journal* of the Royal Asiatic Society. Alexander Csoma Korosi afterwards proceeded to Calcutta, and continued to reside there, engaged in communicating to the public, under the patronage of the Bengal government and the Asia-

KORUNA.

tic Society of Calcutta, the result of his acquaintance with the language and literature of Tibet, of which he was the first European who has attained a critical knowledge. In the beginning of 1834 he published at Calcutta, a Tibetan and English dictionary, and at the end of the same year a grammar of the Tibetan language. Before the appearance of these useful publications he had communicated to the Asiatic Society of Bengal, notices of the contents of the two great collections in which the principal works of the literature and religion of Tibet are comprehended, the Kah-gyur, a collection of one hundred large volumes, and the Stan-gyur of two hundred and twenty-five. Of the former he also prepared a detailed analysis, part of which is printed in the twentieth volume of the Asiatic Researches. A summary account of both these works, compiled from his information, is printed in the Calcutta Gleanings of Science, Vol. iii, and an abridgment of his analytical view of the whole of the Kah-gyur, in the first volume of the Journal of the Asiatic Society of Bengal. He also furnished to the same periodical several interesting papers on subjects connected with Tibetan literature and the religion of Buddha in that country. He illustrated extensively the buddhism of Tibet.—*Dr. Wolff's Bokhara*, Vol. ii, p. 49; *Moorecroft's Travels*, Vol. i, p. 338; *Hurdy's Eastern Monachism*, pp. 152, 158, 438; *Journ. Royal As. Soc.*; *Journ. Beng. As. Soc.*; *Gleanings of Science*, Vol. iii.

KOROSHANAM, also Vishakallu, TAM. Calculus cysticus. Bezoar.

KOROSOKO KOSOULO KADPHISES, see Greeks of Asia, Kabul.

KORRA, TEL. *Panicum italicum*, Linn.

KORRA CHETTU, TEL. *Schmidelia serata*, DC.; *Ornitrophe ser*, R., Vol. ii, p. 266.

KORRA GADDI, TEL. A kind of grass.

KORRALU, TEL. *Setaria italica*, Kunth. *Panicum ital*, R., i, 302. This is the plural of Korra.

KORRAT, EGYPT. *Allium porrum*, W.

KORSINIE, or Korsinu, RUS. Baskets.

KORSO KOZOULO, see Kabul.

KORSOSSA MAIL, SINGH. A creeper, the rough leaves of which are used at Galle as sandpaper.

KORT, SW. Cards.

KORTOM, EGYPT. *Carthamus tinctorius*, Linn.; *Rozb*.

KORTUMBAH, HIND. *Citrullus colocynthis*.

KORUMBA, an island in the gulf of Cutch.

KORUNA, MALEAL. *Amorphophallus campanulatus*, Bl.

KOSAH.

KORUM-DEVI, a princess of Putan and one of the wives of Samarsi, king of Mewar, who fell in the battle of the Caggar. During the minority of her son, she nobly maintained the raj of Mewar and gave battle in person to Kutub-ud-Din, near Amber, where that mahomedan viceroy was wounded and defeated.

KORUN-KUSHA, BENG. *Andropogon iwarancusa*.

KORU TOWERE? TAM. ? *Dalbergia latifolia*, *Rozb*.

KORWA, TAM. A fish of the Madras coast, the air-bladder of which furnishes isinglass.

KORYGAUM, a small walled town on the left bank of the Bheema river, about 35 miles N. W. from Poona. It was the scene of a desperate defence made by a small part of a regiment of the Madras Native Infantry and a small detachment of Madras Artillery, against about four thousand of the elite of the Peshwa's army, the entire army of about 80,000 men lying encamped on the other side of the river. Almost all the Europeans perished, except Captain Staunton and Asst. Surgeon Wyllie of the Madras Army. See Statistics of Battles.

KOS, SINGH. *Artocarpus integrifolia*, Linn.

KOS or Cos, a measure of length. The Kos of India greatly varies in length. One Kos is about 13,000 feet, or 2 miles, 5 furlongs, 153 yards. The mahomedans having introduced the itinerary measures of their various native countries, there are a great variety of such measures to which the hindoo term Kos is indiscriminately applied. The mahomedan kos may be taken at 35 to a degree.—*Ed. Baron Huqel's Travels in Kashmir and the Panjab*, p. 93. See Cos.

KOSA, see Kosi or Chozar.

KOSAH, an Affghan tribe who extend from the Bozdar southern border to a point somewhat below the latitude of Dehra Ghazee Khan, a distance of 300 miles. The tribe dwells partly in the hills and partly in the plains and can muster about 1,200 fighting-men. They are at enmity with the Bozdar above them and the Lugharee below them; but are on good terms with the Khutranee, who are situated behind them. In 1848 the Lugharee sided with the officials of the rebel Moolraj; but the Kosah rose on the side of the government, under their chief, Korah khan, and his son Gholam Hyder. Korah khan and his son then joined Major Edwardes' irregular force in the Multan province with a contingent of 400 horse. Korah khan was confirmed in the possession of a jagheer of Rupees 1,000 per annum for his own life and for that of

KOSHULA.

his son ; he himself was granted a life-pension of Rupees 1,000, and a garden at the native place of the family was confirmed rent-free in perpetuity. The chief always remained loyal. His tribe on the whole, behaved fairly ; some of them, however, occasionally joined in forays made by other tribes : cause for dissatisfaction has however arisen from plunder having been conveyed through the Kosah passes into the hills by other tribes.

KOSALA, an ancient Aryan kingdom, lying between the Gogra and Ganges. Its rulers claimed to be descended from the sun, which again spring from Kasyapa, the grandson of Brahma. Bharata, its ruler, claimed to be descended from the moon.—*Hardy's Eastern Monachism*, p. 438. See Koshula Sakya Muni.

KOSAMBILIWAIL, **SANSC.** Cowhage.

KOSARU CHETTU, **TEL.**

KOSATAKI or Koshataki, **SINHG.**, **TEL.** *Luffa*, *sp.*, also according to Wight, several kinds of cucurbitaceous plants, *Trichosanthes dioica*, *Luffa pentandra*, *L. acutangula* ; and *Achryanthus aspera*, *L.*

KOSCHENILJE, **GER.** Cochineal.

KOSDERI ? *Momordica umbellata*.

KOSHIA, **SANS.** From *koosh*, to issue, to identify.

KOSHA, **HIND.** An ordeal. In the trial by Kosha or image water, the accused person drinks some of the water with which an idol has been washed, and if the accused survive free from calamity through the next fortnight, he is innocent.

KOSHIA KOSHII, **RUS.** Leather, hides.

KOSH-MINAR, milestones of India ; in form they are solid circular stone obelisks, little larger than the usual milestones of Britain. The Cosh-minar were put up to mark the ancient Mogul royal road in India, at the distance of every two miles.—*Tr. Hind.*, Vol. ii, p. 9.

KOSHNANTO, **BENG.** *Cucurbita hispida*, *C. pepo*, *Willde*, *Ainslie*.

KOSHIA, **BENG.** *Jute*. *Corchorus capsularis* and *C. acutangulus*.

KOSHIA ? *Costus speciosus*. *Putchuk*.

KOSHITAMU, or *Bomma kachchika*, **SANSC.**, **TEL.** *Costus speciosus*, *Sm*.

KOSITI, a weaver race, of whom in Berar there are 12,352. This caste occupy themselves in spinning and weaving, in the manufacture of undyed cloths and silks, and of silk thread for necklaces.

KOSHU, **HIND.** *Mentha incana*.

KOSHULA, the first kingdom in India of the Soorya race, corresponded with the kingdom, now the province of Oudh, also written Kosala, Koshula, Koshulya. In the ancient

KOSSÆI.

story of the Ramayana we are made acquainted with the distant maritime wars which the princes of India carried on. Even supposing Ravana's abode to be the insular Ceylon, he must have been a very powerful prince to have equipped an armament sufficiently numerous to carry off from the remote kingdom of Koshula, the wife of the great king of the Surya race. It is most improbable that a petty king of Ceylon could wage equal war with a potentate who held the chief dominion of India, whose father, Desarat'ha, drove the victorious car (*rat'ha*) over every region (*desa*), and whose intercourse with the countries beyond the Brahmaputra is distinctly to be traced in the Ramayana.—*Tod's Rajasthan*, Vol. i, p. 586.

KOSI, see *Sal*.

KOSI or Chozar, according to Dr. Moore, were the lords of Central Asia from the 6th up to the 10th century, and came from the borders of the Caspian and were known to the Greeks and Arabians as Kosa, that is, Kush. See Kush, Hindoo Kush.

KO-SI-CHIANG, a harbour, 78 miles from the mouth of Bangkok river, formed in lat. 13° 12' N., long. 100° 55' E. by a group of seven or eight small islands. The harbour is sheltered from every side but the north.

KOSOPULLA, **SANS.** *Dolichos cultratus*.

KOSRA, *Panicum italicum*.

KOSSÆI. In the gradual diffusion of mankind, the western provinces of Iran appear to have fallen to the share of the Arameans and Elamites, while the mass of the Kosseï, Ariani, Mardi and other tribes, composing the earliest inhabitants, moved more eastward, leaving some of their numbers in the mountainous districts, to mix with or become subject to the new comers. The Shemitic people and language having thus become dominant instead of the Cushite, the ethnography of the former rather than that of the latter, becomes an important consideration. From this primitive language, or rather from one of its cognates (as the Hamyaritic may possibly prove to have been) two distinct branches were derived, the original Arabic, with the Musnad, Koreish, and other dialects of that tongue, being one of these, and the Aramaic the other. The latter had two grand subdivisions, from one of which, known as the Western Aramaic were derived the Amharic, Syriac, Hebrew, &c., and from the other or Eastern Aramaic, came the Assyrian, Babylonian, and Chaldean tongues. From its monosyllabic construction, the eastern seems to be more ancient than the Western Aramaic, and it appears likewise to be the root of the Zend, Pehlevi, Sanskrit, and other dialects in use throughout a portion of the territory

along which it had spread eastward. Whether the first of these languages was once in general use, or was merely the sacred language of Iran, the affinity of all of them is such as to imply a common origin. Pehlevi was the court language in the time of the Sassanian monarchs, and, according to some authorities as far back as that of Cyrus: it contains many words which belong to the Chaldaic and Syriac tongues, and Sir William Jones was of opinion that one of these must have been its root: but it is now generally presumed that the root of the Pehlevi is the Aramaic itself. The cognates of the latter spread westward and eastward, and one of them, the Chaldee, can scarcely be distinguished from the parent root. Another, the Parsi, being a softer language than the Pehlevi, became general in Farsistan, and gave rise to the Deri, or modern Persian. The Pehlevi, however, is still partially used in their sacred writings, in Shirwan, and also by some of the Gabr race of the eastern provinces, as well as by a numerous section of the natives of India, but among the Parsees it is largely intermixed with the Hindustani and other Native dialects, which are less or more connected with the Sanskrit. The affinity of the latter to the Parsi is so great that a learned philologist has pronounced it to be one of its derivatives. The number of words which are identical among the different dialects of Iran and Turan, and some portion of the territory more eastward, goes far to show that at a period anterior to anything like connected history there must have been some common language, and this was probably the Aramaic. See India.

KOSSAH. The Sehrai, Kossah, Chandeia, and Sudani, are tribes of the Rajputanah desert. The Sehrai is the most numerous of the mahomedan tribes of the desert, said to be hindu in origin, and descendants of the ancient dynasty of Arore; but whether his descent is derived from the dynasty of Sehri (written Sahir by Pottinger,) or from the Arabic word sahra, 'a desert,' of which he is the terror, is doubtful. The Kossah or Khossa, &c., are branches of the Sehrai, and their habits are the same. They reduced their mode of rapine to a system, and established koori, or black-mail, consisting of one rupee and five durri of grain for every plough, exacted even from the hamlets of the shepherds throughout the t'hul. Their bands were chiefly mounted on camels, though some were on horseback; their arms were the shail or sang, (lances of bamboo or iron,) the sword and shield, and but few fire-arms. Their depredations used to be extended a hundred coss around, even into Jodpoor and

Daodpotra, but they eschewed coming in contact with the Rajpoot, who says of a Sehrai, "he is sure to be asleep when the battle nakarra beats." Their chief abode is in the southern portion of the desert, and about Noakote, Mittie, as far as Buliarie. Many of them used to find service at Oodipoor, Jodpoor and Sooe-Bah, but they are cowardly and faithless.—*Tod's Rajasthan*.

KOSSAK. The people of Little Kabarda, are said to have been a colony from Great Kabarda, driven thence from their natural possessions by the more powerful tribes. Circassia might, in former times, have provided itself in the same way. There are, also, numerous Tartar tribes which extend themselves southward over the lower hills and flat lands, which reach from the foot of the mountains to the Kuban; and then possess the banks of that river westward, till it terminates at the Black Sea. It is from amongst this wild people, and the Kabarda people bordering on the Malka and Kouma rivers, that Russia formed its corps of Cossacks, known by the general name of Cossacks of the line of the Caucasus.—*Tod's Rajasthan*; *Porter's Travels*, Vol. i, p. 51. See Cossack, Kasak.

KOSSANG, MALAY. The fourth part of the mace.—*Simmond's Dictionary*.

KOSSAYE, URIA? A tree of Ganjam and Gumsur, extreme height 22 feet, circumference 1 foot, height from the ground to the intersection of the first branch, 7 feet. Useless except for firewood.—*Capt. Macdonald*.

KOSSE, HIND. Allium, *sp.*

KOSSEIR, or Cossair, a sea-port of the Red Sea, has a population of 5,000.

KOSSEI, an ancient tribe who occupied the mountainous country east of the Tigris. That country was the abode of the Scythians under Nimrod, and Nimrod sprung from them.—*Bunsen*. See Kossai.

KOSSYE, a river near Kurruckpoor in Midnapoor.

KOST, ARAB. *Costus speciosus*, *Smith*.

KOSTI, RUS. Dice.

KOSTI or Kusti or Custee, the sacred thread or cord of the Parsees. It is to this which Moore, in his Lalla Rookh, alludes, when he makes Hafiz declare himself a fire-worshipper;

"Hold! hold! thy words are death!"
The stranger cried, as wide he flung
His mantle back, and show'd, beneath,
The Gebr belt that round him hung.

The Kosti is terminated by two small tails at each end, denoting the four seasons, three knots on each tail represent in the aggregate the twelve months of the year. The cord is twisted, of 72 threads, such being the number according to Parsee interpretation, of the

KOTAGHERRY.

known kingdoms of the world at the time of Hushang. It seems to be also called Kushi. Every Parsee lad, arriving at a certain age must assume it.—*Baron C. A. De Bode's Travels in Luristan and Arabistan*, p. 113; *Silvestre de Sacy's Memoire sur diverses Antiquites de la Perse*, p. 184; *Moore's Lalla Rookh*; *The Parsis*.

KOSTUM, also Putschuck, TAM. ? *Costus speciosus*, Putschuck.

KOSTUS, GREEK. *Aucklandia costus*, *Falconar*.

KOSU, see Kyan.

KOSUNDRA, HIND. *Bauhinia parviflora*.

KOT, HIND. A fort, hence Sabzal Kot in Bahawalpoor. Kot Dafadar, a cavalry non-commissioned native officer. Fareed Kot consists of Fareed Kot proper, and Kot-kupoorah, it is S. W. of Ferozpur, and borders to the S. E. on Puttiala. It has an area of 643 square miles, and a population of 51,000 souls with a revenue of Rs. 75,000.

KOT, HIND. *Aucklandia costus*, also *Plectranthus rugosus*.

KOTA, NER. Turpentine.

KOTABOO, see Kili-katr.

KOTADI, TEL. *Terminalia*, *sp.* ? Tadi is *T. bellerica*, and the prefix Ko is an ancient Telugu word for "great."

KOTA-DIMBOOLA-GASS, SINGH. *Covellia oppositifolia*, *Gaspar*.

KOTAGHERRY, on the Neilgherries, is situate twelve miles east of Coonoor and about 500 feet greater in elevation; twelve miles due north of Metapolliam and 6,500 feet above sea level, or rather from the Bowany river. This station is much drier than either Coonoor or Ooty, and although not so cold as the latter, during the summer months, the thermometer never rises above 74°; Kotagherry is then like an English summer, and far more pleasant than Switzerland. This is also the emporium for all fruit on the Neilgherries. In a sanitary point of view, it is the healthiest of all three. Invalids who cannot stand the cold of Ooty and the damp of Coonoor, fly here for comfort and restoration to health. The Kotagherry Ghaut begins about a mile and a half north from Metapolliam, is about twelve miles in length and is accessible by horse, palkee or "wunchee;" but should the traveller prefer the Coonoor ghaut, he will have to make a detour of about thirty-seven miles, that is, from Metapolliam to Coonoor in a westerly direction twenty-seven miles, and from Coonoor to Kotagherry easterly ten miles. At Kotagherry the supply of all grain is scanty and rather high in price, only from 4½ to 6 measures of rice of the ordinary kind per Rupee and of horse gram from ten to fifteen measures;

KOTAH.

eggs and fowl are cheap. Mutton, from two to four annas per pound. House accommodation is scarce: a person on 200 or 300 rupees a month could live with the greatest comfort and have enough to spare at the end. The Budaga, Kohatar and Toda races are residing there. See Tea, Dravidian, Kohtar, Kurumbar.

KOTAH is built on the right bank of the river Chumbul. It was captured by General Roberts on the 30th March 1858. The principality of Kotah was formed about the beginning of the 17th century by the chief of Boondee, who was forced by the maharana of Oudeypore to cede half his territory to his younger brother. Like all the other Rajpoot states, Kotah had been despoiled by the Mahrattas, and was under obligations, which it was too poor to fulfil, to pay tribute to each of the three great Mahratta families of Malwa, the Puar, Sindia, and Holkar, as well as to the Peshwa. Kotah was then saved from absolute ruin by the talents of its minister, raj rana Zalim Sing, into whose hand maharao Omeid Sing surrendered all power. In the course of forty-five years he raised the Kotah state to be one of the most powerful and flourishing in Rajpootana. He was one of the first of the Rajpoot chiefs to co-operate with the British government for the suppression of the Pindarees in 1817. Zalim Sing died in 1824, and his son Madho Sing succeeded him. In 1828, Kishore Sing, the Maha Rao, was succeeded by his nephew Ram Sing. In 1834 disputes between Ram Sing and his minister Mudden Sing, the son and successor of Madho Sing, broke out. There was danger of a popular rising for the expulsion of the minister; and it was therefore resolved with the consent of the chief of Kotah to dismember the state and to create the new principality of Jhallawur as a separate provision for the descendants of Zalim Sing. Seventeen pergunnahs, yielding a revenue of twelve lakhs of rupees, were made over to Muddun Sing. The Kotah contingent is now represented by the Deolee Irregular Force. The troops which the Maha Rao is allowed to entertain are limited to 15,000 men of all descriptions; the State revenue from all sources is about rupees 25,00,000; the area of Kotah is about 5,000 square miles; and the population 433,000. The tribute payable to the British government is rupees 1,84,720 in addition to the two lakhs of rupees for the Deolee Irregular Force. The Maha Rao has been guaranteed the right of adoption. In 1817 rawut Doorjun Sing was guaranteed in the possession of the village of Seedra which had been held by his family in jaghire from time immemorial,

KOTAH.

and in place of a horse which the Rawut was required annually to present to the Maha Rao, it was stipulated that he should pay a yearly tribute of rupees 100. Placed in the very heart of India, Kotah was for years the centre, around which revolved the desultory armies, or ambulant governments, and its wealth could not fail to attract the cupidity of these vagabond powers. The early history of the Hara race of Kotah belongs to Boondi, of which they were a junior branch. The separation took place when Shah Jehan was emperor of India, who bestowed Kotah and its dependencies on Madhu Sing, the second son of Rao Ruttun, for his distinguished gallantry in the battle of Boorhanpoor. Madhu Sing was born in S. 1621, (A. D. 1565.) At the early age of fourteen, he displayed that daring intrepidity which gave him the title of raja, and Kotah with its three hundred and sixty townships (then the chief fief of Boondi, and yielding two lakhs of rent), independent of his father. The conquest of this tract had been made from the Koteah Bhils of the Oojla, the 'unmixed' or aboriginal race. From these the Rajpoot will eat, and all classes will drink water at their hands. Kotah was at that time but a series of hamlets, the abode of the Bhil raja, being the ancient fortress of Ekailgurh, five coss south of Kotah. But when Madhu Sing was enfeoffed by the king, Kotah had already attained extensive limits. To the south it was bounded by Gagrown and Ghatoli, then held by the Kheechi; on the east, by Mangrole and Nahrgurh, the first belonging to the Gor, the last to a Rahtore Rajpoot, who had apostatized to save his land, and was now a nawab; to the north, it extended as far as Sooltanpore, on the Chumbul, across which was the small domain of Nandta. In this space were contained three hundred and sixty townships, and a rich soil fertilized by numerous large streams. The soil of Kotah is a rich tenacious mould, resembling the best parts of lower Malwa. Each plough or team is equal to the culture of one hundred bheega; consequently 4,000 ploughs will cultivate 400,000 during each harvest, and for both 800,000, nearly 300,000 English acres. The soil is deemed poor which does not yield seven to ten maunds of wheat per bheega, and five to seven of millet and Indian corn. The Chohan Rajpoot sent forth twenty-four branches, of whom the most celebrated are the families of Boondi and Kotah, in the divisions termed Haravati. They have well maintained the Chohan reputation for valour. Six brothers fought in one field, in support of Shah Jehan against his son Aurung-

KOTAR.

zebe, and but one survived his wounds. The Kheechi of Gagrown and Ragoogurh, the Deora of Sirohi, the Sonagurra of Jhalore, the Chohan of Sooe Bah and Sanchore, and the Pawaitcha of Pawagurh, have all immortalized themselves by the most heroic and devoted deeds. Most of these families yet exist, brave as in the days of Pirthwiraja. Many chiefs of the Chohan race abandoned their faith to preserve their lands, the Kaimkhani, the Surwani, the Lowani, the Kururwani and the Baid-wana chiefly residing in Shekavati, are the most conspicuous. No less than twelve petty princes thus deserted their faith: which, however, is not contrary to the Rajpoot creed; for even Menu says, they may part with wife to preserve their land. EesurDas, nephew of Pirthwiraja, was the first who set this example. The twenty-four Sachæ of the Chohans are the Chohan, Hara, Kheechee, Sonigurra, Deora, Pabia, Sanchora, Goelwal, Bhadoria, Nurbhan, Malani, Poorbea, Soora, Madraetcha, Sankraetcha, Bhooraetcha, Balnotcha, Tussairah, Chachairah, Kosiah, Chundu, Nacompa, Bhawur, and Bankut.—*Tod's Rajasthan*, Vol. i, p. 96; Vol. ii, pp. 503, 541, 542, 547; *Aitcheson's Treaties, Engagements and Sunnuds*, Vol. iv, p. 71.

KOTAH, a village on a plain, on the left bank of the Pranheetah river, twelve miles above its junction with the Godavery, in latitude 18° 51' N., and longitude 80° 2' E. Ferruginous sandstone is well-developed at the Mahadeva hills, in the north of the province of Nagpore, in the vicinity of the city itself, and at Kota on the Pranhita, in the dominions of the Nizam.—*Carter's Geological Papers on Western India*, p. 303.

KOTAJ, HIND. *Celastrus paniculata*.

KOTAMALLI KIRE, TAM. Greens of *Coriandrum sativum*, Linn.

KOTA MARAM, TAM. A tree of Tinnevely, wood of a brown colour; specific gravity 0.723, used for building in general.—*Colonel Frith*.

KOTAMBARRU, SINGH. Coriander seed.

KOTAN, EGYPT. *Gossypium indicum*, Lam.

KOTAN, the people speak Turki. See Kara-Koram, Ladak.

KOTAR, a weight of 15½ lbs.—*Simmond's Dict*.

KOTAR, a tribe of the Neilgherries which ranks next to the Toda in priority of occupation of the hills. They have no caste, and as a body, are the most industrious of the hill tribes, giving much of their time and attention to agriculture and handicraft, &c. When not required at agricultural operations they employ themselves as carpenters, smiths, basket-makers, in making and repairing their ploughs,

KOTAR.

bill-hooks, hoes, &c. They also employ themselves as carriers, and are highly esteemed in the plains for the excellent leather they make. They perform all the menial offices required by the Toda and Badaga, supplying them with barbers, washermen, &c. They acknowledge the Toda as lords of the soil, and accordingly pay the tribute demanded by them as "Goodoo." At the same time they exact from each hamlet of the Badaga within a certain distance of their own village, certain annual fees, which they receive in kind for services rendered as handicraftsmen, &c., in addition to that of ceremonial or festive occasions for menial services performed. As cultivators of the soil, they only produce as much as will satisfy their own requirements, and any surplus they may obtain is bartered for iron and other produce of the plains. In confirmation of their having followed the Toda as settlers on these hills, they hold the best lands, and have the privilege of selecting the best whenever they wish to extend their holdings. They are well-made and of tolerable height, rather good-featured and light-skinned, having a copper colour, and some of them are the fairest-skinned among the hill tribes. They have well-formed heads, covered with long black hair, grown long and let loose, or tied up carelessly at the back of the head. An average of 25 men gives the following measurements, &c. :—

Age, 27-68 years.	Length of arms, 80.
Height, 62-61 inches.	Hands, 7.
Circumference of head, 20-35.	Breadth of hands, 3-25.
Neck, 11-95.	Length of feet 10.
Chest, 30-68.	Breadth of feet, 3-50
Arms, 8-76.	inches.
Thighs, 15-62.	Weight. (avoirdupois)
	105-20 lbs.

They have a slightly elongated face with sharply defined features; the forehead narrow but prominent, and occasionally protuberant; ears, flat and lying close to the skull. The growth of the hair from the verge of scalp to eyebrows, $2\frac{1}{2}$ inches distant; eyes, dark-brown, of moderate size and deep set, varying in colour from Nos. 1 to 5, in Paul Brocas' tables, eyebrows, dark and bushy, with a tendency to approach, frequently united to each other; nose, as a rule, smaller and more sharply defined than in the Toda; ridged and slightly rounded, and pointed at the extremity, two inches in length; alæ of nostrils expanded, measuring $1\frac{1}{4}$ inches in breadth; mouth of moderate size and well-formed; teeth, well-grown and regular lips, of fair size and well-compressed; chin, well-set and small. Altogether they may be pronounced tolerably good-looking, and the general aspect of the countenance indicating energy and decision. The women are of moderate height, of fair

KOTAE.

build of body, and not nearly so good-looking as the men. An average of 25 women gives the following results :—

Age, 32-44 years.	Length of arms, 25-62.
Circumference of head, 20-36 inches.	Length of hands, 6-50.
Height, 57-98.	Breadth of hands, 3.
Circumference of neck, 10-70.	Length of legs, 35.
Chest, 29-30.	Length of feet, 9-25.
Arms, 8-20.	Breadth of feet, 2-25.
Thighs, 14-63.	Weight. (avoirdupois)
	96-24 lbs.

Most of them have prominent foreheads, with more of a snub nose, and a somewhat vacant expression about their features. They are rather timid when approached, frequently running into their huts and shutting themselves up. They seem to enjoy robust health, and have large families. Their arms are tattooed, having nine streaks, with four dots on each arm and four circular marks on each forearm. The women assist the men at their work in the fields, and make baskets, chatties and pots, &c. There are some seven villages altogether: six of these are located on the hills, and the seventh is at Goodaloor. They form large communities, each village containing from 30 to 60 or more huts, of tolerable size, built of mud walls, and covered with the usual thatch grass, somewhat after the style of native huts in the plains; but in some villages the arrangement of the dwellings is far from neat. The floors are well-raised from 2 to 3 feet above the soil, with eaves or a short verandah in front, and a pial or seat on either side of the door, under the eaves, on which the people squat themselves when idle. The doors of their huts, measures 46 by 26 inches. The station of Kothagerry takes its name from the Kotar villages in its vicinity. The Kotar, as a body, are dirty. All the dead cattle and carrion in the vicinity, of every kind, find acceptance among them as food. The whole Kotar population of the seven villages is supposed to count a little above a thousand souls. Some rude image of wood or stone, a rock or tree in a secluded locality, form their objects of worship, and to these sacrificial offerings are made; but the recognized place of worship at each village consists of a large square piece of ground, walled round with loose stones, three feet high, and containing in its centre two pent-shaped sheds of thatch open before and behind, and on the posts that support them some rude circles and other figures are drawn. No image of any sort is visible here, and these buildings, which are a little apart, are supposed to be dedicated to Siva and his wife. They have crude and indistinct ideas of these deities. They hold an annual feast in honor of their gods, which

comprises a continuous course of debauchery and licentiousness, extending over two or three days. On these occasions they clothe and ornament themselves in their best, and make as grand a show as they can, and to witness which the other tribes are invited. Perhaps this is the only occasion, if at all, that they have recourse to water for the purposes of ablution. Much indecent dancing takes place on these occasions between the men and women, and frequently the spirit of their deity is supposed to descend on some of them, when their frantic deeds seem to form but a branch of demonology. Their marriage rite is simple, and has much in conformity with that of the Pariah of the plains. As a rule, they marry and live with one wife, and have a number of children. The Kotar possess a small breed of cows, but have no buffaloes. It is believed that the Toda will object to their having buffaloes on account of their uncleanly habits; consequently they make no effort to procure them. They never, as a rule, milk their cattle, but leave it all to the calves.

The Kotar keep up an annual feast in memory of their dead, when a few cattle are slain on a rude kind of altar constructed for the purpose, on it a portion of the flesh of the animal is laid, with a little of each of the different kinds of grain they cultivate, and all is consumed as a burnt offering to their gods, in memory of their dead relatives and friends. During this ceremony, the young men and maidens dance around the altar together. Whilst the younger members are thus engaged, the elders busy themselves in preparing a grand repast for their friends, whom they invite from the adjacent villages on the occasion of this annual festival. More cattle are now slain, and the flesh mixed with small portions of every kind of grain grown in their fields; a great fire is raised, and the scene becomes one of confused riot and mirth, with blowing of the kollera horn, mingled with yells and shrieks and beating of tom-toms, the confusion continuing from morning till night.

The Kotar language is a very old and rude dialect of Canarese, having the same Tamil roots, but differently pronounced, without the guttural or pectoral expression of the Toda. They are believed to be descended from some of the low caste tribes of the plains, who, in former times sought refuge on these hills from persecution practised on them by the invaders of India, they were the first among the other tribes who followed the Toda. They are not held in much estimation by the other hill tribes or European colonists, in consequence of their partiality

to carrion, in which respect they resemble the Pariah of the plains, who eat not only animals killed for food, but also such as die naturally. Oxen and buffaloes which perish from old age or disease belong to them of right, and they carry home and greedily devour the tainted carrion which they find on the highways and on the fields. In cases of sickness they make use of such roots and herbs as their old women commend. The sick are carefully attended to; but in some of the villages, as Kotagerry and Goodaloor, they resort largely to European medical treatment.

The Kotar are industrious, and possess an extensive knowledge of handicraft. Rude as their work may be, there is scarcely a useful implement connected with the mechanical arts, trade, agriculture, or husbandry, that they are not conversant with; and had they only received the encouragement and patronage bestowed by Europeans on the nomade Toda, they might have advanced in the several arts they practise and might have got rid of some of their filthy habits.

Like the Pariah of the plains, the Kotar are addicted to drinking, and, in the absence of liquor, resort to opium-eating. There can be no doubt, that, like the Toda, these people also belong to the great Dravidian family who were driven to these mountain tops by conquest and persecution.

Every Kotar village has belonging to it a circle of Budaga hamlets or villages, from which they claim at periodical seasons the payment in kind of certain fees or dues; and for which they in return furnish the Budaga with, or rather make for them (the latter supplying the material), their implements of woodcraft and husbandry. These fees are generally paid in a certain quantity of whatever grain the Budaga has cultivated, for each plough of land, besides incidental dues on marriages, &c. The Kotar always attend the funerals and obsequies of the Toda, &c., receive from them the carcases of the buffaloes that are offered in sacrifice, allowing from a half to a quarter of a rupee for some; and others they receive in return for the assistance they afford on these occasions or for services which may have been performed for the family of the deceased. If they cannot supply themselves with flesh by any of these means, they kill some of their own herd, or purchase for that purpose from the other tribes. The Kotar burn their dead, collect the bones on the following day, and bury them in a hole, marking the spot where they have done so. This they do in order to the performance of the obsequies. On the night of the first Monday after the first new

KOTMAALE.

moon in the month of March, all the friends of the deceased assemble, and preceded by music, go to the place of burning.—*Abbe Dubois ; Harkness Neilgherry Hills, p. 31 ; Dr. Shortt, in Proceedings of Madras Government.*

KOTAUR, or Kottara, the Kottara of the Greeks, the principal town in south Travancore, and now, as then, distinguished for its commerce.

KOT-AVERE, TAM. *Cyamopsis psoraleoides, DC.*

KO-TEOU, or adoration, as the Chinese word expresses it, consists in nine solemn prostrations of the body, the forehead striking the floor each time. It is difficult to imagine an exterior mark of more profound humility and submission, or which implies a more intimate consciousness of the omnipotence of that being towards whom it is made.—*Macartney's Embassy, Vol. ii, p. 129.*

KOTEREE, or Kotesiree, a river near Sanganeer in Oodeypoor.

KO-THAH-BYU, see India.

KOTHEELA, HIND. *Tragacanth.*

KOTTANG-KARUNDEI, TAM. *Sphæranthus hirtus.*

KOU, an ancient Chinese measure about 17½ gallons.—*Simmond's Dictionary.*

KOUBADIAN, a town on the N. bank of the Oxus, producing good silk. See Baljavar.

KOU-CHU, CHIN. The Chinese obtain from a tree, which they call Kouchu, a fluid resembling milk, which they use in gilding with leaf-gold; this liquid is smeared over the surface of the article to be gilded, in the several forms which the device is intended to represent; the leaf-gold is then applied, which immediately becomes firmly cemented.

KOUEN-LUN. The great mountain chain which separates the Indus and its tributaries from the Yarkand plain, is continued to the

westward, under the name of the Hindu Kush. This chain, which has a westerly direction with some southing, separates the basin of the Oxus on the north from that of the Kabul river, a tributary of the Indus, and from the Helmand, a river which runs towards the south-west, and is lost in the desert of Sehistan, not reaching the sea. The elevation of the chain diminishes rapidly to the westward, but few accurate determinations of its height are known. The Kalu pass, near Bamian, is 12,500 feet, and the peak of Koh-i-Baba, which rises close to it, is 17,000 feet above the level of the sea. The Erak or Irak pass is 12,900 feet. From the neighbourhood of the peak of Koh-i-Baba a meridional chain runs nearly due south to the Indian ocean, forming the water-shed between the Indus on the east and the Helmand on the west. The axis of this chain passes close to Ghazni, elevated 7,726 feet; and to Quetta, 5,540 feet. It lies probably to the westward of Kelat, but our maps are not sufficiently accurate to make its course in that direction obvious. At its point of origin this chain is more than 13,000 feet in height: where it is called the Safed-Koh, or White Mountain, it is 14,000. Near Ghazni it is from 9,000 to 10,000 feet high; and near Quetta its elevation is nearly as great, for the peak of Chah'l Tan rises to 10,500 feet. Its eastern ramifications are high ridges which dip abruptly into the valley of the Indus; one peak, near Dera Ismael Khan, called Takht-i-Suliman, attains a height of 11,000 feet, and the range south of the Kabul river rises still higher.

The Bulut Tagh, according to Captain H. Strachey, is that part of the Kouenlun chain, which is east of Samarcand and south of Khokand. Bulut-Tagh means the cloud mountain, but the Kouen-lun chain is also called the Belur Tagh which, according to Cunningham, is synonymous with Balti mountains: other names for the chain are Mustagh, Karakoram, Hindu-Kush, and Tsunglung or Onion Mountains from the prevalence on it of a species of *Allium*. It is the Tian shang or celestial mountain of the Chinese. Its continuation forms the Pamir range, west of Yarkand. The Kouenlun chain is not less elevated than the Himalaya, and is covered throughout a great part of its length with perpetual snow. Its axis has not been crossed by any traveller, but has been reached by Dr. Thomson who visited the Korakoram pass, elevated 18,300 feet. In Western Tibet, the axis of the chain is in general distant about 150 miles from the Himalaya, and the country between the two consists of a complication of ranges of lofty and rugged mountains separated from one another by stoney valleys, which at

the higher parts of the courses of the rivers expand at intervals into alluvial plains. The vast climatic change which took place in the northern countries is attributed in the Bible to the action of water. In the other, the sudden freezing up of rivers is the cause assigned. Both may have resulted from the same cause, the upheaving of the land by volcanic action, elevating portions and depressing into basins, such as the Caspian sea. Ten months of winter is now the climate of western Thibet, Pamer and Belur, at the present day, and corresponds with that of the Altai country, and the district east of the Kouenlun, the Paradise of the Chinese. The country at the sources of the Oxus and Jaxartes, therefore, is supposed to be the most eastern and most northern point whence the Aryans came. Wherever the Indians may have fixed the Uttarakuru, the dwelling place of their northern ancestors, we cannot venture to place the primeval seats of the Arians anywhere but on the slopes of the Belur Tagh, in the highland of Pamer, between the 40° and 37° of north latitude, and 86° and 90° of longitude. On this western slope of the Belur Tag and the Mustagh (the Tian-Shang or Celestial Mountain of the Chinese) the Huro-berezaitei (Albordsh) is likewise to be looked for, which is invoked in the Zendavista, as the principal mountain and the primeval source of the waters. At the present day, the old indigenous inhabitants of that district, and generally those of Khasgar, Yarkand, Khoten, Turfan, and the adjacent highlands, are Tajik who speak Persian, and who are all agriculturists. The Turkoman occupants either came after them and settled at a later period, or else they are aborigines whom the Arians found there, but its slopes are the primeval land of the Arians.—*Hooker & Thomson's Flora Indica*; *Ch. Bunsen*, iii, 460. See Arian, Cush, Kaffir.

KOUK, BENG. Stainless date tree, *Phoenix acaulis*.

KOUK-KO, BURM. A Tavoy wood, employed for bottoms of boats.

KOU-KOU? also K'u-shih-pa-tau, CHIN. Is the St. Ignatius bean, the seeds of *Strychnos sancti Ignatii*, the *Ignatia amara* of some authors. It enjoys a high reputation in the Chinese Materia Medica. It is bitter, and believed to be a good vermifuge, but is dangerous from the quantity of strychnine it contains.—*Dr. Smith's Chinese Materia Medica*, p. 116; *Simmond's Diet.*

KOU-KOUO, a plant originally from the Philippine Islands; its fruits are of an ashy brown colour, extremely hard and bitter: by steeping it in cold water, it then forms an

KOUREN.

excellent application for wounds and contusions, and the water, taken inwardly, cools the blood and allays inflammation. This fruit plays an important part in Chinese medicine, and is sold by all druggists; it is also used, with great success, to treat the internal maladies of oxen and horses. This is perhaps the seed Lusung-kwo, from a species of pine.—*Smith's Chin. Mat. Med.*; *Huc's Recollections of Journey*, p. 97.

KOULACHARI, SANS. From kula, a race, and char, to act.

KOULKA, a little river leading into the Baikal lake. In the mountains at its source, Lapis lazuli is found.—*Atkinson*.

KOULMIDVI, also Koulmidrie, SINGH. Calamander wood.

KOUMA, see Kabarda.

KOUMODEE, SANS. Brightness, from koomooda, a species of nymphæa.

KOUMI, AR., PERS., HIND. A tribe, a race.

KOUNG-KOUAN, CHIN. Communal palaces, are, in China, found from stage to stage all along the road, and reserved for the use of the great mandarins, when travelling on public service. Ordinary travellers are rigidly excluded from them. A Chinese family has the office of maintaining each of them in good order, and of making the necessary arrangements when a mandarin is about to occupy it. The expenses are paid by the Governor of the town, and he appoints the domestics for the service of the palace. The Koug-Kouan of the province of Sse-tchouen are particularly renowned for their magnificence, and they were completely renewed under the administration of Ki-chan, who was governor of the province for several years.—*Huc, Chinese Empire*, Vol. i, p. 23.

KOUNG MOO, BURM. A tree of maximum girth 5 cubits, maximum length 30 feet. Scarce, but found near Moulmein, Tavoy and Mergui, on the sea coast and on the banks of rivers. When seasoned it floats in water. It is not a good wood, being perishable and liable to rot readily.—*Capt. Dance*.

KOUNG-TOUNG, see India.

KOUNLA, HIND. Citrus aurantium.

KOUREN. The principal Lama Serai of all Mongolia is that of the Great Kourén (Oorga Kooren, of Timkouski). It is situated in the country of the Kalkas, on the banks of the Toulra river, and stands on the edge of the great forest that stretches northwards into Siberia. To the south, lies the desert of a month's journey. It stands, however, in a pleasant valley, amid mountains near the source of the Toulra, which river falls into the great Baikal lake. There are 80,000 Lama, under several heads, at Oorga, their

KOUPOOEE.

chief is the Geesoo Tamba, a regenerated Boodh of great sanctity. There has, of course, risen a large city and mart of commerce in the immediate vicinity of the convent, and it is the head-quarters of Mongolia, having been the capital of the princes of the family of Jungeez Khan, before their conquest of China. Tea bricks are here the measures of value, an ounce of silver representing five tea-bricks.

KOUPOOEE, occupy the hills between Cachar and the valley of Munnipore, in their whole breadth, a direct distance of about forty miles; and from 25° north latitude, they formerly extended over nearly an equal distance to the south. The whole of this tract was formerly thickly studded with villages, some of them of considerable size, and Songboo tradition gives, as the place of their origin, the mountain towards the south of the valley named Thungching. They comprise two tribes, the Songboo and Pooeer-on. They and all the other races of hill people congregate in communities, composed usually of families connected with one another by blood-ties. The superior elevations being the most healthy; their villages are usually to be found in them. Before the subjugation of the Songboo to Munnipore, almost every village was at war with its neighbour. On their subjugation this warfare was put a stop to, but the remembrance of their feuds remains and they would break out afresh to-morrow were the restraining hand of Munnipore withdrawn. But though Munnipore has been able to exert so much influence amongst the Koupooes as to prevent feuds being openly carried on, a state of active feud appears to be the one natural to all the tribes from Cape Negrais to as far north as we have any knowledge. The Koupooes are much attached to their villages, which are permanent. The village and its immediate precincts form their grave-yard, and when, for a time, from whatever cause, they have been obliged to desert their village, they more often express their wish to return to it as being the grave of their ancestors than to it as being their own birth place. Their attachment then to their village is created quite as much by its holding the tombs of their ancestors as by its being the place of their birth. The mountain land around the Koupooes village, within certain fixed bonds, is usually the property of the village. This they cultivate with rice in elevations suited to it, and with other crops in situations unfitted for that species of grain. The spot cultivated this year, is not again cultivated for the next ten years; it having been found that that space of time is required for the formation of a cultivable soil by the decay of the vegetable matter that again springs upon it. Every village has three

hereditary officers, namely, Kool-lak-pa, Loop-lak-pa and Lumpoo, and officers besides these are elected. If the hereditary chief or Kool-lak-pa be a man of wealth, he will be also a man of influence. The Koupooee are subdivided into families Koomul, Loang, Angom and Ning-thau-ja. A member of any of these families may marry a member of any other, but intermarriage of members of the same family is strictly prohibited. Though not attended to with the same strictness, this prohibition, in regard to marriage, and this distinction of families under the same designations, exists amongst the Munnipore race. All the hill people are dirty, but amongst them the Koupooee is comparatively clean, he frequently bathes, though he does not devote much time to the purification of his skin. He is omnivorous, and of course without prejudices of caste, but one species of food he never touches; milk, to him is an abomination. In appearance, manners and customs there is no essential difference between the two divisions of the Koupooee, the Songboo and Pooeer-on, but though so much alike in these respects, between their languages there is so great a difference, that when they wish to communicate with one another they have to resort to the language of Munnipore. The Pooeer-on do not appear at any time to have been numerous, and they are at present confined to a few villages situated in the north-eastern corner of the space before indicated as the region of the Koupooee tribe.

Quoiring.—Next to these is the Quoiring tribe, having a language distinct from those of the Songboo and Pooeer-on, but with a great similarity in all other respects. They inhabit all the hills north of the Koupooee, between the high range that skirts the valley of Munnipore and the Burak, as far as the Angamee tribe, from whose aggression they have suffered much. From these aggressions and their own feuds, they have much decreased in number, but are still a very considerable tribe, possessed of much energy which develops itself in trade with the Angamee and the British frontier district.

The Khong-jai or Ku-ki, until lately, occupied the hills to the south of the Koupooee: whilst in this position, little or nothing of them was known, but they caused fear from their vicinity. South of them lay the Poi, Soote, Taute, Loosai, and other tribes, better armed than they were, and of the same gens as themselves, but at feud with them. By these they were driven from their native hills, the task being rendered easier by the internal animosities of the Khongjai themselves, and the Khong-jai are now scattered around the valley of Munnipore, and thence

through the hills to north and south Cachar. Thus they broke into distinct tribes. Although occupants of the hills to the south of the valley of Munnipore their traditions do not give the southern hills as the place of their origin, but rather lead them to the belief that it was in the north. The salique law rigorously prevails amongst the Khongjai, but the influence of woman is great amongst them.—*Prinsep's Tibet, Tartary and Mongolia*, p. 46; *McCulloch's Records*, G. I. F. D., pp. 42–59.

KOUSHAN, a pass in the Hindoo-Koosh. It is the most frequented east of Bamean, in lat. 35° 37', long. 68° 55'. It has three entrances, leads over the principal shoulder of the Hindoo-Koosh peak, is impassable for wheeled carriages, about 40 miles long, narrow, and its crest is 15,000 feet above the sea. The road rocky, uneven, descent is 200 feet per mile. Three entrances.

KOUTCHE. This town contains between 5,000 and 6,000 inhabitants, besides the Chinese garrison. To the north of the place is the Moussoor-Daban (or pass) on the route to Kulja, and the great volcano Pe-shan is on the east. Iron and copper are abundant in this region, and the latter mineral is worked. Sulphur and saltpetre are also found, and chloride of ammonium. Some fine specimens of this were obtained in a large cavern near the Moussoor-Daban. To the south of Koutche a considerable quantity of rhubarb is produced, it is taken by the caravans to Maima-tchin on the Siberian frontier.—*The Upper and Lower Amoor*, pp. 355-6.

KOUTA, MAHR. *Feronia elephantum*.

KOUTI, MAHR. *Hydnocarpus inebrians*.

KOU-TOUK-TON, in Mongol and Goussée (Geesoo) in Tibetan, M. Timkowski says, is the name of the highest class of the priests of Buddha; the one resident at Oorga is called by the Mongols, Gheghen Koutoukton. The Oorga high priest seems also to be called Geeso-Tamba, a re-generated Budd'ha of great sanctity. There are 30,000 Lamas under several heads at Oorga.—*Prinsep's Tibet, Tartary and Mongolia*, p. 51. See Kouren, Koutoukton, Lama.

KOUTOOKA-SARVASWA, SANS. From koutooka, play, and sarvaswa, a person's all.

KOUYUNJIK, so called by the Turks, and Armushiah by the Arabs, are mounds long believed to be the remains of Nineveh. These ruins include the great mounds of Koyyunjik and Nabbi Yunus. But Mr. Layard found amongst the rubbish only a few fragments of pottery.—*Layard's Nineveh*, Vol. i, p. 4.

KOUZ-KOUZ, AFRICAN? *Holcus spicatus*.

KOWA DOL.

KOVA, TAM. Kovel, MALEAL. *Coccinia indica*, *W. & A.*

KOVIDARA ? *Bauhinia variegata*.

KOVIL, MALEAL. A Kshatriya, also a class of the Nair race.

KOVIL, TAM. *Acacia frondosa*.

KOVILE CHETTU, TEL. *Ixora undulata*, *R.*, i, 385. ; *W. & A.* 1310 ; *Ic.* 708.

KOVLAR, a river in Kamptee.

KOVVILI PUVVU, TEL. A wild creeper.

KOVVAI ; Kovai, TAM. *Coccinia indica*.

KOWA, HIND. A crow, also *Garcinia cowa*.

KOWA DOL. The hills called Burabur, are isolated rocks of sienitic granite rising abruptly from the plain about 15 miles north of the city of Gyah, by the left bank of the Phulgo or Mahanudda ; the cluster is remarkable for its picturesque appearance, and for the noble masses of rock piled, as it were, one above another, with hardly any soil, consequently little vegetation, and rising to various heights, from 100 to 300 or 400 feet. Although Burabur is that by which the cluster is commonly known, each hill has a name of its own. The highest being called "Burabur," also "Sidheswur," from a temple to Mahadeva that once crowned its heights. The next in height is the "Kowa Dol," which is detached from the rest by near a mile to the south-west. A third is called "Nag-ar-juni," and is the easternmost of the great cluster. A fourth, and the smallest, called "Durhawut," is at the northern extremity ; others also have names, but the above alone contain objects of notice. The Kowa Dol is an almost entirely bare rock having nearly a perpendicular scarp on its northern face, and sloping at an angle of 45°, more or less, on the opposite or southern side : east and west, it is disjointed and inaccessible ; huge stratified masses are piled one over the other, decreasing in length at each end, the whole is surmounted by single blocks like pillars ; the centre one of which towers above the rest and is conical. It is said that formerly there was a huge block balanced on the top of this cone, which from its being moved by birds alighting on it, obtained the name of "Kowa Dol," or crow-moved, or the crow-swing ; about the middle of the eighteenth century, this rocking stone fell down, to where it may still be seen. This hill seems to have been surrounded by a large town ; there is an artificial mound continuous round the north and east faces, filled with broken pottery, bricks and blocks of hewn stone ; there are two names given, "Sarain" and "Summunpoor ;" on the portion called by the latter name there is an extensive mahomedan cemetery ; there are none but paltry monuments with fragments of

KOWRA.

some ancient Buddhist temples built into them. The caves of Barabur differ from all other works of the kind known to us. These caves or chambers are, with one exception, entirely devoid of sculpture or ornament of any kind. They are in all seven in number ; four in one hill, three in another, but the name "Satgurbha," commonly understood to mean "seven chambers" is applied to two only.

KOWAR, HIND. *Sida cordifolia*.

KOWAREE, a river in Gwalior.

KOWA-THETI, HIND. *Clitoria ternatea*, *Linn.* ; *Roxb.* ; *W. & A.*

KOWDAN, PERS. Bustard.

KOWE, SUNDA. Ratan.

KOWEET, of Bombay, *Achras sapota*, *Willd.* *Diospyros sapota*.

KOWEIT, a compact town of about 15,000 inhabitants, built on a promontory of loose sand-stone covered with sand, vessels of 50 or 60 tons bear the produce of countries at the northern end of the Persian gulf from Bizea, Dillum, Ghonawah, Bunder Reegh, and the smaller seaport towns round to Koweit, for trans-shipment to bugalows, for conveyance to Bombay. In the same way goods from India are brought here in large bugalows and distributed amongst smaller ones for conveyance to those smaller ports. Teak is imported and used for ship-building, and a large number of horses, the best exported from Arabia, are sent from Koweit to Bombay. The Bedouin inhabitants of the desert are allowed to enter Koweit, on depositing their arms at the gate ; and it was a custom to feed, not only all who enter, but the poor of the place besides. The Bedouin assemble daily in a place outside the gate, and with them there is a good sprinkling of the Slubba. The Arabs generally come mounted on camels, bringing ghee and truffles with donkeys bearing brushwood and camel's dung. Sometimes when hard up, the Arab will bring in his horse for sale, but good ones are seldom got in that way.

KOWLI MATCHI, DUK. *Pleuronectus solea*. The sole-fish.

KOW-MOO, BURM. At least two species of this tree are found, one having a broad leaf, and the other narrow. Both are very large. Canoes of the largest size are made of them, and considered nearly as good as those made of teak.—*Malcolm*, Vol. i, p. 191. See Awrah, Burmese Guava, *Psidium pomiferum*.

KOWNI, MALEAL. *Abrus precatorius*, *L.* **KOWN-UL**, the two outside of the house on either side of the door, so called.

KOWRA, a large shell ; Kowree, a small one. Kowra-kowree, by fugeers, meant for money. Kowra-Kowri Ginna, or Kowra-

KRAAL.

kowri ka hisab lena, a minute counting or reckoning.

KOWBU, also Kilimi, Rus. Carpeta.

KOWTA, MAHR. *Feronia elephantum*, Corr., W. & A.

KOWTEE, MAHR. *Hydnocarpus inebrians*, Vahl.

KOY, TURK. A sheep.

KOYALU, TEL. *Salicornia bractiata*, R., i, 84.

KOYAN, MALAY. A weight for dry goods; at Lombok = 33 piculs; at Batavia = 28; at Samarang = 30, and at Singapore = 40.—*Simmond's Dict.* See Coyan.

KOYA TOTA KURA, TEL. *Amarantus tristis*, Linn.

KOYEE PASSEERAY KEERAY, TAM. *Suæda indica*.

KOYILA MOKIRI, or Putta jilledu, TEL. *Wrightia tomentosa*, Rom. and Sch.

KOYLA, properly Koela, DUK., SANS. Charcoal.

KOYLI AVARI, TAM. *Canavalia obtusifolia*, DC. See Sand-binding Plants.

KOYYA PIPALI, TEL. *Salicornia indica*, Willd.

KOZOLA, see Greeks of Asia.

KRAAL is the enclosure into which, when fresh elephants are required in Ceylon, a herd of wild ones is driven. The kraal is made in some spot convenient to the districts in which the elephants are supposed to be. The moodleer or headmen of these districts are required to find a certain number of coolies as beaters. These are formed into a cordon, surrounding the elephant district. The circle is gradually contracted, the coolies advancing slowly by day, beating the jungle as they go, and lighting watch-fires by night. The elephants are thus driven towards the kraal, into which they are eventually enticed by decoying elephants placed there for the purpose. Once within the enclosure strong ropes are skilfully passed round their legs, and then fastened to the largest trees. There the elephant remains until he is subdued and partially tamed, by hunger and fatigue, after which he is gradually liberated and his education commences. Cordiner gives graphic descriptions of the grand kraals he witnessed at the beginning of the nineteenth century near Tangalle and Negombo, where scores of elephants were enclosed in parks of labyrinthine passages, many of them being drowned in "the water snare." The parallelogram on one occasion was about 240 feet on each side, so that the area was 6,400 square yards. The wings were not more than 200 feet in length. The engraving in Tennent's Work (page 340, 2nd Vol., 5th Edition) gives an excellent idea of a Kandian kraal, its form and

KRANDU KUNING.

the principles on which it is constructed. Vacant spaces are left for two elephants to stand at each corner, which it is understood will rush forward towards the entrance, the moment the elephants enter the enclosure, and cover with their protection the men employed in putting up the barricades. Cross rear lines are drawn through the jungle, when the beaters are satisfied that the elephants are in front; and as the drive nears the kraal the cordon of beaters is drawn closer and closer until at last it closes in on the elephants and they have no choice but to break through the line or enter the kraal. Many of them do break through the line. On one occasion an elephant broke through the kraal, fairly raising up a portion of the palisades, cross beams, jungle vines and all, with his tusks, and, scattering the watchers to right and left, rushed up to the palisade, seized a peeled wand pointed at him by a Koralle and broke it over the man's arm and head, inflicting severe bruises. But this animal was manfully resisted and turned back.—*Frere's Antipodes*, p. 185.

KRAANEN, DUT. Corn.

KRABU GAHA, SINGH. *Caryophyllus aromatics*, Linn.

KRAFT-WURZEL, GER. Ginseng.

KRAKAT, MALAY. A drag-net about 100 fathoms long.

KROCKATOA or Krakatoa, is a high island, about five miles long and three miles broad. It has a conical peak, in lat. 6° 8½ 'S., long, 105° 25' E., and may be considered the Fairway Mark, in entering the Straits of Sunda from the westward.—*Horsburgh*. See Pulo Bessy, Bezee.

KRAKUCHANDA, see Buddha.

KRAMALI, HIND. *Populus ciliata*, also *P. nigra*.

KRAMBU, TAM. Cloves.

KRAMERIA TRIANDRA. This plant is a native of Peru, and yields the Rhatany root of the Pharmacopœia; a powerful astringent, but destitute of any other virtues. The Diospyros is a most efficient indigenous substitute for this article.—*O'Shaughnessy*, p. 211.

KRAMERIACEÆ, MART. An order of plants.

KRAMMAL, HIND., of Kanawar. *Populus ciliata*.

KRAMUKA, also Guvaka, SANS. Betel-nut, Areca nut, Penang nut.

KRANDOOP? A tree of Akyab which grows to a great length, and is very plentiful. Wood used for masts and native boats.—*Cal. Cat Ex.* 1862.

KRANDU KUNING, of Java, a yellowish

and close-grained wood used for furniture and cabinet work.

KRANG, SIAM. *Coccus lacca*. Lac.

KRANGANORE, is twenty-five miles south of Paniani and is the northern frontier of the rajahship of Travancore. This city was distinguished by its having been the residence of a republic of Jews, part of the tribe of Manasseh, who had been carried into captivity by Nebuchadnezzar, who sent numbers of them to this distant place. Their history says that they amounted to twenty thousand, and that they were three years in travelling to this place, from the time of their setting out from Babylon.—*Pennant's Hindustan*, Vol. i, p. 162.

•KRANJANG, MALAY. Basket.

KRANI, Karani, or Crani, an English copyist or clerk in a public office, of mixed European and Native descent. The origin of the name has been disputed, and is, it is believed, utterly unknown. It may probably be a corruption of some Portuguese word, or it may be a mispronunciation of Carana, by which the Kayet'h (Cayast'ha), or writing tribe, is designated in Bengal; and as most native writers in public offices are of the Carana caste, it is not unlikely that by merely extending its signification, the same word has been used to designate English writers. The word from being utterly harmless in its application, has begun of late years to be considered decidedly dyslogistic (to use an expressive word coined by Bentham), and is consequently avoided by all officials of good feeling, for fear of giving offence. In India, Kayet'hs are now ever called Khwaja; though that word is in common use for other classes. In mahomedan countries, west of India, however, the term is still applied to writers and teachers. Dr. Shaw says of the Moors in Barbary, "The Hojas suspend their ink-horns in their girdles," pp. 227), and Lady Montagu says, "The monastery is now belonging to a Hojia, or school master."—*Letters*, p. 176; *Elliot's Supplement*.

KRANUGA or Kanuga, TEL. Pongamia glabra, Vent.

KRAS, KASH. *Capra jemlaica*, Ham., Smith, also called the Tare. The short triangular horns of this species of goat, distinguish the males from any of its allies. The tare is plentiful on the mountains by the banks of the Chenab, in the district of Chamba; it is also found in Lahoul and Kooloo, where it is likewise known by the name of Kras. The natives of the southern Cashmere ranges call it jugla. Dr. Adams was told that during severe winters both markhor and tare may be found in the same forests.—*Adams*.

KRASNOIMJED, Rus. Copper.

KRASSAK-ULA, see Tin.

KRA'T, one of three tribes, Muggur, Gung and Krat, who differ only in their religion, according as it combines in a greater or less degree, the superstitions of the hindoo worship with those of budd'hism. They form the principal part of the Nepaul army.—*Oliphant's Nepaul*.

KRATOON, JAV. A palace, a castle.

KRAW. In the year 1858, Mr. Edward O'Riley, drew the attention of the public to the importance of a route across the Isthmus of Kraw from the Pakchang river, which marks the British boundary in the Malay peninsula, at the Mergui Archipelago, to the opposite gulf of Siam, as preferable to the usual circuitous passage *viâ* the Straits of Malacca. The Isthmus of Krau, separates the Bay of Bengal from the gulf of Siam. The present route to China from the Bay of Bengal is by the Straits of Malacca, and down south round the Malay peninsula, along a rocky coast, and among numerous islands and dangerous rocks. Sailing vessels bound to the eastward find this a very long route, and to the duration in the voyage of a steamer, it adds at least a period of six days. A canal might be dug of thirty miles, to connect the eastern and western portions of the Pakchang river, the boundary line separating Siam from British Burmah at its southern limit. At the western side of the peninsula, the river is deep enough for vessels drawing twenty feet of water and upwards. On the east it is navigable for some miles for large vessels. The intermediate distance of about thirty miles is therefore said to be the only difficulty which exists. India and China are thus separated by a narrow neck of land, which can easily be opened. The Pakchang river is navigable for steamers drawing 6 fathoms of water for 15 miles from the sea, and the highest ground on the Isthmus is not more than 75 feet above the sea level. The distance saved by the adoption of the proposed new route would be nearly 500 miles; and the saving in time, including stoppages for coaling, &c., would be four days, while the saving in cost would be enormous.

KRAUN, equal in value to a shilling.—*Ferrier's Journ.*, p. 51.

KRAUS FLOHR, GER. Grape.

KRAWNDOW? or Ky-oung-thya? A tree of Akyab, very plentiful. A small wood, used for firewood.—*Calcutta Catalogue Exhibition of 1862*.

KREAT, DUK, GUZ, HIND. Chiretta, from *Andrographis paniculata* and other plants.

KREIDE, GER. Chalk.

KRIS.

KREU, HIND., of Chamba hills, *Quercus dilatata*, also *Quercus semecarpifolia*.

KRIAN, see Kedah, Semang.

KRIATHA, SINGH. *Andrographis paniculata*, Wall. See Chiretta.

KRIMEA. The great Turanian or Tartar family of languages is spoken by all the tribes from the Himalaya to Okotsk and to Lapland, and includes the Hungarian, Krimean, and Turkish. In India, there are three or four distinct branches of this family of languages, and consequently of the Turanian race:—in the north are the Himalayan dialects and tribes, from Upper and Lower Kanawar on the Sutlej to the Butani of the extreme east; then we have the Lohitic class, comprising, with the Burmese and others of the eastern peninsula, the dialects of the Naga and Mikir tribes in Assam, and of the Boda, Kachari, Kuki and Garo in eastern Bengal. Nearly related to this class is the Kol or Munda family, including the Kol, Sonthal and Bhumij of Singhbhum and western Bengal, and the Mundala of Chota Nagpur. The fourth class is the Tamulic or Dravidian, to which belong the Brahui of Baluchistan, the Gondi, the Tuluva of Kanada, the Karnata of the S. Mahratta country, the Toda of the Nilgiris, the Malayalam of Travankur, the Tamil and Telugu. The Kur or Muasi, and the Korku in Hushangabad, and westward in the forests on the Tapti and Narmada, until they come in contact with the Bhil of the Vindhya hills, and the Nahal of Khandesh belong to this Kol family; indeed Mr. Hislop held that the word Kur is identical with Kol.—*De Guignes*; *Sir W. Jones' Works*, Vol. iii, p. 72, quoted in

KRIMEE-BHOJANA, SANS. From krimée, an insect, and bhojana, to eat.

KRINKODDI NAR, MALEAL. Fibre of *Smilax ovalifolia*.

KRIPA, BENG. *Lumnitzera racemosa*.

KRIPITA-YONI, SANS. Yonee, a birth-place.

KRIS, MALAY. The abbreviation of *Karis*, a dagger or poniard, the universal weapon of all the civilised inhabitants of the Archipelago. It is of a hundred different forms, short or long, with a straight or serpentine blade, and with every variety in the shape and ornament of the hilt and scabbard. Men of all ranks, from the peasant to the prince, wear this weapon, and those of rank when full dressed, two or even four. In Java, even women of rank sometimes wear a small one. The word is probably Malay, but is now of general adoption through the Archipelago. The Javanese have three native names for it besides the Malay one, and it is found represented on several of the ancient temples of

KRISHNA.

Java. The Kris has even reached the Philippine islands, for there is no doubt but that it is the same word of the Tagala and Bisaya languages which the Spaniards write *cali*, and translate "sword." This dagger is in use in all the Indian islands though ill-suited as a weapon of war. The Javanese ascribe its invention to Inakarto Pati, king of Janggolo, in the beginning of the fourteenth century of our era. Constant use of it gives a facility in handling it. Those of the Eastern Archipelago, get their names according to their form or uses; thus, *Kris Panjang* (long): *K. Sepucal* (straight), *K. Chinankas*: *K. Toomboo Ladah*; *K. Bladohe*: *K. Bاده*. The Kris is used for all purposes, in Bali even to kill the wife who wishes to be burned with her husband. It is always a near relation who gives the first wound with the Kris, but never father or son. Sometimes dreadful spectacles occur. In one instance a woman had received eight Kris stabs and was yet quite sensible. At last she screamed out, driven by the dreadful pain, 'cruel wretches, are you not able to give me a stab that will kill me!' A gusti who stood behind her, on this, pierced her through and through with his kris.—*Crawford's Dict.*, p. 202; *Ind. Arch.*, Vol. i.

KRISHI, HIND. *Dioscorea deltoidea*. See Kriss.

KRISHANOO, BENG. *Plumbago zeylanica*.

KRISHNA, a prince of the Yadu race, who, during his lifetime, was deified and invested with the honours of Vishnu, under the title of Crishna, or Shana (denoting his dark complexion), but more familiarly known as Kanya. Who his parents were, is doubtful. Vasudeva, a chief of the Yadava, and Devaki, a damsel of the royal family of the Bhoja, reigning at Mathura, are claimed, and Nanda and Yasoda, cowherds dwelling at Gokula, are indicated as his apparent parents. The account given of Krishna, by Mr. Elphinstone, is that he was born of the royal family of Mattira, on the Jamna; but brought up by a herdsman in the neighbourhood, who concealed him from a tyrant who sought his life. The story generally believed by the hindcos is partly historical and, in part, fable. It is to the effect that Krishna was born in Mathura, and was the son of Vasudeva (giver of wealth) and Devaki, sister to Kansa, the king of that country. At the time of the nuptials of his father and mother, it was predicted to Kansa that the eighth child of Devaki would deprive him of his life and crown, and become the sovereign of Mathura in his stead. The king, in consequence, commanded that Devaki should be closely confined, and that whenever she was delivered of a child, it should be

brought to him immediately to be put to death. The princess gave birth to five sons and one daughter, who were thus, by the directions of her brother, destroyed as soon as they were born. When she became pregnant the seventh time, a voice from heaven commanded that the fire of her womb should be conveyed into that of another female named Bohini who gave birth to the third Rama, called Bala Rama, Krishna's elder brother : and when the period of her delivery the eighth time arrived, the tyrant gave orders for a stricter watch to be placed over her than had been before observed. The guards placed by Kansa over his pregnant sister, having failed in their vigilance, Kansa enraged, ordered all newborn infants to be slain. But Krishna escaped his various snares, one of which was sending a woman named Patnia, with a poisoned nipple to nurse him. In a miraculous escape of the infant over the Yamuna (Jumna) he is represented as conveyed by his father, and protected by Sessa or immortality. He was fostered by an honest herdsman, named Ananda or Happy, and his amiable wife Yasoda, or the giver of honour, and passed the gay hours of youth, dancing, sporting and piping among a multitude of young Gopa, or cow-herds, and Gopia, or milk-maids, from whom he selected nine as favorites. This is the period which has made most impression on the hindoos, who are never tired of celebrating Krishna's frolics and exploits as a child—his stealing milk, and his destroying serpents ; and among them is an extensive sect which worship him under his infant form, as the supreme creator and ruler of the universe. Krishna excites enthusiasm, especially among his female worshippers. He spent his youth among the gopi, or milk-maids, dancing, sporting, and playing on the pipe ; and captivated the hearts, not only of his rural companions but of the princesses of Hindustan, who had witnessed his beauty. In Brindabun, where he tended cattle, stole milk, played upon the pipe, and danced and sported with milkmaids, the scenes of his gay amours are now reckoned as objects of the holiest veneration. The cradle of Krishna is preserved among the treasures of Nandagaon, and the dairy is shown from which he used to steal milk and butter in his infancy. His subsequent life was chequered, he recovered his inheritance ; but, being pressed by foreign enemies, he removed his residence to Dwarika, in Guzerat. He afterwards appeared as an ally of the family of the Pandu in their war with their relations the Kuru, for the sovereignty of Hastinapur. This war forms the subject of the great hindoo heroic poem, the "Mahabharat," of which Krishna is, in fact,

the hero. It ended in the dearly-bought success of the Pandu, and in the return of Krishna to Guzerat. His end was unfortunate : for he was soon involved in civil discord, and at last was slain by the arrow of a hunter, who shot at him by mistake, in a thicket. Besides taking a place in the story of the Mahabharata, Krishna appears in the other great epic of the hindoos, the Ramayana of Valmiki, in which he is represented as the eighth incarnation of Vishnu. The war celebrated in the "Maha Bharat" was a contest between the lines of Pandu and of Kuru (two branches of the reigning family) for the territory of Hastinapur (probably a place on the Ganges, north-east of Delhi, which still bears the ancient name). The family itself is of the lunar race : but, in the story, the contending parties are supported by numerous allies, and from some very remote quarters. Krishna, an ally of the Pandu, though born on the Jamna, had founded a principality in Guzerat : among the allies on each side also, were chiefs from the Indus, and from Kalinga in the Dekhan, some, even, belonged to nations beyond the Indus ; and amongst them the Yavana, a name which most orientalists consider to apply, in all early works, to the Greeks. The Pandu were victorious but paid so dear for their success, that the survivors, broken-hearted with the loss of their friends, abandoned the world and perished among the snows of the Himalaya, and Krishna, their great ally, fell in the midst of civil wars in his own country. Some hindoo legends relate that his sons were obliged to retire beyond the Indus ; and as those Rajputs who have come from that quarter in modern times to Sind and Kuch are of his tribe of Yadu, the narrative seems more deserving of credit than at first sight might appear. The more authentic account, however (that of the "Mahabharata" itself), describes them as finally returning to the neighbourhood of the Jumna. The date of the war described in the Mahabharata was probably in the fourteenth century before Christ. Once he entered the region of the Saura in Guzerat, as a conqueror, as he had before been compelled to seek shelter there, in defeat, on his flight from the king of Chedi, which obtained him the unenviable epithet of Rinchor, or fleeer from the battle field, though hindoos now appear to consider Rinchor a complimentary title, as under this designation they worship him in crowds. But he last visited this land in company with a few of his kinsmen, the remnant of that tremendous civil conflict which desolated India, to pass the remainder of their days in this insulated nook, in sorrow and repentance for the blood their ambition had shed, though in defence of their

rights. Thus, wandering from one *teerut*, or place of pilgrimage, to another, he with his friends, Arjuna, Yudishtra, the abdicated paramount sovereign of India, and Baldeo, approached the sacred soil around the shrine of Somnath. Having performed his ablutions in the holy Triveni, Kanya took shelter from the noontide heat under an umbrageous Peepul, and while he slept, a forester Bhil, says the legend, mistaking the padma or lotus-like mark on the sole of his feet, for the eyes of a deer, sped an arrow to the mark. When his kinsmen returned, they found that life was extinct. For a long time, Baldeo would not part from the corpse, but, at length, they gave it sepulture at the point of junction of three streams. A Peepul sappling, averred to be a scion of the original tree, marks the spot where the hindoo Apollo expired, and a flight of steps now conducts to the bed of the golden Hiranya, for the pilgrim to lustrate himself. This place of purification bears the name of Swargadwara or door of bliss, and contends with that of Devaputtan for superior efficacy in absolving from sin.

During the discussions prior to the battle described in the Mahabharata, Krishna, who was related both to the Kuru and the Pandu, tried to bring about a reconciliation, and he seems to have continued his efforts to restore peace throughout the eighteen days of the conflict, but he did not personally engage in the fight, and the only part of his career in which he is shown as personally brave is related in the legend describing his forcing an entry into Mathura, by breaking the bow of Siva, and raising a civil commotion in which his enemy, king Kansa, was killed. His great efforts in life were directed to reform the existing religion and to oppose the worship of Siva, then rising into considerable importance. The two gods, Indra and Agni, rain and fire, were the chief deities worshipped by the Vedic Aryans. Indra was the sovereign of the gods, the most powerful of the Vedic deities, the god of the firmament, the hurler of the thunderbolt, who smote the rain-cloud, and brought down waters, who delighted in the Soma juice, in eating and drinking wine, and in war. In Krishna's time, Vishnu and Indra seem to have been sharing the devotion of the Aryans as their great objects of worship, but Vishnu had many worshippers and was rising into importance. This seems proved by the circumstance that Kansa, king of Mathura, angry at the failure of his efforts to destroy the infant Krishna, slaughtered all the worshippers of Vishnu and all the male children and subsequently, when Krishna had induced the Yadava to discontinue the worship of Indra and transfer their devotions to the

mountain Govardhana, Indra is fabled to have caused a deluge of rain to fall, Krishna seems therefore to have thrown his influence against Indra and Siva. Amongst the earliest dissenters from Indra were the Yadu race under Krishna's influence. The reasons leading him to this are not known, but the Mahabharata make him say to Nareda, his father. Why worship Indra as the supreme god? O father! we are Vaisya and our cattle live upon the pastures, let us therefore cease to worship Indra, and pay our devotions to the mountain Govardhana. Up to that time it was to the heaven of Indra that the good who died proceeded. At the gate of the town of Mathura, called the gate of the bow, the bow of Siva was kept under the care of warders. Krishna entered by that gate to take part in the festival which king Kansa held, on the occasion of a great sacrifice to Siva. As he entered the gate of the bow, he took and broke it, slaying the warders. A popular commotion followed, during which the troops of king Kansa and Kansa himself, were slain. Krishna seems equally to have opposed the religion of the Takshac or Naga or Snake races who followed budd'hism according to the legend. It was in Bate or Beit or Pirates' isle that Krishna or Kanya, acted the part of the Pythian Apollo, and redeemed the sacred books, slaying his Hydra foe, the Takshac, who had purloined and concealed them in one of those gigantic shells whence the island has its name. This history of Kanya, or Krishna assuming the form of Vishnu, is allegorical. Kanya, as Vishnu, resembles the sun-god of the Egyptians in name as well as symbols. Kan was one name of the sun in Egypt and his eagle head is a well-known type. The races who supported the religion of Krishna are typified under his emblem Garuda, or the eagle; while their adversary, the buddhist, is figured by the Takshac, Naga, or serpent, a denomination given to the races of northern origin, which at various periods overran India, and of which were Taksiles (the friend of Alexander,) the site of whose capital is still preserved in the Memoirs of Baber, and the still more famed Takshac Salivahana, the foe of Vicrama. In the legend of the Yadu prince, Krishna, (himself a seceder from the faith of Buddha-Trivicrama to that of Vishnu, if not its founder) receiving the sacred volumes from his hydra-foe at this remote point of hinduism, as well as his first combat with him on the Jumna, we have but the continuance of the same sectarian warfare, in which Krishna was, in this instance, successful, driving them before him both in the north of India and here: but his title of Rinchor had been given on his defeat by Jarasindha, the

king of Magadha, of heretical faith. The Yadu race was one of the chief of the races of India or Chandra. The men followed the Buddha, or Jaina faith; in fact, Nemnath, or familiarly, Nemi (from his dark colour called Arishta-Nemi), was of the Yadu race, not only the contemporary but the very near kinsman of Krishna, they being the sons of Basdeo and Samadru, the elder and younger of ten brothers. Colonel Tod supposes the Yadu, to have been all originally buddhists, and of Indo-Gotic origin, as their habits of polyandry alone would almost demonstrate, and as the best informed of the Jains assure us that Nemnath, the twenty-second Buddha, was not only a Yadu, but the near kinsman of Krishna. He regards the Yadu, to be the Yute, or ancient Gete of the Jaxartes, amongst whom, according to professor Neumann from Chinese authorities, one of the shamanic sagos sprung, eight hundred years before Christ. Both Nemnath and Sham-nath have the same personal epithets, derived from their dark complexions, the first being familiarly called Arishta Nemi, 'the black Nemi,' the other Sham and Krishna, both also meaning 'dark-coloured,' and when this is not only confirmed by tradition, but the shrine of Buddha is yet preserved within that of Krishna at Dwarica, we have no reason to question that his faith, prior to his own deification, was that of Buddha. The allegory of Krishna's eagle pursuing the serpent Buddha, and recovering the books of science and religion with which he fled, is an historical fact disguised: namely, that of Krishna incorporating the doctrines of Buddha with his own after the expulsion of the sect from India. The Gulf of Kutch, the point where the serpent or 'Takshac' race attempted to escape, has been from time immemorial to the present day the entrepôt for the commerce of Sofala, the Red Sea, Egypt, and Arabia. There, Buddha Trivikrama or Mercury, has been and is yet invoked by the Indian mariners, especially the pirates of Dwarica; and whether Buddha or Mercury came from, or escaped to the Nile? whether Buddha Trivikrama be the Hermes of Egypt to whom the "four books of science," like the four Vedas of the hindoos, were sacred? the statues of Nemi, the representative of Buddha, exactly resemble in feature the bust of young Memnon, the buddhists appeared in the Guzerat peninsula, the adjacent Indian continent was the cradle of buddhism, and in Saurashtra are three of the "five" sacred mounts of the buddhist faith, i. e., Girnar, Satrunja, and Abu. It is however in the Bhagavata or eighteenth of the Puranas or old books, in which Krishna is described

in his complete apotheosis, and in that he is represented as the eighth avatar of Vishnu. The first Indian poet after Vedic times was Valmiki, author of the Ramayana, a complete epic poem, on one continued, interesting, and heroic action, and the next in celebrity, it is be not superior to it in reputation for holiness, is the Mahabharata of Vyasa. To Valmiki are ascribed the books subsequent to the Vedas, the sacred Puranas, which are called, the Eighteen, and which have the following titles:—1, Brahm, or the great one; 2, Padma, or the Lotus; 3, Brahmanda, or the Mundane Egg; 4, Agni, or Fire—(these four relate to the creation); 5, Vishnu, or the Preserver; 6, Garuda, or his Eagle; 7, the transformation of Brahma; 8, Siva; 9, Linga; 10, Nareda, son of Brahma; 11, Scanda, son of Siva; 12, Maricandeya, or the immortal man; 13, Bhawishya, or the predication of futurity—(these nine belong to the attributes and powers of the Deity); 14, Matsya; 15, Varaha; 16, Kurma; 17, Vamana, or as many incarnations of the Great One in his character of Preserver, all containing ancient traditions, embellished by poetry or disguised in fable. The eighteenth is the Bhagavata, or life of Krishna, with which the same poet is by some imagined to have crowned the whole series; though others, with more reason, assign them different composers, and they are differently arranged and named by other authorities. In the eighth avatara, Vishnu is said, by his sectaries, to have manifested himself in a degree of power and glory far exceeding any other of his forms: in which he assumed only an *ansa*, or portion of his divinity, while Krishna was Vishnu himself in mortal mould. Other tribes of hindoos call Krishna an impious wretch, a merciless tyrant, an incarnate demon, now expiating his crimes in hell. In the Bhagavata, it is mentioned that his votaries say that in this, as in his former descents on the earth, the object of Vishnu's appearance had been the destruction of giants, and the overthrow of oppressive and irreligious kings. The Bhagavata relates that his mortal parents were Vasudeva (meaning the giver of wealth) and Devaki: it mentions a miraculous escape of the infant over the Yamuna conveyed by his father, and protected by Sesha, or immortality. The guards placed by Kansa over his pregnant sister having failed in their vigilance, Kansa, enraged, ordered all newly-born infants to be slain; but Krishna escaped his various snares one of which was sending a woman, named Patni, with a poisoned nipple, to nurse him, and he was fostered by an honest herdsman, named Ananda, or Happy. Krish-

na, deified, is the shepherd Apollo of the hindoos, and his deeds, like those of Rama Chandra, have been sung by the noblest poets of the east. Krishna's names like other deified personages, are numerous. He being Vishnu, they enjoy several in common; Murari, Heri, Madhava, (Vishnu destroyed the giant Madhu) Bahgavan, are among them—Govinda, Gopala, Gokala, are derived from his occupation of herdsman; Gopinatha, the Gopi's god; Murlidar, the Tuneful; Kessu, Kesava, or Kesavi, refer to the fineness of his hair; Vanimali, to his pendant garland; Yadva, Varshueya, and Vasudeva, to his tribe and family. Gokal is a small town on the banks of the Jumna, below Mathura, and Radha, the mistress of Krishna was wife of a cowherd of Gokal. Hence one of Krishna's titles is Gokul Nath, lord of Gokul. Gokul, is almost an island, and is one of the prettiest spots in the holy land of the hindoos. The scene there is still as pastoral as it had been three thousand and five hundred years ago. Large herds of heavy-uddered kine remind us of the days of Nandi, though their number is far short of nine lacs, possessed by that shepherd-chief of old.

Madhu is, also, one of the poetical names of Krishna, viz., the intoxicator, from Madhva, strong drink, and Madhu, the bee, originating our mead. In the civil wars of his kinsmen, the Kuru and Pandu, when he sided with the latter, and shared their exile, he had thrown aside his Apollonic character of Murali, where, by the sounds of his pipe (Murali) he captivated the shepherdesses as he attended the kine in the pastoral Surasen, and had assumed that of Chacradhari, or wielder of the discus, the most ancient weapon of this Indo-Gotic race. Krishna is the greatest favourite with the hindoos of all their divinities. Of the sectaries who revere Vishnu, to the exclusion of the other gods, one sect almost confine their worship to Rama; but though composed of an important class, as including many of the ascetics, and some of the boldest speculators in religious inquiry, its numbers and popularity bear no proportion to that division of the Vaishnava sect, which is attached to the worship of Krishna, and the legends told of him are innumerable. At the age of seven, the legends relate, that he uplifted on the tip of his little finger, the mountain Goverd'hun, the hindoo Parnassus, to shelter the Gopa and Gopi from the wrath of Indra, the Jupiter Pluvius of the hindoo Pantheon, who, enraged with jealousy at the diminution of his votaries and sacrifices, consequent to the adoration of Krishna, attempted to destroy

them by a partial deluge. This story is represented in the Matsya Purana, whence Sir W. Jones has thus poetically introduced it in his hymn to Indra. The bard

— "smil'd, and, warbling in a softer mode,
Sang the red lightning, hail, and whelming rain
O'er Gokul green, and Vraja's nymph-lov'd plain,
By Indra hurl'd, whose altars ne'er had glow'd
Since infant Krishna rul'd the rustic train
Now thrill'd with terror. Them, the heavenly child
Call'd, and with looks ambrosial smil'd:
Then, with one finger rear'd the vast Goverd'hen,
Beneath whose rocky burden,
On pastures dry, maids and herdsmen trod:
The Lord of thunder felt a mightier god."

In pictures of this miracle, Krishna is always represented as a man, attended by his favorite mistress Radha, and sometimes by a multitude of shepherds and shepherdesses; the former with poles, steadying the uplifted sheltering mountain, a shower of rain and fire falling vainly on its summit. Krishna and his Gopis are also represented as well in their characters of Apollo and the Muses, as in those of the sun and the planets in harmonious movements round him; and this picture was formerly adduced in support of the idea, that the hindoos had a knowledge of the true solar system, a point that no longer requires proof. The colour of this deity is azure, and several animals and vegetable of a black or blue colour, are sacred. The metamorphosis of his fleet nymph into the lovely shrub, the tulsi or black oeymum, is related in a style perfectly Ovidian in the Puranas. Tulsi forms a pretty feminine appellation to this day; for, among the women of Hindustan, the beautiful, warlike, and amorous Krishna, is a most popular deity. Nareda, the mythological offspring of Saraswati, patroness of music, was famed for his talents in that science—so great were they, that he became presumptuous, and emulating the divine strains of Krishna, he was punished by having his vina placed in the paws of a bear, whence it emitted sounds far sweeter than the minstrelsy of the mortified musician. In a picture of this joke, Krishna is forcing his reluctant friend to attend to his rough visaged rival, who is ridiculously touching the chords of poor Nareda's vina, accompanied by a brother bruin on the symbols. The loves of Krishna and Radha, which, in the writings and conversation of the hindoos, are as constantly adverted to as those of Laila and Majnun by mahomedans, are said to mean, in their emblematical theology, the reciprocal attraction between the divine goodness and the human soul. They are told at large in the tenth book of the Bhagavat; and are the subject of the beautiful pastoral drama, entitled Gita Govinda by Jayadeva, who wrote before our era. This

poet, in describing one of the events of Krishna's life, in his amours with Radha, exclaims, "let him, then, if his soul be sensible to the raptures of love, listen to the voice of Jayadeva, whose notes are both sweet and brilliant. Bring home the wanderer (Krishna) to my rustic mansion, spoke the fortunate herdsman Nanda to the lovely Radha. The firmament is obscured by clouds, the woodlands are black with tamala trees; that youth who roves in the forest will be fearful in the gloom of night. Go, my daughter, bring the wanderer home, Radha sought him long in vain. She roved among the twining *vasantis* covered with soft blossoms, when a damsel to whom his wanderings were known, pointing out the infidelity of her lover thus addressed her: 'The gale that has wantoned round that beautiful clove plant, breathes now from the hills of Malaya. The full blown *cesara* gleams like the sceptre of the world's monarch, love, and the pointed thyrses of the *cetaca* resembles the darts by which lovers are wounded. See the bunches of *patali* flowers filled with bees, like the quiver of Smara full of shafts, while the *amrita* tree, with blooming tresses, is embraced by the gay creeper *atimucta*, and the blue streams of the Yamuna wind round the groves of *Vrindhavan*. A breeze, like the breath of love from the fragrant flowers of the *cetaca*, kindles every heart, while it perfumes the woods with the dust which it shakes from the *mallica* with half opened buds; and the *coeila* bursts into song, when he sees the blossoms glistening on the lovely *rasala*. In this charming season of youth, Heri (Krishna) dances with a company of damsels." The jealous Radha, however, gave no answer; when her amiable friend pointed out Krishna, with a garland of wild flowers descending even to the yellow mantle that girds his azure limbs; distinguished by smiling cheeks, enjoying the rapturous embraces of his fair companions. One presses him to her swelling bosom; another meditates on the lotus of his face; a third points to a *vanjula* bower. He caresses one, kisses another, and smiles on a third; while a fourth, under the pretext of hymning his divine perfections, whispers in his ear, "thy lips, my beloved, are nectar." Radha remained in the forest lamenting to a confidant the wanderings of her faithless swain. "I saw him, she exclaimed, in the grove with happier damsels, yet the sight of him delighted me. Soft is the gale that breathes over yon clear pool and expands the clustering blossoms of the voluble *asoca*, soft, yet grievous to me, in the absence of the foe of Madhu. Delightful are the flowers of the *amru* trees on the mountain-

top, while the murmuring bees pursue their voluptuous toil; delightful, yet afflicting to me, O friend, in the absence of the youthful *Cesava* (a name of Krishna.)" The festival of Huli, more classically called Hulica, otherwise Phalgutsava, meaning the festival of Phalguna, as occurring in the month of that name, commences about the full moon, at the approach of the vernal equinox. It is one of the greatest festivals among the hindoos, and almost all sects seem to partake in its festivities; and all ranks, from kings downward, appear animated by the season, which is peculiarly dedicated to Krishna. Images of the deity are then carried about in palki, and on elephants, horses, &c., attended by music and singing, and various antics. People of condition receive numerous visitors, who are entertained with dancing girls, music, singing, betel, and rose-water. An annual festival to celebrate the birth of this god, is held in the month Bhadra. On this day his worshippers fast; but, on the conclusion of the worship, indulge themselves in music, dancing, singing, and various other festivities. In the month *Shravana* another festival is held in honor of him, which lasts from three to five days, during which the same festivities prevail; to which is added the ceremony of swinging the image of the god in a chair, suspended from the ceiling. In the month *Kartika*, a third festival takes place to celebrate his revels among the Gopia; and in the month *Phalguna* is also held the celebrated festival of the *dolu*, the ceremonies of which last fifteen days, and are accompanied with great splendour and festivity. During these holidays the hindoos spend the night in singing and dancing, and wandering about the streets, besmeared with the *dolu* (a red) powder, in the daytime, carrying a quantity of the same powder about with them, which, with much noise and rejoicing, they throw over the different passengers they may meet in their rambles. Music, dancing, fire-works, singing, and many obscenities take place on this occasion. The Rev. Mr. Ward says:—"At these times, the grey-headed idolator and the mad youth are seen dancing together, the old man lifting up his withered arms in the dance, and giving a kind of horror to the scene, which idolatry itself, united to the vivacity of youth, could scarcely be able to inspire." Krishna is also worshipped under his infant form as *Gopalu* and *Balagopalu*, and again as *Goponatha*, the god of the milk-maids. In the picture of Krishna, observes Sir William Jones, it is impossible not to discover, at the first glance, the features of Apollo, surnamed *Nomios* or the pastoral, in Greece, and *Opius* in Italy,

who fed the herds of Admetus, and *slew* the serpent Python.

Krishna's favourite place of resort is a tract of country around Agra, and principally the plains of Mattra where Krishna and the nine Gopia, evidently the nine muses, usually spent the night in dancing. Major Cunningham believes that the worship of Krishna is only a corrupt mixture of buddhism and christianity, and was a sort of compromise intended for the subversion of both religions in India. Several of the legends in the mahabharata seem to have been written after the birth of Christ, whose miracles have been copied, and Krishna is made to straighten the crooked woman Kujja, which resembles the miracle of raising the bowed down woman. Amongst the goddesses of the hindoos, who once were mortals, are Seeta, the wife of Rama; Radha, the mistress of Krishna; Rookmani and Satya-bhama, the wives of Krishna; and Soobhadra, the sister of Jugunnatha. The stories relating to Radha, Krishna's favourite mistress, are familiar to every hindoo, being incorporated into their popular songs, the image of Radha being placed near that of Krishna in many of the temples.—*Wh. KRISHNA, a river in the Peninsula of India, rises in the Mahabaleshwar hills, among the western ghauts. After a straight course of forty-two miles, it flows in a southeasterly direction, until it receives the waters of the Warna river, a medley of streamlets falling from the mountainous ridges. Turning then more to the east, the Krishna gradually receives the added waters of four other rivers, and finally disembogues into the Indian ocean. See Kistnah.

KRISHNA, HIND. *Seesamum indicum*, also *Nigella sativa* or Indian Fennel flower.

KRISHNA AGARU, SANSC., TEL., or Agar, TEL. *Aquilaria agallocha*, R. Black agallocha. There appear to be at least three

kinds of agallocha or wood-aloes, the trees producing which are not fully identified. Roxburgh followed by Royle, admits doubtfully the existence of two—*Aq. agallocha*, R., and *Aq. ovata*, Cor., the Garo de malacca of Lam.; and an inferior sort is said to be derived from *Excoecaria agallocha*, which need not be taken into account. But Loureiro maintains that the best lign-aloe or calambac, which appears to be the 'ud-i-kimari of the Indian bazars is derived from a tree which he calls *Aloexylon agallochum*, Rozeb., and Royle considers the Malayan agila (whence probably is derived the Hindi aguru), the aquila and eagle-wood of commerce and the 'ud-i-Hindi of the bazars, to be the produce of *Aquilaria agallocha* which grows plentifully to the N. E. of Bengal, and that it is probably identical with *A. ovata*. Royle; *Ell. Fl. Andhr.*

KRISHNA CHANDANAM, SINGH., or Chandanam, TEL. *Santalum album*, L. Black sandal, probably referring to the heart of the tree which is the most prized for its scent and is more or less dark-coloured according to age. W., 219, under Kaleyana and Kaleyana says, "a yellow fragrant wood"—Sk. says, "sandal from the mountain Japaka" and quotes the Sans. Kalanu saraka, W. 218, where it is explained by Tagara Tabernemontana coronaria!

KRISHNA VRINTA, SANS. *Bignonia*
suaveolens, *Roxb.*

KRISHNA-KRORA, SANS. *Krora* sig-
 nifies the side.

KRISHNA-MOONG, BENG. Black gram,
Phaseolus melanospermus.

KRISHNA-TIL, BENG. *Sesamum majus*.

KRISHUN, HIND. *Iris pseudacorus*.

KRISS, HIND. The root of *Dioscorea del-*
toidea, is used in Cashmere to wash the cele-
 brated shawls; soap is used only for white
 shawls. The root is bruised and mixed with
 pigeons' dung, and when mixed with water
 the shawls of Cashmere are steeped in it.—
Simmond's Comm. Products, p. 574; *Hon-*
nigberger, p. 265; *Dr. J. L. Stewart*.

KRISS, MALAY. A weapon of the Archi-
 pelago, a kind of dagger. The Panjaug,
 Sepucal, Chinnukas, Toomboo, Ladah, Bladohe,
 Badoh, are commonly in use, and have their
 names according to their uses or qualities, as
 panjaug, long, sepucal, straight, &c.—*Hon.*
Colonel Cavanagh in Cat. Exhib., 1862.

KRISTNA, SANS. *Bergera konigii*, *Linn.*

KRITANJAYA, a hindoo sovereign of
 the Kali Yuga, the Iron or Fourth age, which
 commenced, according to one authority 3101
 B. C. according to Bentley, 8th Feb. 540.
 He was prior to Sakya, and was the first
 emigrant from Kosala (Oude) and founder of
 the Surya dynasty in Saurashtra.—*Vol. p.*
235.

KRITANTA, SANS. From *Krita*, done,
anta, end.

KBITA YUGA, an age, in hindoo theo-
 logy: there are four of these according to
 Bentley, viz.,

Krita or first, B. C., 19th April 2352

Treta or second, B. C. 28th Oct. 1528

Dwapur or third, „ 15th Sep. 901

Kali or fourth, „ 8th Feb. 540

The *Krita Yuga*, is the first, or golden age.
KRITHIE, GR., of *Dios*, *Hordeum hexas-*
tichon, *Linn.* Barley.

KRITTIVASA, SANS. From *Kritti*, the
 skin, and *vasas*, a garment.

KRITZ, HIND. *Cousinia*, *sp.*

KRIYA, the second degree in the Saiva
 system.

KRIYAT, HIND. *Ophelia elegans*, *Andro-*
graphis paniculata, *Wall.*, and other plants
 yielding *Chiretta*.

KRODHAGARA, SANS. From *krodha*,
 anger, and *agaru*, a house.

KROH, PERS. A coss.

KROMELA? *Gmelina asiatica*.

KROMO, a musical instrument of Java.

KRONOS, Ouranos and Moloch had attri-

KSHETRIYA.

butes similar to those of *Bel*, *Bal* and *Belus*.
 See *Infanticide*.

KROR, BENG. *Andropogon muricatus*.

KROR, HIND. Ten millions.

KRORA, HIND. *Rubus rotundifolius*.

KROR-GIRI, a Custom office, *Wils.*

KROSHTAMU, or *Bomma kachchika*,
 TEL. *Costus speciosus*, *sp.*

KROT, properly *Akrot*, HIND. *Juglans*
regia. Walnut.

KSHARA-KARDDHAMA, SANS. From
Kshara, ashes, and *Kurddhamia*, mud.

KSHEERA, SANS. Milk, from *Kshar*, to
 ooze out.

KSHETRIYA. Amongst the Arian hin-
 doos, a warrior branch of their body, taking
 social rank after the brahmins. Their name
 is from *Kshata*, a wound; and *troi*, to save.
 A not unusual spelling of the word is *Kshat-*
riya, but *Chetriya*, *Ch'hatriya* and *Chettrya*
 are not uncommon, and it is also written and
 pronounced *Khattri*, *K'hetri* and *Khuttri*. The
 third *Upa Veda* was composed by *Viswami-*
tra, and treats on the fabrication and use of
 arms and implements huddled in war by the
Chatriya tribe. The insignia of a student of
 this caste according to *Meun*, are thus alluded
 to in the *Uttra Rama Cheritra*, (*Hind. Th.*,
Vol. i, p. 347) on the approach of *Lava* twin
 son of *Rama*.

Janaka. Who is this youth that thus delights our sight?
Arundhati. Some *Kshetriya* lad who here awhile pursues
 His sacred studies.

Jan. You have rightly judged
 His birth; for see, on either shoulder hangs
 The martial quiver, and the feathery shafts
 Blend with his curling locks; below the breast,
 Slight tintured with the sacrificial ashes,
 The deer skin wraps his body; with the zone
 Of *Murva* bound, the madder tinted garb,
 Descending, veils his limbs: the sacred rosary
 Regirds his wrists and in one hand he bears
 The pinal staff, the other grasps the bow.
Arun. Whence comes he?

Brahmachari means a hindoo student in
 theology. All twice-born hindoos, i. e., the
Brahman, the *Kshatriya*, and the *Vaisya* are
 enjoined to spend the first quarter of their
 life in this state.

Hindoo writers give this branch of the
 Aryan immigrants the second place, the brah-
 mans being first, and the *vesya* and *sudra*, the
 third and fourth. In the rules of conduct for
 this branch of the Aryan race, the natural
 duties of the *Chetriya* are declared to be bra-
 very, glory, fortitude, rectitude, not to flee
 from the field, generosity, and princely con-
 duct. *Manu* says "to defend the people, to
 give alms, to sacrifice, to read the *Vedas*, to
 shun the allurements of sexual gratification;
 such are, in a few words, the duties of a
Chatriya." How this soldier-branch broke
 up is extremely obscure, but though most
 of the *Rajput* families are believed to be-
 long to them, it is now, however, generally

thought that none of the present races in India can trace their descent from the ancient race, whose constant wars amongst themselves and for others have exhausted them. If there be a doubt on this point, the present Rajput races may possibly be of the warrior Kshetrya, and undoubtedly take the Kshetrya place as soldiers, princes and rajahs. There seem to have been two branches of that part of the Aryan family that entered India : the Solar, who traced up to Ikshwaku, and the Lunar, who traced up to Budha, and Budha, married Ella, daughter of Ikshwaku. These soldier Aryans do not appear to have adopted brahmanism readily, and the brahmins, to overawe them, consecrated by fire on Mount Aboo, a warrior body who still remain, and are known, as the four Agnikula Rajput tribes, whose descendants still dwell in Rajputana. The third Upa Veda which was composed by Viswamitra, treats on the fabrication and use of arms and of the implements handled in war by the Chatriya tribe. The four Agnikula Rajput tribes are the Chohan, Solnki, Puar (or Prumar), and the Purihar. The unnamed progenitors of these races seem to have been invaders who sided with the brahmins, in their warfare, partly with the old Kshetrya, partly with increasing schismatics, and partly with invading Græco-Bactrians, and whose warlike merit as well as timely aid and subsequent conformity, got them enrolled as the Agni-kula or "fire-born," in contradistinction to the solar and lunar families. The Agnikula are now mainly found in the tract of country extending from Oojein to Rewah near Benares, and Mount Aboo is asserted to be the place of their miraculous birth or appearance. Vikramaditya, the champion of brahminism, according to common accounts was a Puar. A hindoo race calling themselves Khatri, is numerous in the Upper Panjab and about Delhi and Hurdwar, and they are found along the Ganges as far as Benares and Patna. These Khatri divide themselves into three principal classes 1, the Char-jati or four clans, viz. : Seth, Marhota, Khunna and Kupper ; 2, Bars-jati, viz. : Chopra, Talwar, Tunnahu, Seigul, Kukker, Meihna, &c. ; 3, Bawan-jat, or fifty-two clans, amongst whom are Bundari, Meindrao, Sehti, Suri, Sani, Unnud, Buhsen, Sohdi, Bedhi, Teehun, Bhulleh, &c. Inferior Rajput tribes, are settled in Bundelcund, and in Gurry Mandella. Others, according to Thevenot, are settled in Multan, as the original country of the Khatri, from whom he says the Rajputs are believed to spring. As soon as Alexander had crossed over to Taxila, on the east side, Ambisacres, king of the Indian mountaineers (supposed to be

the predecessors of the Ghikar,) sent ambassadors with presents to him : as, similarly, the chiefs of the Joudi afterwards made their submission to Timur, in 1398. After Alexander had crossed the Acesines (Chenab) and Hydraotes (Ravee), he appears to have been drawn out of the direct route towards the Ganges, to attack the city of Sangala, most probably being between Lahore and Multan ; but we are left by Alexander's historians in uncertainty as to its position. The name Sangala, occurs only in Arrian : and is said to have been a city of great strength and importance, in the country of the Cathi. Diodorus Siculus calls the same people Cathi, or Kathi ; and these may possibly be recognized under the name of Catry, of Thevenot, that is to say, the Khatri or Kshetrya tribe, Thevenot speaking of the people of Multan, says, "there is a tribe of Gentiles here, called Catry, or Rajput ; and this is properly their country, from whence they spread over all the Indies." Diodorus Siculus marks them by the custom of their women burning themselves alive, on the funeral piles of their husbands ; which continued a practice among them as well as some other hindoo tribes, down to the middle of the 19th century. We find by Arrian, that the Cathi were confederated with the Malli and Oxydraces, that is, the people of Multan and Outch, and which lay to the south-west of the place where Alexander might be supposed to cross the Hydraotes (or Ravee) in his way into India. That the Malli were the people of the present Multan, we can have no doubt, if we attend to the circumstances of the voyage of Alexander down the Hydaspes here. Before the arrival of the Aryan or Sanscrit speaking colony of the brahmin, Khetriya and Vesya races, the greater part of northern India was peopled by rude aboriginal tribes described by the Sanscrit writers as Mlecha, Dasya, Nishada, &c., and it is the received opinion that those aboriginal tribes were of Seythian or at least of non-Aryan origin. The Khetri, of the Panjab, is said by some authorities to be dissimilar to the Kshetrya of the Rajput. In the Panjab their avocations are looked upon as effeminate, but these writers and traders are not much inferior in courage and firmness to the ruder tribes, while they are superior in civilization, refinement and capacity for affairs : some of Runjeet Singh's best governors and ministers were of the Khutree race. Both Baluch and Affghan are, in truth, in their own country little better than freebooters, and the mahomedan faith has mainly helped them to justify their excesses against those of other persuasions and to keep them together under a common banner for

purposes of defence or aggression. But the Khutree and Uroa of their cities and towns are enterprising as merchants and frugal as tradesmen. They are the principal financiers and accountants of the country. And even yet, the ancient military spirit frequently reappears amongst the once royal "Kshatri" and they become able governors of provinces and skilful leaders of armies. The Kutthri of Berar claim to be Rajput, and to be of the ancient Kshatriya, though many of them are weavers of "nakki," "kor" and "kinara." In reality the Khattri of India, are a fragmentary people, from some ancient stock now untraceable, but spread all through India, and actively engaged in peaceful avocations. The late rajah Chundoo Lal was a Khetri.—*Rennell's Memoir*, pp. 123-133; *Records Government of India*, No. 2; *Gita*; *Capt. Cunningham's History of the Sikhs*, p. 22; *Wilson's Hindoo Drama*. See Khetrya, Khatri, Khetri, Vidya, Aryan, Chetrya.

KU or CU, SANS. Is a prefix, meaning 'evil'; Ku-mar, the evil-striker. Hence, probably, the Mars of Rome. The birth of Ku-mar, the general of the army of the gods, with the hindoos, is exactly that of the Grecians, born of the goddess Jahnvi (Juno) without sexual intercourse. Kumara is always accompanied by the peacock, the bird of Juno.—*Tod's Rajasthan*. See Kumara.

KU, HIND. *Celtis caucasica*.

KU, see India.

KUA, HIND. *Curcuma zerumbet*.

KUA-KA-NASHASTAH, also Tikkur, HIND. Arrowroot.

KUA KALANGU, also Kua-ninoo or Kua-mavu, MALEAL, TAM.? *Curcuma angustifolia*.

KUAME, HIND., of Lahore, species of *Onosma*, a root yielding a red dye, a black tapering root like a parsnip, with rough glabrous leaves, very like the allied genus *Anchusa*.—*Powell's Hand-book*, Vol. i, p. 447.

KUANG, see Cochín-China.

KUANO? Guana.

KUARA, see Jurkundaloo.

KUAY KALUNG; Kua koghai, MALEAL. *Curcuma angustifolia*, Roxb.

KUBAB, ARAB., PERS., HIND. Roast meat; little pieces of meat roasted on skewers of silver, wood or iron. Kubab are generally, in India, spitted on little slips of bamboo, though silver is often used. See Kabab.

KUBAB CHINI, HIND. Piper cubeba. Cubebs.

KUBAN, see Kabarda.

KUBAYRATCHIE, SANS. *Guilandina bonduca*, Linn; *W. & A.*

KUBBI, PERS. Ape.

KUBEEN, GER. Kubeu, Rcs. Cubebs.

KUBEER, also written Kabir, a celebrated hindoo Unitarian reformer, equally revered by hindoos and musulmans, founder of the sect called Kubeer Punthee, or Nanuk Punthee, from which Nanuk, founder of the Sikh, borrowed the religious notions which he propagated with the greatest success. Kubeer lived about A. D. 1430, he assailed at once the worship of idols, the authority of the mahomedan Koran and hindoo shasters, and the exclusive use of a learned language. He is said to have been a weaver, or a foundling reared by a weaver, and subsequently admitted as a disciple, by Ramanand. His religious views are very obscurely laid down, but the latitude of usage which he sanctioned, and his employment of a spoken language, have rendered his writings extensively popular among the lower orders of northern India. Another account makes Kubeer a mahomedan by birth, and a weaver by profession. His disciples may be either mahomedans or hindoos. On his death the mahomedans claimed a right to bury him, the hindoos to burn him, in consequence of which they quarrelled, and placed a sheet over the corpse, which, when they withdrew, according to a legend, they found the upper part of his body to be metamorphosed into a tulsee plant, the favourite nymph of Krishna, the lower part into rehan, an odoriferous herb of a green colour, the colour of the prophet Mahomed.—*Correspondence relative to Hindoo Infanticide*, p. 39. See Kabir, Kabir Panthi.

KUBEL, HIND. *Andropogon martini*, Roxb.

KUBEIS, the name of one of the holy mountains at Mecca, of which wonderful things are related, no meaning is assigned to the name.—*Vale, Cathay*, Vol. ii, p. 391.

KUBERAKSHI, SANS., or Padari chottu, TEL. *Bignonia suaveolens*, R.

KUBERA WANLOO, TEL. Common women.

KUBJAK, HIND. *Rosa centifolia*, *Rosa incerta*.

KUBJAKAM, SINGH., or Pariko gadda, TEL. *Trapa bispinosa*, L.

KUBLGIRA or Kili-katr, a tribe in the Southern Mahratta country, migratory, who act as ferrymen, and exhibit pictures of the Pandava heroes.

KUB-LO-WAH, BURM. *Laurus*, sp.

KUBO, is the name applied to the Shan race, in the Manipur language.

KUBO, a title of the secular emperor of Japan. See Kobo.

KUBTUCK, a river of Jessore.

KUCHA or Kut'cha, HIND. A term in general use to designate any thing improper

KUCHU-NAR.

or incomplete or of small value, in opposition to the word Puk'ha, meaning ripe, mature, complete.

KUCHA-BUNDI, HIND. Herbalists.

KUCHAN, HIND. Ephedra alata, also Asparagus punjabensis.

KUCHANDANA, HIND. Adenanthera pavonina, Linn., Willde.

KUCHANDANAM, SANS., or Erra-chian-danam, TEL. Pterocarpus santalinus, L. Sanderswood, also Adenanthera pavonina. Ku means "bad, inferior."

KUCH BAHAR, a small marshy district to the N. W. of Goalpara. The station is 348 miles from Calcutta. See Cutch Bahar.

KUCHCHEE, see Kabul, Derajat.

KUCHCHELA, TEL. Anthericum tuberosum, R. ii, 149; Phalangium tuberosum, Kunth; W. Ic.

KUCHERIAN or Amboosi, HIND. The mango fruit, dried and sliced.

KUCHIK, see Kelat.

KUCHILA, HIND. Strychnos nux vomica.

KUCHILA KE MULUNG, HIND. A parasite, Viscum monoicum, found on the Nux Vomica trees of Cuttack; a substitute for preparations of strychnine and an extremely powerful narcotic. Its powder is a powerful convulsive tonic, producing the same effects as the strychnine and brucine preparations.—O'Shaughnessy, Beng. Phar., p. 406, and Dis., p. 376.

KUCH-KOLE or Kishtee, HIND. A fu-quer's wallet.

KUCH-KUCHIYA, BENG. Papyrus tege-tiformis.

KUCHLA, BENG., DUK., HIND. Strych-nos nux vomica.

KUCHLA LUTA, BENG. Strychnos colubrina, Linn.

KUCH MARD A PAT, BENG., HIND. Corchorus olitorius.

KUCHNAL, HIND. See Koochnal.

KUCHINAR, HIND. Bauhinia variegata, Linn.

KUCHOO, BENG., PERS. Colocasia anti-quorum, also written Kuchu, Kuchwee.

KUCHOO GUNDUBEE, BENG. Homalo-nema aromatica, Schott.

KUCHOORA, also Kuchoor a shuthi, HIND., BENG. Curcuma zerumbet, Roxb.; zerumbet, long zedoary.

KUCHU GUNDUBI, BENG. Homalo-nema aromatica, Schott.

KUCHSA, HIND. A doubtful cucurbita-coous plant.

KUCHU, BENG. Colocasia antiquorum, Sch.

KUCHU, SANS. Hair. From kuch, to bind.

KUCHU-NAR, HIND. Bauhinia acumi-nata, Roxb.

KUDI-NIM.

KUCHUB, DUK, Kuchara, TEL, HIND. Curcuma zedoaria, Rose.

KUCHURI, BENG. Exacum tetragonum, Roxb.

KUCUDI NUNA, TEL., properly Kum-kudi nunay, Sapindus emarginatus. Soap-nut oil. See Oil.

KUCHWA or Coorma, synonymous terms, and indiscriminately applied to the Rajputs of Ajmer, meaning tortoise.—Tod's Rajas-than, Vol. ii, p. 351. See India, Rajput.

KUCHYAPA, SANS. A proper name; pa, means to drink.

KUCHWEE, BENG. Colocasia antiquo-rum.

KUDA, a Malay name for the horse.

KUDAKA DORNATTA, SINGH. Strych-nos nux vomica.

KUDALEEA, a river near Singeer Bael, in Comillah.

KUDALI, HIND. A pickaxe.

KUDALI, SANS. Plantains.

KUDALIA, HIND. Desmodium triflorum.

KUDALLA, SINGH. Leeches.

KUDAMAN, MALEAL. A class of predial slaves in Malabar, Wilson.

KUDAPALLI MARAM, TAM. Holar-rhena colaga.

KUDARI PASJAM-YENNAI, TAM. Oil of Sterculia fetida. See Oils.

KUDAVAN, TAM. A shepherd.

KUDDA MULLA, MALEAL. Jasminum sambac.

KUDDAR, a whitish coloured wood, not good, found from Sooree to Hasdiha in the Santal jungles. Planks are sawn from this wood, but it is not fit for any thing else.—Engineer's Journal, July 1860, p. 156.

KUDDIA-KHAR, BENG., also Tankan-Khar, GUZ., HIND. Borax.

KUDDMUL, HIND. Jasminum sambac.

KUDDOO, HIND. Cucurbita lagenaria. Bottle Gourd. This is grown at the com-mencement of the rains; a good soil is all that is necessary, requiring no further care.—Riddell. See Kaddoo.

KUDDOOT ALAIN, BURM. A large tree of Tavoy, used in house and ship building.

KUDDOOT-NU, BURM. An inferior wood of Tavoy, used in boat building.

KUDDU, GUZ., HIND. Helleborus niger.

KUDDUM, BENG., HIND. Nauclea cad-amba, Roxb.

KUDDUM, MAHR. Nauclea parviflora.

KUDEY-WAKLEE-WANLOO, TEL. The women of this caste dress their hair in a bunch on the right side of their heads.

KUDI, TAM. Basket.

KUDIA, a slave tribe in Coorg and Mala-bar.

KUDI-NIM, HIND. Bergera konigii.

KUDU-KUDUPPI-KARAR.

KUDI MAI, TAM., see Hindoo.
KUDIRE-PAL-PASHANAM, TAM. Red sulphuret of Arsenic.

KUDKEE, MAHR. *Hoccomlia montana.*
KUDMI, one of the two Parsi sects in India.

KUDNUZ, see Uzbek.

KUDOO, BENG. Pumpkin. *Lagenaria vulgaris*, *Cucurbita lagenaria* or *C. pepo*.

KUDUM, BENG., HIND. *Nauclea cadamba.*

KUDRA-JUVI, TEL. *Putranjiva roxburghii*, Wall.

KUDRA MUKHA, a hill on the Malabar coast with a resemblance to a horse's head.

KUDRAP-DUKHU, TAM. *Sterculia foetida*, Linn.

* **KUDRAT-HALVASSI, TURK.**

Musce, AR. | Guzanjabin, PERS.
 Ghezo, KURD.

Manna found on the dwarf oak, though several other plants are said to produce it, but not so abundantly, or of such good quality. It is collected by gathering the leaves of the tree,

*** The manna on each leaf did
 Pearled lie,

letting them dry, and then gently threshing them over a cloth. It is thus brought to market in lumps, mixed with an immense quantity of fragments of leaves, from which it is afterwards cleared by boiling. There is another kind of manna found on rocks and stones, which is quite pure, of a white colour, and is much more esteemed than the tree manna. The manna season begins in the latter end of June, at which period when a night is more than usually cool, the Koords say it rains manna, and maintain that the greatest quantity is always found in the morning after such a night. It is called in Turkish, Kudrat halvassi, or the divine sweetmeat; in Arabic, Musce; in Persia, Ghazangabin; in Koordish, Ghezo.—*Rich's Residence in Koordistan*, Vol. i, p. 142.

KUDRAY-WALI CHAMAY, TAM. *Panicum semiverticillatum*.

KUDRUM, of Behar, *Crotalaria juncea*, Linn.; also *Hibiscus cannabinus*, Linn., Roxb., W. and A.

KUDRUTTEE, HIND. Mushroom.

KUDSUMBAL, (white and red) HIND. *Canavalia gladiata*.—DC.

KUDSUMBAR, of Bombay, *Canavalia virosa*, W. & A.

KUDU-KAI MARAM, MAHR. *Terminalia chebula*.

KUDUKE PALLI, MALEAL. *Garcinia affinis*.

KUDU-KUDUPPI-KARAR, fortune tellers—the word comes from Kudu-kuduppy, a clapper.

KUEN-LUEN.

KUDULEE, BENG. Plantain tree, *Musa paradisiaca*.

KUDUMBU, BENG. The Shady *Nauclea*, *Nauclea cadamba*.

KUDUMI, TAM. A tuft of hair left on the crown of the head by hindooes. It is called in Sanscrit Sik'ha and seems to be the Sisoen of Lev. xix. and 27. It is cut off the head of a deceased hindoo by his son, as a preliminary to the further funeral ceremonies. The Greeks, Romans and Egyptians of old wore, and the Tartars, Chinese and hindooes now wear, this.

KUDUR, DUK., HIND. Frankincense.

KUDURU JUVVI or *Putra jivi*, TEL. *Putrajiva roxburghii*, Wall. Juvvi is applied to various kinds of *Ficus*—Kuduru, Br. 244, "a branch of a family" is almost syn. with putra, a son.

KUDUVALI VER, MALEAL. Root of *Plumbago zeylanica*.

KUEL, HIND. *Pinus excelsa*.

KUE-LA, GZ. Charcoal.

KUEN-LUEN, a mountain chain as seen from Sumgal in Turkestan is in lat. 36° 8' N., and long. 78° 5' E., and 13,215 feet above the sea. The Kuen-Luen, is the northern crest of the great range which bounds the high table land of Thibet. This range is the true watershed between India and Central Asia, the Indus absorbing all the streams which flow from the southern slopes of the range, while the northern rivers which form the Kara Kush force their way through or round the outer barrier of the Kuen-Luen, and wend northward to the Gobi or Sandy desert.

In the Kuen-Luen, all passes above 15,000 feet are closed in winter by the heavy snowfall. The following are the principal passes in India :—

1.—Dekhan.

Name.	Feet.	Name.	Feet.

8.—In the Alps.

St. Theodule	11,001	Old Weisssthor (a)	11,871
New Weisssthor (a)	12,136		

(a) These two passes cannot be used for practical purposes.

Trees grow very generally in the Himalaya up to heights of 11,800 feet, and in most parts there are extensive forests covering the sides of the mountains at but a little distance below this limit. In western Tibet, however, there is nothing at all corresponding to a forest. Apricot trees, willows, and poplars, are frequently cultivated on a large scale; poplars, indeed, are found at Mangnang in Gnari Khorsum, at a height of 13,457 feet, but they are the objects of the greatest care and attention to the lamas. On the northern side of the Kuen-Luen, are no trees at all, owing to the considerable height of the valleys. In the Andes, they end at about 12,130 feet, in the Alps, on an average, at 6,400 feet, isolated specimens occurring above 7,000 feet. The cultivation of grain coincides in most cases with the highest permanently inhabited villages; but the extremes of cultivated grain remain below the limit of permanent habitation. In the Himalaya, cultivation of grain does not exceed 11,800 feet, in Tibet 14,700 feet, and in the Kuen-Luen 9,700 feet. For the Andes, the limit is 11,800 feet, in the Alps, some of the extremes are found near Findeler, at a height of 6,630 feet, but the mean is about 5,000 feet. The upper mean limit of grass vegetation in the Himalaya is at 15,400 feet, in western Tibet, nearly the same level as for the highest pasture grounds, 16,500 feet, may be adopted; in the Kuen-Luen, grass is not found above 14,800 feet. Shrubs grow in the Himalaya up to 15,200 feet, in western Tibet as high as 17,000 feet, and in one instance, at the Gunshankar, even to 17,313 feet. On the plateaux to the north of the Kara Korum, shrubs are found at 16,900 feet, and, which is more remarkable, they occasionally grow there in considerable quantities on spots entirely destitute of grass. As an example, may be mentioned, amongst several others, the Vohab-Chilgane plateau (16,419) feet and Δ Bashmalgun (14,207 feet). In the Kuen-Luen, the upper limit of shrubs does not exceed 12,700 feet. Above this height grass is still plentiful, and shrubs being here, as generally everywhere else, confined to

KUFELZYE.

a limit below the vegetation of grass, the range presents an essential contrast in this respect to the characteristic aspect of the Kara Korum. The number of species of plants, as well as the number of individuals, is exceedingly limited in the higher parts of the Kuen-Luen. Richens are completely wanting in the dry angular gravel covering the high plateau, and the slopes of the mountains in their neighbourhood. The wild yak, the existence of which in the wild state, has been doubted, and the kiang, five to six species of wild sheep and goats, hares and mice, are found as high as 16,000 to 17,000. Two systems of cleavage are particularly regular in the central parts of the Kuenlun; the steeper one dips north 30 to 50° east, the other south 20 to 40° west. A hard crystalline rock occurs not unlike pudding-stone, which contained enclosures of spherical and angular forms, the quarries where the Yashem stone is dug are at Gulbagashen, in the valley of Karakash.—*Report on the Proceedings of the Magnetic Survey of India*, p. 9. See Arians, Karakoram, Yak.

KUEPHUL, HIND. *Myrica sapida*.

KUEVEA, TAM., a Ceylon tree which grows to about eighteen inches in diameter, and fourteen feet long. It is used by the natives in boats and house-work.—*Edey on the Timber of Ceylon*.

KUFA. The old, now decayed city of Kufa, founded by the kalif Omar, was constructed from the ruins of Babylon. Four miles to the westward, Meshed Ali stands conspicuous. Kufa, gives its name to the old form in which Arabic was written. The inscriptions on Mahmood's pillar at Ghuzni are in Kufic. Ali was buried at Kufa after his assassination.—*Mignan's Travels*, p. 325. See Kellek.

KUFA. The Kelek is not the only singular description of vessel, traceable to antiquity, that appears on these rivers of ancient celebrity. The circular bowl-shaped basket boat or "kufa," (so named from the Arabic word, which means basket,) is also used as the common ferry-boat. Its fabric is of close willow-work, well-coated and made waterproof with the bituminous substance of the country. It holds about three or four persons with room enough, though not in the most agreeable positions. It is moved by paddles across. Herodotus notices the different kinds of boats plying on the rivers of Babylon, mentioning them as composed of willows and the skins of animals; and adds, that on their arrival at the great city, the owners sold every material of the boat, excepting the skius and those they packed on the backs of asses, and carried whence they came.

KUFELZYE, more generally known as

KUHAK.

the Popolzye, an Afghan tribe, numbering 20,000 families, an offshoot of the Abdalli, one of the branches of which, the Suddozye, gave sovereigns to the Affghans in the 17th and 18th centuries.

KUFF, also Kuffee, **PANJ.** Chaptalia gossypina. The plant is a mere weed, from Simla to Lolon, and covers the whole of the unwooded hills in the very greatest profusion; 'kuff,' peeled off the leaves of the plant, is called by the puharries 'sokhta,' and they use it instead of tinder for their matchlocks, &c. The plant is exceedingly common in the Himalaya, and is found over their whole extent from Murree to Almorah, as well as Simla. When the leaves are damp and green, the 'kuff' is peeled off the back of the leaf with great facility and quickness. 'Kuff' would not make the stronger and larger kinds of paper, but it would be available for that of the finest and most delicate kind. The collection and disengagement of the down from the back of the leaf would cost little or nothing. The maximum number of leaves on each plant is 8, the minimum 3. A kunder or hill basket of leaves, weigh about 12 seers, cost one anna, and the product 1 lb. 2 oz. of the film; separating the film costs about one anna more, or 2 annas for 1 lb. 2 oz. In some cases the leaves get blighted by the mist and fogs, one-half the underside of the leaf will often be found of a brown tinge, and whenever this is the case the film will not separate. A seer of the leaves was weighed and the film separated, the product was $\frac{1}{2}$ of a chittak of film from 1 seer of the leaves, or, 2 lbs. avoirdupois gave $1\frac{1}{2}$ oz. of film; consequently 1 cwt. or 112 lbs. of the leaves would only produce 5 lbs. 4 oz. of the film, and 1 ton of leaves less than 1 cwt. of the film.—*General Cox, from Lieutenant W. A. Ross, (Bengal Artillery), dated Murree, 25th July 1858.*

KUFFIN, AR., HIND., PERS. A shroud.

KUF-GEER, HIND., PERS. A skimmer.

KUFL, PERS. Locks.

KUFNEE, or Alfa HIND. Fuqeer's dress.

KUFRA, HIND. Oreocseris languinosa.

KUFRA, a town, six hours from Sert, on the Bitlis road, in the district of Shirwan. The castle of Shirwan is only an hour from Kufra. In Rich's time, the bey was powerful and independent, and a younger branch of the Hassan Keif family and consequently an Eyubite or descendant of Saladin. There is a gold mine in Shirwan.—*Rich's Residence in Koordistan, Vol. i, p. 377.*

KUFRI, see Kirkook.

KUGHAI, MALAY. Curcuma angustifolia.

KUGINA, HIND. Rosa webbiana.

KUHAK, see Kelat.

307

KUKI.

KUHAON, in Gorakhpur, on a column is an inscription in imperfect Sanskrit with errors of orthography, of date not before tenth century. The character used in the inscription is the Gupta or Allahabad No. 2, a little before the Gaya alphabet. There is no invocation and no hindoo gods are named. Indra is mentioned; and the pillar records that five images of him are set up by the roadside. The naked figure on the column, backed by the seven-headed snake, is the same as one in the Buddha cave at Ellora. It mentions the death of Skanda Gupta, [of Allahabad?] 133 years before the date of the inscription, but the recorder of the inscription belonged to a wealthy private family. His name was Madra, and he put it up in honour of himself and family, son of Rudra Soma, son of Bhatta Soma, son of Amaila. Madra professes to be the friend and patron of brahmans, guru, and Yati; but there are not any hindoo gods named in the inscription, and all the naked figures cut on the pillar are evidently the same as are found in some of the caves of Ellora. The chances are, that the inscription, like the Gupta inscriptions of Allahabad and Bhitari, was cut on a previously existing buddhist column.—*Vol. vii, p. 32.*

KUH-I-NEMEK, or Hill of Salt, a mountain of singular appearance, described by various eastern authors.—*Ouseley's Travels, Vol. ii, p. 155, properly Koh-i-namak.*

KUH-I-SIAH, PERS. See Luristan.

KUHKRATZE, GER. Cowhage.

KUHNAR, the wild almond tree which grows in the south of Persia. Its fruit is something like that of the service (Sorbus) and is yellow when ripe, slightly acid and pleasant to the taste. When unripe it is green or red.—*Baron C. A. DeBode's Travels in Luristan and Arabistan, p. 253.*

KUHNI, HIND. Fruit of Careya arborea.

KUI or Kuji, HIND. Rosa brunonis; Gad kuji, is Pyrus variolosa; Tser kuji, is Prunus armeniaca; Ban kujru is Rosa macrophylla.

KUIRUB, BENG. Water-lily, Nymphaea lotus.

KUJOOR, HIND. Dates.

KUKAI, or Kuke, HIND. Flacourtia sapida, also Rhamnus persica.

KUKA TULASI, or Batsalla-kura, Allahabad, TEL. Basella alba, Linn.

KUKA WOMINTA, BENG. Cleome viscosa.

KUK'HA, a race in the north-western Panjab who occupy the rugged mountains along with the Bimba.

KUKHURA, HIND. Curcuma zedoaria, Rose.

KUKI, the country occupied by this people

307

K

KUKI.

lies to the south of the Garo, Kasia, and Mikir areas, or the hill ranges of Garo, Jaintia and Cachar in Sylhet, Tipperah and Chittagong among the mountains to the north east of the Chittagong province. There are new Kuki who came from the ruder parts of Tipperah and Chittagong, and their form of speech is not always intelligible to an old Kuki. The Manipur dialects and that of the new Kuki are mutually intelligible. In 1848-49, four Kuki tribes,—the Thadon, the Shingshion, the Chungsen and the Lungum, were driven into north and south Cachar and into Manipur, from their locations, by the Lushai people who speak a Kuki dialect and dwell further south. They were driven back by Colonel Lister and his Sylhet Light Infantry. He entertained the new Kuki as soldiers, and they are found to form good out-post soldiers on the frontiers of both the Lushai and the Angami, countries. The Looshai, however, are in their turn being pressed up northwards by another tribe still more powerful than themselves, called the Poi, who are approaching from the south-east. The hilly tract lying between Cachar and Chittagong, is inhabited by the Looshai, who claim and hold all the tract of country to the south of the parallel of the latitude of Chatterchoora hill, and east of Hill Tipperah to the Topai river is the Burmese frontier. Puthu is their chief deity, he is benevolent : and Ghumvishve is a malignant deity. The Kuki likewise worship the moon. They have no professed minister of religion. The Thempu, their priest and diviner, is not hereditary and his office is not coveted from fear of the initiatory rites. The Kuki occupy Sylhet, Tipperah and Chittagong, with an offset in Cachar who are called the old Kuki. Those in Cachar are skilful in the cultivation and weaving of cotton. The Cachar old Kuki are under 4,000 and are arranged into three divisions, the Rhangkul, the Khelma and the Betch. The Kuki are also called Luneta. They are little civilized, are of an active, muscular make, but not tall. The tradition of the Kuki respecting their origin is, that they and the Mug, are the offspring of the same progenitor, who had two sons by different mothers. The Mug, they say, are the descendants of the elder, and the Kuki, of the younger son. The mother of the younger having died during his infancy, he was neglected by his step-mother, who, while she clothed her own son allowed him to go naked. According to Coleman, the Kuki are all hunters and warriors, and are divided into a number of distinct tribes, totally independent of each other. The rajahships are hereditary, and the rajahs by way of distinction,

KUKI.

wear a small slip of back cloth round their loins ; and, as a father-mark of superior rank, they have their hair brought forward and tied in a bunch, so as to overshadow the forehead, while the rest of the Kuki leave their's hanging loose over the shoulders. Kuki are armed with bows and arrows, spears, clubs, and the dah, a hand hatchet, resembling the knife of the Nairs on the Malabar Coast and a most destructive weapon in close combat. They also wear round their necks large strings of a particular kind of shell found in their hills : about their loins, and on their thighs, immediately above the knee, they tie large bunches of long goat's hair of a red colour, and on their arms they have broad rings of ivory, in order to make them appear the more terrific to their enemies. The Kuki, are vindictive ; blood must always be shed for blood. The Kuki have but one wife ; they may, however, keep as many concubines as they please. Adultery may be punished with instant death by either of the injured parties, if the guilty be caught by them in the fact.

On the eastern frontier, the people are an entirely different race from the Kuki of the Chittagong jungles. The name by which they are commonly known is "Tipperah." In physiognomy some of them are like the Muniporee, but the greater part bear more resemblance to the Khasiah tribes having strongly marked Calmuk, or Mongolian features, with flat faces and thick lips, not in general shorter in stature than Bengali, and far more muscular and strongly made. Many of them, with fair complexions scarcely darker than a swarthy European. The villages contained perhaps from 100 to 200 inhabitants each, and each house is raised on bamboo piles 4 or 5 feet from the ground. On the death of a chief, the body is smoke-dried and kept for two months with the family. If a rajah fall in battle, they immediately proceed on a head hunting expedition and bring in the heads of those they kill, hold feasts and dancings and, after cutting the head into pieces, send a portion to each village. This is considered in the light of a sacrifice to the manes of the deceased. In the spring of 1871, they made several inroads into Assam, for the purpose as was alleged, of obtaining heads for the manes of a chief's daughter.

The Looshai dwell on the southern frontier of Cachar. In 1848-49, they drove up the Kuki, from the south, into Cachar. In their turn, they are being pressed up into Cachar, by the Poi, a tribe who are advancing from the south-east. The Looshai inhabit the hilly tract lying between Cachar and Chittagong, and claim and hold all the tract of country to the south of the parallel of the latitude of

Chatter Choora hill, and east of hill Tipperah to the Tepai river, is Burmese frontier.

Khum means a village, Khumia, a villager. The two tribes, Khumia and Kuki, occupy the hills of Sylhet, Tipperah and Chittagong, the Khumia on the skirts and the Kuki on the tops of the hills. The Kuki are the ruder or more pagan, though also tinctured with hinduism. They term their supreme being, Khojein Putiang, to whom they sacrifice a gyal, and an inferior one is named Shem Saq, to whom they offer a goat. Shem Saq is put up in every quarter of a village, in the form of a rude block of wood. Before this they place the heads of the slain, whether of men in war, or of animals of the chase.

•The Chumiah are located in the lower hills between the Kuki and the plains, to the north and east of Chittagong. Both tribes are described as having flat noses, small eyes and broad round faces, and to differ from the Naga in appearance, as in their customs.

If a Kuki man die at night his body is burned in the morning. Vegetables and rice are placed on the spot where the body was burned, and the relatives of the deceased address the ashes of the consumed corpse thus, "We bid you farewell to-day; whatever money and rice you have acquired, leave with us." On the following day friends resort to the deceased man's house, and offer up a sacrifice of a fowl to the gods Tevae and Sangron. Liquor is freely partaken of, the good qualities of the deceased are recited, and much lamentation is made. When a married man dies, all his friends assemble and bewail their loss. Vegetables and rice are cooked, and placed on the left side of the corpse with a gourd or bottle of liquor. Amongst the Beli clan of Kuki, soon after death the corpse is washed with warm water, and covered up with a cloth. The principal deities worshipped are called Tevae and Sangron, to whom fowls, pigs, and spirituous liquor, are offered in sacrifice on all occasions of sickness, famine, or other affliction, which they conceive is the surest method of averting evil and bringing their wishes and undertakings to a successful termination. The Kuki have no images or temples of any kind. The object of the Kuki inroads on the plains is not plunder, for which they have never been known to show any desire, but they kill and carry away the heads of as many human beings as they can seize, and have been known, in one night, to carry off fifty. These are used in certain ceremonies performed at the funerals of their chiefs, and it is always after the death of one of their rajahs that their incursions occur. The Kuki smoke dry the dead bodies of

the rajahs. After the death of a rajah, his body is kept in this state for two months before burial, in order that his family and clan may still have the satisfaction of having him before them. Should a rajah fall in battle by any chance, they immediately proceed on a war expedition, kill and bring in the head of some individual, hold feasting and dancing, and then, after cutting the head into pieces, send a portion to each village of the clan. This was done on the murder of the Kuki rajah by the Nimzæ Naga race. This is considered in the light of sacrifice to appease the manes of the deceased chief. The Kuki have been accused of cannibalism, and in one instance the charge seemed substantiated, but they disclaim the imputation with much vehemence. Nothing comes amiss to a Kuki—the elephant, rhinoceros, and beef, being equal delicacies.

The new Kuki clans are presided over by rajahs and muntrees, who decide all matters of dispute brought before them; and in such respect do they hold their rajahs that their word is law. One, among all the rajahs of each class, is chosen to be the Prudham or chief rajah of that clan. The dignity is not hereditary, as is the case with the minor rajahship, but is enjoyed by each rajah of the clan in rotation. The Kuki cultivate rice and cotton, but in a manner quite opposed to the system pursued by the Cacharee and Naga, the former of whom raise three crops of rice from the same land, and the latter four. The crop is not cut till November, whereas that of the other hill tribes is cut in August and September; their cotton is also very fine. Besides this they grow tobacco, and all the usual vegetables met with in the hills. The Kuki are described as short, muscular and active, with massive limbs, and are darker in complexion than the Chumiah. The men are powerful and hardy but turbulently inclined. Having been accustomed to war in their own country, they are exceedingly well suited for soldiers, and those that have been enrolled in the Kuki levy at Silchar have turned out well. They are also particularly modest and decent, each man living with his family in a separate house. The widows also live in houses of their own (in this respect like the Naga and Cacharee), built for them by the villagers. The men wear a large cloth, sometimes two, wrapped loosely round the body, and hanging from the shoulder to the knee. Underneath this they wear nothing, the whole body being bare, in which they consider there exists no want of modesty, as such has been their custom from time immemorial. The women wear a short striped petticoat, reaching from the

KUKUDU.

upper part of the stomach halfway down to the knee. Married women have their breasts bare, but all virgins are covered, wearing a similar cloth to the petticoat wound round the bosom underneath the arm-pits. They wear their hair prettily plaited at the back, the two ends being brought round in front and tied just above the forehead in the form of a coronet. Like all hill people, the Kuki are most dirty in their habits, very seldom washing their bodies. The sites of the Kuki villages are well-chosen on the broadest parts of the highest ridges, with water near at hand, generally a small hill stream. Some of the chief villages contain as many as 200 houses, commodiously built on platforms raised between three and four feet from the ground. Every part of the house is formed of bamboo, there being but few trees of any kind.

The *Bongzu* or *Bonzu* are said to resemble the Burman, but to be less strongly built and not so well made. The Khy-eng, Kumi, Ky-au Bonzu and Kuki vocabularies show that all are dialects of one language.—*Cole, Myth. Hind.*, p. 324 ; *J. H. Reynold's Embassy, Vol. of 1864 of B. A. S. KUL, AR., PERS., HIND. All.

KUL, KARN. One who pays revenue to Government.

KUL, BENG. *Rhamnus jujuba.*

KULA, the Portuguese name of a Ceylon tree, called in Tamil Kanugha. It is very heavy and close-grained, grows to about twenty-four inches in diameter, and eight feet high. The natives use it for general purposes, and for houses and vessels. It produces a fruit which they eat, and from which they extract an oil which is used as a medicine.—*Edye, Ceylon.*

KULA, or Kulla, PERS. Hat.

KULA, a family, a race, a tribe. Properly the got of a hindoo is his tribe and Kula is the race. But Kula, among the Rajputs means a tribe ; and corresponds to the Afghan kheil. Amongst the hindoos, there are three kinds of devata or deities to whom worship is given, the Gramma Devata or village god ; the Kula Devata, the race or household or family god ; and the Ista Devata, the patron or personal deity of individuals. Devata, Adhi-devata ; or primitive deity, Sthana devata, local deity. The Aryan hindoo does not recognize the village gods of Southern India, but the non-hindoo Turanian races, largely worship them, and even many of those Turanian races who have been converted to hinduism, worship them. They are mostly shapeless pieces of wood or stone smeared with vermilion, and mostly represent evil spirits or devils. These are the Amma, Ammun and Amoor of the eastern and southern parts of the peninsula, and the Satwai, Bhairo, Massoba, Chamanda, Asra, Ai and Marry-ai of the northern and western parts of the peninsula, all of whom are recognized as causing harm to individuals. In health, they are neglected, but when sickness occurs, either to individuals, or as an epidemic, these spirits of evil are worshipped with much solemnity, and bloody sacrifices are made to them of goats and sheep and bullocks and buffaloes. Gotra or Kula, mean a family, and existed amongst Kshatrya, Vaisya as well as Brahmans. Gotra depends on a real or imaginary community of blood and then correspond to what we call families. No hindoo house is supposed to be without its

KULANJAN.

tutelary divinity, but the notion attached to this character is now very far from precise. The deity who is the object of hereditary or family worship, the Kula devata, is always Siva, or Vishnu, or Durga, or other principal personage of the hindoo mythology—but the Griha devata or household god rarely bears any distinct appellation. In Bengal, the domestic god is sometimes the Saligram, sometimes the tulasi plant, sometimes a basket with a little rice in it, and sometimes a water jar, to any of which a brief adoration is daily addressed, most usually by the females of the family: occasionally small images of Lakshmi or Chandi fulfil the office, or should a snake appear, it is worshipped as the guardian of the dwelling. In general, in former times, the household deities were regarded as the unseen spirits of ill; the ghosts and goblins who hovered about every spot, and claimed some particular sites as their own. At the close of all ceremonies, offerings were made to them in the open air, to keep them in good humour, by scattering a little rice with a short formula. Thus, at the end of the daily ceremony, the householder is enjoined by Menu—3,90 “to throw up his oblation (bali) in the open air to all the gods, to those who walk by day and those who walk by night.” In this light the household god corresponds better with the genii locorum than with the lares or penates of antiquity.—*Wilson's Hind. Th.*

KULA ABBAAL? Laquis.

KUL AALIN NAR, MALEAL. Fibre of *Ficus mysorensis*.

KULAB, a hill state north of Badakhshan, its chief claims a Grecian origin. See Kabul, Kush.

KULAK of Java, a grain measure = $77\frac{1}{4}$ catty.

KULADHAN, HIND. *Conocarpus latifolius*.

KULAFEE, HIND. *Phaseolus trilobus*. Three-lobed bean. Sown like other native beans, *Riddell*.

KULAH ARKCHIN, HIND. Embroidered caps.

KULAIU, HIND. Land watered by a kul, or canal. See Kuli.

KULAI, HIND. *Phaseolus trilobus*.

KULAKA, SANS. *Nux vomica*.

KULAMBERI, SINGH. Calamander wood.

KULANG SEN, is an island south-west of Amoy, three miles in circumference, principally granitic.

KULANJI, also Siah Danah, HIND. *Nigella sativa*.

KULAN KOTE, the ancient site of Tatta.

KU-LA-PAI, BURM. *Cicer arietinum*.

KULANJAN, or Kulanjana, AR., HIND. *Kulanjoga*, SANS. *Alpinia galanga*, Swz.

KULEEJEE.

KULAR, a river of Seoni and Nagpore.

KULARA, HIND. *Viburnum foetens*.

KULASAIKERA, Arya Chakravarti, is found in Ceylonese history as the name of a great warrior who commanded an army sent by Kulasaikera, who is called king of the Pandians or people of the Madura country, which invaded Ceylon in 1314. The same name re-appears as if belonging to the same individual in or about 1371, when he is stated to have erected forts at Colombo, Negombo and Chilaw, and after reducing the northern division of Ceylon, to have fixed the seat of government at Jaffnapatam.—*Yule Cathay*, Vol. ii, p. 422.

KULAT, HIND. *Dolichos uniflorus*.

KULAWAN, HIND. of Simla, the small field pea, *Pisum arvense*.

KULBAGI, a tree in Canara, which grows to fifteen or twenty-five feet in height, and from twenty-four to thirty-six inches in diameter. It yields a close-grained, hard and durable wood, and is used by the natives at Mangalore and Honore for the keels and beams of vessels. It is of a dark colour, and is considered valuable.—*Edye, Forests of Malabar and Canara*.

KULBURGAH, a town in the Hyderabad dominions, in the centre of the Peninsula of India. It was the capital of the Bahmini dynasty (which commenced with Hassan Gao, A. D. 1347) and appears to have exceeded in power and splendour, those of Delhi, even at the most flourishing periods of their history. Kulburgah was central to the great body of the empire. It fell to pieces with its own weight, and out of it were formed four potent kingdoms, under the names of Visiapour (properly Bejapur), Golconda, Berar and Ahmednuggur; each of these subsisted with a considerable degree of power, until the Moghul conquest; and the two first preserved their independency until the time of Aurungzeb. The five monarchs of these kingdoms, like the Cæsars and Ptolemics, had each of them a name or title, common to the dynasty to which he belonged, and which were derived from the respective founders. Thus, the kings of Kulburgah were styled Bahmani, those of Visiapour, were styled Adil-Shahi; those of Golconda, Kutub-Shahi; and those of Berar and Ahmednuggur, Nizam Shah Bhairi and Amud Shahi.—*Rennell's Memoir*, p. lxxix; *Orme's Historical Fragments*, p. xxxvi.

KULEAH, PERS. Is a robe exactly similar to, but worn over, an Al-Khaliq.

KULEEJA, HIND. The liver.

KULEEJEE, HIND. The pluck, viz., the heart, liver, lungs, spleen and kidneys of animals.

KULIN.

KULERI, or Kalar, HIND⁵, of Rawalpindi, *Bauhinia variegata*.

KULFA, HIND. *Portulacca oleracea*.

KULFA ? Clove oil.

KULFA-DODAK, HIND. *Euphorbia helioscopia*.

KULFA-KA-TEL, HIND. Cassia oil.

KULFI RANG, HIND. Deep lilac colour, blue prevailing.

KULFUL, ARAB. Cassia tora.

KULGHARI BECHNE-WALA-JOGI, see Jogi or Yogi.

KULGULLY PASS, see Kelat.

KULHARI, HIND. *Saccharum officinarum*.

KULL, or Coolie, are labourers all over India, *W. W. Hunter*. See Koolee, Coolee.

KULI, HIND., of Bajwat and in Gurdaspur, land irrigated by a kul. See Kulahu.

KULIAN ? Galangal.

KULI BENGAN, BENG. *Solanum melongena*, *Linn*.

KULIGAM, see Kashmir.

KULI KHAN, also known as Tamas Kuli Khan, styled Nadir Shah, king of Persia. Invited by Nizam-ul Mulk, he invaded India in 1738, 1739, defeated and re-instated Mahomed Shah on the 7th June 1747. He was assassinated in Persia. Ahmed the Abdalla was his treasurer.

KULIMAH, AR. The mahomedan creed. It contains five sections, viz :

Kulima-i-Shahadat, the martyrdom-creed.

Kulima-i-Tumjid.

Kulima-i-Towhid.

Kulima-i-rad-i Kufr.

Kulima e-Tyub or Ty-eeb.

Kulma-i-Shahadat, means "I bear witness that there is no deity save God, who is the one and has no co-equal ; and I bear witness that Mahomed is his servant and is sent from him."—*Herk*. See Kalimah.

KULIMITAN, TAM. *Ocimum hirsutum*.

KULIN, a class of brahmins in Bengal, who are deemed by other brahmins to be of very pure descent and in consequence many are anxious to wed their daughters to them. As a result the Kulin men are great polygamists, and in the middle of the nineteenth century a pamphlet gave the following, amongst others :

	Age.	Number of wives.
Bhola Nath Bannerjee	55	80
Bhugwan Chatterjee	64	72
Purna Chunder Mookerjee	55	62
Mordu Sudu Mookerjee	40	56
Titaram Ganguly	70	55
Ram Moy Mookerjee	50	52
Boldo Nath Mookerjee	60	50
Shama Churn Chatterjee	60	50
Nobo Coomar Bannerjee	52	50
Ishan Chunder Bannerjee	52	44
Jodu Nath Bannerjee	47	41
Shib Chunder Mookerjee	45	40

KULLOOA.

Pundit Iswara Chandra Vidyasagar published a pamphlet, in Bengalee, entitled "Polygamy—Should it be abolished or not ?" Most of these marriages are sought after by the relations of the girls, to keep up the honour of their families ; and the children of these marriages invariably remain with their mothers, and are maintained by the wives' relations : in some cases, a Koolina father does not know his own children.—*Ward on the Hindoos*, Vol. iii, p. 268.

KULINJAN, DUK. *Alpinia galanga*.

KULIT, MALAY. Skin or leather. Kulit kaya, MALAY. Bark.

KULIT LAWANG, MALAY. The aromatic bark of a wild species of cinnamon, produced in abundance in Borneo. It is the *Cinnamomum kulitlawan*, but other varieties are also found. It was probably this plant which induced the earlier voyagers to imagine that the true cinnamon of Ceylon, which this much resembles, was found in the Archipelago. The bark is well-known for its clove-like aromatic flavour, and for the essential oil it produces, but which, is never extracted by the natives of Borneo.—*Lowe's Sarawak*.

KULIT MANIS, MALAY. Cinnamon.

KULJIKOON, GR., of Arabs. *Colchicum autumnale*, *Linn*.

KULKA SHINDA, BENG. Cassia sophera, *Linn*.

KULKUL, AR. Cassia tora, *Linn*. Habulkul, HIND., is the *Cardiospermum halicacabum*.

KULLA-BASALA-KIRE, TAM.

Oopodaki, SANS. [Potti Batsai kura, TEL.

Basella alba.

KULLAI, also Ranga, also Kathel, GUZ., HIND. Tin.

KULLAH-I-HAZARA, see Kush or Cush.

KULLA KITH MARA, CAN. *Ficus glomerata*, *Roxb.* ; *Willde*.

KULKURU, MAL. Beads.

KULLA, HIND. Heaps of grain thrashed in the open field preparatory to being divided and housed.—*Tod's Rajasthan*, Vol. ii, p. 63.

KULLAH, PERS. Literally a hat, applied by the Affghans to crowned heads also to hat-wearing natives of Europe. The use of the kullah of black lamb-skin is universal among the Persians.—*Ouseley's Tr*, Vol. i, p. 208.

KULLEE, a river near Seesghur in Bareilly.

KULLEYUM ? *Odina wodier*.

KULLI, HIND. *Euphorbia tirucalli*.

KULLIANI, SANS. *Celosia nodiflora*.

KULL MULLAH, MALEAL. *Bambusa arundinacea*, *Roxb.* ; *C. P.*

KULLOOA, BURM. *Cerbera manghas*, *Linn*.

KULSIAH.

KULLOO KOLI MIN, TAM. Holocanthus insperator.

KULLOOR or Belaspore. The raja of Kulloor had estates on both sides of the Sutlej. But the suannd given to raja Mooher Chund, in 1815, confirmed to him the eastern portion only. The family is Rajpoot. In acknowledgment of his services during the mutinies in 1857, the rajah received a dress of honour of Rupees 5,000 value, and a salute of seven guns. The revenue of this state is not less than Rupees 70,000. The population amounts 66,848.

KULLORA and Talpur, Sind tribes, which furnished its last two ruling dynasties. The Kullora trace their descent from the Abbaside kaliphs, and the Talpuri from Mahomed, but both seem to be Baluch, which are essentially of Jit or Gete origin. The Talpuri ("Tal" or "Tar," Borassus flabelliformis or palmyra, and "pura," a town) amount to one-fourth of the population of Hyderabad which they call Lohri or Little Sind. There are none in the Thul. The origin of the mahomedan Kullora and Sahrai is doubtful.

KULLUNG, a river near Kurrungee in Assam.

KULLUNGAN MATCHI, DUK. Whiting fish.

KULL VALEI MANNI, TAM. The seeds of *Canna indica*, Linn.

KULLYAGHY, a river near Bailda in Midnapoor.

KULLYHAIN, a plant, from the fibres of which, the Lepcha, near Darjeling, make rope.

KULKUSUNDA, BENG. *Smithia sensitiva*.

KULM, or Kalm, Guz., HIND., PERS. A pen. **KULM**, see Kabul.

KULM, a river of Bhopal.

KULMI DARCHINI, DUK. *Laurus cinnamomum*, rolled cinnamon.

KULM-LUTA, BENG. *Rivea bono-nox*.

KUL-MOOLLA, MALEAL. *Bambusa arundinacea*.

KULME-CHAK, BENG., or Kulmee sag, *Convolvulus resiliis*. Creeping Bind Weed. This grows wild; its leaves are eaten by the natives.—*Riddell*.

KULM-TRASII, PERS. Penknife.

KUL-MULLA, MALEAL. *Bambusa*; the Bamboo.

KULNAR? Gypsum.

KULONJI, HIND. *Nigella sativa*.

KULOOA, HIND. *Saccharum officinarum*.

KULOU-MIDVI, SINGH. Calamander wood.

KULRE, HIND. *Picea webbiana*.

KULSIAH, a Cis-Sutlej territory, has an area of 155 square miles, and a population of 62,000 souls, with a revenue of Rs. 1,30,000. The family came from the village of Kulsiah in the Manjha.

KULUMB.

KULT, HIND. *Dolichos uniflorus*.

KUL TEAK, Tectona grandis, var. A scarce variety of the teak tree, in the Wynaad about Sultan's Battery. It is considered superior to the common teak.—*McLvor, M. E.*

KULTI, BENG, DUK., Guz., HIND., MAHA. Gram or Horse Gram, *Dolichos biflorus*, or *Dolichos uniflorus*. *Dolichos biflorus*, the two-flowered bean, is grown in fields after the rains, and chiefly used for cattle; when given to horses it must first be boiled; they soon become very fond of it, and keep in as good condition as upon any other grain. The Bengal gram or chenna, is the *Cicer arietinum*.

KULU, TAM. *Dolichos uniflorus*.

KULU or Kullu, a hill state in the N. W. Himalaya. This province consists of the mountain basin of the Beas, and the west bank of the Sutlej. Sultanpoor, its capital, is elevated 4,584 feet. The chain bounding the Sutlej on the west, is considerably higher than that on its east bank, and is crossed into Suket, by the Jalauri pass, elevated 12,000 feet. The province of Chamba bounds it on the west, and the physical feature of Kulu and Chamba are similar. The poorer Kulu people wear only a blanket, wound around the waist and one end flung across the shoulders and pinned across the chest, men and women often dress alike, but the long hair of the women is plaited in one tress. The natives of Busahir, Sookeyt-Mundee and Kulu, in the Kohistan of Jhullundhur, have all sallow complexions and seem all of the same race. In the hills of Kullu and Kangra are the "Goojura" and "Guddi races," who cultivate little, and keep herds of buffaloes, and flocks of sheep and goats. They claim certain beats of the forests as their "warisi," or ancestral property, subject to the payment of pasturage tolls. The forests of the lower hills are apportioned out among the Guddi or shepherds of the snowy range, who, in the winter season bring down their flocks to graze. In the same manner, the Goojur with their buffaloes, take up divisions on a hill side, and carefully respect their mutual boundaries.—*Cleghorn's Punjab Report, p. 89; H. f. et T., p. 203.* See Ladak.

KULUMB, the name of several towns in the south of India. One of these, is Colombo, the seat of Government in Ceylon, which has a population of 40,000 people. It seems to have been selected by the Dutch from the proximity of the cinnamon gardens, for it has no other recommendation. It was visited by the Portuguese in 1505. It capitulated on the 16th February 1796. It is on the west coast of the island, in lat. 6° 56' N., long. 79° 53' E., and exports largely to Europe. Colombo is mentioned in Singalese historical

KUMAON.

annals so early as A. D. 496; the name is said to signify a sea port. This and Covelong, south of Madras, and Quilon of the western coast, are all the same name "Kulum."—*Horsburgh, Sirr.*

KULUMBU, BENG. *Cocculus palmatus.*

KULUNG, HIND. The Kulm fowl of the Bombay side of India, is the *Grus cinerea*, the European crane, the *G. vulgaris*, *Pallas*. It visits India in great flocks, but wholly disappears in the breeding season. It is also called the karranch.

KULUNGI VER, MALEAL. *Tephrosia purpurea.*

KU-LUNG-SOO, is an island opposite to Amoy, and commands the entrance to the harbour; for this reason, it was taken possession of by the British, at the commencement of the first China war, and retained until 1845.—*Sirr's China and Chinese, Vol. i, p. 844.*

KULUNJI, MALEAL. *Guilandina bonduc, Linn.*

KULUNJUN, BENG. *Alpinia galanga.*

KULUSH-NUR, BENG. *Panicum paludosum.*

KULUTU, SANS. *Dolichos uniflorus.*

KULU KAY NATH or Jhol Ke Ghurray, a matrimonial ceremony.

KULZUM or Colzum, the Red Sea or Arabian Gulf, represents the name of Clysma the ancient *κλυσμα*, situate at the northern extremity of a bay, in long. 63° 20', lat. 28° 50', according to Ptolemy. But the sea of Culzum, says Hamd Allah Cavvini, is likewise called Bahr Ahmar or the Red Sea. The Arabic adjective here used, Ahmar, must not be confounded with the proper name Hameir or Hamyar, bestowed by the Persian geographer on another gulf. Natives of India regard the Bahr-i-kulzum as the Caspian sea.—*Ouseley's Travels, Vol. i, p. 28.*

KUM, a town of Irak-ajami, between Teheran and Ispahan.

KUMAD, HIND. of Panjab. Sugar-cane.

KUMAKUS, Jav. Cubebs.

KUMALA? Diamond.

KUMALA, the son of Asoka: a legend regarding him proves the antiquity of the practice of placing eyes on the outside of buddhist temples. In a former birth, Kumala is said to have plucked the eyes from a Chaitya, for which he was punished by the loss of his own in the next birth, and because he then presented a pair of golden eyes to a Chaitya, he was afterwards born as the son of Asoka, with eyes beautiful as those of the Kumala bird, from which circumstance he obtained his name.

KUMAON, a province in the N.W. Himalaya, bounded on the east by the river Kali,

KUMARA.

which separates Kumaon from Nepaul; on the west by the Alaknunda branch of the Ganges, and its western feeder, the Mandakni; on the north by the axis of the Cis-Sutlej Himalaya, and on the south by the upper Gangetic plain. The elevation of the Terai at its base varies from 600 to 1,000 feet. The mountains of the outer ranges rise to 7,000 feet in many places, and in the interior attain to 10,000 feet, while still further north many rise to 20,000 and a few above 24,000 feet, and Nandadevi, 25,750 feet, the highest mountain west of Nepaul, is in this province. The loftiest, as elsewhere in the Himalaya, are never on the axis of the chain, but are still further north, and its great elevation may be judged of from the heights of the passes over it. Of these proceeding from the eastward may be mentioned the

Lankpya.. 18,000	Niti..... 16,800	Naina-tal... 6,500
Lakhur .. 18,400	Mana..... 18,760	Bhim-tal... 4,000
Balch..... 17,700	Almora... 5,560	

The vegetation of Kumaon includes fully two thousand flowering plants.

The Dom of Kumaon is now, merely an inferior caste dwelling amongst the general population. In the north of India, under the Himalaya and in the Kumaon hills, the Dom were once a considerable tribe. They are still a numerous helot section of the population, being in fact the only inferior class and ordinary labourers as well as artizans. The Dom are very black with curly hair and altogether aboriginal in appearance, the Dom or Domar in the labour-market of northern India take the place of the Mhang of the south of India. The Dom of northern India are rope, fan, basket and mat-makers. In Oude and Bengal the Dom are sweepers, and carry dead bodies. The Dom are also musicians. The Mirasi Dom are mahomedans and called Mir and Mirasi. The Bodo, Dhimal and other tribes inhabiting the mountains and forests between Kumaon and Assam, are styled Tamilian by Mr. Hodgson. He has done so on the supposition that all the aborigines of India, as distinguished from the Aryans, belong to one and the same stock, of which he considers the Tamilian of southern India the best representatives. And he has founded this supposition on certain general grammatical similarities which are common to the entire scythian group of languages.—*Campbell, pp. 16-124; Wils. Gloss.* See Khas, Polyandry, Sanitarina, India, Rawat or Raji, Hindi.

KUMAR, from the Tamil, also Sanscrit, for a virgin.

KUMARA is the hindoo god of war, and is supposed to be identical with Mars, the Roman god of war. Kumara was the son of Janavi (Juno), as Mars was the son of Juno,

KUMARI.

and, like as the Roman Mars was produced by the agency of Vulcan, so was Kumara by the hindoo regent of fire. Kumara has the peacock as his companion; and this bird was likewise sacred to Juno, and as the Grecian goddess is fabled to have had her car drawn by peacocks, so Ku-mara (the evil-striker) has a peacock for his steed.—*Tod's Rajasthan*, Vol. i, p. 596. See Ku.

KUMARA DEVI, Kumara Gupta, Kumara Pala, Kumara Sen, see Inscriptions.

KUMARI, or Komari, is a name of the goddess Durga, derived from the Tamil Kumar or Komar, and the Cape Comorin at the south of the peninsula of India is derived from this goddess. The author of the *Periplus* states that at the town of Komar, where there is a fort and a harbour, people came to bathe and purify themselves, for it is related that a goddess was once accustomed to bathe there monthly. Cape Comorin formerly ranked as one of the five sacred bathing places, and the monthly bathing in honor of the goddess Durga or Parvati is still continued, but the number of visitors to it is now very small.

KUMARI, CAN., of Mysore and Canara, this is the Ponnam of Malabar, the Punakad of Salem, the Chena of Ceylon, and the Tungya of Burmah, and is a rude system of culture followed in all the countries, wherein secluded tribes and others, clear parts of the forest. The kumari cultivators earn a cheap but wretched subsistence, and live in miserable huts, the Irular and Kurumbar races on the Neigherries, the Malai, also, on the Shevaroye, the Punam cultivators in Malabar, the kumari cultivators of Canara, and the Karen in Burmah, all endeavour to obtain a precarious subsistence by scattering grain after burning the jungle, and thus avoid, to them, the irksome restraints of civilized life. A hill side is always selected, and at the close of the year a space is cleared. The wood is left to dry till the following March or April and then burned. The ground is then sown with Italian millet, *Panicum italicum*, as also with rice, *Oryza sativa*. In Canara, the seed is generally sown in the ashes on the fall of the first rain, without the soil being touched by a plough. It is fenced and weeded, and the crop gathered towards the end of the year. A small crop is taken off the ground in the second year and sometimes in the third, after which the spot is deserted, for 7, 10, or 12 years, until the jungle grows sufficiently high to tempt the tribe to renew the process. In Ceylon, the Chena lasts two years, and includes the culture of chillies, yams, sweet potatoes, cotton, hemp, &c. About the middle of the nineteenth century in Bekal, the most

KUM FERROZ.

southern taluk of Canara, 25,746, or one-sixth of the rural population were engaged in it, but north of that taluk, it was carried on by the jungle tribes of Malai Kader and Mah-ratai to the number of 59,500. Kumari was then prohibited in Mysore and under great restriction in the Bombay Presidency, and the Madras Government, in 1860, prohibited it in Government forests, without special permission, which they commanded to be given sparingly, and never in timber spots. Mr. Cannan, a coffee planter of Wynaad, says that in a spot thus treated, only wood re-grows, unfit for any building purposes, and he had never been able to get coffee to grow on it.—*Dr. Cleghorn in Reports to the Madras Government*, 1858, &c., *Cleghorn Forests and Gardens of India*, p. 126.

KUMARI, BENG. *Aloe litoralis*.

KUMARIKA, SINGH. *Aloe indica*, *Royle*.

KUMARILLA, SINGH. *Aloes*.

KUMATHA, CAN. *Gmelina parviflora*.

KUMATI KAI, MALEAL. *Cucumis colocythis*.

KUMBA, HIND. MAHR. *Careya arborea*.

KUMBA, Tartar cavalry from Koko Nor.

KUMBAKA, in hindoo mythology, a rak-shasa, brother of Ravana.

KUMBAL or Kamala, HIND. Red powder from the fruit of *Rottlera tinctoria*.

KUMBALI, TAM. *Benincasa cerifera*.

KUMBANG, MALAY. *Rusa equina*, *Cuv.*, *Ham.*, *Smith*.

KUMBULU or Kambulu, TEL., also Sujilloo, TEL. *Pencillaria spicata*.

KUMBURANI, a tribe in Beluchistan. See Beluchistan, Kelat.

KUMEA, see Kuki, Ku-mi.

KUM FERROZ, a river, across which amir Azan Delemi, built the Bend-i-amir, or Bend-ameer. Aras, is a modern name of the ancient

Araxes, the **Awerma** of the Purans, now called **Kum Feroz**. It lavas the foot of the rock **Isakhr**. The snowy **Ardekan** mountains are the same with those which presented so formidable a barrier to Alexander's progress, and by whose slopes he descended into Persia, in his advance on **Persepolis**. Towards the north of **Armenia**, runs the **Araxes**, with its numerous tributaries. This river which at its commencement, owing to its many affluents, bears the Persian appellation of **Hazara**, springs from the side of the **Bin Gol**, or mountain of thousand Lakes, about 30 miles south of **Erzerum**, and nearly in the centre of the space between the eastern and western branches of the **Euphrates**. Its course, from its first spring near **Jebel Seihan**, is almost N. E. for about 145 miles through **Armenia**; when it turns eastward, being then near the frontier of **Kars**: this proximity continues for 110 miles. The sources of the **Aras** and those of the north branch of the **Euphrates** are about 10 miles from one another. According to **Pliny** (lib. vi., c. 9) those sources are in the same mountain and 600 paces asunder. In modern times, the north-eastern districts, along the banks of the **Araxes**, intervening between **Aderbijan** and **Georgia**, had been in general subject to the sovereigns of Persia.—*Pliny, lib. vi, c. 9*; *Malcolm's History of Persia, Vol. ii, p. 212*; *Journal of the Royal Geo. Society, Vol. vi, Part ii, p. 200*. See **Aras** also **Bend Amir**, **Fars**, **Iran**, **Tigris**.

KUMHAR, HIND.

Kumar, Beng.
Kumbakar, KARN.

Kumara vailu, TEL.

A potter.

KUMHAR, PANJAR. *Gmelina arborea, Roxb., Cor. Pl.*

KUMHIR, HIND.? A tree of **Chota Nagpore** with a hard, green timber.—*Cal. Cat. Ex. 1862*.

KUMHIR, HIND. Crocodile.

KU-MI also **Ka-mi**, a race in **Arracan**, in lat. 21° N., and long. 93° E., in the valley of the **Koladyn** river, which disembogues at **Akyab**. The **Kami** assert that they once dwelt on the hills now held by the **Khyen**. Their name seems the same as that of the **Khumia** of **Chittagong**. The **Kumi** of **Arracan** chiefly inhabit the **Koladan** and its feeders. The **Khy-oung-tha** and **Khu-mi** or **Kum-wi** (properly **Ku-mi**), of the middle basin of the **Koladyn**, belong to the **Burman** family. **Kumi**, **Khumi** or **Khum-wi**, are of the same race, but their language has some peculiarities. It has been partially examined by **Captain Latter**, who says it is evidently cognate to the **Bakhaing** form of the **Burman**. The majority of its words however are non-Burman. The **Kumi** are fair, with small features. The **Kumi** of **Chittagong**

believe that a certain deity made the world and the trees and the creeping things, and lastly 'he set to work to make one man and one woman, forming their bodies of clay; but each night on the completion of his work, there came a great snake, which, while God was sleeping, devoured the two images. At length the deity created a dog, which drove away the snake, and thus the creation of man was accomplished.—*Lubbock, Origin of Civil., p. 253*.

KUMMALAR, in the Malayalam country, an artificer. The **Ainkudi Kummalar** are the five artisan castes, the **Ashari** or **Carpenter**, the **Mushari** or **Brazier**, the **Tattan** or **Goldsmith**, the **Perning-Kollen** or **Blacksmith**, and the **Tol Kollen** or **Tanner**. These five castes follow the custom of marrying one girl amongst three or four brothers, and this **Kummalar** custom of three or four brothers marrying one girl, is followed in some parts of **Malabar** by the **Eeyoover**, **Juver** or **Teer**, **toddy-drawers**, and is partially also the custom of the **mahomedan Mapilla**, in taking the wife of a deceased brother. The **Kummalar** and **Teer** are sprung from the same race and in earlier times intermarried, and this may explain the similarity amongst them of this social practice. It is only in the taluqs of **Nidunganad**, **Kuttanad**, **Chowghat**, in some parts of **Vettutnad**, and a few adjoining spots in south **Malabar**, that a woman amongst the **Nair** is kept at the same time by two or three men, who are not brothers. Although the **Nair**, **Teer**, and other hindoo castes of **Malabar**, **Cochin** and **Travancore**, particularly the two latter countries, are thus more or less tainted, the practice of polyandry does not seem to have ever prevailed, generally, amongst the **Nair**, and many of the **Teer** of north **Malabar**, from **Kurumbraad** to **Mangalore**. But many **Teer** women, even there, admit to indiscriminate connection all races, of all castes and religions, without incurring any prejudice as to caste or loss in social estimation. The **Teer** women of south **Malabar** do not so readily yield themselves to this unusual practice. As this **Nair** custom is of interest ethnologically, the following description of it, by one of this race, **Kookel Keloo**, **Nair**, **District Munsiff** in **Malabar** is given from No. 48 of the **Madras Literary Society's Journal** of 1859, pp. 52, 53, 54. He says, "The **Eeyoover** or **Teeyer** (toddy-drawers) are a section of the servile class of people who, during the time of the **brahmans** and **Peroomals**, came to **Malabar** from **Ceylon** to earn their livelihood. It cannot, however, be accounted for, how they, in many parts, though not throughout the whole of **Malabar**, came to adopt the beastly custom of the **Kummalar** of the country, of a single girl, being married to three and four brothers ;

KUMMALAR.

and likewise in some parts of the country, where this sad custom is not so generally prevalent among them, the practice of taking their deceased brothers' widows for wives as the mussulman Mapilla do. It is only in the Talooks of Needoonganad, Cootanad, Chowghaut, and some parts of Vettutnad and a few adjoining spots in south Malabar alone, that a woman among the Nair is kept at the same time by two or three different men, who are, though, never brothers. It is, though, very possible that the Teeyer may have taken the idea from this latter error and themselves fallen into the other and more shameful one, or perhaps they observe the custom, as they in general are, as a document in its beginning shows, sprung from Kummalar or the Kummalar from them, through their then frequent intermarriages. The document calls them also Eeyoovahaiyer, a word equally low and contemptuous in Malabar and of the same meaning as the word Kummalar. Moreover, amongst the Nair of the whole of north Malabar (that is to say, from part of Cooroombranad as far as Mangalore), though sometimes unchaste practices occur in their families, yet, I can most confidently assert, that the above abominable custom of one woman being kept by two or three men at the same time, never in ancient or modern time was once known. A Nair, there, will, though, occasionally, marry two or three women in succession, if the first or second prove barren or all the children born, die, or from any other like cause or domestic difference. Many of the Teeyer also of that part of the country do in some measure follow the custom of the Nair; but the Teyette (Teeyer women), of the remaining Teeyer there, are notorious harlots and become the concubines of strangers of any caste or religion, and this without the least prejudice to their own caste, or any loss of esteem in society; on the other hand, any such act proved against any females of the other castes, subjects the person to excommunication from caste, banishment from society, and all religious advantages. The Teeyer females of south Malabar do not, though, so readily as those of the north, yield themselves to this disgraceful practice. Owing to the very great number of castes, and the peculiar and different manners and customs in various parts of the country, the superficial inquiries of most foreigners have led them into error and in their works they generally ascribe the same pernicious practices to all castes and parts of the country indiscriminately.

However the Nair, Teeyer and indeed all the other numerous castes of Malabar (including the Cochins and Travancore countries, these being indeed the most striking in this

KUMRA.

respect), are in some way or other in a greater or less degree of error; and reformation therefore is indeed much needed among them all. It is, though, very lamentable to find them dormant in their original state of depression and not seeking for reformation rather than growing blindly proud of their vain and different castes and privileges, and ready to run any risk even that of hazarding their lives, only to preserve their castes."—*Madras Lit. Soc. Journal*, pp. 52-4 of 1859.

KUMMARA BADDU, or Konda tamara, TEL. Smilax ovalifolium, R.

KUMMARA BADDU, or Dumpa, TEL. Dioscorea aculeata, L.

KUMMARA CHETTU, TEL. The word means the potter's tree.

KUMMARA POLIKA CHETTU, TEL. A certain tree, the potter-like tree.

KUMMARA PONUKU, or Ponuku, TEL. Gyrocarpus asiaticus, Willd.

KUMMEN, DAN. Cummin seed.

KUMMERBAND, HIND. A sash, a waist belt, a girder of the loins.

KUMMI, BURM. A Tavoy wood.

KUMMUL, HIND. Nymphaea rubra.

KUMMUL-SHAH, a mohurrum fuqeer.

KUMMINAN, MALAY. Frankincense; olibanum.

KUMMOON? Cuminum cyminum, Cummin seed.

KUMMOONKOO, MAL. Cubebs.

KUMONLY, a naddi or rivulet near Mirzapoor.

KUMPA, TEL.? Baskets, properly Gumpa.

KUMPAL, or Rendezvous island, on the west coast of Borneo, in lat. 2° 44' S., and long 110° 3' E., extends about 12 miles to the N. E., and is joined to the main by a chain of islands.

KUMPIL, is certainly of sufficient antiquity for mention in the Mahabharata. It is a place moreover of sacred resort amongst the Jains, where they annually bury an image of one of their Tirthankara, and has been immemorially established among them as a holy city.

KUM-QUAT, CHIN. Citrus japonica. A small species of Citrus, about the size of an oval gooseberry, with a sweet rind and sharp acid pulp. This fruit is well-known in a preserved state by those who have any intercourse with Canton, and a small quantity is generally sent to Britain as presents every year. Preserved in sugar, according to the Chinese method, it is excellent. Groves of the Kum-quat are common on all the hillsides of Chusan. The bush grows from three to six feet high, and when covered with its orange-coloured fruit, is a very pretty object.

KUMRA, BENG. Benincasa cerifera.

KUMYS.

KUMROO, also Kudima, HIND. Cucurbita pipo.

KUMROO, see Kunawur.

KUM-RUDI, men who have adopted the Chinese system of secluding themselves from the rest of the world.—*Baron C. A. De Bode's Travels in Luristan and Arabistan*, p. 22.

KUMRUK, DUK. Fruit of Averrhoa carambola.

KUMUDA, SANS., or Tella kalava, TEL. Nymphaea pubescens, Willd.; W., 23.

KUMULA, BENG. Kæmpfera galanga, Linn.

KUMULA-KAMANI, SANS. From Kumala, the water-lily, and kama, desire.

KUMULA NIMBOO, BENG. Orange, Citrus aurantium.

KUMUNI SIAH, ARAB. Cuminum cyminum. Cummin.

KUMULU, BENG. Indiau sacred bean or lotus, Nelumbium speciosum: properly Kamala.

KUMUNKUS, JAV. Cubebs.

KU-MURAD, see Kelat.

KUMURKI, BENG. Smilax ovalifolia, Roxb.

KUMUT or Bark Cloth, from the river Baram, supposed to be from a species of Artocarpus, is worn by the Kyan race when mourning their dead.—*Royle Fib. Pl.*, p. 341.

KUMYS, TARTAR. Ma-ju-tsiu, CHIN. The ordinary drink of the Tartars is 'kumys,' a spirit made of mares' milk. Mares' milk has 17 per cent. of solid matter and eight per cent. of sugar of milk, which renders it very liable to undergo alcoholic fermentation. They pour the milk into a large leathern vessel, and when they have got a considerable quantity, beat it till it begins to ferment like new wine. When it becomes quite sour, they beat it again violently and then draw off the buttery part. The fermented whey makes a brisk sort of liquor, with an agreeable almond flavour, very intoxicating to those not much accustomed to it. The Tartars also make, from goat's milk, a kind of butter, which they boil and keep for winter use in goat's skins, and though they put no salt in it, it never spoils. After they have taken off the butter, they boil the curd again to make cheese, which they dry in the sun, and which is as hard as iron; these cheeses they put into sacks for the winter store, and when the supply of milk becomes scanty, they put this hard sour curd into a leathern vessel, pour hot water upon it, and beat it till it liquifies; and with this acid drink they have to content themselves during the time of year so severely felt by pastoral nations. The Tartars live chiefly on

KUNAWAR.

their flocks, and the produce of the chase.—*Huc's Christianity*, Vol. i, p. 209; *Smith's Chin. Mat. Med.*

KUN, a language of India.

KUN, HIND. Edwardsia hydasica.

KUNACHI, HIND. Rubus floribundus.

KUNA GILI GICHCHA, TEL. Crotalaria oximensis, R., iii, 276, also C. neglecta, W. and A., 49?

KUNALI, HIND. of Multan, a vat in salt-petre-making.

KUNAR, PERS. Papaver somniferum.

KUNAWAR is usually divided into Upper and Lower Kunawar and includes the upper part of the Sutlej basin to the borders of Piti and Guge in Tibet. Its general direction is N. E. and S. W. It has two parallel bounding mountains. On the S. E. it is bounded by the Cis-Sutlej mountains and to the N. W. by the mountains of Piti. The mountains which descend from the two parallel bounding chains of Kunawar are very lofty. They are crossed in the usual route into Tibet by the Wernang pass 13,200; by the Runang pass 14,500; the Kuibrang in the north, across the Cis-Sutlej, is 18,300. The Shtul pass across the Cis-Sutlej leading to Simla is 15,560, and the Huanrang into Piti is 14,800. The passes to Upper Piti are more lofty. The bed of the Sutlej from 8,000 to 9,000 feet at the upper part of Kunawar, descends to 4,000 feet in Lower Kunawar.

In Lower Kunawar, the preponderating language is Hindi and is called Milchan, but the Bhot preponderates in Upper Kunawar. The Lubrung or Kanum and the Lidung or Lipa are varieties of the Milchan. In Sungnum, the word Theburskud is used to designate all variations from the regular form of speech. In Kunawar, budd'hism decreases in the central districts and disappears in the southern, where brahminism in an impure form occurs with local gods and irregular priests, every hill having its deota or genius. Polyandry is general in Kunawar from the higher classes to the lowest chamars, one family having one wife, the elder brother being the more special husband. It is called Koorpa. The tract of country belonging to Busebur, lies on both banks of the Sutlej, from lat. 31° 15' to 32° 4', and from long. 77° 50' to 78° 5'. It runs in a N. E. and S. W. direction, and the habitable part seldom exceeds eight miles in breadth. The mean number of inhabitants to a house in various parts of Kunawar is six. Polyandry, or a plurality of husbands, prevails, also, in Chinese Tartary and in the hilly tracts towards the plains. Besides this drawback on the increase of the population, there is another peculiar to Chinese Tartary and the adjoining countries; that is, celibacy, which is professed

KUNAWAR.

by numbers of the inhabitants; and in some villages the monks or lamas and nuns form almost half the population. A tribe of Hung-rung Tartars occupy 378 square miles.

Bootunt is a name given to the Tartars by the people of Lower Kunawar. They also call the Tartars Zhad, also Bhotiah, and their country is called Bhot and Bootunt. These Tartars differ greatly in appearance from the people of Lower Kunawar.

At all the elevated passes, there are a number of square piles of stones, called Shughar, upon which passengers usually place a piece of quartz, or attach rags to poles, which are fixed in the middle, there are also several Shughar on the neighbouring heights, sacred to the deota, or spirits of the mountains, who are supposed to inhabit the loftiest and most inaccessible points, especially where there is much snow. The Shughar at the passes are erected by travelers, but those on the higher peaks are commonly made at the expense of some wealthy pilgrim not much accustomed to the mountains, who has succeeded in crossing a pass which is reckoned an arduous undertaking by an inhabitant of the plains.

Square miles	2105	Population	9,863

The greatest part of Kunawar is occupied by vast chains of snowy mountains, inaccessible crags, or impenetrable forests. It was formerly under the dominion of a number of petty chiefs, of whom, there was almost one in each small district. The principal river in Kunawar is the Sutlej, which flows through it from one end to the other; the chief branch, or that which has the longest course, issues from Rawun Rudd Lake, better known by the name of Lanka, or Langa-Cho, the last word meaning a sheet of water. It runs within the Himalaya mountains for 280 miles, and the first part of its course is nearly W. N. W. for 200 miles, to clear the heads of the Ganges and its tributary streams; it then enters Kunawar, and winds considerably, generally in a south-western direction, but it

KUNAWAR.

often runs due south, and near where it leaves the Himalaya, its course is west for a long way. Within Kunawar, its length is about eighty miles, after which it still flows W. S. W. for 160 more through the hills, and before it enters the plains it makes several bold sweeps, and penetrates the low sandstone range at Roopoor. It washes the hill towns of Rampoor, Bilaspoor, and Makhawal, and its course from Roopoor to its junction with the Beah or Beas, at Hurreeke Puttun, twelve miles above Ferozepoor, is about 130 miles in a south-westerly direction. Its whole length thus far is 570 miles, 440 of which lie within the mountains.

The passes from Kunawar through the outer Himalaya range, are fifteen in number:

(a.) *Shatool*, 15,555 feet, leading from Rol to Utharabee. This pass is reckoned worse than most of the others, not on account of its elevation, for it is inferior in altitude to many of the rest farther to the east, but from there being almost fourteen miles without even a single bush for fuel. It is open part of June, July, August, September, October, and sometimes November.

(b.) *Soondroo*. From Tangno to Rasgramee, the people represent it as crossing two ranges, and say it was very seldom attempted, and was never open more than two months in the year; so it is probably little below 16,000 feet.

(c.) *Yoo-soo*, 15,877 feet, leading from Jangleeg to Rasgramee.

(d.) *Buorendo*, 15,171, feet, is the easiest pass in this quarter and most frequented; it leads from Jangleeg to Rasgramee, and is open seven or eight months. And during the rainy season almost all the snow dissolves.

(e.) *Neebrung*, 16,035 feet. (f.) *Goonas*, 16,026 feet. (g.) *Ghoosool*, 15,851 feet. From Chooara to Sungla of Tookpa. These three passes cross the top of the range within half a mile of each other.

(h.) The next is Roopeen, 15,480 feet, a very easy pass.

(i.) *Nulgoon*, 14,891 feet, is the lowest pass seen by Gerard, in the outer snowy range.

(j.) *Barga*. (k) *Lumbee*. (l.) *Marja*. (m.) *Seenga*. These four passes are contained in the space of little more than a mile; they lead from Sungla, Rakcham, and Chetkool, to Lewar of Gurhwal, and like Goonas. Neebrung and Ghoosool, are crossed in different months. Barga is reckoned lowest, so is probably little above 15,000 feet; it is chiefly travelled by the Sungla people, being on the direct road from that place. The others are most likely between 16,000 and 17,000 feet, and are frequented by the inhabitants of Rakcham and Chetkool.

(n.) *Sungla*, from Chetkool to Boorasoo of Garhwal, is reckoned lower than *Kimlees*, and may perhaps be 16,000 feet. The road is said to be generally bad, and is travelled for six months. There are three passes to the westward of *Shatool*, the *Jalsoo*, *Khealig* and *Soongree*, but they cannot be considered in the Himalaya, being from 2,000 to 4,000 feet below the circle of congelation. From the above account given of the passes, it will be seen that Mr. Fraser's saying there is no ghat for the conveyance of merchandise through the Himalaya, between Rampoor and Budreenath, is erroneous. The whole of these fifteen passes are almost as good as the Rampoor road, and many of them considerably better. Most of the passes to the eastward are said to be better than those mentioned: some of them are,

(o.) *Shear Garh*, a difficult pass.

(p.) Boorasoo to Chungsa, much snow, and rather difficult.

(q.) *Jannubee* to Chubrung, high, but very easy.

(r.) *Kedarnath*, said to be very difficult.

(s.) *Doomnees*, from Budreenath to Chubrung, the pass is high, there is much snow, but the road is good, and is travelled by loaded cattle.

(t.) *Birjee* pass, *Nectee* pass, *Dharma* pass, and *Joor* pass. These last four passes are travelled by cattle.

The passes leading from Kunawur to Chinese Tartary on the eastward, are six in number, all of which are practicable for loaded sheep.

1. *Chungsakhago*, from Chetka to Neilung, on the *Jankee* or *Jannubee* branch of the *Ganges*, a lofty pass, probably not under 18,000 feet.

2. *Koono* pass, from *Koono* to *Tunge*.

3. *Teedoong*, from *Charung* to *Tunge*.

These two roads are each about five days' journey, without an intermediate village, and like *Chungsakhago*, cross a high flat piece of ground.

4. *Keobrung*, from *Nisung* to *Bekhur*, five stages without a village. The road leads up the *Taglakhar* river for 3½ days, and is often difficult.

5. *Gangtung*, from *Dabbling* to *Bekhur*. This properly speaking, is not a distinct road.

6. From *Nungea* to *Shipke*, there are two roads:—1st. *Peeming*, the height of which is only 13,661 feet. Part of this path is very rugged in clearing the deep-worn glen of the *Oopsung* rivulet.

There are four passes leading to *Speetee*:

1. From *Pundrabees*,
2. *Taree* from *Wangpo*,
3. From *Leepe*, not ascertained.

4. *Manerung* from *Soongnum*, open three and a half or four months.

The *Kunawari* and *Tartar* races estimate the altitudes of the passes, by the difficulty of breathing they experience in ascending them. Those who cross the outer chain, attribute the symptoms from which they suffer to the noxious qualities of a poisonous plant; but the best informed, who are in the habit of traversing heights where there is no vegetation, know well that they are produced by the height alone.

In *Kunawar*, the greatest height at which rice that requires water has been observed, is 6,600 feet. There are other kinds, which are not watered, that grow at 8,000 and 9,000 feet, but what is produced in *Kashmīr*, which forms the chief subsistence of the inhabitants requires the fields to be laid under water, as in *Bengal*. In the higher parts cows are rare, and their places is supplied by the *Yak* of *Tartary*, described by *Captain Turner*; the male is called *Yak*: *Yag*, or *Yokh*, and the female *Breemo*; the produce between them and the cow is common, the male being named *Zo* or *Zofo*, and the female *Zomo*. The *Yak* are strong and hardy, and like cold places.

The inhabitants of *Kunawur* are generally of a dark complexion, but good-looking, and some of them have ruddy faces; they are well made and muscular, and their stature is from five feet five inches to five feet nine inches; they are frank, active, generous, hospitable and highly honourable in their dealings. The people are fond of dancing and singing, and they have several annual festivals, which they celebrate with a degree of joy scarcely known amongst other Asiatic nations. The greatest festival is called *Mentiko*, which prevails throughout the whole of *Kunawur*; it is held in the beginning of September, its origin is not known. All the people who are able to move leave their villages, and ascend the nearest hill, they proceed slowly, making a circuit of several days, and this is a time of the greatest festivity; they adorn themselves with garlands and flowers, and sing and dance to the sound of music, which is much more melodious than the tunes of *Hindoo*-*stan*; they have all sorts of amusements, run foot and horse races when the ground will admit of it, perform feats of agility, feast, and drink. The religion of the mass of the inhabitants is *hindooism*, but they have no minute distinctions of caste. They either burn or bury the dead at some distance from the villages, where they erect gravestones. Some of them profess the *Lama* religion; but that properly belongs to the *Tartars*. There are five different dialects spoken in

KUNAWAR.

Kunawar, of which Gerard got vocabularies of three. With the exception of compounds, which are easily distinguished, the words are monosyllabic or dissyllabic:

1st. The Milchan, or common Kunawari, which is most generally used.

2nd. The Theburskud, spoken at Soon-gum, is very different from the Milchan, and the infinitives terminate in bung and pung.

3rd. The dialect used in Lubrung and Kanum, in which the infinitives of verbs end in ma and na.

4th. That spoken at Leedung, where the terminations of the infinitives are eus.

5th. The Bhoteca, or Tartar.

The Milchan and Bhoteca are distinct tongues, and the same may almost be said of the Theburskud. The other two are dialects of the Milchan, and differ principally in the tenses of verbs, and cases of nouns.

The Tartar husbandmen have a custom similar to those of some of the Scotch farmers, who plait the first corn cut three-fold, and fix it over the chimney-piece till next harvest, when it is renewed. The Tartars use three ears of barley, which they paste outside above the door. At Nisung there was not a house in the village but was ornamented in this way. The Tartars are called by the Kunawar inhabitants of the lower parts, Zhad, Bhoteca or Bootunttee, and their country is often named Bhot and Bootunt; the Tartars are very different in appearance and manners from the inhabitants of Lower Kunawar; all those of Busehur were formerly under the Chinese. The Tartars of Kunawar are not so stout as those farther to the eastward, and have less of the Chinese features. The others are muscular, well-made, and tall; Gerard saw few under five feet ten, and many were six feet or more; their strong athletic forms were remarkably contrasted with the puny diminutive figures of his attendants, several of whom were inhabitants of the plains. Their countenance is ruddy, and they have small oblong eyes, high cheek bones, thin eye brows, and very few have either mustachios or beards, which they admire much. Many of them, especially from twelve to eighteen years old, are extremely handsome, of a very prepossessing appearance, and fine specimens of Tartar youth. The Kunawar people may be found as petty traders between Tibet and Hindustan in almost every hill state between Nepaul and Cashmere. The custom of several brothers having but one wife amongst them is universal. In appearance the Kunawari are taller but less robust than the Garwhali, and the men on the whole are better-looking, but the women are plainer. The women generally wear a striped woollen blanket wound round

KUNBI.

the body in such a manner that the plaits are all behind. It is confined round the waist by a long belt, and leaves the arms and one shoulder exposed. It is fastened on the bosom with an immense brass brooch, weighing nearly a pound. They wear, like the men, a round woollen cap. The portion of Kunawar in the Sutlej valley, from its turn at the confluence of the Buspa river, is rather unproductive. Grapes are the chief agricultural produce. The inhabitants profess to be hindoos, but their religion is highly tinged with the buddhism of Thibet. Garo, Garoo, Gartop, Sur, Yoogar, or Gurtokh, for it is known by all these names, is a collection of black tents inhabited by pastoral tribes for six months. In winter, the Tartars retire chiefly to Eagoong on the bank of the river, two stages down the stream, and the Chinese governors reside at the fort of Tuzheegung, where they have houses. Garo is the most famous mart for wool in Chinese Tartary, and there is a fair of 10,000 or 22,000 people in July, well attended by merchants from Kumaon, Koonawur and Ladak, and sometimes from Yarkund. Wool, borax and salt are the principal exports, and these articles are exchanged for the produce of the plains of India. The country about Garo must be very elevated, since the only productions are prickly plants and small tufts of short brown grass. It is the great summer mart of Gnari Khorsum. The pass over the range between Garo and the Sutlej is 19,200 feet above the sea. It is near the source of the Indus river. The Garo river is the Sing-ge-chu or Indus, also called there Gar-jung-chu, and there is no great eastern branch as some suppose. At Garo, according to Moorcroft, it is a very insignificant stream. —*Moorcroft's Travels*, Capt. Gerard's Account of Kunawar, pp. 3 to 144. See Indus, Kashmir, Kulu, Khampa.

KUNBA, HIND. *Lycoperdon gemmatum*.

KUNBALLI, CAN. *Allium cepa*, Linn.

KUNBI, a race amongst the Mahrattas, engaged in cultivation. They are also the main body of the cultivating population of Guzerat, where they are the chief owners of the soil, and though quiet and unpretending, are a robust, sturdy, independent agricultural people. Throughout the Mahratta country, Berar, Nagpore and Khandesh, they are the principal agriculturists. Mr. Campbell considers them (pp. 93, 94, 95) to be quite Arian in their features, institutions and manners, though their institutions are less democratic than those of the Jat and Rajput, and in the Mahratta villages they have at their head, a Potail. Few of the Kunbi ever enlist as soldiers. Sivaji and his des-

KUNBL

cendants and some of his chiefs were however of this race, but their followers, were drawn from the mawals of the western ghats, and latterly their armies were composed of the soldiers of fortune of every race. The Mahratta chiefs sprung from the people of Sattarah and Poonah, but Holkar was of the shepherd, and the Gaekwar was of the cowherd caste, while the Peshwa, who put the descendants of Sivaji aside were Konkani brahmans.

The Kunbi of the Hyderabad dominions are wholly illiterate. Indeed no effort or attempt has been made to educate the people of the Hyderabad territories. Though education is making enormous strides in Berar and in British Mahrashtra, there was no proper school met with in all the editor's journeys from 1866 to 1869 amounting to about 9,000 miles, and only occasionally a few lads were to be seen, children of foreigners, learning in a verandah, the elements of the hindi or mahratta. In that eastern part of the Mahratta country, the knowledge of reading or writing of any tongue was almost unknown. The Arjawn Kunbi reside in western India. Professor Wilson says, the Kulambi of Mahrashtra and the Kalmi of Guzerat are the same people, and adds that the Kunbi claim to represent the pure sudra of the hindoo system. They are, for the most part, an industrious and respectable race, and, amongst the Mahratta, reckoned the rajah of Satara, and other descendants of Sivaji, among their caste. They are subdivided into an infinite number of classes, many of whom do not eat together, or intermarry.

The Kunbi, in Berar, allot themselves into eleven classes :

Mali,	Haldi Mali,	Sagar,	Vindesa,
Full Mali,	Wanjeri,	Atole,	Pazni.
Jerat „	Gantadi,	Telale,	

With the exception of the Haldi Mali and Pazni, they have *roti vya whar*, amongst each other, but not *Beti vya whar* ; i. e., they eat with each other but do not intermarry. The Kunbi and Mali alone of the Sudra people are 834,588 souls in Berar. The Kunbi and Mali, eat flesh, drink liquor in moderation, and their widows may all re-marry if they choose, except those of the *deshmukh* who follow the high caste custom. The Kunbi in the Oomraoti district, are 254,098 out of a population of 549,082. They are in eastern Berar, cultivators and farmers. This term, throughout the Mahratta country and Central India is applied exclusively to the cultivating class of hindoo sudra. The Kunbi form the stock of the people of the north-western parts of the Hyderabad territory and in the Hyderabad assigned districts. The western parts of the Hyderabad territories receive the rains of the south-west mon-

KUND.

soon. The regur or Cotton soil is naturally very retentive of moisture and very fertile, and the country is well under cultivation, even the laterite hills are largely cultivated. The field crops grown are cereals, pulses and cottons. There are no cultivated grass fields or green forage for cattle, and these pick up the natural grasses, patches being left unploughed in the fields and by the roadsides. Throughout the Central parts of peninsular India, the cultivators regard hedges and trees as injurious to crops, which are annually enclosed by the branches of thorny trees, consequently when the crops are off the ground the whole territory has a treeless aspect, and in many places fire-wood bears a very high price. There are great tracts however, which could be beneficially planted with trees. Kunbi women are stout, coarse and robust. See Kumbhee, Kutch, Rajpoots, India.

KUNCH, BENO. *Abrus precatorius*.

KUNCH, HIND. *Mucuna prurita*.

KUNCH, or Koish, HIND. *Alnus nepalensis*, Himalayan alder.

KUNCH, HIND. *Viburnum fœtens*, Ban kunch, *Viburnum cotinifolium*.

KUNCHINI, HIND. A dancing girl, properly Kanchni. Kunchni ka Taifah, a band of dancing girls.

KUNCHI, also Muthi, HIND. A 'handful' the first is applied to grain in the stalk at harvest time ; the other to such edibles in merchandize as sugar, raisins, &c., collectively termed *keranoh*. Kunchi, means, also, any small quantity ; it is the Saxon, a puckle, the right of taking a handful at harvest granted to holy men.

KUNCHI-TAGAR, KARN. A tribe of agriculturists in Mysore claiming to be pure Sudra.

KUNCHRA, a river near Gorahbebee in Nagpore.

KUNCHUN, also Kunchoon, HIND. Species of *Bauhinia*, *B. acuminata* ; *B. purpurea* ; *B. tomentosa* ; *B. variegata*.

KUNCHURA of Rungpore, China grass.

KUND, ARAB. Jagree, sugar.

KUND, HIND. *Jasminum pubescens*.

KUND, or Ghoont, is a hill-breed of horses of the Himalaya mountains, generally small, strongly made, hard-mouthed, and sometimes almost unmanageable. In ascending hill faces, or passing along the declivities of mountains, it is best to let them have their own way, for in an intricate passage they often show more sagacity than the rider ; their common pace is a kind of amble, and they stop every now and then to breathe, when no application of the whip will move them ; they are sure-footed, and sometimes halt at

KUNDANA KOMOOLOO.

the edge of a precipice, to the terror of the rider; they are not so quick in ascending hills as the low country horses, but they descend with double the speed, and endure great fatigue. The Ghoont, though a useful animal, seldom carries any burden but a man, the total number in Spiti is 295; they are bred chiefly for sale. They have two breeds, one a small Ghoont, never above 12 hands high, peculiar to the country; and the other a large breed, from 13 to 13½ hands high, is bought from the Chinese, and usually comes from Choomoortee, for a Chinese ghoont two years old they give a Spiti ghoont four years old. All are equally hardy and are kept out the whole winter, except the yearlings, which are housed. During winter the ghoont live on the roots of the stunted bushes, and are very expert at scraping the snow from off them with their forefeet. The breed of ghoont might be improved with a little care. Many are killed during winter by wolves and leopards.—*Powell's Hand-book; Captain Gerard's Account of Koonawur*, p. 112.

KUND, or Ku, see India.

KUNDA, DUK., TEL. *Tacca pinnatifida*.

KUNDA, SANS. *Jasminum multiflorum*.

KUNDA or Koond, HIND. A pit; a hollow; a lake; a natural reservoir. Sita Kund is a sacred pool near Monghir, Brahma Kund is at the source of the Brahmaputra.

KUNDA, TEL. An earthenware pot.

KUNDA, HIND. *Cucurbita pepo*.

KUNDA FRAGARA? TEL. *Casearia esculenta*, *Roxb.*

KUNDA and Golaka are distinct words, the first being a bastard, the second the child of a widow. Kunda-golak is a term applied to the adulterous offspring of a brahman man and woman, but it is applied to brahmans of a low order.—*Wilson*.

KUNCUMA PESALU, TEL. *Phaseolus*.

KUNDAGU, TAM.? *Sinapis ramosa*, *R.*

KUNDA GURVA-TIGA, TEL.? *Smilax ovalifolia*, *Roxb.*

KUNDURU, HIND. *Coccinea indica*.

KUNDU PALE, or Hundu Pale, the fruit of a tree which grows to about eighteen inches in diameter and twenty feet high. Its fruit is eaten by the natives and by wild animals.—*Edye, M. and C.*

KUNDUR ROOMI, PERS. *Pistacia lentiscus*.

KUNDURU, TEL. *Boswellia thurifera*.

KUNDUZ, a small town of 500 souls in a marshy valley, about 40 miles south of the Oxus. It is surrounded on all sides by hills, and is so very insalubrious that the proverb runs, if you wish to die go to Kunduz. The chief of Kunduz, Murad Beg, ill-treated Moorcroft and robbed him of money and effects to the extent of 23,000 rupees. In 1830, he had occupied all the valley of the Oxus and ruled all the countries immediately

north of the Hindu Kush. It lies in a valley among the hills running from E. to W. about 30 miles, and from N. to S. about 40 miles, and the great mountain the Hindu Kush is visible, and Khulam, Heibah, Gori, and Indarab are subject to it. After passing Kunduz and Baghlan a traveller arrived at Andar (Andarab), where he says a city formerly existed which had altogether disappeared. Starting for the Hindu Kush (the name which he uses) they met with hot springs in which he washed, and lost the skin of his face in consequence. These were no doubt the hot springs of Sirab, near where the Passes of Tul and Khawak diverge in the upper valley of Andarab, and which are mentioned by Wood as having temperatures of 108° and 124° Fahr.—*Woods' Journey*, p. 413. See Kush, Kabul, Khulm.

KUNEE, MALEAL. Abrus precatorius.

KUNER, see Kohistan.

KUNG, a Chinese family, lineal descendants of Confucius, whose surname was Kung; the oldest and highest European families sink into insignificance before it. The great ancestor of the Kung lived 550 years before Christ, about 200 years after the foundation of Rome.

KUNGANI, HIND. Abutilon indicum, *Don*

KUNGEE KI PAT, LAT. Malva mauritiana.

KUNG-EVELKA, DUK. Nelumbium speciosum, *Willd.*

KUNG-FU-TZE, or Confucius, was the founder of the school of philosophy in China, which contains injunctions as to conduct, and may be termed the moral code of China, in which learning (*Wen*), courtesy, good breeding and propriety (*Li*), doing as you would be done by (*Shun*), sincerity in worship of the deity (*Tien*), are everywhere inculcated. He never claimed the possession of supernatural power, and invariably reproved all who attributed such to him. Every word he uttered has become, in China, a maxim, a proverb and an aphorism, and in the fact that his language is intelligible to every Chinaman at the present day, his inculcations are of greater power than the Latin or the Greek, both unknown to their descendants. Once he was asked, whether there were one word which represented all the duties of life, he answered "*Shu*," a word which Confucius and his commentators have explained to mean "as I would not that others should injure me so would I not injure them also." To seek the good of others equally with your own, is to fill a large portion of the field of virtue. At the time of his death, the number of his disciples was about 3,000, of whom about 72 were his more intimate associates. All his teach-

ing consists of a few simple words. One of his aphorisms, "Chu Chung sin," verbally, "Head, faithful, sincere," mean that fidelity and sincerity are the paramount or primary virtues. Another is that Wen and Li make up the whole sum of human excellencies. "Lun yu," judge others indulgently, yourself severely. Confucius was a sage and a statesman. Among his other celebrated literary labours, undertaken in B. C. 490 and the following years, he edited the Yih-king, and appended those annotations which have given the work its subsequent value. What philosophical views may have been attached to the Yih-king of Wan-wang and Chou-kung by the contemporaries of Confucius, we know not. That work, together with the other three works edited or compiled by Confucius, viz., the Shoo-king and the Le-ke, constitute the whole of the ancient literature of China which has come down to posterity, and who have it only, as it was explained, arranged or modified in passing through his hands. It is well known that he expressly repudiated portions of it, as containing doctrines adverse to the views which he held and strove to diffuse. The names only of some celebrated ancient books, one dating from the times of Fuh-he himself, have been preserved. It is these circumstances which constitute the labours of Confucius, the commencement of a distinct literary epoch. Apart from the labours of Confucius himself, the permanent literary results of this, the first of the two great philosophic or literary epochs of China, are contained in the collection of works called the Four Books, composed by different members of the school which he founded. The last contains a record of the ethical and political teachings of Mencius, (Meng-tse) who died in B. C. 317, and closed the first epoch. The Chinese people are in nowise prohibited from worshipping in the Buddhist and Taouist temples; in other words, they may regulate their purely religious life by the tenets of these, or indeed of any other sect. But where Taouism or Buddhism would leave the region of religion, and in the form of philosophy or morality, extend their direct influence into the domain of the social science and art, there Confucianism peremptorily and effectually prohibits their action. Not only are the national legislation and administration formed exclusively on Confucian principles, it is by them also that the more important acts of the private life of the Chinese are regulated, as for instance marriages. The cause of the prevalence of christianity and mahomedanism in China, in spite of discouragements, lies in the fact that Confucianism says little or nothing of a supernatural world or of a future existence. Hence

it leaves almost unsatisfied those ineradicable cravings of human nature, the desire to reverse and the longing for immortal life. That it has, notwithstanding its want of these holds on the human heart, maintained itself not simply in existence, but as the ruling system, is a fact that must, as soon as it is perceived, form for every true thinker a decisive proof of the existence of great and vital truths in its theories, as well as thorough soundness and wholesomeness in the practical rules which it dictates. By Chinese philosophy, must be understood Confucian philosophy; and by Chinese morality, the moral principles rooted in that philosophy. The works of Confucius, which are used by his followers, are called the "five canonical books," and are held in the greatest veneration, the whole tenor of these works indicate morality and sound political views; one political extract must suffice. "Let those who produce revenue be many, and those who consume it few; let the producers have every facility, and let the consumers practise economy, and thus there will be at all times a sufficiency of revenue." He was born n. c. 552, and died b. c. 479, aged 73 years. He and Lao Tze were contemporaries, Lao Tze was the founder of the Taoist or Reason sect. He was a hermit, an ascetic, who discouraged acceptance of public employment. He made reason the ground-work of his doctrines, and they had much to recommend them, but his teachings have merged into gross idolatrous rites, the study of astrology and necromancy, fanatical observances, self-inflations, such as dancing in flames, mutilating the body, practising abstinence and seclusion.—*Bowring*; *Sirr's China and the Chinese*, Vol. ii, p. 146. See China, Kung-Fu.

KUNGHI, GUZ., HIND. A comb.

KUNGGUN, HIND. A bracelet. Kung-gun kholna, a mahomedan ceremony.

KUNGI, HIND. Wheat-bligh or red-rust.

KUNGIA, BENG., HIND. *Urena sinuata*, Linn.

KUNGILIAM, TAM. *Bdellium*.

KUNGIYA, BENG. *Congea pentandra*.

KUNGNI, also Kungu, BENG. Millet. *Panicum italicum*, Linn. Italian panic grass.

KUNGOO-JOORIYA, BENG. *Helopus filiculmis*.

KUNGOORAY, small triangular lumps made of Thoollee.

KUNGOOYA, BENG. *Urena sinuata*.

KUNG-QUA, CHIN. A resting place for travellers, or rather for officers of Government in Lew Chew. The Kung-qua corresponds very nearly to the Turkish khan, except that, being used only by persons of some consideration it is far more neat and elegant in every

respect. The house resembles a private dwelling of the better class.—*American Expedition to Japan*, p. 189.

KUNGU, a peculiar kind of rouge in great request among the ladies of Sindh who keep it in a little ornamented box.—*Richard F. Burton's Sindh*, p. 392.

KUNGU, HIND. *Lycium europæum*.

KUNGUR, Kunjur or Chungur, a wandering houseless race in the Punjab, probably the same as the Chinganeh of Turkey, the Italian Zingaro, the Spanish Gitano, and the English Gipsy. About Delhi, the race is called Kunjur, a word which in the Punjab implies a courtesan dancing girl. See Zingarro.

KUNGWEL, HIND. *Nelumbium speciosum*, Willd. Kungwel ka gudda, its root.

KUNGYE, see India.

KUNHAN, a river at Matnee in Nagpore.

KUNI, MALEAL. *Abrus precatorius*, W. & A. Kuni vera, its root.

KUNICH, or Kunch, HIND. *Alnus sp.*

KUNJAD, HIND. *Sesamum orientale*.

KUNJANA, is the name given by mahomedans to a migratory tribe in the southern Mahratta country who style themselves Raj-yogni. They are of ordinary stature, dark-featured, and not well-favoured, and state that they came originally from Bhopal which their forefathers left 150 years ago. They encamp without the walls of cities, and have no definite period of residence. The men play on musical instruments, and the women combine the art of dancing to fascinate the spectators. They call themselves hindoos and say they worship the brahmanical deities, but they wear clothes like the mahomedans and never have brahmins to preside at their festivals. They also eat the cow, but never eat the hog. They bury their dead and they place offerings of rice to the manes of the dead, and draw the most favourable omen of the state of the deceased by the offerings being eaten by a cow.

KUNJAR, HIND. *Sageretia brandrethiana*.

KUNJED, PERS. *Sesamum orientale*, Gingelly seed.

KUNJEE or Kunji an oil of Jubbulpore, extracted from the seeds of a leguminous plant, cultivated in gardens, it is used externally in the treatment of itch, but is far inferior in its effects to sulphur. Internally, it is said to be poisonous in large doses.—*Dr. Wilson*; *J. B. Williams*, in *Cal. Cat. Ex.* 1862.

KUNJEERAM MARAM or Poison tree, *Strychnos nux vomica*.—*M. E. J. R.*

KUNJI, Ganji or Conjee, HIND. A porridge or caudle made by boiling wheat, rice, &c., in the south of India, a usual term for food: also starch.

KUNKUR.

KUNJI or Kunji tundhe, **HIND.** of Ravi, *Rhamnus purpureus*.

KUNJOO, a red powder made by steeping tumeric-root in an alkali, used in India for the forehead marks of the hindoos.—*Simmond's Dict.*

KUNJBA, **HIND.**, &c. A caste who sell vegetables.

KUNJU-LUTA, **BENG.** *Pergularia odora* tissima.

KUNJUR, or Chungur, see Kungur, Zingarro.

KUNJUR, a hawker of fruits and vegetables.

KUNKA-NUTI, **BENG.** *Amarantus atropurpureus*.

KUNKEE? ground-rice, or the scraps that fly off in pounding rice to separate it from the husks : qu. Kankri ?

KUNKER, a limestone deposited from water : very common in India. See Kunkur.

KUN KHAM, **AR.** *Gardenia lucida*, *Rozb.*

KUNKHOORA, also Kunchoor, in Rangoon, China grass ; *Rheea boehmeria*.

KUNKROL, **BENG.** Mixed bitter gourd, *Momordica mixta*.

KUNKS and Sumaserrie, rivers near Khurosh and Doorgapur in Nusseerabad.

KUNKUDU CHETTU, **TEL.** *Sapindus emarginatus*, *Vahl.* ; *R.*, ii, 279 ; *W. & A.*

KUNKUMA DONDA, or Nagadonda, **TEL.** *Byronia rostrata*, *Rottl.* Dr. Roxburgh's name refers to the scarlet colour of the fruit, from kunkumu, vermilion.

KUNKUMA PUVVU, **TEL.** *Rottlera tinctoria*, *R.*, also *Crocus sativus*, *L.* The Sanscrit names are Kāsmir jaman and Kavera, *W.*, 218, this is imported from Kashmir and sold in every drug-bazaar.

KUNKUR, a fresh water limestone, apparently peculiar to India, of very recent origin, some of it even now forming in the soil. Generally found in nodules, or small pieces. Its name is derived from a Hindustani word, meaning nodule. There are two varieties, the red and the white ; the red differs from the white, solely in containing a large proportion of peroxide of iron ; the white consists of carbonate of lime, silica, alumina, and sometimes magnesia and protoxide of iron. Kunkur is also deposited by calcareous waters abounding in infusorial animalculæ ; the waters of the annual inundations are rich in lime, and all the facts that have come under observation appear to indicate that this is the source of the Kunkur deposit, which is seen in a different form in the Italian travertine, and the crescentic nodules of the Isle of Sheppey and of Boulogne. Kunkur is a limestone, mostly nodular—always fresh water and

KUNNU KUTTI PILLU.

recent—in most cases in the act of being formed under our eyes. It is sometimes found in thick stratified beds like the travertine near Rome, and seems in this case to have been formed by calcareous springs : more generally it is met with in clay or alluvial soil, in the shape of small pieces from the size of peas or filberts to that of the hand. In the blue clay which stretches along the Indian shores, it is found in vast abundance generally assuming the most fantastic forms—indeed it abounds in every rice field and open soil all over the country. The more recent varieties seem to be formed by the agency of the rains : when the earth abounds with vegetation, the tepid waters are charged with fixed air and dissolve the lime prevailing in the soil everywhere around,—the mineral being again thrown down as the advancing season dispels the excess of gas. It in this state absorbs the clayey matter around and cements it into kunkur. This is collected by the lime-burner, placed with firewood in small-sized conical kilns, and burnt in the usual way. It contains 72 of carbonate of lime, 15 of sand, and 11 of clay and oxide of iron, but usually about 70 per cent. of carbonate of lime, about 2½ per cent. of carbonate of magnesia, a trace of oxide of iron and 10 to 20 per cent. of sand and clay. Mixed with half its weight of river sand it makes an excellent mortar, burnt in pieces of a cubic inch or so in size, and then powdered without slaking, it forms a first-rate water cement, setting in a few minutes, and becoming as hard as stone. Everywhere the finer varieties of kunkur are burnt with charcoal all throughout the country, in neat pigmy-looking kilns, 2½ feet high and about as much in diameter at the base. These hold about a cubic foot of material, or about 36 lbs. of charcoal and kunkur in equal parts. When burnt, it is slaked and then made up into bricks, which are sold in the bazaar for the purpose of whitewashing. The ordinary Indian cement is chunam in its various forms : the only Indian building materials, which differ materially from those of the rest of the world are laterite, concrete and kunkur.—*Col. Sykes, Lond. Geol. Trans.*, 1836 ; *Dr. Buist ; O'Shaughnessy.*

KUNKURA of Rungpore. China grass.

KUNKURI, **DUX.** *Cucumis sativus*. Kunkuri ke Binj ka-tel, **DUX.**, is the oil of *Cucumis sativus*, Cucumber seed oil.

KUNKUTA GANZALU, **TEL.** Soap-nuts.

KUNNADI, **TAM.** Glass.

KUN-NA-ZOO, **BURM.** *Heritiera minor*, *Lam.*

KUN-NE-AN, **BURM.** *Myristica*, *sp.*

KUNNU KUTTI PILLU, **TAM.** *Commelynna communis*.

KUPASSI.

KUN-NYEN-BEN, also Kun-Nyen-Si, BURM. Species of *Dipterocarpus*.

KUNOR, HIND. *Pavia indica*.

KUNRA PORA-BATUL, HIND. *Ipomoea pes-tigridis*.

KUNSH, HIND. *Alnus*, *sp.*

KUNSJURA, a river near Ramgurh in the Sabathoo district.

KUNTAKARI, SANS. *Solanum jacquini*.

KUNTAL, BENG. *Artocarpus integrifolia*.

KUNTALEE, a river near Susneer, in Sindhiab's territory.

KUNTAN, MAHA. A pander, a pimp, a caste said to be sprung from a vaisya-father and a brahman-mother, whose office is attendance on the women's apartments, and providing dancing girls and courtesans.—*Wilson's Glossary*.

KUNTENA CHETTU, or Kaki neredu, TEL. *Ardisia humilis*, *Vahl*.

KUNTH? *Cassava manioc*.

KUNTHA, a necklace or rosary of large beads made of silver, crystal, or the earth of Karbilla.

KUNTHANUM, MALBAL. *Santalum album*.

KUNTHI, BENG. *Areca catechu*, *Linn*.

KUNTI, wife of king Pandu, and mother of the five Pandava. Kunti is said to have been the daughter of Kunti-Bhoja, a chieftain of the Viudhya mountains and to have chosen Pandu for her husband at her tournament or swayamvara. The Bhoj tribe are said to be represented by the Dhar rajahs.—*Wh.*; *Hist. of India*, p. 66.

KUNTIKARI, BENG. *Jacquin's* nightshade, *Solanum jacquini*.

KUNTUK-PHAL, BENG. Jaka. *Artocarpus integrifolia*. The Jack-fruit tree.

KUNUKA, BENG. *Elretia umbellulata*.

KUNUK CHAMPA, BENG. *Ochua squarrosa*.

KUNURKA, BENG. *Commelina bengalensis*.

KUNZOOL GURRAIB, the title of a work.

KUPAISII, HIND. *Helicteres isora*, *Linn*.

KUPALABRIT, SANS. From kapala, the forehead or face, and bhri, to hold.

KUPALA, HIND. *Blitum virgatum*.

KUPAMENI, TAM. *Acalypha indica*, *L.* See Kuppa Mani.

KUPAS, HIND. *Gossypium*. Cotton, see Kapas.

KUPASI, HIND. *Helicteres isora*.

KUPASSI, HIND. A plant remarkable for the under-surface in its leaves being covered with a cotton-like tomentum; hence it is called kupassee, from kupas, a name of cotton. The people in the Himalaya use it as

KUPPI CHETTU.

tinder. It is also spun into thread and woven into cloth, of which bags are made. The string, until examined, looks as if formed of fibre. A coarse kind of blanket, called kurkee, is said to be made of this substance by the hill people north of Deyrah. This curious substance is not of much importance.—*Royle, Fib. Pl.*, p. 301.

KUPEIROS INDIKOS, GR. *Curcuma longa*, *Roxb.*; *Rheede*.

KUPE KIRE, TAM. ? *Amarantus polystachyus*, and *A. tristis*.

KUPFER, GER. Copper.

KUPFER VITRIOL, GER. Sulphate of copper?

KUPHONI, a river in the Kumaon Himalaya.

KUPI, TAM. An article of women's jewellery.

KUPI, BENG. Cabbage. *Brassica oleracea*.

KUPILA, HIND. *Rottlera tinctoria*. The dust from the capsule of the fruit is used to dye silk yellow: alum is used as the mordant. It is also considered in medicine as of a warm nature, also anthelmintic; given to children in butter-milk. Three or four massee are a dose, used in ointments for herpetic eruptions: two and a half seers for one rupee.—*Gen. Med. Top.*, p. 142.

KUPITHA, BENG., SANS. *Feronia elephantum*, *Corr.*; Elephant apple.

KUPOC, a Malayan grain measure.

KU-POOP? A tree of Akyab, grows to a large size, and is plentiful; wood used for making boats.—*Cal. Cat. Ex.*, 1862.

KUPOOR, HIND. Camphor.

KUPOOR KUCHREE, HIND. *Hedychium spicatum*.

KUPPA, HIND. A large vessel made of the intestines of the horse, chiefly to hold oil.

KUPPAM, TAM. A small village, a hamlet.

KUPPA MANHALA, CAN. *Bixa orellana*.

KUPPA-MANI, TAM., TEL., MALBAL. *Acalypha indica*. There is a plant of this name in Ceylon, with which cats are so enchanted, that they play with it as they would with a captured mouse, throwing it into the air, watching to see if it will move.—*Tennent's Sketch Nat. Hist.*, p. 33.

KUPPANTI CHETTU, or Murukonda chettu, TEL. *Acalypha indica*, *L.*

KUPPAS, HIND. *Gossypium*. Cotton, properly Kappas.

KUPPEI KIRE, TAM. *Amarantus tristis*.

KUPPER, GER. Copper.

KUPPHUL, HIND. A salt of soda obtained from the waters of the lake of Loonar, used in fixing the red dyes of cloth.

KUPPI, DUK. *Acalypha indica*, *L.*

KUPPI CHETTU, TEL. *Pimpinella ani-*

sum, *L. Anise*. The syns. in Sanscrit are *Awakpushpi* and *Karavi*.

KUPPOOR, see *Khatris*.

KUPPOOR-THULLA, a chiefship with a raja of the Sikh sect.

KUPRAIL, *Guz.*, *HIND.* Tiles.

KUPULA, see *Kattyawar*.

KUPURDIGURI, famed for an inscription which in language and import is the same as those of *Dhauri* and *Girnar*. See *Kapurdigiri*, *Inscription*, *Manikhyala*.

KUR, *PERS.* *Cyrus*.

KUR, occupying the *Gawilghur* range of hills are not *Gond*, but a branch of the *Kol* family.

KUR, also called *Muasi*, a hill tribe with a language quite distinct from the *Gond* being to the N. W. and W. of the *Mahadeva* hills.

The close relationship of the *Kur* and *Sonthal* and their separation from the *Dravidian*, are illustrated by a few examples:—

English.	Kur.	Sonthal or Kol.	Gond dialects.	Tam.	Telugu.
Dog	Sita; Chita	Seta	Nel	Nay	Kukka
Kar	Latur	Latur	Kavi	Kadu	Chaco
Hair	Op; Up	Up	Nelr	Muyir	Yentckalu
Nose	Mu	Mu	Muku	Mukku	Mukku
Belly	Lal	Lal	Pir	Wairu	Karpu
Fire	Singul	Singul	Narpu	Nerappu	Neppu
Water	Da	Da	Tanni	Tannir	Niru
House	Ura	Ora	Ron	Vidu	Illa
Star	Epal	Ipil	Sukum	Tareket	
Man	Koro	—	Manwal	Manidan	Manshi
Two	Barku	Bara	Rand	Iranda	Randu
Three	Akor	Apla	Mund	Mundru	Mura

The *Kur* or *Muasi* and the *Korku* or *Kurku* to the north-west and west of the *Mahadeva* hills are, in language, at least, quite distinct from the *Gond* tribes.

From the geographical distribution of the *Kol* and *Dravidian* languages, Mr. *Hislop* asks, "May we not conclude then that while the stream of *Dravidian* population, as evidenced by the *Brahui* in *Baluchistan*, entered India by the N. W., that of the *Kol* family seems to have found admission by the north-east; and as the one flowed south towards *Cape Kumari* (*Comorin*) and the other in the same direction towards *Cape Roumania*, a part of each appears to have met and crossed in *Central India*." This hypothesis, a *Reviewer* remarks, rests on the presence of the *Brahui* in *Baluchistan* a fact, however which is not inconsistent with the supposition that the *Dravidian* tribes may also have entered India from the north-east, or even across the *Himalaya*, as the *Kanawari*, *Newar*, *Chepang* and other tribes have done, while the *Kol* tribes were an offshoot from a latter horde, the main body of which entered the eastern Peninsula. The *Brahui* may have been driven westward from the upper *Indus* by the invading *Aryans*.

4. KUR, or *Kar*, a term in use amongst the

Mahratta and *Nair* races. Many of the principal *Mahratta* families derive their name from a compound formed from that of the village where they were born, and the substantive *Kur*, which signifies an inhabitant, as *Nimbal-Kur*, *Pattuu-Kur*, &c. *Kur*, in *Maleali*, means a class, a party. The people of *Malabar*, from the *rajas* and *brahmins* to the lowest races, are divided into classes, the *Chenara Kur*, the fighting or ruling class, and the *Panniyur Kur*, the civil and laboring class; their usages differ materially, and the distinctions are carefully preserved.—*Malcolm's Central India*, Vol. i, p. 142; *Wilson's Glossary*.

KUR, ARAB. *Colocasia antiquorum*, *Schott*.

KURA, TEL. Vegetables, greens.

KURA, MAHR. *Ixora parviflora*.

KURA, HIND. Panjab, Seed of *Holarhena antidysenterica*, *Wall*.

KURA, HIND. *Saccharum sara*.

KURAB, PERS. Is seen when looking on a plain covered with haze or mist, but not reflected as the mirage. It constitutes, however, that deceptive appearance for which the *Persians* have various names, such as *Kurab*, *Kivir*, *Namayesh-i-ab*, *Walah Serab*, &c.—*Ouseley's Travels*, Vol. i, p. 270.

KURACHEE LIGHTHOUSE, on *Munroo* point in lat. 24° 47' 20" N., long. 66° 58' E. From *Kurachee*, iron steam-boats run on the *Indus* to *Mooltan*, calling at *Beacon*, *Tatta*, *Hydrabad*. See *Karachee*.

KURAGU MANJAL, TAM. Bixa orellana, *Arnott*.

KURA-KURA, MALAY. A land tortoise.

KURAL, a celebrated poetical production in *Tamil*, treating of morals.

KURAL, HIND. *Hemidesmus indicus*, *Rheede*.

KURAL of *Chenab*. *Hedera helix*; the *Ivy*.

KURAL? *Ocimum sanctum*.

KURALEA, KARN. A shepherd race, who manufacture coarse woollens, *Wilson's Gloss*.

KURAMBAR, KARN. A shepherd race in the south of India, who tend sheep, also weave coarse woollens. The *Kurambar* women of the *Wynaad* and the *Chenchur* of *Masulipatam* and *Guntoor*, are said to have a similar costume. See *India*, *Curambar*.

KURAND, HIND. *Corchorus depressus*.

KURANDWAR, see *India*.

KURA NELLI or *Nelli*, TEL. *Premna esculenta*, *R.*, iii, 81.

KURANGANYASA, SANS. From *kara*, hand, *anga*, a part, and *nyasa*, to place.

KUBANJ, HIND. *Coruudum*.

KURANJ, HIND, MAHR. See *Honge*.

KURANJA or *Kuranju*, BENG. *Pongamia glabra*.

KURBA.

KURANJI VAMAM or *Kurasani vamam*, TEL. *Onidium diffusum*, DC. ; *Ligusticum diffusum*, R., ii, 92.

KURA PALLERU, TEL. *Vitis auriculata*, Wall., 145. *Cissus aur.*, R., i, 411.

KURA PASUPU, TEL. *Zinziber cassumunar*, R., i, 49.

KURA SANNA, HIND. *Berthelotia lanceolata*.

KURASKAI, HIND., PUSHTU. *Berberis aristata* and other species of *Berberis*.

KURATIYA JUBANEE, BENG. *Trichostylis jovanee*.

KURBA, the coal-bearing (*Damuda*) beds of Kurba extend for about forty miles to the eastward, as far as Rakkub in Udiapur (Oodeypore.) They also extend far to the south-east towards Gangpur, and to the northwards towards Sirguja, and in all probability are continuous, or nearly so, with the deposits of the same nature known to occur in these districts. Main Pat and the neighbouring hills, and all the country on the road from Main Pat through Chandargarh and Jashpur to Ranchi, consist of metamorphic rocks with the exception of a cap of trap and laterite on Main Pat. Indications of the existence of coal seams, were afforded by the occurrence of fragments of coal in the rivers, especially in the Mand, where were found a few seams near Chitra, twelve miles west of Rakkub and nearly thirty east of Kurba. Two or three are seen in the Mand, about three to four miles east-north-east of Chitra, but they are only from a foot to 18 inches in thickness. In a small stream, the Koba Naddi, which runs south of Chitra, one seam about three feet in thickness is seen near the village of Tendumuri, more than a mile south-east of Chitra. It is nearly horizontal, having a very low irregular dip to the west or south-west. Part consists of fair coal, the remainder is shaly. The only seam examined from which it is possible that a supply of useful fuel might be obtained, is exposed in the same stream rather nearer to Chitra, being about a mile from that village, close to the boundary of the village of Tendumuri, appears to be of considerable thickness, perhaps 20 feet, and the lower portion appeared to be fair in places. The dip is about 15° to the north-north-west. Lieutenant Sale, found a seam of coal about four miles north-west of Rakkub in a small stream running into the Mand, and this may be the source of the blocks in the river bed. Several coal localities are north of Kurba and Udiapur. The rajah of Jashpur told that coal occurred in his territory in the Khurea country, twenty-four miles north-west of Jashpur Nagar, about one hundred miles or rather more west by south of Ranchi.

KURBOOLAH.

KURBAJ, AR. A switch of dried and twisted hippopotamus hide, the ferule, horsewhip, and "cat-o-nine-tails" of Egypt.—*Burton's Pilgrimage to Meccah*, Vol. i, p. 80.

KURBAN, MALAY. A buffalo.

KURBAN, ARAB., PERS., HIND. A sacrifice. As might be supposed from the sacrificial rites amongst the Jews, allusions to such are to be found also in the New Testament. This occurs as the word *Curban*, Mark vii, 11. But ye say, if a man shall say unto his father or mother, It is *Curban*, that is to say, a gift, by whatsoever thou mightest be profited by me ; he shall be free. This word is equivalent to *Sadqa* or *Tassadooq* or *Fida*, and is often used by men or women addressing a superior, in which case it means merely, I am your sacrifice. The word is Arabic, derived from the Hebrew, has allusion to an approaching to God, and means a sacrifice, a victim, an offering, an oblation, for which also, we have the Greek *καρπομα*. The other words, in the Arabic, *Sadqa*, *Fida* and *Tassadooq* mark the continuance of the sacrificial rite. *Sadqa*, properly *Sadaqa*, from the Hebrew, means alms, propitiatory offerings and sacrifice. The words are continued into Hindustani, in *Sadqe-jana* or *Sadqe-hona*, to become a sacrifice for the welfare of another, and *Sadqe karna*, to sacrifice for the welfare of another. Mahomedans have two great *Kurban* or religious festivals, the *Bakr-Eed*, called also *Eed us Zoha*, also *Eed i Kurban*, which is held on the 10th *Zu ul Haj* in commemoration of the offering up of Ishmael by Abraham. The other is the *Eed ul Fitr* or *Ramzan ki Eed*, held on the 1st of *Shawal* at the close of the *Ramzan* fast. The three lesser *Eed* are the *Akhiri Char Shambah*, on the last Wednesday of *Safar*, when Mahomed in his last illness, felt a little better and bathed for the last time. The *Shab i Barat*, or night of recording is another, and it is held on the 16th *Shaban*. Other religious festivals are *Moharram*, *Bari-wafat*, *Miraj i mohammed*, *Charaghan i zandah Shah Madar*, *Charaghan i Banda Nawaz*, *Pir i Dastagair* and *Ooroos i Kadr-wali*.

KURBANA WANLOO, or *Buljera wanloo*, TEL., amongst the Teling races are migratory grain and salt merchants like the *Biujara* race.

KURBALA, the name of a place in Iraq where Hussun is buried. *Kurbala ka Maidan*, the plain where Hosein was slain.

KURBEE, HIND., the stalks, cut small, of the *sufaid Joar*, or *Saonulee*, the *Sorghum vulgare*, and in this state is extensively used for feeding cattle.

KURBOOR, BENG. *Curcuma reclinata*.

KURBOOZAH, HIND. *Cucumis melo*. Melon.

KURD.

KURCHI-WANDLU, TEL. An out-caste people in southern India, who are engaged in mat-making.

KURCHOORA, BENG.

Shootees, HIND.
Zedoaris longa.
Long zedoary.

Kurcukma zerumbet, Roxb.
Fl. Ind., Vol. 1, p. 20.

A plant of the East Indies, stemless, roots palmate and tuberous, pale-yellow internally, smell pleasant and camphor-like, taste aromatic and bitterish. This is the long zedoary of pharmacy.—*O'Shaughnessy*, p. 648.

KURD. This people is supposed by Dr. Latham to be identical with the Karduchi of the Anabasis. Merv is held by the Kurd. Nomade Kurd tribes, occasionally occupy the elevated valley of Dasht-i-be-Dowlat, N. W. of Moostung, at the head of the Bolan pass. On the west of Saharawan the country is held by pastoral tribes, the Sirphierra and their branch, the Rodani, Kurd of the Dasht-i-be-Dowlat : Sherwani of Khad, and the Raisani of Dolai and Khanak. The Dasht-i-be-Dowlat in the northern part of Saharawan and west of the Bolan hills, is about 15 miles in length and breadth. In spring it is covered with lovely flowers and grasses, and is then covered with the toman of the Kurd, who retire to Merv after the harvest of autumn, and then predatory bands of Khaka roam over the ground and attack travellers. The Kurd possess the Dasht-i-be-Dowlat and Merv, also Tikari in Kach Gandava. The Kurd of the Dasht-i-be-Dowlat are surmised to have come from the west in the train of some conqueror and settled where they now are. The Turkoman is a shepherd and neatherd ; the warlike Kurd is pastoral and nomade, the Georgian is largely endowed both physically and mentally, but are less tenacious in purpose. Amongst their families are treasures of female beauty. The Kurd are distributed over the western part of Asia much after the manner of the Armenians ; and there are whole tracts of country where the Kurd and Armenian villages alternate. The nucleus, however, of the Kurd family lies south of Armenia ; along the mountain-ridge which separates Asiatic Turkey from Persia. There are, also, a few of the Kurd within the Russian frontier. Some pay allegiance to both Persia and Turkey, but there are more which are independent of both. Some are well within the Turkish, others as well within the Persian, frontier. They all speak the Persian language, but their feelings of nationality are local and tribal rather than general. Their habits are rude and predatory. They are hardy, brave, rapacious. The costume of the Kurd is,

KURD.

with the wealthier classes, entirely oriental ; that of the people varies from it a little. The men wear wide linen trowsers, and over them a shirt confined by a girdle, as well as sometimes a woollen jacket without sleeves, made of stuff of only a hand's breadth wide, and sewed together. Some, instead of white trowsers, have brown ones, which are excessively ugly, and look like sacks with two holes to thrust the feet through. Their chaussure consists of boots of red or yellow leather, with large iron heels ; or sometimes shoes made of coarse white wool, and adorned with three tassels. On their heads they wear the turban. The women have the red and yellow boots, with iron heels, and loose trowsers like the men ; but over this they wear a long blue garment, long enough to reach half an ell below the feet, but which is tucked up under the girdle ; and a large blue shawl hangs down below the knee. Round their heads they wind black shawls in the turban fashion, or they wear the red fez, with a silk handkerchief wound round it, and on the top of that a sort of wreath made of short black fringe, put on like a diadem and leaving the forehead free. The hair falls in narrow braids over the shoulders, and from the turban hangs a heavy silver chain. It is not easy to imagine a more becoming headdress. Girls and women go with their faces uncovered, and exquisitely beautiful girls with really noble features, are to be seen. Their complexions are brown, and the eye-brows and eye-lashes black, or dyed with henna. Nose-rings are only seen among the women of the very lowest class. A Kurdish writer, in his preface to a history of his native country, states that authors differ regarding the origin of the Kurd. Some believe them to be descended from those persons who were saved from the cruelty of Zohak. The prisoners informed Xenophon, that the Carduchi who inhabited the mountains along the Tigris, through which he desired to march, "were a warlike nation and not subject to the king, and that once the king's army, consisting of one hundred and twenty thousand men, penetrated into their country, whence not one of them returned, the roads being hardly passable." There are some Arabian tribes in this tract of country, and several of the principal Kurdish chiefs boast a descent from families of that nation. The historian of Kurdistan includes all the province of Laristan in that country ; which, according to him, extends to the Persian Gulf. The same author states, that Kurd signifies "valiant ;" and that Roostum, though born in Seistan, was of a Kurdish family. He says, that the common reading of Roostum-e-Goord, in Ferdusi, is erroneous, and that it should be Roostum-e-

KURDISTAN.

Kurd, or Roostum the Kurd.—*Latham's Nationalities of Europe*, Vol. ii, p. 131; *Sinnett's Lady's Voyage*, p. 212; *Malcolm's History of Persia*, Vol. ii, pp. 207-208, 240.

KURD? *Galedupa arborea*.

KURDEH or Curdee, HIND. Safflower.

KURDISTAN. The country of the Kurd, is a district in the east of Persia, though the Kurd are also found in the west of Persia, in Asia Minor and Syria. They own a partial subjection to the king of Persia. The Kurd are mahomedans in creed. They are wiry and bony in make, with very prominent features, elongated faces and dark skins. They are divided amongst each other into tribes, called the Bulbassi, the Jaf, Beber, Sindjani; and in the south, the Lak, Faili or Bakhtiyari tribes, in the mountainous parts south of Kirmanshah. Its limits comprise the greatest part of the territory of the Kurd or Carduchi. This extensive tract is divided into four districts, two of which are Kirmanshah and Ardclan. The Kaldani people, according to their own account, were converted to christianity by St. Thomas and two of the seventy disciples. By means of a rigidly enforced system of exclusion, they have preserved their freedom as a republic, their religious tenets and simple liturgy have also remained nearly unchanged since the Gospel was introduced into their secluded valleys. The remarkable country of the Kaldani stretches eastward of the district of Amadiyah, between lake Van and the Taurus. In the interior, are terraces cultivated with rice or other grains, with a succession of deep, dark, wooded valleys, between the high and rugged Alpine ranges of Julamerik, the Jawur Tagh, and other chains, which rise to the uplands, situated beyond the back-bone of Kurdistan. A production in ancient Assyria is the celebrated manna; (Exod. xvi. 15, 31, 33 and 35; Numb. xi. 7,) which, in Turkish, is most expressively called Kudrat-al-havassi, or the divine sweetmeat. The Kurd not only eat manna in its natural state as they do bread or dates, but their women make it into a kind of paste; being in this state, like honey, it is added to other ingredients used in preparing sweetmeats, which, in some shape or other, are found in every house throughout the east. Goats and sheep are met with in large flocks, and the wool of the latter is particularly good, provided it is carefully washed. The buffalo is not so common as in the plains; but oxen and cows are abundant, and of full size; they are used almost universally to carry light burthens, chiefly of corn, which is balanced over the back of the animal in a stout double bag, made of thick woollen cloth. Of the popu-

KURDISTAN.

lation of Kurdistan it is difficult to speak, with any degree of precision, but it appears to be thickly peopled, considering the mountainous character of the country; such is certainly the case in those parts which have been examined by Mr. Rich, Major Rawlinson and preceding travellers. The Sekkir, Nurud-din, Shinkia, Gellates, Bulbasi, Jass, Mikris, together with the Bahdinan tribes, under the prince of Amadiyah, and Rowanduz, make up an aggregate of about 400,000 souls; to whom must be added a large nomade population, and the numerical strength of many, as yet, unvisited districts. The number of the Chaldeans and Nestorians proves to be much under the estimate made previous to Mr. Ainsworth's visit to their country, but still, it may be presumed that the population of Kurdistan, west of Zagros, amounts to about 2,500,000, or, perhaps, rather more; and a smaller number would scarcely bear a fair proportion to the horses and other cattle which are known to exist in the country. The Kurd are a frontier population, some being within the Turkish, others within the Persian boundary, their name is the same as the ancient Godiæi, and they are the Karduchi. They are mostly mahomedans, and its southern members are the Lak, Feili and Bukhtiyari tribes who dwell south of Kirmanshah. The Sindjavi, are a predatory tribe of Kurd depending upon Persia, who alternately inhabit the mountains of Kermanshah and the plains upon the Turkish frontier. They do not number more than 2,000 families. Mr. Rich tells us that the people of Kurdistan are divided into two different races: the one consisting of the tribes, the other of the peasants or Gooran. The Kurd, like the Persian, eat slowly, and talk between whiles, their dinner lasting as long as ours. They have a great objection to the ravenous mode of feeding practised by the Turks, among whom the dishes are put down separately on the table, and taken off after a few mouthfuls have been snatched by the guests. This seems to be the old Tartar fashion; while the Persians appear always to have been deliberate at their meals. Hafiz alludes to this when saying, "these wanton damsels have snatched away quiet from my heart, as Turks do a tray of plunder;" the different breeds of Arab horses do not breed well in Kurdistan though the sire and dam be true desert Nedjdi, the colts never turn out anything but very common horses. The Jaf tribe possesses a breed of small stout horses, much celebrated for their strength and activity. There are Kurd in the Dashti-be Dowlat, Merv, and part of Kutch Gundava, who are divided into six tribes or clans.

KURDISTAN.

Lower Kurdistan is the name given to that part of the pashalik of Baghdad which lies to the N. E. of the Tigris and which comprised the chief part of Assyria, and seems to be the land of Kir spoken of in the second book of Kings and in the prophet Amos. In Kurdistan, Dr. Wolff had long conferences with the Jews, whom he found possessed of much learning. He spoke with them in Hebrew and Chaldean, which they mix considerably with Turkish. The ordinary, as well as some of the more precious metals and valuable stones, are found in the eastern provinces, and also in Azerbaijan; copper and other ores abound in Kurdistan, the Julamerik, and other mountain districts. Mr. Rich procured from Omar Aga a list of all the districts of Kurdistan, commencing from the Bagdad frontier. Daouda, it commences four hours from Kifri. Dillo, Zinganeh, Kuom Zun, are so called from the people who inhabit the district. Sheikhan, Nara and Tehematchemal; Tchia Souz, i. e., the Green Mount, Kewatchemala, Shuan, Schubook, Kalaa, Esker, Kalau, Sewka, Gird Khabèr, Bazian. This finishes the outer line to Sulimania, Karadagh, is bounded by Dillo and Zenganeh on the west and north, on the south it goes to the Dinala. The pass of Ban-i-kilan on the Dila is in Karadagh. Karadagh is a large government, and is subdivided into several districts; that in which Ban-i-kilan is situated is called Dizziaecesh, in which is also Gewrakalaa. Warmawa, Sertchinar, in which is Sulimania; Soordash; Mount Goodroon is in this district, Mergch, Pizhder. Between Mergch and Pizhder flows the river of Altoon Kiupri, whose source is at Lajan, four or five hours west of Saouk Boolak. Ghellala, Shinek, Mawutt Aalan, Siwell, Seraou, Mirawa, bounded by Mawutt, Siwell and Aalan. Balukh Gapiron, Sheher-bazar, Berkeou, Serotchik, Kulambar, Halle-ljee; bounded by Kulambar, Juanroo, Warmawa and Zehar. Shemiran, a mountainous and desert district on the other side of the Dila Tchowntan, written Teheftan, it adjoins Kizzeljee, Terratool, Kara. The Bakhtiari, are wandering pastoral tribes of Kurd, who take up their warm winter quarters in Arabistan, at the head of the Persian Gulf, but, in summer, travel northwards amongst the mountains of Kirmanshah. The inhabitants of Luri-Bazurg are now classed under the general title of Bakhtiyari; but originally this name merely applied to a small tribe, one of the twenty-six distinct clans, among whom the province was divided. The Bakhtiyari, with their dependencies, numbered recently 28,000 families. They comprise exclusive of dependencies, three divisions—the Haft-Laug, the Chahari-

KURG.

Lang and the Dinaruin. The Bakhtiyari tribe who inhabit the mountains of Luristan, west of Irak between Shuster and Ispahan, and from Shuster to near Kermanshah, often wander to other parts. They have often attacked Ispahan, Nadir shah alone having almost reduced them. They are named Παισιχοί by Strabo, and Patiskharis in the cuneiform inscriptions. Their manners and language have scarcely changed since the days of Cyrus. They retained their independence till about 1840, when they were conquered and decimated by the Persian government, and their chiefs kept in perpetual imprisonment at Teheran. The country is famed for the expedition of Alexander and his successors. The country south of the great chain probably formed the site of the ancient Elam of Scripture, a powerful nation in the early days of Abraham, before the kingdoms of Assyria and Babylon rose into notice in the east.—*Euphrates and Tigris*, Col. Chesney, p. 128; *Dr. Wolff's Bokhara*, Vol. i, p. 5; *Rich's Residence in Kurdistan*, Vol. i, pp. 110, 126, 272; *Baron C. A. KURFIYOON, YUNANI. Cubebs; Piper cubeba.

KURG or Coorg, in its aspect presents an entire forest, and the long and narrow cultivated valleys enclosed within it serve but to render its vast woods more striking. The whole of the eastern boundary presents a remarkable line of demarcation exhibiting an almost uninterrupted and impervious wood from the Burmagery hills, till reaching the Cavery; this space is wholly uninhabited. Advancing westward the woods decrease in density as the country improves in cultivation, and become gradually thinner till reaching the western ghauts, the immediate sum-

KURGONDA.

mits of which partially bare of wood, are clothed with a luxuriant herbage. Verajenderpett 20 miles from Mercara, and about 48 from Cannanore, has a climate similar to that enjoyed by the rest of Coorg, cool, healthy and bracing. The temperature ranges from 70° to 80° at noon, rarely reaching 84°. In cloudy, rainy, weather, it continues stationary at 66°, and in the cool nights of the S. W. monsoon it goes as low as 55°. The wind is not so violent there as in some other districts, though it blows pretty strong. Coffee cultivation was commenced in this district. The general elevation of the estates is about 3,000 to 3,500. The natives are much attached to their little coffee gardens. The Cborg or Kodaga tongue is spoken in this small principality lying on the western ghauts. The Kodaga and has hitherto been regarded as Canarese, modified by the Tulu. But Mr. Moëgling states that it is more nearly allied to the Tamil and Malayalam than to the Canarese. Dr. Nash describes the Coorg and Amma Coorg as of the same tribe. They have a Caucasian head, regular features, aqualine nose with chiselled lips, black eyes and dark hair. They wear whiskers and mustascho, but no beard, have fair complexion with intelligent countenances and in general a bold independent deportment. They follow agriculture and a few seek other employments, but, as a rule, they eschew military employ. They believe themselves to be descendants of the daughters of Chandra Varma, king of Matsadesha, obtained by the intercession of Parvati. Chandra Varma is said to have come originally to Coorg. They chiefly worship the goddess Cavare Ammah or Parvati, but demon and ancestor-worship is common. They have no guru of their own but are under brahminical influence. No Coorg man has as yet embraced christianity. The Yeraver tribe or Yerrawanru or Erra Vandlu, red men; and the Yevaru, Yerlan or Erlan are servile races in Coorg.

KURG, HIND., of Panjab, &c. *Celtis caucasica*. Nettle tree.

KURGOADA in Canara. A slab from this place has an inscription in Canarese, but the invocation is in Sanskrit. Its date is Salivahana 909, A. D. 987; and there is an era of the family of Machmal, 710, corresponding to the above. Character used in inscriptions is Hala Canara. It has an invocation to Siva as Swayambhunath, Parbati, Sambhu, and the kings or princes mentioned are Machmal Deva and his son Bachwan. The inscription is remarkable, adverting to the date, for the terms "suppressor of the pride of the Daitya," applied to Sambhu (Siva), having relation apparently to the ex-

KURILE ARCHIPELAGO.

termination of the buddhists, not long previously, by the Saiva sect. The inscription gives lands to a temple of Sambhu, and houses to the native priesthood. There is not a word about brahmans, and the mention of "native priesthood" would seem to confirm the belief of the modern introduction of the brahmans into Southern India.—*Vol. vi, p. 664.*

KURGOTAR, HIND. *Saxifraga ligulata*.

KURH, HIND. A savage rite now forgotten in India. The burning of an old woman by brahmans to prevent any government officer placing them under restraint.—*Wilson's Glossary.*

KURIHURIA, BENG. *Achyranthes aspera*, Linn.

KURI, HIND. A name of several plants. *Sterculia villosa*, *S. wallichii*; *Xanthium strumarium*, *Nyctanthes arbor-tristis*, *Ficus cunia*, and a species of *Eragrostis*.

KURI, CAN. A fish-trap basket made on the same principle as the mouse-trap with narrowing entrance and springy bamboo spikes projecting inwards so as to prevent return; on the same principle as the mouth of the purse in a trawl net. On this plan they are made of all sizes and of many shapes. The small ones used to catch the fly in the rice-fields are about a foot long, and are made of finely-split and closely-twined bamboo, while those used in the rivers are sometimes the same, and sometimes as much as 10 or 12 feet in length, and more elaborately constructed. These traps are called cruives.

KURI, see Kashmir.

KURIAPERAR DOAR, see Doar; India.

KURIL, PUSURU. *Capparis aphylla*.

KURI or Kuril of Ravi. *Hedera helix*.

KURILA, BENG. *Alysicarpus vaginalis*.

KURILE ARCHIPELAGO is on the east of Asia. The Kurilian or Aino race occupy the mouth of the Seghalin and the southern extremity of Kamtskatka, on the main land, and all the islands between Kamtskatka and Japan. The peninsula of Tarakai is Kurilian. In the island of Karafto, Kamoi is their chief deity: Kami, in Japanese, is the name of a god,—in Mongolia, of a shamanist priest. The Aino are the aboriginal races of Yezo, whose severe treatment by the Japanese, has led them to other countries. They also occupy the southern part of the island of Seghalin, which is in possession of the Japanese. The Aino are of short stature with broad faces of the Mongol type. They are a timid race, their limbs are hairy, they have bushy beards and long tangled hair, large heads and clumsy figures, the expression of their faces is that of good nature cumbered with stupidity. According to M. Rosney, their language is dissimilar to Japanese, and that spoken in the

KURKU.

Kuriles and in the island of Yezo, are also different from Japanese.—*Rev. Mr. Adams*, p. 240. See Japan.

KUR-KHAN, see Kamran.

KURKIHAAR. About three miles to the north-east of Punawa is the large village of Kurkihar. It is perhaps the largest place between the cities of Gaya and Bihar. The remains at Kurkihar consist of several ruined mounds, in which numerous statues and small votive topes of dark-blue stone have been found.—*B. A. S. J.*, 32, 1864.

KURKNI, HIND. *Staphylea emodi*, *Spiræa Lindleyana*, *Marlea begoniifolia*, *Leptopus cordifolius*.

KURKTI, BENG. *Cucumis utillissimus*, *R.*

KURKU, or Kur, a race who occupy Nimar, the Gawilghur hills of Berar, Kalibhit, the western Satpura, in the hills about Gawilghur near Elliehpur and northwards towards Indore. Major Keatinge describes them as a tribe of Gond, but that is a mistake, they are not Gond, but a branch of the Kol family. The Kurku and Gond keep themselves separate, and they each have a separate language. Voysey had mentioned that the Gond consider themselves as a distinct tribe from the Kur, and neither eat nor intermarry with them. Their language has a great resemblance to that in use by the Lurka Kol and Santal. None of these correspond with the words of the Dravidian tongues. The Kurku language is identical with that of the Kol. There are 28,709 of this race in Berar: along with the Andh, Gond and Kolamb, they occupy the Mailghaut and the southern skirts of its hills. These four races all resemble each other in appearance, though they each speak a different tongue, and in their features they differ from the villagers. Many of the Kurku occupy the Mailghat, a strip of wild country

KURMA.

along the Wurdah river, where, also, dwell the Gond, Raj Gond, Agarmunde Gond, Bhoya Gond, the Pardhan or bard of the Gond, the Ballai or Gond Pariah, the Nihal or outcaste of the Kurku, the Muge fishers and quail-catchers, numbering in all about 34,650 souls of the aborigines, along with whom are 5,196 hindoos.—*Campbell*, pp. 41-2.

KURKULI, HIND. *Leptopus cordifolius*.

KURKUM, HEBREW, PERS. *Crocus sativus*, *Linn.*

KURKUNI, HIND., also Tulikurkar of Hazara, *Gardenia tetrasperma*.

KURKUTCHA, a range of mountains which separates the valley of Kabul from the plain of Jellalabad; and connects the Hindoo-Kush with the Sufed-Koh. The altitude of the range varies from 1,000 to 2,000 feet above Kabool, and the highest part, in 31° 25' and 69° 30', is 8,000 feet above the sea. There are four routes over this range, practicable only for a man and horse; at Lattabound Pass, 4,000 British troops were destroyed in their retreat in 1842. Cold, intense during winter, the frost splitting the rocks into huge fragments.

KURMA, HIND. *Phoenix dactylifera*.

KURMA, HIND. A tortoise.

KURMA, or the Tortoise incarnation of Vishnu, was the second grand avatara of Vishnu, in the form of a tortoise, and evidently refers, like the first matsya or fish avatar, to the flood. For the purpose of restoring to man some of the comforts and conveniences that were lost in this flood, Vishnu is fabled to have become incarnate again in the form of a tortoise: in which shape he sustained the mountain Mandara, placed on his back to serve as an axis, whereon the gods and demons, the vast serpent Vasoky serving as a rope, churned the ocean for the recovery of the amrita, or beverage of immortality. And the result of the operation, that chiefly distinguished this avatara, was the obtainment of fourteen articles, usually called fourteen gems, or chaturdesa ratna; in common language chowda ratni. These fourteen jewels are thus enumerated: 1, the Moon, Chandra; 2, Sri, or Lakshmi, the goddess of fortune and beauty; 3, Sura, wine, or Suradevi, the goddess of wine; 4, Oochisrava, an eight-headed horse; 5, Kustubha, a jewel of inestimable value; 6, Parijata, a tree that spontaneously yielded every thing desired; 7, Surabhi, a cow similarly bountiful; 8, Dhanwantara, a physician; 9, Iravati, elephant of Indra, with three probosci; 10, Shank, a shell conferring victory on whoever should sound it; 11, Danusha, an unerring bow; 12, Bikh, poison, or drugs; 13, Rhemba, the Apsara, a beautiful and amiable woman; 14,

KURMI.

Amrita, the beverage of immortality. When hindoos speak of the deity Vishnu having been thus incarnated, we must understand it with some qualification ; for in fact, there is, perhaps, scarcely one point in their mythological religion in which the whole race of hindoos have faith. There are sectaries and schismatics without end, who will believe only certain points that others abjure ; individuals of those sects dissent from the doctrines believed by the majority ; other philosophical sceptics will scarcely believe any thing, in opposition to their easy-faithed brethren, who disbelieve nothing. Thus some saiva, or followers of Siva, admit the sacredness of the avatara of Vishnu, but in different degrees of potency and sanctity : they generally admit the personified interposition of the preserving attribute of the deity in the affairs of the world, without yielding the point of supremacy in the prototype. And some zealous vaishnava, or followers of Vishnu, giving themselves up to his adoration in some incarnation, Krishna or Rama, for instance, reject with indignation, commensurate with their zeal or bigotry, all further application of divine terms. Hence may, in part, be discerned the liability under which inquirers labour, of being misled by sectaries into receiving schism as orthodoxy, and of forming general conclusions from individual or partial information. Avatara, means in the hindi tongue, descent or incarnation, and is a term employed by the hindoos to designate the ten incarnations of Vishnu, usually thus arranged and named : 1, Matsya, or fish ; 2, Kurma, or Tortoise ; 3, Varaha, or Boar ; 4, Narasingha, or Man-lion ; 5, Vamana, or Dwarf ; 6, Parasu Rama, the name of a favoured person in whom the deity became incarnate ; 7, Rama, the same ; 8, Krishna, the same ; 9, Budha, the same ; 10, Kalki, or Horse. Of these, nine are past ; the tenth is yet to come, and those of Rama and Krishna are the most remarkable.

KURMABU NADDI, a river near Barutganj in Allahabad.

KURMEJA, or Kenja, HIND. Galedupa indica.

KURM-FULLI, a river of Chittagong.

KURMI. The Kurmi are semi-aboriginal cultivators, dwelling north of the Kunbi, but to the south of the Rajput and Jat. They form the bulk of the population in the part of Manbhūm, near the Damudah river, (*Dalton*, p. 157), and are a very industrious class of quiet cultivators, in considerable numbers in all the central and eastern parts of the North West Provinces or in Hindustan generally, who there attend to the finer garden style of cultivation much more than the Jat and

KURMI.

Rajput, but, like the Jat race, are assisted by their industrious women who have passed into a proverb for industry,

Bhale jat Koonbin ki K'hoorpi hat'h

K'het nirawen apne pi ke sat'h.

They dwell to the south of the Rajput and Jat, have villages of their own, and are also spread in detached families or groups. Mr. Campbell considers them to be identical with the Kunbi and to occupy from L. 23° or 24° N. to 16° N., and from the western frontiers of Guzerat, countries watered by the Wynganga, the middle gunga and upper streams of the Nerbuddah. Very few of these become soldiers, and in the valley of the Ganges they are looked down upon as mere humble tillers of the soil. They are more numerous towards the Jubbulpore and Saugor territories where they mingle with the Lodha. Thence, westwards, as on both sides of the Nerbuddah, in Malwa, where they meet the Jat, and throughout the southern borders of Hindustan, there are numerous Kurmi who speak hindi. Those in Hindustan are darker and less good-looking than brahmins and rajputs, but Mr. Campbell states (pp. 93-4) that they are quite Arian in their features, institutions and manners. Other authorities, however, mention that there is no similarity in the physiognomy of the Kurmi and Kunbi. The Kurmi subdivisions are—

Jeshwar,	Patān,	Patrihu,
Dhāvini,	Adhonda,	Ghora Charhao.

But Sir H. Elliot says the seven subdivisions are usually enumerated as K'hurebind, Puturya, G'horechurha, Jyswar, Canoujea, Kewut and Jhooneya. Wilson also says they have seven sections, and that in central and eastern Hindustan, West and North-West Provinces, they are the great agriculturists. He says, that they are occasionally seen as predial slaves to which state they have sold themselves or been sold. The Ghameta of Behar are a sub-division of Kurmi. They form, says Elliot, a large class of the cultivators in the eastern and central portion of the N. W. Provinces, few in Delhi and the Upper Doab. Under the different names of Coormee, or Koormee, Kunbli, Kunabi, or Koombhee, they extend throughout the greater part of Hindustan, Berar and the western Deccan. They are famous as agriculturists, but frequently engage in other occupations. The Kurmi, Kunbi, Jat and Rajput are the chief territorial tribes of Northern India. The Kurmi are supposed by Tod to be the Koolmbi of the Dekhan and to be perhaps the most numerous, next to the Jat, of all the agricultural classes. The best agriculturists of the Central Provinces are decidedly the Kurmi, but they seldom occupy the wilder portions of

the districts and are found mostly in rich black soil tracts. It is a common saying that no Kurmi can exist where he is unable to raise rabi crops. They are a most peaceable set of men and have always been remarkable for their royalty to the ruling power. They are very tenacious of their ancestral holdings, and seldom alienate rights in land unless under the greatest pressure of circumstances. A Kurmi is rarely known to follow any other profession, but that of agriculture, whether as cultivator or farmer, and the real secret of their unflinching success in agricultural pursuits generally does not appear to lie so much in their reputed superior skill, as in the fact of women as well as men engaging equally in fieldwork, while the women of several other agricultural classes are precluded, by prejudice or custom, from assisting the male population in their labours. Scarcely inferior to the Kurmi as agriculturists, are the Lodhi who, however, are the opposite of the former in natural temperament, being turbulent, revengeful, and ever ready to join in any disturbance. They make good soldiers, and are generally excellent sportsmen. Both among Kurmi and Lodhi, there is no distinction between a mistress and wife, provided always that the former is of the same caste as the husband, or better still the widow of an elder brother or cousin, however far removed. The children born from such connexions are on an equal footing as regards inheritance of property, whether personal, real, or ancestral, with those born from regularly married wives. Large numbers of the Gond and Ahir too are agriculturists. They are the only tribes which inhabit the wooded and hilly portions of the districts, and are generally poor, of unsettled habits and indifferent agriculturists. In the plains they are principally employed as farm-servants. In 1866 the Raipur population amounted to 952,754, almost all of them immigrants,—Kurmi, Teli, Lodhi, Chamar, Ahir, Gairi, Gauda, Kanwar, from the north, the Halba from Bastar, and Chanda and Maharrattas. The Kurmi, Teli, Chamar and Halba are the chief agriculturists of the Raipur district. The Kanwar are regarded as the prior occupants, they prefer the jungle tracts, but are supposed to be Rajputs imperfectly hinduised. The Halba are immigrants from the south. Once in his life-time, a Halba sacrifices three goats and a pig, one to each of the national deities, called Narayan Gansin, and Burha Deo, male deities, Sati and Ratna, female deities.—*Elliot; Tod's Rajasthan, Vol. ii, p. 371.*

KURMRU, HIND. Albizzia odoratissima.

KURMSAQ, PERS. As an expression of contempt, the word Sag, signifying "a dog," is generally applied to christians by the

Persians, and among themselves, as equally contemptuous, Kurmsaq is in very frequent use. Both appear to be terms of no mean antiquity; for Ouseley suspects that Sag and Kurmsaq are the Sacæ and Khor-Sa-kæ mentioned by Solinus, those barbarous words being probably latinized from an imperfect apprehension of their sounds. "The Persians in their language," according to this author, "call the Scythians Sacæ, and in return the Scythians call them Chor-saci." Scythas, Persæ lingua sua Sacas dicunt, et invicem Scythæ Persas Chorsacos nominant.—*Solin Polyhist., Mix in Ouseley's Travels, Vol. ii, p. 542.*

KURMUL, MAHR. Dillenia pentagyna.

KURMU-VIPAKA, SANS. From kree, to work, and pak, to ripen.

KURNAH. Near the junction of the Euphrates and Tigris in long. 31° north, and lat. 47° east, after a course of 950 miles, is the walled town of Kurnah, with about 800 houses, disposed along the right bank of the Tigris, and the left of that of the Euphrates. It fluctuates as to size, and it was larger in 1831 than it was found in 1836 and 1837. It is chiefly constructed of reed-mats, and is on part of the supposed site of ancient Apamea; which probably stood within the line of walls still extending across the peninsula formed where the two great rivers cease to be known by their individual names. Below the Tak-i-Kesra or Arch of Chosroes, and which marks the site of the ancient Ctesiphon, and a little lower down the remains of the ancient Seleucia, the continuations of the Tigris bear the well-known appellation of Shatt-al-Dijlah as far as Kut-al-amarah, a small town on the left bank nearly midway between Bagdad and Kurnah, being about 178 miles by water from the former city, and 97½ miles directly S. S. E. from the latter. Lower down, after passing for about 40 miles through marshes, and coming near the tomb of Ezra, the river resumes its former size and character, as it winds in the general southern direction, to Kurnah, which place is 232 miles from Kut-el-amarah by the windings, and 144½, in direct distance. The whole course thus briefly described may be estimated at 1,146 miles, which is little more than half the length of the sister stream, the Euphrates, from the sources of the latter to their junction at Kurnah, but it discharges more water, owing to the numerous tributaries which it receives on its eastern side, among which may be particularly noticed the two Zab rivers, and the river Diyalah. There are, however, only two feeders of any moment on the western side throughout the long distance from Diyar Bekr to Kurnah. A considerable increase of the river Tigris takes place during the rains of November, sub-

sequently it decreases and swells irregularly at intervals, till the different feeders are bound up by the frost and snow of January, in the Kurdistan mountains. This serious check retards for a time the swelling of the river, therefore its permanent rise, like that of the Euphrates, does not usually begin till the middle of March. There is an active commerce along the Tigris, between Basrah and Bagdad, by means of the large country boats, which go in fleets, and above the latter city it takes place chiefly by means of rafts from Mosul. On the junction of the Euphrates and Tigris, the one tidal channel, almost half a mile wide, takes nearly a straight course, S. 37° east under the well-known appellation of Shatt-el Arab, and when five miles below Kurnah their united waters receive those of the Kerah, or Kerkbah, which, coming from the mountains of Ardelan through an extensive tract of country, passes a short distance westward of the ruins of Susa and likewise of the town of Hawizah. After receiving this accession, the Shatt-el-Arab flows through date groves and near several villages, chiefly on the left bank, and at length arrives opposite Basrah, which is 39½ miles by the river, and 36 miles south 34° E. direct from Kurnah. In the whole of this distance there are but two islands, both of them large : and the river has an average width of 600 yards, with a depth of 21 feet ; it has a current of two knots per hour during the flowing, and three knots per hour during the ebb tide. Kurnah is one of the towns founded, and called Apamea by Seleucus Nicator, after Apama, his wife. Seleucus Nicator founded thirty-five cities in greater and lesser Asia ; sixteen of which he named Antioch, from Antiochus, his father ; nine Seleucia from his own name ; six Laodicea, from Laodice, his mother ; three Apamea, from Apama, his first wife, (of which the city of Kurnah was the chief ;) and one Stratonicea, from Stratonice, his last wife. According to Dean Prideaux, he was a great protector of the Jains, and the first who gave them settlements in those provinces of Asia, which lie on this side of the river Euphrates. As they had been faithful and serviceable to him in his wars, and in many other respects, he granted them great privileges in all the cities which he built.—*Euphrates and Tigris, Col. Chesney, p. 39 ; Prideaux's connection of the Old and New Testament ; Mignan's Travels, p. 4.* See Khuzistan, Chaldea, Mesopotamia, Tigris.

KURNAH, see Kuru-khet.

KURNIJA, TAM. Tylophora asthmatica, W. & A.

KURNIKA, BENG. Premna spinosa.

KURNOOL, a walled town on a tongue of

land on the right bank of the Tumbudra river and left bank of the Hindri, in lat. 15° 48' N., long. 78° E., 900 feet above the sea, the junction of the Hindri and Tumbudra occurring to its south-east. Kurnool, was long held by a feudatory Pathan chief. Lying between the Ceded Districts and the Hyderabad territory, it was surrendered to the East India Company on 15th December 1816, but on the 18th October 1839, was again taken possession of, and on the same day a battle was fought at Zorapore, a few miles off ; the nabob of Kurnool was captured and the territory annexed ; this Pathan family accompanied Nasir Jung to the Carnatic in 1750. Kurnool province is now a small collectorate of the Madras Presidency with 273,190 inhabitants to the north of Cuddapah, throughout which, the river Tumbudra runs and joins the Kistnah river a few miles down. The basins of the Kistnah river and its affluents, the Gudpurbah, Malpurbah and Beemah are occupied by quartzites, slates, limestones, &c., which cover the larger portion of the districts of Cuddapah and Kurnool, westwards through the Raichore Doab by Gogi, Gulburgah, to Kulladghce and Belgaum, and appear to represent the older portion of the great Vindhyan series. Rocks of the same mineral character appear under the great flows of the Dekhan trap, and resting quite uncomfortably on the gneiss rocks in parts of the Raichore Doab, and the vicinity of Belgaum, and under parts of the ghauts on the western coast, and that they belong to the same general series as the rocks in Cuddapah and Kurnool, there is no doubt.

KURNU-PHOOL, BENG. Gilly-flower, Mathiola incora, also China pink, Diacanthus chinensis.

KURNYEE, see Kalliyon.

KUROL, HIND. Hedera helix.

KUROONAMAYI, SANS. From karoona, pity.

KUROONGAULEE, TAM. In Palghat, a dark coloured heavy and hard wood used for furniture.—*Colonel Frith.*

KURUTU-PALAH, MALEAL. A tree of Malabar and Canara, which grows to about eighteen feet long and eight inches in diameter. It is very close in its grain, and remarkably hard and strong. It produces a fruit which is eaten medicinally ; but the wood is not much used in consequence of the labour required in working it.—*Edye, M. and C.*

KUROUW ? see Tin.

KURPHULLON, GR. Caryophyllus aromaticus, Linn.

KURPOOR, BENG. Camphor tree, Camphora officinarum, also Limnophila graticoides.

KURRIMIA CEYLANICA.

KURPOORA SILASIT — ? Gypsum.

KURRA (pl. Kurre) a ring worn on the wrists, ankles, &c.

KURRAGANIKA-WANLOO, Wanaganakaloo, Pungchanganigaloo of Telingana, three shopmen, dealers or shopkeepers, called, in common parlance by the Hindi word "Teli" or oilmen. They are petty traders or shopmen.

KURRAH, see Kasambi.

KURRAH, HIND., PERS. A circular enclosure in which brahmans were accustomed to place a woman, whom they threatened to burn, if the servants of Government preferred a charge. See Kur, Kush.

KUREH, PERS. Plural, of Kurrah means circles or districts of a country.

KURRAHEE, a flat vessel of iron, brass, or earth, in which food is boiled or fried.

KURRAL. The Dhund, Tanaoli, Alpial, Kurral, Awan and Gukkur, are petty tribes known only by their tribal names without any common appellation living north of the Salt Range. They are described by Mr. Campbell as the finest and handsomest men in India, perhaps in the world. They profess mahomedanism and have fanciful mahomedan genealogies, but are wholly Indian in their language, manners, habits and constitutions. Their language is Punjabi. They have no connection with the Pathan races, and they claim none with the Jat and Rajput, the Dilzak alone claiming to be of Hindustan origin. Their features would seem to show that they have kindred with the Kashmiri, or with the pre-hindoo congeners of the earlier Indians found in the hills far west, but their language and character, their dress and the architecture of their houses would indicate that they are nearly allied to the Punjabi. The Dhund, are a very handsome race, and the Tanaoli dwell to the north in the outer range of the Himalaya, and about the Indus near Torbela, but they are not considered to be brave or trustworthy. The Awan of the lower lands and the Dhund, &c., of the higher lands have democratic village institutions.—*Campbell*, p. 97.

KURRANJ, HIND. *Pongamia glabra*.

KURREAL, some of the most eminent of the Jat sub-divisions in the Panjab are named Sindhoo, Cheenoh, Varaitch, Chuttheh, Sidhoo, Kurreeal, Gondul, &c., &c.—*Cunningham's History of the Sikhs*, p. 5.

KURBEE-SHAKAR, HIND., GUZ. Candy. Sugar candy.

KURREIS, a river near Sylhet.

KURRE-PAK, DUK. *Bergera konigii*.

KURRIMIA CEYLANICA, *Arn.*

Palang, SINGH. | Alareya-gass, SINGH.
Hoora-kandoo, " |

A large tree of Ceylon, one variety grows

KURSEONG.

in the warm, moister parts of the island, another variety in the central province, up to an elevation of 5,000 feet.—*Ther. En. Pl. Zeyl.*, Vol. i, p. 72.

KURRI-SHAKAR, GUZ., HIND. Candy.

KURROCHA, GUZ., HIND. Bastard cardamoms.

KURROO, GUZ. Chalk.

KURROO, roots of *Pneumonanthe kurroo*: an Indian substitute for Gentian, *Gentiana kurroo*, Wall. The root of *Pierorhiza kurroo* is sold at Rupees 2 per maund.

KURROO, a river near Hetounalah in Nepal.

KURROO-MARDOO, TAM. In Palghat, a dark-coloured strong wood; used for wheelwright's work.—*Col. Frith*.

KURROO-VALAGOM, TAM. In Palghat, a small tree, of a light brown colour, specific gravity 0.701; used for naves of wheels.—*Col. Frith*.

KURROO-VELU, TAM. *Anisochilus carnosum*?

KURROO VELUM, MALAYAL. *Acacia arabica*.

KURRU, GUZ. Chalk.

KURRUBI, HIND. *Nerium odorum*.

KURRUCKPOOR, a town in Midnapoor, on the Kossye river.

KURRUCK, see Khyber.

KURKUJE, also Kurrunj, SANS. *Dalbergia arborea*, Willd. Kurrunj ka tel, its oil.

KURRUL, see Jun.

KURRUMATEE. These have descended from the Belooch race, but have sub-divided into thirty-nine tribes.

KURRUMBAR. The Curb, Curbuari or Kurumbar, are nomade shepherds, who occupy the denser deeper jungles near the Neilgherries where they are occasionally stumbled upon by adventurous sportsmen, and the smoke of whose fires may occasionally be seen rising from the lower gorges of the hills. See Curumbar, Kurumbar.

KURRUNGHEE, a river near Bohoo Bul in Sylhet.

KURRU-VAYLAM, MALAYAL. *Acacia arabica*, Willd.; *Linn.*; *W. & A.*

KURSAN, in Central India, cultivators, are termed Kursan, a name which distinguishes them as a specific class from ryots or peasantry, which is a more general term, including all ranks.—*Malcolm's Central India*, Vol. ii, p. 25.

KURSATAN-KUNNI, TEL. *Eclipta prostrata*.

KURSEE or Kurseca, TEL. *Cluytia colina*, Roxb.

KURSEONG, not far from Darjeeling. Its climate is equable and the mists which are of such frequent occurrence at Darjeeling

KURU.

and the higher altitudes are rare. It is within two hours' march of the plains by the old road, and the new cart-road from Silligooree to Darjeeling passes through the heart of the station. Kurseong is in many respects a more suitable locality for troops than Seuchal. Seuchal is 9,100 feet high, and the change from such an elevation to the plains has been found in more than one instance hurtful to the health of the men.

KURSHI in Turkistan, in lat. 38° 51' 50" N., is a division of Bokhara on the Samarkhand river.

KURSHI-WANLOO, see India, Korava, Yerkala.

KURSUMBUL KE PHALLI, DUK. *Dolichos cultratus*, also *Dolichos lunatus*, Duffin Bean. This latter is a very fine sort of large bean, and when dressed resembles the Windsor; it is grown like all other beans that require sticks for support, *Riddell*.—

KURT, HIND., of Kalesar, &c. *Nyctanthus arbor-tristis*.

KURTA, HINDI. A coat, a jacket.

KURTALLAM, a village near the ghauts, east of Bombay.

KURTAM, HIND. *Carthamus tinctorius*.

KURTAMA, SUTLEJ. *Cucumis colocynthis*, *Linn*.

KURTAN, MALAY. Mulberry.

KURTARPOOR, see Sikhs.

KURTAS, MALAY, TAM., TEL. Paper.

KURTEAH, a running river near Mungulbaree in Dinagepur, and near Kolahattee in Rangpoor.

KURTIN, EGYPT. Safflower.

KURU, son of Hastin, son of Bharata.

KURU, one of the great hindoo families who settled in Hindustan, many of whom were dispersed over India and Central Asia, amongst whom we may place the Ootooru Cooru races (northern Cooru) of the Poorans, Ottorocura of the Greek authors. The Balicu and Indo-Mede were also occupying those regions. The battle of Kuru Kshetra was a memorable event in the history of the Lunar race. It was fought about B. C. 1367 between the Pandu and the Kuru of Hastinapura, two branches of the race; and after a series of single combats through a space of 18 days, the Kuru were completely defeated, their leader Duryodhana had been slain, and Yudisthira then retired to Dwarka with Krishna, his principal adviser. The Kuru Kshetra, was a great battle fought between two branches of an Aryan family, the Pandava and Kaurava, in which another branch, the Yadava, aided the Pandu. They were all blood-relations, some of them nearly allied to each other, and connected by intermarriages. The battlefield is supposed to be identical with Paniput. The

KURU.

battle lasted 18 days, and terminated in the complete destruction and extinction of the power of the Kaurava family. The commanders-in-chief, whom the Kuru lost, were Bhishma, slain on the 10th day, Drona, on the 5th, Karna, on the 2nd, and Salya on the first days of their commands. It is this war of succession which is described in the great Sanskrit poem, the Mahabharata. One of the last incidents of this battle, occurred on the night of the 18th day, when Aswatthama entered the Pandava camp and killed the sons of the Pandava, whose heads he brought to Duryodhana. The Kuru drew up their army in the form of a spider's web, but in many cases, it was a series of single combats which chiefly marked this war, each chief or warrior had challenged opponents, in the daytime, in the presence of the armies; and this act of Aswatthama was so contrary to the usage of the war, that Kripa remonstrated with Aswatthama against his doing it, but, along with Kiritavarmam, accompanied Aswatthama to the gate of the Pandava camp and held the gate during the midnight butchery. The ultimate fate of Aswatthama is uncertain, but he seems to have been pursued and killed by Bhima. This battle field of the Kuru is near Tanisha, between Karnal and Sirhind, is generally identified with the field of Paniput to the north-west of Delhi, and the locality is deemed holy. It was a war to the knife between near kinsmen to gain possession of lands, of which the Kuru had long held possession to the exclusion of the Pandu. Yudisthira, son of Pandu, lost in gambling to Duryodhanu, his kingdom, his wife and even his own and his brothers personal liberty, and became an exile from the banks of the Jumna for twelve years. The traditional history of these wanderers during the term of probation, their many lurking places now sacred, the return to their ancestral abodes, and the grand battle or Mahabharat which ensued, form highly interesting episodes in the legends of hindoo antiquity. To decide this civil strife, every tribe and chief of fame, from the Caucasus to the ocean, assembled on Kuru Khetu, the field on which the empire of India has since more than once been contested and decided. This combat was fatal to the dominant influence of the "fifty-six tribes of Yadu." On each of its eighteen days' combat, myriads were slain; for "the father knew not the son, nor the disciple his preceptor." Yudisthira, Buldeva, and Krishna, afterwards retired with the wreck of this ill-fated struggle to Dwarica, but the two former had soon to lament the death of Krishna, who was slain by one of the aboriginal tribes of Bhils; against whom, from their shattered condition, they were unable to

contend. After this event, Yudishtra, with Buldeva and a few followers, entirely withdrew from India, and emigrating northwards by Sind, to the Himalayan mountains, are there abandoned by hindoo traditional history, and are supposed to have perished in the snows. Herodotus describes the ruinous passion for play amongst the Scythic hordes, and which may have been carried west by Odiu into Scandinavia and Germany. Tacitus tells us that the Germans, like the Pandu, staked even personal liberty, and were sold us slaves by the winner. Bunsen estimates B. C. 1606 or 1486 as the first year of the Kaurava, and B. C. 1107 or 987 as the last year as the close of the great war, after the battle of Kurukhet. The life of Krishna forms a second memorable part of the history of the Lunar race, as he has been deified throughout hindoo India, and is regarded as an incarnation of Vishnu.—*Tod's Rajasthan*, Vol. i, p. 50; *Bunsen*, iii; *Wheeler's Mahabharata*, 567; *Hardy's Eastern Monachism*, p. 438.

KURU, CAN., HIND. A sheep.

KURU, HIND. Villarsia nymphoides.

KURUA-NEEBU, also Bejoura, HIND. *Citrus medica*.

KURUBA, KARN. A shepherd race in the south of the peninsula of India, who also weave woollen or blankets.—*Wilson*. See Curambar, Kurambar, Kurumbar.

KURUBEE, BENG. Sweet-scented oleander, *Nerium odorum*.

KURUCHCHIYAN, or Kuruman, MAL. A race inhabiting the hills in Wynad, *Wils*.

KURU DINNE or Kadepa tige, TEL. *Vitis carnosia*, *Wall*.

KURUFS, ARAB. *Apium graveolens*, *Linn*. Celery.

KURUK, HIND., MAHR. *Caruga pinnata*, *R*.

KURUK, MAHR. *Cedrela toona*, also *Celastrus montana*, *Roxb*.

KURUK, Kourk or Barik, a coarse, brown cloth, half woven and half felted, forming the ordinary winter dress of the Affghan. The best are made at Denzi but those of Karabagh are very good. During the English occupation it was a favourite article of dress both with officers and men. The manufacture of the Kourk or barik, is from an exceedingly fine and silky wool which grows on the belly of the camel; nothing can be softer or warmer than the barik, but unluckily they are badly woven: if they were better made, they would be preferable to every other kind of cloth. As the nomades never dye the raw material, the barik is of the same colour as the camel; the price varies from ten shillings to four pounds a piece.—*Ed. Ferrier Journ*, pp. 192-240. See Koolk.

KURU-KHET, see Kuru.

KURUKITI, TEL. *Gardenia latifolia*, *Ait*.

KURUKU, TAM. *Argemone mexicana*.

KURULA, BENG. *Momordica charantia*, *Linn*. Hairy or spiked bitter gourd, also *Momordica muricata*, also *Luffa amara*.

KURUMARTHI MARA, CAN. *Terminalia alata*.

KURUMBAR or Kurubar, CAN., a shepherd from Kuru, a sheep; a pastoral shepherd race who occupy the peninsula of India. They are an ancient people, the earliest known occupants of Dravida Desam, the modern Carnatic and Coromandel. They seem to have established numerous petty principalities over the whole peninsula, which were ultimately absorbed in the Chola empire. Numerous sites attributed to this race and still called Kurumbar Kot, are to be met with. Small communities of the Kurumbar tribe to this day dwell all over the peninsula, wandering with their flocks, and others of them occupy the less accessible hills and forests of many parts of the peninsula, tending their flocks. The section called Hala-Kuruba does not weave blankets: the Hando-Kuruba section who take service in towns is regarded as the highest of the race, and the Mesa-Kuruba are the lowest in rank. Arcot town, about 65 miles W. from Madras, takes its name from two Tamil words, Arakada, the jungle on the river Palar. It is in lat. 12° 54' N., and long. 79° 19' E. and 599 feet above the sea. It is the Arkatou Basileon of the Greeks, and the capital of the nomade Sorni, (Σωρνοι) and once formed the centre of the Chola kingdom, the whole of the neighbouring territory for several centuries after the christian era, having been occupied by wandering Kurumbar. Rennell says that Arcot must have been a place of great antiquity, by its being taken notice of by Ptolemy as the capital of the Sora or Sora-mandalum, from whence corruptly Choramandel or Sora district, the Coromandel of modern geographers. It was then a pretty large city, and its citadel was esteemed a place of some strength, for an Indian fortress. The Arkatou Basileon of the Greeks, was supposed by one of the editors of Ptolemy to be Bijnugur, but as the Greeks represent it as the capital of the nomadic Sora (Σωρνοι), and the local traditions indicate that for several centuries after the christian era, the occupants of the tract lying between Madras and the ghauts, were Kurumbar or wandering shepherds, nomades, but it is doubtless the present Arcot, which was then, as now, included in the ancient Sora or Chola kingdom. On the Neilgherry hills, above the Erular, at heights varying from one to two thousand feet, in the clefts of the mountains and little openings in the woods,

KURUMBAR.

with which at this elevation they are girt, live a race, calling themselves Kurumbar. They occupy the highest range bordering on the Neilgherries. The Toda do not consider the Erular as forming a part of the inhabitants of the hills, but they allow this designation to the Kurumbar, whom they call Curb, and from them they receive certain services. The nomade shepherds, Curb, Curubar or Kurumbar, who occupy the dense deeper forests of the lower slopes of the Neilgherries, are occasionally stumbled upon by adventurous sportsmen, and the smoke of their fires may at times be seen rising from the lower gorges of the hills. The Neilgherry Kurumbar are a short miserable-looking race, who live on the slopes of the hills in the most feverish places, and the Mula or jungle Kurumbar are little raised above the beasts of the forests. It is probable that the Kurumbar of the Neilgherry hills are of the same race as of the nomade Kurumbar of the plains. In disposing of their dead they either burn or bury whichever may be most convenient. Swarthy and unhealthy-looking in countenance, small of stature, the head but thinly covered with sickly-looking hair, the only covering it has,—little or no eyelash, small eyes, always blood-shot and apparently much inflamed, pot-bellied, they have in most respects the semblance of savage men. Their women and children have much the same squalid appearance, though on their necks and wrists they wear ornaments made of the different kinds of wild seeds and of berries. Many of the men also wear ornaments in their ears, of yellow straw, plaited with some degree of ingenuity; but, in their general appearance, they are much like the Erular, pictures of wretchedness and misery. They gave a party an abundant supply of honey, plantains, and such fruits as, on the higher parts of the mountains, or in the vicinity of Ootacamund, are considered delicacies. They have no marriage ceremony; but occasionally, when two have been living together for some time, they will enter into an agreement, in the presence of friends to remain united for life; and in a family where a succession of such unions has taken place, they will, once in two or three generations, perform a ceremony, and hold a festival in celebration of them. This is done by pouring pots of water over one another, the pairs seating themselves together for this purpose; the ablution, commencing with the seniors. They then put on new clothes, and end the day in feasting and merriment. The Kurumbar, and all the classes occupying the lower regions of the Neilgherry mountains, are many stages

KURUMBAR.

behind the Budaga, in civilization, but possessing all the cunning natural to this unenlightened state.

The Kurumbar of the Wynaad forests have two sections, the Jani and the Mulli, and the Gurchea, Panniar and Pulliar races live along with them. The Jani Kurumbar live entirely in the forest, they are the only axemen, and, without them, it would be difficult to work a forest, and the wood-contractor and planter alike employ them. They are very docile, quick of imitation, and slavishly submissive to their modelly or headman. This individual, like a patriarch of old, exercises undisputed power over his own family, numerically containing about twenty or thirty beings. Those employed by the coffee planters are a little civilized, appreciating the comforts of life in a slight degree higher than their more savage brethren. They erect rude huts for the habitation of themselves and family, which are built on elevated ground, surrounded by jungles, and about six in number; they touch one another, and the whole present the form of a crescent. One larger than the rest, styled the cutcherry, is erected in the middle in the shape of a hall, for the sojourn of casual strangers: it is dedicated to their household deity, and the place cannot be contaminated by a shoed foot. They are but migratory occupants of these habitations; the presence of a suspected stranger in their vicinity, sickness, or other trifling but natural cause, will make them emigrate from one place to another, generally within the same district, and sometimes for miles away, but always preferring lonesome localities and dense jungles. The Kurumbar does not stop for two weeks together in the same place; hence though some are partly civilized, they have not yet been brought into a settled mode of life. The extent of government lands in Wynaad is not known, but government also possess some forest lands towards Periah and Teriate, and in several spots over Wynaad and in teak belt are several bands of Kurumbar, some of the Jani and others of Mulli caste; they amount to about,

Kurumbar...200	Panniar & Pooliar...100
Gurchea.... 50	Chetty & Squatters... 50

These Kurumbar live entirely in the forest. They are the only axemen, and without them it would be difficult to work a forest. The Kurumbar are held responsible, through their headmen, and the Chetty tribe are also responsible for their Panniar or farm-slaves. The Kurumbar services are constantly called for by the wood-contractor and the planter, but, they will not leave their haunts in the forests for any time.

Mr. Campbell (p. 31) describes the Kurumbar, Irular, Puliar and Veder, as in the lowest stage of life, mere men of the woods, of very diminutive stature, with thickly-matted locks and supple limbs, living under trees, in caverns, or in the rudest wingwams, keeping sheep, or collecting forest produce, very stupid, but also very mild and inoffensive, though reputed as sorcerers and believers in demons. But such a character is only applicable to the secluded families who have been forced into the forests and mountains. The Kurumbar who herd their vast flocks from the Godavery to Cape Comorin are tall, slender, graceful men, with skins blackened by their food and the great heat, and in travelling over the swelling lands of the interior, these self-reliant men are to be seen engaged in their lonely avocation. They wear only a coarse blanket or cumblil. They appear to be a wholly different race from the Idayan or shepherd branch of the Tamil-speaking people who take the honorific appellation of Pillay or son, to distinguish them from the Vallalar who are styled Mudali or first man. The nomadic shepherd is called Kurumbar-Idnan.

The Kuruba are a wandering race in the south of India divided into Betla and Genu. Both of them have a Mongolian caste of head, high cheek bones, short and somewhat flat nose, and prominent lips. Eyes, small, dark and deep set. Hair, curly, but woolly and matted from neglect. Of middle size in stature, well-proportioned body, nimble, with powers of endurance, and daring. Colour, dark. Hair on upper lip and chin, but no whiskers. They are labourers, basket-makers, and gather honey and other forest products. They are supposed to have come from Mysore. They profess to worship Kali. — *Wilson's Gloss.*; *Cap. Harbues*, *Neilgherry Hill*; *Mr. G. Campbell*; *Rennell's Memoir*, Part xxi, pp. 265-328. See India.

KURUMBI, or Kondatungelu, TEL. *Cassia florida*, *Vahl.*

KURUMBOLE, MALEAL. A tree in the Canara forests. It grows to about twelve or eighteen inches in diameter, and from fifteen to thirty feet high: it is used by the natives for house-work, and is considered a useful and durable wood. — *Edge, Forests of Malabar and Canara.*

KURUMBRANAD, see Kummalur.

KURUMCHIA, or Kurumchi, BENG. *Carissa carandas*, *Linn.* Jasmine-flowered Cananda.

KURUMERU, or according to Buchanan, Karubaru; according to Abbe Dubois are three migratory tribes, one branch of which engages in the traffic of salt and grain on the backs of asses, backwards and forwards from the coast to the interior. Another branch who

manufacture osier panniers, baskets or mats, live in tents 3 feet high, 4 or 5 broad and 5 or 6 long, made of bamboos, and they move from place to place to obtain work. The third branch are called Kalla bantru and are said to be robbers by profession. — *Buchanan's Journey through Mysore*, Vol. i, p. 395.

KURUMINGA, SINGH. The *Butocera rubus*, a beetle of the south of India which penetrates the trunk of the cocoanut tree near the ground and there deposits its eggs; and its grubs, when hatched, eat their way upwards through the centre of the tree to the top, where they pierce the young leaf-buds and do incredible damage. — *Tennent's Ceylon*.

KURUMNASSA, a river in the Benares district of Bengal near Buxar.

KURU MOELLI, MALEAL. *Flacourtia sepiaria*, *Roeb.*

KURUND, HIND. *Corundum*.

KURUND, HIND. *Chenopodium murale*.

KURUNDA, HIND. *Carissa carandas*.

KURUNDU, SINGH. Cinnamon.

KURUNGU MUNGA, MALEAL. *Bixa orellana*.

KURUNJA, BENG. Kurung, HIND. *Pongamia glabra*, *Vent.* Kurunj ka tel, its oil.

KURUNJA, HIND. *Dalbergia arborea*.

KURUNTHOTTI, also Kurun tudi, MALEAL. *Sida retusa*, *Linn.*

KURUNTUKA, or Karantaka, SANS. *Buriera pruriens*.

KURU NUVVULU, TEL. Small Sesamum, qu. Kara nuvvulu.

KURUT, a kind of pudding or pottage, used in Afghanistan as food. It is made of Indian corn, broiled, bruised between two stones, or made into bread, on which they pour ghee or clarified butter. See Koorut, Kourut.

KURUT, HIND., of Peshawur. A kind of cheese.

KURUTALEI, see Kurumbar.

KURUTU PALA, MALEAL. *Tabernaemontana crispa*, *Roeb.*

KURUVENDA, TEL., or Puvvula gurvenda, i. e., flowery Abrus, adding "the common plant *Hiptage madablota*." *W.*, 232, under Kuruvinda has *Cyperus hexastachys*.

KURU VEPILAI MARAM, TAM. *Bergera konigii*.

KURUVERU, TEL. *Coleus osmirrhizon* or *Plectranthus*, *sp.*; *Rheede*, ix, 74. Hindoo women use the scented roots to ornament their hair. It is also employed in offerings to idols, and as a drug, for which purposes it is cultivated generally in gardens.

KURU-VERU, TEL. *Andropogon muricatus*, *Retz.*

KURUVINGI? TAM. *Ehretia buxifolia*.

KURVAH TANGA MARAM, TAM. The wild cinnamon-wood tree of the jungle. It

KUSBUL.

grows to about twenty or thirty feet high, and from twelve to fifteen inches in diameter: it is very scarce, and consequently not much known or used.—*Edye, M. & C.*

KURVI, TAM. A bird.

KURWA, or Kuru, a measure of capacity varying in different parts of India.

KURWAN, MAHR. *Cratæva roxburghii*, *R. Br., W.*

KURWI, MAHR. Hymenodyction obovatum.

KURWUTTEE, GUZ., HIND., SANS.

KURWYE, MAHR. Hymenodyction obovatum, *W. Jc.* Hymenodyction utile.

KURYELLOO, TAM. *Sesamum orientale*.

KURZE WAAREN, GER. Hardware.

KUS. Marino is Kus, the ancient Cos or Apollinopolis Parva, between Kench and Luxor, described by Ibn Batuta (i, 106) as in his day a large and flourishing town, with fine bazaars, mosques and colleges, the residence of the viceroys of the Thebaid.—*Yule Cathay, Vol. ii, p. 400.*

KUSA, one of the sons of Rama by Sita.

KUSA, HIND. *Eragrostis cynosuroides*.

KUSA, see Hindu or Hindoo, Serpent, Sati, Garuda Kasambi.

KUSA-DARBHA, SANS. Kusa gaddi, *TEL.* *Poa cynosuroides*, *Retz.* Care must be taken not to confound Darbha with Durbha, which is *Cynodon dactylon*, *p. 58.* The Avenejana is a ceremony in the sraddha. The funeral cake is placed on kusa grass, *Poa cynosuroides*, and before offering it, water in which white flowers and sandal paste are immersed, is poured on the cake.—*Wils. Gloss.*

KUSAILOO, also Kusaili. The bark of a small tree, wild about Ajmeer: is tasteless; given to lying-in women to clear the blood and create milk: from one to four pice size form the dose in six or seven days.—*Gen. Med. Top., p. 142.*

KUSAJA, ARAB. Cucumber.

KUSALA, merit, a constituent of Karma, *Hardy's Eastern Monachism, p. 438.*

KUSAM, HIND. *Carthamus tinctorius*, safflower.

KUSAMBI, a wood of Java, uncommonly heavy, hard and close: it supplies anchors for small vessels, blocks, pestles, and numerous similar utensils.

KUSANDA, a frontier race resembling the Chepang and Haiu.

KUSAR, HIND. *Vitis carnosa*.

KUSAVIAN, TAM. A potter.

KUSBAS. qu? Khush-bas, *HIND.* *Saccharum violaceum*.

KUSB-SINI, ARAB. China-root.

KUSBUL, HIND. *Apilotaxis fastuosa*. The shepherd's tinder. This is found in the

KUSH.

Sutlej valley between Rampur and Sunnam at an elevation of 7,000 to 9,000 feet. The tomentum on the under-surface of the leaves is employed by the hill people as tinder,—*Cleghorn's Punjab Report, p. 67.*

KUSH, or Cush, a term familiar to readers of Scripture (*Gen. ii, 13*; also *x, 6 to 8*; and *Chr. i, 10*) as the name of the eldest son of Ham (*Charma*); and before the flood, of a country encompassed by the Gihon, the second river of paradise. The name seems to have descended to Noah's progeny, who took it for themselves and gave it to countries. There was an African Cush, and the Cushan of Habakuk *iii, 7*, is another. The Hamitic Cushites appear to have spread along tracts from the Upper Nile, to the Euphrates and Tigris. In the history of India, Kush or Cush, the second son of Rama, gave his name to the Cushwaha or Cutchwaha princes of Nirwar and Amber, though the tortoise is supposed to be a source of this name. The country of which Ayodia (now Oude) was the capital, and Rama monarch is termed Koshula, in the geographical writings of the hindoos, supposed by Col. Tod, to be from Koshulya the mother of Rama, and in the archives of the Rana of Mewar, the first emigrant from the north is styled Koshulaputra—son of Koshula.

KUSH, or Koh-i-Kush or Hindu Kush, is the term applied to a lofty peak in the range of mountains, continuous with the Himalaya, west of the Indus, and also to the range itself. The only part of the range covered with perpetual snow is the Koh-i-Baba between Kabul and Bamian. The Hindu Kush peak is visible from Kabul and is entirely covered with snow, and also from Kunduz, distant 150 miles. All creatures, including man, birds and beasts of burden, suffer in crossing it and many perish. In its perpetual snow, however, is a creature called the snow-worm which perishes if removed below the snow line. The highest pass does not exceed 12,400 feet. Many parts are devoid of wood and even of verdure. There grows merely a stunted furze, used as fire-wood called Kullah-i-Hazara or Hazara cap.

The Hindu Kush was crossed by the Arians who settled on the western slopes. The Arians started from the northern slopes, crossed the Hindu Kush range and settled on the southern slopes. The people of Cashmere have, from time to time, been mixed with races from the north, the south and the west; and while their language is hindoo and their faith mahomedan, the manners of the primitive Kush or Kutch tribes, have been influenced by their proximity to the Tartar races. The hills westward from Kashmeer to the Indus are inhabited by

KUSH.

Kukka and Bumba, of whom little is known, but towards the river itself the Eusofzye and other Affghan tribes prevail; while there are many secluded valleys peopled by the widely spread Gujar, whose history has yet to be ascertained, and who are the vassals of Arabian "syeds," or of Affghan and Toorkamun lords. The countries north of the Hindu Kush, which lie in the valley of the Oxus and its tributary rivers, from Balkh upwards, have no general designation. Eastwards of that city lies Kunduz, the Mir of which subdued all the smaller provinces, and it has another dependency, Badakhshan further eastward. To the north of this territory are the hill states of Wakhan, Shughnan, Darwaz, Kulab and Hissar, whose people claim a descent from Alexander the Great. To the eastwards of Badakhshan lies the plain of Pamir inhabited by the Kirghis, and beyond the Belut Tagh mountains are Chitral, Gilget and Iskardo, that extend towards Kashmir. South of Badakhshan is the country of the Siah Posh Kafir, who occupy a great part of the range of Hindu Kush and a portion of Belut Tagh. It is bounded on the north-east by Kashkar or Badakhshan, and on the north-west by Kunduz in Balkh. On the west it has Inderab and Khost, also in Balkh and the Kohistan of Cabul; and on the east it extends for a great distance towards the north of Cashmere, where its boundary is not distinctly known. The whole of this Alpine country is composed of snowy mountains, deep pine forests, and small but fertile valleys, which produce large quantities of grapes, wild and cultivated, and flocks of sheep and herds of cattle while the hills are covered with goats. Grain is inferior both in importance and abundance. The common kinds are wheat and millet. The roads are only fit for men on foot, and are often crossed by rivers and torrents which are passed by means of wooden bridges or of swing bridges made with ropes of some other pliant tree. All the villages described as built on the slopes of hills, near the roof of one house, forms the streets to the one above it. The people have no general name for their nation. Each tribe has its peculiar name, for they are all divided into tribes, though not according to genealogy, but to geographical position, each valley being held by a separate tribe. Kush has probably the same derivation with Kash. Hindu Kush is the original Cush of scripture, the land compassed by the Gihon.—*Bunsen, Vol. iv, p. 52; Burnes, Elphinstone quoted in Ferrier's Journal, p. 51.* See Cush, Koh, Koh-i-kush, Kosi, Chozar, Kushika, Kushan, Viswamitra. KUSH, also Kus also Kaga, HIND. Saccharum spontaneum.

KUSIA.

KUSHA, HIND. *Poa cynosuroides*. KUSHAR, BENG. *Scirpus kysoor*. KUSHARTA MARA, CAN. *Embryopteris glutinifera, Roxb.* KUSHEEDA, HIND. See Cotton manufactures. KUSHER, ARAB. Bark. KUSHKAH, HIND. Boiled rice, properly Khushkah. Grains of ground-rice in curds is the material for the primitive teeka, which is applied on the foreheads of hindoos. KUSHKASH or Khas-Khas, ARAB. Kuknar, PERS. Poppy seed. KUSHMA, HIND. *Mentha incana*. KUSHMANDAMU, SANS., or Gummadi-kaya, TEL. *Cucurbita maxima, Duch.* KUSHMI ZURK, also Hub-ud-Dan, ARAB. *Cassia absus, Linn.* KUSIMULLA, also Kushmulla Kimul, also Ajaaringha, HIND. *Odina wodier, Roxb.* KUSHNEEZ or Kitnuz, PERS. *Coriandrum sativum*. Coriander seed. KUSHINIZ, PUSHTU. *Coriandrum sativum, Linn., Roxb., W. Ic.* KUSHOLUM, MALEAL. *Alpinia galanga*. KUSHT, HIND. *Pennisetum italicum*. KUSHTA, PERS. Mineral compounds used as medicines, the principal being Kushta sikka, Kushta jast, Kushta tamba or mis, and Kushta loha. These preparations are made by native hakims, they are compound bodies (murakkabat), though called by the name of a simple constituent taking their name from the metal which forms their basis. To prepare the Kushta sikka, or carbonate of lead, one tolah of lead is placed in an iron pan, with the juice of the Euphorbia, or the "kesu" or "dhak" flowers (*Butea frondosa*). The Kushta jast, is oxide of zinc. The Kushta tamba is arsenite of copper. The Kushta loha, an oxide of iron, is also called khubs ul hadid, or zafran ul hadid.—*Powell's Hand-book.* See Medicine. KUSHTAM, SANS. Kushta, SYRIAC. Putschuk. KUSHTIGAR, or Phailwan, PERS. Wrestlers, throughout Southern Asia, who whirl over head, ponderous wooden clubs called mil, also nagdar, instruments of a favourite but very laborious exercise, regularly taught by an ustad or teacher. The ustad, an older man, a professor and teacher, instructs in one of the three hundred and sixty band or forms.—*Ouseley's Travels, Vol. i, pp. 234, 236.* KUSHT-I-SHIRIN, also Kusht-i-talkh, PERS. *Costus putchuk*. KUSHU, HIND. *Pyrus malus*. KUSHURI PASAPU, TEL. *Curcuma zedoaria, Roxb.* KUSIA, see Topes.

KUSRANI.

KUSIKA, see *Viswamitra*.

KUSINARA, the city near which Gotama died.—*Hardy's Eastern Monachism*, p. 438. See *Sakya Muni*, *Topes*.

KUSKUS, HIND. The poppy seed, properly *Khash-khash*. This name seems universal in India.

KUSKUS, BENG. *Andropogon muricatus*.

KUS KUSU, AR. One of the numerous kinds of what the Italians generally call *Pasta*. The material is wheaten or barley flour rolled into small round grains. In Barbary it is cooked by steaming, and served up with hard boiled eggs and mutton, sprinkled with red pepper. The Bedouin Maghrabi Arabs merely boil it.

KUSMOR, see *Khyber*.

KUSNIR, BENG. *Ficus elastica*, *Rorb*.

KUSOOMBA, a term used by the Rajputs to designate opium. In times of peace and ease, the Rajput leads an indolent and monotonous life. After a midday siesta the chief rises, washes his hands and face, and prepares for the great business of the day, the distribution of the red cup, *Kusoomba* or opium. He calls together his friends into the public hall, or perhaps retires with them to a garden-house. Opium is produced, which is pounded in a brass vessel and mixed with water; it is then strained into a dish with a spout, from which it is poured into the chief's hand. One after the other the guests now come up, each protesting that *kusoomba* is wholly repugnant to his taste, and very injurious to his health, but after a little pressing, first one and then another, touches the chief's hand in two or three places, muttering the names of *Dev*, friends or others, and drains the draught. Each, after drinking, washes the chief's hand in a dish of water which a servant offers, and wipes it dry with his own scarf, he then makes way for his neighbour.—*Ras-Mala Hindoo Annals*, Vol. ii, pp 261-62. See *Kusumba*.

KUSRANI, an Affghanistan tribe whose hills extend from the Korah pass downwards for a distance of about fifty miles; about half the tribe own lands and villages in the plain, a portion lead a wandering life in the front range of hills nearest the plain and the half desert tract at its base, and the remainder live in the hills. The hill *Kusrai* can muster some 1,200 fighting-men, of whom 50 are horsemen. They are very thievish, and were in the habit of proceeding through the land of their brethren in the plain to plunder in the villages near *Dehra Ishmael Khan*. From the *Kusranee* limits the hills of the *Bozdar* tribe extend along the British frontier for about 15 or 20 miles. The range is

KUSSOWLEE.

intersected by some nine passes leading into the plains, the chief which is the *Sungurh* pass, through which there is considerable traffic with *Candahar* and the *Punjab*. Opposite these hills lies the *Sungurh* low-land (forming the upper portion of the *Dehra Ghazee Khan* district and cultivated by several peaceful tribes) and very much at the mercy of the *Bozdar*. There is only one *Bozdar* village in the plains, but there is much scattered cultivation belonging to the tribe. Almost the whole tribe and their chiefs live in the hills. They can muster 3,000 or 4,000 fighting men, some portion of whom are horsemen. They are probably the most formidable robbers in this part of the frontier. Under the *Sikh* regime they repeatedly carried fire and sword into the *Dehra Ghazee Khan* district. See *Khyber*.

KUSSAM, HIND. *Kussamba*, CAN. *Carthamus tinctorius*.

KUSSAN, see *Viswamitra*.

KUSSAR. There are 3,085 of this caste in the *Oomraoti* district.

KUSSAVU, TEL. *Anatherum muricatum*.

KUSSOO, BURM. A *Tenasserim* tree, maximum girth 2 cubits, of maximum length 15 feet. Abundant near the sea or the river's edge, all over the province. When seasoned it sinks in water. It has a very tough wood, durable, and as good as *Kya-zai*, for helvies. *Kya-zai* wood is of the colour of oak with a yellowish tinge. The *Kussoo* is nearly white. The Burmese name of the *soondree* wood is nearly the same.—*Captain Danoe*.

KUSSOOR, HIND. *Lathyrus sativus*.

KUSSOWLEE, in the *Himalaya*, is elevated 6,500 feet above the sea. It is a military post on the crest of a ridge which overlooks the *Kalka* valley, the inner slope is covered from the summit to perhaps 1,000 feet below it, with an open forest of the *Pinus longifolia*, a fir nearly resembling that of *Scotland*. The barracks for the troops and the houses of the residents are scattered over the northern slope. The vegetation is characteristic of the temperate zone. In the shady ravines north of *Kussowlee*, where there is the greatest approach to a forest, a species of *laurel* is the most conspicuous tree. On the more exposed hills, *Falconeria insignis* and *Euphorbia pentagona* occur, scattered as small trees, and one small wood of *Ægle marmelos* grows close to the village of *Haripur*. The most common shrubs are *Adhatoda vasica*. *Carissa* and *Zizyphus jujuba*, species universal in the plains of *Upper India*. On the cliffs near *Kussowlee* are to be seen the well-preserved impressions of various species of land plants, leaves, seeds, and stems. See *Sanitaria*.

KUST.

KUSSUB, penance, a term used in the science of exorcism.

KUSSUB-BEWA, GUZ. ?

Godavuz, HIND. | Waj-i-Igir?
Venkund, " | Sweet flag.

Acorus calamus.

KUSSUB-UZ-ZERIREH, AR. Chiretta.

KUSSIALGARH, lat. 33° 28', long. 71° 54', in the Panjab, on the right side of the Indus, north-east of Kalabagh. The mean height of the plain is 970 feet. The tower station is 1,025 feet. The level of the Indus during the dry season is 799 feet. Mean flood level of the Indus is 855 feet. Maximum flood level during a cataclysm is 890 feet.—*Ad. ; Schl. ; Walker.*

KUSU-KANDIRA, TEL. Kousu kandira, TAM. *Strychnos bicirrhosa*, *Lesch.* The Telugu derivation is from Kousu, "a disagreeable smell," which is characteristic of the plant. The plant is plentiful in the Nagari hills under the name of Tige mushti.

KUSSUMB, HIND. *Schleichera trijuga*.

KUSSUMBA, HIND.

Gul-i-masafir, Safflower.	PERS.	Bastard saffron.
Kajira,	BENG.	<i>Carthamus tinctorius</i> , L. V.
Lollora,	HIND.	Kussumbakum, TAM.

This plant yields 6 or 7 distinct shades of red, the palest pink or piyazi gulabi (pink), gulabi surkh (rose colour), kulfi or gul-i-shaftalu (deep-red). In combination with harsinghar flowers (*Nyctanthus arborescens*), it yields soneri or golden orange; narangi, deep orange and sharbati, salmon-colour and with turmeric (haldi, zard chob), it gives a splendid scarlet, gul-i-anar, and other tints; again if combined with indigo, Prussian blue, &c., a series of beautiful purples, known as lajwardi, uda, nafarmani, sosani, kasni, (a delicate mauve), falsai, kokai and the deep-purple baingui. All these tints are more or less beautiful, but scarcely one of them will stand washing. There is a great want of that series of substances known as mordants. The use of the salts of tin and lead is entirely unknown to native dyers.—*Powell's Hand-book*, Vol. i, p. 457.

KUSSUMBA, in Sind, is the name given in good society to a solution of opium, which the natives extensively use. In Cutch, it means a Rajput practice of drinking a solution of opium from each other's hands to stanch feuds.—*Burton's Scinde*, Vol. ii, p. 143. See Kussoomba.

KUSSUR-KA-GHAR, HIND. Literally fractional house, a term used in forming magic squares.

KUSSUS, AR. *Hedera helix*, the Ivy.

KUST, ARAB., also Kust-i-arabi. Kustak, PERS. Kusti, HIND. *Aucklandia costus*, *Falconar*. Putchuk, *Costus putchuk*.

KUSWUR.

KUST-TALKH, AR. Galangal.

KUSTI, the Zonar worn by the Parsees.

KUSTOOLA, HIND. *Justicia verticillata*.

KUSTOORA, the musk deer, a native of Cachar, or lower Tibet: but commonly met with in Nepal.

KUSTOOREE, BENG. *Abelmoschus moschatus*.

KUST-TALKH, HIND *Aucklandia costus*.

KUSTUBHA, see Kurma.

KUSTURI, GUZ., HIND. Musk.

KUSTURI, TEL. *Acacia farnesiana*.

KUSTUS, GREEK. Putchuk.

KUSUM, BENG., DUK., HIND., also Kajira, BENG. *Carthamus tinctorius*. Safflower.

KUSUD, AR. *Cucumis sativus*, *Linn.*

KUSUMA, TEL. *Carthamus tinctorius*, *Linn.*, *Roth.*

KUSUMB, MAHR. *Schleichera trijuga*.

KUSUMBA, TEL. *Carthamus tinctorius*.

KUSUMBA-JAVA, see Dyes.

KUSUMBA NUNA, TEL. Safflower oil.

KUSUNDA, a Nepal tribe. The Chepang, Chetang, Kusundu and Haiyu are four uncivilized Bhot tribes who reside amid the dense forests of the central region of Nepal, to the westward of the great valley; they dwell in scanty numbers, and nearly in a state of nature. They have no apparent affinity with the civilized races of the country, but live in huts made of the branches of trees, on wild fruits and the produce of the chase. The Chepang are slight, but not actually deformed though with large bellies. Mr. Hodgson says they are of Mogul descent. Their language is akin to the Lhopa. The Chepang, Haiyu and Kusunda, seem to belong to the Rawut group of frontier populations. They are named by Mr. Hodgson, the Durre, Denwar and Brahmo, which Mr. Latham believes to be the same as Tharu, Dhungur, and possibly Ravi. They occupy the districts where the soil is moist, the air hot, and the effluvia miasmatic.—*Latham*. See India.

KUSUND KA KATORA, a cup made of bell metal.

KUSWUR, HIND. The flower from which is made the yellow Kuswur dye used in hindoo marriages. To use it on the day of battle is among the hindoos deemed a sacred pledge to die or conquer. Volunteers are often invited to assume the yellow dress, which implies desperation in any undertaking. Amongst Rajputs, it was a not infrequent usage to imitate the hindoo saints and warriors, and dye their garments with yellow, the hymeneal colour, which indicated that they went to battle as to a bridal feast, and were determined to die, or to live, exulting conquerors.—*Malcolm's Central India*, Vol. i, p. 358.

KUTCH.

KUT, see Chaldaea.
 KUT, HIND. *Abelia triflora*.
 KUT, also Kutch, HIND. Catechu.
 KUT, also Ooplate, Guz., HIND. Putchuck, the root of the *Aucklandia costus*. A bitter aromatic tonic used in fever, the roots have a pleasant smell and are used as perfumes. It is chiefly exported to China, where it is used as an incense.—*Powell's Hand-book*, Vol. i, p. 356.

KUTA, MALAKAL. Baskets.

KUTA, see Crocodilidae.

KUTAIA, HIND. *Solanum jacquini*, Willde.

KUTAJA, SANS. Connessi bark.

KUTAJAMU, SANS., or Kodisa chettu, TEL. *Wrightia antidysenterica*, R. Br.

KUTAKA, SANS. *Nux vomica*, *Strychnos nux vomica*.

KUTAN, PERS. Flax.

KUTAR, a dirk or dagger carried by sages. See Kalan.

KUTAY KI CHITRI, DUK. A mushroom.

KUT-BEL, BENG. Elephant apple, *Feronia elephantum*, qu? Kat-bel.

KUTCH or Cutch, a province on the north-west of the peninsula of India bordered by the Runn. Its capital is Bhooj; on the north are Pawar and Patcham. Kanta extends along the coast containing the seaport towns of Mandavie, Munniia and Tunia, the bagdar or port to Anjar. Waghair, to the east, contains Shahpur Ardasir. To the west, are Garrah and Ubrassa, in which are the towns of Mbar, Narna, Lakpat Bandar, &c. The inhabitants of Kutch are given to predatory habits. The Kumbi or cultivators are not numerous, the Charon or Bard (Bhat) are numerous. The Jhalla are Rajputs of Sindian origin, and there are tribes of Lowanna, Ahir and Rebbari. The Bhatta of Sindian origin, are a fair handsome race, skilful and industrious mechanics, and found in all the ports of Arabia and Western India. Kaba, a piratical tribe in the gulf of Cutch. The Khosa are a marauding tribe on the Thul desert between Hindustan and Sind. Amongst the Cutch oolitic strata some are evidently marine, yet from what Mr. Hyslop had seen of those in the Deccan or those in Bengal none of them in either of these districts exhibit the least evidence of having been deposited in the sea or ocean: all seem to be of fresh-water origin.—*Mrs. Elwood's Letters*; *Wilson's Glossary*. See Cutch, Infauticide, Rajpoots, Kelat, Hindoo.

KUTCH, the breeches of the Sikhs, the adoption of which is of as much importance to a Sikh boy as was the investiture with the toga virilis, to a Roman youth.

KUTH-LAH.

KUTCHERRY, HIND. An office, a court or place of public business.

KUTCH GUNDAVA, a champagne district of Baluchistan, a depressed level plain. See Kelat.

KUTCHHOOR, DUK. Kutchhooa, HIND. *Curcuma angustifolia*. The species of *Curcuma* growing in the Mahabaleshwar hills seems to be the *Curcuma montana*. In the East Indies large quantities of arrow-root are prepared from different species of *curcuma*, all of which have not been clearly ascertained, but the *C. angustifolia* and *C. leuconorrhiza* are recognised. In the Madras Exhibition of 1855, arrow-root from the *C. angustifolia* and *C. montana* of Roxburgh, was exhibited from Canara, Cochin and Travancore, where it has been, for many years past, prepared in large quantities, and, from Travancore, it is a regular article of export.

KUTCULEGA, HIND. Bonduc nut, *Guilandina* (*Cassalpinia*) *bonducella*.

KUTER, HIND. *Celastrus paniculata*, Willde.

KUTEERA, see Resins, Kutira.

KUTH, HIND. Putchuck, *Aucklandia costus* root.

KUTH, HIND. A coarse alloyed metal.

KUTHI, Guz. Catechu.

KUTHALI, HIND. A crucible or small nest-like vessel.

KUTH-BEL, BENG. Elephant apple, *Feronia elephantum*.

KUTHERI, TAM. Horse.

KUTHIERI, HIND. A kind of rice in Kangra.

KUTH JAMUN, HIND.? A tree of Chota Nagpore with a soft, red wood.—*Cal. Cat. Ex.* 1862.

KUTH-LAH is a great, black, chubby fish with large scales, and a very big mouth without teeth—it has been known to attain a size weighing two Bengal maunds, which are equal to 164 lbs. This fish does not take a hook. The "Ro-hoo" and the "Mir-gali" resemble each other in size and habits; they are very much like the salmon, but have tiny little mouths with no teeth. The "ro-hoo" in season has very pretty red fins, and both have ash-coloured backs, with silvery bellies; they attain to the weight of 20 lbs., and afford the angler excellent sport at bottom-fishing, sometimes engaging him for an hour before he can attempt to land his fish. The "Keel-bause" is a pretty little dark ash-coloured fish with a small toothless mouth, and has a whisker on either side of it. This fish also affords the angler good sport, and is found of five or six pounds in weight. These are all plentiful in Calcutta and lower Bengal; and, while young, could be easily exported.

KUTTA TERPALL.

KUTUB MINAR, at *Delhi*, is said to have been erected A. H. 592 by *Kutub-ud-deen*, *Aibek*. The epigraph in *Persian* over the outer archway of the eastern entrance, embodies his name in the following terms: *Kutub-ud-deen*, *Aibek*, founded this mosque. May the Lord bestow pardon on that slave. The *Minar* is erected at the south of the square. *Col. Tod* found, in *Guzerat*, a column, several feet high, of three compartments, gracefully tapering as it rises from a circular base, consisting of three marble steps, sculptured with innumerable minute niches, each containing a figure of the *Jineswar*, in the customary contemplative attitude. One like this, is a common appendage of *Jain* temples; *Col. Tod* is inclined to rank with it the *Kutub Minar* at *Delhi*, imagining that the *mahomedan* architects have only fluted the latter, in order to remove the obnoxious images. Of this class, also, is a column on the summit of *Cheetore*, nearly eighty feet in height. The uncompleted minaret of the *Kutub-Minar* at *Delhi* is 82 feet in diameter. It was begun by *Ala-ud-din*, the penultimate predecessor of *Mubarik Shah*. The total diameter at the base is 47 feet 3 inches, and at the top about 9 feet. The doorway is not larger than an ordinary *London* street door. The uncompleted minaret is certainly not half the height of the *Kutub* in diameter, it is perhaps twice as great. *Ibn Batuta* was certainly misinformed as to the date and builder of the *Kutub*. He ascribes it to sultan *Muiz-ud-din* otherwise called *Kaikobad*, grandson of *Balban* (A. D. 1286-1290). But the real date is nearly a century older. It was begun by *Kutb-ud-din*, *Aibek*, when governing for *Shahab-ud-din* of *Ghazni* (otherwise *Mahomed bin Sam*, A. D. 1193-1206), and completed by *Altamsh* (1207-1236). *Ibn Batuta* ascribes the rival structure to *Kutb-ud-din Khilji* (*Mubarik Shah*, 1316-1320) and in this also, *Colonel Yule* thinks he is wrong.—*Tod's Travels*, pp. 108-327; *Col. R. MacLagan*, *R. E. in Yule, Cathay*, Vol. ii, p. 434.
KUTUB SHAHI, a dynasty of kings of the 16th and 17th centuries ruling in *Golconda* and *Hyderabad* in the *Dekhan*.
KUTUB-UD-DIN, AIBEK, a slave of *Shahab-ud-din*, who gave him the government of *Delhi*. *Kutub-ud-din*, extended his domi-

KUVERA.

nion, became independent and died 1210. In A. D. 1206, on the death of his master, Mahomed Gori, Kutub-ud-din retained possession of Hindustan. He was the first of the Turki slaves who attained sovereignty and furnished a succession of rulers to Hindustan. Kutub, after a reign of four years was succeeded by his son Aram, who was, within a year displaced in 1211 by Altamsh, a slave and son-in-law of Kutub-ud-din. Bakh-tiar, general of Kutub-ud-din Aibek, in A. D. 1201, conquered Behar: and in 1203, conquered Bengal, but was defeated and driven back from Bhutan and Assam. Altamsh, a slave and son-in-law of Kutub-ud-din in 1211 succeeded Aram, son of Kutub. He ruled Hindustan 25 years, and in that time subdued the fortress of Rintumbore in Rajputanah, captured Gwalior and Mandoo and conquered Oojein. It was in his reign that Chenghis Khan ruled in western Asia, destroyed the temple of Mohakal, which Vikramaditya had erected at the beginning of the christian era. Altamsh died in 1236. His son reigned six months and was deposed, and then his daughter sultana Razia, who ruled ably for three and a half years. See Kutub Minar, Ibn Batuta.

KUTUN, ARAB. Cotton.

KUTUNG, HIND. A seedling of the bamboo, a man who has seen two "kutuug" is a very old man.

KUTURU BUDAMA, TEL. Bryonia scabrella, L., R., iii, 724; Mukia, sc. W. III.

KUTZ, HIND. Indigofera heterantha.

KUVACH, HIND. Mucuna prurita. Cowhage.

KUVALAM, MAL. Ægle marmelos.

KUVALAYAMU, SANS. Nymphaea, sp.

KUVEAMA, TAM. A Ceylon tree. It grows to about two and a half or three feet in diameter, and is curved in its growth. Wood is remarkably heavy and strong, and used in the frames of native vessels: it produces a fruit which is of no use.—*Edge*.

KUVEER PUNTHEE, see Kabir: Mendicant.

KUVERA, the hindoo god of wealth and hindoo Plutus; he is also the regent of the north. This deity was a son of Viswasrava, and a brother of Ravan, who was overcome by Rama. He is also called Paulastya. Only a brief notice has been taken of him in hindoo mythology, although he is a deity whose favours are by no people more valued than by the hindoos. He is represented as a magnificent personage residing in the splendid palace of Alaca; or borne through the sky on the heads of four figures, in a radiant car, called pushpaca, which was given to him by Brahma. In each of two of his hands he

KWANG-TUNG-CHI.

holds a closed flower of the lotus, and has on his head a richly ornamented crown. His sacti is Kuveri. The Guhyaca are servants of Kuvera, the deformed deity of riches—into such beings the dark souls of men, addicted in this world to selfish gratification, transmigrate.—*Cole. Myth. Hind.*, p. 111; *Moor*, p. 108. See Sati, Braminicide, Indra, Inscriptions, Meru, Ravnua, Saraswati, Tripati.

KUVIDARA, also Yoga Putra, SANS. Bauhinia candida, B. variegata, Linn.

KUVIR or Kubeer, as it is called by the natives, is the salt desert which predominates in Khorasan; and salt abounds in many districts, to which the desert does not reach: there is little doubt, that this salt desert penetrates through the inhabited isthmus extending between Herat and Mushed, into the mountainous districts of Kohistan, and Hazarah, where we are informed there is much salt and brackish water. There is a great deal of Kuveer, or salt desert all through the steppes of Khaurezm and the desert lying between the Oxus and Caspian sea.—*Fraser's Journey into Khorasan*, p. 253.

KUVIRAJU, SANS. From kuvce, a poet, and rajun, a king.

KUVACHA, SANS. From vacha, a word.

KUWARI, HIND., or Puari of Kaghan, Ficus caricoides.

KUWAR KAMIN, HIND. Polygonum, sp.

KUWATZEI, HIND. Adiantum, C. V.

KUWERA, a mole, called in Koordish, Mousha Kwer, or the blind mouse, is the Chargol of the Talmudists, or Garan of the Cape of Good Hope.—*Rich's Residence in Koordistan*, Vol. i, p. 196.

KUWU-WUL, see Kowuul.

KUWUK, JAV. Felis leopardus, F. Javanensis, Desm.

KUWWAYTHAH, a mohurrum faqeer.

KUYA, see Hindoo.

KUZA MISRI, HIND. Sugar-candy in a globular form, made in a 'kuza,' or earthen pot.

KUZEEREH, ARAB. Coriandrum sativum.

KUZISTAN bounds Faru on the west.

KUZZILBASH. Their native country, is the neighbourhood of Tabriz, Meshid, Kerma and Shiraz, where they are horse-breeders, shepherds and cultivators. See Kazzilbash.

KWAN, or Kouan, the Cochin-China name for a string of about 600, "cash," the popular coin. Each kouan makes 10 heaps, or "tien," each of 60 cash. The Spanish dollar averages about 4 kouan; in Upper Cochin-China being worth 3 to 4 kouan, and in Lower Cochin-China, 5 or 6 kouan. As a weight, 500 kan or catti, of 1½ ounce each, make 1 kouan.—*Simmond's Dict.*

KWANG-TUNG-CHI. A general account of Kwang-tung, is a Chinese work usually

KWEI.

stitched in 140 Chinese volumes: its officers are—

Tsung-tu, the governor-general.

Fu-tai, the governor.

Fan-tai, the superintendent of finance.

Nie-tai, the provincial judge.

Chi-fu, *Chi-le-chou* and *Chi-le-tung-chi*, prefects.

Tung-Chi, sub, and *Tung-pan*, deputy sub-prefects.

Chi Chou and *Chi Hsien*, district magistrates.

Ching Le and *Chau-mo*, secretaries.

Ghai Kwan, superintendent of customs in China, is the superintendent of the maritime customs of Yuc. There is also a superintendent of customs for Kwang-tung. The prefect of Kwang-chou is the chief local authority of a territory equalling in extent the kingdom of Holland, and containing a much larger population. His Yuman is the first court of appeal from fourteen others, each resembling in their power British courts of assize.—*Meadow's Desultory Notes*, p. 8.

KWANG-YIN. This rock, with an excavation near its base, serves as a temple and dwelling for several priests of Fo. It is composed of one solid mass of grey marble, rising out of the margin of the river to a height exceeding six hundred feet. In a large rent near the base is a temple of two stories, ascended by flights of steps hewn out of the sides of the cavern.—*Baron Macartney's Embassy*, Vol. i, p. 28.

KWAN SAF SAFEI, HIND. *Solanum nigrum*.

KWAN-SE is bounded on the north by Ho-nan, and an irregular chain of lofty mountains on the south and east by Kwan-tung, on the west by Yun-nan. Its surface is estimated at eighty-seven thousand square miles, and its population is between seven and eight millions. Kwy-ling-foo, is its capital. This province contains eleven cities of the first class, twenty-five of the second class, and 170 of the third class.

KWAN-TUNG, or Yue-tung, which signifies the "eastern breadth," extends along the southern coast from the centre of the gulf of Tonquin, nearly as far as the portion of the coast which is opposite the island of Formosa.

KWAN YING, the Chinese goddess of mercy.

KWARGANDAL, HIND. *Aloe perfoliata*.

KWASSZE, RUS. Alum.

KWE-HWA-CHING, a large mart in the Shan-se province of China, immediately beyond the Great Wall, 400 miles north-west of Peking and 240 west of the pass of Kalgan. See Kalghan.

KWEI, CHINESE. Rubruquis, speaking of

KYABOCA WOOD.

certain envoys of a Korean nation whom he saw at the court of Karakorum, says: "The principal envoy had in his hand a tablet of polished ivory, about a cubit long by a palm broad, and whenever he addressed the Khan or any other great personage he kept his eyes fixed on this tablet, looking neither right nor left, as if he read there what he had to say." The use of this tablet, called Kwei, was a very ancient Chinese etiquette. It is mentioned in Demailla's version of the Chinese annals in connexion with Yu, one of the most notable worthies of ancient China, who is said to have flourished B.C. 2286.—*Rubruquis*, p. 290, quoted in *Yule Cathay*, Vol. i, p. 142.

KWEI HWA, CHIN. *Olea fragrans*.

KWEI PE, or Kwei-pie, CHINESE. *Cassia lignea*, *Cassia bark*.

KWEI-TSZE, CHIN. *Cassia buds*.

KWEREI, HIND. *Berberis aristata*. Kweichow is bounded on the north by Sze-chu-en, on the south by Kwang-se and Yun-nan, on the east by Hu-nan, and on the west by Sze-chu-en. This province is estimated to embrace a surface of 64,500 square miles.—*Sirr's China and the Chinese*, Vol. i, p. 423.

KWIKLAPOT, HIND. *Cuscuta pedicellata*.

KWISPRE, HIND. *Verbascum thapsus*.

KWON THIEE, also Kwon thoung, also Kwon bung, and Hmo, BURM. *Areca catechu*, *Linn*.

KWUN, BURM. *Areca catechu*, *Linn*.

KYA BIN, MALAY. *Terminalia chebula*.

KYABOCA WOOD, or Amboyna-wood, is imported from Singapore. It appears to be the excrescence or burr of some large tree; it is sawn off in slabs from 2 to 4 feet long, 4 to 24 inches wide, and 2 to 8 inches thick; it resembles the burr of the yew-tree, is tolerably hard, and full of small curls and knots, the colour is from orange to chesnut-brown, and sometimes red-brown. It is a very ornamental wood, and is much esteemed in China and India, where it is made into small boxes and writing desks, and other ornamental works. The kyaboca is said by Prof. Reinwardt, of Leyden, to be the burr of the *Pterospermum indicum*; by others that of *Pterocarpus draco*. It is from the Moluccas, the island of Borneo, Amboyna, &c. The native name appears, from the specimen of Mr. Wilson Saunders to be "Serioulent," the wood itself is of the same colour as the burr, or rather lighter, and in grain resembles plain mahogany. "The root of the cocoa-nut tree, says Colonel Lloyd, is so similar when dry and seasoned, to the 'bird's-eye' part of the wood here termed kyaboca, that no difference, can be perceived; the cocoa has a tortuous and silky fracture, almost like indurated asbestos." The comparison of the palm wood

with the kyaboca, renders the question uncertain, as amongst the multitudes of ordinary curly woody fibres, which one cannot account for in a palm there are a few places with soft friable matter much resembling it. At the Madras Exhibition of 1855, a slab of kyaboca wood, imported from Singapore, was exhibited by J. Sanderson, Esq. A small portion was polished, and showed well the highly ornamental appearance of the timber in its marking. The specimen exhibited the very knotty character and curly fibres of the wood, from which pieces of even a foot square free from flaws, can rarely be obtained. The botanical name of the tree has not yet been determined with certainty, although this valued ornamental wood and another, the Lingoa wood of commerce, are supposed to be the produce of the same tree, the *Pterospermum indicum*. Of late years, its estimation seems to have decreased in Europe, but it is still much valued by the Chinese. It is brought from Ceram, New Guinea and the Arru islands of the Moluccas. In Singapore it is sold by weight.

The Lingoa wood is also known in commerce as kyaboka wood, and very large slabs are obtainable from the lower part of the tree by taking advantage of the spurs or lateral growths. They are thus sometimes as large as nine feet in diameter. It is very durable, takes a considerable polish, is very abundant and may be had in any quantity.—*M. E. Juries' Reports of 1851; Col. G. A. Lloyd; Holtz.*

KYAI-GYEE, BURM. *Barringtonia speciosa*, B. *angustifolia*.

KYAI-THA, BURM. *Barringtonia acutangula*, Gaertn.; B. *macrostachya*. A Tensascrium tree, maximum girth $1\frac{1}{2}$ to 2 cubits, maximum length 7 feet. Scarce, but found widely scattered on low marshy grounds in the provinces. When seasoned it sinks in water. The wood is excellent for planes, or for any other purpose, for which a straight grain, great toughness and strength are required.—*Captain Dance.*

KYAI-THA, BURM. A tree of maximum girth 4 cubits, maximum length 18 feet. Found abundant, but scattered up the Attaran, Gyne, and Thoungween rivers near Moulmein and near Tavoy and Mergui. When seasoned, it floats in water. It furnishes a very compact hard timber, used for posts of houses, zyats, &c. The fibre is liable to start with repeated percussion, and the wood itself is subject to dry rot. This is called Itchwood, because the fruit, chips, or bark produce, when touched, an itching like that caused by cowhage.—*Captain Dance.*

KYAI YEW, BURM. A tree of Amherst,

Tavoy and Mergui, of maximum girth 3 cubits, maximum length 22 feet. Rather scarce but found all along the banks of rivers all over the provinces. When seasoned it floats in water. Its wood is used by the Burmese to make charcoal, also sometimes for posts of small huts: but is brittle.—*Captain Dance.*

KYA MOUK, BURM. A kind of oak in Amherst, Tavoy and Mergui, maximum girth 4 cubits, maximum length $22\frac{1}{2}$ feet. Abundant but widely scattered all over the provinces inland. When seasoned it floats in water. It is an excellent tough wood, durable and sufficiently light; used for all purposes by the Burmese. Strongly recommended for helves, hammer handles, handspikes, staves of casks, and many other purposes, but too widely scattered to be easily obtained, unless a large quantity be ordered which should repay a search in the forests: much used by Burmese as a pole for cavady baskets.—*Captain Dance.*

KYAN, a small tribe in Arakan, whose language is affined to Burmese.

KYAN, a powerful tribe of about 100,000 souls, who occupy the country from the south of the kingdom of Brunai, swept away into the interior. They strongly resemble the Dyak. Mr. Dalton states that the Kyan, amongst whom he lived, amount to 270,000 souls and that they were greatly addicted to head hunting. Of the tribes of Borneo differing from each other sufficiently to be classed under separate titles, the Kyan, as the most numerous and powerful, first claim attention. Personally, little is known of their divisions by the English, though the Netherlands of India Government has been supplied by its officers with many particulars concerning those who inhabit the south and south-east of the island. This people, differing however in various customs, are found on the great rivers Banjar, Pasir and Coti, and probably on all the rivers of the eastern coast. The Orang Tedong are, most likely, a tribe of the great Kyan division of the nations of the island. On the north and northern parts of the island, they are found in the interior of the Bintulu, Barram, Rejang, and other great rivers, as far west as the country of the Sarebas Dyak, but they only occupy the inland parts, at a great distance from the coast; always having between it and them other tribes, and frequently Malayan states; which latter have, by their intrigues, in a great measure prevented our acquiring that knowledge of them, which the settlement of Sarawak might otherwise have obtained. The Kyan of the rivers Banjar, Coti and Pasir, appear to have been always subject to the European or Malayan power, which held the mouths of

their respective streams. But the Kyan of the north-west have always been feared by the inhabitants of the Malayan towns of the coast; and the chiefs of Hoya, Mocha, Egan and Serekei, have always eagerly sought alliances with their barbarous but powerful neighbours; and, on several occasions such as have quarrelled with them, have found to their cost, that they were implacable foes, several coast towns having been burnt by them to the ground. The populous town of Sarebas was one year attacked by them, in conjunction with their ally, Dattu Patingi Abdul Rahman, of Serekei, to whose assistance they are reported to have come, with ninety boats, under three of their rajahs or most powerful chiefs. In their Government they are said to resemble the sea Dyak, each village being under one chief, who is, however, much more subservient to the authority of a higher chief, than either the Sarebas or Sakarran Orang Kaya. The country is divided into little states, each of which contains many villages, tributary to that in which the rajah of the province, as he is said to term himself, resides. The principal chief of this kind is the rajah Nipa, on the head waters of the great Rejang river, and he is very much feared by the neighbouring tribes of Dyak, Milanowe, &c. He is the ally of the chief of Serekei, who, though a mahomedan, is not of the pure Malayan race, his mother having been a Kyan woman. The country of the Kyan is reported, by all who have visited it, to be very populous; much more so than any other parts of the island. In some parts of it, gold and diamonds are found. On the Banjar river the people are said to wash the earth for these precious commodities as do the Dyak of Suntang, in the interior of the western branch of the Batang Lupar river.

The houses of the Kyans are built, like those of the Sea Dyaks, in one long terrace, with the verandah fronting its whole length. They are said to be formed of the most substantial materials, the posts being always of the very hardest wood, and the roof of planks of the same material. In the south of Borneo where there are tribes who live only to desolate each other, all the villages are said to be surrounded by a high and strong pagar, but the low country of the south of Borneo has its effect upon the customs of the people as there are no paths in that flat and swampy part of the island, as in that of the country of the Kyans of the north; and all communication between the tribes of the Banjar river, even far inland, is carried on by boats.

The Kyan tribes of the north are not engaged in incessant conflicts with each other,

nor do they seem to have any foreign enemies whom they dread. They are the hereditary foes of the Dyaks of Sarebas and Sakarran, than whom they are more powerful, although the report merely of two or three muskets which they possessed, sufficed to beat the Kyans, of whom, in reality they have great dread. They are allowed by all their enemies, and others who have known them, to possess in a much higher degree personal courage, than any of the other tribes inhabiting the island. Their bodies are beautifully tattooed, of a blue colour in various patterns; but images of the sun, moon and stars are amongst the most frequent.

It is reported that some of the tribes on the Barram and Bintulu rivers do not tattoo the persons of the males, and that the practice is there confined to the women, who thus discolour their arms and legs only. The Kenawit Dyaks, whose country borders that of the Kyans, also practice tattooing, as do the Orang Tatow, who live near the Bintulu river, and more towards the coast than the Kyans. These people also call themselves Dyaks, but the races appear to be so easily traced through the Tattoos, the Kenawits and other tribes, to the Dyaks of Sarebas and Sakarran, that there is no doubt that one comprehensive term, whether it be Dyak or Kyan, is applicable to all their divisions; and the whole of the inhabitants of the island are certainly of the same race.

The Dutch authors always speak of the Kyans of south Borneo, as the "Dyak Kyan," including all the infidel natives of the island under the former term, and using the names of divisions and tribes as specific names of this generic appellation. In dress and person, the Kyans very much resemble the Dyaks; the women wearing the small bedang, and the men the chawat; this latter is said to be uniformly of greater length and width than those used by the Dyaks, and to be frequently made of European cloth, though the women are expert in the manufacture of coarse kinds, both from cotton, and, it is said, also, from the fibres of the pine-apple leaves which are abundant in this country. The dress of the Kyan women of the Bintulu river, is reported to consist of two cloths, a little longer than the bedang, which are tied on opposite sides of the person, the one covering lapping over the other; but their dresses from the Rejang are made like the bedang. The jacket of the Kyan women is not loose, like that of the Dyaks, but fits closely to the person, and is longer than the cotton ones of the hill tribes: it is also frequently made of the pineapple fibre. In war, the dress of the men differs much from

the Dyaks of other denominations. The jackets they wear on these occasions are made of the skins of beasts; those of the panther and the bear are the most esteemed, but those of goats and dogs are sometimes substituted in a scarcity of the others. The broad part of the skin forms the back part of the jacket, the edges of which are bound with wide strips of red cloth. Bunches of feathers of the rhinoceros hornbill, which seems to be the war-bird of all their tribes, depend from little strings of beads, fastened to the skin, and dangle in the breeze as they move about. Their head-dresses in war are also peculiar to these people, and unknown to the other inhabitants of the island: they are of various descriptions, but the favourite ones are caps made in the fashion of a man's face caricatured, in those which represent the faces of animals. The weapons of the men are the sumpitan or blow-pipe: this is a long tube of hard wood, through which small poisoned arrows, or darts, having on their end a piece of pith, or some other light substance adapted to the size of the bore of the tube, are blown with great force and accuracy of aim. The sumpitan has, at its farthest end, an iron sight by which they regulate their aim. It is also at this end furnished with a large double-bladed spear. Both the sight and the spear are nicely bound on with rattans, which are woven over them. The dart used is poisoned with the ipoh, which is the same as the upas and chetik of Java, described by Dr. Horsfield; the darts, which are very thin and about ten inches in length, are pointed with the sharp teeth of fish, neatly bound on to them. A Meri man, who was very expert with the sumpitan, at the distance of from fifteen to twenty yards, could readily transfix a bird of the size of a starling with one of the little darts. The whole distance to which the arrow can be blown with any thing like effect, is sixty yards; and at that distance, they would probably not pierce the skin. The sumpitan varies in length, being from seven to ten feet. It is used also by the Mui people, the Benkatan and the Tatow, and by all the tribes of the east coast. The Idnan or Meroot, are said by Forest, also to possess it. Mr. Low saw specimens from the river Esiquibo, in south America, which resembled those of the Dyak in appearance and size, but were without the sight and the spear at the end. The Kyan must be very numerous; the tribes on the Coti river were reported to Mr. Dalton, who resided for the purposes of trade for fifteen months in the years 1825 to 1826 at the Dyak (Kyan) town of Tongarron, above the Bugis settlement of Semerindem, to

be above 270,000 in number, and if we may judge from the tribes of the west, this number is not likely to be an exaggeration, but the contrary. Notwithstanding this comparatively large population, Mr. Dalton informs us that head-hunting is practised to a frightful extent, and that desolating wars are constantly carried on for the purpose of obtaining these ghastly trophies. The manners of the young females resemble those of the sea Dyak; but, adultery after marriage is punished by death to the man, who, under whatever circumstances the criminal action takes place, is always considered the guilty and responsible party concerned. On the death of a person, it is said that a head must be procured previous to his burial. And though bloody and ferocious tastes lead to their wars, they are not, as they have been hastily stigmatised, cannibals; nor does any race, which, like the Batta of Sumatra, practise the horrid custom of feeding on the bodies of their own species, exist on the island.—*Journ. Indian Archip.*

KYANAN, BURM. On the low lands near the sea-coast of Tenasserim, there grows a large tree, of which canoes are occasionally made, that is much used for sandals, house posts, musket stocks, and spear handles. The wood is red; but turns black on being anointed with petroleum. The tree has pinnate leaves, with two pairs of oval leathery leaflets, and is a leguminous tree.—*Dr. Mason; Captain Dance; Cal. Cat. Ex. 1862.*

KY-A-NI, BURM. Copper.

KYAN-PHO, BURM. A tree of Moulmein; a strong wood, good for building purposes.—*Cal. Cat. Ex. 1862.*

KYAR, a naddi near Boeltriagunge in Azimgurh.

KYARI, HIND. A bed in a garden, or plot in a field; also a shallow pan for evaporating salt.

KYATPEN, see Ruby Mines.

KY-AU or Kyo, and the Khy-eng, according to Mr. Logan, appear to be similar to the Ku-mi. They have numerous common words, and each has words common to Khumi and Burman, or to Burman only. All the ancient or pre-Burman dialects of Arakan, from the Khy-eng to the Kuki, retain one of the characteristics of the Mon-Kambojan alliance and of Tibetan, the use of definite prefixes ha, a, ma, &c. While the adjacent highlanders have a Tartar-like physiognomy, the Ky-au, in features, dress and appearance, can scarcely be distinguished from the lower class of the Bengali peasantry of Chittagong. They are dark with large features, while the Kumi are fair with small features.—*Mason.*

KYAU THOO, Dipterocarpus, species.

KY-A-VE-KHET, BURM. Coral.

KYDIA CALYCINA.

KYE YO THOO.

KYAY-TSAY-BAYOUN, BURM. A Tavoy wood, useful for common carpentry.

KYAY-TSAY-GYU-KHY-AY, BURM. In Tavoy, a heavy, compact, dark wood; suitable for gun-stocks.

KYA-ZOO, BURM. In Amherst, a very heavy wood, like Saul, also a tree of Moulmein, used for building material.—*Cal. Cat. Ex.* 1862.

KYBURTO. Amongst the hindoos of Bengal, the Gnoli are the most numerous, after them, the brahmin and kaist races, are the Bagdi, an aboriginal people, and a class of cultivators called Kyburto.

KYCHEE-WARRA, the country inhabiting by the Kychco Rajpu.—*Malcolm's Central India*, Vol. i, p. 470.

KYDIA, a genus of plants occurring in Southern Asia. Several of the family it belongs to, abound in mucilage, and as a Guazuma is employed in South America in clarifying sugar, so a Kydia is in India. Dr. Wight in *Icounes*, gives Kydia calycina, fraterna, pulverulenta and Roxburghiana. The Kydia genus of plants occurs especially in the Pegu and Tounghoo districts. The small saplings are used, from their great strength and elasticity, by the natives, for making banghy sticks, but it is large enough to afford timber of three or four feet girth. Its wood is white-coloured, and adapted to every purpose of house-building.—*Roxburgh, McClelland, Voigt*.

KYDIA AXILLARIS, *Thw.*, a middle-sized tree near Badulla in Ceylon, growing at an elevation of about 2,000 feet.

KYDIA CALYCINA, *Roxb.; Corr.*
Kydia fraterna *Roxb.*

Bo-ke-mai-za,	BURM.	Putta-pulow,	KAMAON.
Pandiki,	TEL.	Pula, Pulli, Pola, Puli,	
Potari,	"	PANJAB.	

This is a middle-sized tree, about 20 feet high and 2 feet in girth, pretty common along the western ghauts, in the valleys of the Circar mountains, in Mysore, and on the slopes of the Nilgiris, and plentiful throughout the Pegu forests, more especially in the Pegu and Tounghoo districts, in Kannon and Garhwal and in many parts of the Siwalik tract up to 3,000 feet. The bark is mucilaginous and is employed in northern India to clarify sugar. The small saplings are used, from their great strength and elasticity, by the natives, for making banghy sticks, but it is large enough to afford timber of three or four feet girth. Its wood is white-coloured and adapted for every purpose of house-building, charcoal and fuel, and being light and elastic is made into oars, and used on the rafts floated down the Ganges. This tree grows rapidly in the outer valleys, but is not common west

of the Sutlej.—*Roxb. Fl. Ind.*, iii, 188; *Captain Drury's Useful Plants*; *Madras Hort. Gard. Cat.*; *Dr. McClelland*; *Dr. J. L. Stewart*, p. 25; *Messrs. Thomson*; *Jameson*; *Powell*; *Voigt*.

KYDIA FRATERNA, *Roxb.*, or Kydia calycina, *R. W.* A small tree of the circars, *Roxb. Fl. India*.

KYEATTEE, TAM. ? In Travancore, a wood of an ash colour, specific gravity 0.972. Used for carts and buildings.—*Col. Frith*.

KYEE, BURM., of Moulmein, Cassia sumatrana.

KYEE THA, BURM. The name according to Dr. Mason, of *Syndesmus Tavoyana*; and also called Kyay Mishoung. But according to Dr. McClelland it is *Barringtonia neutangula*. This tree is of maximum length 10 or 12 feet, it is very scarce in Moulmein, but sufficiently abundant at Tavoy.

KY-EING-NEE, or Ky-eing-ni, BURM. *Calamus draco*, *Willd.*

KYEING-TA-BOUNG, BURM. *Calamus*.

KYEM, HIND. ? MAHR. ? In Nagpore, a light coloured wood inferior to teak in strength, and greedily eaten by white-ants. Its length is from 16 to 28 feet and girth from 4 to 3 feet. It sells at 5 annas the cubic foot and it would answer for rafters.—*Captain Sankey*.

KYEN, see Karen.

KYEN-YO, BURM. In Tavoy, a kind of teak.

KYERE, HIND. *Euphorbia hirta* or *E. thymifolia*.

KYET-BET-YA, BURM. *Bæhmeria interrupta*, *Willd.*

KYET MOUK, BURM. *Celosia cristata*, *Linn.*; *Roxb.* Cock's-comb, a moderate-sized tree, found wild in most parts of the Burmese country. The fruit is sour, red, and the colour of a cock's-comb, and has similar corrugations on the skin. It hangs in grape-like clusters.—*Malcolm*, vi, p. 181.

KYET TET, BURM. One of the *Coffeaceæ*.

KYET-THA-HEN, BURM. *Antidesma paniculata*, *Roxb.*; *McClelland*.

KYET THWON NEE, BURM. *Allium asenlonicum*.

KYET THWON-NI, BURM. *Allium cepa*, *Linn.*

KYET THWON PHYU, BURM. *Allium sativum*, *Linn.*

KYET TSUT SHI, BURM. Castor oil.

KYET YET, BURM. *Celosia sp.* *Princes'* feather.

KYET YUNG, BURM. One of the *Cinchonaceæ*.

KYE YO THOO, BURM. A tree; very abundant at Mergui, not procurable at Moul-

mein, but found inland up the rivers all over the provinces; maximum girth $2\frac{1}{2}$ cubits, and maximum length 15 feet. When seasoned it floats in water. It has an uncommonly smooth-grained, tough, close, yet not heavy wood. Durable and with but one fault,—the smallness of its girth,—which unfits it for gun-carriages. It is strongly recommended for helms and handles of tools of all sorts, also for handspikes and for spokes. This wood, on careful examination, appears to be identical with Trincomallee wood, though this cannot be positively stated till the flowers of the tree can be procured.—*Captain Dance.*

KY-KAYA, is supposed by Dr Carey, to be a king of Persia, the Ky-yansa preceding Darius. The epithet Ky not unfrequently occurs in hindoo traditional couplets. One is connected with the ancient ruins of Abhaner in Jeypoor, recording the marriage of one of its princes with a daughter of Ky Camb. Tu beti Ky Camb ca, nan Permala ho, &c., 'Thou art the daughter of Ky Camb: thy name is Fairy Garland.' Ky was the epithet of one of the Persian dynasties. Qu. Cam-baksh, the Cambyses of the Greeks?

KYL, KASHM. Ibex.

KYLAS. The finest specimens of brahmanical caves, properly so called, are at Ellora and Elephanta, though some good ones exist also on the island of Salsette and at Mahabalipur. In form, many of them are copies of, and a good deal resemble, the buddhist vihara. But they have not been appropriated from the buddhists, as the arrangement of the pillars and position of the sanctuary are different. They are never surrounded by cells as all vihara are, and their walls are invariably covered or meant to be covered with sculpture, while the vihara are almost as invariably decorated by painters, except the sanctuary. The subjects of the sculpture of course always set the question at rest.

Another class of caves consists of rock-cut models of structural brahmanical temples. To this class belong the far famed Kylas at Ellora, the Sivite temple at Doonnar, and the Ruth at Mahabalipur. This last is cut out of isolated blocks of granite, but the rest stand in pits.

The Indra Subha group at Ellora should perhaps form another class, but whether they are brahmanical or jaina is undecided.

KYLAS, the heaven of Siva. He is usually represented with his bride, the mysterious Durga, by his side—and broods upon his endless task of world-destroying. See Kailas.

KYLLINGIA MONOCEPHALA. One-headed Killingia, common at Ajmere in low grounds. The root is sweet-scented, used and named as zedoary: "nirbishee."—*Gent. Med. Top.*, p. 174.

KYNDLI, MALEAL, CAN. A wood called in Tamil Bellerom.

KYMORE. The whole of the Kymore range in Shahabad is described as of mountain limestone which also shows itself in the valley of the river Sone as far at least as Mungeysur peak in Mirzapur, and it crops up at Rhotas forming a sloping base to the precipitous sandstone rock. Below the mountain limestone is one of a bluish grey colour mixed with occasional crystals of calc-spar, this, like the Kurnool stone, is admirably suited for lithography. Below the latter, in Kymore, is a limestone of a hard tenacious almost indestructible composition admirably suited for building.

Mr. R. Bingham adds the following remarks on the sandstones of the Kymore range, which have a high commercial value at Chunar and Mirzapur, being used as flagstones, and for ornamental purposes. The stones at those places owe their advantages to the proximity of the Ganges, which affords an easy river carriage; otherwise they are the worst and most destructible description of stone in the range. The millstones of Chynepore, Sasseram and Tilowthoo (perhaps also Akbarpore), are famous, but must always be dear in a distant market for want of river carriage. The Sone causeway and the Koylwan railway bridge are built of the dense sandstone of Sasseram; little quantities are found in the higher portions of the range towards Rohtas. The best stone, while easily workable, is almost as hard as granite, and may be had of any colour, white, crystalline, blue, grey, and all shades to a dark-red. Flexible sandstone is found at Ulwar, Jhend and Jubulpore.

At the Punjab exhibition held at Lahore, there was a good collection of building materials from Sahi Balabgarh, in the Delhi district, including the red, the spotted, and the light coloured sandstone, so much used in the large buildings of Hindustan; and from the same place are polished blocks of white marble, and of a pretty dappled gray marble called Narnaul marble, which last was exhibited from the Hissar district.

L

L, is the twelfth letter in the English alphabet, and is usually denominated a semi-vowel or a liquid. In the English language it has only one sound as in *like*, *canal*, but in other languages is found interchangeable with *r*, *n*, *m*, *d*, *i*, *u* and *z*. Letters with the sound of *l* are in use in all the written tongues of the East Indies : but in the Vedas and in the Marathi and other languages of the south of British India, *l* has a rather harsher sound, and in some parts of the Tamil country, medial *l* has the sound of cerebral *r*, and that of a cerebral *l* when final. In other parts of the Tamil region, *l* has the sound of *lr*, and in others again of *zh*, so that pāllām fruit is also pronounced pāzhām. *L* and *zh* are therefore frequently confounded. The languages of Southern India have a sound correctly expressed by *zh*, but taken by the untutored ear to be *l*, and written *l* even by scholars ; thus Tamil is properly Tamizh ; Tuluva is Tuz-huva. In non Aryan speech *l* sometimes takes the place of *zh*, *sy*, *s*, and *j* or other sibilant. *L* is used in China in the place of the letter *r*. *L* does not exist in Zend. In New Zealand, *r* is substituted for *l*.—*Rev. W. Farrar's Lectures on families of speech*, London, 1870 ; *Dr. W. W. Hunter ; Wilson's Glossary*.

LA, TIBETAN. A pass.

LA, or **Laa**, PORT. Wool.

LA, CHIN. Wax.

LAB, HIND. Nursery beds for raising poppy, tobacco, or rice.

LABAIK, ARAB. May it please you, or give your commands, the term from which the Labbay race of the south of India derive their name.

LABAK, MALAY. Radish.

LABAN of Java, a yellowish hard wood, employed for the handles of axes and various utensils.

LABBAT-UT-TUARIKII, a history of Asia, by Kasvini.

LABBAY, tall, well-made, robust men, inclined to be obese, with a light brownish yellow colour. Their arms and lower limbs are large, their cranium is singularly small. Their eyes are slightly oblique, and not wanting in expression, cheek bones prominent, lower jaw large and heavy, beard usually spare. They wear the loongi or picce-cloth, wrapped

around their waist and limbs. They are mahomedans, and except pork eat the usual kinds of animal food. Their chief locality is on the eastern coast of the southern part of the peninsula of India, between Pulicat and Negapatam, but chiefly at Nagore where is the shrine of Kadir Wali. They are extensive merchants and traders, are engaged in every branch of foreign and inland trade on the south-eastern side of India, and are exceedingly industrious and enterprising. The hide and horn trade is almost monopolized by them. Their origin is obscure, but the commonly-received opinion is that they are the offspring of Arab fathers with Tamil mothers. Their language is Tamil.—*Pro. Mad. Govt.*, 1867, p. 3. See India, Mahomedan.

LA BEHMEN, Bombay. The dried roots of two varieties of a composite plant, chiefly obtained from Kabul. Used by the natives as a tonic in debility, in doses of 4 drachms ; also in impotence as a deobstruent. Price eight annas per lb. Not at present used in European medicine, but was formerly employed as an aromatic stimulant.—*Cat. Ex.* 1862.

LABER, HIND. Desmodium tiliaefolium.

LABERA, HIND. Cordia myxa.

LABHA, see Brahmadica.

LABHAN, HIND. Populus euphratica. Euphrates poplar.

LAB-I-ABI, HIND. A kind of silk of Bokhara.

LABIATÆ, a name given by Jussieu to an order of plants, called by Lindley, Lamiaceæ.

LABLAB, AR. Hedera helix. The Ivy.

Wild variety.

Adavi chikkudu kaya, TEL.

Red variety.

Yerra chikkudu kaya, TEL.

A common plant in the hedges in many parts of India, whence it has travelled into the tropical parts of America. It is a smooth perennial with showy white or purple flowers, and large horizontal pods, containing from three to four seeds. It has a heavy disagreeable bug-like smell, prefers a rich black soil that cannot be flooded by rains, and produces a coarse but wholesome pulse, much eaten by the lower classes in India. This bean is sown in the fields like all others in rows, and is eaten both boiled or put into curries, when young, the legume is eaten pod and all, when full-grown the seeds only are used. It is about five inches long and has got its names from the reddish colour of its edges. Burmese and Karens grow several varieties of one or two species of lablab, which occupy the place of kidney or French beans in Europe. Commonly cultivated in gardens, of easy growth, a pandal is required for its support. Its composition, in 100 parts, is as under :—

LABU AMBON, MALAY. Calabash. *Cucurbita lagenaria*.

LABUAN, an island about 10 miles long and from 2 to 5 broad, ceded to the British Government in 1846. It has the harbour of Victoria on its south. The island is on the N. W. coast of Borneo, and is in shape, a sort of triangle, of which the longest side, running about N. E. and S. W., is 11 or 12 miles in length and approaches a straight line. The coast line is, for the most part, flat and sandy, although in one or two places, low cliffs abut upon the sea and at about the centre a sloping cliff, 100 feet high or more, leads out to a long sunken ridge of rocks, terminated by a rocky islet named *Iyang Iyangan*. At this point, deep water may be found up to the beach ; but elsewhere shoals and coral reefs extend to a great distance from the land. The southern side of about 6 or 7 miles in extent from E. to W., is indented by a broad bay having for the most part very shonl water, from the bottom of which a considerable stream, the China river, pursuing a very tortuous course through mangrove swamps, but in a general N. and S. direction, divides the island for about two-thirds of its length into two nearly equal parts. Victoria harbour may be considered a part of this bay, for it is probable, though not certain, that the mangrove swamp at its head is continuous or nearly so with that bordering the China river, so as to separate the range of low hills on the west of the harbour from the rest of the island. From the opposite sides of this bay two ridges of hills, probably nowhere more than 200 feet in height, converge towards the head of the China river, the most elevated parts probably occupying about the central lines of the two divisions and forming the water-shed between

the central mangrove swamps and the ravines of the eastern and western shores. Besides the main central drainage of the China river, there are upon this coast several minor creeks, dignified by the name of rivers, which penetrate but a short distance into the jungle.

The dependant islets of Labuan, with the one exception just mentioned, all lie to the south, and proceeding from W. to E. are as follows:—Pulo Kuraman, consisting of a long low ridge and a good deal of sandy beach, is about $1\frac{1}{2}$ miles in length and is situated a little to the S. W. of Tanjong Kiam Sam, the west point of Labuan. Eastward of it is Pulo Burong, opposite the mouth of the China river, a round mass of limestone rock about 50° or 60 feet high. Off Tanjong Rancha Rancha, to the west of Victoria harbour, is Pulo Belulang, a small limestone rock, and south of it is Pulo Enoo, a small hill surrounded by extensive sandy tideway. On the east of the harbour entrance lies Pulo Kulin Pappan, a small ridge with sandy beach on each side, and connected by a line of rocks, for the most part sunken, with Pulo Daat, which is the largest of the islands, being 4 or 5 miles in circumference, and containing several hills 80 or 90 feet high. Still eastward and in the mouth of the Kaleas river, passing over an island named Labungan, is Pulo Malan Kassam, which by some mistake in the naming of the early charts was ceded without the intervening island. All these islands are nearly in a straight line. To the southward of Kuraman are Oosookan Kichil and Oosookan Besar, rocky islets with a little flat sandy plain and surrounded by very foul and dangerous ground.

The eastern side of the island forms also a shallow bay almost filled with coral reefs and sand banks, and partially fringed with mangroves. Towards the north another smaller river, the Gangarak, drains a considerable extent of country, chiefly swampy, producing a luxuriant vegetation of various palms and mangroves, and the greater part of it hardly elevated above the level of the sea. Its sources are, for the most part, to the southward of its debouchment, though one small branch runs in a northerly direction, and they are divided from those of the China river by the united northern extremities of the two ridges before mentioned, which are here, for the most part, very low.

The measures of which the whole island is composed are alternating clays and sandstones, with all the intermediate modifications usually found in an English coal field, but having throughout the appearance of having been exposed to much less pressure and condensation. Coal occurs in several places, and the

veins appear to be associated in groups. In one place five, in another three veins (one very small) are distributed in a very small space of ground, and in each case, the containing group of clays is placed between two very thick beds of sandstone. The clays are usually very slightly laminated, excepting where they are alternated with sandstone in excessively thin beds, a formation rather common. They are also much less carbonaceous in general than the corresponding members of the Welsh and north of England coal fields, but to this there are some exceptions. One bed of blue shale, apparently of considerable thickness, yields in several places small springs of dark coloured but tolerably pure petroleum. This bed is in perpendicular depth some 400 or 500 yards below the principal coal seam. No regular beds or veins of ironstone have been detected, though the clays frequently contain nodules of argillaceous iron ore, sometimes in nearly continuous courses. These nodules are often septarian, and are filled with crystallized but very friable carbonate of lime. Small masses of arsenical pyrites are also sometimes enclosed in them, as well as in the clays themselves. These nodules when exposed to the air, appear in the course of a great length of time, to become converted into a red oxide of iron of various degrees of hardness, from a powdery yellow soft substance, to a dense dull purple cavernous stone of vitrified appearance, capable of striking fire with steel and closely resembling the laterite of Singapore. The whole surface soil of the island and the beds of most of the streams are more or less covered with scattered masses of this substance. It is also found on the main land, and is the ore from which the Kadyan and Moorat, native tribes in the neighbourhood of Brune, manufacture their iron.

The coal is of very good quality, hard, dense and with a fracture inclining to conchoidal, and is remarkable for having dispersed through its substance masses of imperfect amber, sometimes light yellow and very transparent, sometimes approaching to black and in a semi-carbonized state, but always extremely friable and brittle; when burnt it diffuses the fragrant smell of recent resin, and is in a sufficiently perfect state to be collected by the workmen and used with fresh dammar in making torches. In some seams of coal on the river Bintula, to the south of Brune, the late Mr. Burns mentioned that almost half the seam consists of this substance, which is there commonly dug and used by the inhabitants as dammar. Specimens of coal from Riteh, on the east coast of Sumatra near the Indrageri, contain much of this substance.

Lac is obtained from incrustations made by an insect (*Coccus lacca*), similar to the cochineal, (*Coccus cacti*) on the branches and twigs of many trees in India, but seemingly all from the punctures of the *Coccus lacca*; the names of the trees are :

Aleurites laccifera.	Feronia elephantum.
Anona squamosa.	Inga dulcis.
Butea frondosa.	Mimosa cinerea.
Carissa spinarum.	Rhamnus jujuba.
Celtis, sp.	Schleichera trijuga.
Croton draco.	Urostigma religiosum.
" laccifera.	Vatica laccifera.
" sanguiferum.	Vismia " ?
Erythrina indica.	" micrantha ?
" monosperma.	Zizyphus jujuba.

The *Coccus* genus of insects belongs to the order Hemiptera. The species known in the south of Asia are the *C. cacti*, the cochineal insect; the *C. lacca* that yields the stick lac of commerce, and the *C. maniparus* of Arabia, which punctures the *Tamarix gallica*, and causes the exudation of the Arabian manna. The *Coccus lacca*, produces the substance called lac. When the females of this *Coccus* have fixed themselves to a part of the branch of the trees on which they feed, a pellucid and glutinous substance begins to exude from the margins of the body, and in the end covers the whole insect with a cell of this substance, which, when hardened by exposure to the air, becomes lac. So numerous are these insects, and so closely crowded together, that they often entirely cover a branch; and the groups take different shapes, as squares, hexagons, &c., according to the space left round the insect which first began to form its cell. Under these cells, the females deposit their eggs, which, after a certain period are hatched, and the young ones eat their way out. It is found encircling twigs and branches. The broken twigs covered with these incrustations are called 'stic lac' in commerce. After the colour has been extracted and further purified, shell lac results. Lac lako was first made in Calcutta in the beginning of the 19th century, afterwards the lac dye. *Coccus sinensis* of China secretes a wax from which candles are made. The lac is formed by the insect into cells, somewhat resembling a honey-comb, in which the insect is generally found entire, and owing to whose presence, stick-lac yields by proper treatment a red dye, nearly if not quite as bright, as that ob-

tained from cochineal, and more permanent. Lac is found encircling the branches of these trees in the form of a tube, $\frac{1}{4}$ inch to one inch in diameter. The broken branches with encrustations at various distances, is called in commerce stick-lac, which ought to be semi-transparent. The colouring matter obtained by grinding stick-lac, and then treating it with water, constitutes seed-lac. At the Madras Exhibition of 1855, the crude stick-lac attached to branches of various trees was exhibited from 16 localities, extending from Kamptee to Trivandrum. It is abundant in the jungles of S. India, but is not much collected for commercial purposes, although always procurable in the bazars; the best lac is produced upon the *Schleichera trijuga*, which abounds in the central provinces, and yields the resinous secretion twice a year. In Bengal, lac is chiefly produced in the forests of Sylhet and Burdwan, but it is also procurable in the Deccan, and Siam and Pegu afford the largest supplies. At the Madras Exhibition of 1857, lac was exhibited from the *Ficus elastica*, *Butea frondosa* and *Zizyphus jujuba*: it is found in great abundance on the *Croton lac-ciferum* growing near Colombo, in the island of Ceylon; it is also an article of commerce from Siam and Pegu. The Abbe Rochon informs us that gum lac is brought from Quanton in the province of Quei-chu in China, but of a quality greatly inferior to that of Bengal. The Reverend Mr. Ward also points to this superiority. The hindoo physicians of the South of India, known as Vyteans prescribe Komburruk in old and obstinate bowel complaints, when the habit has been much reduced; they also, when mixed with gingelie oil use it as an external application for the head, in cases, in which the patient is debilitated from long continued fever. The stick-lac from Pegu is, perhaps, the finest in the world, preferable even to that of Bengal. The jungle at Taldungah consists chiefly of thorny bushes, jujube of two species, an *Acacia* and *Butea frondosa*, the twigs of the latter often covered with lurid red tears of lac, which is there collected in abundance. As it occurs on the plants and is collected by the natives it is called stick-lac, but after preparation shell-lac. In Mirzapore, a species of *Celtis* yields it, and the Peepul very commonly in various parts of India. The elaboration of this dye, whether by the same species of insect, or by many from plants so widely different in habit and characters is a very curious fact; since none have red juice, but some have milky and others limpid. The cells made by the insect, for its eggs adhere to the branches in grains, completely encrusting them, and, in commerce, are either

imported in that form, and called stick-lac, or the grains are gathered from the branches, their colouring matter extracted, and formed into flat cakes, still preserving the granular appearance, and called seed-lac, or the seed-lac is melted up into masses, and called lump-lac. Shell-lac, is seed-lac further purified by being put in bags of fine linen, and melted over a charcoal fire until it passes through them. The bags are squeezed, and passed over a smooth surface of wood, on which the lac is deposited in thin layers. If pure, this kind of lac will take fire on a hot iron and burn with a powerful smell. The heat of a ship's hold will sometimes run it into a solid mass, and thus diminish its value. The chief consumption of lac in Europe is for the manufacture of sealing-wax and varnishes. In India the inferior kind is made into bangles, or armlets for women of the lower classes, the superior is fashioned into rings, beads, and other trinkets; and, to fit it for such purposes, the natives purify it by melting in the manner above described. When the lac begins to exude, it is scraped off, and the bags are twisted or wrung by means of cross sticks at their ends, to force out the melted contents. The natives of India make a good varnish of lac, coloured with cinnabar or some other pigment, with which they varnish boxes, cabinets, and other articles. Coloured varnishes of this description are much used in the adornment of their religious houses. They also employ lac as a dye. By pouring warm water on stick-lac a crimson colouring matter is obtained, which is made into square cakes for sale, and called lac dye, lac lake, or cake lake. These cakes when broken are dark coloured, shining, and compact, but when scraped they yield a bright red powder approaching carmine. A mixture of lac, alum, and tamarind-water is the native dye for silk or cotton cloth of a crimson colour. The Indian lapidaries make use of lac as a vehicle for retaining the hard powders used in cutting and polishing gems. The lac dye constitutes much of the value of lac, and is due to the insect which makes the cells. The parent lac insect, after laying her eggs, becomes a mere lifeless bag, of an oval shape, containing a small quantity of a beautiful red liquid. The young insects feed on this liquid, and their bodies assume the same hue, so that the branch which bears them appears to be covered with red powder. The cells of gum-lac which shelter them are more or less deeply tinged with the same colour. The best time for gathering stick-lac so as to secure the colouring matter, is before the insects have made their escape. Previous to the discovery of the true cochineal, the colouring matter of the lac

insect was universally employed for dyeing red. The crimson of Greece and Rome, and the imperishable reds of the Brussels and Flemish schools, were obtained from this source. The best quality of stick-lac is obtained from Siam; the twigs being frequently encrusted all round to the depth of a quarter of an inch, while sometimes a great accumulation takes place on one spot: that of Assam ranks next: the stick-lac of Bengal is inferior to these, being scanty and irregular in its coating of resinous matter. The supply of lac from among the mountains of India, could support a consumption ten times greater than at present. The accumulation of insects is so great, that the trees, often a species of ficus, on which they live, are exhausted and injured by this vermin. The lac which is so largely exported from Burmah, is obtained chiefly in the Shan districts. It lives in Assam, chiefly on the Ficus religiosa. After the dye is extracted, the gum-lac still requires much purification before it can be used for the more delicate varnishes. It was long a desideratum to render lac colourless, its dark-brown hue being a drawback to its use as a spirit varnish. A premium of thirty guineas and a gold medal were offered by the Society of Arts for "a varnish made from shell or seed lac, equally hard, and as fit for use in the arts," as that prepared from any other substance. These were claimed by two persons, Mr. Field and Mr. Luning; and as both their processes were found to answer the desired end, a premium of twenty guineas was awarded to each.

The imports into Great Britain were as under:—

Year.	Lac-dye. Tons.	Shell-lac. Tons.
1847	277	472
1848	371	431
1849	222	718
1850	679	739
1851	906	764

It was imported into Liverpool from Bombay as follows:—

The resinous excretion or exudation called, Shell-lac, Stick-lac, Seed-lac.			The colouring matter of the body called, Lac dye or cake lac, Lac lake.		
Year.	Cwt.	Used for Varnishes.	Year.	Cwt.	Used for Varnishes.
1851	323	150	1851	43	180
1852	325	150	1852	82	180
1853	325	150	1853	82	180
1854	120	79	1854	80	180
1855	79	79	1855	80	180

The exports of Lac from India were almost all from Calcutta and were as under in the eleven years 1850-51 to 1860-61:—

Year.	Tons.	Value. £	Year.	Tons.	Value. £
1850-51	3,757	139,177	1856-57	2,489	105,595
1851-52	2,867	105,823	1857-58	107,577
1852-53	3,837	156,680	1858-59	1,854	80,567
1853-54	3,527	102,792	1859-60	1,979	78,042
1854-55	2,542	92,282	1860-61	2,186	171,646
1855-56	2,906	126,878

LAC, LAT. Milk.

LAC, a barbarous native tribe in Persia. The Zund, and all other branches of the Lac tribe, are as barbarous as any of the wandering tribes of Persia. The Manfee are, like the Zund, a barbarous branch of the Lac.—*Malcolm's History of Persia*, Vol. ii, pp. 150 and 160.

LAC, in hindoo numeration, 100,000; a lac of rupees is therefore £10,000; ten rupees going to a pound sterling; a crore, or krur, is 100 lacs.

LACARU, Guz. Wood: Timber.

LACCA, It. Lac.

LACCADIVA, or Laccadives, an archipelago of low islands, off the coast of Malabar, extending from lat. 8° 30' N. to the parallel of 13° 52' N., and from 71° to 73° 40' E. L. Most of the islands are low, and surrounded by steep coral reefs. The Laccadives form a group of 32 small islands, west of the Malabar coast, surrounded by coral shoals. The inhabitants subsist mostly on coconuts and fish, and their chief trade is in coconuts, oil, coir, jaggery and coral. The inhabitants call them the Lakhera-deevh. Ptolemy mentions them as the Dimurce Insule, but Ammianus Marcellus, in the 4th century styles them merely Divi, and the Arabs and Persians call them Debajat. They were re-discovered in 1499 by Vasco deGama and afterwards plundered by the Portuguese. They were then subject to the mahomedan chiefs of Cannanore, some of them afterwards were under the Bedur queens of Bednore, and latterly under the Beeby of Cannanore and the British, and between the last two they are now apportioned. They were visited

in 1844-45 by Mr. W. Robinson, and in 1867 by Mr. Sewell; 8 or 10 islands are more or less inhabited, and each with 2 to 3 miles of superficial area. They are all about 15 or 20 miles apart, separated by great channels, but none of the islands are more than 10 to 15 feet above the sea level. The people are estimated to be 7,000 in number. They are of Malayala origin, but are now mahomedans and adhere to the Alya-santan, or decensus ab utero, though some of the islands are adopting the filial law. They are poor, quiet and inoffensive, make good pilots and use a dialect of Malayalam. They produce the cocoanut palm and coir, jaggery and a few pulses: a few cattle, sweet-potato and betel-nut. The castor oil and arnotto plants are grown, tortoiseshell, holothuria or sea slug, mats, shells, shark and fins. Their boats vary from one to fifteen tons burthen, and they visit all the western coast of India from Goa to Cochin. They are taught Arabic and Baltite (a dialect of the Malayali) in the mosques, by the priests. There are 19 considerable islands, but the approach to most of them is very dangerous, as they are surrounded by reefs and steep rocks with a great depth of water close to them. The largest island is about 7 miles long and $2\frac{1}{2}$ broad, and there are many navigable channels between the islands, the largest of which is the Mumaie or the Nine-degree channel. They pay £1,000 of tribute to the British Government. The islands are very difficult to find in thick, squally weather, as scarcely any of them rise more than six feet from the surface of the water: they have a novel appearance when first coming in sight, as the cocoanut trees with which they are thickly covered, have the appearance of growing out of the sea. They are all of coral formation, and very few have any anchorage near them. As a rule, no bottom is found at a hundred fathoms close up to the beach. The four northern islands, are Chitlai, Kitban, Armini and Cardamum.—*Johnson, Gazetteer*; *Mr. William Robertson's Report*; *Mr. Sewell's Report*.

LACCA EM PAOS, PORT. Lac.

LACCA TREE, ENG. *Tanarius major*.

LAC DYE, or Lac Lake, consists of the colouring matter extracted from the stick-lac. The lac dye of commerce is prepared by evaporating the coloured tincture to dryness, when the residue is formed into little cakes, two inches square and half an inch thick; these are of various qualities and are marked with different letters by which the quality is recognized. They are used as red dyes for some purposes, instead of cochineal. Lac dye is largely manufactured in Bengal, whence it is exported to England. A sample of lac-lake dye was exhibited at the Madras

Exhibition of 1865 by Dr. Flynn, who prepared it by boiling coarsely powdered Bangoon stick-lac in several portions of water, until it ceased to yield any colouring matter; a small quantity of alum was then added to the filtered solution, after a few minutes, a small quantity of Liqr. Potassæ was used to throw down the alumina with the colouring matter, the fluid at the same time being constantly agitated. The precipitate was allowed to settle for a day, the fluid then drawn off and the sediment pressed into cakes and dried in the shade. This dye is usually obtained from the lac by treating the crushed lac with water to dissolve the colouring matter; but the lac should be gathered when the insect is within the lac concretions appearing as a small oval body consisting apparently of nothing but a soft red substance nearly liquid. If the lac is not gathered till after the insect has escaped from its resinous envelope, the quantity of colouring matter obtainable is very small. Dr. McLeod, of Madras, prepared a superior lac dye, by digesting stick lac (crude lac) in the cold, in a slightly alkaline decoction of the leaves of *Memeylon tinctorium*, and the solution being applied to woollen cloth, after preparation with a mordant formed of a saturated solution of tin in muriatic acid, produced a brilliant scarlet dye.—*M. E. J. R.*; *Powell's Hand-book, Econ. Prod., Panjab*, p. 183.

LACE.

Kanten,	DUT.	(Gold or silver),	Bands,
Dentelle,	FR.		MALAY.
Spitzen,	GER.	Krushowo,	RUS.
Merletti, Pizzi,	IT.	Encasjes,	SP.

At the Madras Exhibition of 1865, some very fine thread lace was contributed by the Edeyengoody Mission School, Tinnevely, and by the Nagercoil Mission School, Travancore, so nearly equal in merit that a second class medal was awarded for each. The patterns of both were varied and tasteful, but the prices above those of European lace. The Cochin Local Committee exhibited some very creditable specimens of lace insertion and edging. Some excellent specimens of Gold lace, Cord Sashes and sword Knots were exhibited by the Madras Local Committee, deserving of honorable mention. Lace, is a term applied to two very distinct products, one consisting of gold and silver wire, or even silk thread, woven into ribands for embroidering hats and uniforms. The other is the well-known transparent network, in which the threads of the weft are twisted round those of the warp; it may be made of silk, flax or cotton, or even of gold and silver thread, and has usually a pattern worked upon it, either during the process of making the lace, or with a needle.

after this has been completed. Much lace is made by machinery, but the highly esteemed genuine articles is made by hand. Lace-knitting is considered to be a German invention; but lace worked by the needle is of far older date, and was probably an eastern invention, though it does not appear to have been known or practised in India. Lace however, is enumerated by General Cullen as being made in the territories of the rajah of Travancore; and the Madras Central Committee, in their final report state that the lace of Nagercoil, though knit by natives of the country, was equal to the best French lace. A few of the European residents are already aware of the superior quality of the Nagercoil lace, and use it, but its beauty is well-deserving of being more generally made known than it at present is. This lace, when seen at the Great Exhibition, was much admired, and some said that it must have been made in France. Samples of six different kinds were sent. Gold and silver blond lace are both excellent of their kinds, but as the demand is limited, and fashion changeable, they might not always command a sale. But the broad black lace on wire-ground, and the broad white and fine lace on Brussels ground, and of the nature of Bedfordshire lace, were highly approved of by the best authorities. The broad being thought worth four shillings, and the narrow worth two shillings a-yard.—*McCulloch's Dictionary of Commerce*; *M. E. J. R.*; *Royle's Arts, &c. of India*, p. 503.

LACE-BARK TREE, see *Daphne cannabina*; *Thymelæa*; *Daphno lagetta*.

LACERTIDÆ. A family of reptiles known as Land Lizards, of which the following genera and species occur in India:—

Tachydromus—

sex-lineatus, *Daud.*, Rangoon Archipelago.
meridionalis, *Günth.*, Cochin-China, China.
septentrionalis, " Ningpo.

Cabrita *Leschenaultii*, *Milne Edwards*, Coromandel, Punjab.

Ophiops *Jerdoni*, *Blyth*, Mhow.

Acanthodactylus *cantoris*, *Günth.*, Rannuggur.

Under the family name Lacertians, Cuvier arranged—1st. The Monitors and their subdivisions, namely, the Monitors properly so called, including the Ouarans of the Arabs (*Varanus*), &c.; the Dragons (*Crocodilurus* of Spix, *Ada* of Gray), and the Sauvages (Monitor of Fitzinger and Ameiva). 2nd. The Lizards properly so called. The second group comprises, according to Cuvier, the genera *Lacerta*, *Algyra*, and *Tachydromus*, but these are now arranged under other families.—*Eng. Cyc.*; *Günther's Reptiles*.

LACHU LACHI, HIND. Rheum emodi.

LACK, GER. Lac.

LACKER, a varnish either for wood or for brass, made with shell-lac and spirits of

wine. That for wood, called hard-wood-lacker, may be in the proportion of 2 lbs. of lac to the gallon. Another recipe is 1 lb. of seed-lac and 1 lb. of white rosin to a gallon of spirits of wine. For brass the proportions are ½ lb. of pale shell-lac to 1 gallon of spirit. It should be made without heat, but simply by agitation for five or six hours. It should then be left until the thicker portions have subsided, when the clear lacker must be poured off, or if not sufficiently clear, it must be filtered through paper. It darkens by exposure to light, so that paper should be pasted round the bottle to exclude it. A pale yellow lacker may be prepared from 1 oz. of gamboge and 2 oz. of Cape aloes, powdered and mixed with 1 lb. of shell-lac. For a full yellow, ½ lb. of turmeric and 2 oz. of gamboge: for a red lacker, ½ lb. of dragon's blood and 1 lb. of annatto. The colour, however, is modified by that of the lac employed. Lackers may also be coloured by dissolving the colouring matters in spirits of wine, and adding the proper proportions of these to the pale lacker, according to the tint required. Mr. A. Ross prepares lacker with 4 oz. of shell-lac and ½ oz. of gamboge, dissolved by agitation in 24 ounces of pyro-acetic ether. The clear liquor is decanted, and when required for use is mixed with eight times its volume of spirits of wine. Hardwood lacker is applied nearly in the same manner as French polish. In lackering brass, the work must be cleansed from grease and oil, and if convenient, heated to the temperature of boiling water, when the spirit evaporates, and the varnish attaches itself more firmly to the metal, producing a brilliant effect. If heat cannot be applied, the air should be dry and warm. The lackering should follow immediately after the work is polished, otherwise it will become tarnished, and prevent the lacker from adhering. To prevent this tarnish, the work may be smeared over with oil, or kept under the surface of pure water, or wrapped closely up in cloths. Before lackering, the oil must be carefully cleaned off with moslings, and afterwards with whitening applied with a rag or a brush. In brass-work factories, a lackering-stove, with a broad, flat top, is used for holding the articles which are to be heated preparatory to lackering; or a metal plate, supported by four legs like a table, and heated by a ring of gas-jets below, may be used. Brass tubes may be heated for lackering by being filled with boiling water, the ends being stopped with corks. In lackering the heads of a large number of small screws, they may be inserted in a piece of card, and heated over a charcoal fire or a gas flame, and the whole

be-lacquered at one process. In thin circular works, the friction of polishing gives the heat required for the process. The lacquer must be laid on quickly and uniformly by means of a camel's hair brush; and as soon as one coat is applied, another must be put on, heat being used between the two coats if necessary. Circular works may be lacquered on a lathe. The word lacquer is evidently derived from the Indian name for lac. The name occurs in Avicenna, who mentions it, as described by some, as the gum of a tree like the myrtle, and by others that it is a substance like to, and having some of the properties of, amber. It is mentioned in many Indian works, and is apparently alluded to by Ctesias. This substance is used for a variety of purposes in India, and it is the common material for uniting things together, as gum and glue are in Europe, toys of various kinds, lac chains gilt, and lac grindstones, are made from it. The term lacquer is applied to laying on or covering with a preparation of lac; but two different processes are usually confounded under this term. The one prevailing in Burmah and the southern parts of the Indian peninsula is from the balsamic juices of trees and was well-known to Dampier, in 1638, as he says, "The lac of Tonquin is a sort of gummy juice which drains out of the bodies or limbs of trees," and that "the articles lacquered are cabinets, desks, &c." Some chemical change, no doubt, takes place on exposure of these juices to the air. This kind of lacquered-ware was much appreciated in the last century, and was imported chiefly from China; much, however, was always prepared in Burmah, though that of Japan was always considered superior to any other. Both these and the lacquer of Burmah are prepared only from the juice of the Terebinthaceæ family of plants. The chief expense of the manufacture arises from the care with which successive layers of varnish must be laid on. Another kind of lacquer-work is rather of the nature of papier-mâché, covered with one or more layers of lac varnish. This is the case with the lacquered boxes from Cashmere and Lahore, so remarkable for the beauty and elegance of their patterns. At the Madras Exhibition of 1855, a series of lac-ware from Hyderabad consisting of bracelets, chains, neck ornaments, pin-cushions, purses, and other ornaments were exhibited through Dr. Smith, excellent of their kind, and well-finished. Some large and interesting specimens of this manufacture contributed from Kurnool, consisted of charpoys, trays, an almirah and several boxes, and exhibited considerable proficiency in the execution and arrangement of the patterns, but too great a sameness of colour with a

preponderance of yellow. The joinery also admits of much improvement. In China, lacquered-ware was formerly exported in considerable quantities, but partly owing to the liability to injury on the homeward passage, and being superseded abroad by other things more substantial, the exportation has dwindled to a mere trifle. Such articles as are exported consist of those which have always been in request, as fans, waiters, boxes, tea-boards, tea-caddies, tea-pots, &c. The patterns worked on them affect their sale, and the least mark spoils the varnish. The best kind of lacquered-ware comes from Japan. The beauty of the lacquered-ware of China owes its lustrous colouring to a composition of lamp-black and the clarified juice obtained from a species of sumach, called *Rhus vernix* or *R. vernicia*. Wood oils are obtained from other plants of the same family, and the different qualities of lacquered-ware are owing to the use of these inferior ingredients. The real varnish tree is described by De Guignes as resembling the ash in its foliage and bark, it is about fifteen feet in height, and furnishes the sap when seven years old, which is carefully collected from incisions in the trunk opened in the summer nights. The body of the ware is wood partially smoothed, or paste-board, upon which two or three coats of a composition of lime, paper, and gum are first laid and thoroughly dried and rubbed. The surface of the wood is also hardened by rubbing coarse clay upon it, and afterwards scraping it off when dry. Two coatings of lamp-black and wood oil, or in the finer articles, of lamp-black and varnish, are laid upon the prepared wood, and after drying, the clear varnish is brushed on, one coating after another, with the utmost care, in close and darkened rooms, allowing it to dry well between the several coats. The articles are then laid by to be painted and gilded according to the fancy of customers, after which a last coating is given them. The varnish is brought to market in brownish cakes, and reduced to its proper fluidity by boiling; it is applied to many purposes of both a varnish and paint, when it is commonly mixed with a red or brown colour. A beautiful fabric of lacquered-ware is made by inlaying the mere of fresh and saltwater shells in a rough mosaic of flowers, animals, &c., into the composition, and then varnishing it. Another kind, highly prized by the Chinese, is made by covering the wood with a coating of red varnish three or four lines in thickness, and then carving figures upon it in relief. The great labour necessary to produce this ware renders it expensive. A common substitute for the varnish is the oils of the Dryandra,

Jatropha, *Croton*, and other members of the Euphorbiaceous family, expressed from their seeds by a variety of simple machines, consisting for the most part of different applications of power to cylinders and pestles by which the seeds are pressed or pounded. The oil, after pressing, according to DeGuignes, is boiled with Spanish white in the proportion of one ounce to half a pound of oil; as it begins to thicken, it is taken off and poured into close vessels. It dissolves in turpentine, and is used as a varnish, either clear or mixed with different colours; it defends wood-work from injury for a long time, and forms a good painter's oil. Boiled with iron rust, it forms a reddish brown varnish. In order to prevent its penetrating into the wood when used clear, and to increase the lustre, a priming of lime and hog's blood simmered together into a paste is previously laid on.—*Tomlinson; Royle's Arts, &c., of India*, p. 486; *M. E. J. R.; Williams' Middle Kingdom*, Vol. ii, p. 121; *Hon'ble Mr. Morrison's Compendious Description*. See Lacquer.

LACQUE, FR. Lac.

LACQUER, see Japan, Lacker varnish.

LACQUER-WARE of Benares is good. Two kinds of resin are used, one called *ral* or *rala*, is sold at eight annas the seer, and is said to be brought from Mirzapoor to Benares. The fine lacquer is made of a resin called *gaharba*, for a seer of which one rupee and two annas are paid. The beautiful China lacquer-ware, which is so universally admired, is made principally near Nankin, being considered far superior to that which is made in Kwau-tung and the other provinces. The ware is frequently used for articles of furniture, and the process of the manufacture of a table, which has a landscape with figures delineated on the top, in gold, may be thus described. The timber being first put together, and rendered perfectly smooth, is covered with transparent paper, besmeared with pork fat. As soon as this paper is quite dry, it is covered with paste made from a peculiar description of clay. When this substance has become completely dry and hard, it is rubbed down with a whetstone, to remove all inequa-

lities of surface; as soon as this process is complete, the lacquer is laid on, then allowed to dry and harden, when the process is again repeated three or four times more, the lacquer being allowed to become completely dry and hard between each several coating. The intended landscape is traced on the top of the table, by throwing a fine white powder, over paper, on which the landscape has been traced, by means of small perforations, thus forming the outline of the picture: a minute instrument, somewhat resembling a style, is drawn carefully over the perforations, by this means tracing the landscape on the surface of the table. The picture is then besmeared with a compound of size and red paint; the gold, first reduced to a powder, is then applied; the raised appearance of the figures being produced by means of a preparation of gum combined with other ingredients; the picture is allowed to become perfectly dry, when, if requisite, another coat of the lacquer or varnish is added. To prepare this lacquer-ware in perfection, requires a lengthened period, and a Chinese manufacturer mentioned that to produce a fine specimen, elaborately painted, six months ought to elapse between the commencement and the termination of the work, thus affording time for each coat of lacquer to become thoroughly hardened before another is applied. The designs traced upon their porcelain or China are very inferior, but the colours used by the artists who paint these designs are far superior to any European colouring. Of all the works of art in which the Japanese excel the Chinese, the lacquer is the most striking. Some of that now made is very fine, but not to be compared with the real old lacquer, which is very rare, and is hardly ever brought into the market, except when some old family is in much distress for want of money, they then bring pieces of antique lacquer (which is as highly esteemed by them as family plate with Europeans) to be sold at Yedo or Yokohama. There are on some of the noblemen's estates, manufactories of lacquer, celebrated for their excellence and from which their owners derive great wealth. Articles made there are always marked with the crest or crests of the owner of the estate, so that that which is much sought after, such as prince Satsuma's lacquer, may at once be recognized by seeing his crest upon each piece. Old, Japanese lacquer is, like good lace, inimitable; but an experienced connoisseur can at a glance pronounce upon its merits and reality. It is very difficult now to meet with a good old specimen; the market is stocked full of modern work, made expressly for Europe, now and then, however, a Daimio, very hard up, or a courtesan in temporary

LACQUER-WARE.

embarrassment, sends secretly from Yedo a choice piece for sale, and it is astonishing to find the enormous price it will realise. Twenty, forty, sixty sovereigns or more are given for an old box not a foot square; but the sale is tacitly interdicted; indeed it is almost as disgraceful for a Japanese to part with old lacquer-ware, as it is for an English gentleman to dispose of his family-plate. The laque is vegetable: it is the sap or juice of a very handsome tree, *Rhus vernix*. But the manner of preparing it, and the mode of applying it to the perfection of those exquisite old specimens is, and is likely to remain, a secret for a long time. The bark of this tree, on being cut, yields a white milk, which becomes black on exposure to the air: the leaves, petals, and nearly every part of the tree yield also the same liquid. As one of the ingredients in its preparation, the oil of the *Bignonia tomentosa* is employed. If secret there was, it seems lost to us and themselves, for the modern laque is such a wretched imitation of the ancient, that is very difficult to admit that the same composition could have produced the two qualities. Ordinary laque has the consistency of treacle, and much the same colour; the first coating is thin and yellowish, the second of a brownish tinge, and the last (as I have seen it employed on my own furniture) a bright mahogany.

Colour Sticks for lacquer-ware, are used in the *Ranjab* by the *Kharati*, or wood turner, to colour his ware when the turning process is complete. The stick consists of shell-lac, melted down with a certain proportion of wax and sulphur, and coloured by various simple or compound colours. They are applied by the hand. The operator holds the colour stick against the turned wood object while revolving rapidly; the heat produced by the friction melts the lac and the colour is deposited on the surface of the wood. The skill and fancy of the operator directs him either in laying on a uniform layer of colour, or else putting it on in little spots or touches, by allowing the colour stick only very lightly to touch the revolving wood, thus producing either a smooth uniform colour, or the pretty mottled appearance so often observed in lacquered ware. Two or three different colour sticks are often applied, giving the whole a marbled appearance of great beauty. The colour thus applied is spread, fined and polished, by pressing the edge against the turned object while revolving. The final polish is given by a rag with a little oil. The principal colours are of lac, crimson, orpiment, red-lead, green, made of orpiment and Prussian blue, dark blue, indigo or Prussian black, white, brown or gold colour, light blue or

Gardon lettuce,	"	Salada,	SING.
Cos,	"		

It is used by natives as a demulcent only. The lettuce is a garden vegetable, inodorous, of scarcely sensible taste, or slightly bitter: at the flowering time it contains a milky juice, which has acquired some celebrity under the name of *Lactucarium*, or *Thiridace*. Its seed, called *Khas-ka-bij*, is in hindoo medicine regarded as a very cold remedy.—*O'Shaughnessy*, p. 406; *Powell's Hand-book*, Vol. i, p. 355; *Dr. Stewart*, p. 127.

LADAK. Ladak lies between *Nari-Khor-sun* on the S. E. and *Balti* on the N. W. to the N. of *Dras*, *Zanskar* and *Parang*. Ladak territory lies between lat. 34° 35' N., and long. 75° 78' E. The *Shayok* and *Indus* rivers run through it. In its E. and W. course, the *Indus* descends from 14,000 feet at *Dem Chok* to 10,500 feet below *Le*, and at 8,500 feet enters *Balti*. Ladak is occupied by the *Bhot* race. It is a province of *Kashmir*. Between the British territory and Ladak and the countries beyond, a trade exists in shawl wool and charas, which are taken in exchange for opium the produce of the *Kulu* hills, other skins, cotton, piece goods and drugs. The *Bhot*, in the Ladak frontiers of the western *Himalaya*, salute by raising the back of both hands to a height even with the forehead and then repeatedly describing a circle in the air with them, by dropping the fingers downwards and turning the palm inwards. This is similar to the mahomedan practice of *Billaen-jena*, where a woman is supposed to take upon herself all the evils which would befall the person whom she addresses. The Ladak country is called *La tag* in Tibetan, *Ka-chan-pa*, or *Snow-land*, *Mar-yul* Redland, or *Lowland*. It is bounded on the north by the *Kara-koram* mountains, which separate it from the Chinese district of *Kotan*; on the east and south-east, are the Chinese districts of *Rudok* and *Chumurti*; and to the south are the districts of *Lahul* and *Spiti* now attached to British India, but formerly belonging to Ladak. To the west lie *Kashmir* and *Balti*. Its greatest length is 290 miles and breadth 240 miles, and its whole area is 30,000 square miles. Ladak is politically divided between the *raja* of *Kashmir* and the British. Ladak, anciently was called *Kie-cha*, by the Chinese, it is still

LADAK.

called Kha-pa-chan or Kha-chas, abounding in snow or snow-land, and the people as Kha-pa-chan-pa or Kha-chan-pa, men of the snowy land. Ptolemy's A-khassa regio, is no doubt Kha-chan-yul, snow-land or Ladak. It is one of the most elevated regions of the earth, and the joint effect of elevation and isolation, amidst snowy mountains, produce perhaps the most singular climate in the world. The plains between 16,000 and 17,000 feet are covered with wild horses and hares and immense flocks of domestic sheep and goats, while the slopes of the hills up to 19,000 feet abound with marmots and alpine hares. Both meats and fruits are cured by mere exposure to the air, a sure indication of its intense dryness. It seldom snows and scarcely even rains. Its mountain ranges stretch in parallel lines from south-east to north-west, determine the course of the rivers and form the natural boundaries of the country. The general aspect of Ladak is extreme barrenness, but many fertile tracts occur along the rivers, covered with luxurious crops. The yellow plains along the Indus, are covered with flocks of the shawl-wool goat, and all the principal thoroughfares of the country are dotted with numerous flocks of sheep laden with the merchandise of China and of India. No rain falls and but little snow. Burning heat by day is succeeded by piercing cold at night and everything is parched up by the excessive dryness of the air. During the short summer, barley ripens at 15,000 feet, although the temperature falls below the freezing point, every night. Ladak is in general of the buddhist faith. The valley of Le or Ladak proper, Zanskar, Dias, Suru and Purik are all buddhist. Cultivation goes on in Zanskar on the Indian side of the Indus, and at Nubra Nira 12,000 feet, on the north side of the Indus, Yul-chung 13,000 feet, and 14,000 and 15,000 feet at Phutaksha. Ladak is agricultural but enjoys a transit trade, and much labour has been expended in constructing roads through Kashmir, Jammu, Kullu, Lahul—leading to the Panjab, Kabul, Lhasa, Chinese Tartary, Khoten Yarkund, Little Tibet and Bulti. All these follow the lines of rivers, cross passes 18,000 feet high, and over rivers by ferries, by inflated skins, and suspension bridges. Three varieties of the sheep and three of the goat are domesticated in Ladak, and the domesticated Yak, is used for carrying loads. The Dso, hybrid between the yak and cow is a beast of burden. Rain fell ten times during the two years that Moorcroft remained at Leh. Its population amounts to 433 persons in the square mile. In Ladak, the nuns and monks bear a large proportion to the population. It was subject to L'hasa,

LADAK.

until A. D. 1834, when it was seized by Zangur Sing, general of the raja of Jammu. Ladak is inhabited by a peculiar race who call themselves Bot-pa, who speak a peculiar language in Europe called Thibetan and who profess the religion of Buddha, under a hierarchy of monks called Lamas. The term Thibet is unknown to the people as also to the Indians who call them Bhotiya and their country Bhutan Ladak belongs partly to the Jammu Rajah and partly to the British, and is Bhut along the banks of the Chandra and Bhaga, but Hindu after their junction. To the north of the Ladak country, the people of Yarkand and Kotan speak Turki. To the west, beyond Balti, the people of Astor, Giljet and Hunza Nager, speak different dialects of Dardu, while the Kashmiri have their own peculiar language. To the south, the people of Chamba Kullu and Bishnar, speak a dialect of Hindi, and to the east and south-east, the people of Rudok, Chang Thang, and Gnari speak Tibetan only. Moorcroft lived for two whole years in Ladak, from September 1820 to September 1822. In Ladak proper, is the valley of Le, the main stream of Indus. Ladak, or the Bot Pa of Tibet, includes Spiti, Zangskar, Purik, Suru, Hembako (Dras), Ladak proper or Le, Nubra, Rong, Rupshu and Haule. The natural divisions of the country are seven, viz., (a) Nubra on the Shayok; (b) Ladak proper, on the Indus; (c) Zanskar on the Zanskar river; (d) Rukchu around the lakes of Tshomo-riri and Tshokar; (e) Puruk, Saru and Dras or Hembaks, on the different branches of the Dras river; (f) Spiti on the river of this name, and (g) Lahul on the Chandra and Bhaga or headwaters of the Chenab. Ladak is the most westerly country occupied by the Tibetan race who profess the buddhist faith. Ladak is supposed by Major Cunningham to be the Cesi of Pliny and the A-Khassa regio of Ptolemy. Chang-thang, Tib, literally northern plains, the Chatse Seythae of Ptolemy, north-east of Ladak. Major Cunningham, in his 'Ladak,' &c., remarks that "the water-fowl swarm on the lakes and on the still waters of the Upper Indus. I have, he says, shot the wild goose on the Thgji Chanmo and Chomoriri lake at 15,000 feet; and Col. Bates and I shot three teal on the Suraj Dal, a small lake at the head of the Bhaga river, at an elevation of upwards of 16,000 feet." Leh, the capital of Ladakh, is situated upon a rising ground, at an elevation of 11,000 feet above the level of the sea. Like the generality of the fortress-looking towns and villages in Ladakh, it has an imposing appearance from a distance. The old palace, fort and ruined wall on the face of a ridge are striking enough, but, in

common with every one of Gulab Singh's conquests, tyranny and neglect sadly changed Ladak since the time of its legitimate rulers. The men, it is said, were chiefly employed in the sulphur and borax mines, so that the greater part of the cultivation and manual labour in and about Leh is performed entirely by women. At stated times caravans from Yarkand arrive with brick-tea, shawl wool, China silks, ponies, &c., which are exchanged for grain, English calicoes, and the like; so that Leh is but a market-place for Cashmere and Yarkand merchants. The buddhist monastery of Himis is 12,324 feet above the sea, in lat. 33° 59' north, and long. 77° 16' east. The people are of a cheerful disposition and often may be heard humming simple tunes. The richer Laho, wear silver and even gold pins. This refers to those parts of Ladakh near Kashmir, far on this side of Leh. At Leh itself and among the wandering Tartar tribes, the women dress with woollen or variegated petticoats, and tanned sheep or goats' skins as mantles. The principal ornament of the Ladakhi women is a head band hanging like a long tail, and studded all down with large turquoises; this is called "berak" and often, even with common people, worth Rs. 20 or 30. The great article of trade in Ladakh is the shawl wool from the further provinces. The route to Amritsar via Ladak is that which brings the trade of Yarkand and eastern Turkistan. There is also a route from Amritsar, Jalandhar or Ludhiana via Nurpur, Mandi and Kulu, to the same places. The Tibetan provinces of Ladak and Balti which continue, as formerly, appanages of Kashmir, have been very completely explored botanically by several travellers, their herbaria contain many plants found within the British boundaries. Buddhism was still prevailing in A. D. 1419, in Turkistan, in the cities of Turfan and Kamil, when Shah Rukh's ambassadors passed through, and Toghlaq Timur was the first mahomedan sovereign of Kashgar of the lineage of Chengaz. There are now many buddhist priests at the capital of Khotan, but mahomedanism had been extensively prevalent in East Turkistan for centuries prior to its conquest by the Chinese in A. D. 1757, and the buddhist priests and temples may have been since introduced. Nearly all Ladak is of the buddhist faith. The valley of Le or Ladak proper, Zaskar, Hem-baks or Dras; Suru or Purik, Spiti, Nubra, Janskee, Rong, Rupshu and Hanle, are all buddhist. In the valley of the Upper Indus, that is in Ladak and little Tibet, the prevailing race is the Bhot sub-division of the great Tartar variety of the human race.

Lower down that classical stream, in Ghilghit and Chulas, the remains of the old and secluded Durdoo and Dughher races are still to be found, but both in Iskardo and in Ghilghit itself, there is some mixture of Toorkaman tribes from the wilds of Pamer and Kashkar. The Dard race lying along the Indus, to the westward of Ladak, speak three distinct dialects. They use the Persian character in writing Dardu, the three dialects of which are called Shina, Khujnah and Arniya. The Shina dialect is spoken by the peoples of Astor, Gilget, and lower down in Chelas, Darel, Kohli and Palus on both banks of the Indus. The Khujnah, by the people of Hunza and Nager, and the Arniya in Yasan and Chitral. Astor has an area of 1,600 square miles, on the left bank of the Indus. Gilgit, in Thibetan Gylgyid, has an area of 2,500 square miles on the right bank of the Indus. Dard or Durd are supposed by Vignot to be the Dadicæ (*Δαῖκαι*) of Herodotus, and the people who now occupy the country called Dardu. Under the name of Chinese Tibet, for convenience, may be included the whole of the territory made up of the districts of Chanthan, Ghari Khorsum, Chumurti, &c., which lie to the east of Ladak and march with the Spiti and Bussahir boundaries to the south. But little is known of this country, as the local authorities, though not at all objecting to being visited by the men of Ladak, Lahoul and Spiti, have the greatest aversion to the intrusion of any European. No actual violence is offered to the latter, but supplies are refused, and the head-men distinctly say that if the traveller insist on proceeding he can do so as he will not be opposed, but his advancing will be the death-warrant of those who allowed him to enter. The chief towns with which British trade has to do are Rudokh, to the east by south of the Pangong Lake at about 33° 25' lat. and 72° 40' long., and Gardokh, lying between the sources of the Indus and Sutlej, at about 31° 40' lat. and 80° 25' long. The latter is an important and prosperous city and a famous commercial entrepôt, where annually in August there is a very large fair. Through both these towns from Leh there is a route to Lhasa, the more direct one by Gardokh, being 1,350 miles in distance or 4½ months' journey. By the route by Rudokh the Sokpo are said to have invaded Ladak in 1826-7, and again 3,000 Changpa in 1834, the latter rapidly retreating as the Kashmiri troops approached. Shortly after both Rudokh and Gardokh fell under the dominion of maharajah Golab Singh, but disasters attending his army, in 1842, the old boundary between Ladakh and Chinese Tibet was once more re-established. Another

town, Shipki, is just without the Bussahir frontier, and but 100 miles from the termination of the Hindustan and Tibet road at Serahun. From it there is a pretty regular communication with Simla, Rampore in Bussahir and Kooloo. There is no possibility of forming an estimate of the trade entering the Panjab from Nari Khorosom, but it is considerable. Its trade with Leh was calculated by Cunningham in 1854-5 to cover £48,365. One of its chief exports is the shawl wool from Chanthan in the vicinity of Rudokh, a tract of country long celebrated for the fine fleeces of its herds of sheep and goats. Bussahir is the territory on either side of the Sutlej, which touches on Spiti to the west and Chinese Tibet on its northern flank. Kunawur, its largest subdivision, is in length about 70 miles by 40 and 20 broad at its northern and southern extremities, according to Mr. Davies, who in his Trade Report alludes to its genial climate beyond the influence of the periodical rains of India, the winters also being comparatively mild. "Grain and fruit," he says, "are produced abundantly, the poppy also flourishes." The people of the north are active traders. They proceed to Leh for Churus and to Gardokh for shawl wool giving in exchange money, clothes and spices. The mountain paths are scarcely practicable for laden mules, and merchandise is carried chiefly on the backs of sheep and goats. An annual fair is held in November at the capital of Rampore on the Sutlej. The town is of some importance as the point where the commercial routes from Leh, Gardokh and Simla meet, and also as a seat of the pushmeena manufacture. In 1840, the value of the pushm or shawl wool imported, was put down by Cunningham at about Rs. 90,000. Trade from Bussahir catches up the Hindustan and Tibet road at Serahun and passes by Kotghur to Simla, and from Rampore direct by Spiti to Leh or to Sooltanpore in Kooloo and thence to the Panjab.

Eastern Turkistan may be described as the country to the east of the Pamir steppe. It is bounded on the north by the Thian Shan range, on the south by the Himalaya and Kuen Luen, and on the east by the Great Gobi desert, which stretches away to the confines of China proper. For many years this province was held by the Chinese, but in 1862 an insurrection broke out, and by 1864, Yakoob Begi, the commander of the rebel forces, succeeded in completely ousting the Chinese and seating himself on the throne. He evinced no small powers of governing, was brave, energetic and prudent, and by his liberal treatment of merchants and his merciless severity to robbers, did all he could to

encourage trade. He was known under the name of "the Kushbegi" or commander-in-chief, but he assumed the title of Ataligh Ghazi, and he received with honour and distinction, Mr. Shaw, the gentleman who with Lieutenant Hayward penetrated into Yarkand, and he expressed a desire to send an envoy to the Viceroy of India. The chief towns in Eastern Turkistan nearest to British frontier are Yarkand and Khoten. Yarkand is the largest city in the territory and has a population exceeding 100,000 souls. It is also by far the most important. It stands between the branches of the Yarkand Daria (river) in long. 71° north, by lat. 42° east, and is encompassed by a wall eight fathoms high and 17 miles in circumference. There are numerous bazaars, and also a large circular one in the centre of the city. Yarkand lies 247 miles from Aksu, 270 from Khoten and about 200 from Kashgar by well traversed routes. Khoten, Ilsa, Ilchi or Ili lies to the south-east of Yarkand, in long. 79° 25' north, by lat. 37° 15' east, and is situated between, or rather above the junction of, the Khoten and Karakash rivers. It is surrounded by a low wall and has 18,000 houses, with eight serais for the use of foreign merchants. Khoten is nearer than Yarkand to Kashmere, but the routes from and to the latter place are more generally adopted by traders. From Yarkand to Leh in Ladakh the distance is reckoned at very nearly 500 miles, while from Khoten to Leh it is about 350, and from Leh to Sultaupore in Kooloo it is close on 250 miles more. The chief exports from Eastern Turkistan to Hindustan consist of silks, shawl-wool, churus, felts and ponies, and the imports are mainly in opium, red goat-skin, piece goods, chintzes, spices, sugar in a raw state and drugs. The shawl wool, termed in Eastern Turkistan "Toor-fanee" or "Kucharee," has only of late been brought into use in the manufacture of shawls. This Toorfaanee wool is quite as good, if indeed it is not better than the "pushm" exported to Kashmere from Chanthan. The natives of Ladakh deny the possibility of any approach at domestication of the Kiang, and state the young always died in confinement. The chief food of this species appears to consist of the stunted fescue grasses common on the plains and mountains, together with a red-flowered vetch, possibly *Oxytropis chilio-phylla* of Hooker. The speed of the kiang is great; its action seems to consist of a long step or trot, which is never varied, with which a herd bounded down a steep hill-side.—*Dr. Latham's Descriptive Ethnology*; *Major Cunningham's Ladakh*, p. 3; *Adams*; *Cleghorn's Punjab Reports*, pp.

LADJA, see Brahmadica.

LADKHANA, or Larkhana, twenty-one miles from Shikarpur, the road leads through jangal, and is unsafe. Ladkhana a large, populous, and commercial town, the bazaars exhibiting great activity.—*Masson's Journeys, Vol. i, pp. 460-461.*

LADRONE ISLANDS, the Grand Ladrone, called, by the Chinese, Tyman-Shan, is in lat. 20° 56' N. long. 113° 44' E. 12 miles east of Macao, and 29 miles east of Canton factories. It is steep and bold and 2 miles in circumference. On its west side is the little Ladrone. The Ladrone were the first islands seen by Magellan. From those he sailed to the Philippines where, in the island of Mactan near Zebu, he was killed, as also was Barbosa. Magellan's companions then visited Timor in 1522 and returned to Lisbon, making the first circumnavigation of the globe. The opening of this archipelago to Europe was gradual. Entering the utmost eastern confines of the archipelago, Magellan discovered the Ladrone, or Isles of Thieves. They have since

LÆMODIPODES.

been named the Marianas, but still deserve their original appellation, as the people of the surrounding groups stand in dread of their predatory inhabitants. On one of the Meia-co-shimah isles walls have been raised and pierced with loopholes, as a defence against these roving banditti of the sea. The Ladrone lie about four hundred leagues east of the Philippines. Only one of them is now tenanted, and that by a small and savage tribe. Plantations of caper trees are in perpetual bloom.—*Bikmore, p. 206; St. John's Ind. Arch., Vol. i, p. 102; Vol. ii, p. 357; Sir. E. Belcher, Vol. i, p. 84; Horsburgh.*

LADRONES, PORT. The term applied by the Portuguese to the Chinese pirates, who commenced to gain power by the close of the 13th century. The Ladrone or pirates of the Archipelago consist wholly of the inhabitants of the free mahomedan states in Sumatra, Lingin, Borneo, Magindano, and Sulu; those natives who have remained uncontaminated by the doctrines of the Arabs never being known to engage in the like pursuits. Europeans who were unfortunate enough to fall into their hands were generally murdered, while the natives who compose the crews of the captured vessels are sold for slaves.—*Mr. Earl, p. 42.*

LADUNUM, or Labdanum.

Cistus creticus, Linn.

Laden, Ladun,	ARAB.	Ledanon,	GR.
Ciste, Ladunifere,	FR.	Ladanum,	LAT.

This resinous substance which was considered by old writers cephalic, pectoral and nervine, is now only used in the preparation of certain plasters. It is not unknown to the mahomedan medical practitioners of lower India, and has a place in the Materia Medica of the Arabians amongst their Munzigat (Suppurantia). Ladanum, is sometimes written Labdanum, but incorrectly as it is the *Λάδανον* of the Greeks and the Ladun of the Arabs. It is first mentioned by Herodotus (iii, 112) as procured in Arabia, and used by the Arabs for fumigation. The word is not Greek, but an Arabic word with a Greek termination; the Greeks also use the word *Λῆδος* to indicate the shrub which produced the Ladunum.—*Ains. Mat. Med., p. 23.* See Ladanum.

LADURI, HIND. *Nyctanthus arbor-tristis.*

LAE CHOW-FOO, in lat. 37° 13' north, long. 119° 50' east, lies at the southern part of the gulf of Pe-Tehee-lee. It is a place of considerable coasting trade.

The Bottle gourd, is commonly cultivated by the natives, to whom it is of some importance as food; of easy culture, but is seldom eaten by Europeans, being very coarse. In Tenasserim, the bottle gourd grows luxuriantly, and several varieties may be seen about the Indian cabins. One species grows abundantly in southern Asia. It is used for making the stringed musical instrument called the sitar. When dried it becomes hard, of a pale bay colour, and is used to contain water, and as floats and buoys and swimming aids when crossing rivers. In its wild state, this plant, or a variety of it, produces a poisonous fruit, and Dr. Royle states that a very intelligent native doctor informed him that cases of poisoning have occurred from eating the bitter pulp. Some sailors also are said to have died from drinking beer that had been standing in a flask made from one of those gourds. Don says that the poor people among the Arabians eat the edible kind boiled with vinegar, or fill the shells with rice and meat, and so make a kind of pudding of it. The pulp of the fruit is often employed in poultices; it is bitter and purgative, and may be used instead of colocynth. The seeds, "Doodoo seed," yield a bland oil, and they are given in headaches.—*Jaffrey*; *Mason*; *O'Shaughnessy*; *Powell's Hand-book, Prod., Punjab*, pp. 263-264; *Eng. Cyc.*; *Dr. J.*

LAGERSTREEMIA.

L. Stewart, M. D.; *Roxb. Fl. Ind., Vol. iii, p. 718*; *Rheede*; *Voigt, Useful Plants, p. 57.*

LAGERSTREEMIA, a genus of plants of the natural family of Lythraceæ, growing in the Peninsula of India, along the foot of the Himalaya to the northern parts of India, and from the Malaya Archipelago into China and Japan. The species are few in number, but most of them highly ornamental. Speaking of this genus, as they occur in China, Mr. Williams remarks that few trees in any country present a more elegant appearance; when in full flower, by far the most beautiful plants met with on the low ground, are the different species of Lagerstræmia. There are two or three varieties, having red, white and purple flowers, and in the summer months, when they are in bloom, they are quite the hawthorns of China; surpassing in their gorgeous flowers even that beautiful family. It generally met with them in a wild state, very near the sea shore. The whole of the species may be propagated by seed or cuttings in any garden soil. In the island of Hongkong, the most beautiful plants met with on the low ground, generally in a wild state, very near the sea shore, are different species of Lagerstræmia. There are two or three varieties, having red, white and purple flowers, and in the summer months when they are in bloom, they are quite the hawthorns of China; surpassing in their gorgeous flowers even that beautiful family. A little higher up is the beautiful *Ixora coccinea* flowering in profusion in the clefts of the rocks, and its scarlet heads of bloom under the Hongkong sun are of the most dazzling brightness. The ravines are crowded with ferns and creeping shrubs of different kinds, not however of much interest to the lover of ornamental flowering plants. Here, however, under the over-dripping rocks, grows the beautiful *Chirata sinensis*, a plant with elegant foxglove lilac flowers, which is now in many of the gardens of England. The Tavoy forests are adorned with a smaller species of Lagerstræmia than the *L. Indica*, but the flowers are equally elegant and quite as large. The Pyinma or Pee-ma, Burm., is a very large and useful species tree, sometimes twelve or fifteen feet in circumference, and preferred for some parts of ship-building to teak: drupe very small; fruit, like a lemon, and very sour; wood, reddish, hard, tough, and durable. From the bark constantly exudes a yellow gum, resembling gamboge. The whole of the species may be propagated by seed or cuttings in any garden soil.—*Eng. Cyc.*, *Fortune's Wanderings*, p. 20; *Williams' Middle Kingdom*, p. 285; *Riddell*; *Mason*; *Malcom's Tr. in S. E. Asia*, Vol. i, p. 185.

LAGERSTRÆMIA GRANDIFLORA.

LAGERSTRÆMIA, species. Kuen-mou-nee or Pu-ma, BURM., is a Tavoy tree, wood used in building.

LAGERSTRÆMIA, species. Pyemma, BURM., is a splendid tree, abundant throughout British Burmah, wood used more extensively than any other, except teak, and used generally for the fittings of boats, sometimes for the hulls of canoes, for house posts, planking, beams, scantling for roofs, carts, and a variety of other purposes. Large quantities are now employed for ordnance purposes. The wood of the light-coloured variety is less heavy and is said to be less durable. A cubic foot weighs 37 lbs. In a full-grown tree on good soil, the average length of the trunk to the first branch is 30 feet, and average girth measured at 6 feet from the ground is 12 feet. It sells at 8 annas per cubic foot.—*Dr. Brandis, Cat. Cat. Ex. of 1862.*

LAGERSTRÆMIA, species. Pyen-ma-phoo, BURM., is a tree of Moulmein, wood used for making oars and for rough house-building.—*Cal. Cat. Ex. of 1862.*

LAGERSTRÆMIA, species. Pyen-ma-zoot-gyee, BURM., a Moulmein tree, with a soft wood, used in the ordinary purposes of a building material.—*Cal. Cat. Ex. of 1862.*

LAGERSTRÆMIA, species. Thit-py-oo, BURM., is a light, but comparatively strong wood of British Burmah, colour white and pinkish, probably a valuable wood for furniture. Used for planking, breaking weight 153 to 179 lbs. A cubic foot weighs 30 to 38 lbs. In a full-grown tree on good soil the average length of the trunk to the first branch is 80 feet, and average girth measured at 6 feet from the ground is 12 feet. It sells at 4 annas per cubic foot.—*Dr. Brandis, Cat. Cat. Ex. of 1862.*

LAGERSTRÆMIA GRANDIFLORA, Hooker.

Dua-banga, HIND.

In the Terai, east of Siligoree, Bombax, Erythrina, and the Lagerstrœmia grandiflora were found by Dr. Hooker in full flower, and with the profusion of Bauhinia, rendered the tree-jungle gay; the two former are leafless when flowering. The Dua-banga is the pride of these forests. Its trunk, from eight to fifteen feet in girth, is generally forked from the base, and the long pendulous branches which clothe the trunk for 100 feet, are thickly leafy, and terminated by racemes of immense white flowers, which, especially when in bud, smell most disagreeably of asafœtida. Dr. Hooker, is the sole authority for this tree, the Lagerstrœmia grandiflora.—*Hooker, Him. Journal, Vol. i, p. 401.*

LAGERSTRÆMIA MACROCARPA.

LAGERSTRÆMIA INDICA, Linn.

Velaga globosa, <i>Gertn.</i>	Lagerstrœmia	tajlinkin.
Lagerstrœmia alba.		
Indian lagerstrœmia,	Tajlinkin, <i>Rumph.</i>	
Pyen-ma, BURM.	Telanga cheena, TAM.	
China henna, HIND.	Cheena pu, "	

There are three varieties (a) rosea, (b) lilacina and (c) alba, of this small pretty shrub, which is common in gardens in Maulmain, and of easy cultivation. It has one of the most beautiful flowers in our Indian gardens, grows to the height of seven or eight feet; the flowers hang in bunches at the extremity of the branches, and are of a beautiful lilac colour. The white flowering species of the China mehndi, is a common shrub in gardens, and used for border hedges, it bears a small reddish flower and grows easily from cuttings at the commencement and during the rains.—*Drs. Mason; Ains. Mat. Med., p. 164; Riddell; Roxb.; Voigt.*

LAGERSTRÆMIA LANCEOLATA.

Ven-teak, ENG.	Chinnamaugi, TEL.

This is a tree of the western side of India, common in Wynnad and on the western ghauts, very common in the Bombay forests, but less so to the north of the Savitree than to the south of that river. It is of large size with a long straight stem, and, for common purposes, where timber of inferior quality is sufficient, is very useful, being easily worked. It only bore 290 lbs., and on a second trial, it sustained 374 lbs. If stronger and more durable, the length and straightness of the stem would adapt it for spars. But, Dr. Gibson thinks this wood is very fit for many household purposes, and for the decks of ships, &c., and it is much used in the Bombay dockyards, which forms a good presumptive proof that the wood cannot be very inferior. In the Madras Gun Carriage Manufactory, it is made use of for a variety of purposes. It has great "stiffness," and wooden bridges have been built of it. In Wynnad, it is prized for making coffee cases. It is said to be a tree of Moulmein, commonly known under the name of jarool, but this is doubtful.—*Drs. Wight, Gibson and Cleghorn; Mr. McIvor, Madras Catalogue Exhibitions of 1851 and 1862; Col. Mailland in Madras Cat. Ex. 1862; Madras Exhibition Jury Report 1855; Voigt., 132.*

This tree grows in the Northern Circars, in the Godavery forests, on the Neilgherries, at Courtallum, in the Dehra Dhoon, and in the Tavoy forests. Is common in Wynnaad and on the western ghats, but is not common in the Punjab Suwalik tract. Dr. Gibson says it is most common in the Dandalee forest above; also not uncommon below, and reaches a large size. Wood prized for making coffee cases, for house-building, and masts for the dhow, pattamah, and other country vessels. It grows to ninety and one hundred feet long, and from twelve inches to three feet in diameter; it is perfectly straight and without branches, excepting at its top; the leaves are small and very thick. This wood is not so durable as the poon, but it may be considered of the same texture, although it is very much lighter in colour, and in this respect much resembles the American red oak. Its wood is tough and valued for its qualities in standing water. It is greatly in use for beams, rafters and boat timber. In the Nalla Mallai it has a light-brown, compact, hard, servicable wood, and used generally. As a wood of British Burmah, it is not much used. A cubic foot weighs 40 lbs. In a full-grown tree on good soil the average length of the trunk to the first branch is 15 feet, and average girth measured at 6 feet from the ground is 5 feet. It sells, there, at 8 annas per cubic foot. Its timber is yellowish, elastic, and tough, and is valued for agricultural implements, &c. In the N. W. Provinces it is reckoned one of the best woods for buggy-shafts, &c.—*Roxb.*; *Voigt*; *Edyc, M. & C.*; *McIvor*; *Drs. Gibson, Wight, Brandis, Mason, J. L. Stewart and Captain Beddome*; *Mr. Latham.*

LAGERSTROEMIA PUBESCENS, Wall.

Lu-izah, BURM.

A very large tree of British Burmah, stem not always perfectly round, and inclined to form buttresses; timber valued for bows and spear handles, also used for canoes and cart wheels. A cubic foot weighs 53 lbs. In a full-grown tree on good soil the average length of the trunk to the first branch is 100 feet, and average girth measured at 6 feet from the ground is 12 feet. It sells at 8 annas per cubic foot.—*Dr. Brandis, Cal. Cat. Ex. 1862.*

LAGERSTROEMIA PYMMAH, McCl.

Pymmah-nec,	BURM.	Red pyrmah,	ANGLO-BURM.
Pymmah,	"		

LAGERSTROEMIA REGINÆ.

This common and valuable timber is found all over Pegu, in the Mayagie forests, and on the Choungs Kayoo, Thabyeed and Thenat in abundance; but ceases a little below Tounghoo and Promé. At all the lower stations from Promé and Tounghoo downwards, it ought to supersede the use of teak. It stands without a rival in strength. It is a red-coloured wood, strong, and adapted for house-building, and valuable in ship-building and next to teak; it is in greater request than any other description of timber, as it is not injured by white ants. The Burmese gun carriages are made of this wood: its fault is its liability to shakes. It is a different species from *Lagerstroemia reginæ*, but the posts of an old wharf at Tavoy, which were of this Pymmah wood, stood erect for twenty or thirty years, though house-posts often decay in the ground in a much shorter period. Capt. Dance says Pymmah Nec or Red Pymmah, is very abundant all over the Tenasserim and Martaban provinces, and found of maximum girth 6 cubits; and maximum length 30 feet. When seasoned it floats in water, and is a tough wood, very good for helms, and already used for such, and for other ordnance purposes. He says that the great fault of pyrmah is its liability to shrink and warp when exposed to the heat and sun, but it has not been killed and left standing as teak has been, otherwise the tendency to warp might disappear. Dr. McClelland seems to regard the white wood tree as *L. reginæ*, and the red wood as *L. pyrmah*, which Dr. Brandis treats as two varieties of *L. reginæ*—*Dr. McClelland*; *Capt. Dance, Selec. Records Govt. of India, Foreign Dept., No. ix, pp. 10 and 42.*

This is a large tree of Ceylon, the peninsula of India, Coimbatore, Canara, Sunda, in the mountains north-east of Bengal, in the Jynteah hills, in Pegu and Tenasserim, Amherst, Tavoy and the Mergui Archipelago, and when in flower, is most conspicuous. In full blossom, in the morning, a tree looks as if mantled with roses, but the flowers change through the day to a beautiful purple, making it appear at evening, if seen from a short distance, like a bower of English lilacs. It is not uncommon in the warm, moister parts of the western and southern parts of

LAGHUNAI.

Ceylon, up to an elevation of 1,500 feet. In Canara and Sunda, it grows near the banks of rivers below, and reaches a large size. It is common in the jungles, below the ghauts, south of the Savitree river; but is hardly found north of that and never in the inland Bombay jungles. In Ceylon its wood is used for water casks and buildings; in Coimbatore and in Hyderabad, this tree is more celebrated for its large handsome flowers than for its timber, which last, however, is used for common purposes. Its timber from the Bombay forests, is reckoned rather good, and is used, being generally crooked, for the knees, &c. of native boats. In the Madras Gun Carriage Manufactory it is used for light field cheeks, felloes, cart naves, framing and boards of waggons, limbers, platform carts, ammunition box boards and heavy field cheeks.—*Voigt, Thwaites, Drs. McClelland, Riddell, Wight, Brandis, Mason and Gibson; Mr. Mendis; Captain Dance; Major Benson; Col. Mailland in Madras Cat. Ex. of 1862; Dr. Hooker's Him. Jour., Vol. ii, p. 327; Roxb., ii, 505.*

LAGETTA LINTEARIA, HIND. *Daphne cannabina.*

LAGG. Sokota is the capital of Lagg and Wasta, in Abyssinia and is a place of considerable size.—*James Parl. Paper.*

LAGGAN, or Lakken, ARAB. A dish, which is sometimes placed under a candlestick to intercept any wax that might fall on the carpet; the lower part of a sanus or lantern is also called laggan. In this vessel or dish, the paste or dough of bread is often kneaded.—*Onseley's Travels, Vol. i, p. 247.*

LAGHAR or Hobby, and her mate the Jaghar, is the only long-winged hawk generally used in the Sindh country; she is large, and black-eyed with yellow legs, black claws and a tail of a cinereous white colour. She is a native of Sindh, moults during the hot months from April to October, and builds in ruined walls and old mimosa trees. The Laghar is flown at quail, partridge, curlew, bastard-bustard and hares; the best sport is undoubtedly afforded by crows, only she is addicted to carrying the quarry, and is very likely to be killed by her angry enemies. Carrying is the technical word for walking off with the wounded bird.—*Burton's Falconry Valley of the Indus, pp. 13 to 16.*

LAGMAN, see Inscriptions, Kabul.

LAGOMYS BADIUS. On entering Tibet, Dr. Hooker found the ground burrowed by innumerable marmots, foxes, and the "Goomchen," or tail-less rat, *Lagomys badius*, sounding hollow to the tread, and at last becoming so dangerous that he was obliged to dismount and walk. Other tail-less rats, as *Lagomys hodgsonii*, are plentiful, and *Lagomys roglia*, common on the Cashmere ranges. One or both may be the Pharaoh's mouse mentioned by Marco Polo. The lagomys is said to be eaten by certain tribes in Tartary.—*Hooker, Him. Jour., Vol. ii, p. 156; Adams.*

LAGOMYS NEPALENSE, inhabits Nepal.

LAGOMYS RUFESCENS, Gray, a little quadruped found on the mountains of Afghanistan, and perhaps onward to the Hindu Kush, but which is very unlikely to inhabit the Indian side of the passes.—*Cal. Rev.*

LAGOON. Many shallow salt water lagoons known as back-waters, run close around the shores of the Bay of Bengal and of the Arabian Sea, some of them from twenty to fifty miles long,—they afford great facilities for a safe traffic along the coast line, the violence of the monsoons and the few sheltered harbours on the eastern coast of the Peninsula, rendering navigation perilous at all times and often impossible. The Marine Lagoons or back-waters of the coast of India, are quite dissimilar from those of the Coral islands. In the latter, the surf beating loud and heavy along the margin of the reef, presents a strange contrast to the prospect beyond—the white coral beach, the massy foliage, and the embosomed lake, with its tiny islets. The colour of the lagoon water is often as blue as the ocean, although but fifteen or twenty fathoms deep, yet shades of green and yellow are intermingled, where patches of sand or coral knolls are near the surface, and the green is a delicate apple shade, quite unlike the usual muddy tint of shallow waters. "These garlands of verdure seem to stand on the brims of cups, whose bases root in unfathomable depth. Seven miles east off Clermont Tonnerre, the lead ran out to eleven hundred and forty-five fathoms, (six thousand eight hundred and seventy-feet) without reaching bottom. Within three-quarters of a mile of the southern point of this island, the lead had another throw, and, after running out for a while, brought up for an instant at three hundred and fifty fathoms, and then dropped

LAHORE.

off again and descended to six hundred fathoms without reaching bottom. The lagoons are generally shallow, though in the larger islands sounding gave twenty to thirty-five, and even fifty and sixty fathoms."—*Gosse's Natural History*, p. 94; *Cheever's Sandwich Islands*.

LAGOON ISLAND, see Coral, Polype.

LAHNA, *HIND.* Species of *Sueda* used for camel fodder; also for soda burning.

LAHNI, *HIND.* A kind of land.

LAHORE, the chief city of the Panjab, is built on the left bank of the Ravi river, and has about a hundred thousand inhabitants. It was annexed to the British Government on the 16th Dec. 1845, and was occupied by the British, 22nd Feb. 1846. The treaty of Lahore was dated 9th Mar. 1846. Arrian states that the first city taken by Alexander after leaving the confluence of the rivers was inland 400 stadia, or 46 miles, distant from the Akesines, and that it was captured by assault, and General Cunningham infers that this city was Kot Kamalia. Old coins, found in great numbers, show that Depalpur was in existence as early as the time of the Indo-Scythians, and General Cunningham is inclined to identify it with the Daidala of Ptolemy, which was on the Sutlej to the south of Labokla and Amakatis, or Lahore and Ambakassi. Lahore has been the capital of the Panjab for nearly nine hundred

LAHORE.

years. It is said to have been founded by Lava, or Lo, the son of Rama, after whom it was named Lohawar. Both Jay Pal, and his son Anand Pal, the successive antagonists of Mahmud, are called rajas of Lahore by Ferishta. This Hindoo dynasty was subverted in A. D. 1031, when Lahore became the residence of a mahomedan governor under the king of Ghazni. Upwards of a century later, in A. D. 1152, when Bahram was driven from Ghazni by the Afghans of Ghor, his son Khusrü established himself at Lahore. But this new kingdom lasted for only two generations, until A. D. 1186, when the sovereignty of the Ghaznavi was finally extinguished by the capture and imprisonment of Khusrü Malik, the last of his race. Milton notices Lahore as one of the towns in the far east, when indicating the various nationalities, thus,

— the flow'r and choice
Of many provinces from bound to bound,
From Arcthosia, from Candaor east,
And Margiana to the Hyrcanian cliffs
Of Caucasus ———
From Samarchand by Oxus, Temir's throne
To Agra and Lahore of Great Mogul,
Down to the Golden Chersonese
And utmost Indian Isle Taprobane.

Bernier marching from Delhi to Lahore with the camp of the emperor says, he never saw a town or village all the way. The revenue of the province of Lahore, in the reign of Anrungenzeb, was, according to Bernier, £2,500,000 per annum. Lahore has within its walls numerous wells. It is surrounded with a substantial brick wall, some twenty-five feet in height, and sufficiently broad for a gun to traverse on it. It has many circular towers, and divers sided bastions, at regular intervals. There are many gates, as the Murchi Darwaza, the Lohar Darwaza, the Delhi Darwaza, the Atak Darwaza, &c. The last is also called Darwaza Tanksala, or the Mint gate, an appellation that led the Jesuit Teifenthaler into the error of supposing that in his time one of the city gates retained the name of Taxila. At the Lohar Darwaza was a large piece of ordnance, called the Banghi. In the neighbourhood of Lahore are many large and delightful gardens; the fruit trees, flowering shrubs and plants, are, however, those common in Hindustan. About three miles north-east of Lahore, is the renowned and once delightful garden of Shalimar. There are still the marble tanks and fountains. Amritsir, however has become the great mart of the Panjab, and the bankers and capitalists of the country have taken up their abodes there. As men, physically speaking, the natives of the Panjab are superior to those of Hindustan proper. Their

LAHORE.

limbs are muscular and well-proportioned, and they have a stoutness of leg and calf, seldom seen in Hindustan. Instances of very tall stature may be rare, the general standard being a little above the middle size. The Sikh are certainly a fine race of men, particularly the better classes. Their females, are seldom permitted to go abroad. They wear extraordinary high conical caps, producing a curious effect, with trowsers. The dress of the men is peculiar, but not inelegant, consisting of the Panjab pagri for the head, a vest, or jacket, fitting close to the body and arms, with large bulky trowsers, terminating at the knee, the legs from the knee being naked. About the middle of the nineteenth century, chiefs began to wear full trowsers, but at one time the maharajah and his court could scarcely be said to wear trowsers at all. Over the shoulders, a scarf is usually thrown. Generally speaking, these articles of dress are white. The Sikh are cleanly in their linen, in which particular they advantageously differ from their mahomedan compatriots. Their scarfs are usually trimmed with a coloured silk border, and sometimes scarlet shawls, or other showy fabrics, are employed. The Sikh allow the hair of their heads to attain its full growth, and gather it up into a knot at the crown, agreeably to the old Jetic fashion. By pressing it tightly back from the forehead, they somewhat elevate the upper part of the face, which imparts a peculiar cast to the countenance. The country between Ferozpur and Lahore is for the most part cultivated, and covered with fields of wheat and groves of date, mango, acacia, peepul, &c. The famous old mussulman city of Kussor is worth a visit, were it only to examine its fallen grandeur. Among its old temples, ruined walls, and broken aqueducts, are to be traced, the remains of a once important town, which the great Runjeet Singh levelled with the ground when employed in consolidating the Khalsa dynasty. The Chenab river at Wazeerabad has little of the majesty and appearance observed in its course through the Himalaya; the roaring mountain torrent is transformed into a muddy river, whose banks are often almost level with the plain, especially in the neighbourhood of the city above-mentioned, where annual inundations leave great swamps in which wild-fowls congregate during winter. The Masjids or Padshah and Vazir khau mosques are particularly splendid. The Sona, or Golden Masjid, also claims attention, from the attraction of its gilded minarets and cupolas. The manufacture of armour, swords, guns and the like, once had its grand centre at Lahore; but when the Sikh rule passed away, the

LAHUL.

demand ceased. The artisans have recently all gone into the Gujrat and Gujranwalla districts, where they develop their art in works of peace; and now, instead of Sikh armour, inlay caskets and studs, vases, paper-cutters, letter weights and other fancy articles are produced. There are still persons at Lahore who can work magnificently in inlaid armour, and do so occasionally at the call of the collectors of articles of vertu; but in Lahore it is almost impossible to get the articles above enumerated as made at Sealkot, Gujrat, or Nizamabad.—*Cunningham's Ancient Geography of India*, pp. 197, 198, 206 to 214; *Milton's Paradise Lost*; *Mason's Journeys*, Vol. i, pp. 408, 411, 415, 433; *Cunningham's History of the Panjab*, Vol. i, p. 31; *Powell's Hand-book, Econ. Prod., Panjab*, p. 9; *Adams*. See India, Inscriptions, Jat, or Jet, or Jut, Kabul, Khetri, Khyber, Panjab, Shawl-gout, Sikhs.

LAHOREE-SUBOO, BENG. *Choiranthus cheiri*.

LAHORI BANDAR is called by Ibn Batuta, Lahari, also Laharyn, probably Lari, from Lar, the local name of the southern portion of the province of Sind. Lahori Bandar, or Lari Bandar, succeeded Debal as the seaport of the Indus. Debal was unknown to Ibn Batuta A.D. 1333.

LA-HOUL-O-LA-QOOWUT, &c., ARAB., meaning there is no power or strength but in God, are the commencing words of a mahomedan invocation.—*Herk*.

LAHSAN, GUZ., HIND., DUK. Garlic. Lahsan-ka-tel, HIND. Garlic oil.

LAHSUNA, SANS. Garlic.

LAHUL is a British province in the valleys of the head waters of the Chenab, the bed of which is nowhere below 8,500 feet of elevation. It is everywhere surrounded by lofty mountains, except towards its north where it is conterminous with Kishtwar. To the south it is bounded by the mountains north of Kulu, where it is crossed by the Rotang pass, elevated 13,200 feet, an exceptional depression, the rest of the chain being very lofty. To the west, a portion of the Himalayan axis divides it from the Tibetan province of Spiti and is crossed by the Kulzum pass, elevated 14,850 feet, and to the north a continuation of the same axis separates it from the Tibetan province of Zaskar and is crossed by the Baralacha pass, elevated 16,500 feet. Lahul is the southern district of Ladak, comprises the valleys of the Chandra and Bhaga Rivers. It belongs to the British. The peaks of the mid-Himalayan range, are in height from 16,203 to 21,786 feet, and its bases from 13,000 to 16,700 feet, and the snow line is at 16,665 feet. The

great mass of the Lahul range is granite. The people of Lahul are said to be of mixed origin. Mrs. Hervey says she never saw an uglier race than the Lahul people of both sexes, and she did not even see one pretty child. The Lahuli seemed, however, (ugly and dirty though they are,) to be a simpler and better race than the Kulu people. Their features are essentially Tartar. They speak a language not intelligible to the natives of the neighbouring talooqa of Kulu. The Lahul coolies will only carry most absurdly small burthens; women and children are much more employed in this capacity than the grown men. Lahul is divided from Kulu by a range of snowy mountains. It comprises the upper course of the two streams, Chandra and Bhaga, which uniting under the common name of Chandrabhaga, form one of the principal rivers (the Chenab) of the Panjab. The country is rugged and inhospitable. For six months, snow covers the ground. The inhabitants descend to the more genial temperature of Kulu, and return with the commencement of summer. The soil yields only one crop a year, and the grains produced are buck-wheat and barley peculiar to the country. Spiti is a region almost similar, except perhaps the cold is still more severe and the people less civilized even than in Lahul. It is surrounded on all sides by lofty mountains inaccessible for half the year, and the mean elevation of the valley (along the river Spiti) is not less than 10,000 feet above the level of the sea. The people belong to a kindred race with those of Lahul. The language is almost identical, but the customs and religious institutions are not analogous. Here also the resources of the land are locked up for more than six months in the rigorous winter. The inhabitants are obliged to repair during this inclement season, to the lower and more genial latitudes in the valley of the Sutlej. The produce of the land in Lahul and Spiti does not suffice for the wants of the population. The people of Lahul import grain from Kulu, and the valley of the Sutlej supplies the additional demands in Spiti. The crops in both taluqa are the same. The barley of Spiti is hexagonal or six-sided, and the grain large and succulent. In Lahul, there are few indigenous trees. That which gives character to the district is *Juniperus excelsa*, or pencil cedar, the Shukpa of Lahul, and Lewar of Kunawar. It forms small forests, especially on the southern slope of the hills at an elevation of 9 to 12,000 feet. The tree seldom attains 30 feet in height and 6 feet in girth; but Thomson mentions one perhaps 40 feet high, and Cleghorn measured one below the monastery at Kyclaug, 13 feet in girth. The

bark is red, separating into laminae like birch, and apparently a good material for brown-paper. The wood is used for house and bridge building, and is adapted for ornamental cabinet work; it is fragrant, harder, and less odorant than *W. Indian cedar*; of this tree Jacquemont wrote, (*Voyages, tom. p. 373*), "C'est là qu'on fait avec le bois de *Juniperus arborea* les vases de toute espèce, qui servent à contenir l'eau et le lait en Kunawar, et qui s'exportent en Ladak et à Garou." The ground below the trees is generally rocky, bare, or covered with a strong smelling *artemisia*, large thistles, or various species of rose. A wild yellow Persian rose, *R. eglan-teria*, here finds its eastern limit. The Nail or Som-sling, *Pinus excelsa*, is the largest tree in Lahul, but is less frequent than the pencil cedar. On the left bank of the Chandra, about three miles above the junction, there is a forest of this tree, and a small patch occurs above Kardang, from which the Moravian mission house was built.—*Mrs. Hervey's Adventures of a lady in Tartary, Vol. i, pp. 124-25*; *Powell's Hand-book, Econ. Prod., Panjab, pp. 229-230*; *Hooker and Thomson's Flora Indica, Vol. i, pp. 208, 209*; *Cleghorn, Panjab Report, p. 150*; *Thomson's Travels, p. 257*; *Jacquemont's Tr., p. 373*. LAILAT-UL-KADR, or night of power, occurs on the night of the 27th Ramzan, and in it the Koran is supposed to have been sent down from heaven.—*Herklot's Qanoon-i-Islam; Wilson's Glossary*.

LA-IL-LA-HAH, IL-LUL-LA-HO, Mahomed oor-Russool Oollahay, there is no deity except God, and Mahomed is the prophet (or messenger) of God. This is the first part of the mahomedan creed; but the same words occur in the mahomedan azan or call to prayers, viz., Alla-ho-akbar! Allah-ho-akbar! Ush-ud-do-un, la-il-la-ha, il-ul-la-ho, Ush-ud-do-un, la-il-la-ha, il-ul-la-ho. O Ush-ud-do-un, Mahamed-ur-rasul Ullahay. Hy-ul-us-salwat! Hy-ul-us-salwat. Hy-ul-ul-fullah! Hy-ul-ul-fallah. Us-sul-la-to Khair-un-min-nun-nowm. Allah-ho-akbar! Allah-ho-akbar! La-illa-ha illul-la-ho! The

LAKES.

translation of this azan by which the mahomedan muazzin, five times daily, calls mahomedans to prayers, is God is great! God is great! I bear witness there is no other deity but God. I bear witness there is no other deity but God, and I bear witness that Mahamad is the prophet of God. Come enliven your prayers: Come, enliven your prayers: Come for refuge to the asylum; Come for refuge to the asylum. Prayer is preferable to sleep; Prayer is preferable to sleep. God is great; God is great. There is no deity but God.

LAING, SAMUEL, a member of Parliament, succeeded, in 1861, on Mr. Wilson's death, to the office of finance minister in India, and his is a name which Indian history should not utter without praise. Possessed of vast abilities, a home-bred fundamental knowledge of finance, cautious in manner, and ready in argument and writing, he gave great satisfaction in India, but Sir Charles Wood's letters induced him to resign. By submission, Mr. Laing might have served India longer: but, by independence, he really served it most.—*Thurlow, p. 19.*

LAKE, Lord, commander-in-chief in India, in the beginning of the 19th century: gained the famous battle of Laswari over the Mahrattas.

LAKES are comparatively rare in British India, but large "Jhils" are occasionally to be seen, especially in the river streams of the Ganges and Brahmaputra. For the most part

LAKES.

they are not very deep; but their surface is very variable. Artificial lakes or tanks are frequently met with; their numbers throughout the country testify the importance attached to them by the natives. In the Himalaya, also, there are but very few lakes. That of Nainital, in Kamaon, (6,520 feet), the Vullar lake, in Kashmir (5,126 feet), and the Chinari lake, near Srinaggar, at about the same height, suffice to exhaust the category of those deserving mention. Glacier lakes, which are accumulations of water formed by one glacier obstructing the outlet of a higher one, are of much more frequent occurrence. At times, the wall of ice breaks away before the pressure of the swollen waters, when the lower lands become suddenly inundated, and the torrent rushes on with uninterrupted violence for miles, exercising a marked influence even down to the lower parts of the rivers. Two of the most elevated glacier lakes are the Deo Tal, in Garhwal (17,745 feet), and the Nantso, or Yunam, in Lahul (15,570 feet.) The following are lakes of western Tibet and Turkistan:—

Aksao Chin.....ft. 15,620	Tsomoriri.....ft. 15,130
Tso Tiyagar..... 15,693	Nima Kar..... 15,100
Tso Kar, or Khauri.....	Hanle..... 14,800
Talan..... 15,684	Tso Gam..... 14,580
Mure Tso..... 15,517	Tso Rul..... 14,400
Kluk Khol..... 15,400	Tso Mitloa..... 14,167
Mansaur, or To.....	Upper Tsomogna.....
Mapan..... 15,250	Lower Tsomogna..... 14,050
Rakus Tal, or Tso..... 15,250	Lari..... 14,010
Lanag..... 15,250	

Throughout British India, there are few natural inland lakes or seas deserving of note; none, certainly, which could be used for purposes of commerce, and most of them only fit for purposes of irrigation—the largest natural waters in the country are equalled, and in many cases, surpassed by the magnificent lakes which have been formed in several places by throwing embankments across great valleys; there are, however, extinct basins of lakes in the Deccan. Marine Lagoons or Back waters occur along all the coast of the western peninsula of India.

Lake-ab-Istada, literally Standing water is between Hamoon and the Kabul river, and is a receptacle for the waters of Afghanistan. It varies greatly in size at different seasons.

Chilka Lake, in Ganjam, is 35 miles long and about 8 broad with numerous islets.

Colair Lake, is a marine lagoon in the northern Circars of Madras Presidency.

Lake Debur, is in Ulipur.

Issyk-Koul Lake is amongst the mountains bordering between Central Asia and China.

Kashmir Lake is near the capital. Its shores have an unrivalled loveliness. The gardens on the northern aspect have been there from the time of Jehangir, and to the south is the Takht-i-Suliman with the

fort of Srinuggur on its summit. The lake is everywhere shallow, its water of a brilliant blue colour and great purity with numerous long waving water plants and grasses waving beneath the surface, and on its surface are numerous "rahd" or floating gardens consisting of wood rafts fixed by poles and covered with earth, and cultivated with flowers.

Lonar Lake, about two miles in circumference, is a body of water low down in the crater of an extinct volcano.

Munchar Lake, in Sind, was described by professor Orlebar, Postans, Knight.

Pulicat Lake, is a marine lagoon, skirting the bay of Bengal, north of Madras, in the Nellore collectorate.

Oodi-Sagur Lake. The Bairis river issues from the Oodi-Sagur lake of Rajputannah and passes within a mile of Cheetore. There are two grand reservoirs within six miles of each other, the Peshola, or internal lake, having an elevation of eighty feet above the external one, and the Oodi-Sagur, whose outlet forms the Bairis. The Peshola may be called the parent of the other, although it is partly fed by the minor lake at the villa of Subnailenka-bari. Both are from twelve to fourteen miles in circumference, in some places thirty-five feet deep, and being fed by the perennial streams from the Aravalli, they contain a constant supply of water. From the external lake to Cheetore, the fall is so slight that few locks would be required; and the soil being a yielding one throughout, the expense of the undertaking would be moderate.

Samber Salt Lake, in lat. 26° 53', and long. 73° 57', is twenty miles long, and one and a half broad.

Tso-Gam Lake, in eastern Ladak in Tibet, is a salt lake, 14,580 feet above the sea, and in lat. 33° 10' N., and long. 78° 34' E.

Manasarawara Lake, or Tso Mapan, is a salt lake, 30° 28', 81° 26' in Gnari Khorsum, about 15,250 feet above the sea.—*Strach.*

Tso-Mitbal Lake, in Pangkong, in Tibet, is a salt lake, in lat. 33° 25' N., and long. 78° 40' E., and is 14,167 feet above the sea.

Tso-Mognalari Lake, in Pangkong, in western Tibet, is a salt lake, in lat. 33° 39' 48', and long. 78° 38' 30' E., and 14,010 feet above the sea. It is about 120 miles long from E. to W.

Tso-Moriri Lake, in Rupchu in western Tibet, is in lat. 32° 45' 24' N., and long. 78° 16' 36' E., and 15,130 feet above the sea.

Ural Lake, see Khiva Khanat.

Walar Lake is in the vale of Cashmere.—*Buis's Catalogue: Col. Dixon; Lond. As. Trans. Vol. iii, p. 181; As. Jour., Vol. xvii, p. 372; Tod's Rajasthan, Vol. ii, p. 627.*

LAKH, HIND. A hundred thousand, a

vaguely great number; a multitude, as expressed by our word millions, is expressed by the hindi term Lakh, Crore. The Tibetans, to express a multitude, use 84,000: Khrag-Khrig, a hundred thousand millions: the Chinese, Wan, or 10,000.

LAKH, HIND. Lac derived from the word lakh, a hundred thousand, from the multitude of insects that congregate together. It is sold in the form of chapra-lakh, shell-lac, fused-lac, dana or seed-lac, and kham-lac or lac gathered in a crude state.

LAKHIA, see Jell.

LAKHAR, HIND. *Rhus acuminata*.

LAKHA RANA, by assassination, mounted the throne of Cheetore in S. 1439, (A. D. 1373). His first act was the entire subjugation of the mountainous region of Merwarra, and the destruction of its chief stronghold, Beratgurb, where he erected Bednore. But an event of much greater importance than settling his frontier, and which most powerfully tended to the prosperity of the country, was his discovery of the tin and silver mines of Jawura, in the tract wrested by Khaiti from the Bhils of Chuppun. Lakha rana has the merit of having first worked them, though their existence is superstitiously alluded to so early as the period of the founder. It is said the "seven metals (haft-iliat)" were formerly abundant; but this appears figurative. There is no evidence for the gold; though silver, tin, copper, lead and antimony, were yielded in abundance (the first two from the same matrix), but the tin that has been extracted for many years past yields but a small portion of silver. Lakha Rana defeated the Sankla Rajpoots of Nagarchal, at Amber.—*Tod's Rajasthan, Vol. i, p. 274.*

LAKHAR-BAGHAR, HIND. of N. India, Hyena.

LAKHI, HIND. Red leather dyed with "lakh" at Nurpur, &c.

LA-KHIRAJ, ARAB. A term applied in India to land, free from rent or public taxes, rent free-land.

LAKHON, see Laos.

LAKHNOUTI. This is the well-known city of Gaur called by Humayun, Jannatabad, and supposed by some to be the Gangia Regia of Ptolemy. It stood on the left bank of the Ganges about twenty-five miles below Rajmahal.—*Cal. Rev., Jan. 1871; Rennell, p. 55.*

LAKHTEI, HIND. *Cousinia calcitrapæ-formis*.

LAKMUNA, BENG. *Atropa mandragora*, Linn.

LAKPAT KANDHI BAO, see Kandeh rao, Kutch or Cutch.

LAKBA, HIND. Wood or Timber.

LAKSHMI.

LAKBA-BAG'H, HIND. Hyæna.

LAKBEHAN, a river near Nujeeabad in Bijour.

LAKRI, HIND. Wood. *Meda lakri*, HIND., is *Tetranthera monopetala*, and *T. roxburghii*. In India, rhyming doublets are of common occurrence and are not confined to proper names, to a certain extent they may be made colloquially at will upon a variety of substantives. Thus *chauki-auki* means "chairs," simply *chauki* or, at most, "chairs and tables;" *lakri-akri*, "sticks and stakes."

LAKSHA, SANS. Lac.

LAKSHMANA, the faithful brother of Rama. See Meghnad, Mehrawun, Rama, Vishnu.

LAKSHMANA, HIND. *Dicliptera roxburghii*.

LAKSHMI. This sea-born goddess of beauty and prosperity, the consort, or *sacti* of Vishnu, was obtained by him at the churning of the sea. She is painted yellow, sitting on the lotus or water lily, and holding in her hand, sometimes the *kamala* or lotus, at others, the shell or the club of Vishnu. At her birth she was so beautiful that all the gods became enamoured of her, but Vishnu at length obtained her. She is considered as the hindoo Ceres, or goddess of abundance. Lakshmi has various names—among which are *Sri* or *Sris*, the goddess of prosperity, called *Padma* or *Kamala*, from the lotus or *nymphaea* being sacred to her, also *Rembha*, the sea-born goddess; *Varahi* (as the energy of Vishnu in the *Varaha* avatar); *Ada Maya*, the mother of the world, *Narayani*, *Vidgnaui*, *Kamali*, &c. The goddess was the daughter of *Bhriga*; but, in consequence of the curse of *Durvasa* (an incarnation of *Siva*) upon *Indra*, she abandoned the three worlds, and concealed herself in the sea of milk, so that the earth no longer enjoyed the blessing of abundance and prosperity. Lakshmi as the consort of Vishnu is the *sacti*, or active energy, of the preservative power. She is considered as the goddess of riches, and would be invoked for increase of wealth by a desiring hindoo rather than *Kuvera*, the *Plutus* of their pantheon: she might, therefore, be naturally considered as the appropriate consort of the deity of wealth, but Major Moor did not see her represented in that capacity. The followers of Vishnu esteem Lakshmi as the mother of the world and then called her *Ada Maya*; and such *Vaishnavas* as are *Sactas*, that is, adorers of the female energy or nature active, worship her exclusively as the symbol of the Eternal Being. As *Rembha*, the sea-born goddess of beauty, she sprang as one of the fourteen gems from the ocean, when churned by the good and evil beings for the

LAKSHMI.

amrita, or immortal beverage. She then assumes the character of the *Venus* Aphrodites of the Greeks, who, as *Hesiod* and *Homer* sing, arose from the sea, ascended to *Olympus*, and captivated all the gods. "It may be contended," he continues, "that although *Lakshmi* may be figuratively called the *Ceres* of Hindustan, yet any two or more idolatrous nations, who subsisted by agriculture, might naturally conceive a deity to preside over their labours, without having the least intercourse with each other, but no reason appears why two nations should concur in supposing that deity to be a female, one at least of them would be more likely to imagine that the earth was a goddess, as, indeed, is the case with the hindoos in the existence of *Prit'hivi*, and that the god of abundance rendered her fertile. Besides, in very ancient temples near *Gaya*, we see images of *Lakshmi* with full breasts, and a cord twisted under her arm, like a horn of plenty, which looks very like the old Grecian and Roman figures of *Ceres*." Sir *William Jones* has addressed a hymn to *Lakshmi*, "the world's great mother," that cannot be perused by an oriental student without great profit, nor by any one without unqualified admiration. In the argument he calls her *Lakshmi* or *Sri*, the *Ceres* of India, the preserving power of nature, or, in the language of allegory the consort of *Vishnu*, or *Heri*, a personification of the divine goodness. Some represent her as the daughter of *Bhriga*, a son of *Brahma*: but, in the *Mercandeya Purana*, the Indian *Isis*, or *Nature*, is said to have assumed three transcendent forms, according to her three *guna* or qualities, and each of them to have produced a pair of divinities, *Brahma* and *Lakshmi*, *Mahesa* and *Saraswati*, *Vishnu* and *Kali*. After whose intermarriage, *Brahma* and *Saraswati* formed the mundane egg, which *Mahesa* and *Kali* divided into halves, and *Vishnu*, together with *Lakshmi*, preserved it from destruction. A third story supposes her to have sprung from the sea of milk, when it was churned on the second incarnation of *Vishnu*, who is often painted reclining on the serpent *Ananta*, the emblem of eternity; and this fable, whatever may be the meaning of it, has been chosen as the most poetical. The other names of *Sri*, or prosperity, are *Heripriya*, *Padmalaya* or *Padma*, and *Kamala*, the first implying the wife of *Vishnu*, and the rest derived from the name of the lotus. In the *Srad'ha* or obsequies in honour of deceased ancestors, *Lakshmi* is, among most other deities, earnestly invoked, particularly when a votary, by gifts to brahmins, is "desirous of obtaining celestial bliss for the defunct." A donation of a milch cow

is attended by many appropriate ceremonies, finishing with prayers, the acceptor holding during the recital the sacred animal by the tail. The boon-granting cow, so honoured in the preceding extract, is called *Surabhi*, and her descendants are much revered by all classes of hindoos above those that may be denominated base. It is common for brahmins and others, to feed a cow before they take their own breakfast, ejaculating as they present their food, "Daughter of *Surabhi*, framed of five elements, suspicious, pure, holy, sprung from the sun, accept this food of me; salutation unto thee!" Or, if he conduct the kine to grass, "May cows, who are mothers of the three worlds and daughters of *Surabhi*, and who are beneficent, pure and holy, accept the food given by me." In marriage ceremonies a cow is one of the actors. "The hospitable rites are conducted by letting loose a cow at the intercession of the guest; a barber, who attends for that purpose, exclaims, 'the cow! the cow!' Upon which the guest pronounces this text—release the cow from the fetters of *Varuna*. May she subdue my foe, may she destroy the enemies of both him (the host) and me. Dismiss the cow, that she may eat the grass and drink water. When the cow has been released, the guest thus addresses her, 'I have earnestly entreated this prudent person, saying, kill not the innocent harmless cow, who is mother of *Rudras*, daughter of *Vasus*, sister of *Adityas*, is the source of ambrosia, &c.' "It is evident," continues Mr. Colebrooke, "that the guest's intercessions imply a practice, now become obsolete of slaying a cow for the purpose of hospitality." In the *Hitopadesa*, p. 110, the earth is called *Surabhi*, and the learned translator (Wilkins) notes the name to be not usually so applied, although the earth may well be called the cow of plenty. Many writers have noticed the superstitious veneration that some sects of hindoos have for cows and calves: the custom, so universal in India of using cow-dung for floors and walls, can, however, scarcely be considered as a superstition, for it is used for floors by all sects, as well as hindoos, as the most cool and cleanly article. Once a week, perhaps, it is common to rub over earthen floors with fresh cow-dung mixed up with as much water as will render it easy to spread; this is done, not only in tents and temporary houses of gentlemen, but sometimes over the floors of the out-houses of Europeans as well as natives. This smell, which is not at first unpleasant, quickly goes off, and no floor is so cool and comfortable, nor so obnoxious to fleas and vermin. Cow-dung is plastered over the cooking-place, before the meal of a per-

son of a high class be cooked: in camps, or on journeys, a space of 10 or 12 square feet is so purified; and is easily polluted by the approach of impure persons or things; in which vexatious case the food becomes unholy. The ashes of cow-dung are also of a very purifying nature; and hindoos, of almost all ranks and degrees, men and women, occasionally, or frequently use them, mixed sometimes with other ingredients, to mark their forehead, necks, arms, &c. Sometimes men, especially religious mendicants or penitents or those having some claims to sanctity, are rubbed all over with these ashey mixtures, and make a curious sky-blue appearance. Mahadeva is frequently painted blue, or rather of an ashey colour, and the classes just noticed perhaps imitate that deity, or Krishna, also a deity of a blue or black hue. The ceremony of *Karslaggni* is obtained from the use of the cow-dung—on one occasion of its performance it happened, according to a legend, that a crow, named from her friendly disposition, *Mitra-caca*, was present, and immediately flew and imparted the welcome news that a hindoo who performs the *karslaggni*, goes to heaven. This expiation consists in the victim covering his whole body with a thick coat of cow-dung, which, when dry, is set on fire, and consumes both sin and sinner. Until revealed by the crow, this potent expiation was unknown: and it has since been occasionally resorted to, particularly by the famous *Sancara-charya*. The friendly crow was punished for her indiscretion; and was forbidden and all her tribe to ascend to heaven and were doomed on earth to live on carrion. The crow is reckoned a bird of ill omen in India; still Malabar females are sometimes named *Kaka*, the name in that dialect, as well as in Sanscrit, for the crow. The females of Malabar are, more than others, called after animals. *Mani*, the alligator, is a name among them. But the greatest, or, at any rate, the most convenient, of all purifiers, is the urine of a cow: hindoo spirits of impurity abhor this sin expelling sanctifying liquid. Images are sprinkled with it, no man of any pretensions to piety or cleanliness would pass a cow in the act of staling without receiving the holy stream in his bedewed fingers, marking and crossing his forehead, shoulders and breasts. If the animal be retentive, a pious expectant will impatiently apply his finger, and by judicious tickling excite the grateful flow; if heedless, however, he may perhaps, by super-excitation, receive a greater boon than the descendant of *Surabhi* was implored to yield. The name of this goddess is also given to the last stalks of grain which the hindoos, as the

Scotch, carry home from the field and preserve until next harvest. With all who desire that prosperity attend their Lakshmi, of whom the Roman prototype is Ceres, it receives their adoration. The Mahratta cultivators are attentive to her worship, and when the rabbi crops are well above the ground, they proceed to their fields, where they place five stones around a tree, on which they set pots of vermilion and some wheaten flour which they worship as the Panch-Pandu. In the evening they take a few stalks of Sorghum, with a lamp surrounded by a cloth, to their homes, which  they regard as Lakshmi. It is an interesting sight to see the wives of the cultivators each returning to her home with her lit-up basket of Sorghum. The ceremonial is performed on the 28th day of the moon, "amas," which, in 1867, fell on Christmas day.

In Rajputanah in one festival, Lakshmi is depicted by the type of riches, evidently the beneficent Anupurna in another garb, and the agricultural community place a corn-measure filled with grain and adorned with flowers as her representative; or, if they adorn her effigies, they are those of Padma, the water-nymph, with a lotus in one hand, and the pashu (or fillet for the head) in the other. As Lakshmi was produced at "the churning of the ocean," and hence called one of the fourteen gems, she is confounded with Rembha, chief of the apsara, the Venus of the hindoos. Though both were created from the froth (sara) of the waters (ap or up), but they are as distinct as the representations of riches and beauty can be. Lakshmi became the wife of Vishnu, or Kaniya, and is represented at the feet of his marine couch when he is floating on the chaotic waters. As his consort, she merges into the character of Saraswati, the goddess of eloquence, and here we have the combination of Minerva and Apollo. As of Minerva, the owl is the attendant of Lakshmi; and when we reflect that the Egyptians, who furnished the Grecian pantheon, held those solemn festivals, also called "the feast of lamps," in honour of Minerva at Suis, we may deduce the origin of this grand oriental festival from that common mother-country in Central Asia, whence the Dewali or festival of lamps radiated to remote China, the Nile, the Ganges, and the shores of the Tigris; and the lamps and fireworks of the Shab-i-burat of the mahomedans of Islám is but "the feast of lamps" of the hindoos. In all these there is a mixture of the attributes of Ceres and Proserpine, of Plutus and Pluto. Lakshmi partakes of the attributes of both the first, while Kuvéra, who is conjoined with

her, is Plutus, as Yama is Pluto, the infernal judge. The consecrated lamps and the libations of oil are all dedicated to him; and in Rajputanah, "torches and flaming brands are likewise kindled and consecrated, to burn the bodies of kinsmen who may be dead in battle in a foreign land, and light them through the shades of death to the mansion of Yama." In some parts of northern India, Lakshmi is a personification of the luni-solar year; in the same manner as Durga is that of the Solar one: but this allegory is rejected by the pundits of the Carnatic, who likewise deny what some pretend, that she lends occasionally her name to the Moon, and even to Jupiter. The representative of Ceres, amongst the hindoos, is Lakshmi. Amongst the Rajputs, Gouri seems to be the analogue of Ceres, and the festival of the Ahaira or Muhoorat ka Shikar,—the slaying of the wild boar, is in honour of Gouri or Ceres.—*Tod's Rajasthan*, Vol. i, p. 597; *Cole Myth. LALLY, Count de, arrived in India in 1758 as commander-in-chief and commissary of the king for all the French possessions in India. The father of count Lally Tollandal, was sir Gerard O'Lally, an Irishman, who having defended Limerick, took service with the French. He formed the "Irish Brigade," and his son, Thomas Arthur, at the age of one (1702) was a private in the French army, and at the age of forty-three (1745) saved France at Fontenoy. His charge and that of his brigade, the command of which he had inherited from a grand uncle, Count Dillon, decided the day, which had been won by the stolid, immoveable English advance. Lally served in Russia with credit, in the force raised to assist the Jacobite rebellion, and under Marshal Saxe, who regarded him as a future Marechal de France, and on the 31st December 1756, when fifty-four years old, he was appointed commander-in-chief of the French possessions in the east. He was then in the vigour of his powers, a perfect disciplinarian, a general by instinct, and by training, a statesman. Full of genius, and knowledge, and thoughtfulness, his wonderful capacities were, however, all neutralized by that strange spirit which Garibaldi once denominated "the disease of militarism," which in all ages has betrayed itself in the French army. Lally was unable to comprehend the existence of a state of things such as forced itself upon his attention immediately after he had landed in India. The institution of caste appeared to him to be simply an excuse of which men

availed themselves to escape toilsome occupation. He at once reversed the policy of Dupleix. That able administrator had been careful to respect native prejudices ; his whole policy in fact had been a policy of conciliation. But Lally, confident in his strength, tried to ignore the existence, as a nation, of the millions of Hindustan. When men whose caste forbade them to labour refused to act as coolies, they were at once impressed, and driven to their tasks. The native inhabitants of Pondicherry were, in this way, condemned without distinction to all sorts of labour. Bralmins were compelled to carry the loads their caste forbade them to touch, and were yoked with the pariah and soodra to draw carts. The result was an universal panic in Pondicherry. When de Leyrit and the Council remonstrated, they were treated as accomplices who had been bribed. When he returned from the conquest of Fort St. David, he returned to a city, the European and Native inhabitants of which were alike struck by a paralysis of terror, and imbued with a feeling of savage hatred. Of these two feelings he himself was at once the cause and the object. His officers petitioned that Bussy should command them in the field. When before Madras his officers shrank from an assault out of hate for him, and at last, deserted by his fleet, with a mutiny in his army, and an object of active hatred to every officer under his command, he was compelled to raise Bussy to the active command. After the battle of Wandewash, in which colonel, afterwards sir Eyre Coote, totally defeated him, he was compelled, with mutinous troops and hostile population, to defend Pondicherry. Without reinforcements, or supplies, or forage, detested by his officers and so hated by the population that they tried to kill him, he defended the town for months against a superior army, compelling even the admiration of the besiegers, who could not comprehend how a man so detested could have held the reins so long. By the 1st May 1760, the French Army was confined almost to the limits of Pondicherry, and the place was virtually invested by sea and land. Even then, Lally never for a moment showed the slightest sign of despair. For the nine months that followed, though thwarted by intrigues and opposition within the walls, by the discontent of some of his troops, and the faithlessness of others, he still maintained a lofty mind in difficult circumstances. All this time he was surrounded by those whom he had made his enemies, he was ill, harassed and opposed. The regiment of Lorraine had been reduced to 327 men, that of Lally to 230 ; whilst the enemy had received large reinforcements. Finally, all

resources having been exhausted, and having but four ounces of rice left for distribution to each soldier, he agreed on the 14th January to capitulate, but the English refused to grant him terms, and he was compelled to surrender at discretion (16th January 1761). The following extract from the letter of an English officer who was present at the siege, will show the straits to which Lally was reduced before he gave in. 'Our Artillery,' he says, 'performed wonders, but the want of every necessary within was what chiefly wrought in our favour. The inhabitants had subsisted for a long time upon their elephants, horses, camels, &c. I can assure you for a truth that a dog sold for 24 rupees ; of this miserable provision, there did not remain enough for one day longer, when the English took possession of the place.' Again referring to Lally, he says, 'it is a convincing proof of his abilities, the managing so long and vigorous a defence, in a place where he was held in universal detestation.' As he marched out of the citadel of Pondicherry, he was saluted with a loud and general hiss, and was loaded with the most abusive and opprobrious epithets. The Intendant of his army who followed him, an old half blind man, upwards of seventy years of age was killed on the spot. Lally himself would have shared the same fate but for the opportune appearance of some English hussars. He returned to France, and found himself an object of suspicion to the Government he had served so zealously. For twelve months he occupied himself in prayers for an inquiry, but obtained only an investigation, was condemned on two charges,—insolence to His Majesty's other officers, which was true, treason to His Majesty, which was false,—was haled forth in a dungcart to his execution, and cognizant to the last of his one misfortune, died exclaiming, "Tell my judges that God has given me grace to pardon them, if I were to see them again, I might no longer have the forbearance to do it." . . . An English officer, writing of him at the time he was a prisoner at Madras, says :—'Monsieur Lally is arrived amongst us ; notwithstanding his fallen condition he is now as proud and haughty as ever. A great share of wit, sense, and martial abilities, obscured by a savage ferocity, and an undistinguished contempt for every person that moves in a sphere below that of a general, characterize this odd compound of a man.'—*The Career of Count Lally, a Lecture by Major G. LAMA, correctly *blama*, is the Tibetan word for a superior. The Dalai Lama, literally ocean superior, is the highest in rank of the Tibetan lamas. He resides at Lhasa. He is viewed as an incarnation of the Dlyano Bodhisatwa Chenresi, who is supposed to effect his re-embodiment by a beam of light which issues from his body and enters the individual whom he selects for his re-descent. The honorific title of Lama, (*blama*) strictly belongs only to the superiors of convents : but is applied also to ordained priests. The Tibetan priests are ordained to celibacy ; but as they live under the same roof with nuns, this prohibition is probably not followed out. The Khanpo is a head Lama, and these are the superiors of the larger monasteries. The Dalai Lamas are selected by the clergy, but, since 1792, the Chinese government influence the election, to obtain the sons of families known for their loyalty. In Bhutan the Khanpo have made themselves almost independent of the Dalai Lamas, and the ruler of Bhutan, the Dharma Rinpoche

or Dharma Rajah, yields but a loose obedience. Lamas are very numerous, at Lhasa and its vicinity ; Dr. Campbell gives a list of 12 principal monasteries, inhabited by a total of 18,500 Lamas. In Ladak, there are about 12,000 Lama in a population of 158,000. There has been some misapprehension regarding the Buddha and Bodhisatwa, the regeneration of the Grand Lama being considered as an exceptional case of a Buddha returning amongst mankind. Mr. Hodgson, (pp. 137, 138,) truly calls the "divine Lamas" of Tibet, Arhanta, but he believes "that a very gross superstition has wrested the just notion of the character to its own use," and so created the "immortal mortals, or present palpable divinities" of Tibet." Fra Orazio says that "Lama sempre sara coll' istessa anima del medesimo (iany-c' iuh) oppure in altri corpi." Remusat was not aware of this fact when he stated "Les Lamas du Tibet se considerent eux-mêmes comme autant de divinités (Bouddhas) incarnées pour le salut des hommes." But the explanation which Major Cunningham received in Ladak, which is the same as that obtained by Fra Orazio in Lhasa, is simple and convincing. The Grand Lama is only a regenerated Bodhisatwa, who refrains from accepting Buddhahood, that he may continue to be born again and again for the benefit of mankind. For a Buddha cannot possibly be regenerated, and hence the famous epithets of Sathagata, "thus gone," and Sugata "well gone," or gone for ever. The ordinary monk or priest in Tibet is the Gylong, above whom are the Lhama or presidents, and below whom are the Tohba and Tuppa. The Tuppa is a probationer who is admitted into the establishment to which he would attach himself at the age of 8 or 10 and receives instruction accordingly. At 15, he becomes a Tohba, and at 24 a Gylong, provided his acquirements be satisfactory. There are two sects, the Gylupka, who dress in yellow, and the Shammar in red, the Shammar Gylong being allowed to marry. So also the Great Lama of Thibet is regarded as immortal ; though his spirit occasionally passes from one earthly tenement to another.

Tepa is the "Lama Yeungjing," the private guru, or high priest of the "Grand Lama." He is also appointed by order of the emperor, and is sometimes an *avatari Lama*, but not always. His office is to teach and train the Grand Lama in childhood and youth, and lead him, if he can, afterwards. He is indeed an important personage in the Buddhist world, being no less than the keeper of the Grand Lama's conscience. The nomination to this post being in the hands of the emperor,

furnishes an interesting clue to the extent of the imperial power over the church of Thibet.

The Che Kap Kempu Lama is a churchman of great influence in the Government. He appears to represent the Grand Lama in the council of state and in the deliberations of the Shapees. He may be called Secretary or Minister for the church, and the Shapees may, correctly enough, be called the Financial, Judicial, Revenue and Home Secretaries, or ministers.

The Tibetan Treasury is managed by two officers named Jhassa; both are Lamas, and act conjointly, although one of them is Treasurer on behalf of the "Grand Lama," and the other on behalf of the Noume-hen or temporal estate. They are assisted by two Sub-Treasurers styled Shangjotes. Four officers designated Da-puns, are the commanders of the Thibetan Troops, and act as Civil and Political Commissioners on occasions of frontier or other disturbances, they are Thibetans, and not Lamas. The ordinary course of official promotion is from a Da-pun to a Shapee; of equal rank, to the Da-pun is the Che-pun, who is, however, a civil officer and acts in all departments as Deputy to the Shapee. Shate Shapee, was the energetic Commander-in-Chief of the Thibetan army which opposed the Nipalese under Jung Bahadur. The Shapee is often employed as Commissioner on deputations in civil affairs either Judicial or Fiscal, and all the cases sent up by the Police for trial before the Shapee are forwarded through this officer. All appointments to the offices above noted, require the confirmation of the emperor.

A religious exercise much practised by the buddhist, is that of going round the convent, prostrating himself at every step. Sometimes an immense number of devotees will be going through their act of devotion at the same time, one after the other, and they will include all the neighbouring buildings in their prostrations. The feat must be performed all at once without any interruption, even that of stopping for a few moments to take nourishment; and the prostrations must be perfect, that is to say, the body must be extended its whole length, and forehead must touch the earth while the arms are stretched out in front, and the hands joined. Before rising also the pilgrim must describe a circle with two ram's horns which he holds in his hands. Some content themselves with taking a walk round the convent, rolling all the while between their fingers the beads of their long chaplet, or giving a rotatory movement to a kind of praying mill, which turns with incredible rapidity. This instrument is called a Chu-Kor, that is, "turning prayer;" and it

is common enough to see these fixed in the bed of a running stream, as they are then set in motion by the water, and go on praying night and day, to the special benefit of the person who has placed them there. The Tartars also suspend these convenient implements over their domestic hearths that they may be put in motion by the current of cool air from the opening of the tent, and so twirl for the peace and prosperity of the family. Another machine which the buddhists make use of to simplify their devotional activity is that of a large barrel turning on an axis. It is made of thick pasteboard, fabricated of innumerable sheets of paper pasted one on another, and upon which are written in Thibetan character the prayers most in fashion. Those who have not sufficient zeal or sufficient strength to place on their backs an immense load of books, and prostrate themselves at every step in the mud, adopt this easier method, and the devout can then eat, drink, and sleep at their ease, while the complaisant machine does all their praying for them. As a penance, or under a vow, a Lama will open his belly, take out his entrails and place them before him, and then return, immediately to his former state. This spectacle, atrocious and disgusting as it is, is very common in the Lama convents of Tartary. The Bokte who is to display his power, as the Mongols say, prepares himself for the act by long days of fasting and prayer; and during the whole time he must maintain the most absolute silence, and refrain from all communication with men. In Tibet, the remains of the sovereign Lamas are deposited entire in shrines prepared for their remains which are ever afterwards regarded as sacred and visited with religious awe. The bodies of the inferior Lama are usually burnt and their ashes preserved in little metallic idols, to which places are assigned in their sacred cabinets. Ordinary persons are treated with less ceremony—some are carried to lofty eminences where there are left to be devoured by ravens, kites, and other carnivorous animals. But they also have places surrounded by walls where the dead are placed. The Mongols sometimes bury their dead; often they leave them exposed in their coffins, or cover them with stones, paying regard to the sign under which the deceased was born, his age, the day and hour of his death, which determine the mode in which he is to be interred. For this purpose they consult some books, which are explained to them by the Lama. Sometimes they burn the corpse, or leave it exposed to the birds and wild beasts. Children who die suddenly are left by their parents on the road. In Spiti, in the north-west Himalaya, when a

person dies, the body is sometimes buried, or burnt or thrown into the river, or cut into small pieces and burnt, admonitions are made over the body to the departed spirit, such as do not trouble yourself, you cannot enter it (meaning the dead body,) in summer it quickly becomes corrupt, in winter it freezes and is too cold for you.—*Fra Orazio in Nouv. Jour. Asiat.*, t. xiv, p. 408, ii.; *Jour. des Savantes*, Mai 1831, p. 263; *The Bhilsa Topes*, by Major Cunningham, p. 67; *Lubbock's Orig. of Civil* p. 236; *Iluc's Recollections of Journey*, pp. 117, 125, 126; *Tinkovskii's Journey to Peking*, Vol. ii, p. 312; *Moorecroft's Travels*, Vol. ii, p. 12. LAMB, HIND. *Eragrostis*, sp.

LAMB. The vegetable curiosity known as the Tartarian Lamb, is thus apostrophised by Dr. Darwin:—

Cradled in snow, and fanned by Arctic air,
Shines, gentle Barometz! thy golden hair;
Rooted in earth each cloven hoof descends,
And round and round her flexile neck she bends;
Crops the gray coral-moss, and hoary thyme,
Or laps with rosy tongue the melting rime,
Eyes with mute tenderness her distant dam,
Or seems to bleat, a Vegetable Lamb.

The plant about which these fables have gathered seems now to be referred to the fern genus *Cibotium*, formerly to *Aspidium*. The English Cyclopaedia says, "The Rhizoma of *Aspidium barometz* presents a rude resemblance to an animal. It is covered with a silky down, and when cut into has a soft inside with a reddish, flesh-coloured appearance, sufficient to account for the origin of the fables with regard to its animal nature.—*Yule Cathay*, Vol. i, p. 145.

LAMBA, TIBETAN. A priest, a monk. Europeans usually spell it L'launa.

LAMBRA, HIND. *Aristida depressa*.

Travelling grain merchants, better known as Binjara. The Binjara style themselves Gohur.

LAMBAR, or Lambardar, HIND. The village head-man who collects the revenue from the proprietors of his village, and pays it into the tahsil—he is a sort of middleman

between the officials of Government and the body of proprietors and rent-payers: he is called in Hazara, &c., mustajir; and in other parts, as also generally before British rule in the Punjab, mukaddam. It is an Anglo-Indian word from number and dar, and in Bengal, is a farmer who settles with the Government. In the Mahratta country this work is taken by the potail.

LAMD-DOR, HIND. Cord from fibre of *Calotropis gigantea*.

LAMBOK, an island east of Bali island, and only differs from Bali in the circumstance of the natives professing the mahomedan religion. The town of Bali Labogee, on the east side of the island, is more frequently visited by British ships than any other native port in the Archipelago, as vessels from New South Wales often call here on their voyage to China for the purchase of rice. In 1829 some Dutch cruisers visited this island and that of Bali, in order to buy slaves, which were required to recruit their army, and about one thousand were procured, at the rate of twenty dollars a head. They are, also, visited occasionally by French vessels from Bourbon for the same purpose. The natives of both islands devote their whole attention to agriculture, and large quantities of rice are exported to China and the Archipelago. Hides, tobacco, cocoanut oil, and coffee, are also exported; the cotton produced in the island is of an excellent quality, being considered the best in the Archipelago. It is manufactured into calico, but the tedious process of cleaning and spinning the raw material renders it very expensive: British and Indian calicoes, therefore, meet with a ready sale. Lambok strait, is formed by the island of Bali to the west, and that of Lambok to the east. The rajah of Lambok has the title of Anak Agong, which means son of heaven. The indigenous inhabitants of Lambok, are called "Sassak." The people of Lambok believe that some men can turn themselves into crocodiles, which transformation they adopt in order to devour their enemies. The Sassak indigenes of Lambok, are a Malay race, hardly differing from those of Malacca or Borneo, and have been converted to mahomedanism, but the ruling race are brahminical and from Bali. The men are jealous and strict with their wives, infidelity is punished by the couple being tied back to back and thrown into the sea, where crocodiles devour the bodies. Even a married woman accepting a flower, or betel, from a stranger, has been punished by death with the kris, and any one found without leave within the grounds of a house, is kreessed and his body thrown out to the street. The

LAMELLICORNIA.

people frequently do amok, but it seems to be deliberately done. On one occasion, a person doing amok killed 17 people before he could be killed. In war, a whole regiment will agree to amok, and then run on with such desperate resolution as to be very formidable to men less excited than themselves — *Wall.*, pp. 161, 173-174; *Mr. Earl*, pp. 89-91.

ORDER COLEOPTERA.

SECTION LAMELLICORNIA.

Gen. (1). *Euchirus macleanii*, *Westw.*

Syn.

E. macleanii, *Burm.* | *Chelotonus macleanii*, *Hope*.
Of a brassy-green colour, male 2½ and female 2 inches long, inhabits the Assamese and Himalayan regions, forelegs, disproportionately long and bent.

(2). *Euchirus dupontianus*, *Burmeister*.

Syn.

E. 4. lineatus, *Waterhouse*.

Inhabits the Philippine islands, length 2½ inches.

(3). *Dynastes hardwickii*, *Hope*.

Inhabits Nepal, length about 2 inches.

(4). *Jumna rukori*, *Saunders*.

Inhabits the Himalaya, length 1½-1¼ inches.

(5). *Heterorhina nigritarsis*, *Hope*.

Syn.

Cetonia nigritarsis, *Hope*. | *Cetonia mutabilis*, *Hope*.

Inhabits Landour, its favourite resort is wild indigo.

(6). *H. hopei*.

Syn.

H. bengalensis.

This resorts to the wild indigo. *H. bengalensis* is supposed by Dr. Benson to be the female.

(7). *H. anthracina*, *Westw.*

Inhabits upper India, length 10½ lines.

(8). *Bombodes ursus*, *Westw.*

Inhabits the Himalaya.

(9). *Peperonota harringtonii*, *Westw.*

Inhabits the Himalayas.

(10). *Parastasia rufopicta*, *Westw.*

Inhabits Sylhet and Assam.

LAMMERGEYER.

LAMES DE ECORCE DE CITRON,
Fr. Lemon peel.

LAMIACEÆ, *Lindl.*, the Mint tribe of plants, the Labiatae of Jussieu, comprising 11 Gen., 299 species, viz., 80 Ocimeae; 38 Menthae; 8 Monarda; 4 Satureiae; 7 Melisseae; 12 Scutellariae; 25 Nepetae; 93 Stachyae; 14 Prasieae, 18 Ajugeae. Dr. Royle recommended the introduction of the peppermint plant, with the essential oil of which the natives are well acquainted from its common use in cholera. Species of *Anisomeles*, *Diospita*, *Elscholtzia* and *Pogostemon* are used as substitutes for their European allies. The only plant of this family much cultivated in India is the *Dracocephalum royleanum*, or *Balungoo*, the seeds of which, *Tuklum balungoo*, are very generally used in India for the preparation of mucilaginous drinks. *Coleus barbatus* is a very aromatic plant of India, of the family Labiatae. The strongly scented *Plectranthus rugosus*, the *Pimar* or *Pisumar*, is a plant of Kaghan. — *Royle*, p. 303; *O'Sh.*, pp. 91-492.

LAMGHAN, see *Kohistan*.

LAMINARIA SACCHARINA, *sp.*

Gillar-Pattr, | *Gillar-ka-Pattr*, *HIND.*

Is official at Lahore and in Cashmere. The fronds are procured from Thibet, where they are reported to grow in a salt lake, but some maintain that they are brought from the Caspian Sea. The plant probably grows in all the salt lakes of High Asia, also it is probably brought from the sea through China. It is imported from Yarkand and via Kashmir. It contains much iodine, and acts as an alterative in scrofulous affections and enlargement of the thyroid gland or goitre (*gillar* or *gul*) a common disease in many parts of the Himalaya. If washed and hung up, a saccharine substance exudes. It consists of long ribbon-like pieces. Dr. Cayley states that 16 seers of this were imported from Yarkand to Le in 1867. It is highly esteemed in Japan, where it is extensively used as an article of diet, being first washed in cold water and then boiled in milk or broth. — *Honinger*, p. 297; *Powell's Handbook*, Vol. i, p. 384; *Dr. J. L. Stewart's Punjab Plants*, p. 2 69; *Simmond's Comm. Product*, p. 379.

LAMJAK, *HIND.* *Andropogon iwarancusa*, *Cymbopogon iwarancusa*.

Lucerna,	IT.	Lampara,	SP.
Palitakandillampu,	MALAY.	Vallak,	TAM.

Lamps are formed of various material and shapes, in them liquid inflammable bodies are burned, for the purpose of producing artificial light. Those in most common use in India are Argand lamps. Lamps are arranged for burning materials which are fluid at ordinary temperatures, in order to produce light. Such are the oils. A feast of lamps was held by the Egyptians in honour of the goddess of war. The Jews had a feast of lamps. The hindoos have a feast of lamps, at the same period of the year as that of the Jews, in honour of Kartakeya, or Scanden, the god of war, and the Rajputs, in honour of Lakshmi. The Parsi religionists have a feast of lamps. The Chinese have a feast of lanterns, on which occasion are many inscriptions on the lanterns, a usual invocation is Tien-tee, San-sheei, Vaulin Chin-tsai; Oh! heaven, earth, the three limits, and thousand intelligences, hail!—*Roberts*, p. 17; *Faulkner*. See Lakshmi, Dipawali, Dewali.

Klenruss,	GER.	Negro de humo,	SP.
Kajal,	HIND.	Mal,	TAM.
Nero di fumo,	IT.	Katike,	TEL.
Negro-fumo,	IT.		

Lamp-black is obtained by burning the impurities left in the precipitation of tar and pitch, and collecting the deposit in the form of soot. The finest kind is procured by collecting the smoke from an oil-lamp. It is used in the arts, particularly in the manufacture of painter's ink. The mahomedan women of Arabia,

LAMPONG.

Egypt, Persia and India stain their eye-lashes with it. Mahomedan men use antimony for this purpose.—*McCulloch*; *Herklots*.

LAMPE, FR., GER. Lamps.

LAMPEAN or Laban a wood of Java, light but durable, and affords materials for the handles of the spears or pikes borne by the natives.

LAMP-OIL,

Charagh ka tel, HIND. | Vallak yennal, TAM.

The kind of oil used in different parts of the world for burning in lamps varies with the sources of supply, and these are numerous. In Great Britain, whale oil, boiled from the subcuticular fat of the whale, was long used, and still is to a certain extent, although the general introduction of coal gas has lessened the demand for it. Oils obtained from seeds by pressure are used for artificial illumination in different parts of the world. In Paris, oil of rape-seed and oil of poppy-seed are clarified for lamps by filtration through cotton wool, and other processes. In the south of France and in Italy an inferior kind of olive-oil is used, as also the oil of *Arachis hypogæa*, or earth-nut. In Italy, lamp-oil is expressed from the stones of the grape. In Piedmont, walnut-oil is used; in India, cocoanut, castor, poppy, sesamum and ground-nut oils are in use; on the eastern and southern coasts of the Mediterranean and in China, oil of sesamum seed; and in tropical countries, cocoanut oil (which at the temperature of Britain is a white solid-like tallow) is burnt often in lamps made of the shell of the cocoanut and of bamboo. Much of the lamp-oil used in China is expressed from the seeds of *Camellia oleifera*, cultivated for the purpose, as is also a shrub, *Croton sebiferum*, from the fruit of which a solid oil is obtained by expression. Seal oil is used by the Esquimaux. The essential oils are too volatile for lamps. Petroleum and naphtha from fossil vegetable matter are used in localities which produce them. Naphtha, the most liquid of the oils, is also prepared by distilling fossil vegetable matter, and is well-adapted for burning. In Genoa, the streets are lighted with naphtha from the adjacent territory of Amiano; and some years ago it was obtained by the distillation of pit coal, for the purpose of burning in the street-lamps of London. Alcohol, or spirits of wine, is often used as a source of heat, on account of its clean flame, no soot being deposited.—*Tomlinson*.

LAMPONG. The size of these districts of Sumatra is about 12,926 square English miles. Their maritime boundaries are formed on the south by the Indian Sea and the Straits of Sunda, and on the east by Java, whilst the rivers Masuji and Pisang bound it on the

north and west. Tobacco is planted here and there, but it does not constitute an article of export. The leaves do not grow very large, but have a fine flavour. The inhabitants of the Lampong deem their tobacco better than that of Java and will not buy or use the latter. It is probable that the difference consists more in the preparation of the produce than in the plant itself. In the markets, tobacco is sold according to the weight of the copper money. The pliable rattan and the cane are found in considerable quantities, and are exported to Singapore and Batavia. The cane (*Calamus rotang*, L.) is called in the Lampongs "semambu." The country is very rich in species of these, and allied genera. The inhabitants of Tarabangi enumerated besides the semambu, the following species:—

Rottan	Rottan	Rottan
Bubuwar or bu-	Suti,	Peledes,
war buwar,	Urang,	Sessak,
Bunku,	Balk,	Tungal,
Kommoran,	Kuyu,	Bobras,
Semuly or Je-	Lakki,	Manu.
mang,	Sabuk,	

Calamus draco, L., is only first found further to the north-west, in the plains of Palembang, "Dammar kacha," also called "Dammar mata kuching," for some years maintained a high price in the European market. Other sorts are used for candles and flambeaus, as scarcely any oil is burnt in the interior. Some periods of the day are even named according to the time of lighting the rosin flambeaus. In Tarabangi are the following kinds of dammar:—

Dammar kacha or mata kuching, from a high tree which grows in the vicinity of the southern coast.

Dammar kuyung used for flambeaus.	
" Assem,	" Hulu tupay,
" Barinti,	" Bunu,
" Seburu,	

Karuwing or bangbang, is probably the thick oil, tough and quickly drying of the *Hermandia sonora*, called "bunka" by the Bugis.

Dammar tahala.

Dammar Selunay, from the Mengarawan tree, which is the wood most sought after in the Lampongs for building.

Dammar tambikat,	
" Sali-siep,	
" Kenbutul,	
" batu or serem for flambeaus,	
" dagin meira, which runs of itself from the trunk,	
" Mahalu, makes a good cement.	

The Lampongs possesses three species of ape which are not found in Java. The Orang-utan appears to be even less native than on

Java. Besides tigers and panthers, two smaller species of cats also occur, which are strangers to the island of Java, as also another kind of *Viverra* and *Mustela*. The Malayan bear and the elephant are also wanting on Java. In place of the rhinoceros of the last we find there the *Rhinoceros sumatrensis*, and in place of the *Cervus russa* we find there the *Cervus equinus*. The tapir probably has its habitat towards the frontiers of Palembang, and on the other hand, the banteng (*Bos sundaicus*), which is spread over the whole of Java, is wanting. The bear is called "genol" in the Lampongs. The beautiful *Argus pheasant* occurs, which it is difficult to export, because it easily sickens and dies on the voyage. Its eyes are first affected, afterwards follows a complete blindness, then a swelling of the whole head and throat, and shortly afterwards it dies. The natives call the bird ku-wau. Its manner of living agrees entirely with that of the peacock. Of the foreigners the Bugi are most numerous, and they principally reside at Telok Betong, Mengala and Siring Kebo. The Lampong people differ little from the Sundanese on Java, and clearly belong to the same race. They are not larger and are less muscular than the latter. In particular we do not find amongst any of them the round broad faces, short legs, and the coarse large feet, which are so frequently met with amongst the Sundanese. The difference is most marked in the women who are favourably distinguished in the Lampongs by finely formed feet and hands, by a fairer colour of the skin and a softer and slightly pensive expression of the eyes. That the colour of the skin is less dark-brown, may be ascribed to the circumstance that the women pass the greater part of their lives in well-closed houses. The dress of the men is exactly the same as in the west of Java. The Lampong fair ones delight much in finery, which, however, they only wear so long as they remain unmarried. As wives they do not make any further use of their ornaments. They wear bands for the forehead, which consist either of resin-beads strung together and covered with silver or gold and are called jelemeni; or are made of a thin strip of bamboo, to one end of which their gold leaves are sewed, while the other remains loose. This kind is called kembany pandan. A cincture of gold leaf in the form of a hoop is called Kandu Keda.

The bracelets which consist of the before-mentioned beads, are called piko: those of gold or silver leaves, gale pepe; those of resin rings covered with gold, gelang.

Necklaces, of gold leaf or silver leaf, gold and silver thread, tali gala.

LAMPONG.

Bangles, or ankle rings of gold or silver, gale chalu.

Ear-needles, with gold or silver crowns, chundok.

A girl who would be fully adorned, must affix silver nails to her fingers. There are very short ones called singai; and very long ones, which look like claws, called tanggai, which are principally used in dancing.

All the houses in the Lampongs stand on high posts. They are built so beautifully, so strongly and so fitly, especially in the interior of the country, that we cannot sufficiently admire the patience, activity and art of the inhabitants, particularly when we consider what small mechanical means the builders have at their service and how few and rude are the instruments which they employ. The houses consist altogether of wood with the exception of the floor, but including the roof, which is made of good shingles (siraps).

Exports from the Lampong Districts in the year 1843.

LAMPYRIDES.

Kollelet is the native name for caoutchouc, Puleh sahari is the bark of the *Alyxia stellata*, which is much used in the Archipelago as a medicine. Kulit glam is used by leather-curriers. Kayu Kamuning, the wood of different Murraya is used for scabbards and handles of weapons, principally of krisses. The export of pepper increased in 1844. The import of money in the same year amounted to :—

	Silver.	Copper.
Telok Belong—Java Rs.....	550	51,633
Mengala.....	..	3,616
Siring Kibo.....	..	12,445

The Lampong nation, which occupies that portion of the south-western side of Sumatra which lies opposite to Java, divided from it only by the Straits of Sunda, has its own peculiar alphabet, which consists of 19 substantive letters with double or treble consonants making them up to 44. It has a great deal of that angular linear and mengro form which characterizes the other Sumatran alphabets.—*Journal of the Indian Archipelago*, Vol. —, No. 12.

LAMPYRORNIS CYANIVENTRIS, Blyth, Syn. *L. nitens* apud Ruppell, from Abyssinia; nec *nitens* (L.) of S. Africa, from which it differs in having a conspicuously shorter bill, and various details of colouring. In *L. nitens* (verus), the whole plumage is glossy aeneous or steel-green, brightest on the wings and mingled with steel-blue on the head and neck: the abdominal region being of the same hue as the black, but an admixture of steel-blue is observable on the tibial plumes, axillaries, and under wing-coverts, shoulder of the wing (under the scapularies) bright steel-blue or purple, tipped with amethystine, which forms a distinct bar.

LAMPYRIDES, are a tribe of the Malacodermous Coleoptera, including the glow-worm and fire-fly. The fire-fly is the name given to species of *Elatér* and *Lampyrís*, of the order Coleoptera, and to the *Fulgora* of the tropics. *F. lateraria* is of South America, *F. candelaria* of south-east of Asia. The latter resort to moist places. The *Lampyrís* fire-fly is the *Moucholumineuse* of the French. The Romans styled the luminous insects by the common names *noctiluca* and *luciola*. Glow-worms are common in all parts of India. The glow-worm of Ceylon is the female of the *Lampyrís*, and attains a size of nearly three inches. Mr. Morren reports that he found phosphorous in glow-worms, as well as a system of prisms in transparent lenses, above the luminous matter. The fire-fly is a little luminous beetle, a species of *Lampyrís*. The lower part of its body has some apparatus for emitting a bright phosphorescent light.

LANCA.

Usually it is emitted in flashes at intervals of a second, and it is interesting to guess where the creature in its flight will next show itself. But occasionally the light is continuous. A splendid species of *Lampyrus*, was observed by Mr. Adams at Sarawak, when placed around the finger, it resembled a superb diamond ring.

LAMTENG in Sikkim. Here birds are scarce, with the exception of alpine pigeons (*Columba leuconota*), red-legged crows, (*Corvus graculus*, L., and the horned pheasant (*Meleagris satyra*, L.)—*Hooker's Hin. Jour.*, Vol. ii, p. 37.

LAMUJA, *Cucurbita citrullus*, Linn.

LA MUSCADINE, Fr. Dry rot.

LAMUT, MALAY. Ant.

LAMYIT ISLANDS, consist of one large and many small, on the east coast of China. The small islands lying N. E. of the large, are called the Eighteen Yit islands.

LAN, BURM. Fathom.

LANA, IT., LAT., SP. Wool.

LANA, HIND. *Ballota limbata*, also *Anatherum muricatum*.

LANA, HIND. of the Panjab, salsolaccous plants used for camel feeding and soda burning saji, barilla. The chief of these plants are

Baggi lana, also Chhoti lane, Suæda fruticosa.

Kuti lana, *Withania coagulans*.

Shor-lana, *Anabasis multiflora*.

Gora lane, *Anabasis multiflora*, also *Caroxylon fœtidum*.

Metra lane, *Anabasis multiflora*.

Moti lane, *Caroxylon fœtidum*.

Peshak lane, *Suæda fruticosa*.

Lanebar, is *Orphanthera viminea*.

LANA DYE, see Dyes.

LANANG, HIND. of Kanawar. *Vitis vinifera*.

LANAS, MADURESE. *Ananas sativus*, *Schult.*

LANAULI, in lat. 18° 45', long. 73° 26', in the Dekhan, east of the Bhor ghat. The mean height of the village is 2,307 feet eastward.

LANCA, in Hindoo cosmogony, one of the four imaginary cities which are supposed to lie under the equator at 90° distance from each other; viz., 1st, Yavacoti; 2nd, Lanca; 3rd, Romaca; and 4th, Siddhapuri. Bor-nacoti is stated to be the 3rd; but the pundits have rejected that spelling. Lanca is considered by all manner of Indian Astronomers, to lie under the first meridian, to which all computations should be referred; though several, and particularly the Telugu people, refer to that of Rameswara. Towards the north, and under the same meridian

LANDOUB.

as Lanca, the Sastra states that there are two other cities and a great mountain, viz., Avasi (supposed to be the same as Ujani or Oogai), Rohitaca, the mountain; and Sannitha, which in former, or rather fabulous, times, were the seats of colleges and observatories. The meridian of Lanca lies in 75° 53' 15" (5h. 3' 33") east of Greenwich; and 78° 38' (4h. 54' 12") east of Paris, Warren-Kala Sannitha.

LANCAVA. This group of islands, off the Malay Coast, consists of three large and many smaller, extending nearly N. W. and S. E., from lat. 6° 8' N. They are high bold islands, particularly Lancava, the centre one, which has on it a high peaked hill. The Laddas which form the east and south parts of the group are high barren islands.

LANCEROTA, see Polyandry.

LANCEWOOD a commercial name, in use in most countries to indicate a light, elastic wood. The Lancewood of Tenasserim, is from a tree which produces a timber possessing the properties of Lance-wood: it is not uncommon in the Tenasserim provinces, but it belongs to the dog-bane tribe, and is not at all related to *Guatteria virgata*, the Lancewood of commerce. The Meenaban or Pavetta Indica?, one of the Cinchonaceæ, is called Moulmein Lance-wood, but it is not equal to Lance-wood in elasticity, and beyond being useful for handles of tools, and such purposes, Major Benson thinks its qualities have been generally overrated, besides, it is susceptible to the attacks of insects. The *Guatteria virgata* of Jamaica, is much valued as a Lance-wood on account of its exceeding even ash in lightness, strength and elasticity. It is chiefly used for shafts of carriages. Lancewood of Australia, is the *Backhousia australis*, a myrtaceous tree. Lancewood of commerce, is the *Guatteria virgata*. Lancewood of Maulmain, is from a tree found all over the Provinces which yields a wood that the residents at Maulmain sometimes call lance-wood tree. The Karen make bows of it, but prefer *Cassia fistula*. Dr. Mason never met with the tree in flower, but thinks it a species of *Dalbergia*, one of the Apocynaceæ, though it may possibly be a *Cassia*.—*Dr. Mason; Faulkner.*

LAND-CRABS, see *Gecarcinus*, Crustacea.

LAND. According to Manu, "cultivated land is the property of him who cut away the wood, or who cleared and tilled it," and this ordinance is binding on all the hindoo race which no international wars or conquests has overturned.

LANDGA, HIND. *Canis lupus*, Linn. A wolf.

LANDOUB, a town in the Merut district of the N. W. Provinces. The height of

LANGAN TREE

Landour above Mussoorie is 800 feet, and the difference of temperature 3°. On the ascent from Rajpoot at the foot of the hills to Landour, the traveller passes through a vegetation which graduates insensibly from the tropical into that of temperate regions. The Dhoon contains numerous forms which are strictly tropical, such as among forest trees the *Acacia elata*, which extends up along the Tarai from the banks of the Irawadi. The *Saul* or *Shorea robusta* and species of *Pterospermum*, &c. &c., while the slopes of Mussoorie and Landour are covered with forests of oak and rhododendron together with the other temperate forms generally associated with them. The pine and the deodar forests which constitute the characteristic features of Simla, and add so much to the beauty of the station are nowhere seen at Landour and Mussoorie. This is chiefly owing to their lower elevation, and partly to their situation on the outermost ridge of the Himalaya overhanging the Dhoon.

LANDSE, the term applied by the Singhaless to anything English or European. It is a corruption of *Hollandische*, Dutch.—*Ten-nent's Christianity in Ceylon*, p. 103.

LANKEEKA WANLOO, in, Telingana, a caste of Sudras.

LANE TSURU, HIND. *Xanthium strumarium*.

LANGA, or *Lunga* a piece of cloth used by the men of several Indian races, as a lower garment, applied like a petticoat. Where the *langa* or petticoat is not worn, *pajama* or trousers take their place. These are sometimes worn loose, as in Oude and Bengal; and elsewhere as tight as they can be made. The cutting out of these tight trousers is no easy matter, for they have several gores on the inside of the thigh; and are contrived so that they are flexible, however tight, and do not hinder the wearer from sitting cross-legged. With the trousers, which are tied at the waist, are worn the *angia* or *choleo* bodice, the *koortni* or shirt, and the *dopatta* or scarf.

LANGA-CHO, see *Kunawur*.

LANGAET, see *Jangam*.

LANGAIA, a tribe following mahomedanism, proselytes from the Solanki Rajpoots, one of the four *Agnicula* races. Probably they inhabited the district of Lumghan, west of the Indus. It is curious and interesting to find that the Solanki gotra *acharya*, or 'genealogical creed,' claims Lokote as their settlement. The use of the word *Pat'han* by no means precludes their being hindoos.

LANGALI, SANS. A name of several plants, *Gloriosa* and *Commelina* and the coconut tree.

LANGAN TREE, *Nephelium longanum*,

LANGTANG.

Cambess. Its fruit is occasionally imported into England from China.

LANGAR, AR., PERS., HIND. Anchor. *Langar ki rassi*, HIND. Cable.

LANGAR NIKALNA, HIND. Literally to take out an anchor. This is a ceremonial performance of a vow by mahomedan men and women, usually given effect to on the fifth k'hun, i. e., the fourth day of the mohurrum. Wealthy mahomedans take out an anchor annually whether for a vow or not.

LANGARU, TEL. Anchor.

LANG PFEFFER, GER. Long pepper.

LANGAR KIHANA, HIND. An almshouse.

LANGHEE. In Hongkong, bees are useful in producing honey, and in Afghanistan they are semi-domesticated as in Europe. The *Langhe* bee of Borneo, and one of smaller size called *Nuang*, produce valuable honey. They generally place their nests underneath the larger branches, and the Dyaks to remove the honey and honey-comb ascend the trees by means of a rail of bamboos.

LANGHIA. The musicians in Sindh are of two kinds: 1, the *Khalwat* or respectable singers; 2, the *Langha*, or *Mirasi*, the bards of the country.—*Burton's Sindh*, p. 302.

LANGKWA, MALAY. Galangal.

LANGOOR MONKEY, is the *Semnopithecus schistaceus* and is usually seen in herds in pine and oak forests. The animal is common in the Chor forests and similar situations on the western ranges. It is dark-slaty above; below, pale-yellow; tail, long and tufted; hair on the crown of the head, short and diverging. There is considerable variety of colouring; the young incline to brown, and the old become more or less hoary. The *bandar*, *Macacus rhesus*, is the most common monkey. The *Entellus* monkey, *Semnopithecus entellus*, is ash-gray on the upper parts; darker on the shoulders and lower part of the back; tail, grayish-brown; hands with a slight shade of black; body slight; limbs, long and slender; tail lengthened. This species and the *langoor* are mistaken for each other.

LANGOTA, HIND. A cloth passed between the thighs and fastened to a string before and behind. *Langota-dost*, a friend from infancy, from the days when they wore the *Langota*.

LANGSAB, or *Langsat*, or *Langseh*, a species of *Lansium*. See *Duku*, *Lansium*.

LANGSHU or *Langshur*, HIND. *Juniperus communis*.

LANGTAM, a range of mountains covered with perpetual snow, in lat. 28° north, and long. 97° to 98° east.

LANGTANG or *Langthang*, HIND. *Scopolia pœalta*.

LANGUAGES of eastern and southern Asia are very numerous. The number of words in the languages of civilized races is no doubt immense. Chinese, for instance, contains 40,000; Todd's edition of Johnson, 58,000; Webster's dictionary, 70,000; and Flügel's, more than 65,000. The great majority of these words, however, can be derived from certain original words, or roots which are very few in number. In Chinese there are about 450, Hebrew has been reduced to 500, and Professor Max Müller doubts whether there are more in Sanscrit. But the number of words used in the conversation or writing of any persons, is very limited. M. D'Orsey assures us that an ordinary agricultural labourer has not 300 words in his vocabulary. When Labillardiere inquired of the Friendly islanders, the word for 1,000,000, they seem to have thought the question absurd, and gave him one which apparently has no meaning; when he asked for 10,000,000, they said 'loole,' which is left unexplained, for 100,000,000, they replied 'nonsense,' and for higher numbers, they gave him certain coarse expressions, which he gravely published in his table of numerals. The principal languages, from the Fin and Hungarian in the west to the Japanese in the east, have many phonetic characters in common, particularly that of vocalic harmony. But with all the Oriental languages those who would acquire them, encounter their first difficulty in the variety of writing characters in use, and a second difficulty in the discordant manner in which, when a foreign character is used, or indicated by foreigners, the powers of the letters are employed. Dr. John Borthwick Gilchrist's attempt to form a universal writing character, in his "Missionary's portable christmas-box and cosmopolitan's seasonable new-year's gift," did not succeed, and up till this time, it continues a matter of discussion whether in the efforts to diffuse knowledge by means of printed books, the writing characters in use by the peoples of the south and east of Asia should be continued, or whether the Roman letters should be employed to represent them. In this Cyclopædia, in which the Roman letters have been used, there has not been any system of spelling rigidly followed. The book is one of reference, to which all nations may resort, and as even those who use the Roman characters give widely dissimilar powers to different Roman letters, the attempt to follow a uniform system of spelling Asiatic words has even been avoided. Also, where the orthography of a word has been so generally adopted, that it may be said to have become a European word, no attempt has been made to disturb it, as 'Tinnevely,' not 'Tiruna-

vélei; 'bamboo,' not 'bambu.' Undoubtedly, a great difficulty to the English reader arises constantly from the discordant and inconsistent methods of spelling Native words and names, by means of the Roman characters, and practical utility requires that that system should be adopted, which is most widely received by English Orientalists, and employed in the most valuable works. Two modes have been proposed and largely followed, of indicating by the Roman letters, the characters in use for the vernacular tongues of India. The one put forward by Sir William Jones, about the year 1788, was an analogous classification of the letters, the other proposed by Dr. John Borthwick Gilchrist, in the early part of the nineteenth century was the representation of the sounds of the vernacular letters by equivalents of similar enunciation according to the powers of the letters as given by the English people; in other words the one principle is analogy, the other pronunciation. The latter principle is well adapted for expressing the Oriental characters in English letters in such a manner that English readers unacquainted with the Oriental characters would be enabled to articulate the words with a very near approach to their correct pronunciation: but it is for the most part unsuitable for all other of the European nations who use the Roman letters. The principle of analogy adopted by Sir William Jones retains the original letters with certain distinguishing marks and permits the learned men of all Europe to follow the word to its source, and it has been generally followed by the learned. The most recent writer on the subject was professor Horace Hayman Wilson in his Glossary, and he considers that the characters in the English alphabet have enabled him to represent letters in nine alphabets of thirteen different languages of British India. But, to do this, he has, by diacritic points and marks, and by compound letters, increased the English alphabet from 26 to 70 characters, nineteen of the English letters having two to six forms, *b, c, e, i, j, o, p* and *u*, each two; *g, h* and *l*, each three; *d* and *k*, each four; *a, r, s, t* and *z*, each five, and *n* has six forms, and he has even recommended other additions. Dr. W. W. Hunter does not follow out any plan.

The subjoined vowel-system which is that substantially of Sir W. Jones, H. H. Wilson, Shakespear, and Wilkins, has simplicity and authority in its favor. The short vowels are unaccented; the long have an acute accent or a straight line above them—

a as in 'about.'	i as in 'thin.'
ā as in 'mast,' (in Urduī and Bengālī as in 'ball'.)	ī as in 'pique.'
e as in 'hen.'	o as in 'not.'
ē as in 'ste.'	ō as in 'note.'
	u as in 'full.'

LANGUAGES.

ú as in oo in 'fool.'
 si as i in 'thine.'

ei—a somewhat narrower
 sound.
 ou as in 'bough.'

Consonants are recommended to have the same powers as in the ordinary English alphabet, and double letters are each to be pronounced distinctly, as in Italian.

y sounds as in 'you,' | gw as in 'polignant,' 'Spag-
 as in 'go,' noletto,
 " as in 'join.' | ng as in 'thing.'

h to have always a separate sound, except in *ch* as in 'church,' *sh* as in 'she,' *dh* as *th* in 'though,' *c* whether for *k* or *s*, being superfluous, need not be used, nor *x* for *ks*. But, although the three consonants, C, Q, X, are called superfluous in English grammars, Q, historically represents the Hebrew ק, and Arabic ق: hence it has been generally so employed by the learned. The English always have *u* after Q. In Qâl (قال) the Q is a deep soft K, formed at the root of the tongue.

Some writers, the latest of whom is H. H. Wilson, advocate the propriety of each language having its own natural alphabet, as if a new alphabet had been born with every tongue. But the single alphabet of Phœnicia has been modified for all the languages of Northern Africa, except that the Tuarick of the Great Western Desert have an alphabet of native growth. The Roman, Grecian and Hebrew have together all the consonants needed for Arabic, except three. The Greek type, now in use, has not the forms which alone were known to Demostheus and Æschylus. Moreover, Mohammed did not write with the very characters of the modern Arabic, and the Roman characters may serve for most tongues. When, in Europe, they began to print Greek, they copied all the contractions of the manuscripts. After that, it was customary in dictionaries to give Anglo-Saxon quotations in type which was copied from the hand writing of the Anglo-Saxon MSS.—German quotations in the modifications of Gothic type used in Germany, Danish in that used in Denmark and so forth. Gradually these trammels have been thrown off, all but the Greek type. With proper care in selecting letters, almost every word of any tongue could be distinctly articulated according to the English pronunciation, independently of the terms that precede and follow it, but the English pronunciation would not correspond with that of the Dutch, Italians or Spaniards, &c.

As to the original of the Chinese characters, it is known that, in transacting business before the commencement of the monarchy, little cords were used, with sliding knots, each of which had its particular signification. These are represented in two tables by the Chinese called Ho-tu and Lo-shu. The first

LANGUAGES.

colonies who inhabited Se-chwen had no other literature besides some arithmetical sets of counters made with little knotted cords, in imitation of a string of round beads, with which they calculated and made up all their accounts in commerce.

Dr. Pritchard, Professor Max. Muller, Professor Steiuthal and Professor Farrar have each attempted to classify the languages in use, and the writings of Chevalier Bunsen, of Pictet, of Burnous, Rask and Hunter have aided much towards the general arrangement. In Dr. Pritchard's classification he has four groups or dynasties of language, three of which are confined to Europe and Asia, a fourth being common to Africa and those parts of Asia which are near that continent. The first of his four groups is the Indo-European, sometimes termed Indo-Germanic, and by late writers the Arian or Iranian languages. He considers that the Indo-European languages and nations may be divided into many different groups, in the order of their affinities for instance; but he regards the most obvious division to be a geographical one, and he styles his first, the eastern group, which, by many writers has been termed exclusively the Arian family of tongues. It includes all the idioms of the ancient Medes and Persians, who named themselves Aarii, and their country Eriene or Iran, and likewise the Sanscrit with all the Prakrits, properly so termed, and the Pali of India. Among the former was that ancient Persian language in which one particular set of the cuneiform inscriptions was written. This dialect was so near the Sanscrit that the inscriptions have been interpreted through the medium of that language.

The Zend lays claim to a still higher antiquity since the Zend is said by Burnous, Professor Wilson and others who have studied it most successfully, to be more nearly allied to the very ancient dialect of the vedas, which preceded the classical Sanscrit, than it is to this last more cultivated speech. How this claim is to be reconciled with the comparatively recent date of all extant compositions in the Zendish language, remains, he considers, to be explained. But that the high castes or "twice born" classes of the Indian race, as they term themselves, the brahman, the chetria and the vaisya hindoo, were of the same stock as the ancient Persians, may be regarded as a fact established by the affinity of their languages.

Chevalier Bunsen's names differ from those of Dr. Pritchard. He classes one group as the great Asiatic-European stock of languages, which he sub-divides into eight families, viz., 1, Celts; 2, Thracian or Illyrian; 3, Arme-

LANGUAGES.

Iranian ; 4, Asiatic-Iranian ; 5, Hellenico-Italic ; 6, Slavonic ; 7, Lithuanian tribes, and 8, Teutonic. His fourth or Asiatic-Iranian, or the Iranian stock as represented in Asia, he again sub-divides into :

1. The nations of Iran proper or the Arian stock, the languages of Media and Persia. It includes the Zend of the cuneiform inscriptions and the Zend Avesta: the younger Pehlevi of the Sassanians and the Pazend, the mother of the present or modern Persian tongue: the Pushtu or language of the Affghans belongs to the same branch.

2. The second sub-division embraces the Iranian languages of India, represented by the Sanscrit and her daughters.

His Semitic stock of languages he constructs from the following nations who form another compact mass, and represent one physiologically and historically connected family: the Hebrews, with the other tribes of Canaan or Palestine, inclusive of the Phœnicians, who spread their language, through their colonization, as that of the Carthaginians; the Aramaic tribes, or the historical nations of Aram, Syria, Mesopotamia and Babylonia, speaking Syrian in the west, and the so-called Chaldaic in the east; finally, the Arabians, whose language is connected (through the Ilmyritic) with the Æthiopic, the ancient (now the sacred) language of Abyssinia. He calls this second family, by the name now generally adopted among German-Hebrew scholars, the Semitic. Chevalier Bunsen further remarks as the first lesson which the knowledge of the Egyptian language teaches that all the nations which from the dawn of history to our days have been the leaders of civilization in Asia, Europe and Africa, must have had one beginning. He adds that the researches of our days have very considerably enlarged the sphere of such languages of historical nations, as are united by the ties of primitive affinity. Those researches have made it more than probable that the Tartar, the Mantchu and Tungusan belong to one great stock, that the Turkoman, as well as the Tshude, Fin, Laplander and Magyar (Hungarians) present another stock closely united, and that both these families are originally connected with each other.

L

LANGUAGES.

The Iranian family of languages seems to be called Arian, by Mr. Farrar; it is the Indo-European and Indo-Germanic of some physiologists: Pictet and Barnous called it Arian from the Sanscrit word Arya meaning noble; Rask called it Japhetic. According to Mr. Farrar, it has 8 divisions,

Hindu, Persian,	Greek, Latin,	Lithuanian, Slavonic,	Teutonic, Celtic,
-----------------	---------------	-----------------------	-------------------

Of these it is uncertain, whether Celtic or Sanscrit represents the older phase. But it is known that all of them are the daughters of a primeval form of language which has now ceased to exist, but which was spoken by a yet undivided race at a time when Sanscrit and Greek had as yet only implicit existence.

A simple symmetrical and precise classification of languages has been elaborately established by Professor Steinthal in his *Charakteristik der hauptsächlichsten Typen des Sprachbaues*. He proposes to divide them all into two great classes, viz., culture-languages and uncultivated languages, and, each of these he would divide into two classes, viz., the isolating and the inflecting. Taking the uncultivated first: under the isolating class he proposes to place the Transgætic; and under the inflecting he would place three divisions: 1, the Polynesian, which expresses all the minor modifications of the meaning, all distinctions of declension and conjugation, by reduplications and prefixes: 2, the Ural Altaic (which Farrar calls the Alatyan), which expresses them by annexing separate words after the root; and 3, the American, which expresses them by amalgamation. The cultivated languages are similarly divided: 1, into the isolating, represented by Chinese; 2, into the inflectional, under which head he places, i, the Egyptian, which achieves a sort of inflection by a loose addition of grammatical elements; ii, the Semitic, by internal modification of the root; and iii, the Aryan, throughout which the formal elements have been reduced to mere conventional suffixes, such, for instance, as the letter S, which is our all-but-universal sign for the plural number. The table of the two classes may be expressed as follows:—

Our Lord's Prayer, in the types used in India for printing six of its languages.

[illegible]

LANGUAGES.

The Lord's Prayer was published in 1548 in fourteen languages, by Bibliandro; in 1591 in twenty-six languages, by Rocca (Bibliotheca Apostolica Vaticana, a fratre Angelo Rocca: Romæ, 1591, 4to.): in 1592 in forty languages, by Megiserus ("Specimen XL. Linguarum et Dialectorum ab Hieronymo Megisero à diversis auctoribus collectarum quibus Oratio Dominica est expressa:" Francofurti, 1592); in 1593, in fifty languages, by the same author (Oratio Dominica L. diversis linguis," cura H. Megiseri: Francofurti, 1593, 8vo.) The Bible has been printed and distributed in India in twenty-five different languages, in ten of which between six and one hundred thousand copies have been printed, and in Tamil 1,560,950 have been issued since 1706, when the Bible was printed in that language. The Bible was printed and issued in Bengalee in 1796 and in Malayalam in 1816. The whole of the copies printed in the twenty-five Indian languages is 4,772,621.

The languages in use in the south and east of Asia have been thus classified:—

1. *Reflecting types*.—Arabic, Sanscrit.
2. *Compounding types*.—Bask; Finnic; Magyar; Turkish; Circassian; Georgian; Mongolian; Mantshu; Javanese; Ngoko-Javanese; Kraama; Malay-Javanese.
3. *Isolating types*.—Chinese of Nankin, Amoy, Pekin, Shanghai and Canton; Japanese. ? Brahui.
4. *Chinese frontier and Thibet*.—Gyami; Gyarung; Takpa; Manyak; Thochu; Sokpa; Horpa; Tibetan.
5. *Nepal (West to East)*.—Serpa; Snuwar; Gurung; Murmi; Magar; Thaksya; Pakhya; Newar; Limbu.
6. *Kiranti Group, East Nepal*.—Kiranti; Rodong; Rungchenbung; Chingtangya; Nachhereug; Waling; Yakha; Chourasya; Kulungya; Thulungya; Bahingya; Lohorong; Limbiehong; Balali; Sangpang; Dumi; Khaling; Dungniali.
7. *Broken tribes of Nepal*.—Darhi; Denwar; Pahari; Chepang; Bhramu; Vayu; Kuswar; Kusunda; Tharu. Lepcha (Sikkim.) Bhutani or Lhopa.
8. *N. E. Bengal*.—Bodo; Dhimal; Kocch, Garo; Kachari.
9. *Eastern frontier of Bengal*.—Munipuri; Mithau Naga; Tablung Naga; Khari Naga; Angami Naga; Namsang Naga; Nowgong Naga; Tengsa Naga; Abor Miri; Sibsaor Miri; Deoria Chutia; Singhpo.
10. *Arakan and Burmah*.—Burman written and spoken; Khyeng or Shou; Kami; Kumi; Mru or Toung; Sak.
11. *Siam and Tenasserim*.—Talaing or Mon; Sgau Karen; Pwo Karen; Toungh-

LANGUAGES.

thu; Shan; Annamitic; Siamese; Ahom; Khamti; Laos.

12. *Central India*.—Ho (Kol); Kol (Singbhum); Santali; Bhumij; Uraon; Mundala; Rajmahali; Gondi; Gayeti; Rutluk; Naikude; Kolami; Madi; Madia; Kuri; Keikadi; Khond; Savara; Gadaba; Yerukala; Chentsu.

13. *Southern India*.—Tamil, ancient and modern, Malayalam do. do.; Telugu; Karnataka, ancient and modern; Tuluva; Kurgi; Toduva; Toda; Kota; Badaga; Kurumba; Irula; Singhalese.

The inhabitants of Mesopotamia consist of the Arab, Osmanli, Turk, Kurd, Turkoman, Syrian, Jew, and Christian. Arabic is the general language; Turkish, Kurdish, Chaldee, Syriac, and Syro-Chaldean dialects being the exceptions. The sunni muhammedan religion is prevalent; but in Upper Mesopotamia there are many christians of the creed of Nestorius, (some of whom have become Roman Catholics), and Jacobite as well as Roman Catholic Syrians. The races that have ruled in Mesopotamia have been many and from the most remote times and remnants are still to be traced of former dominant peoples in the varied languages still spoken. Professor Rawlinson believes that Chaldea was a part of the great Mesopotamia plain, bordering the Persian Gulf on the south, with Arabia on its west, and the limit between lower and upper Mesopotamia on the north.

Modern Arabic is written in the same dialect, in Egypt, in Syria, in Bagdad, in Constantinople, at Algiers and at Zanzibar, whether it be a mercantile letter, a State proclamation, an advertisement, or a letter in a newspaper, and it is understood by every body. The learned men who write novels or other books of Belle's Lettres may be aiming to bring back a classical style; but their dialect is less trustworthy as actually modern. Poetry also, may be ever so antique, just as in the decline of Greeco the learned wrote poetry in Homeric dialect. Similarly to Italy which has local dialects strongly distinguished, though the language of literature is but one, so is it with Arabic. The local dialects of Algiers, of Cairo, of Aleppo, of Bagdad, have marked diversities, as those of Sicily and Milan; but Mecca seems to set the law in Arabic literature, as Florence in Italian. The writing characters anciently in use in these regions are known from the sculptures which remain. The Arrow headed character was that used on the sculptures of Nineveh and is still occasionally used in writing Arabic, as also is the Cufic or Kufic which had its origin in the town of Kufa, but the Nashk, and Talik characters are now usually employ-

LANGUAGES.

ed. The Nashk-talik and the Shafia and Shakastah forms are also used for the Persian language and largely for the Urdu or Hindustani tongue, which for nearly three hundred years, up to the latter part of the 19th century, was, amongst all the military classes, the lingua franca or camp tongue of what is now called British India. There are, still, however, on sculptures near Aden, inscriptions in the Ilmyaritic and other characters. The Sanscrit and Pali languages have ceased to be spoken in any part of India, but both of them are in use as the sacred languages of the brahminical hindoos and the buddhists. The characters which have been used for Sanscrit, as seen inscribed on sculptures, have been the Kutila as at Vijayamunder, in Udayapur and on a stone slab from a temple at Ranode and at Oojcin. An old form of character is engraved on the Allahabad column, and that on one of two bronze tridents found at Gopendara in Garhwal was in this old character, the other being in nearly modern Deva-Nagari. The latter has been largely employed in writing Sanscrit in somewhat differing forms and as it is now used, but another form of it is known as Kanouj-Nagari. The character on the Allahabad column is Deva-Nagari in transitu, identical with that of the Gaya inscription, and also, like Mr. Wathen's inscriptions from Gujarat and those of Mahabalipur. The character of the Gaya inscription, is known to be of the eleventh century. A seal was found at Aseerghur in Kaundesh, engraved with a Deva Nagari, resembling the Gaya or Gour, approaching the Allahabad. That on the Bhitari Lat or pillar at Ghazipur, is not pure Sanskrit, nor easily intelligible, but its character is the same as Allahabad No. 2, or Kanouj Nagari, with numerous mis-spellings. At the ancient village of Maguta, district of Bhushana, on a stone slab, is an inscription in Sanskrit verse, the language and poetry superior to anything seen by the Bengal Asiatic Society's Pandit, Kamalakanta. The character used in the inscriptions, is called the Kulda, and is midway between the Deva Nagari and the Gauri. Some of the vowel inflections wanting. The inscriptions at the Budda Gaya vaulted cavern, or Nagarjuni, are in old Pali, of date, B. C. 290 to B. C. 247, and the character used in the inscriptions, old Lat. Those at Mathiah near Bettiah, at Bahra, and at Rediah, are in Pali, of date, 315. B. C. ; and the character used in the inscriptions is old Pali.

The characters used in the Inscriptions found on ancient sculptures in Southern Asia and India, may be briefly named as under :—

- Modern Deva-Nagari alphabet.
- Old Pali alphabet of the Burmese, compared with A. D., 200.

N. W. India.—The languages spoken in the western border of India, between it and Afghanistan, and of India adjoining Afghanistan; are dialects of Hindi, but sufficiently distinct to be called Sindi, Panjabi and Kashmiri. The late Lieut. Leech indeed has given vocabularies of seven languages spoken on the west of the Indus. The western border tribes are still mostly under patriarchal governments. In the south are the various Baluch tribes in the territories to which they give their name and whose language is said by Captain Raverty to be a mixture of Persian, Sindi, Panjabi, Hindi and Sanskrit. The Brahui tribes in Saharawan and Jhalawan, whose great chief is the khan of Khilat, ethnologists consider to be of the same Scythic stock as the Dravidian races in

the south, and infer from this that the passage of Dravidian tribes from Turan was along the valley of the Indus.

The Persian language of Persia, is met with all over Afghanistan, the great families speak it, and most of the correspondence is carried on in that tongue; the people are acquainted with it, but they prefer speaking the Pushtu, the language of their nation, which is a mixture of ancient Persian, Arabic and Hindustani. They have a few works in this language, but they read Persian authors by preference, and have, through them, formed imperfect ideas of geography, astronomy, medicine and history, but these works, full of fictions and deficiencies, have not materially assisted in developing their faculties. According to Captain Raverty, the people who dwell about Kabul and Kandahar, Shorawak and Pishin, are designated B'r-Pushtun or Upper Affghans; and those occupying the district of Roh, which is near Indus, are called L'r-Pukhtun or Lower Affghans. Persian is the official language of Afghanistan, but the Pushtu is alike the common tongue of the uneducated people, of the families of the Sadozi kings, and of the dwellings of the amir. There are, however, two divisions of the Affghans, termed Pushtun and Pukhtun, who speak Pushtu and Pukhtu respectively. The Pushtu being the western dialect with affinity to Persian, and the Pukhtu the eastern with many Sanskrit and Hindi words. The Pushtu is spoken, with slight variation in orthography and pronunciation, from the valley of Pishin south of Kandahar to Kafiristan on the north, and from the banks of Helmund on the west to the Attock, Sindhu or Indus river, on the east; throughout the Sama or plain of the Yuzufzye, the mountainous districts of Bajawar, Baujhkora, Suwatt and Buner to Astor on the borders of Little Tibet, a tract of country equal in extent to the entire Spanish peninsula: also, throughout the British districts of the Derajat, Bannu Tak, Kohat, Peshawar and the Saina or plain of the Yuzufzye, with the exception of Dera Ghazi Khan, nine-tenths of the people speak the Affghan language. Since the invasion of Mahmud of Ghazni, in the eleventh century, there has been a constant influx into India of Affghans, as conquerors and settlers, and this has been so great from particular districts that some tribes have altogether disappeared from Afghanistan. In some localities in India, the Affghan settlers are said to have preserved the Pushtu almost in its purity up to the present day, having from the outset married amongst themselves. In some parts of Bundelcund and in the territory of the nawab of Rampur, whole towns

and villages may be found in which the Affghan language is still almost exclusively spoken and is the medium of general communication. Captain Raverty considers that although, on numerous points, the Pushtu bears a great similarity to the Semitic and Iranian languages, it is totally different in construction, and in idiom also, from any of the Indu-Sanskrit dialects.

The Arabic language of Arabia, is known to the learned mahomedans of Afghanistan and India; Sanskrit to the learned brahmins; but in India, neither of these tongues are spoken. The few Affghan zemindars settled in the north of the province of Sindh, still use the Pushtu of their forefathers; but the dialect is not sufficiently diffused among the people to be included in the languages of Sindh. The same is the case with pure Panjabi, it is confined to the small number of Sikhs who are settled in the different cities and towns. The generally known tongues of Sindh are, the Beluchi, the Jataki, the Persian, the Sindhi and Brahuiki.

The Beluchi is a rude mountain dialect, spoken throughout the country called Beluchistan, and by those hill tribes who have migrated to the plains of Sindh. It belongs to the Indo-Persian class of languages, and though uncultivated, is said to be very ancient. It is remarkable for its similarity to modern Persian, one-half of the words appear mere corruptions, or possibly similar forms of the polished tongue. Like its neighbouring dialects, Brahuiki and Pushtu, the vocabulary contains a few Sanskrit and Arabic roots, together with a considerable proportion of other words. The latter, however, appear not to be the remains of an aboriginal tongue, otherwise they would be those expressing primary ideas: they are probably a new element, introduced by isolated position and the want of a standard of language. As must happen among a people divided into clans, and separated from each other, the dialect abounds in diversities of words and idiom, and being naturally poor, it borrows many vocables from the neighbouring countries. Its literature is confined to a few tales, legends, war songs, and the productions of the bhat or Beluchi bards. Few Europeans have hitherto been tempted to learn Beluchi, easy as it would be to any one acquainted with Persian and Sindhi, and this is the more to be regretted as a critical knowledge of it might be valuable to students of the old and obscure Iranian languages, such as the Zend, Pehlvi, Dari, the dialects of the Dasatir, and others known only by name. It has been said of the Parsee sacred volumes, that in them "there is scarcely a single radical of any importance,

which may not be traced to a corresponding term in some living dialect of Persiau." The Jataki, also called Siraiki, from Siro, or Upper Sindh, where it is commonly spoken by the people, and Beluchki, on account of its being used by several of the Beluch clans settled in the low country, is a corrupted form of the Multani, itself a corruption of the Panjabi tongue. It is extensively used throughout the province, and is spoken by probably one-fourth of the inhabitants. As usual it abounds in varieties of dialects and contains little or no original literature, except a few poetical pieces, and short tracts on religious subjects. The Langha or Sindhi bards seem to prefer it to their own language, and many well-educated natives, especially Beluchi, have studied it critically, and composed works in it. The celebrated Arabic hymn, generally known by the name of Dua Suryani, the Syriac or Syrian prayer, from which language it was borrowed by Ali, or, as is more generally believed, by Ibn Abbas, has been translated into Jataki, and is learned by heart as a talisman against accidents and misfortunes. The Jataki dialect is usually written in the Nastalik, and sometimes in the Nashki character. In the former, the system of denoting the cerebral and other letters which do not belong to the Arabic alphabet, is the same as in Urdu. The Persian is, in Sindh, the language of literature, ceremony, office and epistolary correspondence. The origin of the Sindhi dialect appears to be lost in the obscurity of antiquity, but there are ample reasons for believing it is as old as any of the vulgar tongues of modern India. It belongs to the Indian class of languages, and is directly derived from the Sanscrit, yet is a perfectly distinct dialect, and not, as has been asserted, a mere corruption of Hindustani. It is spoken with many varieties from the northern boundary of Kattyawar as far as Bahawalpur, and extends from the Brahui mountains to the desert which separates Sindh from the old western-frontier of British India; and these limits well agree with the mahammadan accounts of the extent of empire belonging to the Rahis or hindoo rulers of Sindh. The classical or literary language is that of Lar, or Southern Sindh; the other principal dialects are,

1st. The Siraiki, or language of Siro, Upper Sindh; admitting a mixture of Jataki and Beluchi words.

2nd. The Kaehi, spoken in Cutch, and made to approach the Guzerathi.

3rd. The Thareli or Jesalmiri, the language of the people about Omerkot, the Tharr and Jesulmer; also used by the

Shikari, Dedh, and the other outcaste tribes of Sindh. It borrows largely from the Marwari, and has its own written character and religious compositions.

4th. The Takkarana-ji-boli, or dialect of the hill people to the west of Sindh, corrupted by a mixture of Brahui and Belochi terms, as well as possessing many names of things and idioms unintelligible to the people of the plains.

The Sindhi is superior to most of the dialects of Western India in various minor points of refinement and cultivation, as, for instance, in the authorized change of terminations in poetical words, the re-duplication of final or penultimate letters to assist the rhyme, and many similar signs of elaboration.

The Brahui language, according to Dr. Caldwell is mainly Punjabi with a Dravidian element. According to Mr. Campbell is mainly Arian (Indo-Persic) with a Turanian element. The typical Brahui are certain tribes in Saharawan and Jhalawan. The higher classes of Brahui are sunni mahomedans, are stout, squat, have short thick bones, with round faces and flat lineaments, with brown or even red hair and beards. They have, both in feature and speech, indications of a Turanian element. They are hardy, often migratory. Their political chief is the khan of Khilat.

The Rind and Mughsee are settled in Kutch Gandava, to which fertile plain they have emigrated at different periods from the province of Mekran, and have become incorporated with the Jut, or cultivators of the soil, as the subjects of the khan of Khilat; a few of these likewise reside in the hills to the north-east of Kutch Gandava and skirts of the desert north of Khilat. The sub-division of the Brahui tribes amount to about ten, and those of the Rind and Mughsee each amount to double that number.

The Brahui are divided into an indefinite number of tribes and khel, and are an unsettled and wandering race, always residing in one part of the country, during summer, and emigrating to another for the winter season: they likewise change their immediate place of resort many times every year in search of pasturage for their flocks—a practice rare among the Beloochi. They differ so much from the Beloochi in external appearance that it is almost impossible to mistake one for the other. The Brahui, instead of the tall figure, long visage, and raised features of their fellow-countrymen, have short, thick bones, with round faces and flat lineaments; and Lieutenant Pottinger had not seen any Asiatics to whom they bear any resemblance, for numbers of them have brown hair and beards. The Kamburane, the

chief tribe, are divided into three distinct gradations of rank called Ahmedzye, Khanee and Kumburane. The first supplies the khan; the Khauee are of the secondary rank of chiefs. The word Kumburane includes all the remainder of the tribe, but in common is applicable to the whole body. They receive wives from, but do not marry their daughters into other tribes. Writing of the original settlement of the Belooch and Brahui tribes in the country, it is said, that when Mahomed, the successor of Subaktagin the first sultan of the Ghaznavi dynasty, turned his arms towards India, he subjugated the whole of the level district, west of the Indus, to the very foot of the Brahui mountains. His son, Musaood, extended these conquests still more westerly into Mekran; he adhered, however, to his father's plan of not ascending the lofty ranges, and all subsequent invaders of Sind, seem to have been guided by their example. The Beluchi ascribe their origin to the earliest mahomedan invader of Persia, and are very desirous of being supposed to be of Arabian extraction. They spurn the idea that they are derived from one stock with the Afghans. The affinity of the Beluchikee to the Persian language affords of itself strong evidence in favor of this position, (viz. that they came from the westward) to back which, we still see that the majority of the Beluch nation still dwells on the western frontier; but neither their features, manners, nor language, bear the slightest similitude to those of the Arabs. In the beginning of the fifth century of the Hejira, the Suljuk Tartar appeared in Khorasau, and in the short space of ten years, wrested that kingdom from the house of Ghaznavi. It was ceded to Alp Arslan, and constituted a part of the Seljukide dominions, until the extinction of that race, about 150 years posterior to Togrul Beg having assumed the title of emperor. In the lapse of time, the Beluchi are alluded to both by that general term and particular tribes, and as dwelling in the very districts which they people at this hour. We learn from Greek and Asiatic historians that, as invading armies became dismembered, either by the death of their generals or a defeat, the barbarians who composed them wandered over the country until they found an advantageous place to fix themselves, or entered the services of some more fortunate chieftain than their own as mercenaries. Such in his opinion, were the Beluchi, and various circumstances go to prove that they are of Turkoman lineage. Their institutions, habits, religion, and in short, everything but their language, are the same; this last anomaly is easily explained. The Seljuk rulers had long settled in Persia,

where they naturally adopted the colloquial dialect, and brought it with them on their expulsion by the Kharazmian kings. The unremitting enmity of these kings forced vast hordes of them to fly from Persia after they had been colonised there for many years. The fugitives are said to have gone to Seistan and the neighbouring countries, which are those of Sind, Seistan, and the Brahui mountains.

The languages of India from the Himalaya to Ceylon, belong to two essentially different stocks, viz: the Tamulian, such as Karnatic, Telugu, Malayalam, Tulu, and Tamil, and languages of undoubted Sanskrit origin or the Arian or Sanskrit stock. The affinity between the Telugu and Karnatic is so great that in order to make the correspondence complete it frequently suffices to change an initial or an inflection, and Ellis shows both these languages to be cognate with Tamil. Again the Tamil-speaking inhabitants of the Coromandel coast can make themselves intelligible when they get into the districts on the western coast of the peninsula, where Malayalam is vernacular. So the language of Tuluva on the coast of Canara, has a strong resemblance to that of Malayala, though the Tuluva speaking race are unable to understand their Malayalam neighbours. The languages or dialects of the aboriginal mountain races occupying the Neilgherries, are Tamulian, and the Kodagu of the mountains of Coorg is a dialect of Tulu. On the crest of the high range, extending from Cochin to Cape Comorin, and reaching to 8,000 or 9,000 feet above the sea, Francis Buchanan found that the rude tribes spoke a dialect differing only in accent from Tamil. The language of the mountaineers of Rajmahal dividing Bengal from Bahar, abounds in terms common to the Tamil and Telugu, and Mr. Hodgson, after comparing the vocabularies of seven languages now spoken by rude tribes in Central India, pronounced all of them to belong to the Tamulian stock, while the Brahui, on the mountains of Sind, are said to have a language very like that of the Toda. Thus a closely allied family of languages extend over all Southern India, cropping out on the hill tops in Central India, on the mountains in the west, and perhaps also traceable on the southern slopes of the Himalaya. According to Bask, Singhalese belongs to the same family, and Lassen states that the languages of the Laccadives and Maldives come within the same category. In the North, however, we meet with languages of a different family, springing from those Arian conquerors who during the thirteen centuries preceding the Christian era, migrated from Central Asia,

LANGUAGES.

entered India from the north and north-west, and diffused themselves, their language, their religion and their brahminical distinctions, over the plains of India, at a period before the authentic history of this country begins. According to this view therefore, the principal languages of India, may be arranged as under :

- | | |
|---|--------------|
| Arian, Sanskritoid, or Northern Family. | |
| 1 Hindi. | 2 Kashmiri. |
| a. Hindustani or Urdu. | 3 Bengali. |
| b. Brij Basha. | a Tirhuti. |
| c. Rangri Basha. | 4 Gujarati. |
| d. Punjabi. | a Kachhi. |
| e. Multani. | 5 Marathi. |
| f. Jataki. | 6 Konkani. |
| g. Sindhi. | 7 Urya. |
| h. Marwadi. | |
| Turanian, Tamiloid or Southern Family. | |
| 1 Telugu or Tiling. | 4 Malayalam. |
| 2 Karnatica. | 5 Tulu. |
| 3 Tamil. | 6 Gondwani. |

Our present knowledge of the languages belonging to the Arian class does not enable us to determine whether they are developments of some tongue, of which the Sanskrit is the cultivated representative, and of which Magadhi and Pali at the era of Asoka and the introduction of buddhism into Ceylon, was a spoken form, or whether Sanskrit has been superinduced upon some aboriginal tongue, as has been demonstrably, though in much smaller quantity, upon the Tamiloid languages of the south, and as French has been introduced into Anglo-Saxon. However, certain it is, that in every Arian tongue, a considerable and apparently primitive element is found which is not traceable to Sanskrit and which in Gujarati is reckoned at one-third of the whole language.

The languages of the Southern and Central tribes, Dr. Caldwell terms Dravidian, and he estimates as under, the numbers of the populations speaking them :

Tamil...10,000,000	Tulu.....150,000
Telugu...14,000,000	Toda..... 300
Canarese...5,000,000	Kotah..... 1,000
Malayalam2,500,000	Budaga.....
Gond or Goand	
also Khund, Kond	
or Ku.....500,000	

In the preface to the Cyclopædia, allusion was made to the numerous languages spoken in Southern and Eastern Asia. Along the low level tract which runs bordering the ocean from the Red Sea to the southernmost point of the Malay Peninsula, we find vernacular, the Arabic, Turkish, Kurdish, Syriac, Jataki, Sindi, Guzerati, Marathi, Hindustani, Konkani, Canarese, Tulu, Malayalam, Tamil, Telugu,

LANGUAGES.

Urya, Bangali, Rakhui, Burmese, Siamese, Chinese, Japanese and Malay, a number of languages truly perplexing to traders on the sea-board of Southern Asia. Mr. Fiddington in the Preface to his Index, quotes a Master Mariner, Master Richard Kynge as saying, "and in this founde wee oftymes much trouble and vexation, with moreover, losses, both of precious time and Incre. *Fyrste*, that wee could never aske in Indian Tongues for such herbes, or frutes, wodes, barks or gummes, as wee knew full well, by experience in sundrye other partes, to bee wholesomme (many of our crewe lying sicke at the tyme), or savorye, or usefulle to trafficke withall. *Nexte*, that when anye were shewne us, we couldo in noe-wise tell, from ^e names given to them by ^y *Gentoos*, whether or noe ^e like were already knowne in *European* countryes; and yett these parts doe myghtylye abound with herbes and woodes of sovraigne virtew."

Sir Erskine Perry and the Reverend Dr. Caldwell remark that the brahmins make a simple classification of the languages of India depending mainly on geographical considerations, by which five northern languages are grouped in one class and five southern ones in another, under the denominations of panch Gaur and panch Dravid, the term Gaur or Bengal applying to all northern India, while Dravida, the name of that part of the Coromandel Coast lying between the twelfth and thirteenth parallels of north latitude, is applied to the whole Peninsula. Their classification was as under :

The five Gaur.	The five Dravid.
1. Saraswati (extinct)	1. Tamil
2. Kanoji	2. Marathi
3. Gaur or Bengali	3. Karnatika
4. Mathala or Tirhuti	4. Telinga or Telugu
5. Orissa or Urya.	5. Gujarati.

Dr. Caldwell, in his Comparative Grammar, remarks that by the term Gaura or Gauda, are meant the Bhasia or Praerit or vernacular tongues spoken in northern India, some old ones of which have since ceased to be spoken, or have merged into others. At present the languages which may be considered Gaura, are Bengali, Hindi with its neighbour the Hindustani, Punjabi, Gujarathi, Marathi, the languages of Kashmir and Nepal, altogether nine. The pandits named the five Dravira, the Telinga, Kanatika, Mahratha, Gurjara, and Dravida or Tamil proper, but at present Dr. Caldwell displaces the Gurjara or Gujarathi and the Marathi, and considers the Dravida proper or Tamil, the Telinga, Talunga, or Telugu, and the Karnataka, Kannada or Canarese, to be the three principal lan-

languages of the Dravidian family, and he adds thereto the Malayalam, the Tulu, and the uncultivated Toda, Kota, Gond and Ku, making altogether nine Dravidian or Tamilian tongues. Of the languages now named, some of the Hindi tongues, such as Kashmiri, Uria and Gujarati are the languages spoken in the smallest limit. But the Jataki, Sindhi, Panjabi, Harauti, Marwari, and Konkani, are other Hindi dialects. Mr. Elphinstone, however, makes another classification. He assigns Gujarati to the northern and Urya to the southern languages and the Haiga brahmins in Canara, gave a third list of Dravida tongues, in which they exclude the country on the Malabar coast where they themselves are domiciled. These brahminical divisions, however, are not founded on any scientific principles.

Hindi is a term used over much of northern India to denote the vernacular tongue of the district, but it is not easy to attribute to it a very precise signification. Speaking generally, the whole of Upper India, including the Punjab, from the Himalaya to the Vindhyan range, but exclusive of Bengal, may be said to be possessed by one language, the Hindi. According to Colebrooke and the Serampore translators of the Bible, Hindi owes nine-tenths of its vocables to Sanscrit roots; when it is spoken by mahomedans who add to it Arabic and Persian roots, it becomes converted into Urdu or Hindustani. When Hindi is spoken by hindus who draw on Sanscrit for enrichment or embellishment, it appropriately retains the name of Hindi. Modified in these various ways it is found not only on the plains of Hindustan, but also on the southern slope of the Himalaya, for Mr. Trail informs us that the language of Kumaon and Ghurwal is pure Hindi. Indeed, generally, along the Sub Himalayan range as far as the Gogra river, the impure Hindi dialect introduced by the Gorkha from the plains appears to be extirpating the vernacular Thibetan tongues of the aboriginal mountaineers. Mr. Masson says by means of Hindi, made himself understood throughout the whole of the Kohistan, and it will thus be seen that the term is used to bring under one common designation, the various dialects of a language essentially one, but which has received no great cultivation in any of its forms. According to the brahman pundits of Benares, there are hundreds of dialects equally entitled to the name. The Brij Basha (or Bhaka, as it is pronounced on the Ganges), and the Panjabi are the two most cultivated varieties of it, but the Panjabi passes into Multani, which a good philologist has shown to be a corrupted form of Panjabi; whilst Jataki, again, further to the south, is a

corrupted form of Multani; Sindhi, according to Lieut. Burton, is a perfectly distinct dialect, though directly derived from Sanscrit. When the Mahrattas extended their conquests into Hindustan, they found Hindi everywhere prevalent from the limits of the desert to the frontiers of Bundelcund; and finding it different from their own tongue, they called it contemptuously, Rangri Basha, quasi barbarous jargon. Sir John Malcolm extends the Rangri Bhaka as far west as the Indus and east as far as the frontier of Bundelcund, where, as in all the country to the Indus, from the western frontier of Bengal, dialects of Hindi prevail. The Marwari and other dialects of Rajputana, are evident varieties of Hindi introduced by the Rajput races.

Bengali is also derived from the Sanscrit, there being but few words in it, not derived from the Sanscrit; and Tirhuti on its north-eastern border has a great affinity with Bengali. But for this, the Bengali, from being the language of thirty millions of souls, and restricted solely to the geographical limits of Bengal, and from the cultivation which has been given to it, it well deserves to be ranked as a separate language. Bengali is a highly cultivated language of Sanscrit origin or has been largely stocked with pure Sanscrit words as it is spoken throughout Bengal.

At the present day, the Hindi tongue is written in Deva Nagari character, the Burmese in the Pali, the Tamil, Telugu, Canarese, Mahrati, Malealum, Bengali, Guzerati, Urya and others have each their own separate character.

Guzerati language is spoken throughout that peninsula, and has been adopted by the Parsi religionists.

Mahrati is spoken from the Kolwan hills near the Portuguese settlement of Daman, above the ghauts in a north-easterly direction along the Satpura range, parallel to the Nerbudda, intermingling with the Gujerati about Nandovar, in the jungly valley of the Tapti. It is spoken throughout Berar, in the open parts of the country of Nagpur and the whole of its eastern border abuts on the countries and languages of the Gond, Tiling and Canarese. In the S. E. the Mahrati meets the Telugu and Canarese at Murghpetta, Ninni, Dongapura, Beder and Sungum, and treading to the S. W. through Bejapore, Shaubashwar to the coast at Sedasheghur, skirting the northern boundary of the Canarese tongue. From Daman in the northern Konkani, Marathi runs down the coast both below and above the ghauts to the neighbourhood of Goa, when it meets the Konkani, a mixed tongue of Mahrati, Tulu and Canarese that prevails as far south as Mangalore, and the

southern limits of the Konkani is a village four miles north of Upi or Udapi near Cundapore, where Tulu begins.

Tamil is spoken in the Peninsula of India by about ten millions of people, generally speaking, dark-coloured and short statured, energetic, fiery, quarrelsome, but not revengeful. Tamil was the language of three ancient dynasties, of which we have record, the Chola, the Pandya and the Chera. Tamil is spoken throughout the vast plain of the Carnatic, or country below the ghauts, termed, by the mahomedans and the British, the Carnatic Paecen Ghaut. The Tamil speaking races occupy from Cape Comorin to Pulicat, 30 miles north of Madras, where it meets with the Telugu, and from the Bay of Bengal inland to the Eastern Ghauts, skirting the Telugu up to Kirkambari and Tripati, and skirting the Canarese of Mysore in all its eastern frontier, and it is spoken over the Bara Mahal, Salem and Conibuncum, leaving the Canarese at Kaligul and meeting with the Malayalam at the Gap of Palghat. Tamil is spoken also on the western side of the ghauts in the southern part of the Travancore country, and from Trevandrum to Cape Comorin. It is also spoken in the northern and western parts of the island of Ceylon, where Tamulians formed settlements prior to the christian era, and from whence they have gradually thrust out the Siugha-

Telugu is spoken in the north-eastern parts of the Peninsula of India, by about 14 millions of people, a taller and fairer race than the Tamil, many of them indeed being equal in stature to the Arian hindoos of Northern India. They are more brahminical than the Tamulian races, are bold and self-reliant and are as energetic as the latter though less restless. Telugu at present extends along the tract on the Coromandel coast, known as the northern circars, commencing at Pulicat, 30 miles north of Madras up to Ganjam, where it meets the Urya tongue. At Nellore, is the purest of the Telugu language, and at Vizagapatam, Telugu only is spoken. It extends inland to Chanda on the west, and its western boundary runs S. westerly through the Hyderabad territory to Beder, Dongapura, and Murghpetta and southwards to Kurnool and Ghooty, east of Bellary south-easterly to Kirkambari in N. Arcot, therefore, part of Ganjam, all Vizagapatam, all Nellore, Kurnool, Cuddapah and Ghooty, the eastern parts of Hyderabad and Bellary are Tiling. The boundary line may thus be drawn from immediately north of Madras, where it meets the Tamil, through the pass of Kirkambari near Nageri, through Cuddapah to Bellary,

where it meets the Canarese, with which it runs from Sangam past Beder to Dongapura and Murghpetta, its northern boundary skirting Gondwana by Waraungal to Chicacole, where it meets the Urya.

Urya is the language of Orissa and runs for 45 miles S. of Ganjam where Telugu ceases. Urya is a tolerably pure dialect of Bengali, At Chicacole it is spoken, but even there Telugu is the prevailing language. In Vizianagram, Telugu is spoken only in the open country, and Urya runs further down to the south. On the coast line, Urya continues in the direction of Bengal as far as the Hijil and Tumlook divisions on the Hooghly. On the western side of the Midnapore district it intermingles with Bengali, near the Subanreeka river. To the westward the Gond and Urya languages pass into each other, and at Sonepur half the people speak the one, and half the other language. A line from Sonepur to Midnapur would mark the northern and western boundary.

Canarese is essentially a plateau language. The ancient Hindu term, Carnatica, comprehended all the high table land in the south of India above the eastern and western ghats, and seems never to have held sway beneath the ghats though, in the present day, by a strange fatality, it is now only the countries below the ghats, the Carnatic on the east and Canara on the west, to which the name of the ancient Karnatica kingdom has come to be applied, which is now never given to that above the ghats, the Bala Ghaut. The common Canarese or Karnatic character and languages are used by the natives of the countries from Coimbatore north through the whole of the Mysore, Belgaum, Dharwar, much of south Bellary, through Bijapore to Murkunda or Murghpetta about 37 miles west from Beder, and within the parallels of the eastern and western ghats. This northern boundary is, therefore, more extended than that given to it by Mr. Walter Elliot, who draws its boundary-line west and north, by a line from Sadashegur on the Malabar Coast to the westward of Dharwar, Belgaum, and Hukairi, through Kagal and Kurandwar passing between Kelingaon and Pandegaon, through Bralmapuri on the Bhina, and Sholapur and thence east to the neighbourhood of Beder. For about 150 miles, from Murg, Murghpetta or Murkunda, above-mentioned, eastwards through Dongapura, and Beder to Sangam near Satyassi or Sadashipet, is a line of what the people call si-bhasha basti, three-tongue villages, the Mahrati, the Canarese and the Telugu, all there meeting. From Sadashegur, on the western coast following the southern boundary of Sunda to the top of the Western Ghats,

it is the language of the whole of Mysore as far as Coimbatore, and the line of the Eastern Ghats including much of the Chola and Belala kingdoms, and even Dwara Samudra, the capital of the latter, which was never captured by the Chalukia, *i. e.*, the Carnatic dynasty of Kalyani.

Malayalam and Tulu are considered by Dr. Caldwell to be in gradual course of extinction. Malayalam extends from Cape Comorin to the Chandagiri river; or more strictly, perhaps, to Nileshtar (Nilesvara), where a Nair rajah, conquered by Hyder, formerly ruled. The people speaking the Malayalam are said naturally to shrink from contact with foreigners, even from people of their own race: retreating from the great roads, cities and bazars as eagerly as the Tamil flocks to them; and the Malayala speaking race are to be found isolated with their families in their high walled parambu, even in parts where the lines and centres of communication are entirely occupied by the more enterprising Tamil people whose language too seems gradually pushing the Malayala aside.

Gondi.—The large space left between Maharashtra and Orissa is in a great part a forest tract inhabited by the Gond. Their language, though quite distinct from the rest, is unwritten, and being reckoned a jargon of savage mountaineers, is not counted among the five languages of the Deccan.

Mr. Hodgson, writing in the *Journal of the Bengal Asiatic Society*, observes that Mr. Robinson, in a recent paper upon sundry of the border tribes of Assam, had asserted the affinity of these tribes (the Bodo and Garo amongst others) with the people of Thibet. But Mr. Hodgson thinks that Mr. Robinson neglected the physical and psychical evidence which are each of them as important as the glottological, towards the just decision of a question of ethnic affinity. Much of the mechanism of the whole of the Turanian group of languages is common to every one language of that group, and the Tamulian and Tibetan languages are held to be integral parts of that group. He thinks that if the Bodo, for example, were of Tibetan origin, it is hardly credible that their ordinary vocabularies should not plainly reveal the fact, seeing that they have never been out of actual contact with races of the same descent as that ascribed to them. The Sub-Himalayan dialects differ from the trans-Himalayan standard: but identity is here shown in the roots as well as in the mode of agglutinating the servile particles; not to mention that the snows form such a barrier in this case as exists not in regard to the Bodo intercourse with tribes

of Tibetan origin. The same general result follows from a careful examination of vocabularies. Apparently the Tibetan, like the Hindi words, are adopted ones.

Of the languages belonging to the Turanian family, the most prominent among them is the Turkish or Osmanli of Constantinople. The number of the Turkish inhabitants of European Turkey is indeed small. It is generally stated at 2,000,000, but Shafarik estimates the number of genuine Turks at not more than 700,000, who rule over fifteen millions of people. The different Turkish dialects, of which the Osmanli is one, occupy one of the largest linguistic areas, extending from the Lena and the Polar Sea, down to the Adriatic.

The whole of what is called the Turanian family of speech consists of Terminational or Agglutinative languages, and this Turanian family comprises in reality all languages spoken in Asia and Europe, and not included under the Aryan and Semitic families, with the exception of Chinese and its cognate dialects. The name Turanian is used in opposition to Aryan, and is applied to the nomadic races of Asia as opposed to the agricultural or Aryan races. The Turanian family or class consists of two great divisions, the Northern and the Southern. The Northern is sometimes called the Ural-Altaic or Ugro-Tataric, and it is divided into five sections, the Tungusic, Mongolic, Turkic, Turkish is a Turanian dialect. Its grammar is purely Tataric or Turanian. The Turks, however, possessed a small literature and narrow civilization before they were converted to mahammedanism, and as the language of Mahammed was Arabic, a branch of the Semitic family, closely allied to Hebrew and Syriac, this, together with the Koran, and their law and religion, the Turks learned from the Arabs, their conquerors, also many of the arts and sciences connected with a more advanced stage of civilization. Arabic became to the Turks what Latin was to the Germans during the middle ages; and there is hardly a word in the higher intellectual terminology of Arabic, that might not be used, more or less naturally, by a writer in Turkish. But the Arabs, again, at the very outset of their career of conquest and conversion, had been, in science, art, literature, and polite manners, the pupils of the Persians, whom they had conquered; they stood to them in the same relation as the Romans stood to the Greeks. Now, the Persians speak a language which is neither Semitic, like Arabic, nor Turanian, like Turkish; it is a branch of the Indo-European or Aryan family of speech. A large infusion of Persian words thus found its way into Arabic, and

through Arabic into Turkish, and the result is that at the present moment the Turkish language, as spoken by the higher ranks at Constantinople, is so entirely overgrown with Persian and Arabic words, that an uneducated Turk from the country understands but little of the so-called Osmauli, though its grammar is exactly the same as the grammar which he uses in his Tataric utterance.

A class of tongues akin to the monosyllabic is that of Caucasus. The numerous languages of this class have long been reduced to four groups; the Georgian, the Lesgian, the Circassian, the Mizdhegi. That these four are fundamentally one, may be seen from Klaproth's tables, whose classification seems only provisional. These tongues, dealt with en masse, have their affinities with the monosyllabic tongues. As with the Malay language, the monosyllabic character is modified by the evolution of agglutinational and inflectional processes, but not much by euphonic processes. An original continuity of language, displaced at present by the Turkish and Mongol, is thus assumed for parts between Caucasus and Thibet. The same learned author observes that a monosyllabic basis of separate words is provisionally assumed as the fundamental element out of which inflections are evolved by agglutination and amalgamation. This makes it possible that poly-synthetic tongues, like the American, may be represented in their earlier stage by monosyllabic tongues like the Chinese. Glossarial investigations confirm both these views. There is a radical unity for the different Siberian groups of the Asia Polyglotta, *e. g.* Qukageer, Yencsean, Samoeide, &c., and a fortiori for the Turk, Mongol, and Manchoo groups. Each and all of these have affinities with the monosyllabic tongues, and through these with the Malay and Caucasian.

Polynesia presents the first appearance of isolation, in the languages of New Guinea, Australia, &c., *i. e.*, the Negrito tongues. The philological evidence of their being akin, either to the Malay or Tamul languages, is at present indefinite and inconclusive.

Southern India, and the Indian hill-ranges, present the first appearance of isolation in the languages of continental Asia. Although unplaced they can scarcely be called isolate.

In the Report of the British Association for 1845, Dr. Latham remarks that the distinction between the languages of Thibet and China, as exhibited by Klaproth, must be only provisional: over and above the grammatical analogy there is an absolute glossarial affinity. Of the languages of the trans-gangetic peninsula the same may be asserted.

Where languages are monosyllabic slight changes make palpable differences. The vocabularies of Brown, for more than a score of the Burmese and Siamese tongues, have provided us with data for ethnographical comparisons. By dealing with these collectively, we find in one dialect words which had been lost in others. The Chinese, Thibetan, Bhootan, Burmese, Siamese, and all the so-called monosyllabic languages hitherto known, are allied to each other. The general affinities of the Indo-Chinese tongues are remarkable. With Marsden's and Sir Stamford Raffles' tables on the one side, and those of Brown and Klaproth on the other, it can be shown that a vast number of Malay roots are monosyllabic. The Malay languages are monosyllabic ones, with the superaddition of inflections evolved out of composition, and euphonic process highly developed. Dr. Latham is also of opinion that the nations on the borders of British India, in the north-west, the north-east and east, form an ethnological group which contains the Tibetans, the Nepal tribes, several populations of the Sub-Himalayan range, the Burmese, the Siamese, the Natives of Pegu, the Cambodjians, the Cochinchinese and the Chinese, in populations which cover perhaps one-fifth of Asia. Their countries are mostly inland, and mountainous, but contain the watersheds of mighty rivers, the Indus, the Brahmaputra, the Irawadi and the Yellow river. The complexion and features of these people is that to which the term Mongolian has been applied. Though wild paganism and mahomedanism exist, the majority are of the buddhist religion, but all speak a language the least developed of all the forms of human speech, being generally monosyllabic and with little power of grammatical inflections. Colonies may either preserve the ancient form, or become the occasion of a great change. Thus the ancient language of Tibet, which is in the Chinese traditions the land of their earliest recollections, may have been preserved by the colonists who formed the Chinese empire, while Tibet went further in its development. These people are arranged under four great political powers, the British, the Burmese, the Siamese and Chinese. Ethnologically they are capable of being classed in three considerable sub-groups, as under:

The first of them is the Bhot or Bot, which term is used in compound words as Bult in Baltistan, But in Butan, Bet in Tibet, and in the tribes known as Bluntia and Bootia, and comprises the Little Tibetans, the natives of Ladak, the Tibetans of Tibet Proper and the closely allied tribes of Butan. The Bhot area is bounded on the south by India and Cashmir, on the north by Chinese Tartary, and on the

west by Little Bokhara and Kafiristan. Amongst the Bhot populations may be mentioned the mahomedan Bhot of Bultistan or Little Tibet, of Rongdo, Skardo, Parkuta, and Khartakshi, of Shigar, Chorbud, &c., the buddhist Bot of Ladak, Hungrung and Kunawar, the Bhot of the Chinese Empire; the Tibetans of Budok, Garo, Goga, &c. of Lhasa and Tishu Lumbu, the Sifan, the Lhopa of Butan, the Tak, the Bhot of Garwal, Kumaon and Nepal, the Chepang and probably the Rhondur, the Chak and Drok, the Hor and the Kolo.

Further East are the Kocch, the Dhimial and Bodo, arranged into the Western Bodo of Sikkim and the Butan frontier, and the Eastern Bodo or Borro of Assam and Cachar, —the Garo, Kasia, the Mikir.

On the South are the hill tribes of Assam, the Aka, Dofa, Abor, Miri and Bor Abor tribes, the Mishmi, Muttuck, Singhpo and Jili, with the Naga in Assam. The colour of the Bhot and buddhist populations are of various shades of white, yellow and brown; while that of the pagan races is various hues of black.

Amongst the people speaking the Yuma dialects, according to Mr. Logan, are the Khy-oung-tha, of Arakan, a rude tribe, speaking the Rakhoing dialect of Burman.

The Kumi, Khumi or Khumwi, are of the same race, but their languages has some peculiarities. It has been partially examined by Captain Latter, who says it is evidently cognate to the Rakhoing form of the Burman. The majority of its words however are non-Burman. The Kumi are fair, with small features.

The Ky-au or Kyo, and the Khy-eng, as Mr. Logan remarks, appear to be similar to the Kumi. They have numerous common words, and each has words common to Khumi, to Khumi and Burman, or to Burman only. All the ancient and pre-Burman dialects of Arakan, from the Khy-eng to the Kuki, retain one of the characteristics of the Mon Kambojan alliance and of Tibetan, the use of definite prefixes ha, a, ma, &c. While the adjacent highlanders have a Tartar-like physiognomy, the Kyau, in features, dress and appearance, can scarcely be distinguished from the lower class of the Bengali peasantry of Chittagong. They are dark with large features, while the Kumi are fair with small features.

Languages of Assam.—Mr. Robinson tells us (*in Ben. A. Soc. Journal, No. cci, March 1869*) that in the Assam valley and its mountain confines, are three classes of languages: one of Sanscrit origin and the others of two great classes, viz., those connected with the Tibetan and those deriving their origin from the Tai or Shyan stock. Of the Assamese proper, that is, the language of the valley, eighth-tenths of the language is identical with Bengali, and nearly four-fifths of the words in common use, are derivations from the Sanscrit. The country from time immemorial had been governed by rules of Shan origin, and the very small number of Tai words that can be traced to Tai origin is remarkable. The Tibetan and the Tai or Shyan languages, all approximate towards the Chinese colloquial system and more or less possess the characteristics of being originally monosyllabic and all intonated. The Tai or Shyan class are also destitute of inflections.

The borders, of the valley are remarkable for the numbers of its populations. Many of them are of that great Bhot family which we find extending from the west of Chinese Tartary eastwards. All the native populations here are more or less akin to the peoples of the Burmese empire, and seem to be remnants of Bhot tribes left behind in the pressure of the larger bodies to the south.

Dr. W. W. Hunter, thus names the languages in and near the Assam valley and south to the Archipelago.

In N. E. Bengal, are the Bodo; Dhimial; Kocch; Garo; Kachari.

In the Eastern Frontier of Bengal, are the Munipuri; Mithan Naga; Tablung Naga; Khari Naga; Augami Naga; Namsung Naga; Nowgong Naga; Tengsa Naga; Abor Miri; Sibsagor Miri; Deoria Chutia; Singhpo.

Arakan and Burmah.—Burman written and spoken; Khyeng and Shou; Kumi; Mru or Toung; Sak.

Siam and Tenasserim.—Talain or Mon; Sgau Karen; Pwo-Karen; Toung-thu; Shan; Annamitic; Siamese; Ahom; Khamti; Laos.

In Arakan and in the basin of the Irawadi, are several tribes of the same stock with the Burman, and their languages are in their present form so much akin to it that they may be almost considered as forming with Burman dialects of one tongue.

LANGUAGES.

The principal languages in the Eastern Archipelago are as under :

Languages	Spoken at	Written character used.	Religion and Priests.
1 Malay	Singapore	Arabic	Mahomedan.
2 Javanese	Java	Javanese	Indigenes of Lombok, a pure Malay race professing mahomedanism.
3 Sapa	Lombok	..	Mahomedan.
4 Macassar	S. Celebes, near Macassar	Native	do.
5 Bugis	Large part of Celebes	Native, distinct from Macassar	A large island S. of Celebes.
6 Bouton	Boutony	..	A smaller, do.
7 Salayer	Salayer	..	Pagans.
8 Tomore	E. Peninsula of Celebes in Batchian	..	The people speaking these five languages of Celebes are of pure Malay type, and all but the Tomore race, are equal in civilization to the true Malays
9 Tomohon	Plateau of Minabassa	..	These nine languages with many others, are spoken in the N. W. Peninsula of Celebes, by the people called Alfuro. These languages are falling into disuse and Malay is becoming the general medium of communication. Most of the people are being converted to christianity.
10 Langowen	S. E. Coast of do
11 Ratahan	West do do
12 Belang	East do do
13 Tanawanto	A suburb of Menado
14 Kema	Chief town
15 Rantek	On N. W. Coast between Menado & Licoupaug
16 Menado
17 Bolang hitam
18 Sanguir Islands and Siau	Two groups of islands between Celebes and the Philippines. The inhabitants resemble the people of Menado.
19 Salibabo islands, also called Talaut
20 Sulu Islands	E. of Celebes, Malays of the Moluccas type: mahomedans.
21 Cajell	Three villages on the eastern side of Bouru	..	These people are allied to the natives of Ceram: Cajell people are mahomedans.
22 Wayapo	Au Island S. E. of Bouru	..	Mahomedans.
23 Massaratty	The most northern island of the Moluccas	..	Inhabitants somewhat mixed with the indigenes of Gilolo.
24 Ambiau	Next island of the Moluccas	..	Inhabitants undistinguishable from those of Ternate.
25 Ternate	North of Batchian	..	Mahomedans: inhabitants like the preceding.
26 Tidore	A village on the S. peninsula of Gilolo	..	Moluccan Malays. Mahomedans.
27 Katoa Islands	Villages in N. Gilolo	..	Inhabitants called Alfuro. They are indigenes of Polynesian type, but brown skins and Papuan hair and features: Pagans.
28 Batchian	Villages on the N. Coast of Amboyna	..	Of mixed Malay and Polynesian type, they are mahomedans or christians.
29 Gani	Do. in N. W. do..	..	Inhabitants of the Molucca Malay type—mahomedans.
30	A suburb of Amboyna	..	Mahomedans from Ternate.
31 Gaiela	In W. Amboyna	..	Inhabitants of the brown Polynesian type and speaking the same language as those of Ceram, opposite.
32 Liang	An island east of Amboyna	..	Indigenes of Polynesian type, now christians.
33 Morella and Mamilla	Villages on the S. of Ceram	..	Mixed brown Papuan or Polynesian and Malay type: Mahomedans.
34 Batunerah	Villages on the S. coast of Ceram	..	Alfuro, of brown Papuan or Polynesian type—Pagans.
35 Lariki, Asilulu, Wakashio	Indigenes inland from Ahtlago.	..	Inhabitants of much of the N. Coast of Ceram, of mixed race, speak several dialects of this language: Mahomedans.
36 Sapurus	E. Ceram	..	Of mixed race: Mahomedans.
37 Awaiya	N. Coast of Ceram	..	Brown Papuan or Polynesian race. Pagans.
38 Camarian	Small islands E. of Ceram	..	Do. do. do.
39 Teluti and Hoya	Do. S. E. do	..	On the W. of the Aru Islands, true black Papuans; Pagans.
40 Ahtlago and Tobo	Do. S. E. of Matabello	..	W. of N. Guinea, True Papuans.
41 Ahtlago	N. of Ceram, semi civilized Papuans, with mixture of Moluccan Malays.
42 Gah	True Papuans; Pagans.
43 Wahai	Do. do.
44 Goram	Intermediate between the true and the brown Papuans - Pagans.
45 Matabello	Islands W. of Timor, of mixed race, with, apparently, much of the hindu type.
46 Teor	Islands between Flores and Timor, inhabitants of dark Papuan type.
47 Ke Islands	A roaming tribe of fishermen of Malayan type all over the Archipelago.
48 Aru do.
49 Mysol Coast
50 Mysol interior
51 Dorey
52 Teto
53 Vakueno in E. Timor
54 Beisel in W. Timor
55 Savu
56 Roti
57 Alor
58 Solor
59 Bajau or Sea Gypsies

Mr. Crawford in his Malay Gram. and Dic., Vol. I, p. vii, considers that a certain connexion of more or less extent exists between most of the languages which prevail from Madagascar to Easter Island in the Pacific, and from Formosa, on the coast of China to New Zealand,—thus over 200 degrees of longitude and seventy of latitude, or over a fifth part of the earth's surface. In this are the innumerable islands of the Indian Archipelago,

from Sumatra to New Guinea, the great group of the Philippines, the Islands of the North and South Pacific, and Madagascar. It is inhabited by many different and distinct races of men, as the Malayan, the brown Polynesian, the insular negro of several varieties, and the African of Madagascar. Of these, the state of civilization is so various that some are abject savages, while others have made a respectable progress in the useful arts, and have even attained some knowledge of letters. He is of opinion that the leading race in the Archipelago is one and the same, but the languages are many, with more or less intermixture of some principal ones throughout. In Borneo, he says, there are at least 40 languages; in Celebes and its islands at least 10; in Flores 6; in Sumbawa 3; in Sumatra and its islands not fewer than 10; and even in civilized Java with its islands, 3. It is the same in the Philippine islands, and in Lacon alone, there are three. He says that in the Eastern Archipelago, no languages exist derived from a common stock, or standing to each other in the relation of sisterhood, as Italian, Spanish, and French, do to each other; or as Gaelic does to Irish, or Armorican to Welsh, or Scotch to English. The only dialects that exist are of the Malay and Javanese languages, but they consist of little more than differences in pronunciation, or the more or less frequent use of a few words. In the Polynesian Islands alone, real dialects of a common tongue do exist, but there the number of words common to such dialects and to the languages of the Archipelago, is so trifling that it refutes at once the notion of a common origin. In Malay, the most familiar words for the head, the shoulder, the face, a limb, a hair or pile, brother, house, elephant, the sun, the day, to speak and to talk, are all Sanskrit. In Javanese, Sanskrit furnishes words for the head, the shoulders, the throat, the hand, the face, father, brother, son, daughter, woman, house, buffalo, elephant, with synonymes for the hog and dog, the sun, the moon, the sea, and a mountain. In the language of Bali, the name for the sun in most familiar use is Sanskrit, and a word of the same language is the only one in use for the numeral ten. It is on the same principle that Mr. Crawfurd accounts for the existence of a similar class of Malayan words in the Tagala of the Philippine although the whole number of Malayan words does not exceed one-fiftieth part of the language. Head, brain, hand, finger, elbow, hair, feather, child, sea, moon, ruin, to speak, to die, to give, to love, are examples.

Some personal pronouns are found in the Polynesian dialects, where, in a vocabulary of

five thousand words a hundred Malayan terms do not exist. A sentence of Malay can be constructed without the assistance of Javanese words, or of Javanese without the help of Malay words. These two languages can be written or spoken without the least difficulty; without a word of Sanskrit or Arabic. The Malay and Javanese, although a large proportion of their words be in common, are distinct languages, and their Sanskrit and Arabic elements are extrinsic and unessential. When this test is applied to the Polynesian languages we find an opposite result. A sentence in the Maori and Tahitian can be written in words common to both, and without the help of one word of the Malayan which they contain, just as a sentence of Welsh or Irish can be constructed without the help of Latin, although of this language they contain, at least, as large a proportion of words as the Maori or Tahitian do of Malayan. Mr. Crawfurd is of opinion that the Malay and Javanese languages furnish the stock of the widespread words which are common to so many tongues in the Archipelago and which have been chiefly derived from the languages of the two most civilised and adventurous nations of the Archipelago—the Malays and Javanese; and he uses the word Malayan for whatever is common to these two people. In physical form, the people speaking the widespread Malay tongue, may thus be sketched. The average stature of the men is about five feet ~~three~~ ^{three} inches, and of the women three inches less. They are, in fact, as compared to the Chinese, the hindoos, the inhabitants of Western Asia, and Europeans, a short race. The face is lozenge-shaped, the forehead flat, the cheek bones high, the mouth large, the lips thin, the hair of the head black, coarse, lank, abundant,—that of all other parts of the body, beard included, very scanty: the skin is soft, tawny, darker than that of the Chinese, but fairer than that of any genuine hindoo, and never black; the lower limbs are heavy and the whole person squab and wanting in agility. With shades of difference, not to be fixed in words, this, he says, with the exception of a few negroes, is a description which applies to all the inhabitants of Sumatra, the Peninsula, Java, Borneo, Celebes, the Moluccas, Timur, and the whole Philippine group, and by any standard of beauty which can be taken, from the Gauges to the pillars of Hercules, the Malayan must be pronounced as a homely race. The cradle of the Malay race was the plains of Menang-kabau in the interior of Sumatra from whence they emigrated and pushed their conquests, or formed settlements, to their present extensive limits. They formed colonies in the Malay peninsula

and in Borneo, the former probably and the latter certainly occupied before their arrival by rude tribes of the same race of men who could offer no effectual resistance. In the remoter islands or in those occupied by powerful and civilized nations, the Malays appear only as settlers, and not colonists, as in Java and the principal islands of the Philippine Archipelago.

The Malay peninsula, called Tannah Malaya or land of the Malaya, with the exception of a few diminutive negro mountaineers, is occupied by Malays or by men of the same race, for the several wild tribes in the interior, although not calling themselves Malays, speak the Malay language, and have the same physical form as the Malays, although not calling themselves by this name, and their language contains many words that are not Malay.

Nearly the whole of the coast of Borneo is occupied by Malays who are supposed to have first emigrated to that island about the date of the reign of the Saxon king Athelstane.

The Malay tongue is now, and was when Europeans first visited the Archipelago, the common language of intercourse between the native nations among themselves, and between these and foreigners. It is in the Archipelago what French is in western Europe, Italian in eastern, Arabic in western Asia, and Urdu in India. All nations who hold intercourse of business with strangers must understand it, and all strangers must acquire it. This is the case in Sumatra, where other languages are also vernacular, in Java, in Celebes, in the Moluccas, in Timor, and in the Philippine group. Mr. Crawford attributes the spread of this language to the enterprising or roving character of the people whose native tongue it is, as also its own softness of sound and simplicity of structure and consequent facility of acquirement. He adds that although Malayan civilisation in all probability, sprang up in the interior parts of Sumatra, as Malay tradition alleges, still that is not above fifty miles from the coasts with which many rivers communicate and the Malays must be considered as essentially a maritime people.

In Sumatra and the groups of islands on its western coast, in addition to the Malay, there are at least nine other languages, five of which, the Ache or Achin on the north-western end of this island, the Batak or Batta, the Korinchi east of the Batak, the Rajang or Rejang and the Lampong, are cultivated and written tongues. There are also several rude languages among the scattered tribes on the mainland. The Batak or Batta nation lie to the east of the Malays, and furnish perhaps the only recorded example of a people ac-

quainted with letters, who practice a modified cannibalism. The Lampong nation, which occupies that portion of the south-western side of Sumatra which lies opposite to Java, divided from it only by the Straits of Sunda, has its own peculiar alphabet, which consists of 19 substantive letters with double or treble consonants making them up to 44. It has a great deal of that angular, linear, and meagre form which characterizes the other Sumatran alphabets. The Lampong people occupy the eastern end of Java, on the straits of Sunda and fronting the western extremity of Java.

In the groups of islands on the western coast of Sumatra, are several unwritten tongues, amongst which may be named that of the Pogy or Pagi islands, the language of the Nias, and that of Maros.

Many of the Malay race have become converts to mahammedanism. The earliest conversion recorded was that of the Achinese, the nearest people of the Archipelago to the continent of Asia. This was in 1206 of our era. The Malays of Malacca were not converted until 1276; the inhabitants of the Moluccas not until 1478, and the people of Celebes not until 1495, only the year before Vasco de Gama passed the Cape of Good Hope. Thus the earliest conversion of these islanders took place 574 years after the death of Mahammed and long after the first zeal of his followers had evaporated. To this day there are a few mountaineers in Java still professing a kind of hinduism, and the Javanese retain numerous of their old pagan superstitions and have added those of their subsequent religion. They people the air, the woods and rivers, with various classes of spirits. They have the praying or fleeting ghosts; the barkas-a-han, kabuka-male and wewe, evil spirits; and the damit and dadungawu or tutelary spirits. They now consider the hindoo gods of their former belief not as imaginary beings but as real demons, and have added the jan of the Arabs.

The games of the Indian islanders are chiefly sedentary.

Java, an island of 40,000 square miles in extent, and by far the most fertile of the Archipelago contained in 1850, 1,000,000 of inhabitants. In the eastern and central parts there may be said to be three Javanese languages,—the popular, the polite (which is a kind of factitious dialect of it), and an ancient tongue, found only in old books and ancient inscriptions. The modern and popular language, as well as the polite dialect, is written in a peculiar character, of which the substantive letters amount to twenty. In Java, in addition to the Javanese, is the Sunda lan-

guage, which is spoken over about one-third of the island extending from Cheribon across the island down to its western extremity. This tract is more mountainous than that inhabited by the Javanese, and the people somewhat less advanced in civilization, but possessing the same amiable and docile character as that nation.

The industrious, peaceful and numerous people who speak the Madurese language with its dialect the Sumanap, occupy the island of Madura, divided from Java by a strait, and form in some districts the bulk of the population on the opposite shores of Java, to which, depopulated by long wars for the past two hundred years, they have been emigrating.

In the adjacent island of Bali, which is small but fertile, well-cultivated and populous, is the Balinese, with its ceremonial dialect and sacred language, and it is one of the most improved languages of the Archipelago.

The fourth language, which Mr. Crawford considers to have a strong affinity with the Javanese, is that of Lombok, a fertile and populous island, divided from Bali by a narrow strait. This is the termination in an easterly direction, of the group of tongues which begins with Sumatra. According to Mr. Logan, Javan has a much broader, more forcible, asperate and primitive phonology than Malay, and the Javan group embraces Sundan, Maduran, (with its dialect Bawian) and Bali.

Borneo is an island of about three times the extent of Britain. The greater part of the coast of Borneo is rather dotted than peopled by Malay settlements, according to the Malays themselves, the result of migrations from Sumatra dating as far back as thirty generations. A small portion of the eastern coast is occupied by settlements of the Bugis of the Celebes of more recent date. The aboriginal inhabitants are thus, in a great measure, locked up in the interior, and precluded from access to that commerce with strangers which might civilize them. The Malays and the Bugis natives of Celebes, by their superior civilization and power, domineer over the rude aborigines, without, however, being able to penetrate into the interior, or to dispossess them of their land. In 1824, out of the forty wild tribes in its interior, eight had adopted mahammedanism and the Malay language. Amongst these were the Dyak race of Sugalam who long since abandoned the cruel practice of head-hunting. The many languages of this island belong to the same class of languages as the Malay and Javanese, and the aboriginal inhabitants of Borneo are all of the same race with the Malays and Javanese. The inhabitants are divided into

numerous distinct tribes, each, it is stated, speaking a separate language, and Mr. Crawford has seen the names of at least sixty of these small nations who have no common name by which to distinguish themselves from the people of other regions. Nine vocabularies have been collected, the most extensive by Mr. Robert Burns who resided there, and it is that of the most numerous, advanced and powerful tribe in the island, the Kayan or Kyan, whose possessions extend from the northern to the southern coast. No native tribe of Borneo has ever invented letters. The Kyan tribes in the interior, on the Kapuas, are said to be cannibals eating the flesh of their enemies. They prize heads like the Dyak race. They carry spits in the scabbards of their swords. The Dyaks of Jang-kang also are said to be cannibals. They live between Sangow and Sadong, on the Sakiam, a branch of the Sadong river. The Jang-kang people eat Malays or Dyaks or any one else whom they kill in war, and they kill their own sick if near death and eat them. Whilst a party of this people were staying at Sang-kang, one of them fell out of a mango tree and broke his arm, besides being otherwise much hurt, and his companions cut his throat and ate him up. The Jang-kang Dyaks are said to eat only the tongue, brain, and muscles of the leg. The men of this tribe file down their front teeth to a point, like the teeth of a saw. They cut off their hands. There are numerous Dyak tribes settled on the Kapuas river, the principal stream on the west coast of Borneo and which is supposed to take its rise in the Batang Lupar range. Almost every tribe has its distinct language.

In Celebes, the Trans-Javan or Timorian band, and the Moluccas, is a large and important class of Indonesians, who graduate between the Anam type, the Burman and the Negrito. The most prevalent head or that of the predominant race is ovoid, but it is somewhat Burman in nose, eye and colour. The great island of Celebes may be considered the centre of a group of languages, which, although agreeing with those heretofore described, in simplicity of grammatical structure, differs very widely from them in phonetic character although spoken by the same race of men. Celebes is intersected by the equator, leaving a small portion of it in the northern and the mass in the southern hemisphere. Its greatest length is about 500 miles, but its greatest breadth does not exceed 100; and in some places it is hardly one-third of this width. Celebes may be considered to be the focus of an original and independent civilization which probably sprung up amongst the most advanced of the nations which

occupy it, called by themselves Wugi, and by the Malays, and after them by Europeans, Bugi, or in the plural Bugis. In material civilization the Bugi are equal to the Malay. Of the languages of Celebes, the next in importance to the Bugi is the Macassar. The people who speak this tongue inhabit the same peninsula. They call themselves and their language Mankasara, and hence the Makasar or Mankasar, of the Malays, whence our name. Besides Bugi and Macassar, the two principal languages, there are three other languages of Celebes written in the same character, or, at least, occasionally written in it; the Mandar, the Manado, and the Gorongtalu. The Mandar is spoken by a people on that side of the south-western peninsula, which fronts Borneo.

The island of Sumbawa, the third in a direct line east of Java, about three times the extent of Bali or Lombok, and divided by a deep bay into two peninsulas, has three languages, the Sumbawa, the Bima, and the Tambora. The natives of Sumbawa are little inferior in cultivation to the most improved nations of Celebes. The Sumbawa and Bima languages are written in the Bugi character, but there exists in this island a singular and curious obsolete alphabet. It is ascribed to the Bima nation, but the characters do not generally correspond with the simple sounds of the Bima language as exhibited in the specimens given of it.

The large island of Flores, the fifth in a line east from Java, due south of Celebes and of volcanic formation, affords the first example of a race of men seemingly intermediate between the Malay and Papuan, or Negro, but partaking far more of the physical form of the former than of the latter. The complexion is a good deal darker than that of the Malay, the nose flatter, the mouth wider, and the lips thicker. The hair is not lank as in the Malay; but buckles, without frizzling as in the Papuan. The stature is the same as that of the Malay, that is short and squab.

According to the statements made to Mr. Crawford by Bugi traders, themselves settlers in the island, Flores is inhabited by six different nations, speaking as many different languages; the Endo, the Mangarai, the Kio, the Roka, the Kōnga, and the Galetong, names derived from the principal places of their residence.

Timur is a word which means the east, and was probably imposed on this island by the Malays, to whose language it belongs, because this was the extreme limit of their ordinary commercial voyages to the south-east. Timur is about three times the extent of Jamaica. Its principal inhabitants are of

the Malayan race, but it contains also Papuans or Negroes, and tribes of the intermediate race. The two languages of Timur are the Manatoto and the Timuri, the first spoken at the north-east end of the island, and the last used by many of the tribes as a common medium of intercourse. No alphabet has ever been invented in Timur; but judging by the specimens of its languages, the vowels are the same as those of the Malay and Javanese.

In the Malayan Miscellanies, published under the auspices of Sir Stamford Raffles, at Bencoolen, in 1820, lists of two languages of Timur, and of the languages of the two small islands at its western end, Rotti and Savu, are given, amounting each to 95 words.

The language of the Chinese is usually placed amongst the Turanian group, in which are included a large mass of languages very imperfectly known, and supposed by some to have wide differences. Messrs. Rask and Eastern have studied this family of tongues, and the publication of their researches formed an area in philosophical research. Almost every known tongue can be placed under one of three broad divisions: 1, Monosyllabic, of which the Chinese is a striking example, a language literally without a grammar and without words, in our sense of the term; possessing 450 sounds and upwards of 40,000 ideographic signs to represent them. Thus, whenever a Chinese is unable to express himself clearly, even by the aid of intonation and gesture, he must have recourse to the infallible expedient of writing. 2, Agglutinating: the characteristic of the Tartaric and African languages, in which several words are placed side by side, each having its own distinct meaning. 3, Polysynthetic: characteristic of the American languages, which not only, like the Aryan and other languages, combine into single words the minor modifications of each separate conception, but compress even whole sentence into one vast, almost pronounceable word. In this group some include the Basque language, which has so long preserved its identity, although placed between two mighty kingdoms, and which in its grammatical structure resembles the aboriginal languages of America, and them alone.

The Chinese written language consists of picture words. The alphabet is a hieroglyphic system, each word having its own graphic representative. Chinese is monosyllabic; no word is allowed more than one consonant and one vowel. Hence the possible number of words is extremely small, but each word can be pronounced with various accents and intonations, of which there are said to be

450, and the number of words, or ideas, in Chinese is said to be 43,496. The vastness of this amount will be appreciable by mentioning that only about 5,000 words occur in the Christian Old and New Testament. M. Remusat, in his *Grammaire Chinoise*, notices three styles of the Chinese written language, which he calls, style antique, style litteraire and langue des magistrats, or langue mandrinique; but Mr. Meadows considers (*Des. Notes*, p. 13), he is not quite correct in these definitions. Nevertheless, M. Remusat is followed by M. Hue, who says that the Chinese, in their written language, have three distinctions of style; the antique or sublime style, the type of which is to be found in the ancient literary monuments, and which exhibits very rare grammatical forms. The vulgar style and the academic style, which partakes of the two preceding, being less concise than the antique, and less prolix than the vulgar. The vulgar style is employed for light productions, theatrical pieces, private letters, and proclamations intended to be read aloud. The spoken language is composed of a limited number of monosyllabic intonations; namely, four hundred and fifty, which, by the very subtle variations of the accents, are multiplied to about sixteen hundred. It results from this, that all Chinese words are necessarily grouped in homophonous series, whence a great number of double meanings may arise either in reading or speaking, but their difficulty is avoided by coupling synonymous or antithetic words. In this manner the ambiguities disappear, and the conversation is no longer embarrassed. The language called Houan-hoa, that is to say, common universal language, is that which the Europeans wrongly designate by the name of Mandarin language, as if it were exclusively reserved for the Mandarins or functionaries of government. The Houan-hoa is the language spoken by all instructed persons throughout the eighteen provinces of the empire, and in this, a distinction is made between the language of the north and that of the south. The first is that of Pekin; it is marked by a more frequent and sensible use of the guttural or aspirate accent. It is spoken in all the provincial government offices.—*Sir John Lubbock, Bart., Origin of Civilization, London, 1870, pp. 31, 280; Journal of the Indian Archipelago, Nos. vi, xii, June and Dec. 1853, p. 307; Hensleigh Wedgewood quoted in Prof. F. LANGUL, BENG. *Gloriosa superba*, also *Commelina salicifolia*.

LANGULI, BENG. Singalese palmated Nama, Nama zeylanica.

LANGULI-LUTA, BENG. Palmated Ipomœa, Ipomœa pes-tigrides.

LANGUR, HIND. A large monkey, *Semnopithecus schistaceus*. See Langoor.

LANG-YEN BWEN, BURM. (Lower).

LANIADÆ, a family of birds including the Shrikes, or Butcher-birds. It comprises 6 gen., 23 sp., viz., 1 *Gampsorhynchus*, 1 *Thamnocataphus*; 10 *Lanius*; 6 *Tephrodornis*; 3 *Hemipus*; 2 *Xanthopygia*. The harsh chatterings of a very common kind of shrike, *Lanius superciliosus*, in Indian gardens, are the earliest intimations of coming change of season. The species of *Lanius*, are *L. arenarius*, *L. cristatus*, *L. erythronotus*, *L. hardwickii*, *L. lahtora*, *L. nigriceps* and *L. tephronotus*.

LANIUS HARDWICKII. The intensity of the red on the sides of this, the bay-backed shrike is peculiar to the breeding-season. It is the most common butcher-bird, and may be seen perched on the lower branch of a mimosa, watching an opportunity to dart on some luckless beetle; down it pounces on its prey, which it bears away to a neighbouring thorn, impales and devours; then flits within a few feet of the ground to a new perch, from whence with head awry, it examines intently the ground beneath, now and then answering the harsh scream of its companion on some neighbouring tree.

LANIUS HYPOLEUCOS, Blyth. Very closely allied to *L. hardwickii*, Vigors; from

which it differs in having the entire crown nigrescent, passing gradually from the back of the forehead to dark ashey on the nape: the ear coverts being uniformly coloured with the feathers superiorly adjacent: in having the rump and upper tail coverts of the same deep maroon colour as the back and scapularies: in the much greater development of the ferruginous margins of the great wing coverts and tertiaries: and in having the under parts uniformly white, a little subdued, and tinged with a very faint blush, but having no trace of rufous on the flanks and elsewhere.—*Mr. Blyth's Report*.

LANIUS LEUCORHYNCHOS, see Swallow tribe.

LANJANUM, TEL. Antimony.

LANING, HIND. Vitis indica.

LANJASAVARAMU, or Gontema gomaru chettu, TEL. Ipomœa filicaulis, *Blum.*—*Convolvulus medium*, *R.* i, 474—*C. filiformis*, *Thunb.*—*C. prostratus*, *Heyne*, 139.

LANKA, HIND. An island: the residence of the giant Ravana, supposed to be the modern Ceylon. In hinduism Borna Coti is an imaginary city, supposed to lie under the equator at 90° from Lanka. From a note in the English translation of Abul Fazl's *Ayin Akbery* (Calcutta Edition, Vol. iii, p. 36) we learn that there are many reasons for concluding Lanka to have been part of the Taprobane of the ancients; and that Taprobane, or μά. properly Tapobon, which in Sanscrit signifies the "wilderness of prayer," was a very large island, including the whole or the greater part of the Maldivé islands, which have since been destroyed by inundations.—*Ouseley's Travels*, Vol. i, p. 33. See Lanka, Kunawer, Malabharata, Meghnad, Mehrawun, Rama, Ravana, Vishnu.

LANKA MIRCH, BENG. Capsicum frutescens.

LANKAMULLA, see India.

LANKA SIJ, BENG. Euphorbia tirucalli.

LANKARATTI, SINGH. Ruby.

LAN-KEET or Long-eet, literally Dragon's cave or den, an uninhabited island in the Canton river, in lat. 22° 41' N.

LANSEH, is a small oval fruit, of a whitish brown colour, which, being deprived of its thin outer coat, divides into five cloves, of which the kernels are covered with a fleshy pulp, subacid, and agreeable to the taste. The skin contains a clammy juice, extremely bitter, and, if not stripped with care, it is apt to communicate its quality to the pulp. *M. Corrêa de Serra*, in les *Annales du Mus. d'Hist. Nat.*, Tom. x, p. 157, Pl. 7, has given a description of the *Lansium domesticum*, from specimens of the fruit preserved in the collection of Sir Joseph Banks. The chupak,

ayer-ayer and rambé are species or varieties of the same fruit.—*Marsden's Hist. of Sumatra*, p. 101.

LANSIUM AQUEUM, *Jack*. The Ayer-Ayer, MALAY, is a fruit so nearly resembling the Laseh in most particulars that Dr. Jack, hesitating to rank it as a species, mentions it as a permanent and well-marked variety under the name var. *β. L. aqueum*. The fruit of the Ayer-Ayer is rounder, and the pulp more watery, and dissolves more completely in the mouth than the Laseh. Both are highly esteemed by the Malays, and are equally agreeable to the European palate. The juicy envelope of the seeds is the part eaten, and the taste is cooling and pleasant.—*Linnean Transactions*, iv, d. 114; *Eng. Cyc.*

LANSIUM DOMESTICUM.

Var. *a.* Langsat, MALAY, JAVANESE, shape globular.
Var. *b.* Duku "JAV. | "Langsat, oblong.
Langsab, "MALAY.

The Lansium is one of a genus of plants of the natural order Meliaceæ, consisting of moderately-sized fruit-bearing trees, and peculiar to the Malay archipelago. Europeans regard its fruit as next to the mangosteen. It is about the size of a pigeon's egg, having a tough white skin with a bitter taste, and the edible part is the pulpy semi-transparent envelope of the seed. To the same genus belong the duku, also the lingseh, langsat or langsab, for in all these forms the word is written, the rambéh and the ayar-ayar, probably all four but varieties of the same species. The duku is the most esteemed of them, and to the European palate is the best of the native fruits of the Archipelago, after the mangostin. The natives class it after the durian and mangostin. Mr. Hogg states this plant to be a native of the Antilles. It is of the size of a pigeon's egg, of globular form, and covered with a coriaceous skin of the colour of parchment. The species seems to be indigenous in the western portion of the Archipelago, but to have been introduced into the Philippines, where one variety of it, the langseh, is cultivated.—*Crawford's Dict.*, pp. 21, 125; *Hogg's Veg. Kingdom*, p. 171.

LANTANA, a genus of plants belonging to the natural order Verbenaceæ or Vervains.

LANTANA NIVEA var. MUTABILIS, Changeable lantana, is a straggling shrub, which appears to be quite naturalized in the neighbourhood of Maulmain; though rarely seen in other parts of the provinces. The flowers are yellow when they first open out, but afterwards change to a rose colour.—*Mason*.

LANTANA SELLOVIANA, a large shrub, producing pink, yellow, orange-coloured heads of flowers, they blossom at all

LANTSAN.

seasons, and are found in most gardens, the leaves have the scent of black currants, the berries are eaten, may easily be propagated by seed, or suckers.—*Riddell*.

LANTERN FEAST. The feast of lanterns, amongst the Chinese, takes place on the first full moon of the new year. It affords opportunity for a display of ingenuity and taste, in the construction and mechanism of a variety of lanterns made of silk, varnish, horn, paper and glass, some of which are supplied with moving figures of men galloping on horseback, fighting, or performing various feats, together with representations of birds, beasts and other living creatures all in full motion. The moving principle in these is formed by a horizontal wheel, turned by the draft of air created by the heat of the lamp, and the circular motion is communicated in various directions, by means of fine threads attached to the moveable figures.—*Davies*. See *De-wali*, *Dipawali*, *Lakshmi*.

LANTOA or *Ty-ho*, an island 14 miles long and 5 miles broad, is near Canton, and its S. or S. W. point is in lat. 22° 12' N., long. 113° 51' E., the N. E. point being in lat. 22° 21' N., long. 114° 2' 22' E.

LANTSAN, a river on the west of China. The journey thence to the west is in a country inhabited by the numerous tribes of *Yatezu*, *Mooquor*, *Moso* and *Loisu*. These tribes live in small villages, each under its own headman, the whole tribe being ruled by one chief, who holds the Chinese rank of *Bluebutton*, and is a tributary of the Chinese government, having authority in all cases except those involving life and death, which are referred to the nearest Chinese mandarin. The whole of these tribes inhabit a strip of country lying between the *Kinchar Kiang* and *Lantsan* river: they are peaceable and industrious, cultivating peas, tobacco, opium and scanty crops of cotton, they also collect gold, both by washing the sands of the *Lantsan Kiang* and by mining in the hill-sides. Each tribe pays a tithe to its chief, who in turn pays two-thirds of his share as tribute to the Chinese government. The costume of the women is fantastic but graceful; it consists of a head-dress of red cloth, closely braided with cowrie-shells, for which the *Moso* women occasionally substitute a very becoming little cap or hood of red and black cloth, with pendent tassel, a short loose jacket with long wide sleeves, and buttoned up the front, and a kilt-like petticoat of home-made cotton stuff, reaching from the waist to the knee, and made in longitudinal plaits or gathers. The road from the *Jeddo* range of mountains, near *Ta-tsian-loo* up to the banks of the *Lantsan* river, crosses range after range of mountains,

LAOS.

all running from the north-east to south-west, and the great snowy ranges lying on each bank of the *Lantsan* and *Nou-Kiang* rivers are a continuation of the great ranges, which, rising to the north of the Tibetan town of *Tsiamdo*, must form at their conjunction with the *Himalaya* what is believed to be the chief barrier to direct communication between *Bathang* and *Lassa*.

LANUN, or *Illanun*, a practical race occupying places in the Archipelago. They have been repeatedly displaced by the expeditions against the pirates. See *Borneo*, *Kyan*, *Ladrones*, *Pirataunia*.

LANYEN-PWEN, *Burm.* *Caryophyllus aromaticus*, *Linn.*

LAO-KIUN, or *Lao-tse*, a celebrated Chinese philosopher, B. C. 604. He was a contemporary of *Kung-fu-tse* or *Confucius*, and author of "the *Taou-Tih-King*"—the book of *Virtue and Reason*, containing his religious philosophy which was translated into French by *M. Stanislas Julien*. He was the founder of the sect of *Doctors of Reasons*, the *Taoist* or *Reason Sect*. He was a hermit, an ascetic who discouraged acceptance of public employments, he made reason the groundwork of his doctrine, the *Taou* worship resembles the *Logos* of the *Platonists*, and they have much to recommend them, but his teachings have merged into gross idolatrous rites, the study of astrology and necromancy, fanatical observances, self-inflictions, such as dancing in flames, mutilating the body, practising abstinence and seclusion.—*Bowring*; *Chinese Empire*, ch. xi. See *Budd'ha*.

LAO-BAN, also *Heku-ka-ma*? *Burm.* *Benjamin*.

LAO-CHARSA, *Hind.* The rope and bucket apparatus, for drawing water from wells in districts where the Persian wheel is not used.

LAOKALAM, see *Hindoo*.

LAOO, *Beng.* *Cucurbita lagenaria*, *Linn.* *Lagenaria vulgaris*.

LAOS or *Lau* or *Lawa* or *Wa*, a wild tribe on the mountains between the *Irawadi* and the *Meenan*, north of the latitude of *Ava*. There is a small settlement in *Amherst*. The term *Lau* or *Lawa* is applied by the Chinese to all the chief nations on the S. W. frontier of *Yunan*. One writer calls the feudatory tribes in *Yunan* by the term *Lolo* or *Lao*, called *Shyan* by the *Burmese*. Some writers regard the *Lao* as a distinct tribe of *Shan*.

LAOS, are a people of the *Siamese* ordinary group, the most civilized of whom occupy the valley of the *Menam* and its feeders; those of the west are called *Thaung-Khao* or *white bellies*, because they do not tattoo themselves like the *Thaung Dari* or *black bellies*. The *Phi-phrai* and the *Phi-lok* are their wood

demons. The Thevada are their tutelary deities. The Laos dwell in Zimmay, also spelt Changmai and Xieug-mai, on the Menam between 19° and 22° N. L. due north of Siam proper, and due west of the Burmese frontier, with Laphuu and Lakhon, two small territories attached: there are 20 waterfalls on the Menam between Zimmay and Bangkok. The Laos are buddhist; their language is the same as that of the Siamese. Salt is the chief article of barter. The Laos alphabet more resembles that of Kambodia, than that of Siam, they use rice and distil and use a liquor from it. Thai is the native name of the Siamese, and their chief division are Laos, Shyan (or Ahom) and Khamti. Their general complexion is light brown, their hair black and abundant, nose not flattened. The name of the original conquerors, their alphabet and language, was Ahom. Ahom or Ehom was the designation of the races mixed with the royalty of Arracan, and opposed to the pretensions of the king of Ava at a very early period of Burmese history. The Siamese head may be considered as a remarkable modification of the Burmah-Chinese head, with a peculiar tendency to elongation and verticality. They have large straight faces, flat occiputs, lowness of the hairy scalp, comparatively small and firm mouth, hard staring eye and a grave expression. The Siamese tongue appears by far the most widely spoken language of Ultra-India. It was at one time the lingua franca of Kidah, almost as much as the Malay, and even that wandering negro tribe, the Simang, spoke it in some places. It was also current in Asam and Yunnan at the opposite extremities of Ultra India. Cambodia, Laos of the Lu country, Luang, Phra-Bang and Nan are tributary to Siam. Mr. Logan remarks that perpetual aggressions, frequent conquests, extirpations of villages, and migrations, mark the modern history of nearly all the Tibeto-Burman tribes and of the different clans of the same tribe. In recent ages, the Laos have settled in the lands of the Sing-pho, the Bodo, the Burman the Peguan, the Kambojan and the Malay and have originated communities having no connection with each other. The Singpho at a late period forced their way from Burmah into Assam. The Bodo have occupied the country of the Mikir, and the Arung Angami and Kuki have intruded on both. The same tribes also, separated into clans and villages, are permanently at war with each other. Kuki flees from Kuki, Sing-pho from Sing-pho, Abor from Abor. About the thirteenth century of the christian era, the Laos were a powerful and conquering people in the upper portion of the basin of

the Irawadi, where their capital was at Mo gaung (Muang-gaung or Mung Khong) and whence in A. D. 1224, they sent an expedition which subjugated Asam and established Ahom rule. Their native country was a portion of the basins of the Mekong and the Menam, including Yunnan. About the same time, they took possession of a higher portion of the upper basin of the Mili, where their chief seat was at Khamti, whence the name by which this branch is still known. At present, the Lao, under the names of Shan and Khamti, are found in Upper Assam, and scattered over a large portion of the northern half of the basin of the Irawadi, nearly to the confluence of the Khyen-dwen with the principal stream. Sporadic villages are even found in Arakan; on the eastern side they are scattered along the Sa-luen as far as 18°. The whole of the Menam basin is in their hands, with the exception of a small part of the right side near its head; and they also occupy a large portion of the basin of the Me-kong. The eastern tribes are known as Lo-Lo, Lau and Thai. In the basin of the Irawadi, the Shan are intermixed with the Tibeto-Burman tribes amongst whom they have intruded, but in large portions of it, they are the principal population and in the N. E. corner of the empire, the Kham-ti may be considered as independent. It is probable that the Siamese, with the tribes of the upper Menam and of the Mekong, are directly connected with those of Yunnan and are not offshoots from the colony of Muang-gaung. The Siamese have advanced more than halfway down the Malay peninsula and but for the check given to them towards the close of last century, by the establishment of Pinang, as a British settlement, their sway would now have embraced Perah, and probably have extended to the confines of Malacca. The northern clans almost everywhere retain their independence, although owning a nominal allegiance and in some instances paying tribute to Burmah, to China, or to Siam, those on the frontiers of Yunnan propitiating both the Golden Foot and the son of heaven, by an acknowledgment of fealty, and some sending a triennial offering to the latter.

On the south-east of Asam are numerous Shan tribes, many of them subject to the Burmese. These belong to the Siamese or T'hai group who are composed of the Siamese proper, the Kham-ti, the Laos and the Shan who each speak a dialect of their own, none of which are like the Burmese.

Shan and Shyan call themselves Thi or Thai and occupy great part of Laos and Siam and bordering districts of Burmah. In personal appearance, customs and languages, the

Shan and Karen are but offshoots of the same stock. The Laos, the Shan and the people called Ahom were originally the same and once held Asam and Bhotan under their dominion. The Shan or Shan race, swarm in countless tribes over the countries stretching from the valleys between China and Tibet on the north, to the Gulf of Siam in the south, and if united would form the most formidable state in Eastern Asia. They occupy all the territories between the Irawadi and the mountains of Anam. At Bhamo, to the north, east and south-east of which they are numerous, the language of the Shan corresponds with that of the Siamese. Their habits, mode of living and of cultivation of the ground, correspond with those of the Khy-eng and Karen. People of the Thai group have a superior physical development, and resemble the Balinese.

The Lau, on the borders of China, differ little from the Chinese of Yunnan, and their stock, was probably the same. Where they are in contact with the older races, they have considerably altered. In the valley of the Menam, their height is about $1\frac{1}{2}$ inches less than the average Chinese, but as the average stature of the French is the same (5 feet 3 inches) the Siamese may still be considered as of the middle size.

The Lau or Shan race speak a language which was primarily east Himalaic, like Mon, Kambojan, Anam and Pa-long. Like them, it was carried at some remote period, into the Brahmaputra-Gangetic province, and received some Dravidian roots. Subsequently it shared in the great eastern movement of the Himalaic dialects from the basin of the Ganges into that of the Irawadi, where it was intimately connected with some of the intrusive west-Himalaic or Tibeto-Burman dialects. It was then pressed further into the east, into the basin of the upper Mekhong and Tong-king, and became the language of Yunnan. During the Han dynasty, Chinese colonies began to occupy the valleys of Yunnan, and from that time, Lau was exposed to the influence of Chinese and began to receive the modified form it possessed when the pressure of that great race on the older tribes of Yunnan caused the Lau to swarm to the westward and southward. When they re-entered the basin of the Irawadi, they had acquired from their partially Chinese civilization, a superiority over the Tibeto-Burman tribes of northern Ultra India, which made the Lau clans predominant along the central belt of Ultra-India from the Himalaya to the mouth of the Menam.

The Laos races are divided into two very distinct sections—those who tatoo their bodies,

and those who do not. The tattooed or black-bellies, occupy the districts of Xieng Mai, Laphun, Lakhon, Muang Phre and Muang Nan. The non-tattooed (white-bellied) live in the districts of Muang Lom and Muang Luang and Phra-Bang. The Laos spoken language is a modification of the Siamese: so close is the resemblance, that the two sections easily understand one another. The Laos writing, however, is more like that of Cambodia than of Siam. The Laos, like the Siamese, wear a tuft of hair on the top of their heads, which looks like a black brush, the skull being shaven all round the tuft at every new moon. The Laos houses are built upon piles of wood, and made of bamboo canes, ingeniously interlaced, and roofed with leaves. Of the character of the Laos people, Pallegoix expresses a most favourable opinion. He says, they are peaceful, submissive, patient, sober, faithful, frank and simple, but credulous and superstitious. They are honest, abhor theft, and one of their kings is said to have condemned robbers to be fried alive in a pan of burning oil. But the moral tone has been lowered of late years, in consequence of the visitations of war and the presence of much misery. The Laos are buddhists. Of their religious belief, Pallegoix says, "They honour the statues of Buddha, but render more worship to the genii and the demons than to their idol. Of these genii there are several sorts:—1st. The wood demons (phi phrai), whose authority is exercised in forests, into which if any one have the temerity to penetrate, especially during the night, he often disappears, and nothing more is heard of him. But sometimes the adventurer is transported to an enchanted land, in which he leads for years a life of illusions, but finally escaping from their magic influence, he finds himself at the door of his hut, hardly recognizable by his wife and children, who had ceased to remember him. Sometimes these wood demons are reported to punish the invader of their territories with malignant fevers, which destroy him in a few days; 2nd, The phi lok, or fear-giving demons. These are busied in frightening human beings by all sorts of illusions of sight and hearing. At night they haunt the neighbourhood of men's abodes, they wander about the public roads, and exhibit themselves in all sorts of monstrous shapes; 3rd, The malignant demons or the phi pob, are the objects of special apprehensions, on account of their voracity. There are certain sorcerers who are supposed to control these demons; and when one person means to injure another, he makes a present to the sorcerer, who compels the attendance of the demons, which enters

the body of his victim, gradually devours the entrails, heart and liver, so that he pines from day to day, and at last expires; 4th, The thevada, or tutelar genii, who occupy the huts of the natives, and protect their families. These guardian angels must be treated with great kindness, or disease will attack the family, the rice-crop will perish, and misery enter the dwelling. Sir John Bowring saw the Laos women of the highest ranks sent for by their lords to gratify his curiosity. They have crawled into the presence, and, with bowed head, waited trembling for the commands of their husbands. Their dress is more graceful than that of the Siamese women, especially their mode of arranging and adorning their hair, which was sometimes ornamented with fragrant white flowers. They wore the pague, which is the universal costume of Siam; a sort of light scarf passed over the shoulders and covered the breast, and a handsome silk tissue encircled the waist; no shoe or sandal was on the feet, and the legs were uncovered to the knees, though there seemed an anxiety to conceal the feet beneath their garments when they crouched down. Almost all the opulent nobles have wives from Laos, many of whom would be considered pretty. They are of diminutive stature, singularly meek expression, liquid eyes, and graceful movement. They have the art of obtruding the elbow forwards, which is deemed an aristocratic accomplishment among the Siamese ladies, who frequently take occasion to exhibit this subtle action of their arms, and which could only be produced by very early training. The Laos organ is a collection of sixteen fine and long bamboos, bound by a circle of ebony, where there is an opening for the aspiration and inspiration of the breath, which causes the vibration of a number of small silver tonguelets, placed near a hole made in each bamboo, over which the fingers run with great dexterity. He often heard sweet music and sweet voices as he passed along the streets, or floated upon the waters of the Meinam; and, on inquiry, he learnt that the sweetest was the music of Laos. Once, he called on the second king of Siam, and found him playing on a singularly harmonious instrument composed of reeds of the bamboo, an instrument nearly eight feet in length, and groups of meek-eyed, gentle, prostrate people had been introduced, to exhibit their movements, which rather resemble the graceful position of the ancient minuet than the friskiness of the European "light fantastic toe."—*Latham's Descriptive Ethnology*; *Mr. Logan, in Journal Indian Archipelago*; *Bowring's Siam*, Vols. i, p. 89; ii, pp. 2-4. See India, Siam.

LAP, HIND. *Gymnosporia spinosa*.

LAPAE, a Singhpoo tribe occupying the mountain tract in lat. 26 N., from long. 97 to 98 E., on the left bank of the Irawadi river as far east as the Goolan Sigoon range.

LAPIHUN, see Laos.

LA-PHIYAN, BURM. In Amherst, a heavy, solid, large-sized timber, but rather liable to injury from a peculiar insect, not the white ant.—*Captain Dance*.

LAPIDARY OPERATIONS, are extensive with the agates, onyxes, cornelians, and bloodstones, of the Raj-Peepla range, and Cambay cornelians, as they are called from the place where they are mostly cut, and from which they are almost wholly brought to Bombay. The cornelian in the Raj-Peepla range is found in a bed of blue clay—the detritus, probably, of the adjoining rocks. Shafts are pierced in this to the depth of from thirty to thirty-five feet, and horizontal galleries run in any direction that suits the fancy of the miner: they are distributed promiscuously, and do not appear to lie in veins or loads. The galleries seldom exceed a hundred yards in length,—they often run into those of other mines: they are generally five feet in height, and four across. To each mine there are thirteen men attached—they work by turns. Each man must send up so many basketsful of earth and stones before he is relieved. The stones are collected in baskets and drawn up by a rope run over a roller or pulley. A group of people await them at the mouth of the shaft, and examine them one after another by chipping each on a piece of stone: the compact and fine-grained are the best, and the blacker the hue is at first the redder it becomes after being burnt. There were in 1832 about one thousand miners employed; and each man carried home with him a basket of stones every evening. They were spread out on the ground, and for a whole year turned over every four or five days to the sun: the longer they are exposed the richer become their tints. In the month of May they are burnt. The operation is effected by placing the stones in black earthen pots or chalties. The pots are placed mouth under, a hole being pierced in the bottom of each: over this is put a piece of broken pot. The pots are arranged in single rows: sheep's dung is the only fuel found to answer, the fire is always lighted at sunset and allowed to burn till sunrise. If any white spots appear on the surface of the pot, the burning is reckoned incomplete, and the fire continued some time longer. On being removed from

LAPIDARY OPERATIONS.

the fire, the stones that have flaws are thrown aside as useless : those not sufficiently burnt are kept for next year's burning, and the remainder are sold for exportation. Nearly the whole of the stones are cut at Cambay—the greater part of them are made into beads. The following is the process : the stones are first broken up into pieces of suitable size for the end they are desired to serve. An iron spike is stuck into the ground, point upwards : the stone is placed on this and clipped with a hammer till nearly rounded : it is then passed on to the polisher, who seizes it in a pair of wooden clams and rubs it against a piece of sandstone placed in an inclined plane before him, turning it round from time to time till it assumes a globular form. It is then passed on to the borer and polisher : a hole is drilled in it with diamond dust, and the beads are finally polished by being put in a bag with some fine emery and rubbed against each other. The stones for other uses are sawn or ground down. The native lapidary's tools, are simple and efficient to a degree. The wheel consists of a strong wooden platform sixteen inches by six, and three inches thick. In this are two strong wooden uprights.

A wooden roller, eight inches long and three in diameter, is fastened into a head at the one end. This works on an iron spindle or axle at each end. On the one end the axle is screwed and fitted with a nut, by which the saw or grinding wheel can be made fast. The saw consists of a thin plate of iron,—the cutting material consisting of native emery or ground corundum—koorund as it is called. The lap wheels consist of two circular discs or cakes of lac with ground koorund, coarse or fine according to the work—of a copper disc for polishing, and a wooden one for finishing the work. These are spun backwards and forwards by a bow, the string of which passes round the roller. The lapidary sits on his hams, steadying the wheel with his foot and holding on the stone with his left hand while he works the bow with his right. For very fine work a small-sized wheel similar to the English lapidary's wheel, but of a smaller size, is used. It is driven by a multiplying wheel, strap and pulley. The Custom House returns, give the value of the traffic in Cambay stones, at which the average betwixt £10,000 and £12,000 annually,—one per cent. of the stones finding their way to Europe.

The chief articles into which they are wrought are paper-weights, knife-handles, miniature-sized cups and saucers, tablets for snuff-boxes, sets of brooches, necklaces, bracelets, pins, buttons and studs. A field gun, with all its appointments, is one of the finest ornamental pieces of Cambay stone-work—they sell for from Rs. 40 to Rs. 50. The polish of Cambay stones is not such as pleases the eye of the English lapidary—yet were they sent home in their roughly finished state, they are so cheap that they might be expected to become a considerable article of commerce. They might be built up into mosaics for work-tables, into chess-boards, and other elegant articles of furniture—the chief part of the work being performed here, where labour is cheap, the final finish being given at home. The Cambay agates equal the finest "Scottish pebbles" in beauty; they generally exceed them in size, and may be had for a mere fraction of the price.—*Paper by Capt. Fulljames, in the Transactions of the Bombay Geographical Society for 1839.*

LAPIDATION, is an ancient practice, still common in the east, and is a token of haste. Yet, in some parts of Arabia, stones are thrown at tombs as a compliment to the tenant. And in the Somali country, the places where it is said holy men sat, receive the same doubtful homage.—*Burton's Pilgrimage to Meccah, Vol. iii, p. 341.*

LAPIS LAZULI.

Liu Li,	CHIN.	Lajaward,	HIND.
Ho-tai,	"	Lajburd,	"
Azure stone,	ENG.	Lazwardi,	MALAY.

Great quantities of this mineral are procured from the island of Hainan, in the Chinese Seas. It is found in Persia, Beluchistan, China, Siberia and Bucharia, and varies in price from 10s. to 15s. the ounce. It is found in the ruby mines of Badakhshan, also in the mountains at the source of the Koulouk, a little river which flows into the Baikal Lake, where it is detached from the rock by heating it with fire and then dashing cold water on it. It is said to be found massive with iron pyrites, amongst the Ajmeer hills, especially

LAPLAND.

the Nag-pahar range: this stone is sold by all the attars or druggists of India, both as a medicine and as a pigment. Firgamu in Badakhshan stands at the head of the fertile portion of the Kokcha valley, which, south of this, takes the name of Koran. Beyond Firgamu the mountains rise directly from the bed of the river. Where the deposits of lapis lazuli occur, the valley of the Kokcha is about 200 yards wide. The formation is of black and white limestone, unstratified, though plentifully veined with wavy lines. Under the spot to be quarried a fire is kindled, and its flame, fed by dry furze, is made to flicker over the surface. When the rock has become sufficiently soft, flake after flake is knocked off, by hammering till the mineral is discovered. Deep grooves are then picked out round the lapis lazuli, into which crow-bars are inserted and the stone and part of its matrix are detached. The workmen enumerate three descriptions of lajward; these are the neeli or indigo coloured, the asmani or light-blue, and the sabzi or green, and their relative value is in the order they are mentioned. The richest colours are found in the darkest rock, and the nearer the river the greater is said to be the purity of the stone. The mines have been known from a very early period. Its chief use, however, is for affording Ultramarine, a beautiful pigment, highly valued by painters. The colour of this stone is a fine azure blue, having little lustre, but susceptible of a fine polish. The Chinese are supposed to use it in painting upon copper and on their porcelain. The Chinese buddhists regard this mineral as one of the seven precious things. By exposure to heat and moisture, it loses its beautiful azure and assumes sometimes a black, sometimes a chalky appearance. It is used in native medicine for mixing with jalap powders and in other compounds; it is not taken alone. Dr. Honigberger says he applied it externally to ulcers.—*Emmanuel; Gen. Med. Top.*, p. 162; *Comp. Desc.*; *T. W. Atkinson's Oriental and Western Siberia*, p. 596; *Wood's Personal Narrative of a journey to the source of the Oxus, by the route of the Indus, Cabul and Badakhshan*, pp. 264-66; *Powell's Hand-book, Econ. Prod., Punjab*, p. 65; *Smith's Mat. Med. of China*, p. 129. See Balas-Ruby, Lapis Lazuli.

LAPIS LYNCIA, LAT. Amber.

LAPIS NERO, IT. Lapis negro, PORT., SP. Blacklead for pencils.

LAPLAND. The Laplander or Lapp race is one of the most diminutive of the Mongolian group of the human family. The Lapp have a curious mode of divination. They put a shoulder-blade in the fire and then foretell

LAPWING.

the future by the arrangement of the cracks. The same custom exists among the Mongol and Tungus of Siberia and the Bedouin. The lines vary of course greatly, still there are certain principal cracks which usually occur. The Chipecan of North America also make their magic drawings on shoulder-blades, which they then throw into the fire. Williams describes various modes of divination practised in Fiji. In Fiji, one mode of operating is to bury a cocoa-nut, with the eye upwards, beneath the temple-hearth, on which a fire is kept constantly burning; and as the life of the nut is destroyed, so the health of the person it represents will fail, till death ensue. In India, also, magicians make small figures of mud, on the breasts of which they write the names of those whom they wish to annoy. They then pierce the images with thorns, or mutilate them, so as to communicate a corresponding injury to the person represented.—*Jordan's Men I have known*, p. 73; *Lubbock's Origin of Civil*, pp. 142, 144-145. See India.

LAPLYI, a shoe made of the bark of trees.

LAPORTEA CRENULATA, Gaud.

Urtica crenulata, Roxb. | *Macoussa-gassa*, SINGAP.

Very common in Ceylon up to an elevation of 5,000 feet, in damp forests.—*Thw. En. Pl. Zeyl.*, p. 259.

LAPORTEA TERMINALIS, Wight, Ic.

Grows in the Central Province of Ceylon at an elevation of 4,000 to 6,000 feet.—*Thw. En. Pl. Zeyl.*, p. 259.

LAPTA, HIND. *Cenchrus echinatus*, also *Panicum verticillatum*.

LAPTEL. The valley of the Laptel being so much more open and accessible to Guari than to Jwar or to Pinkanada, it seemed questionable whether it did not belong to Lhassa, but the flow of its water is into Pinkanada, so the British frontier advances to the crest of the Balch mountains and the low Pass into Shelshel. Lieut. Weller penetrated just up to the frontier line: Laptel has been visited by two or three other English travellers, but for venatic, rather than geographical, purposes.—Lieut. Weller in *Asiatic Journal*, No. 134, 1833, journey to the Balch Pass in May and June 1842.

LAPURIP or Dalupiri island, in lat. 19° 15' N., long. 121° 14' E. It is one of the five islands near Cagayan. See Babuyan.

LAPWING. The little brown-coloured lapwing, *Vanellus leucurus*, is rare in most parts of India, and most probably migratory in the Punjab. It is said to be common in Afghanistan, where, according to Mr. Blyth, it is known by the name of Chizi. The call of the spur-winged lapwing (*Lobivanellus goensis*) is peculiar. This unsettled water-

LAR.

sprite often flies about at night, startling the unwary with its cry of Did dee doo it, did did did dee doo it. Like the European lapwing, it assails all who intrude on its haunts. It has horny spurs on the wings. Dr. Jerdon names *V. cristatus*, *Chetusia gregaria*, *Ch. leucura*, *Sarceophorus bilobus*, *Hoplopterus ventralis*.

Whoever has unhooded the falcon at a lapwing, or even scared one from her nest, need not be told of its peculiarly distressing scream, as if appealing to sympathy. Tradition relates that a lapwing was scared from her nest, as the rival armies of the Kuru and Pandu joined in battle, when the compassionate Krishna, taking from an elephant's neck a war-bell (*vira gunt'ha*), covered the nest, in order to protect it. When the majority of the feudal nobles of Marwar became self-exiled, to avoid the almost demoniac fury of their sovereign, after his alliance with the British government, Anar Sing, the chief of Ahore, a fine specimen of the Rahrhor Rajput, brave, intelligent and amiable, was one day lamenting, that while all India was enjoying tranquillity under the shield of Britain, they alone were suffering from the caprice of a tyrant; concluding a powerful appeal to Colonel Tod's personal interposition with the foregoing allegory, and observing on the beauty of the office of mediator: "You are all powerful," added he, "and we may be of little account in the grand scale of affairs; but Krishna condescended to protect even the lapwing's egg in the midst of battle." Colonel Tod replied in the same strain, "Would to God, Thakoor Sahib, I had the *vira gunt'ha* to protect you." — *Tod's Rajasthan*, Vol. i, p. 524; *Adams; Jerdon*. See Birds.

LARQUIS, BISAYA. A variety of the Manila Hemp plant, the fibres of the original abaca are termed Lamot by the Bisaya. Rumphius states that the Malay name is Pissang utan; that it is called in Amboyua, Kula abbaal, in Ternate, Fana; and in Mindanao, Coffo, as also the cloth made from it. He distinguishes the Mandanao kind from that of Amboyua.—*Royle Fib. Pl.*

LAR, the local name of the southern portion of the province of Sind, from Hyderabad to the sea, but the name seems at one time to have had a more extensive application. Ptolemy and the Periplus mention Guzerat under the term Larice, and Biruni and Abu'l Fida place Somnat and even Tana in, or on, the borders of the province of Lar. The merchant Sulaiman calls the gulf of Cambay and the seas which wash the Malabar Coast, the seas of Lar, and Masudi says that at Saimur, Subara, Tana and other towns, a language called Lariya is spoken. The Charita enumerates Lardes, or 'country of the Lar,'

LARGE COMMON PUMPKIN.

amongst the eighteen regions dependent on Anbulwarra, but for some fault, Komar-pal "chased the tribe of Lar from the country." Ibn-Said settles the point of position, saying that he had met with "authorities which placed the famous temple of Somnath in the country of Lar." The remains of this ancient tribe are now only to be discovered in Rajputanah in the third or mercantile caste, forming one of the eighty-four great families residing in Maroo, and following the Jain faith.—*Elliot's History of India*, Vol. i, p. 378; *Tod's Travels*, p. 187. See Lar-des, Larek.

LAR. In Maiker is a race named Lar who seem to be a portion of a considerable tribe, the Lar of N. Western India. They are returned as a hindoo people of Maiker; they are named Lour in Oomraoti, and are there 3,485 in number. The Lar are weavers of cloths of silk in Berar.

LARA, see Wheat.

LARANJAS, PORT. Orange.

LARA-SIYAH, HIND, PUSHTU. The Kabul cherry.

LARD.

Chu-yu,	CHIN.	Sur ki charbi.	HIND.
Hwa-yu,	"	Dukku-k'i charbi,	"
Chu-pau-yu,	"		

The fat of the omentum and mesentery of the pig, the melted fat of the domestic pig. Lard is employed in the formation of ointments, plasters, liniments, for other medicinal purposes, and also in cookery.—*Waterston; Faulkner*.

LARDIZABALACEÆ, *Lindl.* An order of plants comprising, 1 sp. of Stauntonia.

LARDO, IT., PORT., SP. Bacon.

LARD-STONE, Kw'ai-hwoh-shih, CHIN., is a magnesian mineral, resembling steatite.

LARDUM, LAT. Bacon.

LAREK or Lardes, 8 miles S. S. W. of Ormuz, at the entrance of the Persian Gulf, is a small barren island, $5\frac{1}{2}$ miles long and 4 broad, about 15 miles in circumference. Larek is supposed by a learned writer to be the Organa of Arrian, rather than Hormuz, which it nearly equals in size. Niebuhr has written its name Larej; but Sir Ouseley suspects that the true orthography, if not Larek, would certainly be Lareg.—*Kinneir's Geographical Memoir*, p. 13.

LARES, see India, Hindoo.

LARGA, HIND. *Rhus cotinus*.

LARGE ASH, ENG. *Fraxinus floribunda*.

LARGE COMMON PUMPKIN, ENG. *Cucurbita maxima*, *Duch.*; *W. & A.*

LARK.

LARGE FLOWERED CRYPTOSTEGIA, Eng. *Cryptostegia grandiflora*, R. Br.
LARGER WOOD APPLE, Eng. *Ægle marmelos*, Corr.

LARI. The Lari, exclusively hold Nermuk, but reside also at Mustang and Shaee, with other tribes. Kuhak is occupied by the Mahomed Shahi; Nurmuk by the Lari Brahui; Lup by the Kalui Rind; Kishan by the Sherwani. See Lar, Kelat.

LARICE, see Bactria, p. 294.

LARIDÆ, a family of birds, sub-family Sternina. The Family Laridæ and its genera may be thus shown :—

Fam.—Laridæ.
 Sub-fam.—Larine, 2 gen., 5 sp., viz.: 1 Catarracta;
 4 Larus.
 Sub-fam.—Sternina.
 Div. 1.—Skimmers, 1 gen., 1 sp., viz.: 1 Rhynchops albigollia.
 Div. 2.—Marsh Terns, 7 gen., 10 sp., 1 Sylochelidon; 1 Gelochelidon; 2 Hydrochelidon; 1 Thalasseus; 1 Scaea; 3 Sterna; 1 Sternula.
 Div. 3.—Oceanic Terns, 2 gen., 4 sp., 2 Onychoprion; 2 Anous.

LARIMUS, a genus of fishes of the FAM. Sciaenidæ, comprising,

4 Larimus,	3 Pachyurus,	3 Collichthys,
2 Pogonias,	25 Sciaen,	1 Nebria,
2 Micropogon,	22 Corvina,	2 Louchurus,
15 Umbrina,	17 Otolithus,	
3 Eques,	2 Ancyrodon,	

LARISTAN, bounds part of the frontier of Fars to the south. Laristan is the ancient kingdom of Lar. Gilan and Siras are on the coast of Laristan. Gilan appears to be the Ila of Arrian, but we can scarcely suppose it the Gilan, which Hamdallah Kazvini enumerates among the islands of the gulf, subject to the Persian government.—*Ouseley's Travels*, Vol. i, p. 174; *Neaveus*, p. 375. See Ed., 1807. See Fars, Kirman.

LARIX DEODARA ?

Cedrus deodara.

Deodar, ANGLO-HIND. | Kelon, HIND.

Its turpentine is the Kelon ka tel, HIND. See Cedar, Cedrus, Deodar.

LARIX GRIFFITHII.

Sab, HIND. | Himalayan Larch. Eng.

Splits well, and is the most durable of any of the genus; but the planks are small, soft and white.—*Hook*, Vol. ii, p. 45. See Cedar, Deodar, Turpentine.

LARK. A writer has written of the delight expressed by one who had been many years in India, at seeing, upon his return to his native land, the sky-lark rise from the sod at his feet, and mount higher, and still higher, till reduced to a mere speck in the heavens, or utterly lost to view, all the while making the air ring with its music. Had he ventured forth into the fields of any part of India, he would have seen and heard the very same; although the species (*Alauda malabarica*) is

LARK.

different, and may be somewhat inferior to the European sky lark in song, so far at least as regards variety in the notes; but there is really very little difference, so little that the two birds could assuredly not be distinguished by the voice alone, nor by the mode of flight. Examined, the common Indian lark may be described as resembling the European wood-lark in size and shape, with the plumage of the sky-lark. In the Himalaya on bare situations and sheep-folds the sober-coloured mountain lark-finch, *Leucosticte nemoricola*, *Blyth*, is common. Like the British "snow-flake" they may be seen in compact flocks flying from place to place. They congregate often to the number of 300 or 400 on the lesser ranges of the Himalaya during winter, and ascend even to the limits of forest in summer. Dr. Adams observed the black-bellied lark-finch (*Pyrrhuloxia grisea*), Gull-billed tern (*Sterna anglica*), in scattered numbers, flying wildly northwards, not settling anywhere, and evidently on the way to the cooler regions of Central Asia to rear its young. The song-lark (*A. arvensis*) follows up the valleys to the limits of verdure. He saw one at Dras, but not subsequently. *Alauda triborhyncha*, *Hodg.*, of the lower region, scarcely differs from the sky-lark of Europe. One distinction would appear to be, with reference to the former, that it seldom mounts so high or remains so long on wing; it is a summer-visitor only, possibly migrating to the lowland valleys in winter. A Cashmere boatman would consider his establishment incomplete without an Afghan lark, *Melanocorypha torquata*. This bird is said to frequent the valley of Kashmere in winter. The sweet notes of these songsters issuing from the boats as they pass up and down the river are very enchanting. In all the desert parts of Sind the crested calandre lark, *Galerida cristata*, is plentiful. It is not unlike the sky-lark, but does not "up to heaven's gate ascend." It is generally met with in flocks during the cold months. The most abundant lark on the plains of Upper India and table-land of the peninsula, is this Charndol or Crested Lark, *Galerida cristata* or *Alauda cristata* which is also a European species, though of rare occurrence in Britain; and the song of this bird, also its mode of delivery of it in the air, are not very unlike that of the Sky Lark, although it does not soar to so lofty an altitude. Larks are often domesticated in S. E. Asia. In China it is the *Acridotheres cristellatus*, the Shantung lark. It has great facility in learning sounds and will bark, mew, crow, cough and sneeze, sometimes talk, and a single bird will fetch £6. The *Acridotheres* will imitate the human

voice accurately. In China, a starling is often domesticated: it is lively, good-natured and easily tamed. They also tame the fork-tailed Parus, the *Leiothrix luteus* of Scopoli. It is in form and habit like the robin of Britain, is pretty, olive green, black forked-tail, with wing primaries bright yellow and red. It turns summersaults on its perch. They have a short loud song. Canaries are sold in many shops of Japan. The grackle, *Gracula religiosa* called the Mina is largely domesticated. The partridge, the shrike are also largely domesticated. The Hoopoe is to be seen occasionally. — *Blyth*; *Adams*.

LARKSPUR, ENG. *Delphinium ajacis*.

LARMEN, BURM. *Eurycles amboinensis*, *Sal*.

LA ROQUE, Author of a "Voyage to Arabia the Happy, by the way of the Eastern Ocean and the Straits of the Red Sea," performed by the French for the first time in A. D. 1708, 1709 and 1710; also of a Journey in 1711, 1712 and 1713, from Mocha to the Court of the king of Yemen.

LARRAK, see Larek, Hormuz or Ormuz, Kishm Island.

LARUS BRUNNICEPHALUS, *Jerd*. Indian hooded gull.

LARUS FUSCUS, 'Lesser Black-backed Gull' of the Atlantic, Mediterranean, Red Sea, Indian Ocean, Cape of G. Hope, N. Zealand, Kabul (*Burnes*), Bay of Bengal.

Xema ridibunda or Larus ridibundus is the 'Black-headed Gull' of Europe, Asia, N. Africa; not rare in India, but less common than the nearly allied *X. brunnecephalus*.

LARVA, a caterpillar. In China, the dried larvæ of flies, *Wuh-kuh-ch'ung*, Chinese, are given to children ill with marasmus.

LAS, TRIB., in Tibetan buddhism, actions on which the destiny of human beings depend.

LAS, HIND. of Jhilm district, inferior land.

LAS, a section of Beluchistan bordering the Arabian Sea. Its ruler is called the Jam. Las is separated from Lower Sind and the Indus delta by the Hala Mountains, and is occupied by the Lassi division of the Lumri or Numri tribe. They have about twelve divisions or clans, one of which, the Jamhut, furnishes their chief or Jam. They trace their origin to Samar, who founded Samarkand, and acknowledge a consanguinity to the Bhatta of Jesulmir. The Lumri are an active, hardy, pastoral people, their wealth consists in flocks of goats, with fewer buffaloes and camels. They despise agriculture: wild Lumri are found grazing on the rocky banks of the Hab river. Their language varies little from that current in Sind. They manufacture coarse fabrics from the wool of their goats and camels. The Lumri eats

meat almost raw and is greatly addicted to the use of opium. Las has only two or three places for receipt of custom. Near one of these, Bela, are found coins, trinkets and funeral jars. Sunmiai contains numerous of the Mehman sect or race, and part of the fixed population of Bela is called Jaghdal. Hormara is a sterile district with a port of same name subject to Las. Near Jabl Malan, is a tribe called Gujur; at Garuki, the Sangur tribe, and at Hormara in Mekran, with four hundred houses, is a tribe of this name. The Hormara tribe say they came originally from Sind. Persani west of Hormara is a small port of two hundred houses. See Beluchistan, Kelat.

LASAJ, HIND. *Artemisia elegans*.

LASAN, HIND.

LASANA, SANS. *Allium sativum*, *Linn*. Garlic. Lalsan-ka-tel, Garlic oil.

LASCAR, ANGLO-PERS. A seaman; a non-combatant in the army; from Lashkar, PERS. army, a public follower of the ordnance or camp equipage department.

LASHI, a province adjoining that of Herat. To the north of Seistan and south of Furra, one of the governments under Herat, is the small district of Lash, held by a Sadozye Dooranee. Lash itself is a place of considerable strength in those parts, being a fort on a scarped hill or rock, which resisted all Kamran's endeavours to take it. — *Burnes' Parliamentary Papers, East India Cabul and Affghanistan*, p. 134.

LASHORI, HIND. *Asparagus racemosus*.

LASHITE, HIND. *Asparagus punjabensis*.

LASHIUNA, BENG. *Allium sativum*, *Linn*.

LASIARA, HIND. *Cordia myxa*.

LASIONAMA, see Cinchona.

LASKAR, HIND. *Delphinium brucei-anum*.

LASNIYAN, HIND. Cat's eye gem.

LASIURUS, a genus of bats of the sub-family Vespertilionæ, sub-order Chiroptera.

Sub-order. — Chiroptera.	Sub-Fam. — Taphozoinæ.
Bats.	1 Gen. — Taphozous, 3 sp.
Fam. — Pteropodidæ, Frugivorous Bats.	Sub-Fam. — Noctilioninæ.
Gen. — Pteropus, 4 sp.	1 Gen. — Nyctinonius, 1 sp.
Cynopterus, 2 sp.	Fam. — Vespertilionidæ.
Macroglossus, 1 sp.	Sub-Fam. — Scotophilinæ.
Fam. — Vampyridæ, Vampyre bats.	3 Gen. — Scotophilus, 6 sp.
Sub-Fam. — Megadermatinæ.	Noctulinia, 1 sp.
1 Gen. — Megaderma, 4 sp.	Nycticejus, 8 sp.
Sub-Fam. — Rhinolophinæ	Sub-Fam. — Vespertilioninæ.
5 Gen. — Rhinolophus, 11 sp.	8 Gen. — Lasiurus, 1 sp.
Coleops, 1 sp.	Murina, 2 sp.
Rhinopoma, 1 sp.	Kerivoula, 4 sp.
Nycteria, 1 sp.	Vespertilio, 5 sp.
Fam. — Noctilionidæ.	Myotis, 5 sp.
	Plecotus, 2 sp.
	Barbastellus, 3 sp.
	Nyctophilus, 1 sp.

LASIURUS PEARSONII, *Horsfield*.

LASSA.

Length about $3\frac{1}{2}$ in., of which the tail measures $1\frac{1}{2}$ in.; having its extreme tip exerted. Head $\frac{3}{4}$ in.; ears (posteriorly) $\frac{1}{2}$ in.; and about $1\frac{1}{2}$ in. from tip to tip. Expense about 13 in.; fore-arm $1\frac{1}{2}$ in.; tarse $\frac{3}{4}$ in.; head broad and short; the ears broad, sub-ovate, widely separated apart, and the tragus small, narrow and elongated. Teeth very robust; the grinders antero-posteriorly compressed, with the caninassers contiguous to the canine above and below, and the canines less elongated than in the *Nyctoeji*: there are four incisors above, of which the outer or lateral are much smaller than the others. Fur soft and extremely dense, of a uniform rufous-brown above and dingy greyish below, with conspicuous hoary tips a little curling; more especially upon the head, shoulders and breast. The membranes are dusky and the alar is attached to the base of the outer hind-top. The lateral membranes near the body, and the whole inter-femoral, are somewhat plentifully covered with brownish-rufous fur, more scant on the inter-femoral, and very dense at the base of the tail above.—*Blyth*. See Mammals.

LASOR, *Rus.* Smalte.

LASORA, *Hind., Sans.* *Cordia myxa*, *Linn.*, also *Cordia obliqua*.

LASOR BEXLINSKAJA, *Rus.* Prussian blue.

LASRE, also Lasrian, and Lasrin, *Hind.* *Albizzia odoratissima*.

LASSA. Its houses are large, and are fresh white-washed and painted every year, so as to present a gay appearance. In the city of Lassa, and over the whole of Thibet, "Geawa Remboochi" or the "Grand Lama" is nominally the supreme authority, in temporal and spiritual affairs. His residence is in Putala Goompa which is on the north side of Lassa. M. Huc says, that "Lassa" in the Thibetan language means, "Land of spirits." The Mongolians on the same authority call this city "Monche-dhot," i. e., Eternal sanctuary. Cheboo Lama gives the following interpretation, "L'ha" means God, "Su" abode or resting-place, hence it is the city of God, or the Eternal city. There are two Resident Envoys from China called "Ampas" stationed at Lassa; subordinate to them are two great officers—Chinese, designated Daloo-he: their rank and occupation are those of general officers. Next to these are two Phopun who act as paymasters of the troops, and perform the duties of our Adjutant and Quarter Master Generals. They are also Chinese. One of the Daloo-he, and one of the Phopun are generally stationed at Digarchi. These officers constitute the general staff of the army in Thibet. Next in rank are three Chonghar. They are Chinese, and military commanders;

LAT.

one is generally stationed at Digarchi and another at Tingri near the Nepal frontier of Thibet. Below these are three Tingpun, non-commissioned officers—also Chinese. There are no other Chinese military officers in Thibet. The usual number of Chinese troops, all Mantchoo Tartars, in Thibet, does not exceed 4,000 men. Stationed at Lassa 2,000, Digarchi 1,000, Giangtechi 500, Tingri 500. The Chinese functionaries in Thibet are Political and Military officers only. All the Civil appointments are held by Thibetans. The local temporal Government of Thibet is headed by the Grand Lama, who is entirely guided in all Political and Military affairs.—*Prinsep's Tibet, Tartary and Mongolia*, p. 89. See Lassa.

LASSAR, *Hind.* *Juniperus communis*.

LASSEN, *Chr.* A learned German philologist, author of *Indische Alterthum Skunde*, *Indian Antiquities*, 4 vols. 1847 to 1861.

LASSER, *Hind.* *Astrantia*, *sp.*

LASSI, *Hind.* Sour milk.

LASSI, see Kelat.

LASTHENIA, a genus of flowering plants, natives of California. Flowers yellow, and adapted for borders.

LASTRA, *It.* Slate.

LASTRE, *Sp.* Lastro, *Port.* Ballast.

LASTROLABE, a French ship of discovery.

LASTUK, *Hind.* *Ephedra alata*.

LASUN, *Hind.*, or Lahsun, *Sans.* Garlic.

LASUNDA, *Sans.* *Dolichos catianya*.

LASURA, *Hind.* *Cordia myxa*. Its fruit is the Sebesten of old writers, a sweetish and highly mucilaginous fruit. Its fibre is not much used. Lasura is also the name of *Cordia latifolia*. A tree of moderate size, the length of trunk to first branch being 10 feet, and girth 3 or 4 feet. Its wood is white and soft, of little use except for fuel. Leaves used as fodder for cattle, and as plates or trenchers. Fruit edible and in great request, only planted.—*Balfour*, p. 87; *Powell's Hand-book*, Vol. i, pp. 511, 541.

LASURI, *Hind.* A small variety of lasura.

LASWAREE, a battle won here by Lord Lake on the 1st November 1803. See Battles.

LAT, *Sans.* An obelisk, a pillar, a staff, a column, a monolith. The Lat pillars of north-western India, have been made known to the savans of the world from their having engraved on them ancient characters, now known as the Lat character, first deciphered by Mr. Prinsep. It was a remark of Colonel Tod, 'let us master the characters on the columns of Indrapreshita, Prayag and Mewar, on the rocks of Junagurh, at Bijoli and on the Aravalli: and in the Jain temples scattered over India, and then we shall be able to

arrive at just and satisfactory conclusions in regard to Indian history. It was observed by Mr. James Prinsep that the language of the Lat inscriptions differs from every existing written idiom, and is, as it were, intermediate between the Sanscrit and the Pali. The nouns and particles in general follow the Pali structure. The verbs are more frequently nearer to the Sanscrit forms; but in neither, any more than in grammatical Pali, is there any great dissimilarity from Sanscrit. That on the Bhilsa monument is in the Gupta class of inscriptions: numerals were first supposed to be discovered by Mr. James Prinsep, on the Bhilsa monument. In the buddhist pillar inscriptions, the dates were uniformly expressed at full length.

The Lat monolith at Allahabad is a monolith containing a Gupta inscription, sculptured on its surface. The more ancient writing on this stone, and for whose exhibition we may conclude the pillar to have been expressly fashioned, consists of a counterpart of the edicts of Asoka, which appear severally on the Lat at Delhi, the rocks of Girnar on the western coast, and Dhanuli in Cuttack, in addition to the transcript in the Semitic character on the rock at Kapurdigiri. The inscription contains 26 verses, which give a survey of the political divisions of India, at the time, contain the names and titles of very many of the reigning families, and, extending beyond the boundaries of India, the regions of the great king of Persia and the hordes of the Huns and Scythians. The *Bhitari Lat* is a pillar in the Ghazipur district, bearing the same royal names and genealogy as No. 2, on that of Allahabad. The *Delhi Lat*, or Golden Lat at Delhi is so called from the gilt kalasa "pinnacle or ball," placed on its summit by Feroz Shah. Its original site was near Khizrabad, immediately west of the Jumna at the foot of the Sewalik mountains whence the column was removed to Delhi by Feroz Shah (A. H. 752 to 790.) This monolith, like the kindred pillar at Allahabad, was in the first instance exclusively devoted to the exhibition of a counterpart text of the edicts of Asoka, but succeeding generations have taken advantage of the ready prepared monument, to supplement a record of their own prowess. Of the two stone pillars at Delhi, one was moved down from near Khizrabad, at the foot of the Himalaya,—the other was taken from Mirat.

Dhanuli in Cuttack.—Inscriptions in the Lat. character were discovered here by Lt. Kittoe.

The character used in the inscriptions in the Lat character, are those of Allahabad and intermediate between those two; also a character at Balibhi, and the parallel-gram headed character of Seoni.

Iron pillar at Delhi.—In the centre of the mosque, says Colonel Yule, there is to be seen an enormous pillar, made of some unknown metal. One of the learned hindoos told him that it was entitled haft-just, or "the seven metals," from being composed of an amalgam of so many. It is thirty cubits in length by eight cubits to compass it. The real height of the pillar above ground is twenty-two feet, and its greatest diameter a little more than sixteen inches. The pillar was considered by James Prinsep to date from the third or fourth century. The shaft has been recently ascertained to descend at least twenty-six feet into the earth, and probably several feet more as with that depth excavated, the pillar did not become loose. The inscription on the Iron pillar at Delhi, has no date, but is scarcely earlier than A. D. 800, the character looking more modern than Kanouj Nagari. In the character used in inscription, many letters agree with the Kanouj Nagari, but the general aspect is more modern. It mentions Vaishnava, but no invocation or names of gods. It mentions also prince Dhava, an usurper, at Hastinapur. The inscription is punched upon an iron pillar, and the only thing remarkable in it is the mention of the Bactrians, called Vallekha, being still in Sindh. From the compound letters used, the inscription must be long after the fifth century. Britain has become heir to the monuments of Indraprestha raised by the descendants of Buddha and Ella; to the Kheel or iron pillar of the Pandus whose pedestal is fixed in hell; to the columns reared to victory, inscribed with other characters.

Feroz Shah's pillar, staff or Lat was brought to its present site in Delhi, from near Hamsi, Fattahabad and Sirsooti. This is the most remarkable of all the objects in the Kotila, as well as the monument of highest antiquity in all Delhi. Till modern European scholars read and expounded its inscriptions, much erroneous opinion had prevailed about this pillar. It was 'the club of Bheem Senna' of the hindoos, 'the walking stick of the old emperor Feroz,' of the mahammedans and 'the pillar of Alexander the Great, in memory of his victory over Porus, with Greek inscriptions' of Tom Coryate, and the other early English travellers until, after the lapse of centuries it once more became appreciable to the last generation as one of the edict columns of Asoka. The pillar that is now just outside the Delhi gate of the city was originally 'on the bank of the Jumna in the district of Salora, not far from Khizerabad, which is at the foot of the mountains, 90 koss from Delhi.' The original site of the pillar is supposed by Cunningham to have been somewhere near the ancient capital

of Shrugghna, described by Hwen T'sang 'as possessing a large vihar, and a grand stupa of Asoca's time containing relics of buddha.' The pillar is stated to have been 'conveyed by land on a truck to Khizerabad, from whence it was floated down to Ferozabad, or new Delhi.' This removal took place about the year 1356 by the orders of Feroz Shah, to confound the hindoos who had boasted of its immovable fixity in the earth. Underneth the pillar had been found a large square stone, which also was transported and placed in the same position as before, when the pillar was put up in the court yard of the palace of Feroz. In the face of this circumstantial account, which a contemporary writer has left of the removal of the pillar, it can by no means be taken for the same that the bard Chhand speaks of 'as telling the fame of the Chohan.' This must have been some other column that stood at Negumbode, and has disappeared from causes not known now to anybody. The head of it is bare now, there is no 'ornamentation of black and white stone-work surrounded by a gilt pinnacle, from which, no doubt, it received its name of Minar Zarin or golden pillar. This gilt pinnacle was still in its place in A. D. 1611, when William Finch entered Delhi, as he describes the stone pillar of Bimsa, which, after passing through three several stories, rises 24 feet above them all, having on the top a globe surmounted by a crescent.' The pillar is a single shaft of 'pale pinkish sandstone,' being of the usual height of all Asoca's pillars, 42 feet 7 inches, 'of which the upper portion, 35 feet in length, has received a very high polish, while the remainder is left quite rough.' It seems that all the pillars of that monarch were made to his particular order of a certain specified length. The weight is rather more than 27 tons. The numerous pillars of Asoca, all of one size, but of a variety of stones, arising from the respective rocks from which they were quarried, exhibit an unequal workmanship which may help to throw some light on the state of sculptural art amongst the ancient hindoos in different parts of India. There are two principal inscriptions on Feroz Shah's pillar, besides several minor records of pilgrims and travellers from the first centuries of the christian era down to the present time. The oldest inscriptions for which the pillar was originally erected, comprise the well-known edicts of Asoca, which were promulgated in the middle of the third century B.C. in the ancient Pali. The alphabetical characters which are of the oldest form that has yet been found in India, are most clearly and beautifully cut, and there are only a few letters of the whole record lost by the peeling off

of the surface of the stone. The inscription ends with a short sentence, in which king Asoca directs the setting up these monoliths in different parts of India as follows: "Let this religious edict be engraved on stone pillars (Sila thamba) and stone tablets (Sila phalaka), that it may endure for ever." The record consists of four distinct inscriptions on the four sides of the column facing the cardinal points, and of one long inscription immediately below, which goes completely round the pillar. The last ten lines of the eastern face as well as the whole of the continuous inscription round the shaft, are peculiar to the Delhi pillar. The second inscription is that which records the victories of the Chohan prince, Visala Deva, whose power extended "from Hinadri to Vyndia." This record of the fame of the Chohan consists of two separate portions, the shorter one being placed immediately above Asoca's edicts, and the longer one immediately below them. But, as both are dated in the same year, viz., A. D. 1220, or A. D. 1163, and refer to the same prince, they may be considered as forming only one inscription.

Eoesildeo (Visaladeva) is the name which heads the inscription on the celebrated column erected in the centre of Feroz Shah's palace at Delhi. This column is alluded to by Chund, as "telling the fame of the Chohan," and he says 'was placed at Nigumbode, a place of pilgrinago on the Jumna, a few miles below Delhi, whence it must have been removed to its present singular position. Feroz Shah, Ruku-ud-din, king of Delhi in 1235, was grand-father of sultan Mahmud, whom Timur conquered. It was this king (A. D. 752 to 790) who removed the Lat or pillar, according to another account from near Khizrabad immediately west of the Jumna at the foot of the Siwalik hills, to Delhi, and erected it in the centre of his palace. The pillar is now known as one of the Delhi Lat, as the golden Lat, so called from the gilt kalasa "pinnacle or ball" which Feroz Shah placed on its summit. The other stone pillar at Delhi was brought from Mirat.

Benares.—One of Asoca's edict columns is erected at Benares. It is beautiful, one of stone, with many carvings and inscriptions. All Asoca's columns appear to be of the same height, 42 feet and seven inches, inclusive of the part underground. The one at Benares and the other at Allahabad measure exactly the same altitude. The columns were erected only in large, populous and opulent cities.

Though the capital of the Lunar princes had been removed to Hastinapur, and though Menu or the Mahabarat makes no allusion to the name of Allahabad, still its importance in the third

LATERITE ROCK.

century before Christ is established beyond a doubt by this column of Asoca. Up to this day, male and female hindoo pilgrims returning from the north-west, speak of this column as the remarkable Gada of Bheema, though it is now a quarter of a century since its meaning has been explained to the world by the man, to whose memory has been erected the ghaut from which the Governors-General quit the shores of India.—*Prin. LATCHMUN-TEERT, Coorg proper gives birth to the Cavery and two principal streams tributaries to it, the Soornawutty on the north and Latchmunteert on the south.

LATERITE ROCK, a clay iron ore, seems peculiar to India. It covers the western coast almost continuously, and for the most part up to the very foot of the ghauts, near from Bombay to Ceylon. It is found in detached beds along the Coromandel coast, near Madras and Nellore, Rajahmundry and Saunleotali, extending into Cuttack. It caps the loftiest summits of the eastern and western ghauts, and some of the isolated peaks in the table-land in the interior. A small patch of it is to be seen in Berar on the left bank of a river eleven miles N. of Oomravati, on the road to Ellichpore, and it covers all the country around Beder. It occurs in the southern Mahratta country, Mysore, Salem, Coimbatore, South Arcot, the Carnatic and Tanjore: it is found in Malwa, and in many parts of Bengal and Ceylon. It fringes the shores of Burmah, Malacca and Siam, and appears on the coast of Singapore and Sumatra. It is found in boulders and rolled masses all along the Malabar coast from Bombay north to Gogo in the Gulf of Cambay, beyond the region of the formation itself. Pieces of it have been met with three hundred feet under the surface, in the blue clay beds at Calcutta, as also in similar beds of lesser thickness in Bombay, and close by Cambay and Kurrachee: so that

LATHE.

the formation at one time was probably much more extensive than at present. Its colour is of a red iron or brick-dust hue, sometimes deepened into dark-red. It is marked with whitish stains, and is occasionally cellular or perforated with tubiform holes. It rarely if ever contains either crystals or organic remains, is never stratified or columnar, and generally spreads out in vast sheets over the surface of the plutonic or volcanic rocks. When the upper surface is cleared away, the rock below is found soft and easily cut into blocks of any form. It quickly hardens and darkens in hue by exposure to the air, and is not at all liable to decomposition or injury from the weather. The Arcade Inquisition at Goa is built of it, also St. Mary's Church, Madras, and the old fortress of Malacca.

It is soft and can be cut with a spade when first exposed, but hardens by the air and is then used for road-metal and in building. Laterite is called by the natives, from its worm-eaten appearance, Kire ka putthur, or Sili ka puttthur. The Tamuls call it Chori kulloo, vettie and culloo; and on the Malabar coast it is termed Stika culloo. There are two strong objections to supposing laterites to be the decomposed rock over which they lie; first, because were such the case, we ought to observe at the foot of a laterite hill a gradual blending of the laterite into the secondary greenstone, but such has never presented itself.—*Carter's Geological Papers on Western India*, p. 77; *Cole on laterite in Madras Journal Lit. and Soc.*; *Newbold's Asiatic Society's Transactions*.

LATES HEPTADACTYLUS, Lacpede.

<i>Percna maxima</i> , <i>Sonnerr.</i>	<i>Colius vacii</i> , <i>Ham.</i>
<i>Holocentre heptadactyle</i> , <i>Lacpede</i> .	<i>Lates nobilis</i> , <i>Chr. & Val.</i>
<i>Pandoo menoo</i> , <i>Russell</i> .	<i>Richardson & Bleeker</i> .
	<i>Ikan Siyakup</i> , <i>MALAY</i> .

This fish inhabits the sea and estuaries of Penang, Malayan Peninsula, Singapore and Madras. It yields isinglass, of which however in the Straits of Malacca, but little is collected, partly on account of the comparative scarcity of the fish and partly owing to the thinness of the air-vessel. That of a fish when dried, weighs upwards of one ounce. At Penang this kind sells at the rate of 25 to 30 dollars per pecul.

LATESWARA RAJ, see Inscriptions.

Cultivated in many parts of India, but being too rich in nitrogenous matter requires to be largely diluted, and it is not considered a very wholesome food either for man or beast. It is common in the higher provinces of India, and is cultivated in the southern parts of the Peninsula. It is often cultivated in the plains of the Panjab as a cold-weather field crop for its pulse, and is grown to 12,000 feet in Tibet. The grain is gray coloured with minute specks of black, also a thin line of black passes all round the seed as if to separate it into two halves. It is used as a pulse, being made into dāl, but is hard and indigestible. Its composition in 100, is

Moisture	10.10	Fatty or oily matter	0.95
Nitrogenous matter.....	31.60	Mineral constituents ash	3.19
Starchy matter.....	54.26		

Dr. Thomson is inclined to attribute to its use a disease which he observed at Saspol. At least thirty people in that village, of all ages from a full-grown man to an infant, and of both sexes indifferently, had been attacked

LAU.

with paralysis within the previous two years. The palsy was confined to the lower extremities, and differed much in degree. The sufferers were in other respects the most healthy and good-looking portion of the inhabitants.—*Ainslie, p. 240; Dr. J. L. Stewart, M. LAU, or Lao or Laos. About six hundred years ago, about the 14th century of the christian era, the Lau were a powerful and conquering people in the upper portion of the basin of the Irawadi, where their capital was at Mo-gaung (Muang-gaung or Mung Khong) and whence, in A. D. 1224, they sent an expedition which subjugated Asam and established Ahom rule. Their native country was a portion of the basins of the Mekong and the Menam, including Yunnan. About the same time, they took possession of a higher portion of the upper basin of the Mili, where their chief seat was at Khamti, whence the name by which this branch is still known. At present, the Lau, under the names of Shan and Khamti, are found in Upper Asam, and scattered over a large portion of the northern half of the basin of the Irawadi, near to the confluence of the Khyen-dwen with the principal stream. Sporadic villages are even found in Arakan; on the eastern side. The Lau, on the borders of China, differ little from the Chinese of Yunnan, and their stock was probably the same. Where they are in contact with the old races, they have considerably altered. In the valley of the Menam, their height is about 1½ inches less than the average Chinese, but as the average stature of the French is the same (5 feet 3 inches) the Siamese may still be considered as of the middle size.

The Lau or Shan race speak a language which was primarily east Himalaic, like Mon, Kambojan, Anam and Pa-long. Like them, it was carried at some remote period, into the Brahmaputra Gangetic province, and received

some Dravidian roots. Subsequently it shared in the great eastern movement of the Himalaic dialects from the basin of the Ganges into that of the Irawadi, where it was intimately connected with some of the intrusive west Himalaic or Tibeto-Burman dialects. It was then pressed further into the east, into the basin of the upper Mekhong and Tong-King, and became the language of Yunnan. During the Han dynasty, Chinese colonies began to occupy the valleys of Yunnan, and from that time Lau was exposed to the influence of Chinese and began to receive the modified form it possessed when the pressure of that great race on the older tribes of Yunnan caused the Lau to swarm to the westward and southward. When they re-entered the basin of the Irawadi, they had acquired from their partially Chinese civilization, a superiority over the Tibeto-Burman tribes of northern Ultra-India, which made the Lau claus predominant along the central belt of Ultra-India from the Himalaya to the mouth of the Menam. See Laos, India.

LAUCA, HIND. *Lagenaria vulgaris*.

LAUDAKIA MELANURA? *Blyth, n. s.*

A well-marked second species of Dr. Gray's genus *Laudakia* founded on the *Agama tuberculata* of Hardwicke's *III. Ind. Zool.*, if not, rather a new genus affined to *Laudakia* (in which case this may bear the name *Ploeroderma, Blyth*). Head and body flat, or depressed: the tail more than twice the length of the head, and body slender, except towards its base, where depressed and broad. Longest fore-toe reaching to the vent: longest hind-toe to the eye. Tympana large and round, their circumference partly concealed by surrounding tuberculated plaits or folds. A glandulous pit above the shoulder, black within; and thence a small plait is continued back over the shoulder to the flank, where followed by another and smaller one; there is also a lateral fold or plait from fore to hind-limb, margining the abdominal surface. Two transversal folds on the throat; the anterior of which is a double or cross-fold: continued upwards into a complication of sundry folds or plaits on the sides of the neck, and there are others above the axilla. A slight appearance of crest on the nape only. Head covered with smooth round or hexagonal scales, in general convex, flat upon the orbits, and obtusely keeled transversely upon the sinciput. Scales of the back imbricated, keeled, largest along the middle, and gradually smaller to the sides, where minute: those upon the tumid base of the tail very large, with prominent keels terminating each in a raised point; save on the under-surface, where they are pointed but not keeled: the long slender portion of

the tail is clad with similar but small scales: those on the upper and posterior surface of the limbs are keeled, with acute points, like those of the tail: and those of the lower parts are small, hexagonal, and smooth. On the abdominal region is a patch of rather larger and glandulous scales, much less developed than in *L. tuberculata*, and placed much lower down (nearer the hind-limbs) than in Hardwicke's published figure of that species: another and præ-anal patch of the same, not very distinct; but the vent is bordered by a ridge of minute scales anteriorly and posteriorly, with a crescent-like patch of the same, beyond which is a remarkable depression like a false vent. On the folds about the tympana, sides of the neck, and axilla, also on some transverse folds upon the base of the hind-limbs posteriorly, and one above the base of the hind-limbs on its dorsal aspect, are some rather larger and tubercular scales: but not any of these are inter-spersed over the body, as in *L. tuberculata*. Colour (in spirit) olive-grey; probably olive-green and changeable when alive; the head and body speckled over with dark scales, and also with some scales paler than the rest, the long slender portion of the tail dusky black, and the lower parts pale or buffy-white, apparently suffused with crimson when alive; the throat and below the shoulders beautifully marbled with greyish-black, probably blue in the living animal. Entire length of specimen 11 in.; of which, tail 7½ in.; and hind-limbs 2½ in. Habitat uncertain; but believed to be Kashmir.

LAUDANUM, Tincture of opium.

2 Polyadenia,	1 Cylindrophne,	4 Machilus,
6 Daphnidium,	1 Actinodaphne,	8 Ocotea,
1 Benzoin,	1 Endlandra,	3 Alseodaphne,
1 Dodonænia,	2 Cryptocarya,	2 Camphora,
6 Litsea,	2 Bellschmiedia,	20 Cinnamomum.
25 Tetraanthera,	1 Cecidodaphne,	

LAUREL, a term applied to various plants: *Laurus nobilis*, *Linn.*, the Sweet Bay of Italy is the laurel of poets; *Cerasus laurocarasus* is the common laurel of English shrubberies, and the Portuguese laurel, is *C. lusitanea*.

LAURUS CAMPHORA.

LAUREL-LEAVED PASSION FLOWER, syn. of *Passiflora laurifolia*.

LAUREL OIL, Oil of *Laurus nobilis*.

LAURINEÆ, see Cinnamon, Cinnamomum iners.

LAURISTENE, is *Viburnum tinus*.

LAUROT ISLANDS, see Pulo laut.

LAURUS, a genus of plants, belonging to the natural order Lauracæ, of which the following species now mostly referred to the genus Cinnamomum, occur in the South-east of Asia:

bilocularis, cassia, cinnamomum, culitlawan, dulcis,	lanceolaria, multiflora, nitida, nobilis,	obtusifolia, porrecta, recurvata, villosa.
--	--	---

Some of the plants furnish useful products as the cinnamon tree of Ceylon "*Laurus cinnamomum*," the *L. culitlawan* of Amboyna; the *L. malabathrum* of several parts of India, and *L. nitida* of Pegu and Tenasserim. A species of *laurus*, producing a hard wood used in carpentry, is seen in Tavoy, where it is called kyaizai. A solitary post of a species of *laurus* is often found in Tavoy houses. There was one in Mr. Mason's which the white ants selected in preference to all others; and so long as left undisturbed, they never wandered from home. It may be an advantage to have one post in a house of this timber, but one is quite sufficient. The Kullowah, is a species of *Laurus*, an inferior sort of camphor wood. Bark fragrant.

The following are Burmese names for undefined species of *Laurus*:—

Ka rwa,	BURM.	Kheomna,	BURM.
Kyai zai,	"	Ka thee wa,	"
Kyai zai khyæ,	"	Ka thee nan,	"

LAURUS CAMPHORA, *Linn.*

Camphora officinarum, *Nees*.

Kafur,	AR., HIND.	Ghansar,	HIND.
Payok,	BURM.	Kayu kapur,	JAP.
Camphor tree,	ENG.	Barus,	MALAY.
Mushk kafur,	HIND.	Karpuram,	TAM.

A native of Japan, Formosa and of China, principally near Chin-Chew in the province of Fo-kien, Kiang-si, Hupch, and other Chinese provinces. It yields one of the camphors of commerce. The wood of this tree is made into boxes, which are valuable as a preservative against insects. The curious guardled and angular branches for which this tree is remarkable, attract notice. The tree does not blossom until it has attained a considerable size, the fruit is a purple berry the size of a pea, composed of a soft pulpy substance having the flavour of cloves and camphor. To this tree it is that the camphor of European commerce is chiefly due. To obtain the camphor, the wood is

LAURUS CASSIA.

cut into billets and boiled in water, in iron pots covered with earthenware heads filled with straw; the camphor volatilizes and concretes on the straw. This process is followed in Japan, Sumatra, Borneo and Malacca. Camphor is a principle found in many plants, but only in two in any great abundance. Camphor, like several substances the produce of countries to the southward or eastward of India, was unknown to the ancients. It was known to the Arabs, and called by them Kap'hur. Camphor is diffused through all parts of the plant, and can be separated from the root, trunk and branches, which when cut into chips, or split into billets, or boiled in water in an iron pot, covered with earthenware heads filled with straw, on which the camphor concretes, sublimed to the inverted straw cones contained within the earthen capitals. It is thus obtained in the form of crude camphor, chiefly from the province of Fokien and the opposite island of Formosa, but some of good quality is also procured from Japan. The Dutch exported from thence into Europe 310,520 lbs. in seven years. It is sometimes imported into Britain from Batavia. The ordinary crude camphor is in small greyish-coloured, slightly sparkling grains, which by aggregation form greyish crumbling cakes, with all the properties of purified camphor. In England this is separated from impurities by being mixed with lime and sublimed in thin glass vessels, which being afterwards cracked, the camphor is obtained in a concavo-convex cake about three inches thick with a hole in its middle. About 300 tons are annually imported into Britain, valued at 90s. per cwt. Camphor is solid, colourless, and translucent, with a crystalline texture, has a strong, penetrating, aromatic odour, and a bitter, rather pungent taste, followed by a sensation of coolness; though brittle, it is not, from its toughness, easily pulverized. Sp. Gr. .98 to .99; so that it floats on water, and, evaporating, produces a circulatory movement. From its volatility, it volatilizes at ordinary temperatures, and crystalizes on the inside of bottles.—*Royle's Materia Medica*; *Eng. Cyc.*; *Riddell*; *Fortune's Residence among the Chinese* p. 39; *O'Shaughnessy*, p. 545; *Hindoo, Med.*, p. 93. *Poole's Statistics of Commerce*; *Hogg, Vegetable Kingdom*, p. 622; *Smith's Mat. Med. of China*, p. 48. See Camphor.

LAURUS CARYOPHYLLUS, *Lour.*, syn. of *Cinnamomum culitlawan*, *Nees*.

LAURUS CASSIA, *Nees, Roxb.*

Cinnamomum aromaticum,	<i>Nees</i> .	Cassia lignea.
Cinnamomum albigerrum,	<i>Nees</i> .	Κινναμύων & Κασσία, Hip. Κασσία, Dioscorid.

LAURUS CINNAMOMUM.

The *cassia* tree is found in Malabar, Sumatra and Java, in China it grows chiefly in Kwangsi and Kweichau, and its dried bark affords the principal part of that spice used in the west. The bark is stripped from the twigs by running a knife along the branch and gradually loosening it; after it is taken off, it lies awhile until decay commences, when the epidermis is easily scraped off, and it is dried into the quilled shape in which it comes to market. The fleshy receptacles of the seeds of this tree, found in the pods, is also collected, and brought to market under the name of cassia buds, being applied to the same purposes as the bark; they require little or no other preparation than simple drying. The leaves and bark of the tree are also distilled and furnish cassia oil, a powerful and pleasant oil employed by perfumers and cooks. The valuable properties of the bark, depend on this essential oil. Bark, red-brown, occurs in fragments of a foot and longer, sometimes in plane pieces a line in thickness, and of variable width or in rolled smooth pieces with a greyish epidermis covered with lichens, chiefly graphides and locanora. Hard, inflexible, and with plane fracture. Odour aromatic, agreeable, but weaker than the true cinnamon. Taste sweetish, mucilaginous, rather acrid, bitterish and tenacious; powder of charmois leather colour. Cassia bark is much used for adulterating true cinnamon; it may be distinguished at once, by its very mucilaginous character when chewed. Mr. Marshall is of opinion that cassia bark is merely an inferior kind of cinnamon, obtained from the larger branches and trunk of the true tree.—*Williams' Middle King*, Vol. ii, p. 137; *O'Shaughnessy*, p. 543. See Cassia bark, Cassia buds.

LAURUS CINNAMOMUM, Andr. Repos.
Cin. aromaticum, *Nees*.

Cinnamon tree, ENG.	Kirfa, PANJAB.
Darchini, HIND.	Dar-sini, PERU.
Kalmi, "	Karuwa pattai, TAM.
	Sannala-wanga-patta, TEL.

This tree is rare in the Deccan, and is only to be found in private gardens, where it is most probably introduced from Ceylon. It blossoms in January and February, the seeds ripen in about four months, the berry is oval about the size of a pea, and when first gathered the taste resembles that of the Juniper berry, and when dry, if boiled, yield a substance which when cold becomes solid like wax, and may be made into candles; propagated by seeds, shoots, or layers; soil a sandy loam mixed with decayed vegetable matter.—*Ainslie's Mat. Med.*, page 264; *Riddell; Powell's Hand-book*, Vol. i, p. 373

LAURUS NOBILIS.

See Cassia Buds; Cinnamomum; Cinnamomum aromaticum; Cinnamomum zeylanicum; Darchini.

LAURUS CULITLAWAN, Rozb.

Laurus culitlawan, Rozb.
" *caryophyllus, Lowe.*
Cortex caryophylloides, *Lour.*

Cinnamomum culitlawan, <i>Nees, Blume.</i>	Soleoka, <i>Mathiolum.</i>
Tolakal, or Sindoc, bark, <i>ARAB.</i>	Selechacha, <i>Aricenna.</i>
Suleekhee, <i>ARAB.</i>	Iliscoo, <i>GREEK.</i>

This grows in Amboyna and the Moluccas. The bark is an aromatic stimulant like cassia, with some astringency and a flavour of cloves. It contains resin, volatile oil and bitter extractive. Dose 10 grains to $\frac{1}{2}$ a drachm. The oil is used in Amboyna as a stimulating liniment.—*Royle*, p. 325; *O'Shaughnessy*, p. 539.

LAURUS GLANDULIFERA, Wall.

Martaban Camphor wood, | Burmese Sassafras wood.
Tree galanga,

This is a very large tree, and furnishes the sassafras, and camphor wood of Nepal. It grows scattered sparsely throughout the Amherst, Tavoy and Mergui provinces. Its maximum girth 3 cubits, rarely 4, and maximum length 20 to 30 feet. It is procurable, from Amherst to Mergui, all along the seacoast at Yea, Henzay and other places. When seasoned, it floats in water. It has the odour of sassafras, is often used in house-carpentry, also for interior of junks, for inside works of drawers, boxes, &c., as its odour repels insects. It is a durable wood, when seasoned and worked up, remarkably tough and strong, excellent for planes, helves, and handles of tools generally, and would be valuable for almirahs in which to keep serge, hospital clothing, &c.—*Captain Dance*; *Dr. Mason*.

LAURUS MALABATHRICA, Rozb., Wall., syn. *Cinnamomum eucalyptoides*.

LAURUS MALABATHRUM, Fee.

Cinnamomum malabathrum, Nees, Ebermaier.
Folia malabathri of the ancients.

Leaves, Tej pata, BENG. | *Bark, Sadrus, Putruj, HIND.*

A native of the Malabar and Coromandel hills, and of the mountain ranges from Sylhet to Missouri. The odour resembles that of cloves; the flavour is aromatic and hot.—*O'Shaughnessy*, p. 539.

LAURUS NITIDA, Rozb.

Cinnamomum nitidum, Nees. | *Pa-na-tha, BURM.*

This and a second species, found in the Pegu and Tounghoo districts, are both small trees, about twenty feet high. Their bark is aromatic and affords an inferior kind of cinnamon.—*McClelland*.

LAURUS NOBILIS, Linn.

Hub-ul-ghar, (berry), *ARAB.* | *Zafnee, PERU.*
Sweet bay, *ENG.*

LAVANGA.

Hub-ool-ghar is the Arabic name of the berries, which are still used in medicine in India, with the Greek name *Daphne* corrupted into *Zaknee* and *Zafnee*.—*Hoyle*, p. 326; *O'Shaughnessy*, p. 538. See *Evergreens*.

LAURUS PARTHENOXYLON, *Jack*, *W. I.*

Camphora porrecta, *Linn.* | *Kayu gadis*, *MALAY.*
Laurus pseudo-sassafras, *Blume.*

A lofty timber tree, abundant in the forest of Sumatra. This species has considerable affinity to *L. cupularia*. The fruit has a strong balsamic smell and yields an oil, which is considered useful in rheumatic affections, and has the same balsamic odour as the fruit itself. An infusion of the root is drank in the same manner as *sassafras*, which it appears to resemble in its qualities. The wood is strong and durable when not exposed to wet, and in that case considered equal to teak. *Kayu Gadis* signifies the virgin tree, whence the specific name. This may be the oriental *sassafras* wood mentioned under the article *Laurus* in *Rees' Cyclopædia*.—*William Jack* in *Cal. Journ. of Nat. History*, Vol. v, p. 354.

LAURUS PERSEA. This tree grows to a large size and requires much water. The wood is very brittle. It bears fruit during the rains, from six to eight inches long, and in the thickest part about three inches in diameter. The outside has a dark green skin, rather thin; and inside a soft whitish pulp, which may easily be divided with a spoon. The seed will grow if planted immediately. The flavour of the pulp is sweet and creamy, and its name, *Subaltern's butter*, is derived from this particular taste and appearance. The natives do not seem fond of it.—*Riddell*.

LAURUS SASSAFRAS, see *Sassafras*.

LAURUS TAMALA, see *Cassia* buds.

LAUZ, *Ar.* Almond.

LAVA, *BENG.* *Lagenaria vulgaris*, *Ser.*

LAVA TRIBES, inhabit the mountains to the N. W. of Cambodia where they cultivate cotton, which their women weave into a coarse tissue used in Siam for shirts and musquito curtains. See *Lao*, *Lau*, *Lawa*.

LAVAJAH TIMBER, short round logs of timber in the Madras market, from 12 to 16 feet in length, 2 to 3½ feet square.

LAVANG KA TEL, *HIND.* Clove oil.

LAVATERA SALVITELLENSIS, common but showy annual flowers, colours pink, light-blue, they will thrive in any soil, and are increased by seed and cuttings of the ripened shoots.—*Riddell*.

LAVENDER, is a hoary, narrow-leaved, fragrant bush, with generally blue flowers, arranged in close terminal simple or branched spikes. Twelve species have been described, only two of which are of much interest, viz., the common lavender, *Lavendula vera*, and French lavender, *L. spica*. The former yields the fragrant oil of lavender used in perfumery, its solution in spirits of wine forming what is called lavender-water, and the latter oil of spike, used by painters on porcelain, and in the preparation of varnishes for artists. English oil of lavender is most esteemed: it is prepared chiefly at Mitcham in Surrey, where the plant is extensively cultivated for the purpose. It is in highest perfection when about a year old. At first it is nearly colourless, but gradually acquires a pale amber tint. Oil of spike or aspic, from *L. spica*, the broad-leaved lavender, is chiefly imported from the south of Europe.—*Tomlinson*; *Hogg*, *Vegetable Kingdom*. See *Essential oils*.

LAVENDER WATER is the distilled water of lavender flowers. The flower dew-water of the Chinese, is the dew gathered at early morning from certain alliaceous plants and especially from that of the sweet flag.

LAVENDULA CARNOSA.

Sitake; pungerie, *DUK.* | *Karpoorawulli*, *TAM.*
—*Ainslie*, p. 252. See *Anisochilus carnosum*, *Wall.*

LAVENDULA SPICA, yields an oil much used by porcelain painters, and called "oil of spike."

LAVENDULA STÆCHAS, *W.*

Æta-kudus, *ARAB.* | *Osta-kudus*, *ARAB.*
Oostakhoodus, " | French lavender, *ENG.*

This is much prized by the Arabs, as an expectorant and anti-spasmodic. It is imported

into Bombay from the Persian Gulf, and is used medicinally by the natives of India.—*O'Shaughnessy*, p. 489; *Faulkner*.

LA VENDULA VERA.

Lavandula apica, DC.

Sita-ki-pungeri, DUK. | Common lavender, ENO.

This native of Europe has small, bluish flowers, calyx, tubular, cylindrical, streaked, tomentose, corolla infundibuliform, pubescent, tube rather longer than the calyx, limb with five unequal divisions, upper lip large, obcordate, bifid, lower lip trifid. Odour agreeable and penetrating, taste aromatic, acrid, rather hot. It grows to great perfection on the Neilgherry hills. The bush there has a strong aromatic scent, but seldom survives more than two years. Is propagated by cuttings and layers, in a good rich soil. Lavender requires pot culture and careful renewing of the stock every season by cuttings, old plants being very uncertain; should be planted in rather poor soil. Seeds sown at the commencement of the rains. The volatile oil is limpid, very transparent, yellowish white; four parts contain nearly two of camphor. Often adulterated with the oil of turpentine, and of a species of lavender of superior or aromatic power, though more acrid. Wight gives *Lavandula Burmanni*, and *Lavandula Lawii*.—*O'Shaughnessy*, pp. 488, 489; *Faulkner*; *Riddell*; *Jaffrey*; *Wight's Icones*.

LA VU CHERUKU, TEL., var. of *Saccharum officinarum*; Laviu, in Telugu, means "thick, robust," and indicates a thick kind of cane.

LAW, John, of Lauriston, a great financier of England, who united all the South Sea companies into one company of the Indies.

LAW, Monsieur, a descendant of John Law, of Lauriston, who started the South Sea Company. Monsieur Law in 1748 defended Ariacopang, and subsequently commanded the French troops with Chaudah Sahib at Trichinopoly. His command was not advantageous to the French interests. He delivered up Chaudah Sahib to Monaji Rao, and on the 3rd June capitulated and surrendered himself and all his troops and stores to Major Lawrence—*Orme*.

LAWA, a tribe, in lat. 21° 20' N., west of the Mekhong river, and dwelling along with the Karen, in the mountainous tract, due east of Kalagouk island at the source of the Sesa Wat river, in lat. 15° 30' N., and long. 99° E., and others in lat. 18° 20' N., and long. 28° 40' E., at the sources of the Meping river which unites with the Menam river. A body of savage Lawa dwell east of the Salwyn river, in lat. 22° N., and long. 98° 40' E., with the wild Kakui, Shan and Nutsa on the east. A Lawa population also dwell on the

water-shed between the Irawadi and Menam, on the frontier of Siam and Ava. Dr. Latham considers the word to be the same as Lao, Lau, or Laos.—*Latham's Desc. Eth.* See Lao, Lau.

LAWANA TRAVAGUM, TEL. Muria-tic acid.

LAWANG, or Kulit Lawang, MALAY. The clove bark of commerce. According to Crawfurd, this is the bark of the *Cinnamomum sinto*, and takes its name from having a clove flavour. It is a produce of Borneo and an object of export to China.—*Crawfurd*, p. 215. See *Cinnamomum culitlawan* and *Laurus culitlawan*.

Linone; Renna, IT. |

A fine cambric, made in Scotland, Ireland, and in France.

LAWN, in lat. 1° 34' S., six miles E. of Kekik.

LAWRENCE. In the nineteenth century, several brothers of this name, served in India. They were the sons of a military officer. Sir Henry was killed at Lucknow, during the revolt, 4th July 1857. Sir John was Viceroy of India in 1866-7 and 8.

LAWRENCE ASYLUMS, a series of educational institutions, endowed by Sir Henry Lawrence.

LAWRENCE, Baron, John, a Bengal civil servant, Lieut. Governor of the Panjab, and Governor-General of India. He was Commissioner in the Panjab during the revolt and rebellion of 1857. By his energy, he saved the Panjab and India, and in reward was made Governor General and Viceroy. But his career as viceroy disappointed hopes, and seemed to show that he was better qualified to shine in emergencies than in the routine of ordinary policy. He evinced a tendency to advance favourites to the neglect of eminent men, and his tenure of office was marked by an overruling desire to retain peace, from which much obloquy befel him.

LAWRENCE, Major, a distinguished officer of the British E. I. Company, in 1748, Commander-in-Chief of all the Company's forces in India. He repulsed the French in their attack on Cuddalore in June, but in

August was taken prisoner. The following year he commanded the division sent against Tanjore, and took Devicottah and returned to Britain in October 1750. In 1752 he fought along with Clive against the French at Trichinopoly, took Elmiserum and sent Clive to Samiaveram and received the surrender of Monsieur Law. For several months in 1754 he bravely defended Trichinopoly against the French, and received the commission of Lieut.-Col. of the British Army, with a sword from the East India Company, but, he felt aggrieved at being superseded by Lieut.-Col. Adlercron to the general command of the British troops in India.—*Orme*.

LAWSONIA INERMIS, *Linn.*; *Roxb.*

Henna, GUZ., HIND.	Iveni, "
Mendi, "	Pachoha pedda goranta, "
Hana, MALAY., PERS.	Na-krie, TRANS-INDUS.

The Henna shrub is the camphire of the English Bible, and the cypress shrub of the Greeks and Romans. It is held in particularly high esteem by the Greeks, the Arabs, the Turks, and Indian and Persian mahomedans, and they think that they make an agreeable present when they offer a person a posy of its flowers. This plant is particularly agreeable to the eye and the smell, the colouring of the flowers is soft, and they spread the most delightful fragrance to a great distance, and fill with balsamic odour the gardens and rooms which they adorn. It is extensively cultivated by the Burmese, and hedges formed of it are common in all India. Lawsonia inermis furnishes an important reddish-brown dye stuff, and the distilled water of the flowers is used as a perfume. The extract of the flowers, leaves, and shoots is used by the hakims in lepra, and in obstinate cutaneous diseases, half a tea-spoonful being given twice in 24 hours. The mahomedan women in India, Persia, Arabia and Barbary use the shoots for dyeing the nails red. The leaf, triturated with rice, gruel or water, is used in staining the nails, palms of the hands and soles of the feet, of a red colour. In all these countries the manes and tails of the horses are stained red in the same manner. It forms a fine hedge and perfumes the air, with a delicious fragrance. Ispond, the seeds of this plant are burnt as a charm with benjamin or with mustard seed and patchouli, Pogostemon patchouli. It is a hedge plant, resembling the English privet. Its wood is strong and suited for tool

handles, tent pegs, &c., the leaves yield the dye used by the natives, to which Moore alludes, when he says,

Thus some bring leaves of henna to imbue
The fingers' ends of a bright roseate hue,
So bright, that in the mirror's depth they seem
Like tips of coral branches in the stream.

This use of the leaves is as old as the Egyptian mummies, and is still practised by Southern Asiatics.—*O'Shanghnessy*; *Faulkner*; *Catalogue of Madras Agri-Horticultural Society's Gardens*; *Mason*. See Henna.

LAYANG, see Tin.

LAY MAY, see Karen.

LAYA DE BARRO, Sp. Earthenware.

LAZARUS. On the festival of St. Lazarus, Magellan discovered that group of more than forty islands, the most northern in the Archipelago, to which he gave the name of the saint, but which were afterwards named in honour of king Philip. Thirteen only of them are remarkable. They occupy the only part of the Archipelago liable to hurricanes, and derive many of their characteristics from this circumstance,—a soil of superior fertility, and adapted for peculiar kinds of cultivation as well as for wheat and rice, without fragrant spices, or fruits of very delicate flavour. Their appearance is singular. In many parts covered with basalt, lava-ashes, traces of volcanic eruptions, and other ruins of nature, they possess a rich alluvial soil. Beneath the surface, the internal fires of the earth are in continual activity.—*Walton's Preliminary Discourse*, p. 67; *Crawford's Indian Archipelago*, Vol. i, p. 11; *John's Indian Archipelago*, Vol. i, p. 103.

LAZHU, HIND. Allium rubellum.

LAZ-UN, BURM. Pongamia atropurpurea.

Lead, the saturn of the ancients, is one of the most anciently known of the metals. It is found chiefly as sulphuret or galena, but a little in a metallic state also, as an oxide, and

LEAD.

combined with several acids. A soft and flexible metal of a pale livid gray colour, easily malleable, but slightly tenaceous, and not sonorous. It is of common and extensive use in the arts. Alloyed with tin in different proportions, it forms solder and pewter, and with antimony it constitutes type metal. Combined with oxygen, it forms massicot, a protoxide of a pale-yellow colour; Litharge, also a semi-crystalline protoxide, obtained in separating silver from lead ores, enters largely into the composition of flint glass; minium or red lead, duetoxide, extensively used as a paint, and also in the manufacture of flint glass; the carbonate of lead or white lead, is a dense white powder, commonly employed as a pigment; the chromate of lead, of a beautiful yellow colour, is also much used as a pigment; and the acetate or sugar of lead, is employed for various purposes.—*Royle, Mat. Med.*

LEAD, Acetate of

Yuen-shwang, BURM.

This substance is made by the Chinese, by mixing up an amalgam of 14 parts of lead and one part of mercury, and exposing sheets of it to the fumes of vinegar in covered jars for some time.—*Smith.*

LEAD, Black, or Plumbago, is found in Ceylon, in Travancore, also in the northern Circars at Vizianagram. Some from Bangalore of good quality for common purposes, is sold for antimony in the baznars.—*Rohde's MSS.*

LEAD, Carbonate of

Carbonate of lead, ENG. | Cerussa, ENG., LAT.
Sub-carbonate of lead, ..

LEAD, Chromate of, Valayati Peori, is a precipitate produce by the addition of bichromate of potash to a solution of acetate of lead. It is the chrome yellow of artist's colormen. It is called "peori," from its resemblance to the "hardwari peori," or Indian yellow.—*Powell's Hand-book.*

LEAD, Red

Ingur, Sandur,	HIND.	Gunga sanduram,	TIB.

This is largely used in India and China for painting, glass making and decoration. It is manufactured in Kiang-si in China. In the Madras presidency, it is used both as a pigment and drier by moochies: Hindoos use it for religious purposes, smearing it on their idols, &c., putting it on their rupees at certain seasons for good luck, and in numerous places in the peninsula it is to be seen smeared on stones to convert it into a "dev" or object of worship.—*Rohde's MSS.*

LEAD ORE.

LEAD, Semivitrified oxide of

Mih-to-sang,	CHIN.	Murdar Singh,	HIND.
Litharge, oxide of		Lithargyrum,	LAT.
Lead, fused,	ENG.	Plumbi oxydum, se-	
Litharge, Protoxide		mitreum,	
de Plomb,	FR.	Murdara-singy,	TEL.
Blei-oxyd,	GER.		

This oxide of lead was known to the ancients: when lead continues to be exposed to a current of heated air, the surface of the metal becomes rapidly covered with a scaly powder of a sulphur-yellow colour, which is the protoxide of lead, and which, being skimmed off, is known in commerce by the name of massicot. When the heat is continued to a bright red, some metallic lead is separated, the oxide is fused, though imperfectly, and on cooling becomes an aggregated mass, which readily separates into crystalline scales, of a greyish-red colour. These form the litharge of commerce, which varies in colour, and is called gold litharge when of a red colour, owing to the presence of a little red lead, but silver litharge when lighter coloured. These are frequently obtained in the process of refining gold and silver by means of lead, and in separating the silver from argentiferous lead. The litharge of commerce is liable to contain a little iron, also copper, carb. lead, silica, and other earths. Litharge is employed for making diacetate of lead, and by combining with oil to form the lead plaster, which is the basis of several others. It is used as a drier in painting, but only seldom, the red lead being preferred by moochies, it is however suitable for rendering oil drying for varnishes.—*Rohde's MSS.; Royle's Materia Medica; Smith's Materia Medica; Birdwood, Bombay products.*

Carbonate de Plomb, Fr.			

This is manufactured in Europe, America and China, from which places it is imported and used as a white paint: when exposed it rapidly decomposes the oil with which it is mixed, or it changes from the presence of hydrate of lead or adulterating additions. Oxides of lead should be avoided in all outside work in India.—*Rohde's MSS.; Smith's Mat. Med.*

LEAD ORE.

Lead glance,	Blei-glans,	GER.
Sulphuret of Lead,	Galena,	LAT.
Plomb-sulfure,		

This is the richest ore of lead, and from which that metal is chiefly obtained. As met with in commerce it is in heavy, shining, black, or bluish lead-coloured cubical masses,

LEAD ORE.

having a great resemblance to the sulphuret of antimony. The old lead mines of Kohel lie near the Red Sea, a day's journey N. by E. from Jabel Zubara, in about lat. $24^{\circ} 40'$. Not far distant are the lead mines of Jabal Rassas, lit. mountain of lead. The mines are situated about $1\frac{1}{2}$ mile from the W. shore of the Red Sea. The ores, galena and carbonate of lead, occur in an argillo-siliceous schist, associated with small quantities of sulphur and iron—a poor carbonate. Seven excavations, mostly from three to four feet broad, and five feet high, run down an inclined plane cut in steps. Galena was found in the shaft, but the indications discovered are not favourable. Besides other minerals, titanated iron, manganese, zinc and fire-clay have been discovered here. The surface of the rock between the mines and the shore is coral limestone, covered with a gravel of granitic gneiss, porphyry pebbles. These mines were worked by the ancients: and the ruins of an old, but not extensive station still exist, in detached buildings of loose stones and foundations—some round,—others square. Water is brought from Jabel Egleh, or Edjleh, four or five hours' distance. Lead ore, is also found in Oman and at Ras-ul-Had in Arabia: also in the mountains of Baluchistan, where the nomade Brahui pick it up from the surface soil. Lead mines exist at Kappar in the hills contiguous to Baghwan and Khozdar. Lead occurs at Raie, Chendak, Kerrage, Patal, Dhunpore and Jak. At Dessouly, about fifty-five coss east of Sirinagur, is a lead mine of considerable value.

Captain Turner informs us, that at a place situated nearly two days' journey from Tessoolumboo, in Thibet, there is an ore which much resembles some of those in Derbyshire in which the lead is mineralized by sulphur. Lead is also worked at Jammu, and large quantities of galena or lead ore are imported from Kabul and Kandahar, this is principally imported under the name of antimony, from which natives of India do not distinguish it, and being reserved for medicinal purposes, finds its way only to the druggists.

This metal at Jungumrauzpillay, in the Cumbum district, is in combination with varying proportions of Iron, Antimony, Silver, Sulphur, Argil and Silix. There is a Lead Mine at Baljavar, a day's journey north of the Oxus, so rich in the ore, that the people who work at it for two months, earn sufficient for a year's subsistence. In a defile close to Bamian there are ten or twelve lead mines. There are also lead mines at Lara, Leedang, Pokso, and some other places; they are very productive, but the lead is reckoned inferior to that of Sirmoor and Jounsar: it sells at two

LEAD ORE.

or two and a half pounds per rupee. The Galena of Jungumrauzpillay near Cuddapah, has been examined by Dr. Scott. In the Dhone taluq, Kurnool, from which Galena in very large blocks has been obtained, one piece measured about 18 inches in diameter and weighed upwards of 3 cwt. This ore was carefully tested by Dr. Scott about the year 1855, and was then found to contain from 53 to 70 per cent. of lead but no silver, but some of the last consignments were found to be rich in silver. It was tried at the Mint and yielded a large percentage of lead. It has been used for some years at the Madras School of Arts for glazing pottery, and answers well for that purpose, though it is found to succeed better when reduced to the form of minium, and then ground with felspar and an alkali. The raw galena only answers for the softest and commonest glazes, and the per-centage of impurities mixed with this description varies so considerably, that it has been found safer to reduce it from the state of sulphuret to that of an oxide before applying it to the wares. Much of the pottery from the Madras School of Arts has been glazed with this galena in different states. Galena is also known to occur as mineral specimens at the Neilghorries and in two parts of the Cuddapah district. The Kurnool lead-ore was brought to notice by Captain J. G. Russell and occurs in large quantities and in blocks of great size in the vicinity of Kurnool. It was discovered accidentally by the late ex-nawab of Kurnool, in digging a well. The re-examination of the first specimen of the Kurnool ore proved it to contain upwards of 1 per cent. of silver, or 374 ounces in the ton, the quantity of lead and silver together being only 45 per cent. which was occasioned by there being a considerable quantity of gangue disseminated through the portion examined. Another specimen, given by Colonel Cotton and also said to be from Kurnool, was found to contain = 175 oz. 3 dwts. of silver in the ton. A specimen of this unwashed ore was again analysed by Dr. Scott in 1859, and when fused with carbonate of soda and nitrate of potash, produced about 60 per cent. of metallic lead. The resulting lead, on being cupelled, furnished a bead of silver weighing 1.18 grs., which is equivalent to 96.64 oz. in the ton of ore, or 165.76 oz. in the ton of metal. In the recent researches of Malagah and Dorochet they have found that when sulphide of silver is associated with the sulphides of other metals, it is always unequally distributed. Lead is found in several places in the Burmese territories, but is only worked to a very limited extent, being chiefly brought from the Shan states. It is used all

LEAD ORE.

over Burmah for musket bullets, in refining silver, and as small change in the bazaars. Its price varies from 5 to 8 tikals the viss. At the beginning of 1855, it sold in Calcutta for six rupees per bazaar maund of 82 lbs., but it since rose to 8 rupees, in about two years from opening the trade after the war. The quantity exported from Rangoon in 1854-55 was 558,885 viss, value Rs. 166,382, and in 1855-56 was 428,658 viss, of value Rs. 115,130. Lead ore, of the richest kind and containing a large quantity of silver, is obtained in the province of Mergui. The limestones of the Burmese provinces probably contain large quantities of lead. In the valley of the Salwen, there is a rich vein of argentiferous galena, which is reported to appear on the surface. A specimen that Dr. Morton sent to England for analysis, was said to be a very valuable mineral, and destined to make a fortune for some one. Professor Mitchell in the certificate that he furnished Dr. Morton of the analysis, says it contains,

Lead,	Gold, (traces)	Iron,
Sulphur,	Lime,	Silica,
Silver,	Magnesia,	Carbonic acid,

it is a sulphuret of lead or galena and the quantity of lead and silver appears to be considerable, but there was not sufficient of the mineral to estimate either. The ore is seen in the limestone precisely as galena is found in the limestone of the Mississippi, one of the richest known deposits of lead in the world. Mr. O'Reiley states that a carbonate of lead exists near the head-waters of the Houg-darau. Galena or sulphuret of lead, a rich ore of lead from Martaban containing silver has already been noticed. At the Madras Exhibition of 1857, a rich ore of argentiferous galena was exhibited from Martaban by Dr. Brandis, granular, or in minute crystals, with silver passing through it in thready veins. This ore, assayed by Dr. Scott, contained about 80 per cent. of lead. But the quantity of silver was found to vary in the portion examined from 70 to 300 ounces in the ton of ore. It is impossible therefore to say what its commercial value may be, unless an average sample were obtained, but if the ore exists in any quantity and of the same quality as that examined, it is a most valuable one, and would be well worth working by Pattenson's mode for separating the silver, by careful slow cooling and crystallization, as the process proves remunerative where only 7 ounces of silver can be obtained from a ton of metal. This is probably the ore referred to by the Rev. Francis Mason, A. M., in his publication on the natural productions of Burmah, where he says the limestone of

LEAF INSECT.

the provinces probably contains large quantities of lead. In a small hand-specimen from Martaban, the amount of silver he says was found to vary in different portions of it, the per-centage of lead being about 75. In the first trial the silver was found to amount to about 70 ounces to the ton of ore; but in the second to not less than 300 ounces in the ton, or a little less than 1 per cent. Galena occurs in China, in Cheli-kiang, Fuh-kien, and Sech'uen.

The Malay and Javanese term for tin "timah," is a word used in the Archipelago, as a generic term for both tin and lead, the epithet "white," or "flowery,"—"putih" and "sari," being given to tin itself, and that of "black," "itam," to lead, a metal with which, being entirely a foreign product, the Malayan nations are but little acquainted.—*Newbold; Powell's Hand-book Econ. Prod., Panjab, p. 10; Turner's Embassy; M. E. J. R.; Ains. Mat. Med., p. 56; Waterston quoted by Faulkner; Oldham in Yule's Embassy, p. 345; Captain Gerard's Account of Koonawur, p. 146; Cat. Exhibition 1862; Mason's Tenasserim; Smith's Materia Medica.* See Elburz, Galena, Iran, Japan, Kappar, Silver.

The first invented drinking cup or eating vessel seems to have been made from the leaf (pat) of particular trees, such as the palasa (*Butea frondosa*) and burr (*Ficus indica*.) Cups of a beautiful brown earthenware, are made at Kotario, and are chiefly the patera of a perfectly classical shape. The word Pat seems to occur in the Roman patera, or the Greek or Saxon pot?—*Tod's Rajasthan, Vol. i, p. 333.*

LEAF INSECT. One of those of Ceylon, the true leaf insect, is the *Phyllium siccifolium*. It eats leaves and those of the jambo in particular. The *Phyllium scythe*, common in the East Indies, is called the walking leaf. It seems, indeed, to be a bunch of leaves endowed with life. A writer of the seventeenth century gravely related that "these little animals change into a green and tender plant which is about two hands'

LEATHER.

breadth. The feet are fixed into the ground first; from those, when necessary, humidity is attracted, roots grow out, and strike into the ground; thus they change by degrees, and in a short time become a perfect plant, while the upper part remains as before, living and moveable. After some time the animal is gradually converted into a plant." The edges of the wings seem torn and ragged, and, moreover, stained with dirty brown, as if from incipient decay. Upon close inspection, the jagged margin and the stained spots that imitate decay, are observed to be as carefully executed as the ocelli that ornament the gayest butterfly. The leaf insect moults its skin three times, each time making a gradual advance towards its perfect form. The third time the full-grown wings and antennæ are produced. After each moulting the body of the animal is soft and tender, and in a few minutes expands to a larger size. In the course of half an hour its body and wings acquire their proper firmness, and the insect is prepared to enter upon its appointed course of life. Looking at this curious insect, it is impossible not to feel what must be the goodness and superintending love of a Being, who with such minute care protects and provides for a creature apparently so humble and so insignificant. The twig-like leaf-insect is a species of *Phasma*. The *Mantis religiosa*, or the Soothsayer, *Le Precheur* and *Le Prie Dieu* of the French, is a predacious insect-devourer, catching butterflies and other insects with its formidably armed forelegs, and then devouring its captures. Hooker in his 'Himalayan Journal,' mentions that the predacious *Mantis* was erroneously supposed by the natives to feed on leaves.—*Churchman's Family Magazine*. See *Mantis*, *Phasma*, *Phyllium*.

LEANG, CHINESE. An ounce of silver, is reckoned equivalent to 6s. 8d. sterling.—*Stanton's Narrative*, pp. 111, 135.

Leather-making is a chemical art with which the hindoos have long been acquainted, though it is doubtful whether they ever made leather of very superior quality; but the art is practised in the native states where it is not likely to have been introduced by European influence, as for instance, in Cashmere and in Cutch, where skins dyed of different colours, are made. Leather of very excellent quality

LEATHER.

used to be made at the Government farm at Hoonsoor in Mysore, likewise in Calcutta, and the native shields are not to be surpassed. The manufacture of leather in the Madras Presidency, generally, is by no means so thriving as it might be, considering the great abundance of tanning materials at command. This is probably owing to the very low rank of the artisans, (Chuckler, or Chakili, or Chamar,) for the art of leather production is well-understood and successfully practised by the European tanners at Pondicherry, Hoonsoor, Guntoor, Bangalore and Madras, the leather being scarcely inferior to that made in Europe. Goat skins, sheep skins, buffalo and bullock hides are much used and are generally procurable, but are very badly dressed; indeed, currying the leather being the province of the shoe-maker's wife, while manufacturing it for the market belongs to the husband, inferiority of Indian leather may be ascribed to want of skill on the part of the currier, and to the use of quicklime. There is no better tanning material than oak bark, but similar substances, if treated with care and skill, may be employed with great success, as for instance, divi divi, catechu, Cassia auriculata bark, gambier, &c., which produce their effects more rapidly, and the leather so manufactured is said to be nearly as durable. Leather is a chemical combination of skin with the astringent vegetable principle called tannin or tannic acid. The manufacture in Great Britain ranks next in importance to that of cotton and of wool, and is probably equal to that of iron. There is a large and constant demand for leather as an article of clothing: it enters into the construction of various engines and machines; supplies harness for horses, linings for carriages, and covers for books; it was probably at the earliest period of man's history that an art so necessary to his comfort and welfare became known. The skins of animals taken in the chase are in their fresh state tough, flexible and elastic, and seem, at first view, to be well-adapted for clothing; but in drying they shrink, become horny, pervious to water, and, on exposure to moisture, putrid and offensive. But if the skin be separated from fleshy and fatty matters, and then be put into a solution of certain vegetables containing tannin, which abound in almost every country, the skin separates the whole of the tannin from the liquid, and becomes hard, insoluble in water, almost impenetrable by it, and incapable of putrefaction. The subsequent operation of currying renders it pliable and more waterproof. Similar but less decided changes are produced upon a skin by impregnating it with alum, and also with oil or grease. The object of these pro-

LEATHER.

cesses being to render soft and flexible that which would otherwise be hard and unyielding, the skin thus transformed was called by the Saxon races lith, lithe, or lither,—that is, soft, or yielding, whence the English term leather. The word tan, and the French tanner, are from the low Latin, tanare. All tanned leather is classed under the denominations of Hides, Kips and Skins. From these there are various kinds of leather tanned in England: 1st, Butts and backs, which are selected from the stoutest and heaviest ox-hides. The "butt" is formed by cutting off the skin of the head for glue; also the cheeks, the shoulder, and a strip of the belly on each side. In the "back," the cheeks and belly are cut off, but the shoulder is retained. The *butt* or *back* of the ox-hide forms the stoutest and heaviest leather, such as is used for the soles of boots and shoes, for most parts of harness and saddlery, for leather trunks and buckets, hose for fire-engines, pump-valves, soldiers' belts and gloves for cavalry; 2nd, Hides, consist of cow-hides, or the lighter ox-hides; they are the same as butts with the bellies on. Hides are sometimes tanned whole, and are struck for sole leather, in which case they are called crop hides; 3rd, Skins, these are used for all the lighter kinds of leather. The hides of South America are in high repute; they are the produce of the half-wild cattle which pasture on the wide plains between Buenos Ayres and the Andes. Hides are also imported into Britain from various parts of Europe, as also from Morocco, the Cape of Good Hope, very extensively from India and other places. They are imported dry or salted. The following were the imports into the United Kingdom for the years 1850 and 1851:—

River Plate & Rio Grande.		East India Horse.	
Dry.	Salted.	Kips.	Hides.
1850.....29,820	630,400	1,606,380	231,510
1851.....62,640	749,540	2,262,700	140,640

About the year 1850, nearly forty thousand tons of leather, hides and skins were annually imported into Britain.

Bull-hide is thicker, stronger, and coarser in its grain than cow-hide. The hide of the bullock is intermediate between the two.

Calves' skin is thinner than cow's, but thicker than most other skins. It is tanned for the bookbinder; but the greater part is tanned and curried for the upper part of shoes and boots.

Sheep-skins. Besides local supplies, many thousands are imported from the Cape of Good Hope, British India. Those of the Cape are distinguished by the greater width of the skin that covers the tail. They are simply tanned, and employed for various

LEATHER.

purposes for which a thin, cheap leather is required; such as for common bookbinding, leathering for common bellows, whip-lashes, bags, aprons, &c. Sheep-skins also form the cheaper kinds of wash-leather for breeches, gloves, and under-waistcoats; as also coloured and dyed leathers and mock-morocco, used for women's shoes, for covering writing-tables, stools, chairs and sofas, lining carriages, &c.

Lamb-skins are imported into Britain from the north of Italy, Sicily and Spain, and are dressed white or coloured for gloves. The skins of goats and kids form the best kinds of light leather. The chief supply of the best kid-skins is from Switzerland and Tuscany, whence they are shipped, chiefly at Leghorn. Lamb-skins are very extensively used with the hair on in the N. W. Himalaya, Affghanistan, Hazara, Kafiristan, Tartary in Tibet, China, Persia, as articles of dress for the head and for mantles.

Goat-skins for Britain are principally obtained from British India, the coast of Barbary and the Cape of Good Hope. They form the best dyed morocco of all colours. Kid-skins supply the finest white and coloured leather for gloves and ladies' shoes.

Deer-skins from New York, New Orleans, Canada, and India. Antelope skins from the Cape of Good Hope are of good quality. Deer skins are all shamoyed, or dressed in oil, chiefly for riding-breeches. Shamoyed leather, of sheep, goat and deer-skins, was formerly a lucrative branch of the leather trade of Great Britain. This kind of leather is employed for breeches, white or dyed, worn by persons who ride much on horseback. In wet weather leathern garments fit close to the skin, and are long in drying, so that the weavers are liable to colds, rheumatism, and other complaints.

Horse-hide is tanned and curried for harness work, for collars, &c. It has of late years been substituted for seal-skin, but does not produce so good a leather. Enamelled horse-hide, split or shaved thin, is used for ladies' shoes, in imitation of seal.

Dog-skin, is thin, but tough, and makes good leather. Of late years, horse-leather takes its place for thin dress-shoes. Most of the dog-skin gloves, are really made of lamb-skin.

Seal-skin makes a valuable leather, but a large proportion of seal-skins is used as fur for covering caps.

Hog-skin, affords a thin, porous leather, which is used for covering the seats of saddles.

In N. W. India, as Mr. Powell informs us, Russia leather "balghar" occasionally comes to Peshawur. A kind of leather having a metallic lustre, called "kimsana," is imported

LEATHER.

also from the north-west; also a beautiful leather, used in the manufacture of the bright blue green shoes from Kashmir and Peshawur, which is called "kimakht." This is not made in the Punjab. Peshawur sword scabbards are often covered with a black leather, looking like morocco, it is probably an imitation. Russia leather is said to be made of horse's skin, it is thick but pliant, and of most grateful fragrance. The skins are much valued for the preservation of merchandise, as insects will not attack them.

The staple manufacture of Cawnpore is leather. There are about fifty tanneries, each of which turns out on an average 1,200 hides a year, or 60,000 hides yearly on the whole. The average value of a hide tanned by the native process, being about 4 Rs., the total annual value of the out-turn of tanned hides is 2,40,000 Rs. Besides the hides tanned in Cawnpore itself, about 180,000 hides are yearly tanned either at Meerut or in the adjacent villages of the Cawnpore district. Those from Meerut are said to be of superior quality: the village hides, on the other hand, are inferior to those tanned at Cawnpore, and are mostly taken from cattle which have died of disease. The total number of hides used yearly at Cawnpore is thus about 240,000, and their value 9,60,000 Rs. In addition to the tanning trade there is an extensive business done at Cawnpore in the manufacture of saddlery, harness, boots, shoes, and other leathern articles: there are 52 saddlers and 55 shoemakers' firms, which make up goods for the European market, and about 200 shops which supply the native market—the latter deal chiefly in shoes made in the native fashion. The value of the shoes made for the native market is about 40,000 Rs. annually. Leathern articles made at Cawnpore are exported to Meerut, Benares, Central India and Rohilkund, whence they find their way extensively to other parts of India. The places above-named carry on a direct trade with Cawnpore. There is no export trade to Europe or America. In British India the quality of the leather produced by the native process is decidedly inferior. The native tanner does not leave his hides to soak in the pits containing his bark infusion, but, having sewed up a quantity of bark in the skin (made into a kind of bag) he exposes it to a constant stream of water, which forces the astringent matter into the pores of the hide very rapidly: but to make the process still more rapid the hide is taken out, wrung, and re-filled every four or five days. A hide can be ready in this way in about a month, but the leather is less strong,

LEATHER.

durable and pliable than English leather. The currying process also is often entirely omitted, and when performed it is generally on a minute scale and very inefficiently.

The English system of tanning is more costly than the native. This circumstance would be a bar to the introduction of English tanned leather into the native market, where cheapness is the first requisite. But for the supply of government contracts, and for the articles used by the European community in India, there is no question that Cawnpore could be made to afford ample quantities of leather and leathern articles at comparatively moderate prices. As it is, the manufactured articles sold to government and to private purchasers are hardly inferior to those manufactured in England, except in the quality of the leather and other materials. The workmanship is very little worse than that of an average English artisan. Indian hides cannot compete in quality with the hides of well-bred and fed English cattle. There is a considerable trade in raw hides between India and England, and it seems not unlikely that if a better process of tanning were established, tanned hides might be exported to England with economy. The circumstances which made Cawnpore an emporium of this trade appear to be *first*, that a great part of the population of the old town of Cawnpore were chumars (shoemakers); *next*, that Cawnpore was a considerable military and civil station.

Vegetable substances used in tanning.—

The tannin or tannic acid of different vegetables does not appear to be the same astringent substance, but the differences between tannins from different sources are small, and are chiefly interesting to the chemist. There are, however, certain broad features which are alike in all. Tannin is characterised by an astringent taste, and by its bluish-black or dark-green precipitates from aqueous solutions, by the solution of salts of the peroxide of iron: it also affords a dirty-white or brown precipitate with a solution of gelatine. Tannin is most easily procured in its pure state from gall-nuts. Gallic acid exists ready formed in gall-nuts, sumach, mango seeds, divi, valonia, tea, &c., and is probably formed in all cases from the decomposition of tannin. Sumach is peculiarly liable to fermentation, probably in consequence of the malic acid present in the leaves. Hence it is of great importance to the tanner to become acquainted with the circumstances which favour the conversion of tannin into gallic acid; and to avoid them if possible, for this is a positive source of loss. In the spent or waste tan liquors there is a considerable

LEATHER.

proportion of gallic acid. There is an opinion among tanners, that the presence of gallic acid is useful; and when hides have been cleansed with lime-water, they are left for a time in the waste liquor, the gallic acid of which is said to expand the hides, and facilitate the penetration of the solution of tan, when the hide is transferred to a stronger liquor. Now, as almost any other acid would answer this purpose (indeed water soured with sulphuric acid is so used), it certainly does appear to be a circuitous as well as costly method of getting an acid by the decomposition of tannin.

Oak-bark in Europe, is a most important tanning material. It must be stripped in spring, for it then contains more tannin than bark cut in autumn, and this again more than that which is taken in winter. The trees are felled about May: but in some cases, a small quantity is cut down about two months later: this is called midsummer bark, but it is now seldom seen in the market. The quantity of tannin is considered by tanners to be in proportion to the freedom with which the sap flows at the time of stripping, and to the facility with which the bark is removed. Bark which has the appearance of having been removed with difficulty, fetches a lower price than that which appears to have come off with ease. The richest bark is obtained in the warmest spring, for then the sap is most abundant. A few days of cold previous to the felling and stripping reduce the proportion of tannin and sap. The bark of coppice trees about 12 years old contains more tan than younger trees, and these more than old ones. Oak bark contains from 5.6 to 6.0 per cent. of tannin, and in this as in other astringent barks the tannin is contained solely in the inner white layers next the alburnum, the middle coloured portion containing most of the extractive matters, and the epidermis or exterior but little extractive and no tannin. From 4 to 6 lbs. of oak-bark are required for the production of 1 lb. of leather. In Europe, leather tanned with oak-bark is considered superior to that made with any other tanning material, but the process is slower. The price of good English oak-bark per load of 45 cwt. delivered in London in June 1852, varied from 12l. to 13l. 10s. When the bark has been stripped, the long pieces are set up on end (stacked) to dry.

Sumach is used in the manufacture of the lighter and finer kinds of leather. It consists of the powder of the leaves and young branches of shrubs growing in the south of Europe and known to botanists as *Rhus cotinus*, *Venus sumach*, or the wild olive, also of *Rhus coriaria*, hide or elm-leaved

LEATHER.

sumach. The former is used most extensively by the dyer and calico printer; the latter by the tanner. Its percentage of tannin had been found to vary from 16.4 and 16.2 in Malaga and Sicilian specimens to 10, and 5 in Virginia and Carolina sumach. The price of Sicilian sumach in June 1852 was from 14s. 6d. to 16s. per cwt.

Divi or divi divi or *dibi dibi* or *libi libi* is the pod of a leguminous shrub, *Cæsalpinia coriaria*, a native of South America, and growing to the height of 20 or 30 feet. It is called the Indian Sumach and grows freely in the peninsula of India and Hindustan. The pods are of a dark-brown colour, about 3 inches long, but curled up, as if by heat in drying. The whole of the tannin exists in the rind below the epidermis; the taste is highly astringent and bitter, but the inner skin which encloses a few flat seeds, is nearly tasteless. *Divi* contains a considerable quantity of tannin, and also a mucilaginous substance which prevents its being used in dyeing and calico printing. It soon ferments when mixed with water. The leather made by means of *divi* is said to be very porous, and is of a brown or deep brownish red colour, but at the Hoonsoor works it produced an excellent leather. The colouring matter is produced somewhat suddenly, and appears to be the result of fermentation. If air be excluded the colour is not produced and the leather is equally good. The price is from 8l. to 9l. per ton.

Valonia consists of the acorn-cups of *Quercus Ægilops*, or prickly cupped oak, growing in the Morea. As soon as the acorns are gathered they are partially dried, and conveyed by mules to Smyrna for shipment. There are here stored in warehouses for some months, in layers of from 3 to 5 feet in thickness. The cups undergo a slight fermentation, and in drying, the long spreading scales which confined the acorn contract, and allow the acorn to fall from the cup. The acorns which contain no tannin are separated from the cups, and those of the latter which are damaged are also picked out. The diameter of the cups including the scales is a little under 2 inches. A small kind of *valonia*, *V. camata*, bears a higher price than the common: it is somewhat richer in tannin, and is chiefly used by the silk dyers. Good *valonia* is thick, full-grown, and bright in colour. If exposed to rain after being gathered, the cups lose a portion of their tannin and become of a deeper colour. About 2 lbs. of *valonia* are required for the production of 1 lb. of leather, which is said to be less permeable to water than that made with oak-bark, and so heavy as to make *valonia* the cheapest of all tanning

LEATHER.

materials, except catechu or terra. A mixture of valonia and oak-bark may be used with good effect.

Babool bark is almost exclusively used by the natives of India for tanning purposes; it is the only bark that can be procured in large quantities and cheap. Price from $\frac{1}{2}$ to 2 Rs. per maund.

Cassia fistula bark, or native Amultas, is found to contain a good quantity of tanning.

Acacia obtusifolia, or native Chakoor, is useful but still not sufficiently plentiful so for manufacture on anything but a small scale.

Aura.—The leaves and small shoots of the native 'Aura,' supposed to be a species of *Terminalia* have also been used. It has properties somewhat similar to the American sumach. The leaves of this 'Aura' have been known to be useful in tanning for some years; but the natives have not used it, owing to the difficulty of finding it in large quantities. It gives to leather a light colour.

Catechu, cutch, terra-japonica and *terra* of commerce, are inspissated aqueous extracts from the bark, wood, catechin or cutch and gambier or terra of the *Acacia catechu* and from the leaves of *Uncaria gambier*. In commerce, the two sorts are known as Catechu, or Cutch and Gambier. The catechu from Bombay is from the former tree, and that from Bengal from the latter. Bombay catechin or cutch is the richer in tannin; it is of a dark brownish red colour, internally as well as externally, and of specific gravity 1.38. Bengal catechu or terra is of a light brown colour internally: its specific gravity is 1.28. Both are astringent and bitter, leaving a sweetish taste on the palate. Catechu is prepared by felling the *Acacia catechu* tree, cutting it up into small pieces, and boiling with water in a narrow mouthed vessel until only one-half of the original bulk of liquid remains. The solution is then transferred to a wide earthen vessel, in which the evaporation is continued; the inspissation is completed by exposure to the sun with occasional stirring. Before the extract is quite dry it is placed in cloths, strewed over with the ashes of cow-dung, cut into small lumps and again exposed to the sun. The tannin of catechu is soluble in cold water. Catechu also affords a peculiar principle, which has been named catechin and catechnic acid, which is not soluble in cold water, but slightly so in the solution of the tannin of catechu. Catechu is extensively used in India tanning, and of late years has also been much used in Europe. It tans skins with great rapidity, but the leather is light,

LEATHER.

spongy, permeable to water, and of a dark-reddish fawn colour. The light-coloured variety of catechu produces a softer leather than that tanned with cutch. Catechu produces but little of the deposit of bloom which is yielded by oak-bark, valonia and divi. A pound of catechu is said to be sufficient for the production of about a pound of leather. Catechu is used by calico printers, to produce a fast bronze on cotton fabrics.

Myrobalans, are the fruits of several species of *Terminalia*, and used in India as a substitute for galls. When ripe, the fruit is pear-shaped, deeply wrinkled, and of a brownish yellow colour: it weighs from 70 to 100 grains. The husk contains the whole of the astringent matter, some mucilage, and a brownish yellow colouring substance, which is used in India for dyeing yellow. The husk is usually separated by bruising the nut, which it encloses. The tannin of myrobalans differs slightly from that of galls. Gallic acid is also present in rather large proportion. The price of myrobalans in June 1852 was quoted at from 5*l.* to 10*l.* per ton.

Mimosa or *Wattle-bark*, is procured from different species of *mimosa*, which grow in Australia and New Zealand. It is sometimes imported in the form of fluid extract, as well as bark. The leather produced by its means is of good quality, but of bad colour. The bark must be finely ground, or it does not give up the whole of its tannin to warm water.

Cork-tree bark.—Cork which is the outer dead bark of the cork oak, may be removed without injury to the tree, but the inner bark which is used in tanning cannot be removed without destroying the tree. In Corsica, Spain, and a few other countries, where the tree is abundant, the bark is removed for tanning. This bark contains twice as much tannin as oak-bark of average quality. The tannin appears to resemble that of catechu: it affords scarcely any bloom and gives a dark colour to the leather.

Larch bark contains a good deal of tannin, mucilage, and some resin, and is sometimes used as a substitute for oak bark, for tanning the inferior sheep skins, known as basils.

Willow bark contains, according to Davy, 2.3 per cent. tannin, and that of the Leicester willow 6.8 per cent. Danish leather which has a peculiar and agreeable odour, and is used for making gloves, is prepared from kid and lamb skin, by means of willow bark, which is also used in the preparation of Russia leather, but the odour of that leather is produced by the oil of birch-tree bark. Imported barks are all free of duty. The prices in 1851, were per ton,

LEATHER WORKERS, throughout British India, Japan and China, are regarded as unclean races. In Berar, the workers in leather assert that they consist of 12½ castes, amongst whom are

The Dhor, who are tanners, make water-buckets and water-sacks, the pakhal and mashak.

The Bandela and Kullar chamar, both tanners and shoemakers.

The Mahratta chamar, a shoemaker.

The Pardesi chamar, a cobbler.

The Mang chamar, who make sandals.

The Mahomedan chamar, who is a book-binder.

The Katari chamar, who make shoes and sandals and labour in the fields, at seed and harvest times. The Katari are identical in personal appearance with the chuckler (chakili) of the very south of India.

The chamar of Aurungabad, worship Mariamma and Sitala. They marry when under age, amongst themselves, proceeding on foot to the goddess Sitala, whose shrine they circumambulate five times. The expense is

LEATHER WORKERS.

about a hundred rupees. They speak hindi. They burn their dead, but some very intelligent men at Aurungabad, did not know that anything followed death. The designations of tanners and leather workers are,

Chamar,	HIND.		

The Mang or Mhang are scattered through all the northern parts of the Indian peninsula, in the Bombay Presidency, in Guzerat, Candesh, the Concan and Kolapore. Tanners and leather workers are perhaps the most humble of all the settled races in the south of India, and they dwell outside the walls of the villages, for they are deemed wholly unclean. They are tanners, workers in raw hides and leather, shoe and harness-makers, messengers, scavengers, and executioners. They are never horsekeepers. Their avocations are the most abject, and only a very few have ever been known to have the ability to read or write. The race, as a rule, are of a dark-black hue, short in stature, and of very slender frame; lower limbs particularly slight, and calf and foot delicate. They still eat creatures which most races regard as unclean, and likewise eat animals which die of disease. In rural villages they perform the lowest menial offices, such as messengers and scavengers, and are paid by portions of the crops and some small privileges, but are not permitted to reside within the village walls. The Madaru and Madigaru of Coorg are predial slaves, and seem identical with this race. The Madaru make baskets. In northern India and in Bengal, the chamar race are workers in hides and leather, tanners, and shoe and harness makers, and there form the great bulk of the labourers, taking the place of the Dher or Pariah of the peninsula. There are many sections of leather-workers throughout the Hyderabad country, and in Berar they serve as scavenger, guide, watchman and executioner. Their signature mark, is a knife. They are part of the baluth, and like the pariah are the predial slaves of the village. The Pendi Mang, are athletes. The Mhang worship the leather ropes which they make. They also make cakes, which they place in the ground and over it five stones, and a lamp, and worship these. They also worship the spirits of departed men who have led evil lives. They claim the right to have, for food, cattle and camels and horses that die of disease, but in some villages this is disputed by the Dher or pariah, and in the village of Dangopura, in 1866 and 1867, this point was for 20 months, under litigation,

LEATHER WORKERS.

the ultimate decision being in favour of the Dher. In the northern Dekhan are the sections Mang Garoro; Hollar Mang; Dekhan Mang. The Mang-Garoro, are also styled "Pharasti" or Migrants, as they have no settled abode but move from place to place, begging; their men and women assume other clothes, and smear their foreheads with the red kuku, a mixture of turmeric and safflower. They also are conjurors and slight of hand adepts from which they have their name Garori. The men also beat the dholak, when practising their conjuring tricks.

The Hollar Mang are village musicians; at marriages, play on the sannai, a wooden musical instrument, and beat the dafra; they are also labourers, and go messengers.

The Dekhan Mhang make brooms and mats from the date palm, are also labourers, bring wood, marry girls under age, fall at the foot of the god Hanuman but worship at a distance, being not allowed to approach the idol. They, like the pariah and the humble native christian, are also prohibited approaching the house of any hindoo, but stand some yards off and intimate their presence by calling out baba, or maharaj, or ayer, i. e., father, great chief, lord, and as with the Dher, every thing they have brought and every thing they touch as also the place they touch, is unclean. If it be a metal dish it is passed through fire, and if cloth or other material, it is washed, or sprinkled with water, or placed on the ground for earth purification. They mount on horseback in procession to their marriage, a privilege which they prohibit to the Dher, and to the Teli or oilman. They do not usually claim dead creatures as a right, but beg portions from the Dher. They worship generally all the local deities or village gods, the Ammun, Ai, Mata, Musoba, Mari Ai, Devi, Kandoba, &c, and the Mangir or ghosts of deceased relatives. Mangir is the form of a human being engraved on silver or copper, intended to represent a deceased father or mother, sometimes it is a casket of copper containing a silver figure of a man. The Mangir is worshipped at the dewali and dussara, and at amas or moonless nights and full moon and anniversaries. The figure is worshipped by washing, and burning frankincense. They bury or burn their dead. They place the corpse in the ground, then bring a potful of water from the river, pour it on the body and cover the dead with earth: after three days they take food and place it over the dead. They seem doubtful as to transmigration.

The Dher, Hind., Tel.; Dhorai, Can.; Dhorata, Mahratta; are found in most of the larger villages of southern India. They are

LEBANON.

tanners, but are regarded as hindoos, and, unlike the Dher and Mhang, reside within the villages. They worship the earthen jar in which the hides are steeped, placing vermilion on it. They do not partake of animals that die of disease. They never devote their young women to the gods. They are looked on by the Pariah or Dher as vile, and are not associated with in eating or intermarrying. The Dher are robust, fair, short, men, with well developed chests, wide faces, light coloured eyes, many of them with a light mustache, and in all their features they present evidence of a Mongol origin. They never eat the large horned cattle, the cow, buffalo, or bullock, nor do they eat dead animals, but fowls, fish, deer, goats and sheep are lawful. They marry in their own tribe, making the marriage procession on a bullock, and say that they are not entitled to proceed on a horse. The objects of their worship are very doubtful, but like almost all the idol-worshipping races of India, they worship at anniversaries, the chief implements of their trade, which in their case is the tan-pit, but they weekly coudung a small spot in their house, on which they burn incense, place flowers, and wheaten cakes covered with rice, bow down, worship and eat. The deity, thus invoked, one family at Oodghir said, was Bawa Adam, whom they consider to be Maha Deva, and inquiry elicited the information that about 60 or 80 miles west of Puaderpore, is a stone, named Bawa or Father Adam. They also worshipped Ai, whom they designate as the Bhawani at Taljapore, but Khandoba at Malligaum, also receives their worship. The temple guardians, however, do not permit the Dher to approach near to the idols, as their trade of workers in skins and hides makes them unclean. They bury the dead who have fallen victims to small-pox and cholera, but those from some other diseases are burned; a pregnant woman dying is burned. They make leather from hides, and manufacture such articles as are used for water purposes, the mot bucket, the d'hol and pak'hal.

LEBANON, a mountain of Palestine, comprehends the two ranges of Libanus and Anti-Libanus. Lebanon is the most elevated part of the chain. The range of the Lebanon, extends between the 33rd and 36th degree of north latitude, from the river Assey (the ancient Orontes) to its southern limits, bounded by the Letani, or Leontes of old. It is inhabited by a variety of different tribes, who from time immemorial have found a refuge in its fastnesses.

Ansari.—The most northern district of the range, extending to the neighbourhood of

Tripoli, is occupied by a sect of idolaters called Anzari or Ansari. A spacious plain, open to the sea on the west, extends north as far as Tortosa, and is bounded on the east by the Anzari mountains. This chain is a lower branch of the Libanus, but is less known than most parts of this celebrated mountain, being inhabited by the lawless Anzari tribe, who have never been brought into actual subjection by any of the Pashas. One of their sects, the 'Shamsi,' are said by some to worship the sun; but the origin of this people and their religion, are still unknown. Like the Druses, they may possibly be a mahomedan sect. Burckhardt mentions the Anzari sects, calling them Kelbye, Shamsye and Mokladje; but adds, "nothing is known of them except the names." The Anzari are the least numerous of the Lebanon tribes, their number in 1840 not exceeding 20,000 souls.

Maronites occupy all the most central valleys and the highest ridges, from the neighbourhood of Tripoli to the south of Beyrout. The Keshrouan, in the neighbourhood of D'Jounie bay, is exclusively occupied by this christian sect, said to have been founded in the sixth century by a certain St. Maronius, and which in religious matters acknowledges the supremacy of Rome though its clergy maintain the right of electing their own bishops or patriarchs, of dispensing with a state of celibacy, and of entering into the marriage state. The Maronites are the most numerous of the Lebanon tribes, numbering about 200,000, of whom 35,000 were reckoned capable of bearing arms.

The *Mutawali* are found in the plain of the Boccah (between the Libanus and the Anti-Libanus), the sides of the Anti-Libanus and the lower part of the southern Libanus, extending to the north-east of Sour or Tyre; but at present, they form only an inconsiderable portion of the population of this part of Syria.

Druse.—Crossing the district of Katalh, and proceeding to the southern range of hills extending parallel to the coast, from the neighbourhood of Beyrout to the heights above Sidon, we come to the country of the Druses, whose origin, belief, religious rites and ceremonies, have long been enveloped in mystery, and continue to afford food for speculation. They are, however, idolaters; one of their objects of worship is said to be the image of a calf, which might adduce some analogy, in their religion, between that of the ancient Egyptians and of the hindoos of modern times. Be that as it may, the Druses are not only tolerant in religious matters, but some of them do not hesitate to conform outwardly to the religious observances of those with whom they

may be associated. They are, generally speaking, a brave and honest race, practising the virtues of hospitality to a degree unknown amongst more civilized nations, but never forgetting an injury; hence constant feuds between the Druses and the Maronites. The tribes of the mountain, if united, might soon drive out all intruders, and become a powerful and independent state. Until the death of the celebrated Druse chief, Fakr-ud-Din, the whole of the Lebanon was (nominally) under a Druse sheikh or chieftain. On his death, however, an ancient and powerful mahomedan family of the name of Shehab, who were descended from Mahammad, and came from the Hauran, by one of those unexpected changes of fortune so common in the east, succeeded under the title of 'Grand Prince,' to the supremacy of the 'Mountain,' as the Lebanon is called. Little mention is made of these 'Grand Princes of Lebanon,' until the accession of Amir Milhem, the uncle of the old Amir Baschir, in the early part of the nineteenth century. The cedar of Lebanon so famous in Scripture, was, in ancient times, much employed in the construction of temples, and for other religious buildings and purposes. It is usually called *Pinus cedrus*, but sometimes *Cedrus libanus*.—*Robinson's Travels*, Vol. ii, pp. 68-9; *Reminiscences of Syria*, by Lieut.-Col. Elers Napier; Vol. i, chap. 4; *Napier's Life and Correspondence*, Vol. ii, pp. 1-4. See Balbec, Keln.

LEBIA, one of the Coleoptera, of the family Lebiadae, is of rare occurrence in the east. *L. unicolor*, is from the Himalaya, *Aplos* is found at Poona. *Orthogonius* is common to Africa and Asia, the gigantic species, however, predominate in the latter country.

LE CALYBE DE LA NOUVELLE GUINEE, FR. *Chalybeus paradiseus*.

LECANIUM COFFEE, *Walker*, the coffee bug of Ceylon, for some years devastated some of the plantations of Ceylon. They are greedily devoured by the large red ant, *Formica smaragdina*, Fab., and an attempt was made to eradicate the bug by the introduction of the ant, but their attacks on the coolies' bare skins prevented the full success of the experiment. *Lecanium coffee* establishes itself on the young shoots and buds, which it covers with a noisome incrustation of scales, enclosing its larvæ, from the pernicious influence of which the fruit shrivels and drops off. It is a *Coccus*, and a number of brownish wart like bodies may be seen studding the young shoots and occasionally the margins on the underside of the leaves. Each of these warts is a trans-

LECANIUM COFFEE.

formed female containing a large number of eggs (700), which are hatched within it. When the young ones come out of their nest, they may be observed running about on the plant, looking like wood-lice, but shortly after being hatched the males seek the underside of the leaves while the females prefer the young shoots as their place of abode. The larvæ of the males undergo transformation into pupæ beneath their own skins, and their wings are horizontal, and their possession of wings may possibly explain the comparatively rare presence of the male on the bushes. The female retains her powers of locomotion until nearly her full size, and it is about this time that her impregnation takes place. The pest does not produce great injury until it have been two or three years on an estate, but at length, the scales on the plants become numerous, the clusters of berries assume a black sooty look and a great number of them fall off before they are mature. The young shoots have a disgusting look from the number of yellow pustular bodies forming on them, the leaves get shrivelled, and on many trees not a single berry forms. The coffee bug first appeared in 1843, on the Lupallu Galla estate, and it or a closely allied species has been observed on the *Citrus acida*, *Psidium pomiferum*, *Myrtus zeylanica*, *Rosa indica*, *Careya arborea*, *Vitex negundo* and other plants, and most abundantly on the coffee bushes in moist places. It re-appears, though eradicated, and is easily conveyed on clothes and from one place to another. Dr. Gardner, whom Sir J. E. Tennant quotes, is of opinion that all remedies have failed, and that it must wear itself out as other blights do. The male of the brown or scaly bug, *Lecanium coffeæ*, is of a clear light pinkish brown colour, slightly hairy and very pretty. It is more delicate than the male *Pseudococcus*. The females when young are yellowish, marked with grey or light brown; and old individuals are light brown with a dark margin. It affects cold, damp and close localities 3,000 feet in height, and the propagation as in the white bug is continuous. The brown bug is much infected with parasites, amongst which the most common are eight minute Hymenoptera (wasps) with brilliant colours, but a mite, the *Acarus translucens*, and the larvæ of the *Chilocorus circumdatus*, a kind of lady-bird, also feed on the bug. In the larvæ state, the male and female brown bug are not distinguishable. The number of eggs produced by a female brown bug is about 700. Those of the white bug are not so numerous: but their propagation in Ceylon is continuous, throughout the year, and this explains their great abundance compared with cold countries

LEDJA.

where the produce is one generation of young annually. The brown bug particularly the full grown female, is dreadfully infested with parasites which thus greatly help the planter. Indeed, it is a question whether coffee planting could be carried on without their aid in the destruction of the bug. The black bug, is *Lecanium nigrum*, but the female only is known. In colour it is from yellowish grey to deep brown and almost black in age, and of a shield-like shape. It occurs alone but also intermixed with the brown bug—but it is much less abundant and therefore not demanding the planter's attention. Its occupation of a coffee, or any other, tree, gives rise to the appearance of a glutinous saccharine substance which has received the name of Honey-dew. This is either a secretion of the bug or the extravasated sap which flows from the wounded tree or probably a combination of both. A fungus or two fungi, the *Syncladium nictneri* and *Triposporium gardneri* seem to depend on this for vegetation as the Honey-dew and the fungus disappear with the bug.—Sir J. E. Tennant's *Ceylon*, Vols. i, p. 261; ii, p. 248. See Bug, Coffee, Coffee bug.

LEDEBAURIA IYACINTHINA, syn.

Erythronium indicum, a native of Bundelcund and Hyderabad. Martius and Ainslie describe the bulbs as a substitute for squill, and the latter writer informs us that they are used in cases of stranguary and fever in horses. Bulbs sent by Dr. Key, of Bolarum, were slightly acrid and bitter, but although given in double and treble the usual quantity in which squill is employed, they did not in any case produce the marked effects which squill occasions. The bulbs which Dr. O'Shaughnessy used had not flowered that season. From trials it would appear that this article holds out but little prospect of its ever being usefully employed in medicine.—O'Shaughnessy, p. 663.

LEDER, Dt., Germ. Leather.

LEDI GADDI, TEL. A kind of grass.

LEDJA, a rocky wilderness in Palestine, which is from two to three days' journey in length, by one in breadth. It is inhabited by several Arab tribes, viz., Selman, Medledj, Szolout, Dhouhere and Sial; of these, the Szolout may have about one hundred tents, the Medledj one hundred and twenty, and the others fifty or sixty. They breed a vast number of goats, which easily find pasture amongst the rocks. A few of them

LEECHES.

also keep sheep and cows, and cultivate the soil in some parts of the Ledja, where they sow wheat and barley. They possess few horses.—*Buchhardt, Vol. iii; Robinson's Travels, Vol. ii, pp. 121, 146.*

TAM.

Leeches of the genera *Bdella*, *Hæmadipsa*, *Sanguisugo*, or *Hirudo medicinalis*, belong to the family *Hirudinidæ* of the class *Annelidæ* from annulus, a ring, and contain the true medicinal leeches, which are procurable in all the stagnant waters of India. In the dry climate of the Dekhan, a caste of hindoos rear them for hospital use. The full grown leech of Madras and Bengal will draw six drams, but those employed in Bombay scarcely a dram. The numbers of these annelides in most warm parts of the world are immense. Dr. Hooker mentions that, when travelling in Sikkim, between Singtam and Chakoong, wading through deep mud or climbing over rocks, leeches swarmed in incredible numbers, in the streams and damp grass and in the bushes: they got into his hair, hung on his eyelids and crawled up his legs and down his back. He repeatedly took upwards of 100 from his legs, when the small ones used to collect on clusters on the instep, and the sores they produced were not healed for five months. He thinks snuff or tobacco applied to the feet the best means of preventing their attacks. He thinks that the extraordinary abundance of these *Annelides* in Sikkim may cause the death of many animals. Some marked murrains have followed very wet seasons, when the leeches appear in incredible numbers; and the disease in the cattle, described to him by the Lepcha as in the stomach, in no way differs from what leeches would produce. It is a well-known fact, that these creatures have lived for days in the fauces, nares, and stomachs of the human subject, causing dreadful sufferings and death. He has seen the cattle feeding in places where the leeches so abounded that fifty or sixty were frequently together on his ankles; and ponies are almost maddened by their biting the fetlocks. The leeches used in the Calcutta Hospitals are caught in tanks and jeels in the direction of Baraset by persons who allow them to fasten on the naked skin. They are to be procured at all seasons; but are occasionally scarce during the months of April and May, when the tanks dry up. The bazar price is two ruppes per hundred. In the Upper Provinces a superior kind of leech is used, called the *Shakooabadi jonk*, caught in the tanks about *Shakooabad* in the *Agra* district. The *Punjab* leeches are the next best, and are procured in abundance about *Pateelah* in the *Sirhind* district. The *Shakooabad* leech will generally bear three applications, and it is the only description of leech that will do so. The animal is of a light olive green colour, and marked with two

LEECHES.

bright yellow stripes on the sides. The common wild leech of the Upper Provinces is called "Dabree;" but for Hospital purposes it is very inferior to those mentioned. The average price of Shakocabadi leeches varies from three to four rupees per hundred. The Dabree from eight annas to one rupee per hundred. In Europe leeches are kept in pans with a little soft water, the vessels being covered with canvass to admit the air. In Bengal they are placed in common earthen vessels with moist clay. The common leech used in the Bengal Hospitals averages 50 grains in weight, and draws from two to three fluid drachms of blood. In Southern India they are found in almost all pools which are not dry in summer and in which the water is good that is not impregnated with salts. It is said that cattle are frequently affected by their adhering to their throats when drinking. Mr. Rohde recommended salt to the ryots as a remedy and thinks an addition of salt to the bran mash usually given, an effectual remedy. *Hæmadipsa ceylanica* occurs in Ceylon, *H. boscii* in the Archipelago. Mr. Carter in a memorandum, on the Leeches of Western India, mentions as the difference between the Matheran and common leech, that the common leech is about one inch in length, of an olive green colour, has seven lines down its back, but no black spots, twelve eyes, arranged quadrilaterally, an uneven lip, with its centre notched, and is aquatic. The Matheran leech is about three quarters of an inch long, of a light reddish brown colour, has a black line down its back, and is covered over with black spots, ten eyes arranged in a semi-circle, a smooth lip, with centre projecting, and is terrestrial. Dr. Carter remarked that a species of Matheran leech appears to be common throughout the jungles in the western part of India as well as in the islands of Ceylon and Madagascar, and is so abundant, active, and voracious, that it becomes a considerable obstacle to those who have to pass through localities infested by them, not only extracting a large quantity of blood, but often producing irritable and festering ulcers. *Hirudo sanguisorba* is the paddyfield leech of Ceylon, and *Hæmopsis paludum* is the cattle leech of that island. There are said to be leeches one foot long in the province of Shantung in China. The Leech zone of Malabar is from 1,000 to 5,000 feet above the sea. In the wet season travelling in the forests is very unpleasant. There are no leeches, mosquitoes or peepsas in Thibet; and maggots or flies are never seen there. There are no bees or wasps in Dingham or Thibet. Leeches are numerous throughout the hot moist parts of Asia. The Planaria occurs near Madras.

LEEZAN.

Leeches and their effects must have been known from the earliest times, they were early employed by the Hindoos and Arabs, and six kinds of useful and six of venomous leeches are mentioned by Susruta and Avicenna.—*Hooker, Him. Jour.*, p. 17; *Mr. Daily's Notes quoted by O'Shaughnessy*, p. 680; *Rohde's MSS.*; *Sir J. E. Tennent's Ceylon*, &c.; *Royle's Hindoo Med.*, p. 38; *Wise's Hindoo Med.*, p. 177; *Eng. Cyc.*; *Mad. Lit. Journ.*

LEEDES, Newberry, Storey and Fitch, four adventurous merchants, who, twenty years after the East India Company obtained its first Royal Charter, were commissioned by the Turkey Company to visit India and ascertain what openings for British enterprise existed there. They traversed Syria, descended the Tigris to Bassora, and thence took shipping to Ormus and Hindustan. One entered the service of the emperor Akbar; another died in the Panjab, a third became a monk at Goa, and the fourth, Ralph Fitch, after wandering to Siam and Malacca, halted at Ceylon and Colombo on the 5th March 1589, and was probably the first Englishman who ever beheld the island.—*Sir J. E. Tennent's Ceylon*.

LEEDUNG, see KUNAWER.

LEEGETAN ISLANDS, a chain of islands which stretch from the Tawee Tawee islands, and from Unsang a great way out from the coast of Borneo. The most southern is in lat. 4° 20' N.—*Horsb.*

LEEKs, the *Allium porrum*, of *Linn.* The native inhabitants of Tenasserim are as much attached to leeks, as the Israelites were to the leeks and onions of Egypt, and they abound in their gardens. The seed may be sown at the commencement of the rains, or after, in beds, broad-cast. When about six inches high they require transplanting into large beds, or rows, at least one foot apart: they go to seed in the course of six months, and grow very well in all parts of the Deccan. Menu says garlick, onions, leeks and mushrooms, no twice-born man must eat, and all vegetables raised in dung.—*Mason; Riddell; Menu, ch. v, para 5.*

LEELAMRITU, SANS. Leela, play, and amrita, nectar.

LEEVIYA-GAIIA, SINGH. *Helicteres isora*, *Linn.*; *Rh.*; *Roxb.*; *W. & A.*; *W. Lc.*

LEEZAN, a village of scattered houses on the side of a hill which slopes down to the river Zab. A mountain stream empties itself into the river at the foot of the village, which it separates from the church. During

the massacre of the Nestorians by the Koords, the inhabitants of Leezan took refuge upon a platform on the rock above the church, where they defied all the attempts of Beda Khan Bey to dislodge them. But being at last starved out, they capitulated on the understanding that they were to surrender their arms and property, and their lives to be spared. The Koords on being admitted to the platform and having taken the arms, commenced an indiscriminate slaughter, but few persons throughout the entire valley escaped this terrible massacre.

LEFT-HAND CASTE.

Edagai,	KARN.	Idangai,	TAM.
Edagai kula,	"	Idam,	"
Eddayai,	"	Idakai,	"

The vaishnava hindoo races in the south of India, speak of themselves as of the right or left-hand. The Karnatic enumeration of the left-hand castes, furnishes nine, viz :

- | | |
|------------------------------|---|
| 1. Panchala or artisans. | 3. Devangada, weavers. |
| a. Kammaranu, blacksmith. | 4. Ganigar, oil-makers. |
| b. Badago, carpenter. | 5. Gollur, money-carriers. |
| c. Kanagar, brazier. | 6. Paliwan and Palawan, cultivators. |
| d. Kallurtiga, stone-cutter. | 8. Bedu, hunters, fowlers. |
| e. Akasale, goldsmith. | 9. Madiga, tanners, curriers and shoe-makers. |
| 2. Beri-sethi, traders. | |

Much animosity and quarrels long occurred between the right and left-hand sects; the cause of which or the points of difference, the disputants themselves are generally unable to state.

Professor H. H. Wilson in his Hindoo Sects, implies that there exists in Northern India a sectarian hindoo division, into right and left-hand sects, and that the left-hand sect are worshippers of the "sakti" or female powers of the hindoo deities. He says that when the worship of any goddess is performed in a public manner, and agreeably to the Vedic or Pauranic ritual, it does not comprehend the impure practices which are attributed to a different division of the adorers of Sakti, and which are particularly prescribed to the followers of that system. In this form it is termed the Dakshina or right-hand form of worship, to distinguish it from the Vami or Vamaclari, the left-hand worshippers or those who adopt a ritual contrary to that which is usual, and to what, indeed, they dare publicly avow. They worship Devi, Lakshmi, Saraswati, the Matri, the Nayika, the Yogini, and even the fiend-like Dakini and Sakini, are admitted to a share of homage. Siva with the two hands, is an object of veneration, especially in the form of Bhairava, with which modification of the deity it is the object of the worshipper to identify himself. The worship of the Vamaclari, is derived from a portion of the Tan-

tras. It resolves itself into various subjects, apparently into different sects, of which that of the Kaula or Kulina is declared to be pre-eminent. The object of the worship, is, by the reverence of Devi or Sakti, who is one with Siva, to obtain supernatural powers in this life, and to be identified after death with Siva and Sakti. All the forms of worship require the use of some or all of the five Makara, Mansa, Matsya, flesh, fish, wine, women and wine are the five-fold Makara, which takes away all sin. But the sect of sakti-worshippers are wholly unknown in the south of the peninsula of India, in which the enmity between the right and left-hand castes is bitter, and which in Madras was only restrained by the energy of Mr. Edward Elliot, the chief Magistrate, between 1820 and 1860.—*Wilson's Hindoo Sects.*

LEGASPI, in 1564, in the reign of Philip the second of Spain, with five ships and four hundred seamen, went from Spain as governor of the Philippines, and ultimately fixed himself on Zebu, which for some time was the central seat of Spanish power.

LEGISLATIVE COUNCILS, for making laws for British India, sit at each of the presidency towns of Calcutta, Madras and Bombay. In forming the Governor-General's Legislative Council, on the 16th January 1862, the following Resolution was passed by the Governor-General in Council on this date. The Governor-General in Council, under the authority vested in him by the Act 24 and 25 Victoria, Cap. 67, Sec. 16, is pleased to appoint Saturday the 18th of January 1862, at 11 A. M. as the time, and the Council Chamber in the Government House at Calcutta as the place for the first meeting of the Council of the Governor-General, for the purpose of making laws and regulations under the provisions of the said Act, and to summon the several members of the said council to attend the said meeting at the time and place appointed, and in forming the Bengal Council on the 17th January 1862, there was issued the following Proclamation to which the sanction of Her Majesty was been signified by the Secretary of State in Council as required by the provisions of Section XLIX, 24 and 25 Victoria, Cap. 67, is hereby made and published for general information:—"Whereas it is declared in the XLIVth Section of the Act 24 and 25 Victoria, Cap. 67, called the 'Indian Council's Act, 1861,' that the Governor-General in Council so soon as it shall appear to him expedient shall by Proclamation extend the provisions of the said Act, touching the making the laws and regulations for the peace and good government of the Presiden-

LEGUMINOSÆ.

cies of Fort St. George and Bombay to the Bengal division of the presidency of Fort William, and that he shall specify in such Proclamation the period at which such provisions shall take effect and the number of councillors whom the Lieut.-Governor of the said division may nominate for his assistance in making laws and regulations ; and whereas it is further declared by Section XLVII of the said Act that it shall be lawful for the Governor-General in Council as aforesaid by such Proclamation as aforesaid to fix the limits of any presidency, division, province, or territory of India, for the purposes of the Act, and further by Proclamation to divide or alter from time to time the limits of any such presidency, division, province, or territory for the said purpose, His Excellency the Governor-General of India in Council by virtue of the authority vested in him as above, does hereby declare and proclaim that the provisions of the said Act touching the making of laws and regulations for the peace and good government of the presidencies of Fort St. George and Bombay are extended to the Bengal division of the presidency of Fort William, and that they shall take effect from the 18th of January 1862. And His Excellency in Council does further direct in conformity with the provisions of the said Act, that the number of councillors whom the Lieutenant-Governor of the said division of the presidency of Fort William may nominate for his assistance in making laws and regulations shall be twelve, and His Excellency in Council doth further direct in conformity with the provisions of the said Act, that the Bengal division of the said presidency of Fort William in Bengal shall for the purposes of the said Act extend to and include all the provinces, districts and places which are now administered by the Lieutenant-Governor of Bengal.

LEGNO DI FERRO, It. Iron wood.

LEGNO GIALLO DE BRASILIO, It. Fustic.

LEGNORIZIA, It. Liquorice root.

LEGNO RODIE, It. Rose-wood.

LEGUMINOSÆ of authors, the Bean tribe of plants, has been named by Lindley, Fabacæ. It comprises 362 genera, and between three and four thousand species, of which 133 genera and 891 species occur in the East Indies, arranged by botanists in two sections, viz., the *Curvembrie*, radicle back upon the *Cotyledons* : and the *Rectembrie*, radicle bent straight. The following will show the genera and the number of the East Indian species in each section :

LEGUMINOSÆ.

Curvembrie.		Rectembrie.	
2-3 Sophora.	1 Robinia.	1 Amherstia.	1 Acrocarpus.
2 Edwardia.	5-6 Sesbania.	1 Tamarindus.	1 Entada.
4 Ormosia.	1 Agati.	1 Baryxylum.	7 Mimosa.
1 Macrotrypis.	6 Caragana.	5 Calharthocarpus.	2 Parkia.
1 Piptanthus.	1 Colutea.	24 Cassia.	4 Desmanthus.
1 Thermopala.	2 Oxytropis.	5 Cydonetia.	1 Cailles.
1 Heylandia.	23 Astragalus.	1 Infata.	3 Adenanthra.
80 Crotilaria.	1 Guldensaditia.	1 Ombu.	1 Prosopis.
1 Cytotrops.	1 Diphaca.	30 Bauhinia.	47 Acacia.
1 Ononia.	2 Ormocarpon.	1 Dialium.	1 Vachellia.
1 Anthylla.	1 Geissaspis.		
1 Medicago.	3 Zornia.		
1 Rothia.	1 Stylosanthes.		
7 Trigonella.	8 Eshynomene.		
3 Mellilotus.	4 Smilthia.		
3 Trifolium.	5 Lourea.		
1 Lotus.	14 Urraria.		
1 Podolotus.	60 Desmodium.		
1 Cynanopsis.	4 Diocrea.		
1 Tysonopora.	2 Taverniera.		
4 Psoralea.	1-2 Hedyasurum.		
51 Indigofera.	2 Eleotia.		
6 Clitoria.	5 Lespedeza.		
3 Shuteria.	3 Oxyramphila.		
1 Grona.	2 Albagi.		
1 Johnia.	10 Alysiacarpus.		
2 Gabecia.	2 Cicer.		
2 Colicea.	5 Viola.		
4 Pueraria.	3 Eryvum.		
3 Dumsia.	2 Pisum.		
12 Glycine.	4 Lathyrus.		
2 Pæudarthria.	1 Orobus.		
22 Tephrosia.	3 Abrus.		

The Leguminosæ are herbs, under shrubs, shrubs or trees, and most of them furnish products useful to man. Peas, beans, clover, saintfoin, lucern, liquorice, indigo, medicks, and trefoils, lupines, and numerous other common European genera, belong to the section *Curvembrie*. Many species are tonics and astringents, others yield a kind of gum, and in a very large number of species, narcotic properties have been discovered. A cassia furnishes the scum-leaves of the shops, to this also belong the tamarind and Algaroba fruits, the trees yielding logwood, Brazil-wood, sappan-wood, &c., and *Hymenæa* from which gum anime is procured. Some of them yield dyes. The Locust-trees of north America belong to this order, and are celebrated for their gigantic stature. Gum Arabic, Senegal, Sassa, and others, are produced by different species ; catechu is the extract of the astringent bark of *Acacia catechu*, and one of the timbers known in England as rose-wood is said to be the wood of some *Mimosa* inhabiting the interior of Brazil. One of the most striking phenomena among the plants of this order is the excessive irritability observable in the leaves of certain species of *Mimosa*, such as *M. pudica*, *M. sensitiva*, which are hence called sensitive plants. It is however a special peculiarity, and not one of general

occurrence ; unless the folding up at night of the leaves of the whole sub-order be regarded as an instance of the same irritable quality in a low degree. Of this family, in Burmah, Captain Benson mentions as valuable timber trees, *Acacia stipulata* and two species of *Acacia* not named, used by the Burmese for naves and spokes of wheels. *Acacia stipulata* is a valuable wood for general purposes, its middling girth and scarcity would, however, render it useless except in small quantities and scantling. species of *Dalbergia*, resembling Bombay blackwood ; *Cassia fistula*, *Inga xylocarpa* and *Pterocarpus Indica* are of this order. *Cassia fistula*, a beautiful ornamental tree, yields a wood useful for furniture, naves and spokes of wheels and tool handles ; *Inga xylocarpa* is a dense wood, resembling *Cassia fistula*, used for windlasses, block sheaves and for parts of gun carriages, but too brittle to resist concussion—*Pterocarpus indica* is therefore preferred and generally adopted. The family is rich in trees, but not much so in temperate climates.—*Major Benson ; Voigt ; Eng. Cyc.*

LEGYA, see Shan.

LEH, the capital of Ladak, in lat. 34° 8' 5" N., long. 77° 14' 36" E., is 11,527 above the sea. It is three miles north of the Indus and is the largest town in Western Tibet, and a most important place for the trade between Central Asia and India. In summer when caravans from distant regions meet at Leh, the number and variety of tribes is remarkably great. It is the principal place of rendezvous for merchants travelling to and from Yarkand. The variety of tribes which is to be found in Leh, is particularly great on account of its extended trade with the different parts of central Asia. The level of the Indus at Leh, is 10,723 feet. The population is estimated at (inclusive of the numerous traders who come from all parts and constantly reside in Leh) one hundred and ten thousand of which considerably more than half are females. In 1820, Moorcroft estimated the population of Leh at between 150,000 and 180,000 souls. The Bhot of the Tibetans have been extending westward. As a general rule, the Himalaya divide Hindustan from Bhotland, but there are Bhot in several parts south of the crest of those mighty mountains in Garhwal and Kumaon. The people of Leh, the eastern Tibetans, call themselves Bhotiah, or inhabitants of Bhot. They are not so tall as, but are stouter made, than the Tibetans of Balti or little Tibet, who though Tibetan in language and appearance, are all mahomedans. Leh is the most important place, and only town of Western Tibet. It is situated about three

miles from the Indus, in the upper part of an open valley, which rises gradually as it recedes from the river, so that the town is rather more than 1,200 feet above its level, or about 11,800 feet above the sea. The town occupies the slope, and surrounds the base of a low spur, on the left or east side of the valley, while the centre and right side are occupied by extensive tracts of cultivation, the fields rising in terraces one above another, and watered by little rills drawn from a stream which descends in the centre of the valley. The aspect of the town, which is very peculiar, is faithfully represented in the frontispiece to the second volume of Moorcroft's Travels, from a sketch by Mr. Trebeck. In the neighbourhood of the town there are several small enclosures, planted with poplar and willow trees. The governor of Ladak, is a deputy of the maharaja of Kashmir, to whom the rule of Ladak has devolved as a dependency of the latter country, and he resides in the town ; but the detachment of troops, amounting to about 150 men, who form the military garrison of the place, occupy a small square fort on the west side of the valley, about a mile from the town of Leh. The peculiarities of the buddhist religion, as practised in Tibet, which are everywhere conspicuous in all parts of Ladak, are especially remarkable in the capital. The principal monasteries in the neighbourhood of Leh are at some distance from the town in the vicinity of villages both up and down the Indus ; but religious edifices of the many kinds which are everywhere so common in Tibet, are seen all round Leh in great numbers. Along the road by which the town is approached there is a very long building, of the kind called Mane, extending for more than half a mile. It consists of two parallel walls, twelve or fifteen feet apart, and nearly six feet high, the intervals between which are filled up with stones and rubbish, and the whole covered with a sloping roof, which rises at a gentle angle to the central ridge, midway between the two walls.

The population of Leh, as of the country at large, is of the Tibetan stock, but a very considerable number of Kashmirians are domesticated at Leh, and a mixed race has originated from them, and the women of the country, termed Argand. The Kashmiri and their descendants are engaged in commerce, and the lower orders follow the business of butchers, cooks and petty retailers. There are also some Turani merchants, and in the lands of Chusbut a colony of Balti mohammedans is established. The Ladaki people are, in general, a mild and timid people, frank, honest, and moral when not corrupted

LEIOTHRIX.

by communication with the dissolute Kashmiri, but they are indolent, and exceedingly dirty, and too apt to be addicted to intoxication. The Kashmirians here, as well as everywhere else, are notorious for every kind of profligacy, and where they abound the people of the country are tainted by similar vices. They have some singular domestic institutions. When an eldest son marries, the property of his father descends to him, and he is charged with the maintenance of his parents. They may continue to live with him if he and his wife please, if not, he provides them with a separate dwelling. A younger son is usually made a Lama. Should there be more brothers, and they agree to the arrangement, the juniors become inferior husbands to the wife of the elder: all the children, however, are considered as belonging to the head of the family. The younger brothers have no authority, they wait upon the elder as his servants, and can be turned out of doors at his pleasure, without its being incumbent upon him to provide for them. On the death of the eldest brother his property, authority, and widow devolve upon his next brother. The women of Ladak, in consequence of their great proportionate number, find it difficult to obtain subsistence, and besides domestic occupations and wool-picking, in which they are very expert, they are the principal labourers in the fields. They are a very lively good-humoured race, and scolding and railing are almost unknown amongst them.—*Report on the Proceedings of the Magnetic Survey of India*, p. 4; *Rob. Schl.*; *Mrs. Hervey's Adventures of a Lady in Tartary*, Vol. i, p. 188; *Dr. Thomson's Travels in Western Himalaya and Tibet*, pp. 182, 183, 185, 247; *Latham's Ethnology*; *A. LEMA ISLANDS, a group of three large and one small island the outermost of the great Archipelago that fronts the Canton river.

LEMAKCHAIR, MALAY. Tallow.

LEMA-PASS in the Himalaya, Dr. Thomson says, that, when in the Lemah pass, it required reflection on the fact that we were traversing a tract in which the bottoms of the valleys were from 15,000 to 15,500 feet above the level of the sea, to make us aware of the very mountainous nature of the country we were passing through, which was, if any part of Tibet (which I have seen) may be so called, the Table Land, north of the Himalaya. The height of the mountains, too, was in fact greater than we had at first been inclined to believe, the gentleness of the slopes making us think the ridges nearer than they really were, and therefore leading to a false estimate of their height. In general they were from 1,000 to 2,000 feet in height, and their summits therefore from 16,000 to 17,000 feet above the level of the sea.—*Dr. Thomson's Travels in Western Himalaya and Tibet*, p. 151.

Camel's hay: Sweet rush,	Wassina-pillu, "
Gund-bel, Olacha, HIND.	Cavatum-pillu, "
Siri, JAV.	Kamachie kasuvu, TEL.
Gowr-gia, PERS.	

This plant is cultivated in gardens, but it grows wild, and large tracts of waste land in India and Ceylon are covered with it. Its fresh leaves are much used as a substitute for tea, the white succulent centre of the leaf bearing culms is often put into curries to flavour them, and a pleasant tasted essential oil is distilled from the leaves. It flourishes in any good soil. It is propagated by slips from the root, and only requires watering. It is cultivated all over the Tenasserim Provinces, and a decoction made from the leaves is deemed by them of much efficacy in cholic and similar complaints. In Madura, are three sorts of grass, named "Ponthapil," "Seegoumpil" and "Comatchipil." To make oil, each sort of the grass should be cut in pieces of one span long (the little roots excepted) and the same put into earthen pans separately. Their subsequent exposure to the warmth of fire will extract the oil.—*Riddell; Mason.*

LEMONADE, a refreshing drink made with water and the expressed juice of the acid lime.

LEMON GRASS OIL.

Camachie pillu tylum,	Camachi kasavu tylamu,
TAM.	TEL.

This oil is obtained by distillation from the *Andropogon schoenanthus* grass. It is much used as a rubefacient for rheumatic affections, as well as in perfumery, for which purposes it is said to be largely exported from Travancore. When newly made, this oil is of a light straw colour, but age changes it to a deep red. Another oil also called Lemon grass oil or Citronelle, the produce of "*Andropogon citratus*," is produced in Travancore and Ceylon. Of its use and properties, particularly in rheumatic cases, there can exist no doubt. Its properties and intrinsic worth even as a perfume of other oils are well-

LEMURIDÆ.

known in England—*M. C. C.; M. E. of 1855.*

LEMON JUICE.

Ning-mung-chih, CHIN.	Limbu-ka-rae, HIND.
Jua de limon, FR.	Agro o sugo de limone, IR.
Zitronen saft, GER.	Jugo de limon, SP.

The expressed juice of limes or lemons, is an approved specific in the prevention and cure of scurvy; a powerful and agreeable antiseptic; as well as an ingredient in many pleasant refrigerant drinks.—*Faulkner.*

LEMON PEEL.

Rind of Cit. limonum, ENG.	Limonschellen, GER.

LENA, see Shaman.

LENAH KRAS, MALAY. Camirium cor-difolium, Gert.

LENCHA, TIB. Common salt. Three sorts of salt are known in the commerce of the Himalaya and Tibet.

Sercha—White and best.

Chama—Reddish and good.

Pencha—Yellowish and bad, contains soda or magnesia and earthy matter.

All the salt consumed in eastern Tibet is the produce of lakes or mines situated to the north of the Yaroo river, or comes from "Lache," a district lying between Digarchi and Ladak, which is traversed by the Yaroo. The best information procurable is to the effect that all the salt of Tibet is the produce of lakes; still there are people who assert that it is also dug out of the ground. Possibly this is confined to the vicinity of the lakes or to their dried margins. All travellers in Tibet are agreed that the salt-producing districts are the most rugged and inaccessible that can be imagined, and men and sheep only can reach the salt deposits, and the elevation of the deposits prevents their being worked, except for the warmer half of the year, April to November. Thousands of sheep are employed in carrying the salt from the deposits to places accessible to yaks. These latter animals carry it all over Tibet in loads up to 160 lbs. Sheep in open places will carry 20

LENTIL.

to 24 lbs. : in the vicinity of the deposits the ruggedness is great.

Lentil-taro,	ENG.	

The lentils of scripture, Gen. xxv, v. 24, are the *Ervum lens*, a leguminous plant cultivated in Europe and Asia, and one of the oldest food plants, of which we have any record. Ever since the time of Esau they are known to have been eaten in the east. In Egypt and Syria they are parched in a frying-pan and sold in the shops, and considered by the natives as the best food for those who are on long journeys. Its composition in 100 parts have been found to be, in samples from

Calcutta bazar. Bombay bazar.

Moisture,	12-70	11-40	10-72	12-50
Nitrogenous matter. . .	24-57	26-18	25-20	24-65

Mineral constituents (ash)	2-29	1-99	2-20	2-37

Lentils, like all other leguminous fruits, contain a large quantity of nitrogenized matters. Einhoff found that 3840 parts of lentils contained 1260 parts of starch and 1433 parts of a matter analogous to animal matter. Dr. Playfair found that 100 parts of lentils contained 33 parts of albumen or gluten and 48 parts of starch, &c.; whilst the same quantity of peas contained 29 parts of albumen, and of beans 31 parts. If the theory of nutrition propounded by Professor Liebig in his late work on 'Animal Chemistry' be correct, then lentils constitute one of the most highly nutritious foods in nature, but it is said to be difficult of digestion, to produce thirst, heat of skin and eruptions if freely used. There are three varieties known in France and Germany: the small brown, which is the lightest flavoured and the best for soups; the yellowish, which is a little larger and the next best; and the Lentil of Provence, which is almost as large as a pea, with luxuriant straw, and

LENTIL.

might be cultivated as food for cattle. In its cultivation the lentil requires a dry warm soil; it should be sown later than the pea at the rate of a bushel or a bushel and a half to the acre. It ripens earlier than the pea, and requires the same treatment and harvesting. The produce of the Lentil in grain is about a fourth less than that of the tare, and the straw is not more than a third as much. The straw is however considered very nourishing, and is used for feeding calves and lambs. It is the *Ervum lens* which was largely advertised in London about the year 1840 under the term *ervalemta*, afterwards as *revalenta*. On analysis Warton's *Ervalemta* was found to consist of a mixture of the French or German lentil, ground and reduced to powder, including portions of the shells or husk, and of a substance very closely resembling in its microscopic characters, maize or Indian-corn meal. The French lentil, either whole or ground, is of a yellowish colour, and has the taste of peas. It has been stated that the farina of a grass called "*Dari*," or "*Durra*," &c., has been discovered in either *Ervalemta* or *Revalenta*. "*Dari*," is suspected to mean *Durra*, also spelt *Doura*, *Dorv*," &c. It is a corn used by the Arabs, and is cultivated in the south of Europe. It is the *Molcus durra sativus* of Forskal, the *Sorghum vulgare* of some other writers. "Its meal is said to resemble that of Indian corn. A German microscopist recently stated that he found the meal of Indian corn in *ervalemta* or *revalenta*, but he perhaps mistook it for the *Sorghum*. The article sold in bottles at 1s. per lb., and recommended to be used in cases of obstinate constipation with the *Ervalemta*, appears to be nothing more than treacle, the name "*Melasso*" being derived from the word molasses. Du Barry and Co.'s *Revalenta Arabica*, was found to consist of a mixture of the red or Arabian lentil and barley flour, sweetened with sugar. A third sample consisted of the Arabian lentil and barley-flour, with the addition of saline matter, principally chloride of sodium or common salt; it also possessed a peculiar taste, as though flavoured with colery-seed. Warton's *Ervalemta* is of a yellowish colour, Du Barry's *Revalenta* is of a pink or rosy hue, arising from the different species of lentil employed, the German being yellow, and the Arabian lentil of a red colour. Lentils, peas, beans, &c., all contain a considerable amount of nitrogenized matter, in the form of Legumine. When taken as an article of diet, they are found by most to be somewhat difficult of digestion, to occasion distention and flatulency, and to be slightly aperient. The two following are receipts for lentil flour:

LEONURUS SINENSIS.

Red or Arabian lentil-flour	2 lbs.	Salt	3 oz.
Barley-flour	1 lb.	Mix into a uniform powder.	

Pea-flour	2 lbs.	Salt	3 oz.
Indian corn flour	1 lb.	Mix as before.

LENTINUS, see Fungi.

LENTIPES, a genus of fishes of the Fam. Gobiidae.

FIRST GROUP.—Gobiina.

152 Gobins,	7 Gobiodon,	1 Lentypes,
2 Euctenogobius,	2 Triacanthophorichthys,	3 Periophthalmus,
2 Latrunculus,		
10 Apocryptes,	1 Tridentiger,	5 Boleophthalmus,
1 Exorthodus,	1 Benthophilus,	49 Eleotris,
6 Gobiomina,	13 Sieyidium,	1 Asteropteryx.

SECOND GROUP.—Amblyopina.

8 Amblyopus.

THIRD GROUP.—Trypauchenina.

2 Trypauchen, 1 Trypauchenichthys

FOURTH GROUP.—Callionymini.

1 Platysterna,	1 Vulsus,	1 Oxymetopon
22 Callionymus,	1 Luciogobius,	

LENU also Lon, Rus. Flax.

LEO, the lion, the *Felis leo* of Linnæus, the Asiatic lion, occurs in India. It was called by Smee, the *Felis gujrattensis*, and the people call it the Sher, the Bahbar-sher, the Untia-bag or Camel-coloured tiger, also Singha and Shingal. Its length is from 8½ to 9½ feet, and its height 3½ feet. The Asiatic and African lion is identical, and is found in the N. W. of India from Guzerat and Cutch to Hurrana, Gwalior and Saugor.

LEO AFRICANUS, a Moor of Graunda. He was named after Leo, having abjured the mahomedan religion during the pontificate. He wrote a description of Africa in Arabic and Latin, and died in 1556.

LEONOTIS LEONURUS, the Scarlet dandelion. A beautiful small scarlet flower, native of the Cape, and now common in all Indian gardens; blossoms throughout the year, and is very difficult to get rid of when once sown: any soil seems to suit it.—*Riddell*.

LEONTES, the modern Letani. See Lebanon.

LEONTODON TARAXACUM.

Dandelion, Eng.

This is found in the Sutlej valley between Rampur and Sungnam at an elevation of 6,000 to 10,000 feet, the extract is official. —*Cleghorn's Punjab Report*, p. 68.

LEONURUS SINENSIS.

Ch'ungwei, CHIN. | Yih-mu-ts'au, CHIN.

It grows all over China especially in Han-

LEOPARD.

cow. It is dried and used medicinally, as a tonic, alterative, vulnerary and general remedy in puerperal and menstrual ailments.—*Smith, Chin. Mat. Med.*

LEONURUS TATARICUS, Tartarian Motherwort, a shrubby plant grown from seed and cultivated in some gardens.—*Riddell*.

LEOPARD. No less than five distinct species of leopard are described. A fawn-coloured animal without spots, called 'chan-koo,' inhabits the mountains about the sources of the Ganges. The panther, *F. pardus*, lower and forest regions. The leopard, *F. leopardus*?—'dheer hay' of the natives; affects the same situations as the last. The white leopard or ounce, and called the 'bur-el hay,' found at high altitudes, near the persistent snow-region. The small leopard, 'goral hay,' is so called from its partiality to feeding on the goral, or Himalayan chamois.

Felis leopardus, *Schreb.*, is the leopard or choctah of India.
Felis pardus, is the pard or panther or gorbicha of the Dekhan.
Felis diardi, *Desm.*, the clouded leopard of India and Malaya.
Felis jubata, the maned leopard, is the hunting leopard of India.
Felis tulas, *Peron*, is the black choctah of India and Malaya.
Felis pardochrous, *Hodgs.*, of Nepal and Tibet.
Felis Horsfieldi, *Gray*, of Darjeeling.
Felis javanensis, *Desm.*, of Sumatra, Borneo, Java.
Felis sumatranus, *Horsf.*, of Sumatra.

Latterly, naturalists have regarded the *F. leopardus* and *F. pardus* as varieties of the same animal, and Horsfield and Jerdon say, the black leopard *F. melas*, *Peron et Lesueur*, is now uniformly admitted to be a black variety of *F. pardus*. Most Indian sportsmen, however, regard them as distinct, though black and yellow cubs are said to have been seen following a female yellow leopard, and the black leopard has seemed to be of a more vicious temper.

Panther—There is undoubtedly in British India, a large and a small leopard, the large variety being commonly called the Panther:

<i>F. pardus</i> ,	<i>Hodgs.</i>	<i>F. leopardus</i> ,	<i>Temm.</i>
Leopard	of Sykes.	Bay-hira of Himalaya,	
Tendwa	of Bowri.	Tahir-hay "	
Honiga	CAN.	Adnara,	HIND.
Chita,	HIND.	A-sna,	MAHR.
Chita bag,	"	Chuna puli,	TEL.
Barkal,	GOND.	Sik,	TURK.

It is found throughout India, in the more open country near low hills and ravines. It is from 4 to 5 feet long, tail $2\frac{3}{4}$ to $3\frac{1}{2}$, total about $6\frac{3}{4}$ to $8\frac{1}{2}$ feet. They destroy deer, occasionally kill and carry off cattle and ponies, not unfrequently carry off children, also old women. Sir Walter Elliot says an instance occurred of four men being killed by one before it could be destroyed.

LEPCHA.

Leopard, or smaller variety:

<i>Felis leopardus</i> ,	<i>Hodgs.</i>	<i>Felis pardus</i> ,	<i>Temm.</i>
"	<i>longicaudata</i> , <i>Valen.</i>		
Bibla,	of Bowri.	Ghur-hay,	Simla.
Gorbacha,	DUKH.	Dhir-hay,	"
Gorbacha,	"	Lakkar-bagha,	Himalaya.
Bibla-bagha,	MAHR.		

This is smaller than the other with a round bull-dog head. It seizes on dogs, sheep, goats, deer, monkeys, pea fowl. It is more abundant in forest countries, in Malabar, Wynnad, Gumsoor, in the woody parts of the Himalaya and Malay peninsula. It is stealthy, not unfrequently attacks man, and has been known to carry off men who were watching grain at night.

Black Leopard:

F. melas. *Peron*. | *F. perringer*, *Hodgs.*

It is found throughout British India but sparingly in a forest country. It is of a uniform dull black colour. On one occasion when shifting the tigers and leopards of the Madras Museum from one den to another, a black leopard leaped violently against the doorway which it forced open and escaped into the garden, creeping close to the low hedge. It was followed up for about fifty yards, but it turned on the Editor who backed and leaped to the top of a wall, five feet high, followed by the black leopard which sprung from the ground, but was caught in the leap by a blow on the head, from which it fell at the foot of the wall stunned. It was secured and restored to its den. It recovered from its insensibility on the following day, but on the twelfth day it was killed by a leopard in the same den. It had a vile temper.

Dr. Adams says the leopard seldom attacks cattle, and confines its plunderings to sheep, goats, and village dogs. The ounce (*Leopardus uncia*) is perhaps the most common of the large Felidæ. The skin of a black variety is said to have been procured in Ladakh; and the natives of Tibet and Chinese Tartary mention a leopard without spots.—*Jerdon's Mammals*; *Adams*; *Horsfield's Catalogue*, *E. I. C. Museum*; *Tenney's Sketches of Nat. Hist. of Ceylon*, pp. 25-29.

LEPCHA, a Mongolian tribe forming a

large part of the population of Sikkim proper and British Sikkim or the Darjeeling territory. The Lepcha is a Blot race hemmed in between the Newar and other Nepal tribes, and the Lhopa of Bhutan. The country of Sikkim and Darjeeling is the land of the Lepcha race who are hemmed in between the Newar and other Nepal tribes and the Lhopa of Bhutan, the Lepcha area being barely 60 miles in breadth. His physiognomy is markedly Mongolian, stature short, from 4 feet 5 inches to 5 feet; face broad and flat, nose depressed, eye oblique, chin beardless, skin sallow and olive, with a little moustache on the lips: broad chest and strong-armed but small-boned legs, with small wrists, hands and feet. The Lepcha is honest, timid and peaceful with mild and frank features. The Lepcha throws over him loosely a cotton cloak striped with blue, white and red, and uses an upper garment with sleeves, in the cold weather: a broad umbrella-shaped hat of leaves and a pent-house of leaves in the rains. The women dress in silk skirt and petticoat, with a sleeveless woollen cloak. The Lepcha man carries a long heavy and straight knife serving for all purposes to which a knife can be applied. They drink the Murwa, the fermented juice of the Eleusine coracana. This Murwa grain gives a drink, acidulous, refreshing and slightly intoxicating, and not unlike hock or sauterne in its flavour. Their songs and the music of their bamboo flute is monotonous. They marry before maturity, the brides being purchased by money or service. The Lepcha, like the Borneo Dyak, kindle a fire by the friction of sticks. The Lepcha burn or bury their dead. Their food is mountain spinach, fern tops, fungi and nettles. Their ailments small pox, goitre, remittent fevers and rheumatism. Dr. Rennie distinguishes the Lepcha as Mongolian Lepcha and Tibetan Lepcha. According to Dr. Hooker, the Lepcha is the inhabitant of Sikkim and have Mongolian features and habits. Their language assimilates to the Tibetan. Some of the Lepcha tribes call themselves Rong also Arrat, and their country Dijong. Captain Hathorn says that they have a written language, but no recorded history of themselves or of others. Amongst themselves they divide into two tribes, the Rong and Khamba. The Rong has no tradition of immigration; but the Khamba appear to have come about 200 years ago from Kham, a province of Thibet on the borders of China. The present Sikkim rajah is a Khamba. The Lepcha are buddhists. The Lepcha have no caste distinctions, but they speak of themselves as belonging to one or other of the following sections:

Burphoong phoocho.	Tung yeld.
Udding "	Lucksom.
Thurjokh "	Therim.
Sundyang.	Songme.
Sugoot.	

Captain J. D. Herbert, when writing of the Lepcha race, says, "this was my first interview with the Lepchas, and I saw immediately that they were the same people whom I had with me at Nialang, at Jahnabbi, at Shipchi on the Sutlej, in Hangarang, and at Lari in Ladak. They are in fact the people who have been erroneously called Chinese Tartars, and are in reality of the same race as the Thibetans, being a family of the great division of Eleuth Tartars or Calmuks."

Darjeeling has a mixed population of the Sikkim, Nepal and Dharma Bhoteah also Lepcha and Pahari. Dr. A. Campbell tells us of the gradual increase of population that had taken place under British rule, from a few scattered tribes in 1853 to upwards of 60,000 in 1870. Brahmans and rajpoots, few in number, with a Sanskrit tongue, and an Indo-European physiognomy, confined to Nepal. The Rhu, Majar, and Goorvong, a mixture of hindoos and Mongolians, with features of a type belonging to the latter, comparatively free from caste prejudices and speaking the Parbatta dialect. They are short and squat highlanders, and make good soldiers. The Bhoteah Lepcha, and Moormi are buddhists, and speak the Tibetan language. They are strong and active and incline strongly to the Mongolian race. The Limbo, Sunwar and Chepang possess a small Mongolian type, strongest in the Limbo, and their language is referable to either the Tibetan or Indian standard. The Meechi, Dhimal and Gharow, are lowland tribes with a Mongolian physiognomy, but are neither hindoos, buddhists nor mahomedans. The Tharvo and Dhunwar are buddhists or mahomedans with fair and barely Mongolian features. The Bahir, Kebant, Amatti, Maralia, Dhanook and Dom are not Mongolian, but a dark race, speaking Hindee or Bengalee. The Koch or Rajbansi are a race of dark hindoos inhabiting the Terai of Nepal and Sikkim, but who have spread into British territory. The oak and maple and other mountain trees throw out great knots, in the places to which the Balanophora attach themselves. These knots are hollowed out into the wooden cups by the Lepcha of Tibet. Some of the Lepcha cups are supposed to be antidotes to poison. They are of a peculiar pale-coloured wood and cost a great sum. The common cups cost only 4d. or 6d. They are all imported into Tibet from the Himalaya. Firing the forest is so easy in the drier months of the year, that a

LEPIDIDIUM SATIVUM.

good deal of cultivation is met with on the spurs, at and below 5,000 feet, the level most affected by the Lepcha, Limbo and Sikkim Bhotia. The term Sikkim Bhotia is applied to the more recent immigrants from Tibet, who have settled in Sikkim, and are an industrious, well-conducted people. The Bhotia, again, of Bhotan, to the eastward, rarely reside except at Darjeeling, and bear the worst reputation (and most deservedly) of any of the numerous people, who flock to Darjeeling. These should not be confounded with any other Bhotian tribes of Tibet, Sikkim or Nepal. The mountain slopes are so steep, that these spurs, or little shelves, are the only sites for habitation between the very rare flats on the river banks, and the mountain ridges, above 6,000 feet, beyond which elevation, cultivation is rarely if ever carried by the natives of Sikkim. The varieties of grain are different, but as many as eight or ten kinds are grown without irrigation by the Lepcha, and the produce is described as a very good 80 fold. Much of this success is due to the great dampness of the climate; were it not for this, the culture of the grain would probably be abandoned by the Lepcha, who never remain for more than three seasons on one spot.—*Dr. Latham's Descriptive Ethnology; Gleanings of Science, p. 939.*

LEP-DWAT, BURM. In Amherst, a timber used for spear-handles and sword-sheaths; it is a fine grained, white wood, fit for turning purposes and picture frames; it is probably the same kind of *Nauclea* which is used for similar purposes in Bengal.—*Captain Dance.*

LEPEEAI, NEPAUL. China grass.

LEPER LEPER, a canoe of Amboyna, dug out of a single tree, with raised sides.—*Bikmore.*

LE PET BEU, BURM. *Elæodendron orientale.*

LEP-HAN, BURM. Grows everywhere in the upper provinces, and is one of the largest trees in the country, often ten and twelve feet in diameter. The ripe seeds are contained in pods, enveloped in a fine cotton, of which mattresses are commonly made. Both blossoms and fruit are eaten when young, chiefly in curry. Timber inferior.—*Malcom, Vol. i, p. 181.*

This is grown in many parts of India. Its small ovoid, reddish mucilaginous seeds are used medicinally by the natives of India as a laxative and anti-scorbutic, and by the native physicians as a gentle stimulant. An oil has been extracted in India, as well as in Europe. The seed is of an agreeable warm taste. Bruised and mixed with lime juice, it is deemed useful for checking local inflammation. Taken whole in half drachm doses, it answers as a gentle and warm aperient.—*Birdwood, Cal. Cat. Exhib. 1862; Roxb.; Voigt; Ainslie, Vol. ii, p. 12; O'Shaughnessy, p. 188.* See Garden cress, Cress, Oil.

LEPIDOPTERA, an order of insects of the class Insecta, comprising the butterflies and moths, and cocoon weavers, the Papilionæ, the Sphingæ and the Bombycæ, and each of these sub-divided into stirps. Their principal genera as they occur in India may be thus synoptically shown:—

CLASS INSECTA.

ORDER LEPIDOPTERA.

TRIBE I. Papiliones, 5 stirps; 110 genera and 669 species.

STIRPS I. with Vermiform larvæ.

13 genera and 97 species, viz.:—

3 Miletus,	5 Anops,	14 Myrina,
20 Lycæna,	1 Pithecops,	3 Polyommatus,
1 Thecla,	2 Chrysophanus,	8 Ileria,
25 Amblypodia,	11 Dipsas,	4 Aphanus,
		3 Loxura,

STIRPS II. with Chilognathiform or Juliform larvæ.

A.—13 genera and 73 species, viz.:—

5 Callidryas,	2 Aporia,	1 Pontia,
1 Dercas,	1 Gonomyia,	3 Collas,
8 Terias,	1 Hebomola,	2 Eronia,
3 Callosone,	4 Thestia,	4 Idnals,
		38 Pieris,

B.—5 genera and 63 species, viz.:—

1 Hardwickii,	2 Leptocircus,	55 Papilio,
1 Telnopalpus,	5 Ornithoptera,	

STIRPS III. with Chilopodiform or Scolopendridform larvæ.

33 genera and 131 species, viz.:—

15 Danaüs,	15 Euphros,	2 Ideopsis,
4 Hestia,	1 Telchinea,	1 Pareba,
4 Vanessa,	1 Grapla,	2 Pyrameis,
8 Junonia,	4 Precis,	2 Ergolis,
1 Cymhia,	1 Ammosia,	5 Cyrestis,
2 Parthenos,	1 Prothoe,	1 Terionis,
1 Cirochroa,	1 Messaræa,	2 Atella,
2 Laogona,	4 Cethosia,	12 Neptis,
6 Argynnis,	3 Diadema,	1 Penthema,
5 Hestina,	1 Calinaga,	12 Athyma,
1 Abrota,	9 Limenitis,	1 Pandia,

STIRPS IV. with Thyasuriform larvæ.

36 genera and 228 species, viz.:—

33 Adolias,	2 Euripus,	1 Herona,
2 Castalia,	1 Dillipa,	4 Apatura,
1 Symphædra,	9 Nymphalis,	3 Kallima,
2 Anathusis,	1 Zuescidia,	3 Enipe,
2 Diacophora,	2 Clerome,	1 Drusilla,
7 Thaumantis,	11 Dehis,	2 Zophoceras,
2 Cyilo,	9 Melanitis,	1 Calceus,
1 Ortuoma,	1 Neorina,	1 Ragadia,
2 Erebia,	1 Laxommata,	2 Enope,
1 Zenica,	4 Satyrus,	1 Erites,
18 Mycalesis,	1 Theope,	6 Ypthima,
7 Elymnias,	1 Hypania,	2 Libythea,

In the winged insect-world, there are numerous species common to the plains of India and the hill regions : among the most prominent of which, appertaining to the Lepidoptera, are the cosmopolite *Cynthia cardui* (or 'Painted Lady' butterfly) at all elevations, the *Papilio machaon* (or English 'Swallow-tail' butterfly) in the Himalaya, the *Colias edusa*, (or 'Clouded-yellow' butterfly) and the *Argynnis lathonia* (or 'Queen of Spain') also common in the Himalaya, *Sphinx convolvulus* at all elevations, &c. ; but others are represented by nearly similar species, which are considered different upon comparison, as the 'Purple Emperor' (*Apatura*) and 'Common Sulphur' (*Gonepteryx*) butterflies, and others which are more obviously different, as *Vanessa vulcania* of the Himalaya compared with *V. atalanta* of Europe. Two species of 'Death's-head' Moths (*Acherontia*) are common to all habitable elevations ; and one of these is exceedingly similar to that of England (*Ach. atropos*) ; but is nevertheless considered by the eminent entomologist Westwood to be distinct.

LEPIDOPTERA.

Butterflies are very numerous in the south and east of Asia, and many of them very beautiful. The largest and most gaudy of the Ceylon Lepidoptera, is the great black and yellow butterfly, the *Ornithoptera darsius* of Gray. Its upper wings, which often measure six inches across, are of a deep velvet black. Its caterpillar feeds on the *Aristolochia* and betel leaf, but the butterfly on the heliotrope. *Papilio polymnestor*, the black and blue butterfly, feeds on the ruddy flowers of the hibiscus or the dark-green foliage of the citrus. *Papilio hector* has crimson spots on the black velvet of the inferior wings. When examining the Lachen valley, Dr. Hooker found the caterpillar of the swallow-tail butterfly (*Papilio machaon*), common, feeding on umbelliferous plants, as in England ; and a *Sphinx* (like *S. euphorbiæ*) was devouring the euphorbias ; the English *Cynthia cardui* (painted-lady butterfly) was common, as were "sulphurs," "marbles," *Pontia* (whites,) "blues," and *Thecla*, of British aspect but foreign species. Amongst these, tropical forms were rare, except one fine black swallow-tail. Eastward of the city of Canton on a range of hills called Lofau shan, there are butterflies of large size and night moths of immense size and brilliant colouring, which are captured for transmission to the Chinese court and for sale. The most valuable to man are the species of the *Bombycidæ* or silk worms. One of these insects (*Bombyx atlas*) "measures about nine inches across, the ground colour is a rich and varied orange-brown, and in the centre of each wing there is a triangular transparent spot," resembling a piece of mica. The *Bombyx* or *Bombyces*, genus of insects, of the family *Bombycidæ*, order *Lepidoptera*, the section *Lepidoptera nocturna* of Latreille, or Moths, are usually styled silk moths. The valuable product of the silk moth is the cocoon, and races have been produced differing much in their cocoons, but hardly at all, in their adult state. Several distinct species exist in China and India, some of which can be crossed with the ordinary moth, *Bombyx mori*. This is believed to have been domesticated in China B. C. 2700. It was brought to Constantinople in the sixth century whence it was carried into Italy, and in 1494 to France, and has since been transported to many countries where food and selection have produced many varieties. It is only in some districts of each country that eggs come to perfection. Captain Hutton is of opinion that at least six species have been domesticated. The principal characteristics of this family are—their possessing only rudimentary maxilla, remarkably small palpi, and bipectinated

antennæ. One of the most interesting of the family is the *Bombyx mori*, well-known as the moth to which the silkworm turns. This species which was originally from China is of a white or cream colour, with a brown fascia and two or more waved lines of a deeper colour crossing the upper wings. In Britain the eggs of this moth hatch early in May: the caterpillar or silkworm is at first of a dark colour, but soon becomes light, and in its tints much resembles the perfect insect, a circumstance common in caterpillars. Its proper food is the mulberry, though it will likewise eat the lettuce and some few other plants: on the latter, however, it does not thrive equally well, and the silk yielded is of a poor quality. The silkworm is about eight weeks in arriving at maturity, during which period it changes its skin four or five times. When about to cast its skin it ceases to eat, raises the fore part of the body slightly and remains in perfect repose. In this state it is necessary that it should continue for some little time, in order that the new skin, which is at this time forming, may become sufficiently mature to enable the caterpillar to burst through the old one. This operation, which is apparently one of considerable difficulty, is performed thus:—the fore part of the old skin is burst: the silkworm then by continually writhing its body (but not moving from the spot) contrives to thrust the skin back to the tail, and ultimately to disengage itself altogether; this last part of the operation, however, is the most difficult, since it is no uncommon occurrence for them to die from not being able to disengage the last segment of the body from the old skin. When full-grown the silkworm commences spinning its web in some convenient spot, and as it does not change the position of the hinder portion of its body much, but continues drawing its thread from various points and attaching it to others, it follows that after a time its body becomes in great measure, inclosed by the thread. The work is then continued from one thread to another, the silkworm moving its head and spinning in a zigzag way, bending the fore part of the body back to spin in all directions within reach, and shifting the body only to cover with silk the part which was beneath it. As the silkworm spins its web by thus bending the fore part of the body back, and moves the hinder part of the body in such a way only as to enable it to reach the farther back with the fore part, it follows that it encloses itself in a cocoon much shorter than its own body, for soon after the beginning the whole is continued with the body in a bent position. From the foregoing account, it appears that with the most simple

instinctive principles all the ends necessary are gained. If the silkworm were gifted with a desire for shifting its position much at the beginning of the work, it could never inclose itself in a cocoon; but by its mode of proceeding, as above explained, it incloses itself in a cocoon which only consumes as much silk as is necessary to hold the chrysalis. During the time of spinning the cocoon, the silkworm decreases its length very considerably, and after it is completed, it is not half its original length; at this time it becomes quite torpid, soon changes its skin, and appears in the form of a chrysalis. The time required to complete the cocoon is about five days. In the chrysalis state the animal remains from a fortnight to three weeks; it then bursts its case and comes forth in the imago-state, the mouth having previously dissolved a portion of the cocoon by means of a fluid which it ejects. The moth is short-lived; the female, in many instances, dies almost immediately after she has laid her eggs; the male survives her but a short time. The silkworms, which are most extensively reared for the purpose of producing silk, are liable to many diseases, and none have been more destructive than that called muscardine. This disease attacks the caterpillar when about to enter the chrysalis state. It is always attended with the development within the body of a minute fungus closely resembling our common mould. It is probable the fungus only attacks those worms which are predisposed to disease, but in certain seasons this fungus has been so extensively developed as to lead to the supposition that it produces the disease itself. It is very certain that, when this fungus is prevailing and its spores are introduced into the body of the silkworm, it becomes rapidly diseased and dies. The fungus spreads internally before the death of the worm and afterwards it shoots forth from the surface of the skin. The chrysalis and moth will have the disease if inoculated with the fungus, but it only occurs spontaneously in the caterpillar. The Bombyces, in their metamorphosis, construct a covering or case generally called a cocoon. Each tribe of the Bombyces produces a cocoon of a peculiar form. They are said to spin or weave their cocoon. In their scientific classification, the Bombyces are arranged into eight stirpes or types, according to the forms of their larvæ, and those known to occur in India, have been classed into 105 genera and 272 species. The most important of these, in a social point of view, are the silk-producing moths, belonging to the genera *bombyx*; *erica*; *salassa*; *anthera*, *actias*, *saturnia* and *attacus*.

LEPIDOPTERA.

1. *Bombyx mori*, *Linn.*, the common, domestic, or Chinese silkworm moth, the *Sericaria mori* of Blanchard and the "pat" of Bengal, is a native of China, but has been domesticated there and in Siam, India, Persia, France and Italy. The usual tradition in China is that this was discovered B. C. 2640, in the reign of the emperor Hawang-Te, by his queen: The culture now flourishes principally about Nankin in latitude 32° N., but in India, into which it was early introduced none of the silk filatures extend beyond 26° N. They have been found in a wild state in Kent in England, on shrubs, but the mulberry tree leaves are its favourite food.

2. *Bombyx religiosa*, *Helfer*, *Deo-mooga*, *HIND.*, *Joree*, *HIND.*, is found in Assam and Cachar, but is supposed by Mr. Moore to be identical with *B. huttoni*. This feeds on the *Ficus indica* and *Ficus religiosa*. Its cocoon shows the finest filament, has very much lustre, is exceedingly smooth to the touch and yields a silk, if not superior, yet certainly equal to that of *B. mori*. It has not been domesticated.

3. *Bombyx huttoni*, *Westwood*, is found in the Himalaya, about Mussoorie, where it occurs abundantly from the Doon up to at least 7,000 feet. It feeds on the leaves of the wild mulberry and breeds twice a year. It has not been domesticated, but feeds on the trees. It spins its cocoon on the leaf, which is enclosed, the silk is very fine and of a very pale yellow tint. It is found in the western Himalaya, in great profusion, at elevations of 3,000 to 8,000 feet, above the sea level. It occurs in the height of the rainy season, when the hills are enveloped in dense mists. Its eggs are deposited on the trees, and subjected to the influence of the frosts and snows of those mountain winters. It is supposed by Major Hutton, that it would suit the climate of Britain. A special committee of the Agricultural Society of India, declared that silk of the very best description can be obtained from its cocoons by careful reeling. The silk is fine and tough, though perhaps somewhat less soft and silky to the touch than that of the Chinese worm, and was valued by the Delhi shawl merchants at 25s. the pound. At Simla, nine species of *Bombyx*, *Saturaia* and *Actias* occur, nearly the whole of which might be turned to account in producing silk.

4. *Bomb. horsfieldi*, *Moore*, found in Java.

5. *Bomb. sub-notata*, *Walker*, found in Singapore.

6. *Bomb. lugubris*, *Drury*, found in Madras.

7. *Bombyx Yama mai*, the oak silkworm, a native of Japan, has been naturalised in England. In Japan it is the most precious for the produce, and is a monopoly of the Royal family. The cocoons are of a beautiful yellowish green colour.

The silk is as fine, thin and light brown as that of the mulberry worm.

8. *Bombyx Pernyi*, a native of the north of China. It produces the gridelin cocoon and silk.

9. *Bombyx mylitta* of India, produces a large cocoon. It feeds on the leaves of the *Rhamnus jujuba*, and furnishes a dark coloured, or grey silk, coarse but durable, inferior to that of the *B. Yama mai*.

10. *Cricula trifenestrata*, *Helfer*, has been arranged under the genera *saturnia*, *euphrasor*, *antheræa* and *phalæna*. It occurs in N. E. and S. India, in Sylhet, Assam, Burmah and Java; and feeds on the *Protium javanum*, *Canarium commune*, *Mangifera indica* and *Anacardium occidentale*. Its cocoon is constructed like net-work, through which the enclosed chrysalis is visible. It is of a beautiful yellow colour and of a rich silky lustre.

11. *Salassa lola*, *Westwood*, formerly in the genera *saturnia* and *antheræa*, occurs in Sylhet.

12. *Antheræa paphia*, *Linn.*

Tasser,	RUMPH.	Koli-surtah,	MAHR.
Tasseh,	HIND.	Munga,	MICH.
Bughi,	BIRBHOOM.	Kontkuri muga,	ASSAM.

This has been classed in the genera *Phalæna*, *Saturnia*, *Bombyx* and *Attacus*. It is known to occur in Ceylon, S. India, N. W., and N. E. India, Bengal, Bahar, Assam, Sylhet and Java. It feeds on the *Shorea robusta*, *Zizyphus jujuba*, *Terminalia alata*, *T. catappa*, *T. glabra*, *Bombax heptaphyllum*, *Tectona grandis*, or teak, and the mulberry or *Morus indica*. The insect has not been domesticated, but is watched on the trees, and in parts of India, is found in such abundance that the people from time immemorial have been supplied with a very durable, coarse, dark-coloured silk, which is woven into the well-known tasseh silk cloth. In the Bhagul-pore district the cocoons are collected in cart loads and are much used, cut into thongs, as ligatures for binding the matchlock barrel to the stock. In the rainy season the perfect insect appears from the cocoon in about twenty days. But Tasseh moths are hatched twice in the year, in May and August. The caterpillar first draws a few leaves together, as if to screen itself from observation and then spins a strong cord, composed of many threads till about the thickness of a crow quill, at the end of which it weaves the cocoon. For the first 36 hours, the cocoon is so transparent that the larva can be seen working within; but it soon acquires consistence and is then rendered quite opaque by being covered with a glutinous substance. The moth generally deposits its eggs within a few yards of the cocoon. These the villagers collect and keep

in their houses for about ten days until the young caterpillars come forth, when they are placed on the Asan trees in the jungles, and in eight or ten days more they prepare for change to the chrysalis state. The owners tend them carefully to protect them from the birds by day, and from bats at night; and practice many superstitious ceremonies to aid them in their care.

13. *Antheræa peruyi*, *Guerin*. Syn. *A. mylitta*: *Saturnia pernyi*, is a native of China.

14. *Antheræa frithii*, *Moore*, found at Darjeeling.

15. *Antheræa royliei*, *Moore*, found at Darjeeling.

16. *Antheræa*, Java, *Cramer*, syn. *Bombyx* Java, found in Java.

17. *Antheræa perottetti*, *Guerin*, syn. *Bombyx perottetti*, found at Pondicherry.

18. *Antheræa*, Simla, *Westwood*, occurs at Simla and Darjeeling. Its expanse of wings is nearly six inches.

19. *Antheræa helferi*, *Moore*, neighbourhood of Darjeeling.

20. *Antheræa assama*, *Helfer*. Syn. *Saturnia*, *Westwood*, the Mooga or Moonga of the Assamese, is found in Ceylon, Assam and Sylhet. It can be reared in houses but thrives best when fed on trees: and its favourite trees are the Adlakoo tree, *Champa* (*Michelia*) *Soom*, *Koutoolva*, *digluttee*, and *souhalloo*, *Tetranthera diglottica* and *macrophilla*, and the *pattee-shoonda* or *Laurus obtusifolia*. There are generally five broods of Moonga worms in the year.

21. *Antheræa larissa*, *Westwood*. Syn. *Saturnia*, a beautiful species, found in Java.

22. *Antheræa* — ? *sp.* This is a native of Mautheouria, in a climate as rigorous as that of Britain. It feeds on a species of the oak. Its silk is strong, with little lustre and resembles strong yellow linen. It has been introduced into France.

23. *Leopa katinka*, *Westwood*. Syns. *Saturnia*: *Antheræa*; a native of Assam, Sylhet, Tibet and Java.

24. *Actias selene*, Syns. *Tropæa*, *Plectropteron*, *Phalæna*; a native of India, at Missouri and Darjeeling from 5,000 to 7,000 feet. It feeds on the *Coriaria nepalensis*, or *Mun-suri*, *HIND.*, the walnut, *Andromeda ovalifolia* and *Carpinus*. The eggs are laid for a few days after the visit of the male, they hatch in about 18 days, and the larva begins to form its cocoon when about 7 weeks old.

25. *Actias mænas*, *Doubleday*. Syn. *Tropæa*, a native of Sylhet.

26. *Actias sinensis*, *Walker*. Syn. *Tropæa*, a native of N. China.

27. *Saturnia pyretorum*, *Boisduval*. A native of China.

28. *Saturnia grotei*, *Moore*. A native of Darjeeling.

29. *Attacus atlas*, *Linn.* Syns. *Phalæna*, *Bombyx*, *Saturnia*. This is the largest of all known lepidopterous insects. It is found in Ceylon, all over India, Burmah, China and Java, and the Tusseh silk of the Chinese is said to be obtained from its cocoon.

30. *Attacus edwardsi*, *White*. A native of Darjeeling, of an intensely dark colour.

31. *Attacus cynthia*, *Drury*. Syns. *Phalæna*, *Bombyx*, *Samia*, *Saturnia*.—This is the eri, eria, or arandi silk-worm of Bengal and Assam, which occurs also in N. E. India, Tibet, China and Java. *A. Cynthia* feeds on the foliage of the *Ricinus communis*, the castor oil plant, hence its name the Arndi. It spins remarkably soft threads.

32. *Attacus ricini*, *Boisduval*. Syns. *Saturnia* and *Phalæna*. This is found in Assam, Ceylon, and is the arindi or castor oil silk-worm of Bengal, so called because it feeds solely on the common castor oil plant with which also, they are fed, when domesticated. This is reared over a great part of India, but particularly at Dinajpur and Rajpur. The cocoons are remarkably soft and white, but the filament is very delicate, the silk cannot be wound off, and it is therefore spun like cotton. The yarn, thus manufactured, is woven into a coarse kind of white cloth, of a seemingly loose texture, but of incredible durability, a person rarely can wear out a garment made of it, in his lifetime.

33. *Attacus guerini*, *Moore*. Is smaller than *A. cynthia* and *A. ricini*. It is found in Bengal. The valuable product of the silk moth is the cocoon and races have been produced differing much in their cocoons, but hardly at all, in their adult states. Several distinct species exist in China and India, some of which can be crossed with the ordinary moth, *Bombyx mori*. This is believed to have been domesticated in China B. C. 2700. It was brought to Constantinople in the sixth century, whence it was carried into Italy and in 1494 to France, and has, since, been transported to many countries where food and selection have produced many varieties. It is only in some districts of each country that eggs come to perfection. Captain Hutton is of opinion that at least six species have been domesticated. *Bombyx mori* is a very important silk-worm. *B. mylitta* lives on the leaves of *Rhamnus jujuba* and yields a dark coloured coarse but durable silk. *B. cynthia* feeds on the castor oil plant and spins very soft threads. Eastward of the city of Canton on a range of hills called Lofan shan, there are butterflies of large size and night moths of immense size and brilliant colouring, which

LEPISMA.

are captured for transmission to the Chinese court and for sale. One of these, the *Bombyx atlas*, measures about nine inches across, the ground colour is a rich and varied orange-brown, and in the centre of each wing there is a triangular transparent spot, resembling a piece of mica.—*Hooker, Vol. ii, p. 65; Tennent's Ceylon; Williams' Middle Kingdom, p. 273; English Cyclopædia, p. 558; Major Hutton in No. 8. of Universal Review; Dr. T. Horsfield and Mr. F. Moore's Catalogue of the Lepidopterous Insects, in the Museum at the East India House, London, 1858-9; Mr. Friedrich Moore's Synopsis of the known Asiatic species of Silk producing Moths: Proceedings of the Zoological Society of London, June 28th, 1859; Darwin, on the Origin of Species.* See Lepidoptera.

LEPIDOPTUS, a genus of fishes of the family Trichridæ, comprising,

- | | | |
|--------------|-------------|--------------|
| 1 Apnanopus. | 1 Epinnula. | 6 Thyraites. |
| 1 Lepidopus. | 6 Dicrotus. | 2 Gempylus. |

LEPIDOSAURS, see Reptiles, Scincidæ.

LEPIDOSIREN, a curious reptile of Africa and South America, placed midway between the reptiles and fishes, and has gills and true lungs. It has the habit on the approach of drought of burying itself several feet deep into the mud of the ponds in which it usually dwells. It does not appear to possess the power of travelling. The *Hydrargyreæ* of Carolina leave the drying pools and seek the nearest water, in a straight line, though at a considerable distance: and Sir R. Schomburgk tells us that certain species of *Dora* (called by the people, the *Hassar*) in Guiana, have the same habit and are occasionally met with in such numbers in their travels that the negroes fill baskets with them. If they fail in finding water, they are said to burrow in the soft mud, and pass the dry season in torpidity like the *Lepidosiren*.—*Gosse, 122.*

LEPISMA. This tiny silver insect has filiform antennæ and the abdomen terminated by three elongated setæ, two of which are placed nearly at right angles to the central ones. This is one of two genera of insects which infest books in India and which are usually regarded as accomplices in the work of destruction, but which on the contrary pursue and greedily feed on the larvæ of the death-watch and the numerous acari and soft-bodied insects which are believed to be the chief predators that prey upon books. Another of these maligned genera, is a tiny tailless scorpion (*Chelifer*) of which three species have been noticed in Ceylon, the *Ch. librorum, Temp.*; *Ch. oblongum, Temp.*; and *Ch. acaroides, Hermann*, the last of which it is

LEPROSY.

believed had been introduced from Europe in Dutch and Portuguese books. Of the *Lepisma*, the fish-insect genus, so called by Fabricius from its fish-like silvery scales, only two species have been described, viz., the *L. niveo-fasciatus* and *L. niger, Temp.* One of larger size, is remarkable for the whiteness of the pearly scales, from which its name is derived, these contrasted with the dark hue of the other parts and its tripartite tail, attract the eye as the insect darts rapidly along. Like the chelifer, it shuns the light, hiding in chinks till sunset, but is actively engaged during the night, feasting on the acari and soft-bodied insects which assail books and papers. It has six legs, filiform antennæ, and the abdomen terminated by three elongated setæ, two of which are placed nearly at right angles to the central one. Linnaeus states that the European species was brought in sugar-ships from America. The *Chelifer* found in Ceylon has been brought thither from Europe.—*Tennent's Sketches, Natural Hist. of Ceylon, p. 476.*

LEPORIDÆ, a family of Rodentia, the type of which may be considered as existing in the common hare. See Hare, *Lepus*.

LEPROSY. According to Manetho, as quoted by Josephus, the Egyptian king Menephthah, son of the Great Ramesses, collected together all the lepers and located them in the quarries in Lower Egypt, on the edge of the Arabian desert, but subsequently mitigated their lot and placed them in the deserted town of Avaris; these outcasts, however, sided with the people of Palestine who rose in a religious war against animal-worship, and Menephthah fled to Ethiopia. Leprosy is largely prevalent in Africa and Asia, and is still, as before, endemic in Egypt along the valley of the Nile, on the shores of the Mediterranean, Algeria, Morocco and Red Sea, in Abyssinia, Soudan, Cape, Madagascar, Mauritius and Bourbon, Syria, Palestine, Arabia, Persia, Bokhara, Ladakh, Cashmir, very prevalent all over India, Ceylon, Burmah and the Eastern Archipelago. It occurs as elephantiasis, white leprosy, tubercular leprosy. In 1870 there were 11,391 lepers in the Bombay Presidency including Sind. The disease is not ordinarily deemed contagious, and the welfare of the community does not demand the complete segregation of those afflicted with it. But leprosy causes much suffering; and it fosters mendicancy. The contagiousness of leprosy is perhaps not quite settled, but if its hereditary character be proved, that supports the presumption that careful segregation would in time extirpate the disease. It would be easy enough to make arrangements by which segregation could be

LEPTOPTILOS ARGALA.

affected without any severe degree of compulsion, though of course to get rid of such an evil as leprosy, the good of future generations would more than justify a considerable interference with the liberty of the subject to make other subjects miserable.—*Bunsen, Egypt's place in Universal History, Vols. ii, pp. 500, 563 ; iii, 188, 195.*

LEPTADENIA JACQUEMONTIANA, DC.

Kip, SIND.

According to Dr. Stocks, this is employed in Sind with *Periploca aphyllum*, for making into ropes and bands used for wells, as water does not rot them.—*Royle, Fib. Pl., p. 306.*

LEPTADENIA RETICULATA, W. and A., W. Conts.

Asclepias suberosa, Rozb. | Pala-tige,

TEL.

Used as a vegetable.

LEPTADENIA SPARTEA, another species of the genus yielding a fibre.

LEPTOCEPHALIDÆ, a family of fishes of the Asiatic seas.

LEPTOCEPHALUS or Glass Eel genus. Of those there have been described 18 species.

LEPTOCERIDÆ, a family of insects, in which is the Caddis-worm genus *Setodes*.

LEPTOCONCHUS, *Rüppell*, a genus of Pectinibranchiate Gasteropodous Mollusca ; *L. striatus, Rüppell*, is a rather dirty milk-white ; it is furrowed externally with numerous longitudinal undulated lines very much approximated. It inhabits the Red Sea, imbedded in the calcareous mass of *Polyparia*, (species of *Meandrina*, *M. Phrygia*, in which *Magilus*, *Venerupis*, &c., occur.) and having no communication with the water except by a moderate opening. See Molluscs.

LEPTOPHIS, *Bell*. Of this genus of reptiles, two occur in India and one from Java. To these Dr. Gray added two species, *L. punctulatus* and *L. spilotos*, (*Coluber spilotos, Lacepede*) collected by the expedition under Captain Phillip Parker King, R. N. '*Survey of Australia*.'

LEPTOPHIS PURPURASCENS, *Coluber purpurascens, Shaw*. Violet, changing to green, gilded ; a lateral and dorsal line of a paler hue ; head obtuse. It is found in the East Indies.—*Zool. Journal, Vol. ii : Eng. Cyc.*

LEPTOPTILOS ARGALA, Linn.

<i>Ciconia nudifrons, Jerd.</i>	<i>Argala migratoria, Hodg.</i>
" <i>marabou, Temm.</i>	<i>Ardea dubia, Amel.</i>
<i>Chaniari-dhauk, BENG.</i>	<i>Hargeyla, HIND.</i>
<i>Adjutant, ENG.</i>	<i>Dusta, "</i>
<i>Gigantic stork, "</i>	<i>Garur of Purneah.</i>
<i>Hargela, Hargela, HIND.</i>	<i>Pini-gala-konga, TEL.</i>

The Adjutant bird is migratory. It is rare in the south of India, though it occurs in Hyderabad and Mysore, but it is common in Bengal, Northern and North Eastern India,

LEPTOPTILOS JAVANICA.

Burmah and the Malayan peninsula. The adult birds make their appearance as soon as the rains set in, and becoming in fine plumage towards the close of the rains, depart at that time to breed in the eastern portion of the Sundarbans, in Moulmein, in the Tenasserim provinces upon lofty trees, and along the eastern coast of the Bay of Bengal upon trees and rocks. It is a bold familiar bird, eats all sorts of animal refuse, frogs, fish, dead bodies. Several eminent naturalists persist in ignoring the very great differences between Storks and Cranes, in their appearance, habits, anatomy, modes of breeding, and everything except that both happen to be long-legged birds. They do so by designating the *Hurgila* or 'Adjutant' (*Leptoptilos argala*) 'the gigantic Crane.' The three ordinary Indian Cranes are *Grus antigone*, *Gr. cinerea*, and *Gr. virgo* : *Grus leucogeranus* occurs rarely in the North-West Provinces. The words Crane and *Grus*, and the Hindustani names of the three common Indian species, *Saras*, *Karranch* and *Kakarra* ; all have reference to the loud trumpeting of these birds, which have a curious internal conformation resembling that of the Trumpeter Swans ; whereas the Storks are voiceless birds, having actually no vocal muscles, and can make no sound, but by clattering their mandibles together, which they do pretty loudly.—*Jerdon's Birds ; Z in Indian Field.*

LEPTOPTILOS JAVANICA, Horsf.

<i>Ciconia calva, Jerdon.</i>	<i>Ciconia cristata, McClell.</i>
" <i>capillata, Temm.</i>	<i>Argala cinnita, B. Ham.</i>
" <i>nudifrons, McClell.</i>	" <i>immigratoria, Hod.</i>
<i>Chandana, BENG.</i>	<i>Chinjara, HIND.</i>
<i>Chandhari, "</i>	<i>Bang-gor, of Purneah.</i>
<i>Madanchur, "</i>	<i>Nutha-cootee-narai, TAM.</i>
<i>Moduntiki, "</i>	<i>Dodal-konga, TEL.</i>
<i>Small adjutant, ENG.</i>	" <i>gatti-gadu, "</i>
<i>Hair-crested stork, "</i>	

The Tamil name of the small Grey and Black Stork, *Leptoptilos javanica*, is *Nutha cootee narai*, literally, "Shell-fish-(*Ampullaria*) picking crane." They have nests two feet in diameter, and contain three eggs or young. The eggs are of a dirty white colour, of the same shape, but not quite so large as those of the Turkey. The young when fully feathered are in prime condition. Their flesh is eaten by mahomedans and pariahs. The bird keeps entirely to marshy fields, edges of tanks, &c., it never approaches towns. Some half a dozen or more of these birds may often be seen in the morning sunning themselves with outstretched wings in the dry fields. They only differ from the adjutant, or *Leptoptilos argala*, in size and colour. These nest early, and the young are firm on the wing in the month of February. They are found throughout Asia,

LEPUS.

feed on fish, frogs, crabs and locusts. Marabow feathers are the under-tail coverts of the *Leptopilos argala*, and of the *Ciconia marabow*; the former, the adjutant bird of tropical India, furnishes the best; the latter inhabits Africa and Asia; both birds are very large, being sometimes six feet high.—*Jerdon, Vol. iii, p. 780*; *Z. in Indian Field*; *Simmond's Commercial Dictionary*. See Birds, Cygnus, Egret, Stork.

LEPTORHYNCHUS has been found fossil in *Ava*.

LEPTOSIPHON, a genus of flowering plants belonging to the Polemoniaceæ, pretty annuals allied to the *Gilia*, and propagated in the same manner, the colours are white, blue and purple.—*Riddell*.

LEPURANDA SACCIDORA, *Nimmo*.

Antiaris saccidora, Dalz.

Chundul, HIND. | Navil maram, TAM.
Araya anjely, MALBAL.

This stately forest tree is indigenous on the west side of India, in the ravines at Kandalla and in the jungles near Coorg, where people manufacture sacks from the bark by a very simple process. A branch is cut, corresponding to the length and diameter of the sack wanted. It is soaked a little, and then beaten with clubs until the inner bark separates from the wood. This done, the sack formed of the bark is turned inside out and pulled down, until the wood is sawed off, with the exception of a small piece left to form the bottom of the sack, and which is carefully left untouched. These sacks, called Cooramboor bags or sacks, are in general use among the villagers for carrying rice, and are sold for about six annas each. This is very common and the most gigantic of all the trees in the Wynand jungles: wood not much used.—*Royle, Fib. Pl., p. 343*; *McLeor*.

LEPUS, the hare is of the family Leporida. Dr. Jerdon, in his *Mammals*, names three Indian species, viz.: *L. hispidus*; *L. nigricollis* and *L. ruficandatus*; *L. pallipes*; *L. peguensis* and *L. tibetanus*. The genus *Lepus* has cutting teeth $\frac{3}{2}$, the upper in pairs two in front, large and grooved, and two smaller behind; lower teeth square; grinders $\frac{6-7}{6}$ composed of two soldered vertical plates; a sixth, very small, in the upper jaw; soles of the feet hairy; anterior feet with five toes; posterior with four; tail very short, turned upwards. Hares are unknown in Arakan and in the Tenasserim provinces, also throughout the Malayan peninsula and Archipelago, with the exception of *Lepus nigricollis*, *F. Cuv.*, in Java, which has most probably been introduced from South India or Ceylon, as it doubtless likewise has in the Mauritius; but

LEPUS HISPIDUS.

several notices occur of hares in the Indo-Chinese countries, even in Cochin-China the species being as yet undetermined.—*Eng. Cyc.*; *Mr. Blyth in Beng. As. Soc. Journ.*

LEPUS ÆGYPTICUS, Egyptian hare, is found in Egypt.

LEPUS CUNICULUS, *Linn.*

Konyn; Kouin,	BLG.	Coniglio,	It.
Kanine,	DAN.	Coelho,	Port.
Konyn; Konin,	DUT.	Conejo,	Sp.
Rabbit, Rabbit, Coney,		Kanin,	SWED.
	ENG.	Cwningen,	WELSH.
Kaninchen,	GERM.		

The rabbit begins to breed at the age of six months, and produces several broods in a year, generally from five to seven or eight at a time. The young are blind at their birth, and nearly naked. The fur of the rabbit is in considerable demand, particularly for the hat trade; and at one time the silver-haired varieties, or silver-sprigs, fetched three shillings a piece, for ornamental linings to cloaks.—*British Museum Catalogue*.

LEPUS HISPIDUS, *Pearson*.

Caprolagus hispidus, Blyth. | Hispid hare, Eng.

This hare inhabits the great sand forest at the base of the sub-Himalaya and of their offsets, from Gorakpur to Tipperah, also at Siligoree in the Terai. This primeval forest is the peculiar and exclusive habitat of the Hispid hare, a species that never ventures into the open plains on the one hand, or into the mountains on the other; and hence it is but little known, deep cover and deadly malaria contributing alike to its happy obscurity. As the black-necked hare or *L. nigricollis* is the single species of the Decan, and the Redtail, *L. ruficandata*, of Hindustan and Bengal, so is the Hispid of the vast sub-Himalayan forest; and it is remarkable that the mountains beyond the forest, even up to the perpetual snows, have no peculiar species. The sand forest hare feeds chiefly on roots and the bark of trees, a circumstance as remarkably in harmony with the extraordinary rodent power of its structure as are its small eyes and ears, weighty body and short strong legs, with what has been just stated relative to the rest of its habits. The whole forms a beautiful instance of adaptation without the slightest change of organism. The sexes are as near as possible of the same size and colour; but, if anything, the male is rather the larger and darker. The male measures 19½ inches from snout to vent—head to the occiput 4; ears to the lobe 2½; to the crown 2½; foreleg from elbow to end of longest toe nail 4½. Hindleg from true knee to longest nail 7½; Planta from heel to long toe nail 2½; heel to knee 4½; sent only 1½; sent and hair 2½; weight 5½ lbs. The female is 19 inches long and 5½ lbs. Both have a girth behind the

LEPUS OIOSTOLUS.

shoulder of 12 inches : but the female's tail is the longer, being 2 inches, or 3 with the fur. Her other proportions are almost identical with the male's. Compared with the common species, these animals are conspicuously of darker hue and heavier make, but not larger. They have heavier heads, much shorter ears, smaller eyes, shorter tails, limbs shorter, stronger and less unequal—in that respect like a rabbit—and, lastly, their mystacial tufts are much less, and their fur much harsher. The profile of the head is less curved in the Hispid than in the common species, the nails somewhat larger, and the digits slightly different in gradation, the thumb in particular being less withdrawn, and the little finger more so, from the front, in Hispidus. But the nails have no peculiarity of conformation, and so far from being "very acute," they are very blunt and worn. The nose and lips agree precisely with those of the common species : but the eye is conspicuously smaller, and placed less backwards, or midway between the snout and ears. The ears both in male and female considerably exceed one-half of the length of the head, and are broader as well as shorter than in *L. ruficaudatus* or *L. timidus* ; and it is remarkable that the tail in the male is shorter than in the female—in both more so than in *L. timidus*. The teats are six, two pectoral, and four ventral, just as in *L. ruficaudatus*, and the skulls and teeth of the two species are framed upon precisely the same model, general and particular.—*Mr. Blyth in Beng. As. Soc. Jour., No. clxxix, June 1847.*

LEPUS KURGOSA, the Lada, or Khar-gosh.

LEPUS MACROTUS. This species inhabits the Himalaya and Nepaul. It is larger than the black-necked hare, *L. nigricollis* of the Indian plains.—*Jerdon's Mammals.*

LEPUS NIGRICOLLIS, *F. Cuv*

Lepus melanauchen, Temm.

Malla,	CAN.	Sassa,	MAHR.
Black-naped hare,	ENG.	Musal,	JAM.
Khar-gosh,	HIND.	Kundeh,	TEL.

This is the hare of Ceylon, of the peninsula of India, of Sindh, of the Panjab and of Java.—*Jerdon's Mammals, p. 225.*

LEPUS OIOSTOLUS, *Hodgs.*

Blue hare,	Alpine hare
Woolly hare,	

This, the Woolly Hare of Thibet and Nepaul, is considered by Major Cunningham to be the *Lepus pallipes* of Hodgson. There was, says Dr. Hooker, much short grass about the lake on which large antelopes, "Chiru" (*Antelope hodgsoni*), and deer, "Goa" (*Procopra picticaudata, Hodgson*) were feeding. There were also many slate-

LEPUS TYTLERI.

coloured hares with white rumps (*Lepus oiostolus*), with marmots and tail-less rats. He found the horns of the Chiru on the south side of the Doukia pass, but he never saw a live one except in Tibet. The *Procopra* is as described by Mr. Hodgson. Dr. Adams says of the alpine hare, *Lepus oiostolus*, that it was common among the fallen boulders, and along the long bottoms and sides of the valleys leading towards the Poogah lake. This species very much resembles the alpine hare of Europe.—*Mr. Blyth in Beng. As. Soc. Jour., 1846, p. 338 ; Hooker Him. Journ., Vol. ii. p. 157 ; Adams.*

LEPUS PALLIPES, *Hodgson*. White-foot hare, Ri-bong Tibetan, occurs in Ladak and Tibet.

LEPUS PEGUENSIS, *Blyth*. Is very similar to the *L. ruficaudatus*, *Is. Geoffroy*, of Bengal. It occurs in all upper India, Assam and Upper Burmah, tail black above, as in the generality of the genus. Upper parts same colour as Bengal hare, but the belly abruptly white.

LEPUS RUFICAUDATUS, *Geoff.*

<i>Lepus indicus, Hodgs.</i>	<i>Lepus macrotus, Hodgs.</i>
------------------------------	-------------------------------

SASSU,	BENG.	Khar-gosh,	HIND.
Common Indian hare,		Khar,	"
Moloh,	GONDI.	Lamma,	"

This hare is found from the Himalaya and the Panjab to the Godavery and Assam.—*Jerdon, p. 224.*

LEPUS SINENSIS, *Gray*, of Hardwicke's 'Illustrations of Indian Zoology,' is known only by that figure. The skull closely resembles that of *Lepus ruficaudatus*, *Is. Geoff.* (the common Bengal hare) ; the general structure *L. sinensis* and *L. ruficaudatus* would appear to be quite similar, but the colouring is remarkably different ; being a mixture of deep tawny or rufo-fulvous with much black on the upper parts, and the under parts, whitish. The paws are black underneath, mingled with some tawny along the lower surface of the tarsus ; the latter being almost pure white externally, and thus forming a remarkable and striking contrast with the hue of the lower surface. Tail black above and at the tip, whitish below towards its base. On the sides towards the belly, the fur much resembles both in colour and texture that of the entire upper parts of *L. ruficaudatus* ; but on the back the fulvous hue is very much deeper, and the admixture of black is much greater : the short soft under-fur is deep buff or fulvous, whereas in *L. ruficaudatus* the same is whitish or rather almost pure white.—*Mr. Blyth in Beng. As. Soc. Journ., No. 4 of 1852, p. 359.*

LEPUS TYTLERI seems the same hare as *T. ruficaudatus*.

LESTRIS ANTARTICUS.

LERA, HIND. A coarse kind of brown gum imperfectly soluble, used in calico-printing.

LEWES UERTOMENES, a learned gentleman of Rome, in A. D. 1503, gave an account of Cambay, and of its quartzose minerals.

LEW-KEW, a kingdom of a group of thirty-six islands lying between those of Kiusiu and Formosa. The island of Lew-Kew is the largest of the group, which is tributary to the empire of Japan, through the prince of Satsuma. Lew-Kew island is about 60 miles in length from north to south with a varying breadth of from five to ten miles, and its scenery, especially at its northern and eastern side, is wild and mountainous. In Lew-Kew, the salutation consists of clasping the hands together, and in that position elevating the knuckles to the forehead, and bowing sufficiently low for the hands so placed to touch the ground. The Lew-Kew people wear a cloak, which is gathered in at the waist with a girdle of brocaded silk or velvet; in this is stuck an embroidered pouch, containing a small pipe and some powdered tobacco. In Lew-Kew, the hair is shaven off the forehead for about three

inches in front, and carried from the back and sides into a tuft on the top of the head where it is held by one or more pins, gold being in most esteem with the men and polished tortoiseshell among the women.

LEW-SAN, CHIN. *Cryptomeria japonica*, valued for its ornamental appearance and fine timber.—*Res. among the Chinese*, p. 194.

LEYA, HIND. A grass, *Cenchrus echinatus*.

LEYCESTERIA FORMOSA, a plant of the Himalaya mountains, at elevations of from 6,000 to 7,000 and 8,000 feet, in Nepal and Sirmore, where it grows among oaks and pines. It forms a large and very showy shrub, with numerous luxuriant smooth and cylindric fistulous shoots issuing from the root, which are of a purplish colour. The leaves are opposite, ovate-lanceolate and glaucous; the flowers white, with a tinge of purple, arranged in drooping racemes, which are furnished with coloured foliaceous bracts.—*Eng. Cyc.*

LEYDEN, Dr. J., a celebrated linguist, antiquary and poet, born 1775, entered the Madras Medical Service in 1802; became Professor of Hindustani, College, Fort William, 1806; accompanied Lord Minto to Java in 1809, where he died. Author of Translation of the memoirs of the Emperor Baber, Lond., 1826, 4to. On the Indo-Chinese languages, in *As. Res.*, vol. x, 158. On the Rosheniah sect. *Ibid.*, vol. xi, 363.—*Dr. Brist's Cat.*

LI, a Chinese copper coin, ten to a candareen.

10 Li.....1 candareen.

100 „1 mas.

1000 „1 tael.

1 Tael about 5 shillings.

LI, a Chinese measure of length, about one-sixth of a British mile.

LI, a Chinese word of very extensive

LIANG.

meaning, sometimes rendered, reason, courtesy, propriety, good breeding. The saying is, Li and Wen (learning) make up the whole sum of human excellencies.—*Bouring*.

LI. Many non-aryan peoples of India, take their tribal designations from the word for "man" in their respective dialects and the very general term *mi* (man) with some prefixed or supposed syllable, supplies the basis of the race name to not less than forty ascertained tribes. Thus, Du-mi, Ka-mi, Ku-mi, Auga-mi Naga, Mi-than Naga. And if we recognise the non-aryan phonetic displacements of *m* and *l* and of *l* and *r*, the list can be greatly increased,—thus, in the Sak, *lu*; Toning, *mu*; *mumi*, *mi*, *Thaksya*, *mi*; and the root *li* affords the generic term *homo*, man, to a whole series of tribal names. Thus Bala-li; Ma-li, the people of Rajmahal; Dhima-li; Santa-li; Banga-li, meaning the people of Bala, Banga, and so forth. *Li* is thus often added to specific names for man to form names for aboriginal tribes. In Santali, *li* furnishes the nomenclature connected with the propagation of our species, such as *lai*, *lah*, &c., and appears in *li di*, a child; *le-daka* or *lad ho*, children; *Khi li*, a generation of men, (*ho-li*) and the hitherto unexplained terms, *Che-la*, *Che-li* (= *Khi-li* = *holi*) for son and daughter, used by all the semi-aboriginal castes of Lower Bengal. The root *Ko*, with the generic affix *li*, is met with in all periods of history and in all India. The Mahabharata and Vishnu Purana, speak of Ko-li tribes in connection with Mikala, Dravida, Kirata and others, and the Aitareya Brahmana, speaks of the Koli as Dasya. Among a section of the non-aryan races of India, or aborigines as Dr. Hunter styles them, the root *ho*, shortening in some to *hu* and *ha*, or interchanging into *ko*, *ku* and *ka*, furnishes the specific word for man amongst the Kol tribes of Central India, and is one of the oldest and most widely spread roots for man. In the Sanserit play, the Mricchha kati, *go-ho* is man: among the Kur, near Ellichpore, it is *ho ko*: amongst the Siamese it is *khon* or *kun*, which is the same form as it takes amongst Khond.—*Dr. W. W. Hunter, on the Languages of India*, p. 22.

LI, HIND. *Gymnosporia spinosa*, also *Pyrus malus*, and *Olea europæa*.

LIADA, ARAB. Goat.

LIANE A REGLISSE, FR. *Abrus precatorius*, *Linn.*

LIANG. A *tchokhi*, in Chinese *thian*, pronounced *tchin* in the Mongol, is a small round brass coin with a square hole in the centre; the reign during which it was struck is marked on the reverse. Five hundred *tchokhi* are strung together upon a ribbon. All the

LIBER.

way to Peking, Timkowski received 1,150 *tchokhi* for a liang or lan.—*Timkowski's Journey to Peking*, Vol. i, p. 274.

LIBA, SANA. Myrobala, *Terminalia citrina*.

LIBAN, AR. Benjamin.

LIBANUS, GREEK. See *Olibanum*.

LIBANUS. A great valley, separates the Libanus from the Anti-Libanus, and includes the district of the Bekaa and the Belad Balbec, which was more anciently called Cælo-Syria. Mr. Robertson says, leaving Bshirrai at sunrise, he commenced ascending the upper range of Mount Libanus. To the left, and at about half an hour out of the road, which leads from Bshirrai over the mountain into the valley of Balbec, stands the grove of far-famed cedars. They appear to be of several generations. Of the eldest there are perhaps not more than seven or eight, distinguished by having four or five trunks, the circumference of one was nearly thirty feet. "The rest of the trees of his forest shall be few, that a child may write them."—(Isaiah x, 19.) "Lebanon is ashamed, and hewn down. The high ones of stature shall be hewn down. Lebanon shall fall by a mighty one."—(Isaiah xxxiii, 9; x, 33, 34.) "Upon the mountains, and in all the valleys his branches are fallen."—(Ezek. xxxi, 12.)—*Robinson's Travels*, Vol. ii, pp. 85-89; *Skinner's Overland Journey*, Vol. i, p. 265.

LIBAS, HIND. A suit of clothes; clothing. Malbas, AR., clothed.

LIBATION. Amongst the hindoos, the Argha offering to an idol, a brahmin, a bridegroom at the marriage ceremony or to any venerable person, and on farming operations. It consists chiefly of fruit and flowers, or water, or milk and honey; and when the first bundle of corn is brought home from the threshing flour and deposited, a libation of water is offered between the threshold and the spot where it is so deposited.—*Wilson*. See *Abishegam*.

LIBER, the inner bark of a plant, is a layer consisting of woody tissue, cellular substance, and vessels of the latex, forming a compact zone immediately applied to the wood. The woody tissue of which it is composed quickly becomes thick-sided, by the addition of internal ligneous strata, the consequence of which is that such tissue in this part is more tough than elsewhere. Hence it is usually from the liber that are extracted the fibres employed in making cordage or linen-thread: this at least is its source in hemp, flax, the lime-tree, the lace-bark, and the many other exogens which furnish fibres: but in endogens, which have no liber as the cocoanut, it is the ordinary woody bundles of

* LICHEN ROTUNDATUS.

the leaves, stem, and husks of the fruit from which the fibres used for ropes is procured. It is said that certain exogens, such as Menispermaceæ, have no liber. In many plants a new layer of liber is formed annually, contemporaneously with a new layer of wood, but this is by no means universal; on the contrary, the oak and the elm increase their liber slowly and irregularly.—*Eng. Cyc.*, quoting *Comptes Rendus*, Vol. v, p. 393.

LIBI LIBI, *Eng.* *Casalpinia coriaria*, Willd.

LIBO, *Beng.* The lime, *Citrus bergamia*.

LICHAKHRO, or Lichakpro, or Lichakro, *Hind.* of Sutlej. *Coriaria nepalensis*, Wall.

LICHEN. Several lichens grow on the top of the Donkia pass, as *Cladonia vermicularis*, the yellow *Lecidea geographica*, and the orange *L. miniata*, also some barren mosses. At 18,300 feet, Dr. Hooker found on one stone only, a fine Scotch lichen, a species of *Gyrophora*, the "tripe de roche" of Arctic voyagers, and the food of the Canadian hunters; it is also abundant on the Scotch alps. Of the lichens several are nutritious, some bitter, some yield to ammoniacal solutions a variety of brilliant colours, and are much used as dye stuffs. They are perennials, spreading in the form of a crust over rocks, trees, or the surface of the earth. The chief lichens employed in the manufacture of orchil and cudbear are the Angola weed, *Ramalina furfuracea* and Mauritius weed, *Rocella fusiformis*, which however comes also from Madagascar, Lima and Valparaiso, and then bears the distinctive commercial name of the port of shipment. Amongst the natural order Lichenes, the *Parmelia kamschadalis*, *Esch.* occurs in the Panjab bazars. It is used as a dye and as a stimulant to digestion in disorders of the stomach and womb, and in cases of calculus. Its vernacular name is chachalira also asneh.—*Hooker, Him. Jour.*, Vol. ii, p. 130; *O'Shaughnessy*, p. 671; *Dr. J. L. Stewart*, p. 269.

LICHEN ODORIFERUS, *Borrera asneh*, *Royle*, is mentioned by Honigberger as a product of the Himalaya, and official at Lahore. The Hakims administer it in disorders of the stomach, dyspepsia, vomiting, pain in the liver or womb, induration in the uterus, amenorrhæa, calculi, and nocturnal spermatic discharges. The stapelioides mentioned by Griffith and the Lichen of Masson is the *Boucerosia aucheri*.—*Dr. Honigberger*, 299.

LICHEN ROTUNDATUS, *Rottl.*

Hinna-i-koreish, ARAB. | Kull pashie, TAM.
Pashar ka phool, DUK. | Ratipanchie, TEL.

This is a dried rock moss which the Tamil practitioners suppose to possess a

LICUALA PELTATA.

cooling quality and prepare a liniment with it accordingly.—*Ains. Mat. Med.*, p. 96.

LICHEN TARTARICUS, Cudbear.

LICHHAVI, a tribe of the Vriji. There were ancient kings of Nepal, Tibet and Ladak of this race. See Lichhavi.

LICHTER, also Kerzen, *GER.* Candles.

LICKHAVI, see Inscriptions, Lichhavi.

LICTORS of Burmah, are generally, if not always, convicts whose sentence has been commuted. Often the pain of death is changed to perpetual infamy: the criminal is then branded on the face, his offence is written in indelible characters on his breast, and he is doomed to act as a satellite or executioner.—*Yule*, p. 93.

LICUALA, a genus of palms of the tribe Coryphinae of Martius, Corypheæ of Lindley, and so named by Rumphius, from the Maccassar name of the species *L. spinosa*, figured by him in 'Herb Amboin,' i. t. 9, and which is found in the islands of Macassar and Celebes. *L. peltata* is described by Dr. Roxburgh as a native of the mountainous and woody parts near Chittagong, which separates that province from the Burmah territories. Both species are small, with palmate, somewhat fan-shaped leaves, but of little use. Rumphius describes the narrow leaves of this tree as being formed into pipes for smoking tobacco, while the broader are employed for wrapping up fruit, and for other domestic uses. This genus of palms is confined to the tropical parts of Asia, and composed of about a dozen species.

LICUALA ACUTIFIDA, *Griffith.*

PLASA TIKOONS, MALAY.

The walking sticks, called "Penang law-yers," are the stems of this small palm. It is a miniature palm, inhabiting Penang, and attaining generally only three or five feet, and in exceptional cases from fifteen to twenty feet in height. The "Penang law-yers" are prepared by scraping the young trunk with glass, so as to wholly remove the epidermis, and nothing more, the inside being the substance of rattan. It is on this account that the smaller, thin, sticks are so much more sought after than the larger thicker ones, and are so rare. The sticks are ultimately straightened by fire, and then polished.—*Seeman, on Palms*; *Griffith*.

LICUALA LONGIPES, *Griff.*

Sha zong, BURM. | Stemless licuala.

This is a nearly stemless palm, described by Griffith as remarkable for its dark-green foliage. He met with it in the forests south of Mergui.—*Griffith*; *Mason*.

LICUALA PELTATA, *Roxb.*

Chitta-pat, ASSAM. | Chattah-pat, ASSAM.

This is one of the finest of the genus,

LIGHTNING.

inhabits all the woody mountains to the eastward of Bengal in Sikkim, as well as the base of the Himalaya, below Darjeeling, Rungpore and Assam, and its large petiolate orbicular leaves, though coarser than "Toko pat" of Assam, are used for the same purpose, though only by the lower orders. Nevertheless the demand for them is very great, scarcely a single ploughman, cow-keeper or coolie being without his "jhapee" or chhatlah, umbrella-hat, made of chhatlah-pat.—*Roxb.*, ii, 179; *Seeman*; *Hooker*.

LICUALA SPINOSA, *Warmb.*

Licuala arbor, *Bumphi*. [*Corypha pileata*, *Linn.*
Corypha licuala.

A plant of the Moluccas, Celebes and Cochin-China.—*Roxb.*, ii, 81.

LIDRA, *HIND.* Odina wadier.

LIDUNG, see *Kumawer*.

LIDUR RIVER, a moderate sized mountain torrent of a few yards in breadth.

LIEGE, *FR.* Cork.

LIENG-MAH, *BURM.* Orange tree, *Citrus aurantium*, the orange.

LIEN, *BURM.* A valuable, compact, heavy homogeneous, deep-brown wood, of Amherst, not attacked by insects, used for house-posts and rafters. See *Lienn*.

LIEN WHA, *CHIN.* *Nelumbium speciosum*.

LIEP-YO, *BURM.* In Amherst, a very compact and heavy but small-sized timber, used for making carpenter's tools.—*Dance*.

LIEUN, *BURM.* In Amherst, a most valuable compact wood, homogeneous and very heavy, of deep-brown colour and fine grain, and exempt from attacks of insects, used for house-posts and rafters.—*Dance*.

LIFAFAM, *AR.* A cover, an envelope. *Malfuf*, enclosed.

LIGA, *SP.* Bird lime.

LIGHT, a commander of a trading ship who obtained the session of Pulo Penang which was re-named Prince of Wales Island. It had then a dense forest and noxious swamps. He married a daughter of the king of Quedah or Kidah. He died in 1794.—*Newbold's British Settlements*, Vol. i, p. 5.

LIGHT is the very life-blood of nature, *Chrysanthemum peruvianum* turns continually towards the sun. Indeed, as a general rule, all plants turn towards the sun. *Hypochaeris radicata* and *Apirgia autumnalis* are seen in meadows turning towards the sun, and species of *Melampyrum* and *Narcissus* turn similarly.—*Winslow on Light*.

LIGHTNING. Sheet-lightning is an electric phenomenon very common in India: it is unaccompanied by thunder, or too distant to be heard: when it appears, the whole sky, but particularly the horizon, is suddenly illuminated with a flickering flash. The zig-zag

LIGN ALOES.

appearance is often observed. Philosophers differ much as to its cause. *Matteucci* supposes it to be produced either during evaporation, or evolved (according to *Pouillat's* theory) in the process of vegetation; or generated by chemical action in the great laboratory of nature, the earth, and accumulated in the lower strata of the air in consequence of the ground being an imperfect conductor. *Arago* and *Kamitz*, however, consider sheet-lightning as reflections of distant thunder-storms. *Saussure* observed sheet-lightning in the direction of Geneva, from the Hospice du Grimsel, on the 10th and 11th of July 1783; while at the same time a terrific thunder-storm raged at Geneva. *Howard*, from Tottenham, near London, on July 31, 1813, saw sheet-lightning towards the south-east, while the sky was bespangled with stars, not a cloud floating in the air; at the same time a thunder-storm raged at Hastings, and in France from Calais the Dunkirk. *Arago* supports his opinion, that the phenomenon is reflected lightning, by the following illustration. In 1803, when observations were being made for determining the longitude, *M. de Zach*, on the Brocken, used a few ounces of gunpowder as a signal, the ash of which was visible from the Klenkenberg, sixty leagues off, although these mountains are invisible from each other.—*Cosmos*, Vol. ii; *Curiosities of Science*, pp. 165-6; *Collingwood*.

LIGHTNING CONDUCTORS. *Humboldt* informs us that the most important ancient notice of the relations between lightning and conducting metals is that of *Ctesias*, in his *Indica*, cap. iv, p. 190. He possessed two iron swords, presents from the king Artaxerxes Mnemon and from his mother Parasytis, which, when planted in the earth, averted clouds, hail and strokes of lightning. He states that he had himself seen the operation, for the king had twice made the experiment before his eyes. The H'tee or Tee placed on the summit of each buddhist pagoda, seems to be a lightning conductor.

Lign-aloes is mentioned in Numbers xxiv, v. 6, Prov. vii, v. 17, Ps. xlv, v. 8, Canticles iv, 14. It is obtained from the *Aquilaria agallocha*, *Roxb.*, the *Ophiospermum* of Lou-

reiro, a large evergreen tree. The wood of the sound tree is light, pale, and very slightly odorous, and is used to scent clothes. A very high artificial value is placed on the better qualities of this resinous product by the natives of the east; the best quality being worth about £14 to £30 the picul of 133½ lbs.; it is probably the lign aloes of the Bible. The wood of the tree contains a large quantity of an odoriferous oleoresin which, when heated, it undergoes a sort of imperfect fusion, and exhales a fragrant and very agreeable odour. There are several kinds in Borneo called generally by the natives 'kayu garu,' but produced apparently by diseases in the tree, the scented and resinous parts not being procurable until the tree has been cut down and decayed. The garu has long been an article of considerable export from Borneo and the other islands to Arabia and China; where it is burned as incense. The *Aquilaria agallocha*, *Roxb.*, is something like the Cedrela tree. It grows in Persia, Sylhet, Assam, the Laos country, Cochin-china, Cambodia, in China, in Kiung-Chan (Hainan Island) in Shantung fu and Lien-chan fu in the Canton province. The wood when boiled produces several substances to which the Chinese apply separate names. If part of the tree rot while growing or at any time after being felled, a dark resinous aromatic wood exudes in the heart-wood, which is the eagle wood perfume under notice.—*Simmonds*, p. 439; *Low's Sarawak*; *Smith's Chin. Mat. Med.* See Aloe's wood, *Aquilaria*, Eagle wood.

LIGNIN: When fine saw dust is boiled, first in alcohol, then in water, next in a weak solution of potash, afterwards in dilute muriatic acid, and lastly, several times in distilled water, so as completely to remove all the soluble portions, the substance which remains when dried at 212°, is called lignin; it forms the skeleton of plants and the basis of their structure; it varies in texture from delicate pith to the hard shells of seeds: it forms the bulk of such manufactured products as linen, cotton, and paper, and the washed and bleached fibre of hemp or flax is a good example of it. Pure lignin has a specific gravity of 1.5: it is white, tasteless, and is not soluble in water, alcohol, ether, or oils.—*Tomlinson*.

LIGNITE, is a fossil wood, is wood somewhat carbonized, but displaying its wooden texture. In structure it is intermediate between peat and coal and comprises jet, Moor Coal, Bovey Coal, Brown Coal, and Basaltic Coal. It occurs in Sumbulpore, Talchere, Rajmahal, Chittagong, amongst the hills up the Kurnfuli river in Assam, and, underlying the clay, in the recent strata all along the east coast from Cutch to Singapore. On the banks

of a small tributary of the Tenasserim, in about ten miles of latitude north of Tavoy, trunks of trees changed to lignite may be seen in the stiff clay, and near them the trunks of other trees completely silicified, and turned to stone. There is a great variety in this wood coal, both in its appearance and chemical analysis. Dr. Goodall, to whom Mr. Mason subjected specimens for analysis, wrote: "100 parts contain, 52 carbon, 29 bitumen, 19 ashes. This specimen was not good. This must be the coal referred to by the Coal Committee in their report for 1841, in which they say: "More recently, excellent specimens of coal have been presented to the Committee by Mr. Blundell, the Commissioner of the Tenasserim Provinces. The Committee call it "Cannel coal," which only proves that lignite is sometimes "a perfect mineral coal;" but in Tenasserim this coal is lignite. The committee also reported on a specimen of coal from Maulmain as "Cannel coal," but Mr. O'Riley who visited the locality whence it was said to have been brought, says that if found in that neighbourhood, it must be lignite. Dr. Morton furnished specimens of lignite collected by the commander of the surveying vessel on the coast, below Amherst. As the shore there for many miles is covered with laterite, it is probably found in that rock. Lignite occurs in laterite on the other coast. Mr. O'Riley approaching the head waters of the Ataran River, where the strata are considerably elevated, with the dip at an angle of 38° found two separate lines of lignite in a coarse sandstone conglomerate with shale and a semi-indurated blue clay containing limestone pebbles. This lignite is highly pyritous, its decomposition affording a copious deposit of sulphate of iron which covers the exposed surface with a dirty-coloured efflorescence. Some of the specimens taken from the deposit retain their original characteristics, do not fracture, and may be sawn through in sections across the grain, the same as wood imperfectly carbonized. Other deposits of wood less charged than the foregoing are found in the banks of the rivers Dah-gyau and Gyaing, some 20 to 30 miles to the north-east of Maulmain, covered with the same blue clay as that already noticed, but none possess any useful quality as a combustible material."—*Dr. Mason*.

LIGNUM ALOES, see Lign aloes.

LIGNUM COLUBRINUM, the wood of *Strychnos colubrinum* supposed to be an antidote against the poison of venomous snakes, as well as a cure for intermittent fevers. It is also produced by *Strychnos ligustrina* and *S. colubrina*. *S. tieute* yields the Upas

LIGUSTICUM AJOWAN.

tierte and Tiettek of the Javanese, which is an aqueous extract of the bark. *S. toxifera* yields the Woorali or Ourari poison of Guyana. *S. pseudoquina* is employed in Brazil as a substitute for Chinchona bark, and the seeds of *S. potatorum*, *Roeb.*, the nirmulee of the hindoos, are employed by them to clear muddy water.—*Faulkner; Hogg, Vegetable Kingdom*, p. 576.

LIGNUM FERREUM, LAT. Iron wood, a term applied in different countries to the hard woods of the country.

LIGNUM MOLUCCENSE, *Croton tiglium*.

LIGNUM VITÆ, wood of *Guaiaacum officinale*. It is shipped from Cuba, Jamaica, St. Domingo, and New Providence, in logs from 2½ to 36 inches in diameter, and is one of the heaviest and hardest of woods; it grows in the Isthmus of Darien to the size of 5 or 6 feet, is there called Guallacan, and is one of the most abundant woods of the country. When first cut, it is soft and easily worked, but it becomes much harder on exposure to the air. The wood is cross-grained, covered with a smooth yellow sap, like box, almost as hard as the wood, which is of a dull brownish green and contains a large quantity of the medicinal gum guaiacum. The wood is much used in machinery, &c., for rollers, presses, mills, pestles and mortars, sheaves for ship blocks, skittle-balls, and other works requiring hardness and strength. It was employed by the Spaniards for making gun-carriages and wheels. In this wood, the fibres cross each other sometimes as obliquely as at an angle of 30 degrees with the axis, as if one group of the annual layers wound to the right, the next to the left, and so on, but without much apparent exactitude. The wood can hardly be split, it is therefore divided with the saw; and when thin pieces, such as old sheaves, are broken asunder, they exhibit a fracture more like that of a mineral than an ordinary wood. The chips, and even the corners of solid blocks, may be lighted in the candle and will burn freely from the quantity of gum they contain, which is most abundant in the heart-wood. The Bahama lignum-vitæ has a very large proportion of sap-wood, pieces of 8 or 10 inches diameter have heart-wood that scarcely exceeds 1 or 2 inches diameter. One variety of cocoa-wood and also the almond-wood are somewhat similar to lignum-vitæ.—*Tredgold*.

LIGOR, in Siamese, Muang Lakhon, is also called Na-khon-si Thamarat. It was founded four centuries ago by the king of Ayudhia. It has 150,000 souls, of whom 3-4ths are Siamese.

LIGUSTICUM AJOWAN, is cultivated all over India, the seeds and those of *L. diffusum*

LILIACEÆ

are highly carminative; promote the secretions; good in dyspepsia: much used in all mescalitis; eight scors for one rupee.—*Gen. Med. Top.*, p. 124; *W.*, *lc.*

LIGUSTRUM, a genus of plants belonging to the natural order Oleaceæ. The species are shrubs or low trees, natives of Europe and Asia, have a fleshy fruit, the berry containing two membranous 1-seeded nuts. The calyx is short, tubular, and 4-toothed; the limb of the corolla 1-4th parted and spreading; stamens two, with short filaments. The genus has bitter and astringent leaves, and coloured berries, used in dyeing wines. A bluish colour which they yield is very much admired. Dr. Wight gives *Ligustrum intermedia*, *macrophylla*, *ramiflora*. *L. bracteolatum*, *Don.*, occurs in Nepal, and *L. lucidum*, *Ait.*, in China.—*Eng. Cyc.*; *O'Shaughnessy*, p. 435; *W. lc.*; *Voigt*, p. 549; *Smith, Mat. Med.*, p. 134; *Hogg, Veg. Kingd.*, p. 493.

L. lanceolatum, *Hb.*, *Lam.* | *L. spicatum*, *D. Don.*
L. nepalense, *Wall.*, *Roeb.*

A plant of Nepal, China and Japan, *Voigt*.

LIGUSTRUM LUCIDUM, *Ait.*

Lah-shu, CHIN. | *Tung-ts'ing*, CHIN.
A handsome evergreen tree of China, with ovate pointed leaves, profuse white flowers with puniceal cymes, and bearing a black capsular fruit. The Chinese term, *tung-ts'ing*, is applied to several plants on which the vegetable wax insect congregates, as *L. japonicum* and *L. obtusifolium*, both of which with *Rhus succedaneum*, are also in China, called Nu-ching. Another wax insect tree is the *Ligustrum ibota* of the Province of Sech'uen. But *L. lucidum*, principally harbours the insect. Its fruit and bark are used by the Chinese in the form of tincture, and its leaves are applied to swellings and sores.—*Voigt; Smith*, p. 229.

LIKH, HIND. *Syphcotides auritus*, *Lath.*

LIKHAWAT, HIND. From *Likhna*, HIND., to write; a written document, a handwriting.

LILAC, in India are several plants known as lilacs: the *Syringa persica*, is the true Persian lilac: the *Melia asederach*, is the Persian lilac of the English in India; *Melia semper-virens*, *W.*, is the West Indian lilac of English writers.

LILAM, as also *Nilam*, in the sea coast towns of India, mean an auction sale. They are both from the Portuguese *Leilao*, auction sale.—*Wilson*.

LILIACEÆ, DC. The Lily tribe of plants comprising, in the East Indies, 20 gen., 66 species, viz.:

1 Tulipa,	1 Notholirion	9 Allium,
2 Oagea,	1 Methonica,	2 Asphodelus,
2 Sloydia,	1 Pollanthes,	1 Hemerocallis,
4 Fritillaria,	1 Funkia,	2 Anthericum,
4 Lilium,	3 Scilla,	3 Chlorophytum,

LILIACEÆ.

- 2 *Chloropsis*, | 2 *Rhacopilula*, | 13 *Dragonis*.
4 *Dianella*, | 6 *Asparagus*,

The Liliaceous plants grow all over the world and, in the East Indies, 66 species have been discovered. The order is sub-divided into the Tulipæ; Agapantheæ; Aloæ; Asphodeleæ. Many of the tulip section are ornamental, but the roots of *Methonica superba* are considered to be a virulent poison. The Aloæ yield valuable fibres from species of *Sansevieria* and Aloes; also the medicinal aloes, the flowering hyacinth and other ornamental plants are found in the Asphodeleæ, as also the squill, leek, onion, garlic, rocambole, shallot, and chives; its sections, genera and species are:

LIMACODES.

LILESWARA, see Yavana.

LILIES OF THE FIELD, alluded to by Our Saviour, are supposed to be the *Amaryllis lutea*, also supposed to be the Chalcedonian or scarlet Martagon lily formerly known as the lily of Byzantium. The plains westward of the lake of Gennesareth which surround the "Mount of Beatitudes," are covered, at different seasons of the year, with liliaceous flowers of many kinds, nearly all of which are brightly coloured. The Chalcedonian lily was in blossom at the season that Our Lord's Sermon on the Mount was spoken. See *Agapanthus*, Liliaceæ.

LILIN, MALAY. Wax candles, Yellow bees wax.

LILITA-DEVI, was either the wife or daughter of a munificent merchant, or perhaps the mother.

LILLAH, ARAB. For the sake of God: out of charity, gratuitously.

LILLUN, HIND. Cottoncaster obtusa.

LILUN, a tribe dwelling east of the Mekong river, in lat. 22° 30' N. The Lilun, also called Lawlan and Lolo, are a buddhist population east of the Mekhong.

LILIUM. Of this genus, Dr. Wight, in Icones, gives *Lilium neilgherrense*, tubiflorum, *Wallichianum*.

LILYWORTS, see Liliaceæ.

LIM, HIND. *Pinus excelsa*.

LIM or LIM1, HIND. Cottoncaster bacillaris.

LIMA, a genus of Molluscs.

LIMACODES. Mr. Nietner's list of the enemies of the coffee tree holds good in general for the entire coffee region of Ceylon. He tells us, however, that the brown and white bug, and the black and white grub, are the only universal and important enemies of the coffee tree, and that the destruction caused by Arhines, Limacodes, Zenzera, Phymtea, Strachia and the coffee rat, appear to be of a more local and occasional nature, and are therefore of less importance. There are three pests which are chief—the white bug, the brown bug and the black bug. The appearance and disappearance of the coffee bug, he tells us, is most capricious. It comes and goes—now rapidly spreading over a whole estate, now confining itself to a single tree amongst thousands;—here, leaving an estate in the course of a twelve-month, there, remaining permanently. Sometimes spreading over a whole estate, sometimes attacking a single field, then leaving it for another and another. But the white bug prefers dry, and the brown damp, localities, the latter being found more plentiful in close ravines and amongst heavy rotting timbers than on open hill sides, and it is probably to this predilec-

LIMBU.

tion, that the shifting of the insect is attributable. The bug, of course, seeks out the softest and most sheltered parts of the tree,—the young shoots, the undersides of the leaves and the clusters of berries. The injury done by the white bug seems more severe than that of the brown, but not being so plentiful as the latter, it is of less general importance. The white bug is especially fond of congregating amongst the clusters of berries, which drop off from the injury they receive, and trees often lose their entire crop in this manner. The injury produced by the brown-bug is the weakening of the tree and is thus more general, but the crop does not drop off altogether nor so suddenly. With white bugs on an estate the crop can hardly be estimated; with brown bugs it can. See Grub.

LIMANZA, HIND., PUNJAB. Pinus excelsa, lofty pine.

LIMAS, PORT., SP. File.

LIMAX, a genus of Molluscs.

LIMBO, URIA, is either the Melia azadirachta or the Azadirachta indica, a tree of Ganjam and Gumsur, extreme height 70 feet, circumference 5 feet, and height from ground to the intersection of the first branch, 22 feet, and he adds that it is the margosa tree. Idols are usually made of its wood because it is not liable to be attacked by insects. The bark is used medicinally for fever, small pox and worms. An oil which is extracted from the seeds of this tree, is used for itch and cutaneous diseases. The tree is tolerably common and is burnt for firewood.—*Captain Macdonald.*

LIMBOO, DUK. Citrus bergamia, *Risso, Poit, Roxb., W. and A.*

LIMBU, called by the Lepcha, Chung, a partly buddhist, partly brahminical border race between Nepal and Sikkim. A hardy hardworking tribe. They engage in the cultivation of grain and feed cows, pigs and poultry, their huts are made of split bamboo, and the roofs of leaves of the wild ginger and cardamum, guyed down with rattans. They drink to excess. The Limbu near Darjeeling eat their sacrifices, dedicating, as they forcibly express it, 'the life-breath,' to the gods, the flesh to ourselves. According to Dr. Campbell, the Limboo tongue is more pleasing to the ear than the Lepcha, being labial and palatal. The Limboo, Suwar and Chepaug, possess a small Mongolian type, strongest in the Limboo, and their language is referable to either the Tibetan or Indian standard. The Rong, the Khampa or Kamba and the Limbu are people from different parts of Tibet. All these people have powerful frames, but are idle.—*Latham's Ethnology; Lubbock, Origin of Civil.*, p. 237; *Dr. Campbell*, p. 148.

LIME is a term applied alike to quick lime or freshly prepared lime, to the same when it has been slaked and when mixed with sand in the form of mortar. Lime, in its pure form, is a greyish-white, earthy-looking mass, moderately hard, brittle; Sp. Gr. 2.3—3.03; having an acid alkaline taste; corroding animal substances. It is made by burning limestones of various kinds also by burning shells. When fresh burnt, it absorbs both moisture and carbonic acid from the air; it will abstract water from most bodies, and is hence often employed as a drying substance. Fresh burnt and slaked lime, though easily procured, is seldom pure enough for medical use. White Carrara marble, calcareous spar, chalk, shells, nodular limestone or kunkur, all yield good lime. The heat being sufficiently great, the carbonic acid is expelled, and about 56 per cent of lime left in a caustic state, and tolerably pure: but, if shells have been employed, mixed with a little phosphate of lime and oxide of iron. Water being added, lime cracks and falls to powder; the rest is an hydrate, of lime.—*Royle.*

LIME, Carbonate of

Kwang-fen,	CHIN.	Valaiti chuna,	HIND.
Crata,	FR.	Cluna,	"
Carbonate de chaux,	"	Calcia carbonas,	LAT.
Kohlensaures kalk,	GER.		

Carbonate of lime assumes, in nature, several forms; chalk, marble, limestone, calc-spar, kunkur and in most of its varieties is useful in the arts.

In the E. Indies, the lime is the fruit of the *Citrus acida*; they are used in cookery, for making lemonade, and the expressed juice known as lime-juice is preserved and used on board-ship as an antiscorbutic. Dried limes are used by dyers in some parts of India, to fasten and improve colours.—*McCulloch; Faulkner.*

LIMES, FR. Files.

LIMES, Sweet, Sweet limes.

Shouk-cho, BURM. | Meeta Neemboo, HIND.

The sweet variety of the citrus grows to the size of a large orange. The juice of the fruit is very grateful to persons with fever, although rather tasteless. It is easily propagated by seed. It will grow also from cuttings. The young shoots make a very good stock for orange grafts. Citrus plants are grown in some parts of Pegu to a very small extent, and three kinds of wild lime are indigenous to the forests in the northern parts

LIMESTONE.

of the Pegu province; it is probable that oranges might be cultivated with success about Prome and from thence to Meeday. The same observation applies to the grape, of which several sorts of wild vine are found in the upper part of the province, so as to render the trial of grape vine very desirable.—*Riddell; McClelland.*

LIMESTONE occurs abundantly in many parts of the E. Indies, in the form of nodular masses, also though rarely as chalk, and as a compact limestone and granular as marble. There is much granular marble in the Tinnevely district in the south of the Peninsula of India, both pure white and veined. The marble rocks of the Nerbudda river, below Jubbul-pore are also famed, and marble is found and largely worked in Burmah: chalk is rare in India, but a nodular limestone called kunkur occurs in the black soil throughout British India. Compact limestone occupies great districts, much of the valleys of the Godavery, Kistna, Tumbudra, Gutpurba, Malpurba and Bhima rivers. A limestone, to which the term mountain limestone has been applied, underlies the whole of the Kymore range in Allahabad, and it also shows itself along the valley of the Soane as far at least as Muncey-sur peak in Mirzapore. In some parts, as in Rohas, it crops up boldly to 200 or 300 feet forming a sloping base to the precipitous sandstone rock. In these places there appear to be three well defined strata, viz., an upper one of a yellowish blue mixed with disintegrated sandstone, iron pyrites, and chalk, all in thin plates. Below that, a more bluish grey limestone with occasional calespar crystals, again, is found, but generally of the same nature as the German lithographic stone. Under the aforesaid strata lies a very dense bluish-grey limestone mixed with veins of calespar. It is not used by native lime burners, as being intractable. This is the lowest stratum, and would be an almost indestructible building or flooring stone from its great hardness. Much harder than granite and approaching to porphyry, it may be had in large blocks, and if sawn into slabs, would be a very handsome building stone, bluish-grey with white streaks, and moreover it would probably make a superior kind of lime. Immense quantities of lime are made from the quarries of the western bank of the Soane, and exported down the Soane and the Ganges as far as Monghyr. Perhaps 300,000 to 400,000 tons are made annually, and the material is inexhaustible. The same limestone rock crops out on the northern face of the range with intervals between the Soane river and Mirzapore, and again, especially in the singular and interesting limestone caverns of

LIMESTONE.

Goopteswar in the valley of the Doorgowtee river, at Beotree Band, in Khawah Koh at Mussaye, on the Sooreh river and near Mirzapore. With canals and tramways these quarries could supply all Northern India with the finest lime in the world. The cost of the lime at these quarries varies from 6 to 16 rupees per 100 maunds, or say 5 to 14 shillings per ton. The present system of lime-burning is a very imperfect one, and indeed only suited to native wants, but with European supervision, although the material could not perhaps be produced cheaper, it could be produced with much more certainty and evenness in quality. Close to Jubbulpore is a range of low hills within a circumference of about ten miles, interspersed with masses of limestone both above and below the surface. The fuel generally used and most available for burning, is brushwood. It is cut and brought from a distance of 7 or 8 miles. The stone is broken into fragments of 6 to 12 inches in size, then piled like a dome over a hole of about 9 feet diameter dug in the ground, and a passage left for introducing the fuel. This kiln is kept burning continually for the whole of the day, and the lime removed on the following morning. The fuel is used in the proportion of 40 maunds to every 75 maunds of limestone. Seventy-five maunds of the stone yield about 50 maunds of well-burnt lime. The stone is simply collected and broken up by manual labour, and the cost of collecting and putting it in the kiln, amounts to 3 rupees for every 100 maunds of lime. The fuel costs from 5 to 8 rupees for every 100 maunds of lime. The entire cost of preparing the lime varies from 8 to 10 rupees per 100 maunds. In A. D. 1861, the lime was only used in the city and station of Jubbulpore, and the locality was leased by government to a farmer from year to year for a trifling sum. The hills are conveniently situated both as regards the line of railway to Bombay as well as to Mirzapore. White saccharine marble occurs on the banks of Nerbudda, at Bhira Ghat near Jubbulpore on the line of the railway to Bombay. The marble is plentiful and easily accessible. It has been used in a limited degree at Jubbulpore, sometimes to make lime, and other times for metalling roads. It is made up into images by natives, but does not take a good polish. A block was sent to the Paris exhibition, of 1855, and pronounced to be equal to Italian marble for statuary purposes. Granular limestone, is the marble of which the images of Gaudama are formed, which are usually called alabaster images. It is a primitive limestone abundant near Ava. All

LIMONIA.

the limestone of the Tenasserim provinces belong to the older secondary formation, which produces what is usually denominated common limestone. The limestone of Tavoy has a specific gravity of 2.7, and is a perfectly pure, semi-crystalline carbonate of lime, akin to statuary marble. It is well adapted to act as a flux in the melting of iron. The limestone of Mergui has a specific gravity of 2.7: it is a pure calcareous carbonate. *Cal. Cat. Ex. 1862; Mason's Tenasserim.*

LIME TREE, the *Tilia europea*, also known as the Linden tree, a plant of north Europe, from which much of the best employed in mat making is obtained.

LIMI a river that drains the western slope of the Aravalli hills, and after a course of 320 miles passes into the Ruin of Cutch.

LIMNADIA, a genus of crustaceans whose relations may be thus shown:

ORDER PTYLOPODEES.

Fam. Apusienis.

Limnadia mauritiana, *Edw. Mauritius.*
" *tetracera*, *Edw. Charkow.*

LIMNEA, a genus of molluscs.

LIMNANTHACEÆ, See *Limnathes*, *Lindl.*

LIMNANTHEMUM WIGHTIANUM, one of the Coleoptera of Hong Kong.

LIMNANTHES, one of the *Limnanthaceæ*, from California, are flowers of yellow colour, with a border of white and a slight fragrance, they are readily grown from seed as others annuals. — *Riddell.*

LIMNOPHAGÆ, group of fishes, of the family Cyprinodontidae, as under:

Cyprinodontidae.

FIRST GROUP.—C. Carnivora.

11 Cyprinodon,	1 Lucania,	1 Jenynsia,
1 Fitzingeria,	18 Haplocheilichthys,	2 Pseudoxiphophorus,
1 Characodon,	17 Fundulus,	1 Ichthyaeta,
1 Tetodon,	3 Rivulius,	8 Gambusia,
1 Limnodynastes,	6 Orestias,	3 Amblyopoma,

SECOND GROUP.—C. Limnophaga.

16 Poecilia,	1 Platyhelius,	10 Girardinus.
3 Mollinnesia,

LIMONES, *Sp.* Lemon. *Citrus limonum*, *Risso.*

LIMONIA, a genus of plants of the Order

LIMONIA MONOPHYLLA.

Citracæ, of which, in the East Indies, the following species are known :

acidissima, *Linn.*, all the E. Indies.
alata, *Hb. Madr.*, *Wight. Ill.*, Ceylon, Neilgherries.
alternans, *Wall.*, Pegu.
angulata, *W. & A.*, Moluccas.
caudata, *Wall.*, Khassya Hills.
grata, *Wall.*, ?
laureola, *DC.*, *Wall.*, Nepal.
missionis, *Wall.*, *W. Ic.*, Tanjore.

The leaves of some of the Limonia are fragrant, the small fruits of *L. acidissima* and *L. crenulata* are very acid. *L. laureola*, is the only plant of this family found on the tops of cold mountains. The people of the Himalaya, remarking its highly fragrant leaves, fancy that it is by feeding on them that the musk-deer acquires its strong and peculiar flavour. On all the lands near the mouths of the Tenasserim rivers that are occasionally overflowed by the waters, is a very handsome shrub of the orange family, with a fragrant white flower, and a small fruit like a lemon in miniature, is quite common ; and ought to have a place in Indian garden plots.—*Wallich, Plante Asiat. Rar.*, t. 245 ; *Roeb.* ; *Voigt.* ; *Eng. Cyc.* ; *Mason.*

LIMONIA ACIDISSIMA, *L., DC., W. and A.*

Limonia crenulata, Roeb. Cor. Pl. Rheed.
Jeru kat narigan, MALACAL. | Torelagu, TEL.

Grows at the falls of Gokak, common on sandstone hills at Padshapore, in the forests of the Godavery, at Hurdwar, Moughir and Assam. Wood very hard, and worthy of attention. It is a shrub with pinnate leaves, and winged petioles ; its flowers are small white and fragrant ; its fruit small, size of a pea, is an article of commerce with the Arabs, used as a tonic.—*Riddell.* ; *Crahan.* ; *Voigt.*

LIMONIA ALATA, *Wight, Ill.*

Kat yellu mitcha, TAM. | Adivi nimma, TEL.
Tree small, but its wood is remarkably close-grained, hard and heavy. It is pale yellow or straw colored, and if procurable of adequate size would be very valuable. Is found in the southern ghat forests of the Bombay presidency, above and below, but it is not a common tree.—*Drs. Wight and Gibson.*

LIMONIA CARNOSA, *McClelland.*

Tau-shouk, BURM. | Taw-shouk, BURM.
The small fruit of this tree, not larger than a nut, is a favorite spice, known in the bazars of Bengal under the name of Keklani. It is only found in the Pegu district.—*McClelland.*

LIMONIA MONOPHYLLA, *Linn. Syn.* of *Atalautia monophylla, DC.*

LIMOSA.

LIMONIA PENTAGYNA, *Roeb.*

Chitri-kaia, TEL.

A large timber tree, a native of the Circars, of Bengal, &c.—*Rohde, MSS.*

LIMONIA PENTAPHYLLA, *Linn.*

Ganji-phall, DUK. | Conchie pallam, TAM.
Ash-shora ? HIND ?

The five-leaved Limonia bears a smooth roundish red fruit, about the size of a marble, edible, but not held in any estimation ; easily propagated by seed.—*Ainslie, p. 225.*

LIMONIA PUMILA, *Burm. Syn.* of *Atalantia monophylla, DC.*

LIMONII, *Rus.* *Citrus limounum, Risso.*

LIMONITE.

Wu-meng-i, CHIN.

This substance was formerly used medicinally by the Chinese ; it is a per-hydrous oxide of iron.

LIMONS, *Fr.* Lemon.

LIMOQ, *Beng.* Citron, *Citrus medica.*

LIMOSA, a genus of birds known as Godwits, of the order of Grallatores or Waders, family Scolopacidae, the position of which as placed by naturalists may be thus shown. Grallatores or Waders.

a. Tribe Pressirostres.

Fam. Otidae, Otis 3 sub-gen., 4 sp., viz., 1 Houbara ; 1 Eupodotis ; 2 Syphæotides.

b. Incertæ Sedes.

Fam. Glareolidae, 1 gen., 2 sp., viz., 2 Glareola orientalis, lactea.

Fam. Charadriidae.

Sub-fam. Cursorine, 2 gen., 2 sp., viz., 2 Cursorius Coromandelicus ; 1 Macrolarsius bitorquatus.

Sub-fam. Esacine, 2 gen., 2 sp., viz., 1 Esacus ; 1 Edicnemus.

Sub-fam. Vanelline, 4 gen., 6 sp., viz., 1 Hoplopterus ; 1 Sarcophorus ; 3 Lobi-vanellus.

Sub-fam. Charadriine, 2 gen., 2 sub-gen., 10 sp., 1 Squatorola ; 2 Charadrius ; 1 Eudromas, 6 Histiola.

Fam. Chionidae, 1 gen., 1 sp., 1 Hamatopus ; Osteolegus.

Fam. Recurvirostridae, 2 gen., 3 sp., 2 Himantopus ; 1 Recurvirostra avocetta.

Fam. Scolopacidae, 16 gen., 32 sp., viz., 1 ibidorhynchus ; 4 Totanus ; 3 Actitis ; 6 Tringa ; 1 Terekia ; 2 Limosa ; 2 Numenius ; 1 Eurinorhynchus ; 1 Calidris ; 1 Philomachus ; 1 Streptopelia ; 1 Phalaropus ; 1 Scolopax ; 1 Macrorhamphus ; 6 Gallinago ; 1 Rhyngæa.

Fam. Palamedeidae.

Sub-fam. Parrine, 2 gen., 2 sp., viz., 1 Metopidius ; 1 Hydrophasianus.

Fam. Gruidæ, 1 gen., 1 sub-gen., 3 sp., viz., 2 Grus ; 1 Anthropoides.

c. Cultirostres.

Fam. Ardeidae.

Sub-fam. Tantalina, 6 gen., 7 sp., viz., 1 Falcinellus ; 1 Geronticus ; 1 Threskiornis ; 2 Tantalus ; 1 Platalea ; 1 Anastomus.

d. Incertæ Sedes.

1 Gen. Dromas ardeola.

LINARIA.

Sub-fam. Ciconiinae 3 gen., 6 sp., viz. Mycteria; Ciconia; 2 Leptoptilos.

Sub-fam. Ardeininae, 1 gen., 7 sub-gen., 19 sp., 4 Ardea; 6 Herodias; 1 Butorides; 1 Ardeola; 1 Nycticorax; 1 Tigrisoma; 1 Botaurus; 4 Ardetta.

c. Tribe Macrodictyla.

Fam. Rallidae, 7 gen., 15 sp., viz. 1 Porphyrio; 1 Gallinula; 3 Porzana; 1 Ortygometra; 2 Rallus; 1 Gallinula; 1 Fulica.

LIMOSA AEGOCEPALA, Syn. *L. melanura*; the 'black-tailed Godwit' of Europe, Asia, N. Africa, Australia: very common in India.

LIMOSA RUFA, 'Bar-tailed Godwit,' of Europe, N. Africa, W. Asia: Nepal (*Hodgson*, *Grey*) Java and Timor (*Temminck*.)

LIMU, HIND, PERS. *Citrus medica*, *Linn.*, also *Citrus bergamia*.—*Risso and Poit*, *Roxb.*, *W. and A.*

LIMULUS, a genus of Crustaceans, belonging to the family Xyphosura. The species are found in all the seas of Southern Asia, and the Eastern Archipelago, as also in the Atlantic and near the coast of North America.—*Milne Edwards*.

LIMULUS DENTATA, *L. polyphema*, *L. longispina*, *L. moluccanus*, known as the Molucca crab, type of the Xyphosura or sword tails, so called from the tail which all have. Two species are common at the mouth of the river Gauges; one is distinguished (among other characters) by having a cylindrical tail.

LIMULUS LONGISPINA, *Milne Edw.*

Kabuto-gani or Helmet | Un-kiie, CHIN.
crab, | Jar. | Umi-do-ganie, "

Found on the coasts of Japan and China.

LIMULUS MOUCCANUS, *Latreille*.

L. polyphemus, *Fabr.* | Cancer moluccanus, *Clus.*
L. gigas, *Muller.* | " perversus, *Rumph.*
L. tridentatus, *Leach.*

Molucca crab, | Eng. | King crab, | Eng.

Found in the Moluccas seas.

LIMULUS ROTUNDICAUDATA, *Milne Edwards*.

Cancer marinus perversus, *Scha.*

A native of the Moluccas seas.

LIMULUS VIRESCENS, *Milne Edwards*.

Polyphemus heterodactylus, *Lam.*

A native of the Moluccas seas.

LIN, ANGLO-SAXON, FR. Flax, Flaxseed, Linseed.

LINACEAE, *Lindl.* The flax tribe, of one genus, *Linum*, with 9 species. See *Linum*.

LINARIA, the toad-flax, a genus of unimportant plants of the natural Order Scrophulariaceae section Antirrhineae, of which the following species occur in the East Indies:

bipartita, *Willde.*, N. Africa, cultivated in India.
incana, *Wall.*, Nepal.
junccea, *Ad.*, Europe, cultivated in India.
purpurea, *Mill.*, "

LINDEN TRIBE.

ramosissima, *Woll.*, Bengal, Hindustan, Burmah.
spartea, *Hoffm.*, Europe, cultivated in India.

triphylla, *Mill.*, " "

vulgaris, *Mill.*, " "

Common plants, and may be easily raised from seed; colours, mostly, purple-blue and yellow.—*Riddell*.

LINARIA CYMBALARIA.

Ivy-leaved snap-dragon. | Karamba, SANS.

Given in India with sugar for the cure of diabetes. *Lindley* observes that *Hamilton's* remarks to this effect are probably applicable to the *L. ramosissima*, *Wallich*, a nearly allied species.—*O'Shaughnessy*, p. 477.

LINARIA RAMOSSISSIMA. This little yellow-flowered plant may be seen in the Sikhim valleys, crawling over every ruined wall, as the walls of old English castles are clothed with its congener, *L. Cymbalaria*.—*Hooker*, *Him. Jour.*, Vol. 1, p. 42.

LINAZA, Sp. Linseed.

LINDEN TREE, *Tilen europea*. Lime tree.

LINDEN TRIBE, of plants, the *Tiliaceae* of *Russien* and *Lindley*, comprise shrubs and trees, of which 82 species occur in the East Indies, viz.:

53 *Grewia*, | 1 *Diplophractum*, | 1 *Eupera*,
12 *Triumfetta*, | 1 *Neesia*, | 1 *Berrya*,
8 *Corechorus*, | 1 *Porpa*, | 1 *Brownlowia*.
3 *Columbia*,
Corechorus acutangulus, *Lam.*, all British India, Malayana.

fascicularis, *Lam.*, all British India.

olitorius, *Linn.*, all British India, Egypt, Malayana.

capsularis, *Linn.*, all British India, China.

trilocularis, *Linn.*, all British India, Burmah.

Triumfetta angulata, *Lam.*, all British India.

annua, *Linn.*, Bengal.

rotundifolia, *Lam.*, Bengal, Circars.

trilocularis, *Roxb.*, Bengal, Senegambia.

Grewia abutilifolia, *Juss.*, Peninsula of India.

asiatica, *Linn.*, Bengal, Peninsula of India.

columnaris, *Sm.*, Penin. of India, Khassya.

denticulata, *Wall.*, Nepal.

clastica, *Royl.*, Himalaya.

floribunda, *Wall.*, Burmah.

humilis, *Wall.*, Banks of Irawadi.

levigata, *Vahl.*, all British India, Malayana.

microcus, *Wight*, Peninsula of India.

LINDLEY, Dr., an eminent botanist of England, who rendered essential service to Indian botany by numerous descriptions and figures of Indian plants that had appeared in various illustrated periodicals. He laboured indefatigably in the distribution of the great Wallichian herbarium, his elementary books on botany, and his great work, the 'Vegetable Kingdom,' are indispensable both to botanical students and to proficients; whilst, by the scientific direction he gave to the study and practice of horticulture, as an author and as secretary to the Horticultural Society of London, he was the means of rendering European botanists familiar with the plants of India in a living state, to an extent that would have been thought visionary a few years before his time.—*H. et T.*

LINEAR LEAVED ASPARAGUS, ENG. *Asparagus adscendens*, *Roxb.*

LINEAR MEASURE; in India, the unit is generally the distance from the elbow to the tip of the middle finger of a tall man. This length is known as the *bat'h*, *HIND.*, or *Moolum*, *TAM.*, *Mora*, *TEL.*, and averages 19½ inches. It is always translated cubit, though invariably exceeding the English cubit of 18 inches by 1½ or 2 inches. In the southern Carnatic, the *adi*, or length of a tall man's foot, is in use, and averages 10½ inches. The *Guz* of India, (translated yard), is partially in use all over India, but varies in different localities from 26 to 36 inches. In Bombay, it is 27 inches, and in the N. W. Provinces of India it has been defined by Government, for the purpose of survey, at 33 inches. The English yard and foot are, however, very extensively adopted by native artizans; and in all the Public Works of India, which give employment to thousands of natives, the English linear measure is invariably employed. As this measure is so undefined, and fluctuating in practice, there can be little doubt but that the English yard and foot should be determined on in any new metrical system. See *Measures*; *Weights*.

Most of the names for linen, in use in Europe, are derived from *lin*, the Saxon for flax, the word flax being derived from the

LINGAET.

Greek word *Pleko* to weave. Linen is a term applied to linen cloth, to body clothing and bed linen.—*McCulloch's Commercial Dictionary*, p. 761.

LINGA, HIND. The form under which the hindoo deity Siva is principally worshipped. There are various kinds of Linga, to all of which worship is offered. See *Lingam*.

LINGA-BALJA-VADU, TEL. Members of the Lingaet sect who follow the Lingaet religion, natives of Tilingana: they seem to be identical with the Linga-banjigya or Linga-banjaga, or Linga-banjaga.

LINGA-BANAJIGA, TEL. A merchant or trader of the Lingaet sect.

LINGADHARI, sectarian hindoos who wear the Linga. See *Linget*.

LINGA DONDA, TEL. *Bryonia laciniosa*. *L.—R.*, iii, 728.

LINGAET.

Banjigya,	CAN.	Wani,	MAHR.
Banjaga,	"	Linga-balja-vadoo,	TEL.

The Lingaet, a sect of hindoos in Southern India, who wear the lingam in a silver or gold casket suspended from their necks, or on their arms. Their name is written also Lingait; nearly all the Canarese or Karmatica speaking people belong to the sect, but even in Berar, where Mahratta is spoken, there are 22,919 lingaet. They are also called Lingadhara, or Linghawant, or Lingamat and Jungama. They are Vira Saiva hindoos, whose sole object of worship is the lingam, a model of which they carry on their arms, or suspend from their necks in caskets of silver or gold, the workmanship of some of them, being of great beauty. They are sectarian saivavi, for their creed does not recognise castes nor acknowledge brahmins. Their customs and belief were described about the year 1833 by Mr. C. T. Brown, of the Madras Civil Service, in the Madras Literary Journal, and he has, since, been writing on the same subjects. They are very numerous amongst the Canarese people from Bangalore, northwards to Panderpoor on the Kistnah and towards Kallianco fort, where the sect was originated in the 12th century by a brahman named Basava. They are largely engaged in agriculture, and as shopkeepers. They are rigid in external ceremonial, but they have loose ideas in morals, probably resulting from what Wilson styles their belief in the equality of women. The sect are sometimes styled Jangam, from jangam the title of their priesthood. They do not reverence brahmins nor acknowledge the Vedas, their principles do not recognise caste (though they have established one of avocation) and they deny polytheism and the inferiority of women. Besides the trade divisions there are race,

LINGAM.

sectarian, or social divisions amongst them. The Aradhya, for instance, are the lingaet of brahman birth, and though some Aradhya are well versed in Sanscrit, they are not held in esteem by the other lingaet who are worthy of Sudra birth. The Samanya or ordinary, the Viseshya or extraordinary, the Samanya Bhakta and Viseshya Bhakta, are other sects. The Samanya Bhakta differ from the ordinary Samanya Lingaet only in retaining caste distinctions—the Viseshya Bhakta, are puritans, have no caste distinctions and are bound by a vow to honour their Guru. Their religious book is the Basava Purana, written in the Canarese tongue, in which language, as also in the Telugu, they have other writings. Lingaet women, in widowhood, re-marry by inferior ceremonies, called the Nickah. In such case the widow returns to her parents home and is there re-married. The ceremonies are few and the bridegroom gives small sums of Rs. 5 or Rs. 10 with two cloths. A village head, who will expend about Rs. 200 for his spinster marriage, will expend about Rs. 5 to Rs. 100 for his marriage with a widow. The lingam casket of the Lingaet is called Ayigalu. Although thus, by their principles without castes, they are undoubtedly the most bigotted of all the hindoo sects. They are all engaged in civil avocations: perhaps in the Madras native army, 30,000 strong, there are not two hundred soldiers of this sect. They are vegetarians and will not sell, and will not even buy or bring, a creature that is to be killed and used as food. Their dislike to brahmins takes many shapes—at a village near Kalladghi, three miles distant from the Gattapara river, they would not dig a well in their village, lest a brahmin should be attracted to reside, and their wives had to bring all the drinking water from the river bed.—*Professor Wilson; C. P. Brown in Madras Lit. Soc. Journal.* See Jangam.

LINGA CHETTU, TEL. Crozophora plicata, *Juss., Roxb.*

LINGAIT, a name of the Jungum hindoo sect, also called Linga-dhari. They are vira-saiva hindooes, and wear the lingum, the phallus or priapus is a casket suspended from the neck or fastened to the arm.

LINGAM, HIND.

Phallos, GR. | Priapus, LAT.

As seen in British India, the lingam is a round conical stone rising perpendicularly from an oval shaped rim cut on a stone-platform. The lingam is the Priapus of the Romans, and the Phallic emblem of the Greeks, and the oval rim-like lines sculptured or drawn around it, is the yoni or bhaga, symbolical of the female form, as the lingam represents that of the male, but there is not apparent to any eye

LINGAM.

the faintest resemblance to the organs of which they are deemed the symbols or types. In British India for at least 1,500 years, the lingam has been regarded as the object under which Siva, one of the hindoo deities, is worshipped, in this instance as a regenerator, whilst the yoni, or bhaga is regarded as emblematic of his sakti or consort Parvati. Perforated rocks are considered as emblems of the yoni, through which pilgrims and other persons pass for the purpose of being regenerated and the utmost faith is placed in this sin-expelling transit. At the present day, these two emblems represent the physiological form of worship followed by the great saiva sect of hindooes, and the worship of Siva, under the type of the lingam, is almost the only form in which that deity is now revered. About two-thirds of all the hindoo people, perhaps 100,000,000 of souls, worship these emblem idols. They are conspicuous everywhere, in all parts of British India between the Ganges and the Indus, and from the Himalaya to Ceylon: throughout the whole tract of the Ganges, as far as Benares, in Bengal, the temples are commonly erected in a range of six, eight or twelve, on each side of a ghat, leading to the river. At Kalua, is a circular group of one hundred and eight temples erected by a raja of Burdwan. Each of the temples in Bengal consists of a single chamber, of a square form, surmounted by a pyramidal centre. The area of each is very small, the linga of black or white marble, occupies the centre—the offerings are presented at the threshold. This worship is unattended by any indecent or indelicate ceremonies, and it would require a very unusual imagination, to trace any resemblance in its symbols to the objects they are supposed to represent. There is an absence of all indecency from public worships and religious establishments in the Gangetic provinces. The Vedas do not seem to inculcate this form of worship, their ritual was chiefly, if not wholly, addressed to the elements and particularly to fire, and the lingam is undoubtedly one of the most ancient idol objects of homage adopted in India, subsequently to the ritual of the Vedas. The worship of the linga is the main purport of the Skanda Siva, Brannadanda, and Linga Puranas. The idol destroyed in A. D. 415 by Mahmud of Ghizni, was nothing more than a Linga. It was a block of stone of four or five cubits long and of proportionate thickness. The original intention in the worship of this object seems to have been forgotten. That the present block lingam is typical of reproductive energy, seems wholly a notion of later times. It is possibly but the brahminical effort to teach the fetichist, when

worshipping a common black stone, to think of the invisible ruler of the universe. This, however, is mere conjecture and many similar notions have been written: Sir John Lubbock says the worship of personified principles, such as Fear, Love, Hope, &c., could not have been treated apart from that of the phallus or lingam with which it was so intimately associated in Greece, India, Mexico, and elsewhere; and which, though at first modest and pure, as all religions are in their origin, led to such abominable practices, that it is one of the most painful chapters in human history. Captain Burton believes the hindoos to have been the first who symbolised, by an equilateral triangle their peculiar cult, the yoni-lingam: in their temple architecture, it became either a conoid or a perfect pyramid. Egypt denoted it by the obelisk, peculiar to that country; and the form appeared in the different parts of the world:—thus, in England, it was a mere upright stone, and in Ireland a round tower. D'Hancarville has successfully traced the worship itself, in its different modifications, to all people: the symbol would therefore be found everywhere. The old Arab minaret is a plain conoid or polygonal tower, without balcony or stages, widely different from the Turkish, modern Egyptian, and Hejazi combinations of cylinder and prism, happily compared by a French Traveller to "une chandelle coiffée d'un éteignoir." And finally the ancient minaret, made solid as all Gothic architecture is. Sonnerat says the lingam may be looked upon as the phallus or the figure representing the virile member of Atys, the well-beloved of Cybele, and the Bacchus which they worshipped at Hieropolis. The Egyptians, Greeks, and Romans, had temples dedicated to priapus, under the same form as that of the lingam. The Israelites worshipped the same figure, and erected statues to it. The holy scriptures inform us that Asa, son of Roboam, prevented his mother Maacha from sacrificing to priapus, whose image he broke. The Jews caused themselves to be initiated into the mysteries of Belphegor, a divinity like the lingam, whom the Moabites and Madianites worshipped on Mount Phegor; and which worship, in all appearance, they received from the Egyptians. When "Judah did evil in the sight of the Lord, and built them high places, and images, and groves, on every high hill and under every tree," the object was Bal, and the pillar, the lingam, was his symbol. It was on his altar they burned incense, and "sacrificed unto the calf on the fifteenth day of the month," the sacred monthly period, the amavas of the hindoos. The Calf of Israel seems the bull Nandi of Bal

Iswara or Iswara, the Apis of the Egyptian Osiris, and throughout all British India a sculptured stone bull, called Nandi, the vahana or conveyance of Siva, is seated with its face looking towards the lingam. According to Colonel Tod, the lingam is identical with the Arabic idol, Lat, or Alhat. The worship reached France, doubtless with the Romans, and the figure of the lingam is still to be seen on the lintel which surrounds the Circus at Nismes, as well as on the front of some of their ancient churches, particularly on that of the cathedral of Toulouse, and on some churches at Bourdeaux. Plutarch says that the Egyptian god Osiris was found everywhere with the priapus exposed. Ptah-Sokari is also so represented, and images of that kind are called Ptah-Sokari Osiri. There can be no doubt but that the god Baal, whose votaries the Hebrews frequently became, is identical with the lingam and the god styled Chiuu in Amos v, is Siva, whose name the races dwelling in Hindustan and along the valley of the Indus pronounce Seo, Seb, Sivin and Chivin. Yet there is nothing to fix the date at which the worship of Siva was brought to India, nor by whom brought; the wars between the buddhists and the linga worshippers of the Dekhan formed a series of important events in hindu history, but these extended up to the 11th century of the Christian era.

The worship of Vishnu seems to have come from Tartary, and that of Siva about the beginning of the Christian era, from the basin of the lower Indus through Rajputanah, and to have displaced the nature worship of the Vedas; Arrian, who resided in the second century at Barogaza (Baroach), describes a Parthian sovereignty as extending from the Indus to the Nerbudda, with their capital of Minagara. Whether these, the Abtelites of Cosmas, were the Parthian dynasty of Arrian, or whether the Parthians were supplanted by the Huns, we must remain in ignorance, but to one or the other must be attributed the sack of Balabhipoora. The legend of this event affords scope for speculation, both as regards the conquerors and the conquered, and gives at least a colour of truth to the reputed Persian ancestry of the rana of Mewar. The solar orb, and its type, fire, were the chief objects of adoration of Silladitya of Balabhipoora. Whether to these was added that of the lingam, the symbol of Balnath (the sun), the primary object of worship with his descendants, may be doubted. It was certainly confined to these, and the adoration of 'strange gods' by the Sooryavausi Gehlot is comparatively of modern invention. There was a fountain (Soorya-coonda) 'sacred to the sun' at Balabhipoora,

from which arose, at the summons of Silladitya (according to the legend) the seven-headed horse Septaswa, which draws the car of Soorya, to bear him to battle. With such an auxiliary no foe could prevail; but a wicked minister revealed to the enemy the secret of annulling this aid, by polluting the sacred fountain with blood. This accomplished, in vain did the prince call on Septaswa to save him from the strange and barbarous foe: the charm was broken, and with it sunk the dynasty of Balabhi. Who the 'barbarian' was that defiled with blood of kine the fountain of the sun, whether Gete, Parthian, or Hun, we are left to conjecture. The Persian, though he venerated the bull, yet sacrificed him on the altar of Mithras; and though the ancient Gabr, or Guebr purifies with the urine of the cow, he will not refuse to eat beef; and the iniquity of Cambyzes, who thrust his lance into the flank of the Egyptian Apis, is a proof that the bull was abstracted by no object of worship. How these strange tribes obtained a footing amongst the hindoo races is not known, but so late as the twelfth century we find the Gete, Hun, Catti, Ariaspa and Dahae, definitively settled, and enumerated amongst the Chatees rajula. How much earlier the admission, no authority states; but mention is made of several of them aiding in the defence of Cheetore, on the first appearance of the mahomedans in the ninth century. D'Herbelot, (vol. i, p. 179) calls them the Hiaithelah or Iudoscythæ, and says that they were apparently from Tibet, between India and China. De Guignes (tome, i, p. 325) however says: "cette conjecture ne peut avoir lieu, les Ethelites n'ayant jamais demeuré dans le Tibet. A branch of the Hun, however, did most assuredly dwell in that quarter, though it cannot positively be asserted that they were the Abtelites. The Hya was a great branch of the lunar race of Yayat, and appears early to have left India for the northern regions, and would afford a more plausible etymology for the Hiaithelah than the Te-le, who dwelt on the waters (ab) of the Oxus. This branch of the Hun has also been termed Nephthalite, and fancied one of the lost tribes of Israel. Which race brought the lingam worship is not known. At Ujein it was particularly celebrated about the period of the mahomedan invasion, but probably long before and one particular linga, was named Vinda-swerna from Vindu, drop; Swerna, gold. At present, the lingam is sometimes three-faced or tri-murti, and tri-lingam is said to be the source of the name Telinga and Telingana, the country extending from north of Madras to Ganjam and west to Bellary and Beder: the four-faced lingam is called the Choumurti Mahadeva, such

as may be seen in the caves of Ellora; and of common occurrence in other districts, and the shrine of Eklinga or the one Lingam is situated in a defile about six miles north of Oodipoor. The hills towering around it on all sides are of the primitive formation, and their scarped summits are clustered with honeycombs. This ek-lingam or one phallus, is a single cylindrical or conical stone; but there are others, termed, Seheslinga and Kot-iswara, with a thousand or a million of phallic representatives, all minutely carved on the monolithic emblem, having then much resemblance to the symbol of Bacchus, whose orgies both in Egypt and Greece, are the counterpart of those of the hindoo Baghes, so called from being clad in a tiger or leopard's hide, as Bacchus had that of the panther for his covering. There is a very ancient temple to Kotiswara at the embouchure of the eastern arm of the Indus; and there are many to Seheslinga in the peninsula of Saurashtra. At the ancient Dholpur, now called Baroli, the shrine is dedicated to Guteswara Mahadeva, with a lingam revolving in the yoni, the wonder of those who venture amongst its almost impervious and unfrequented woods to worship. Very few persons of the saiva followers, of the south of India, ever realize the lingam and the yoni as representations of the organs of the body, and when made to apprehend the fact they feel overpowered with shame that they should be worshipping such symbols. The Bana-lingam or Ban-lingam, and the Chakram lingam are stones formed by attrition in a river bed, into a lingam-like form: the Sali-gram is a fossil shell, the interior parts of which resemble a lingam. The most frequent to be observed of the hindoo idols is the lingam. The emblem of the god Siva, who is usually styled Maha-deo. It is almost invariably of stone, of some kind, and is imbedded in the yoni, and varies from a little projecting knob to a considerable cylinder of two feet high and a foot in diameter. It is usual to describe it as emblematic of destruction and resurrection. The figure inside the house is often of copper or silver. The Ada-sarpa or old serpent, in the form of a single cobra, or five or nine headed cobra, is often figured bending over the lingam, with the figure of a bull Nandi or Basava, the vahan or Siva sitting before it. It is usually of a dark coloured or black stone, erect, a mere round pillar, rounded off at the top. It occasionally rises direct from the ground, but mostly from a stone platform, from out the yoni, carried around its base. At the time of the mahomedan invasion this form of physiologic worship would seem to have been prominent in the districts which their arms reached. The linga temple at Somnath

LINGOA.

in Guzerat was stormed by Mahmud of Ghazni, much wealth was obtained, and he carried the gates of the temple to his own city, where they were put at his tomb, and remained till, in 1842, the British Indian Army removed them. The temple of Mallikarjuna, at Sri-sailam, in Bhima sankari at Rajahmundry, in Telingana, is also mentioned, as are also, Mahakala and Amareswara at Onjein : Omkara on the Nerbudda, Vaidya-nath at Deogurh in Bengal, Visweswara at Benares, Tryambaka at the sources of the Godavery, Rameswara at Ramisseram, Kedaresa, on the Himalaya, and Gautamesa, the locality of which is not now known. At the present day, in the south of India, the principal Siva temples are at Conjevoram, (Kanchi,) at Jambuk Esvar near Trichinopoly, Trincomalee (Tirunamalle), Callesty (Kalahistri), and at Chadamburam. The Saiva hindoo, however, is essentially polytheist, worships at every temple and reverences bralunans.—*Cole., Myth. LINGI, SANS., one who wears the outward emblems of the lingaet order or sect to which he belongs ; but it is more usually applied to signify a pretender, a hypocrite, or one who assumes the external emblems of a caste or order to which he does not belong, or of which he does not perform the duties ; the bearer of a linga — *Wilson.*

LINGIN or Linga, a large island 36 miles long, its S. E. point is in lat. 0° 17' S, long. 105° 4' E. On its southern part is a mountain with two remarkable spire-like peaks, called Apes ears.—*Horsburgh.* See Pulo ponoboo, Ladrone islands.

LINGOA or Amboyua wood, is from the Pterospermum indicum ; it is very durable, and takes a high polish. It was imported

LINSEED.

into England from the Moluccas in considerable quantities at the time when the latter were British possessions ; it is very abundant, and may be had in any quantity. Very large circular slabs are obtained from the lower part of the tree by taking advantage of the spurs, or lateral growths ; they are sometimes as large as nine feet in diameter. A circular disk of wood thus obtained, nearly seven feet in diameter, as well as some other specimens, were exhibited in 1851 by Messrs. Almeida of Singapore, and received a Prize Medal from the Jury. The importation ceased with the cessation of British intercourse with those islands. The wood is abundant at Ceram, New Guinea, and throughout the Moluccas seas. It is prepared in large circular slabs by the natives of these islands, and can be obtained in almost any quantity if the precaution be taken of ordering it during the previous trading season. The Kayu Buka or Kyaboca wood of commerce is the knarled excrecence of this tree ; slabs can be had 6 or 7 feet in diameter, by taking advantage of the spurs which project from the base of the trunk, as the tree itself has not sufficient diameter to furnish such wide slabs. They are occasionally met with as large as 9 feet in diameter, but the usual size is from 4 to 6 feet. This wood is brought to Singapore by the Eastern traders from Ceram, Arru and New Guinea, and is sold at Singapore by weight. It is much esteemed as a fancy wood both in Europe and China, but the demand in Europe seems to have decreased of late years. See Amboyua wood, Kyaboka wood, Java woods, Pterospermum indicum.

In India, the seed of the flax plant is its chief product, and is principally used in the manufacture of linseed oil. The first export from Calcutta was made by Mr. Hodgkinson in 1832, and amounted to only ten bushels, but the increase has been rapidly progressive.

1832, ten bushels.	1837, 32,327 mnds.
1833, 2,163 mauuds.	1839, 167,601 "
1834, 2,826 "	1850, 765,496 "

In the year 1850-51, the amount of linseed imported from the Concan into Bombay alone was 59,076 cwt., and in the year 1851 the total imports into England of this product, was 93,814 cwt., and in 1852-53, 114,309 cwt: the one-sixth part of the total amount imported into England in that year. The value of the Bombay exports in 1850-51 was Rs. 170,112, and in 1852-53, Rs. 342,926. In 1853, Bombay exported only 4,000 tons of seeds, whereas in 1857 it reached 60,000 tons. Of these linseed formed about two-thirds. The price of seeds were:

Linseed per cwt. ...	Rs. 5 to 6
Rapeseed " ...	" 4½ to 5½
Teelseed " candy of 5½ cwt.	" 20 to 27
Copra (Stripped Coconut) Red	
per candy of 5½ cwt. ...	" 54 to 60
" " " Black	" 55 to 60

The loss in weight in cleaning linseed varies according to sample. On a good lot, the loss should not be over 5 per cent. The loss in weight in Kurrachee rapeseed is usually about 4 per cent., in Kutch and Kattywar seed, it is very trifling. On Khandedesh teelseed, the loss is about 3 per cent. Cleaning expenses come to about 2 annas (3d.) per cwt., but if done by machinery on a large scale, these should not exceed one anna (1½d.) per cwt., and calculate another anna to cover weighing, carting, &c. In copra there is no loss in cleaning. The red kind yields most oil, the black being used for food, is dearer. Linseed has been known to cost less than four rupees per cwt. The following were the prices of oil in Bombay in 1857 per maund of 28 lbs.:

Cocoanut oil ...	Rs. 3 10	Gingelly oil (Sweet	
Castor " ...	" 2 15	oil) ...	Rs. 3 12
		Linseed oil sweet	" 3 0

The linseed yield by expression oil in such great abundance, that the seeds form, for this purpose as well as for reproduction, an important article of trade. It is grown in small quantities in the United Kingdom, North

482m

L

LINSEED OIL.

America, Sweden, Denmark, Turkey, and Egypt, but Russia, Prussia, Italy, and India, are the great producing countries. By the year 1862, large quantities of linseed were imported into Britain from India and the exports from all India have been:

	lbs.	tons.	Value £.
1850-51	68,690,384	30,665	170,373
1 2	128,258,144	57,258	317,964
2 3	119,897,008	53,525	277,958
3 4	91,345,632	40,779	227,853

1860-61	61,577,320	27,535	1,255,779

Of the above, Madras exports ranged from the value of £227 to £2,800. For the first few years of the above period Bombay exported only to the value of £17,051 to £34,384, but in 1860-1, the value of the Bombay exports was £564,566: and, in the same year, Calcutta exported to the value of £690,472, that of 1850-1 having been £153,095. It has long been cultivated to a limited extent in Nagpore, Bellary and other parts of the Madras Presidency. Dr. Royle states that this crop in India, is never sown thickly or in continuous fields, but it is so grown in many situations and is the general mode of its cultivation in the linseed-producing provinces. In the poorer Western districts it is often sown as an edging crop to wheat and other grain because it is not eaten by cattle in the green state. The reason given for its being sown in both long and cross drills is that the plant being weakly requires much sowing to guard it against the action of the weather. It does not seem improbable that the spurious white "atees" roots of the bazar are occasionally obtained from this or from the Goolashoopre, or *Linum trigynum*, indigenous in the Lower Provinces. The oil cake which remains after the oil is expressed from linseed, contains the albuminous part of the seed, and is used for fattening cattle.—*McCulloch; Smith Mat. Med.; Faulkner; Calcutta, Cat. 1862; Facts for Factories, Bombay 1857. See Flax.*

LINSEED OIL.

Uli ka tel,	HIND.	Avisi nuna,	TEL.
Alliveri yennai,	TAM.		

Is obtained from flax seed. When used as the vehicle for the harder resins, it should be

482m

LINUM AUSTRIACUM.

pure, pale, well-clarified, and combined with the resin at as low a temperature as possible. Unless these conditions be attended to, a dark varnish is produced which becomes darker by age. This oil gives softness and toughness to the resin, but produces a slowly drying varnish. It is clarified for the best varnishes by being gradually raised to near the boiling point in a copper pan. The linseed oil of *Linum usitatissimum*, is contained in the kernel of the seeds and may be either cold drawn, or, as is usual, obtained after the seeds have been subjected to a heat of 200°. The oil obtained by the former process is paler, with less colour and taste, than where heat has been employed. The seeds of different countries yield different proportions of oil, as the following yields from a bushel of seed will show yield of oil:—

East Indian 14½ lbs.	to lbs.	Egyptian... ..	lbs. 15
		15. Sicilian	lbs. 14

When cold drawn, it is greenish-yellow, and more viscid than when hot drawn. It is one of the cheapest fixed oils; is what is called a drying oil, and is used in the manufacture of paints, varnishes, and printing inks. That made in British India is inferior to the English oil, from the former having been imperfectly freed from mucilage, which prevents its drying. It is procurable in Bellary at Rs. 3-8-0 per maund. In the year 1852-53, English Linseed oil to the amount of galls. 4-552 and valued at Rs. 8-763, was imported into Madras, whilst at the same time cwt. 1,045 of the seed were exported from hence mostly to England. Though the linseed oil of India is considered as not possessed of the full drying properties of the oil prepared in Europe, there is no doubt, this is owing entirely to the Indian linseed being expressed before the mustard seed has been separated, with which it is commonly mixed, in consequence of the two plants being often grown together. Linseed oil is one of the chief ingredients in oil varnishes and in printer's ink; by boiling with litharge its drying properties are much improved.

LINSEME, Ir. Linseed.

LINTIN ISLAND, in the Canton river, is of considerable size, terminating at the summit in a high conical peak, which is in lat. 22° 24' N. and 4½ miles E. of the Grand Ladrone. The island is in 22° 6' N. long. 114° 1' 30" E. and 15 miles westerly, from the north end of Lema Island.

LINUM AUSTRIACUM. Some of its flowers are pretty, and may be placed in a border. *L. tetragynum* *Coleb.*, grows in the Khassya mountains and Nepal, and *L. trigyn-*

Flax was cultivated in Egypt in very early periods, and both linen and cambric are now prepared from it, the latter being the produce of plants more thickly sown. It is extensively cultivated in many parts of British India, produces abundance of seed for oil, but its fibre is inferior. European linseed on the other hand is better for fibre than for oil. By proper treatment, however, good fibre can be got from plants raised in India from European seed, or even from country seed if properly sown. At the Madras Exhibition of 1855, several specimens of true flax, *Linum usitatissimum*, were exhibited from Tanjore, Ganjam and the Nizam's territories, of good length and procurable in large quantities, but none of them were clean or of good quality all having been stained by rotting. Flax is prepared by steeping, stripping off the bark, and then beating, so as to separate the fibres. Linen and cambric are prepared from it, the latter differing from the former in its fineness, and in being obtained from plants which are more thickly sown. Linen, as clothing, is cool, from being a better conductor of heat than cotton; but when the skin is covered with perspiration, or exposed to cold, its feels cold and chilly. The fibre of flax is a straight tube-like cylinder, and is therefore less irritating than the twisted fibre of cotton. Hence lint, which is prepared by scraping linen, is so much preferable to cotton for surgical dressings. Tow consists of the short fibres of the flax, which are removed in the process of hackling. It is used for a variety of purposes. In India, flax has been usually cultivated for its seed, and not for the fibre, the prevalence of cotton as the staple fabric may account for this. The seeds are official with natives, being given (as infusion?) for asthma. The seeds, after having had the oil pressed from them, are in the form of a flat mass, commonly called oil cake.—*M. E. J. R.*; *Powell's Hand-book*, Vol. i, p. 421. See Flax, Linseed, Oil.

LION.

LIOKPA, HIND. *Delphinium brunonianum*.
LIOLÉPIS, a genus of the family *Uromastice*, as under :

Uromastix hardwickii, Gray, Agra, Sind.
Lirolepis reevesii, Gray, Arakan, Martaban.
Phignocephalus candivalvulus, Pall, Lake Chomoriri.

LION, the *Felis Leo*, *Linn.*, is generally recognised to be of only one species, and the lion of Senegal, the lion of Barbary, and the lion of Persia as varieties, and sportsmen are inclined to distinguish a variety in the lion of Guzerat and Kattywar, and another in the lion of Gwalior and Hurriannah. The Lion, is the desert king ; as the Tiger is monarch of the jungles. It is found in Guzerat, Kattywar, along the Runn of Cutch, in Rajputanah, Gwalior and Hurriannah in British India, in Persia, and in Africa. It is tolerably plentiful at Gwalior and also about Goonah, and lions have been killed 20 miles from Sangor, but wretched mangy looking things. In those met with in India, generally, the male is nearly maneless, and usually inferior in size and appearance to its African brothers. Tigers are said to avoid the lions and desert those jungles in which any roving lion may make its appearance. In the Kattywar district, which the lions most affect tigers are said to be unknown, though panthers are common. It has been supposed that the lion avoids the tiger, and in the Central Provinces since tigers have been shot off, lions have begun to appear in the northernmost parts. It is moreover unlikely that an Indian lion could contend with the tiger as it is much inferior in size and strength. The Lion, is very rare in Afghanistan. The only place where lions were heard of was in the hilly country about Cabul, and there they are small and weak, compared with the African lion. " The lion is a native of Persia, and some are found as far as Tashkund, in a northerly and easterly direction. There remains no doubt of lions in Hurriannah in the beginning of the 19th century. In 1837, Major Brown, ('Gunga' of the Bengal Sporting Magazine) remarked, that—"only twenty-three years elapsed from the occupation of the country, when the lions, which were at one time in the dry and sandy deserts of the Hurriannah, became extinct south of the Cuggar. Having no inaccessible dens to retire to during the hot weather, the lions, from necessity, took up their abode where water could be found ; and as places of this description were rare, and generally near villages, their retreat was easily beaten up, and their entire destruction speedily effected. In the month of May, a lion-shooting party had only to ask from the people of the country, where water was still to be found, to know whither they might export sport !" We have the evi-

LION.

dence of Jehangir, and the Reverend Edward Terry, that in their days, the province of Malwah abounded with lions. Jehangir records, that he had killed several, and Mr. Terry mentions his having been frequently terrified by them, in his travels through the vast woods and wilderness of the country. Bernier, had frequent opportunities of witnessing the chase of this animal, an amusement which was reserved for the emperor Aurangzeb alone. Lions are still found in the Geer jungles, but there are no tigers, and Captain Postans observes that while Kattywar abounds with the tiger and lion species, Cutch, the neighbouring province, is free from this terrible infliction. The Times of India says, Lieut. Heyland, 56th Regiment, succeeded in killing 11 tigers, 2 lions, several cheetas, bears, and wild jungle boars. While stationed at Deesa, he shot three lions in one year. One of them measured some nine feet in length. It had severely wounded Lieutenant Clarke, of the R. A., some time in August. A correspondent of the Times of India says when the 3rd Bombay Cavalry was stationed at Rajkote in Kattywar (in 1832-33) Capts. Reeves, Berry, and others of that Regiment used to shoot lions from off their horses. Major Fulljames turned out a lion from the Bhot (a sort of island in the Runn of Cutch), 'opposite the town of Junjoowara, in 1835, and followed it up to a place called Khoora Suttapoor, on the southern border of the Runn, where he shot it ; and Colonel Le Grand Jacob, when 1st Assistant to the Political Agent in Kattywar, killed a lion and a lioness in one day in the Geer jungle valley, in the southern part of Kattywar, where they are still to be found. Both Captain Reeves and Colonel Jacob described the males as being maneless, and a lion kept by the Rajah of Bhownuggur had none.

In the year 1862, a correspondent in the Times of India writing of Kattywar, says lions not only exist in certain portions of this province, but are to be found in Guzerat also, on the range of hills near Deesa. The figure of a lion, is on the top of each of the three tall pillars or columns at Bettiah in North Berar. A lion was shot by Mr. Arratoon, a little before the appearance of the Asiatic lion in the Barah jungles. Tigers, if not lions, venture close to Allahabad in the hills near Barah. Major Benbow, of the Bombay Army, in his youth a great hunter of large game, with his companions hunted the lion in the Runn, by galloping fiercely at them and firing, but continuing to gallop on without pausing to see the effect of the shot—each of the party acting similarly until the lion fell. There are no difficulties to the lion crossing

to the Runu from the south of Persia. It is supposed to be the lion that visited India, from which the figure was taken that is used in the royal Arms of England. The hindoos in their fifth avatar of Vishnu recognise that deity as Nara Singha, (Nara, a man, and Singham, a lion) a man lion. The lion is frequently met with on the banks of the Tigris below Baghdad, rarely above. On the Euphrates it has been seen almost as high as Bir. In the Sinjar, and on the banks of the Khabour, they are frequently caught by the Arabs. They abound in Khuzistan, the ancient Susiana: three or four together, and are hunted by the chiefs of the tribes inhabiting that province. There seem to be two varieties in Babylonia, a maneless one, which the Arabs call true believers, a maned lion, that they call a glabr or glaur, or infidel, the former they say will spare a mahomedan if he pray, the latter never. The largest lion seen in England, was caught, when very young, in Hurriannah, by Genl. Watson, and was presented to his Majesty, Geo. IV. In Vol. I of the Sporting Review, in 1845, the lion is cursorily mentioned as an inhabitant of the territories south of Gwalior. About 1848 there was seen in Calcutta a fine living lioness, more than two-thirds grown, which had been captured as a small cub in Sindh. It appeared healthy and vigorous; but died in the course of her passage to England. There were also, then, in the London Zoological Gardens, a young lion and lioness from Guzerat. From the accounts of Asiatic lions, there seem two distinct varieties of them: one comparatively maneless; the other heavily maned, scarcely (if at all) less so than the African lion. Of the latter, again, some naturalists distinguish apart the lions of Barbary, Senegal, and South Africa. The lion seems to traverse great tracts of country and no doubt those of Persia and Mesopotamia, possibly of distinct varieties or rearing, come to the west of India, along the line of the Indus to Sindh into Hurriannah, Rajputanah, towards Gwalior, Kattywar and Guzerat, and that this is the explanation of the varied opinions put forward by sportsmen as to the appearance of the lions of India. The ordinary Persian lion is well maned; and this race is said to be identical with the Arabian. A fine Persian lion and lioness were long exhibited in the Surrey Zoological Gardens, with a fine S. African lion and lioness in an adjoining den; and, Mr. Blyth says, there was not much difference in the development of the mane of those two lions; but the Persian was a much paler animal than the other. According to Mr. Warwick, a pair were brought as a present to his

late Majesty, George IV., from Bussora, in the Boyne, man-of-war, Captain Campbell, who presented them to the Menagerie then at Exeter Change. The Asiatic, he adds, "differs from the South African Lion in being rather less in size, with mane much more scanty, and of a light yellow colour, tipped with grey, the whole body being of an uniform fawn colour. The head wants the width and nobleness of countenance so apparent in the African Lion. The animal falls off towards the withers more than in the African lion; the tail is not so delicately tapering, and the tuft at the end of it is much larger in proportion." Major Sir W. Cornwallis Harris, however, had no faith in the existence of an Asiatic race of maneless or scantily maned lions; and he was as familiar with the lion of Guzerat as with that of South Africa. In the letter-press accompanying his Portraits of the Game and Wild Animals of South Africa, he says in point of size and complexion, the South African lion differs in no respect from that found so abundantly in Guzerat "and varying in hue betwixt ash-colour and tawny-dun; but generally possessing a more elaborate and matted mane; which peculiarity is attributable, in a great measure, to the less jungly character of the country that he inhabits, and to the more advanced age to which, from the comparatively small number of his mortal foes, he is suffered to attain. In India, the lion is often compelled to establish himself in heavy jungles, which comb out a considerable portion of the long loose silky hairs about his head and neck; but this is seldom the case in the arid plains of Africa, where the covert being chiefly restricted to the banks of rivers, or to isolated springs, he rests satisfied with a less impervious shade, and is often disturbed from a clump of rushes, barely large enough to conceal his portly figure." Major Harris remarks, that "amongst the Cape colonists it is a fashionable belief, that there are two distinct species of the African lion, which they designate the vaal and the zwart, or the "yellow" and the "black," maintaining stoutly that the one is very much less ferocious than the other: but both the colour and the size depend chiefly on the animals age; the development of the physical powers; and of the mane also, being principally influenced by a like contingency. That which has been designated the "maneless lion of Guzerat" is nothing more than a young lion whose mane has not shot forth; and, he adds, this opinion with less hesitation, having slain the king of beasts in every stage from whelphood to imbecility." A correspondent of the B. S. M. (for 1841,) thus writes of the lions of Kattywar:—"Glad as I should be to agree with

so accomplished a sportsman as Captain Harris, and knowing at the time I write this, that he has killed more lions than any man on the Western side of India, yet having nearly accomplished fifty head myself, I wish modestly to observe that there were, three years ago, in Kattywar, lions with very dark skins, and which in fact were called by the natives Kalphoota, which means in these parts 'black skin,' or 'black stripe.' These said lions, thirteen in number, charged most desperately; and I think they made good some seven or eight charges upon the head of Captain Harris's quondam elephant, Mowlah' by name. Since this batch I have killed many, but none in colour or courage like them. Out of all the lions I have killed, 9 feet 2-inches is the longest I have seen, before taking the skins off for curing; they are stretched to 11 feet frequently. Captain Harris gives the correct measurement of the animal, as distinguished from that of its stretched skin; and he supplies a list of twenty lions and lionesses killed (by himself?) in Kattywar, during 1840 and 1841. These lions, writes Captain Smece, "are found in Guzerat along the banks of the Sombermuttee, near Ahmedabad. During the hot months, they inhabit the low bushy wooded plains that skirt the Bhandard and Sombermuttee rivers from Ahmedabad to the borders of Cutch, being driven out of the large adjoining tracts of high grass-jungle (Bhir) by the practice annually resorted to by the natives of setting fire to the grass, in order to clear it and ensure a succession of young shoots for the food of the cattle upon the first fall of the rains. They extend through a range of country about forty miles in length, including various villages, and among others those of Borneo and Golianna. They are so common in this district, that I killed no fewer than eleven during a residence of about a month; yet scarcely any of the natives, except the cattle-keepers, had seen them previously to my coming among them. The cattle were frequently carried off or destroyed, but this they attributed to tigers: the tiger, however, does not exist in that part of the country. Those natives to whom they were known gave them the name of Outiah Bagh, or 'Camel Tiger,' an appellation derived from their resemblance in colour to the camel. They appear to be very destructive to domestic cattle, and the remains of a considerable number of carcasses of bullocks were found near the place at which my specimens were killed: about ten days previously, four donkeys had been destroyed at the village of Cashwa. I could not learn that men had ever been attacked by them.

When struck by a ball, they exhibited great boldness, standing as if preparing to resist their pursuers, and then going off slowly and in a very sullen manner; unlike the tiger, which, on such occasions, retreats springing and snarling. "In addition to the district in which I have met with them, these lions are also found on the Runn near Runnpore, and near Pattun in Guzerat. Some persons who saw them in Bombay stated that they also occur in Sind and in Persia. How far this latter statement may be correct I cannot determine; but I may remark that the Persian lion that is at present exhibited at the Surrey Zoological Garden, has none of the characteristics of the maneless lion of Guzerat, and seems to me to differ but little from individuals known to have been brought from Africa." In the days of Lord Hastings' rule, lions were common in the Great Hurrianah plain. A contributor to the B. S. M. in 1833, remarks that "Hansi was then in its 'high and palmy state' and considered the best sporting country in India. Lions were found in considerable numbers, although lately they have become exceedingly rare. * * * The first lion-hunt I ever was present at was the most beautiful sight I have witnessed. The party assembled at Hissar, where some of the sporting elephants of the Marquis of Hastings' retinue was stationed. A duffadar's party, of Skinners Horse, accompanied us. The presence of sowars in Lion-hunting is very necessary; the plains being extensive, the animal is liable to be lost after the first onset, unless sowars are at hand to go out on the flanks, or to push on ahead, to mark the jungle, the lion retires into. In general, when a lion is pursued, he will either endeavour to get away by sneaking off, or take to the open country, and there await the attack: the latter, a tiger is never known to do, and I consider it to form the only peculiar difference of the two kinds of sport. A lion that takes to this open fighting, gives more exciting sport by far than anything I have seen in tiger hunting, and is the most trying for the elephants. * * * One killed was a young but nearly full grown male, stood exactly 3 ft. high and was 9 ft. long; his mane was 9 inches in length." The famous lion 'King George' formerly in the Tower menagerie, and procured in Hurrianah when a small cub by the late General Watson, was even renowned for the superb development of his mane! Mr. Bennett (in his *Tower Menagerie*) relates that in the commencement of year 1823, the late "General Watson, then in Hurrianah, being out one morning on horseback, armed with a double-barrelled-rifle, was suddenly surprised by a large lion, which

bounded out upon him from the thick jungle at a distance of only a few yards. He instantly fired and the shot taking complete effect, the animal fell dead almost at his feet. No sooner had the lion fallen than the lioness rushed out, which the General also shot at, and wounded severely, so that she retired into the thicket. Thinking that the den could not be far distant, he traced her to her retreat, and there despatched her; and in the den were found two beautiful cubs, a male and female, apparently not more than three days old. These the General brought away: they were suckled by a goat and sent to England, where they arrived in September 1823, as a present to George IV, and were lodged in the Tower." The male was the animal from which Mr. Bennet gives his figure and description of the so-called "Bengal lion;" and he was remarkable for the superb development of his mane, when little more than five years old, at which age the wood cut of him was executed by Hervey. The sum of our present evidence seems decidedly adverse to the belief that a maneless (or comparatively maneless) race of lions exists in Guzerat: but that such a race inhabits Mesopotamia is considerably more probable; no lion, even in Africa, attains to the magnitude of the largest male tigers of India. The lion is shorter in the vertebral column, and much deeper in the chest; indicative of its capacity for running in pursuit: this the tiger never does; and its structure is more emphatically that of an animal which springs upon its prey. Nevertheless, the resemblance of the skulls is so great, that there is only one certain mode of distinguishing them, viz., that the nasal bones pass back beyond the maxillaries in the tiger-skull, and fall short of the maxillary suture in the lion-skull: besides which the profile of the latter is generally much straighter, while that of the former is more tom-cat like, showing a strongly marked obtuse angle. The close affinity of the two animals is demonstrated by the fact of their having interbred and produced hybrids when in captivity; and it is curious that a newly-born lion-cub is far from being so utterly unlike a tiger-cub as might have been expected. They are at first obscurely striped or brindled, and somewhat tiger-like in the coat. There is generally a blackish stripe extending along the back, from which numerous other bands of the same colour branch off, nearly parallel to each other, on the sides to the tail. The head and limbs are generally obscurely spotted. When young they mew like a cat; as they advance, the uniform colour is gradually assumed; and at the age of ten or twelve

months the mane begins to appear in the males; at the age of eighteen months this appendage is considerably developed, and they begin to roar. In lionesses the markings of the young are often more or less obscurely retained till they are full-grown or nearly so. They were conspicuously visible in a Sindh lioness, about two-thirds grown. Lion and tiger-cubs are, in confinement, apt to suffer much at the time of developing their huge permanent canine-teeth; and perhaps many die at this age when wild.—*Bennett's Tower Menagerie*; *Tennant's Hindustan*, Vol. i, p. 78-9; *Postan's Western India*, Vol. ii, p. 158; *Tod's Travels*; *Malcolm's Persia*; *Calcutta Review*, No 2, 20th Dec. 1860; *Times of India*, Rajcote, 12th June 1865; *Bangalore Herald*, 17th June 1865; *Royle, Ill. LIQUIDAMBER.

Mia-sila,	ARAB.	Liquidamber,	ENG.
Nan-tar-ok,	BURM.	Raa-a-mala,	MALAT.
Liquid storax,	ENG.		

The genus of plants belonging to the natural Order Balsamifera, are trees with alternate, palmately lobed leaves, growing in N. America, the Levant, the East Indies, Mexico, the Tenasserim Provinces, and Java. The bark of Liquidamber altingia of Tenasserim and Java is bitter, hot and aromatic, and when wounded affords a resinous substance which is employed to mix with balsam of Peru and balsam: a similar substance is obtained from L. orientale of the Levant islands; and

LIQUIDAMBER CERASIFOLIA.

L. styraciflua of Mexico. The Liquidamber of commerce is a product of the three species. The name is derived from Liquidum, fluid, and Amber the Arabic name of Amber. *L. styraciflua* a large, fine tree, is the species found in Mexico, and the United States, in the latter of which it is called sweet gum, and the fragrant liquid exudes, though not very copiously, from incisions in the stem. This is called Liquidamber, Oil of amber, and Copalm balsam, and in this form has a pleasant balsamic odour and an aromatic bitter taste. This becoming dry, forms what is called soft or white Liquidamber, which resembles very thick turpentine, has a feebler odour than the liquid balsam, and contains less volatile oil, but more benzoic acid. *L. orientale* is a native of Cyprus, where it is called Xylon effendi (the Wood of our Lord), where it produces an excellent white turpentine, especially by incisions in the bark. It is also said to be produced on the island of Cabross, at the upper end of the Red Sea, near Cadess, which is three days' journey from Suze. The product of the *L. altingia* is said to be mixed with the substance obtained by boiling the branches of *Styrax officinale*, or acting upon them with oil, spirit or naphtha. The subject is interesting as connected with ancient commerce, inasmuch as old writers mention a liquid with the solid storax, the mia-saileh and Mia yalseh of the Arabs. *L. cerasifolia* of Wallich (*Sedgwickia cerasifolia* of Griffiths) grows in Assam, but it is not known if it yields any balsam.—*Eng. Cyc.*, *O'Shaughnessy*, p. 255, 660, 611; *Dr. Mason in Bengal Asiatic Society's Journal*, June 1848; *Hogg, Vegetable Kingdom*, p. 702; See Liquidamber *altingia*, *Orientalis styraciflua*.

LIQUIDAMBER ALTINGIA, Blume.

Nan-tar-uk. BURM. Liquid storax tree, ENG. Liquid amber tree, ENG. Rasamala, JAV., MALAY.

A superb tree, native of the forests of Java, at elevations of 2,000 and 3,000 feet above the level of the sea, and indigenous on the Tenasserim coast, in some parts of which it is quite abundant, and a considerable stream in Mergui derives its name from this tree, in consequence of its growing so thickly on its banks. The bark is bitter, hot, and aromatic, and when wounded, affords the balsam called liquid storax. The Rasamala or Rose-maloes, is a stimulating expectorant influencing the mucous membranes, especially that which lines the air passages.—*Dr. Mason in Bengal Asiatic Society's Journal*, June 1848; *O'Shaughnessy*; *Hogg, Veget. Kingd.* p. 702.

LIQUIDAMBER CERASIFOLIA, Wall.

Sedgwickia cerasifolia, Griff.

LIQUORICE JUICE.

Grows in Assam, but it is not known if it yields any balsam.—*O'Shaughnessy*, p. 255; *Hogg, Veget. Kingd.*, p. 702.

Cotter mija, TURK.,	"		

From the bark of this tree is obtained the Liquidamber balsam. This is at first liquid, transparent, yellow, rather consistent; its odour is strong, and resembles that of liquid styrax; taste very aromatic and acid. By long keeping it dries into a deep brown resin. It contains benzoic acid. One kind of liquidamber resembles a soft pitch or turpentine, is opaque, whitish, of sweet and aromatic odour, and contains so much benzoic acid, that it often crystallizes on the surface of the mass. All these balsams are obtained either by spontaneous exudation, by incision into the bark, or decoction of the bark, leaves and branches. When of the purest kind, it is dry, transparent and nearly white, and is then supposed to constitute the white Peruvian balsam of the druggists. In all its states it is used to mix with the common Peruvian balsam. Liquid styrax is soft, of the consistence of honey, tenacious, viscous, of greenish-brown and grey colour, odour strong and heavy, taste aromatic, but not acrid, much adulterated with fragments of bark and earth, entirely soluble in alcohol. It hardens in the air, and absorbs oxygen. By distillation it affords an acidulous water, having the odour of benzoic acid, also a hot, limpid, and colourless oil; a solid coloured oil; benzoic acid, &c. Boiled with alcohol it deposits crystals on cooling. Several writers attribute the origin of liquid styrax to the Liquidamber *styraciflua*. Guibourt assigns it to the Liquidamber *orientale*. Fec considers liquidamber and styrax to be identical, and doubts their oriental origin. Soubeiran deems the origin of styrax to be altogether unknown. M. Pfleritier and several other authorities strongly recommend styrax as a most agreeable and efficient substitute for balsam of Copaiba. Soubeiran gives some excellent formulæ for the administration of this substance.—*O'Shaughnessy*, p. 610; *Hogg, Vegetable Kingdom*, p. 702.

In Europe, the liquorice roots are obtained solely from the *Glycyrhiza glabra* and liquorice plants are grown in large quantities about Peshawur; dug up, dried, and cut into pieces; and used by the natives as a tonic in fever, in doses of sixty grains, also as a demulcent in coughs, and in all diseases, consequent upon an undue accumulation of phlegm or bile. *Glycyrhiza glabra* is a perennial plant, a native of the South of Europe and Persia, but cultivated in some parts of England. The roots are very long, about an inch thick, flexible, fibrous, of a brown colour, and when fresh, juicy; taste sweet. They are apt to spoil, and it is necessary to pack them in sand, when not required for immediate use. They are an article of the *Materia Medica*, particularly in coughs, colds, &c., and are also in demand by brewers and druggists. Liquorice root is imported into Bombay from the Persian Gulf. Dr. Mason writes of a wild liquorice as an indigenous plant in the forests of Tenasserim, the bark of whose roots have the taste of liquorice, but it does not belong to the same genus, though often supposed to be the same tree, but the leaf and fruit would indicate it to be a species of *Acacia*. Throughout British India, however, it is the roots of the *Abrus precatorius* that are sold for liquorice and they are a perfect substitute and sold in the bazaar as a medicine. If imported it is the root of *Glycyrhiza glabra*, if indigenous, it is obtained from the root of *Abrus precatorius*.—*Cut. E.c., 62; Faulkner; Mason; O'Shaughnessy.*

LIQUORICE PLANT OF INDIA, *Abrus precatorius*.

LIRIODENDRON, the tulip tree, one of the *Magnolaceæ*, is highly ornamental, growing to a large size and well adapted for a plantation or lining an avenue, the flowers are large and of a yellow and red colour which

LITCHI.

appear in the rain, it is easily raised from seed. The bark is a strong tonic and is said to be equal to the Peruvian. The wood is fine grained and smooth, used by coach-makers and carpenters.—*Riddell.*

LITCHI, CHIN.

Nephelium litchi. [*Euphorium litchi, Camb.*

A fruit commonly sold in the markets of China, but the tree is also grown in Tenasserim, Bengal and the Mauritius, and occasionally brought to England. It is the produce of the *Euphoria litchi*, a tree belonging to the natural Order *Sapindaceæ*. The eatable part is a pulpy flesh, which covers a stone enclosed in a hard, dry, tessellated, prickly, pericarp. The Rambutan, *Nephelium lappaceum*, and the Long yen or Longon, *Nephelium longona*, are yielded by species of the same genus. The Chinese cultivate many varieties of each. The litchi fruit called by the Chinese, Tanli, is imported from China into England in chests, and can be had in Liverpool, at about 6d.

LITHANG.

per dozen. The litchi looks like a strawberry in size and shape; the tough, rough, red, skin incloses a sweet watery pulp of a whitish colour surrounding a hard seed. The whampe, lichi, lungan, or, "dragon's eyes," and loquat, *Eriobritrya japonica* are four indigenous fruits at Canton. The whampe resembles a grape in size, and a gooseberry in taste. — *Hogg, Vegetable Kingdom*, p. 165; *Williams' Middle Kingdom*; *Mason, Tennesse-rim*; *Smith, Mat., Med.*, p. 155; *Voigt*, p. 198. See *Nephelium litchi*.

LITHANTHRAX, LAT. Coal.

LITHANG. From Hokow, it is four days' journey to Lithang, a Chinese and Thibetan military station, famous for its gold-roofed Lama monastery containing about 3,500 Lamas. Lithang is situated on a high grassy plateau surrounded by mountains of perpetual snow, and indeed the whole country from Ta-tsan-loo, gradually increasing in elevation, seems at this point to reach a climax. Not a sign of vegetation beyond grass is to be seen, and the town, built on the plains at the foot of the mountains, and surrounded by a wall stands out, making the nakedness of the country still more marked, reminding one of the cities seen along the shore of the Gulf of Cutch. Numbers of Lama priests are to be seen dressed in flowing garments of green cloth, each devoutly twirling his prayer-wheel, and muttering the great Thibetan prayer of 'Om Mani Padmi Om!' but not only amongst the Lamas is this solemnity of demeanour noticeable; even the rough tea-traders and towns-people, dressed in their sheepskin coats carry prayer-wheels, which they constantly twirl and join in the universal cry of "Omami peminee, omanee peminee!" which, with one exception in the case of a great Lama from Lassa, is the only way in the prayer of 'Om Mani Padmi Om!' is rendered during my travels in Eastern Thibet; and none of the people or Lamas could translate their prayer to me in any other words than "Glorification of the Deity." The great altitude and rarified air at Lithang, renders breathing an act of pain, but a recent traveller speaks of the excitement his arrival caused amongst the Lamas, who (taught by the Chinese) looked upon his coming as the fore-runner of the annexation of their country by the Palin or white conquerors of India, and met him everywhere with scowls of hatred and muttered curses. He was much struck by the physique common amongst the people of Lithang, which he did not notice in other parts of Eastern Thibet, where the people are mostly tall in stature, with a profusion of black hair hanging over their shoulders, while their complexion is a very

LITTORAL-CONCRETE.

dark brown; but many of the Lithangites are thick sturdy fellows, with short woolly hair, and lighter complexion, forming a great contrast with the general appearance of the Eastern Thibetans.

LITHODOMUS, a genus of mollusca.

LITHOSPERNUM. The roots of some species of *Lithospermum* afford a lac for dyeing and painting.

LITTORAL-CONCRETE is a variety of the rock which has nothitherto found a specific place in geological catalogues: the name has been conferred on it from its being invariably found close by the sea-shore of the Bombay coast and Western coast of the peninsula of India, and from its resemblance to the artificial stone formed by the cementation of sand, gravel, or other coarse material, by lime-water or mortar. It is composed of the material prevailing on the shores—shells, sand, gravel, and pebbles, and varies in its character, with the rocks in the neighbourhood,—being micaceous towards Cochin and Tellicherry, from the quantity of sand and other nodules from the granite and gneiss; gravely to the north of Bombay, and around it, composed almost entirely of fragments of shells. Sir Erskine Perry states that this strange variety of rock is to be found all along the Himalaya, and prevails extensively in Southern India. It is to be met with only in the regions where rains abound. Along the shores of Sind, Arabia, and the Red Sea, though the material composing it is abundant in a position similar to that in which it exists on the Malabar coast, it is nowhere cemented into stone. Even on Bombay island, indeed, the cementation is far from invariable: in one part of the esplanade there is loose sand on the surface, and concrete beneath: at another, sand or concrete as the case may be, from the surface throughout to the rock: and in a recent excavation, concrete was found for the first twenty feet, resting on a bed of fine sand, perfectly loose. It is frequently found to rest—as, for example, at Sewree and Mahim—on a bed of blue clay filled with kunkur and mangrove-roots, offering evidence of a depression from the time the mangroves grew at

LITMUS.

high-water mark, so as to permit the gravel deposit to accumulate. The whole must then have been raised by a second upheaval to its present level. The principal quarries of these are at Versova, about twenty miles to the north of Bombay, where the shore is sheltered by a vast dyke of basalt formerly submerged. In quarrying it, the sand, which seldom extends more than a few inches down, is first removed, and the rock is smooth on the surface. A space about twelve feet each way is next divided into slabs one foot square,—the grooves between them being cut with a light flat-pointed single bladed pick. These are raised successively by a tool something between an adze and a mattock, a single stroke of which is in general sufficient for the detachment of each from its bed. The blocks thus cut out and raised being thrown aside, the bed is once more smoothed, and the operation resumed till the pit reaches the depth of six or eight, when, it being no longer convenient to remove the stones by hand or basket, a new pit is cut. This variety of building material is brought in vast quantities to Bombay where a large portion of the native houses are built of it. It is not very strong, but with the admirable cement employed with such lavish hand, it makes a good and economical wall.—*Dr. Buist, L.L.D., in Bombay Times.*

LITHOGRAPHIC STONES, are obtained from Magnesian limestone; in the valley of the Tumbudra near Kurnool. They were tried in Madras and answered well. Mr. Bingham made stones for lithographic purposes from a grey lime-stone, and used them in the office of the Surveyor-General. They answered admirably for the purpose, but the stone must be freshly quarried or it chips, as after exposure to the atmosphere it grows intensely hard, and can then only be sawn into shape.—*M. E. J. R., 1850; Cal. Cat. Ex., 1862. See Limestone.*

LITHOSPERMUM OFFICINALE. Its seeds are long, very white, and like small stones or pearls, on which account they have been popularly used as a remedy for stone. They are known in India by the name of Lubisfirum. The roots of some species of Lithospermum afford a lac for dyeing and painting.—*Royle; O'Shaughnessy, p. 497.*

LITTLE BASSES, see Basses.

LITTLE BOKHARA, also known as Chinese Tartary, also as Eastern Turkistan is a great depressed valley shut in by mountains of great height on three sides, and on the east are barren sands which merge imperceptibly into the Great desert of Gobi. The Tian-Shan range separates it from Dzungaria; the Bolor range from Transoxiana, and the Kara Koram and Kuen Lun from India and Tibet on the south. The land is clayey near the base of the mountains but sandy in the central tracts. Rain is rare and the air is of exceeding dryness, but the climate is temperate and healthy. It is well watered from the mountains, the waters converging towards the Ergol or Tarym. The country has gold, copper, salt, sulphur and the jade-stone. The southern line of the caravan route passes through it from Khamil to Aksu and Kashgar. From Aksu to Kokand is 800 miles. It was subject to China from the beginning of the Christian era, to the time of Changiz Khan. After the middle of the eighteenth century, the Chinese regained possession of it. Altai-Shahr, or the six cities, forms the western district, comprising Yarkand, Kashgar, Khotan, Aksu, Yanghisar and Oosh-Turfan, with territories subordinate to each. Eastern Turkistan is eminently mahomedan. Yarkand is the entrepot of trade between China and Bokhara. Khotan, from the time of Ctesias, has been celebrated for its mineral products, its jade and emeralds, its shawl wool and flax. It was at one time

LITTLE TIBET.

the entrepot of a vast trade with Hindustan, and now imports largely furs, broad cloth, leather, and sugar.—See Bukhara, Central Asia, Eastern Turkestan, India, Kabul, Kunawar, Kaffir, Ladak.

LITTLE TIBET, the *Byltæ* of Ptolemy the modern Balti. Iskardo, is the capital city of this Bultistan, or Balti, (called by English geographers, "Little Tibet,") a country a good deal to the north-east of Kashmir, and north-west of Ladak. Gilgit is a country, conquered by Goolam Singh, to the west-north-west of Iskardo. The Chorbat district is a dependency of the government of Iskardo, which, like that of Le, is subject to Kashmir. The desert country by which Nubra and Chorbat are separated, has acted as a barrier to the further extension eastward of the mahomedan religion which is now universally that of the people of the whole of Iskardo (or Balti) district, as well as of Drns. On the Indus, and in the valley south of it, there is no uninhabited tract between the two, so that the mahomedan and buddhist population are in direct contact. The result is, that mahomedanism is in that part gradually, though very slowly, extending to the eastward. The name Iskardo is a mahomedan corruption of the Tibetan name, Skardo, or Kardo, as it is very commonly pronounced. The mountains which surround the Iskardo plain rise at once with great abruptness, and are very steep and bare. The houses of Iskardo are very much scattered over a large extent of surface, so that there is no appearance of a town. Bhot, according to Latham, is a word traceable under the appellations of Bult in Bultistan: But in Butan; Bet in Thibet, or in such words as the Bhooteya or Bhotiya, and in ethnology comprises the Little Tibetans, the natives of Ladak, the Tibetans of Tibet Proper, and the closely allied tribes of Butan. Balti or Baltiyul is called Palolo or Bolor by the Dard and Nang Kod by the Tibetans. It is preserved in Ptolemy in *Byltæ*. The Bhot country is frequently called Skardo or Iskardo from the name of its well known fort and capital. Balti proper is a small table land, and with that of Deotsu, is about 60 miles long and 36 broad,—the mean height of its villages above the sea is about 7,000 feet. The Balti, the people of Little Thibet, the *Byltæ* of Ptolemy, though Tibetan in language and appearance, are all mahomedans, and differ from the more eastern Tibetans of Le (who call themselves Bhotia or inhabitants of Bhot,) by being taller and less stoutly made. Their language differs considerably from that of Le, but only as one dialect differs from another. The Bhot of Ladak is

LITTLE TIBET.

strong, hardy, short and square with a decidedly Mongol physiognomy—by which is meant a flat face, broad cheek, depressed nose, very large ears, oblique and narrow eye curtailed at the corners, black hair and low stature, their average height being 5 feet 6.1 inches: the skulls are less Mongolian, having a capacity of 72 cubic inches, 80 cubic inches being a fair capacity for a European. The grand Lama is a Bhot. The ordinary monk or priest in Tibet is the Gylong:—above whom are the Lamas or presidents, and below whom are the Tohba and Tuppa. The Tuppa is a probationer who is admitted into the establishment to which he would attach himself at the age of 8 or 10, and receives instruction accordingly. At 15, he becomes a tohba, and at 24 a Gylong, provided his acquirements be satisfactory. There are two sects, the Gyllupka, who dress in yellow, and the Shammar in red, the Shammar Gylong being allowed to marry. The Bhot of the Tibetans have been extending westward. As a general rule, the Himalaya mountains divide Hindustan from Bhotland, but there are Bhot in several parts south of the crest of those mighty mountains in Gurbwal and Kemaon. The people of Le, the eastern Tibetans, call themselves Bhotiah, or inhabitants of Bhot. They are not so tall and are stouter made than the Tibetans of Balti or Little Tibet, who though Tibetan in language and appearance are all mahomedans. Little Tibet is occupied by the Bhot race. Tibet, in the language of Ladak is called Bod, and in Tibetan Bod-Pa, whence the word Butan of the plains applied to Tibet. Tibet is called Se-Tsang by the Chinese. Tibet is divided into Upper, Middle and Little Tibet, and extends from Lhasa to Gilgit, a distance of 1,200 English miles. Little Tibet contains about 12,000 square miles, is about 170 miles long, and lies between 74° and 76° 35' E. Little Tibet or Bultistan is called by the Kashmiri Sri Butan. Tibetan districts are Khapolor, Chorbad, and Keris, on the Shayok river; Khartakshe, Totte and Parguta on the Sing ge chu; Shigar on the Shigar river, and Balti and Rongdo on the Indus. Tibet is mentioned by Abu Zaid ul Hasan in A. D. 915, by Ibu Haukal in A. D. 950, by Abu Rihan in 1030, and by Edrisi in A. D. 1154. Some suppose that Marco Polo entered Thibet, but the wonderful stories which he tells of its people indicate that he wrote from hearsay. He, however, sojourned in the hills of Badakshan for the sake of his health, and he describes the countries of Wakhan, Pamer, Bolor and Kashmir. And, notwithstanding the wide-spread fame of Prester John, the first Europeans seem to have visited this

L'LAMA.

country in the middle of the seventeenth century. Yul-Sung or L'hassa, the residence of the grand Lama, is the capital of Butan or Northern or Upper Tibet. Leh or Ladak is the chief town of that part of Butan called Middle Tibet; and Iskardo is the principal place in Little Tibet. The Bulti or natives of Little Tibet say that Ladak, Iskardo, Khopalu, Purik, Nagyr, Gilghit and Astor, are distinct Tibets. The people of Ladak are buddhists; those of Little Tibet are shiah mahomedans. In their marriages the bride comes to the house of the groom. Cultivation in Little Tibet is carried on entirely by irrigation. The language of Tibet has thirty simple letters, out of which fifteen different sets are formed, which may be used with a prefix of some other letter. Thumi Sambhuta was the first who taught the Tibetans the use of the Kaslmirian characters, which remain unchanged to this day. More rain falls in Tibet than in Ladak, approaching even to a rainy season. Slavery is a Tibetan institution. Polyandry is common. The gravel of its steppes yields gold, but the value of the crude borax of its lakes is far greater than its precious metal. The tea trade of Tibet is carried on in the form of blocks, weighing about 8 lbs. and which sell at from 12 to 48 shillings each. Little Thibet, has several times tendered its allegiance to British India.—*Dr. Thompson's Travels in Western Himalaya and Tibet*, pp. 204, 219, 247; *Mrs. Hervey's Adventures of a Lady in Tartary*, Vol. i, pp. 213-14; *Cunningham's Ladak*; *Latham's Ethnology*; *Mason*; *Campbell*, p. 48; *Timkowski's Journey to Peking*, Vol. ii, p. 312. See Balti, Byltar, Dard, Gangi Range, India, Kabul, Kafer, Kailas, Kara-korum, Ladak, Sikh, Skardo, Tibet.

LIVISTONIA ROTUNDIFOLIA is supposed, by Mr. Wallace, to be the fan-palm, of the leaf of which the people of Celebes make water buckets and baskets.

L'LAMA, also written Lama, the spiritual ruler of Tibet. In Tibet, the sovereign Lamas are deposited entire in shrines prepared for their remains which are ever afterwards regarded as sacred, and visited with religious awe. The bodies of the inferior Lamas are usually burnt, and their ashes preserved in little metallic idols, to which places are assigned in their sacred cabinets. Ordinary persons are treated with less ceremony—some are carried to lofty eminences where they are left to be devoured by ravens, kites, and other carnivorous animals. But they also have places surrounded by walls where the dead are placed. The Mongols sometimes bury their dead; often they leave them exposed in their coffins, or cover them with stones, paying regard to

LOASA.

the sign under which the deceased was born, his age, the day and hour of his death, which determine the mode in which he is to be interred. For this purpose they consult some books, which are exclaimed to them by the Lamas. Sometimes they burn the corpse, or leave it exposed to the birds and wild beasts. Children who die suddenly are left by their parents on the road. In Spiti, in the N. W. Himalaya, when a person dies, the body is sometimes buried, or burnt, or thrown into the river, or cut into small pieces and burnt, admonitions are made over the body to the departed spirit, such as do not trouble yourself, you cannot enter it (meaning the dead body) in summer, it quickly becomes corrupt. In Tibet, civil and military appointments are made by the Dalai L'lama and the resident Chinese minister of Anterior Tibet. Their grades are five, the highest being equivalent to the Chinese third, but the button which declares a rank in China is worn only by the Tangut, who appear to succeed only to hereditary offices; the L'lama wear no button by reason of the peculiarity of their head-dress. In Anterior Tibet, are 10 ying, cantonments, or encampments, classed as great; 43 as middle-sized, 25 as small, and 14 as frontier posts. In Ulterior Tibet are 14 middle class and 15 small ying. The tsantsan are supported by a contingent of 646 luh-ying from Sz'chnen under a yukih, a tunsze, three captains, and six subalterns, who are distributed through both provinces; the native soldiery are but 3,000, 1,000 in Anterior, 1,000 in Ulterior Tibet, 500 at Ping-jih and 500 at Dziang. They are divided into small sections of 25 under a ting-fung; five of these make 3 tsifung's command; two of these, a yin-fung's; two of these a tai-fung's: there are six of the last in Tibet.—*Wade's Chinese Army*, pp. 71, 72.

Magnetic iron ore, a peroxide of iron, is found in considerable quantities in most countries. Ayaskanta nani Salakeva, "Like a rod of the ironstone gem," is a phrase used in the Sanscrit poem *Malate and Mad'hava*, and makes it seem possible that artificial magnets, as well as the properties of the loadstone, were known to the ancient hindoos. The loadstone as sung by Orpheus was supposed to detect adultery.—*McCulloch*; *Malate and Mad'hava in Hindu Theatre*, Vol. ii, p. 22.

LOASA, an interesting genus of plants,

some species of which possess the properties of nettles, the flowers are red, white and yellow, they are grown from seed, and any common soil suits them.—*Riddell*.

LOBAGARH, in lat. 29° 58', long. 79 18', a town in Kamaon, on an affluent of the Ram-ganga. Its fort is 6,430 feet, or 6,461 feet above the sea according to Webb, in J.A.S., 66.

LOBAN, *Boswellia serrata*, also *Styrax benzoin*, yielding Gum Benjamin, used as a stimulant, and eaten in pawn leaves; the "attar" of India, sublime the benzoin acid very purely, and administer it as an aphrodisiac: one seer costs from two rupees to two and a half. The gum resin of the *Boswellia thurifera* is also considered as "luban" by the community.—*Genl. Med. Top.*, p. 144.

LOBE KE BHAJI, DUK. *Dolichos catianu*, *Dolichos traquebaricus*.

LOBELIA, is an interesting genus of plants, easily cultivated in Southern Asia by seed, the blossoms are extremely beautiful from their variety of colours, they require a light rich soil, with a moderate quantity of water. Dr. Wight, in *Icones* gives *Lobelia aromatica*, *excelsa*, *nicotianæfolia*, *trichandra*, *trigona*. *L. cardinalis*, is an annual creeping glabrous plant, a native of China. Flowers of a pink colour. In gardens it spreads over the soil, rooting at every branch, and is well-adapted for borders to parterres. *L. erinus*, and varieties are pretty little procumbent plants, generally having blue flowers, succeed well in the flower beds, raised from seeds; will not live through the hot weather. *L. nicotianæfolia*, erect, leaves subsessile, lanceolar, acute, entire, raceme terminal. A stout tall species, occurring in the vicinity of Bangalore. *L. radicans*, accidentally introduced from China into the Calcutta garden, where it flowers during the rains; small, much branched, spreading over the ground, and sending forth roots from each branchlet. Dr. O'Shaughnessy instituted numerous experiments with this species, but found it to be altogether inert.—*Jaffrey*; *Riddell*; *Wight's Icones Plantarum*; *O'Shaughnessy*, pp. 424-5.

LOBELIA INFLATA, Indian tobacco. A native of the United States; an acrid narcotic and violent emetic; in small doses diaphoretic and expectorant. A popular remedy in the United States, where from incautious use it has often proved fatal. Its chief employment is in asthma, and in the form of enema in strangulated hernia.—*O'Shaughnessy*, p. 423.

LOBELIA SUCCULENTA, *Blume*, Neilgherry grass. A small procumbent plant, well-adapted for hiding the earth in flower-pots, as is also *L. erinus*.

LOBELIA TRIGONA, a small annual ramous plant which delights in wet pasture ground, and appears during the wet and cold seasons.—*O'Shaughnessy*, p. 426.

LOBELIACEÆ, *Juss.*, comprises 2 Gen., 15 sp., viz., 1 *Piddingtonia*, 14 *Lobelia*.

LOBIA, HIND. *Dolichos sinensis*, also *D. catianu*. Kala lobia, is *Dolichos lablab*. Large red and white beans, haricot bean, *Phaseolus vulgaris* or *P. lunatus*. Lobian, a white bean with a black eye, *Dolichos sinensis*.

LOBIPESHYPERBOREUS, *Phalaropus hyperboreus*; the Red-necked Phalarope, has the circuit of northern regions: one specimen obtained in Nicaragua, and a pair in the Bermudas. It is a little arctic bird, of rare occurrence even in the north of Scotland, Orkney and Shetland: but a specimen was about A. D. 1845, procured near Madras, which is now in the Calcutta museum.

LOBI-VANELLUS LEUCURUS. This is found in India, the only Indian specimen previously recorded was obtained in Calcutta.

LOBOTES ERATE, *Cuv. and Val.*

L. Farkarii, *Cuv. and Val.*

Ikan batu, or Ikan Pichat priek, MALAY.

This fish has a total length of 2 feet 5 inches; it inhabits the sea of Penang, Malayan Peninsula, Singapore, Java, Madura, Malabar, Ceylon, Bay of Bengal, and estuaries of the Ganges. The air-vessel is very large, about $\frac{1}{3}$ of the total length, silvery white and of a lanceolate shape. It is excessively thin and so firmly adhering to the back, that but a small part can be removed. The isinglass is by the Chinese-dealers considered to be of good quality, but the small quantity procurable renders the fish less valuable in this respect.—*Cantor*.

LOBSTER, *Ecrevisse*, FR.; Cancer, LAT. One of the Crustacea.

LO CHOU, a high island, flattened at top, at the mouth of the Canton river, lying northward of Pootoy.

An implement applied to doors, boxes, &c., for securely fastening them.—*McCulloch's Commercial Dictionary*.

LOCRIAN, an ancient race who followed the system of maternal descent. The Aka-Podwal, are a caste in Malabar and Canara who follow the rule of Marumakatayam, or descent from mothers, the descensus ab utero of the Locrians, who drove the Sicilians out of a part of Italy. See Polyandry.

LOCUM, LAT., SANS. A place, a locality, a world. See Hindu, Loka.

LOCUSTELLA RAYI, the *Salicaria locustella* or British Grasshopper Warbler of Europe, Asia, and North Africa, is migratory. Has once been obtained in Central India, and once in Lower Bengal where an affined species, *L. rubescens*, is not uncommon. Both specimens are in the Calcutta museum. It would appear to be not uncommon at Mhow. A specimen has also been seen from the north-west Himalaya.

One of the principal genera contained in the family Locustidæ, is the *Locusta* of *Leach*, in which the hinder legs are about equal to the whole body in length, and the antennæ filiform or terminated in a club. Upwards of twenty species of this genus are known, and it is to this group to which the *Gryllus migratorius* of Linnaeus belongs, a large species which has occasionally been found in Britain, and which in some parts of Europe sometimes multiplies to such a degree as to devastate large districts. Africa at all times appears to have been peculiarly subject to the ravages of locusts. Mr. Barrow states, that, on one occasion, in the southern parts of Africa, an area of nearly two thousand square miles might be said literally to be covered with them. When driven into the sea by a north-west wind they formed upon the shore, for fifty miles, a bank three or four feet high, and when the wind was south-east the stretch was so powerful as to be smelt at the distance of 150 miles. The locust migrates in masses. They often cross from Africa to Madagascar, from Africa to Syria and sometimes to Italy. Their ravages in the North-West Provinces, in 1832, as described by Dr. McGregor in *Jl. of Med. Soc., N. W. P., 1842*, Vol. i, mentions that a cloud of locusts appeared in the neighbourhood of Jubbulpore about 6 P. M. The compact black mass afforded a curious spectacle as it came wafting on the wind from the north-east, speeding westwards, and apparently making for Mundla. When we take into account the myriads of units that often go to compose one of these living clouds, we cease to wonder at the ravaged aspect almost instantaneously exhibited by the fields, the locust columns have marched over. A host of red locusts, once spread 500 miles over the Mahratta country all around Poonah and devastated it. The *Acrydium* (*Gryllus*) *migratorius* which, at intervals, devastates some countries, is that of Africa and the South of Asia, and *G. gregarius* that of

Sinai. The migratory locust, *Acrydium* (or *Edipodium*) *migratorius*, which occurs in Africa and the South of Asia, is greenish, with transparent elytra, of a dirty grey, whitish wings and pink legs. They have the power of inflating themselves with air and of travelling about 18 miles a day. They are bred in the deserts of Arabia and Tartary. Pottinger states that it is a strange though unquestionable fact, that these destructive insects never penetrate to the districts of Saharawan unless in years of drought and famine; they then come as though it were to complete the devastation, and what is still more astonishing, they invariably appear from one quarter (the south-east) and return to the same. Locusts visit the Punjab and North-West Provinces and do much mischief while pursuing their devastating course.

On one 14th September flights of locusts made their appearance in the Jubbulpore, Chinwarrah, and Hoshungabad districts of the Central Provinces, taking a south-westerly direction. A report dated 7th Sep. from Hoshungabad, stated that locusts made their appearance in great numbers in this district. They came from the Bhopal territory, and appeared to be making their way to the westward in the direction of Ellichpore; they kept close to the foot of the Satpoora range of hills. The country between Etarsee and Rampoor was covered with them; when in the air, they appeared like clouds, and when passing through them they lay as thick as snow on the ground devastating the whole of the country. The genus *Acrydium* of Latreille may be distinguished from *Edipoda* by the presence of a large and prominent tubercle on the præsternum, or between the two forelegs, by the one central ocellus instead of three disposed triangularly, and by the deep transverse striæ of the prothorax. The species *A. peregrinum* of Olivier has been described by that author in his "Voyage dans l'empire Othoman," and by M. Audinet Serveille, in his treatise on the Orthoptera forming part of the *Nonvelles Suites a Buffon*, p. 666, from which I extract the following: "Length about 2½ inches. Body smooth, generally of a lively yellow, occasionally of a pale and clear red (rougeatre.) Head of the same colour, smooth, with its hinder part marked by two oblique ferruginous lines, often indistinct, Prothorax marked with small points especially behind; dorsal elevation slight; transverse lines distinct. Elytra (wing-covers) longer than the abdomen, narrow, rounded at tip, of an opaque yellow at the base, and along the anterior border; the rest transparent and colourless, charged throughout with square dusky patches of which those near the

base are opaque, the others open (fenestrees) and formed by a union of dark nerves, detached upon a colourless ground; these patches form towards the extremity of the elytra irregular transverse bands. Wings ample, as long as the elytra, transparent, colourless, lustrous; nerves yellow; base and anterior border tinged with yellow. The abdomen, and under the surface of the body are brown and shining; the terminal pieces short. Legs of a bright yellow, spines of the posterior tibiae with black tips. Antennae yellow at base, then darkish. The yellow parts replaced in some individuals by red. This author described his yellow variety from specimens taken in Senegal, the red one from Mount Sinai,—a wide distribution. Both varieties occur in India, those from Rancegunj show no trace of red, while in those ordinarily described, red is the predominant colour. Serville has figured the red variety in his 12th plate, fig. 3. He quotes from the work of Olivier, previously named, a description of the habits of this species sufficiently resembling what we have lately observed. Accompanying the burning south winds in Syria, he says, clouds of locusts (*A. peregrinum*) arrive from the interior of Arabia and the south of Persia causing a devastation as complete and almost as rapid as that produced on Europe by the most violent hailstorms. It is difficult to express the effect of the sight of the whole atmosphere filled on every side, and to an immense height, with an innumerable quantity of these insects, moving in slow and uniform flight with a noise like that of rain, the sky darkened, and the light of the sun diminished. In one instant the flat roofs of the houses, the streets and the fields were covered with locusts, and in two days they had destroyed nearly all the foliage, but fortunately their life was but short, and they seemed to have emigrated only to reproduce themselves and die. For some days after the fields were covered with their bodies. The *Acrydium lineole*, sold for food in the markets of Bagdad, and the *Edipoda migratoria*, extending its ravages from Tartary to Central Africa and from Paris to Ispahan, are the only other well-known migratory and, so to speak, epidemic species, but sporadic species sometimes multiply to such an extent as to cause infinite local damage. In 1861, in rent-free lands in Khoorda belonging to the temple of Jugganath, the rice-crop was nearly destroyed by a small green *Acrydium* about an inch in length, called Jhintiki by the Ooriya.

These insects have received characteristic names in many languages, for without laying stress on the old derivation of locust, "a locis

ustis," the Hebrew name (*arbeh*) from the root "to multiply," the Sanscrit from the root "to leap," the Arabic from one signifying devastation, give, when taken together, a tolerably full description of the insects' habits.

Aristotle's description of its metamorphoses (*De Animalibus*, v. 28), is accurate enough, but appears to be drawn from those species which form the family *Gryllidae* of modern entomologists. The females, he says, are furnished with an ovipositor (*Kaulos*) by means of which they lay their eggs in the ground, choosing especially such localities as the cracks in a soil broken by the plough. The ova remain beneath the surface during winter, enveloped in a sort of pouch, or thin earthy film; in spring they produce a small black locust, which grows larger, shedding its skin from time to time. The locusts die after breeding, being killed by a scolex or worm produced in the throat. This last observation is evidently derived from the proceedings of some sort of ichneumon larva observed by Aristotle himself whose research and correctness make him as much to be relied upon as any modern observer.

Pliny, as usual, repeats Aristotle, adding traveller's tales more or less improbable. As an instance of his want of personal observation, take his statement that the newly hatched locust is without legs, whereas like all of the Orthoptera it is similar except in size and the absence of wings to the perfect state of the insect. "The locust seizes a serpent by the throat and kills it." They are three feet long in India, and their dried legs and thighs are used as saws—(*cruribus et feminibus serrarum usum prebere*—"by the women," oddly add Kirby and Spence, evidently confounding *feminibus* with *feminis*.) "Flights of them fall suddenly and fortuitously into seas and pools and so die. Some say that they cannot fly by night, in this forgetting that they frequently cross long tracts of ocean, impelled by hunger. Their visits are looked upon as signs of God's wrath. They obscure the sun, and the whirling of their wings is that of a flight of large birds. As though it were nothing to have crossed the ocean they soon spread over immense tracts of land, devouring all they can to the very doors of houses, and blighting with their touch what they do not eat. They visit Italy from Africa, and drive the population to consult the Sibylline books. In Cyrene public war is by law declared upon them, three times in the year, viz., upon their ova, upon the larvae and upon the adult insect; whoever will not help is prosecuted as a deserter. In Lemnos every man is obliged to produce a certain number of dead locusts. They also encourage choughs (*Grac-*

cula) which destroy many. The Parthians feed on locusts."

History is full of accounts of the destruction caused by this plague; and one feature appears in nearly all the descriptions—the simultaneous death of whole flights, and pestilence ensuing on the putrefaction of their bodies. So Joel: "but I will remove far off from you the northern army—and his stink shall come up, and his ill-savour shall come up because he hath done great things." (Joel, ii, 20.) It is not known whether this cause of annoyance has yet been experienced in India; if not it is probably owing to the flights being comparatively small and divided. Kirby and Spence, i, 218, relate on the authority of Major Moor, author of the *Pantheon*, that a flight of red locusts (evidently identical with Indian species) forming a column 500 miles long ravaged the Mahratta country. Serrville, has drawn some observations from M. Solier (*Annales de la Societe Entomologique de France*, ii, 486) on the measures adopted in the South of France to reduce the numbers of these insect pests. The communes have for centuries back spent large amounts on this object. In 1813 Marseilles expended 20,000, and Arles 25,000 francs; and money is still allowed for the same purpose, 25 centimes are paid for two pounds weight of insects, and 50 centimes for the same weight of eggs. The hunt commences in May, and almost the whole population of certain villages is employed in it. A cloth of coarse web is carried by four men, one holding each corner. The two who walk first make the foremost edge of the cloth sweep the ground, and the insects leap into the cloth where they are caught as in a bag. A small bag at the end of a stick, like an entomologist's bag net, is also used. The females lay from August to October; the eggs being placed in holes in the earth in a cylindrical tube of glutinous matter covered with a thin envelope of earth (exactly as quoted above from Aristotle.) The tube is about an inch and a half long by 3 or 4 lines wide, and placed horizontally. Each tube contains from 50 to 60 eggs, and a child trained to the work can collect 10 to 14 pounds per diem, each pound containing about 800 eggs. In other places carts are driven up and down over the breeding grounds with the object of destroying the egg-pouches by crushing them into the earth. Trumpets and even cannon have also been used to turn the course of the flight, but probably without success, as the auditory organs of insects are not greatly developed, though in the case of bees similar methods have long been successfully employed. In some parts of Africa they

are cooked and eaten by the natives. The natives of Senegal are said to dry them, and having reduced them to powder, use them as flour. Captain Yule (page 114) in his account of an interview with the king of Burmah, and the repast which followed, mentions that the most notable viand produced consisted of fried locusts. These were brought in hot and hot, in successive saucers. They were very much like what one would suppose fried shrimps would taste. The inside, he believed, was removed and the cavity stuffed with a little spiced meat. Locust curries have generally been pronounced insipid, and the ordinary method of eating them is fried in butter, but has not been tried in this country. They are also recommended to be boiled with melted butter, or roasted, with a little salt: the G. migratoria is more substantial than the Indian locust. The Acridophagi of Ethiopia who subsisted entirely on this aliment are, however, said to have been thin and weak, and to have suffered a precocious and agonizing death. These people lighted large fires of dry leaves under the flight and so brought the insect down in considerable numbers. A character in Aristophanes (*Acharn.* 1116) raises the question whether locusts or fieldfares are the daintiest eating, and answers in favour of the locust, from which one might infer that it was a recognized, though not a frequent, article of food among the Greeks. The Hottentots, unlike the Acridophagi above-mentioned, are said to grow fat upon this diet. Burton says of the Arabs that where they have no crops to lose, the people are thankful for a fall of locusts. In El Hejaz the flights are uncertain; during the last five years preceding Captain Burton's visit, El Medinah had seen but few. They are prepared for eating, by boiling in salt water and drying four or five days in the sun: a "wet" locust to an Arab is as a snail to a Briton. The head is plucked off, the stomach drawn, the wings and the prickly part of the legs are plucked, and the insect is ready for the table. Locusts are never eaten with sweet things, which would be nauseous: the dish is always "hot" with salt and pepper, or onions fried in clarified butter, when it tastes nearly as well as a plate of stale shrimps. At Bushahr, these insects are generally called Maig, and sometimes Malakh, one kind is distinguished by the epithet halal, the eating of it being "lawful;" the other is haram or "forbidden;" this is smaller and more destructive than the Malakh halal, from which it differs also in colour. The Arabs prepare a dish of locusts by boiling them with salt, and mixing a little oil, butter or fat; they sometimes toast them before a fire.

or soak them in warm water, and without any further culinary process, devour almost every part except the wings. Ouseley eat several locusts variously cooked, and thought them by no means unpalatable; in flavour they seemed like a lobster or rather a shrimp; one neither offensively stale, nor absolutely fresh. In many countries of Asia, in Africa, and even in some parts of Europe, they have often carried with them not only famine but pestilence; destroying leaves and fruits; corn, herbage and everything that wore a vegetable appearance; while they caused infectious diseases by the putrefaction of their bodies. Maig and Malakh, are Persian names for a locust, which the Arabs most commonly call Jarad. The kind, blown over, from the opposite coast of Arabia to Bushuhr, the Persians styled malakh daryai or the "sea locust," and the Arabs, Jarad al bahr, in the same sense. Bochart has enumerated various Hebrew and Arabic names for the locust in his elaborate "Heirozoleicon" (Lib. vi, Cap. i; et seq.); but does not mention the above Persian names, neither does he remark that in the dialect of Mi-r or Egypt, those jarad al bahr or "sea locusts," above noticed, are called Faridi, according to the MS. Burhan-i-Katiah. Zakaria Cazvini divides the locusts into two classes like horsemen and footmen, "mounted and pedestrian," which will call to the recollection of the Biblical reader some passages from Joel and the Apocalypse.

Mr. Forskal calls the locust which infests Arabia *Gryllus gregorius*, and thinks it to be different from that which is called by Linnaeus, *migratorius*. Locusts are sold in the markets of Yembo, and also at Jiddah. The Mukin or red species, being the fattest, is preserved, and, when fried and sprinkled with salt, they are considered wholesome and nutritious food. In 1831, this part of the sea-coast of Arabia was visited by an incredible number of these insects, which did much damage to the date palms. Swarms were drowned in their passage from the Egyptian coast, and the beach was strewn with their carcasses for a depth of several feet. How insects apparently so ill qualified for flight are enabled thus to cross the sea, affords matter for curious inquiry; but Wellsted occasionally saw passing swarms in its centre. Locusts of inner Arabia, the jarad or jerad, a reddish brown insect, and about the size of the little finger are used as food. The hind legs are called keraa. They are boiled and fried. The locust of northern Arabia, a small green grasshopper, is not used as food.—*Winslow*; *Dr. Buist*; *Central India Times*, June 2; *Kirby and Spence Introduction to Entomology*; *Dr. McGregor in Jl. of Med. Soc., N. W. F.*

LODIIA, an agricultural race in Central India and the N. W. Provinces, supposed by Mr. Campbell to be cognate to the Kurmi and to have at one time occupied a very considerable position in the Jubbulpur and Saugor districts of the Central Provinces. The Lodhi came from Bundelkhand about the 16th century. The Kurmi from the Doab about A. D. 1620. The Lodhi are scarcely inferior to the Kurmi as agriculturists, but are the opposite of the Kurmi in natural temperament, being turbulent, revengeful, and ever ready to join in any disturbance. They make good soldiers, and are generally excellent sportsmen. Both among Kurmi and Lodhi, there is no distinction between a mistress and wife, provided always that the former is of the same caste as the husband, or better still the widow of an elder brother or cousin, however far removed. The children born from such connexions are on an equal footing as regards inheritance of property, whether personal, real, or ancestral, with those born from regularly married wives. The Lodhi agriculturists of Upper India, have attained some distinction as swash-bucklers and marauders in the Nerbudda country, and some of their chiefs still retain all the popular respect due to families which have forgotten to live on their own industry.—*Mr. Campbell*, p. 193; *Central Province Gazetteer*.

Sea cocoanut,	ENG.	Kaddel taynga,	Tam.
Double cocoanut,	"	Samudra-pu-tenkaia,	Tel.
Common Seychelles lodoicea.			

The double cocoanut tree of the Seychelles or Mahe islands, is a palm, which attains a height of eighty or ninety feet. When preserved whole, and perforated in one or two places, the nut serves to carry water, and some of them hold six or eight pints; and by slicing them in different directions, they are formed into plates, dishes, drinking cups, &c., known in the islands as Vaisselle de l'isle Prsten. The mahomedan fakeers use it as a scallop. The crown of the trunk is eaten like the American cabbage palm. The down attached to the young leaves serves for filling mattresses and pillows; the ribs of the canes and fibres of the petiole are fabricated into baskets and brooms, and the young canes are plaited to form hats. The Lodoicea might be introduced into India with advantage. Germinating nuts were sold in London in 1854 for £10 a piece.—*Seaman*.

LODORVA and Arore, cities for ages in ruins, are names known only to a few who frequent the desert; and Choton and Kheraloo, but for traditional stanzas which remind us of their former condition, might never have appeared on the map.

LENDIA, MAHR. ? A Nagpore wood, very closely resembles "Thieus," another Nagpore wood and said to be equally good.—*Captain Sankey*.

LOEPA KATINKA, *Westwood*. Syn. *Saturnia antheræ*; a native of Assam, Sylhet, Tibet and Java.

LOESS.

Hwang-t'u, CHIN.

A kind of loam, covering the greater part of the central plain of China.—*Smith*.

LOGAN, a legal practitioner in the island of Penang, who started and long conducted the *Journal of the Indian Archipelago* and contributed to it a great number of editorial articles, principally relating to the Ethnology of Eastern and Southern Asia. Mr. Logan who had great opportunities of contrasting and comparing the Dravidians from various parts of India inclines to call them South Indian. He remarks that physically the population of Southern India is one of the most variable and mixed which any ethnic province displays. A glance at a considerable assemblage of Kling (Telugu) and Tamular of different castes and occupations, shows that the varieties, when compared with those of similar assemblages of men of other races, such as Europeans, Ultra-Indians or

Indonesians (including Negri two cases), are too great to allow of their being referred to a single race of pure blood. Some are exceedingly Iranian, some are Semitic, others Australian, some remind us of Egyptians, while others again have Malaya-Polynesian and even Simang and Papuan features. Yet when the eye takes in the whole group at once, they are seen to have all something in common. They are not Iranians, Polynesians, Papuans, &c., but South Indians. The Dravidian language, however, or one of its principal elements was probably an extension of a Mid or W. Asiatic formation, and it may be inferred that the common element of the Dravidian, the Fin and Japanese languages, must be much more ancient than the occupation of Japan by the Japanese, India by the Dravidians, and Finland by the Fins. The peculiarities in the Dravidian physical type, when compared with the Scythic, are African and Africo-Semitic. The main affinities of the Dravidian formation, thus point two ways,—the linguistic chiefly to a Scythic, and the physical chiefly to an African origin or fraternity. The geographical position of the Brahmi would lead us to explain the double alliance by placing the native land of the Dravidian stock in Beluchistan and including it with Arabia, or the southern portion of the latter,—in the archaic African or Africo-Semitic era. That the African physical element prevailed over the Scythic, while a Scythic language has entirely superseded one of an African character, finds explanation in the fact that the Scythic races and languages, have in themselves an intimate archaic connection with the African, and the Dravidian language, although Scythic more than African, has special Africo-Semitic affinities. He was of opinion that races may blend without the different types being effaced and that, while certain exclusive or excluded castes, or sequestered geographical sections of the population, may preserve one type better than another, all may continue for some thousands of years, to be reproduced in softened and modified forms even in the least secluded portions, and to this he refers his explanation of the variety of physical types visible in south peninsular India. That the Dravidian race did not bring with it into India, the civilization which the present great southern nations possess, as the Arian did theirs, appears, he thinks, to be little questionable when we consider the antique character and affinities of the dialects of the Male, Orond, Khond and Toda, the very archaic and barbarous character of many of the customs of the widely separated tribes

which speak them a prior race, and above all, the nature of the relationship of the dialects to those of the civilized nations. The known ethnic facts lead directly to the conclusion that the uncivilized Dravidian speaking tribes are genuine Dravidians who have in a great measure escaped the culture which the more exposed tribes have received and thus preserve a condition of the race, certainly not more barbarous than that which characterised it when it first entered. The Dravidian race everywhere in India, has been long in contact with other races and, he considers, shows the influence which the mixture has produced. If the formation of their language be taken as a test, it leaves no doubt that one tribe carried a large batch of its native glossary over all India from the Himalaya to Ceylon. In the Himalaya and Northern India, the old race has long been in contact with Ultra-Indians, Tibetans and Arians. But even in the extreme South the diversity which prevails shows that there has been great intermixture, but there are nevertheless widely prevalent characters, most of which are not Arian nor Tibetan and are even distinct from Ultra-Indian. The more important of these characters are a pointed, and frequently hooked, pyramidal nose, with conspicuous nares, more long and round; a marked sinking in of the orbital line, producing a strongly defined orbital ridge: eyes brilliant and varying from small to middle-sized; mouth large, lips thick and frequently turgid; lower jaw not heavy, its lateral expansion greater than in the Arian and less than in the Turanian type; cheek bone-broad and large rather than projecting, as in the Turanian type, giving to the middle part of the face a marked development and breadth, and to the general contour an obtuse oval shape, something bulging at the sides; forehead well-formed but receding, inclining to flattish and seldom high; occiput somewhat projecting; hair fine, beard considerable and often strong, colour of skin very dark, frequently approaching to black. We may, he adds, conclude from the ethnic character and position of the ancient Indian population, that it belonged to the small Turano-African type. But successive modifications of race, seem to have been going on in India from times long anterior to the Arian or even Tartar eras and imply linguistic changes also. The above is the higher and much improved type. But, as in Africa, Ultra-India and Asionesia, a smaller, more Turanian, and less Semiticised type is still preserved although variously crossed. The successive Turanian predominant races and formations and the Irano-Semitic have in turn influenced

all the great outlying southern provinces, Africa, India, Ultra-India and America, the last in general indirectly, through Ultra-India, India and Africa. From the formation of the language, there was, seemingly, a still older intrusive people, the Scythico-Semitic and pastoral who found India less Scythic and more African than it became under their influence, but the same evidence shows that the Dravidian race and linguistic formation preceded the Ultra-Indian, Tibetan and Arian in India, and prevailed everywhere to the southward of the Himalaya. Their route seems to have been from the north-west, where, from time immemorial, the region between the Indus and Euphrates has been occupied by the Turanian, Iranian and Semitic races. Physically the Dravidians are somewhat Turanian, and the linguistic formation of their language has a strong and unequivocal affinity to the great Asiatic-Turanian, or Ugro-Japanese alliance. The Turanian formation, physical and linguistic, evidently long preceded the Iranian and Semitic, as an expansive and dominant one, and it is certain that the Turanian was migratory and diffusive on a great scale, long before the Semitic and Iranian, which must have remained sequestered in some portions of the mountain band of Asia minor, Armenia, and Irania and the adjacent south-west region which includes the basin of the Euphrates, during the great era that must have been occupied while the Turanian linguistic formation spread to Lapland and Japan, to North Cape and Ceylon. The peculiarities in the variably physical character of the Dravidian physical types, when compared with the Scythic, are African and Africo-Semitic. The very exaggerated occipital and maxillary protuberances are not characteristic of the typical African head, but of a debasement of it confined to certain localities. Several east and mid-African nations have the so called African traits much softened, and differ little from the Dravidian. Even woolly or spiral hair is not a universal feature in Africa, some tribes having fine silky hair. The Dravidian pyramidal nose, the sharp depression at its root, the slight maxillary and occipital projection, the turgid lips, the oval contour and the broad nose, are all African. He thinks there is reason to believe that the strong Africanism of some of the lower South Indian castes is really the remnant of an archaic formation of a more decided African character. The position of India between two great negro provinces, that on the west being still mainly negro, even in most of its improved races, and that on the east preserving the ancient negro basis

LOGAN.

in points so near India as the Andamans and Kidah. It is therefore highly probable that the African element in the population of the peninsula of India, has been transmitted from an archaic period before the Semitic, Turanian and Iranian races entered India, and when the Indian ocean had negro tribes along its northern as well as its eastern and western shores.

He was of opinion that the various races in South Eastern Asia, reached their present positions along the great rivers and by traversing the seas, and he styles the original seats as sea basins and districts, defining the former term as the seas with the marginal basins of their affluent rivers. His Tibetan district is the great plateau of mid Asia and is central ethnically as well as geographically to all S. E. Asia and to Asiaenesia, abuts on the west on the eastern extremity of the primitive Iranian region, and is connected with China and all the sea basins on the east of Asia by means of the Yang-tse-Kiang and Hoang-ho, and his Indian Oceanic basin consists of the whole of India and of the Bay of Bengal, the bay affording means of communication between the western margin of the China-Malayan basin and the eastern sea-board of India.

Mr. Logan was of opinion that the post-fix nesia should be confined to the great divisions of the Indo-Pacific insular region,—Indonesia; Melanesia (New Guinea, Australia, and all the eastern Papua islands); Micronesia (all the islands between Melanesia and the Luchu and Japanese chain); and Polynesia, all the islands of the Pacific to the east of Micronesia and Melanesia as far as Easter island. Papuanesia might be occasionally used to distinguish the northern Melanesian islands, inhabited chiefly by spiral-haired tribes, from Australia.

Mr. Logan remarked that perpetual aggressions and frequent conquests, extirpations of villages and migrations, mark the modern history of nearly all the Tibeto-Burman tribes and of the different clans of the same tribe. In recent ages, the Lau have settled in the lands of the Singpho, the Bodo, the Burmans, the Peguans, the Kambojans and the Malays, and originated communities having no connection with each other. The Singpho at a late period forced their way from Burmah into Asam. The Bodo have occupied the country of the Mikir, and the Arung Angami and Kuki have intruded on both. The same tribes also, separated into clans and villages, are permanently at war with each other, Kuki flees from Kuki, Singpho from Singpho, Abor from Abor.

Amongst the people speaking the Yuma

LOGWOOD.

dialects, according to Mr. Logan, are the Khy-oung-tha, of Arakan, a rude tribe, speaking the Rakhoing dialect of Burman.—*Journal of the Indian Archipelago*.

LOGANIACEÆ, *Lindl.*, an order of plants comprising, 3 gen., 20 sp., viz., 1 Geniostoma; 4 Gardnera; 15 Fagraea.

LOGARH RIVER. The Wardak valley, which receives its name from the Wardak tribe of Affghans, lies on the upper course of the Logarh river, at some distance to the south of Kabul, and only 40 miles to the north of Ghazni, while Hussian or Ossian lies 27 miles to the north of Kabul, or more than 70 miles distant from Wardak. The Wardak tribe occupy the greater part of the Logarh valley. The Buruki race who claim to be of Arab origin, occupy Logarh and Butkak, and are said to have been settled there, south of the Kabul river, since the 11th century, by the sultan Mahmud. Their number is about 8,000 families, but they arrange themselves into tribes, with chiefs. They are good soldiers. The Buruki tribes of Logharh and Butkak, reside in the Ghilzi portion of the Affghian country.—*Cunningham's Ancient Geography of India*, pp. 33, 38; *Latham*; *Elphinstone's Cabool*.

LOGOS, see Adam.

LOGWOOD.

Ch'ik-su-muh,	CHIN.	Campeggio.	It.
Bois de Campeche,	FR.	Palo de Campeche.	Sr.
Blauholz,	GER.		

A dyewood, hard, heavy, of a deep orange colour, a sweetish astrigent taste, and peculiar odour. It is extensively employed for compound colours, but its chief use is for blacks, and certain shades of gray; an extract from it is also used in medicine. Logwood is the red heart-wood, or duramen, of a fine lofty growing-tree, *Hæmatoxylon campechianum*, growing in Campeachy and the bay of Honduras, which is also now common in the woods of Jamaica and St. Domingo, and has been introduced into India. In Tenasserim, the log-wood tree is cultivated in a few gardens, and appears to flourish there as well as an indigenous plant. It is cut into short lengths, and they chip, grind, and pack it into casks and bags, ready for the dyers, hatters, and printers' use, who esteem it as affording the most durable deep-red and black dyes. It is sometimes used in medicine as an astrigent. That grown in Jamaica is least valued; that of Honduras, Tobiasco and St. Domingo, fetches a somewhat higher price; but that imported from Campeachy direct, is the most esteemed. The annual imports into Liverpool are about 1,300 tons from Honduras, 1,000 from Tobiasco, and 1,800 from Campeachy. Logwood is

LOHANA.

scarcely used for turning. The introduction of log-wood was prohibited by a statute of Elizabeth; under heavy penalties, and all that which was found in the country was ordered to be destroyed: it was not until the reign of Charles II, that its use was re-permitted.—*Faulkner; Simmonds; Mason; Tredgold.*

LOHA, GUZ., HIND. Iron. Lohar, HIND. A black-smith. The lohar is one of the five artisans of the hindoos, the others being the carpenter, goldsmith, bronzier and stone-cutter.

LOHA BHISARA, SANS. On the ninth of the light half of Aswin, hindoos worship their weapons or arms. The lustration is called Loha bhisara, and at native courts was of great splendour.—*Wilson's Glossary.*

LOHA CHUR, HIND. Iron filings.

LOHAIA, a sea port of Yemen, north of Hodaida, which had its origin in the 15th century having been founded by Sheikh Saleh.

LOHANA, a powerful tribe who have been known as residents in Sind since the earliest times, and have undergone great vicissitudes, but still retain their credit as well as their religion and, whether regarded as merchants or officials, are the most influential tribe in Sind. They have spread into Afghanistan, Baluchistan and Arabia, where they expose themselves to inconveniences, insults and dangers, in pursuit of their darling objects, wealth and final return to their native soil to enjoy the fruits of their industry. Their name is derived from Lohanpur in Multan, from which they migrated in very remote times. They have about fifty subdivisions, of whom the Khudabadi and Sihwani are the chief. They all wear the jameo or zunnar. Most of them are hindoos, but a few have become sikhs. They eat meat, are addicted to spirituous liquors, do not object to fish or onions, drink water from their inferiors as well as superiors in caste, and are neither frequent nor regular in their devotions. The town of Agham and Agham Lohana seems to have got its name from a Lohana chief named Agham, who was governor of Brahmanabad in the time of Chach. It lies about 30 miles S. E. from Hyderabad in Sind, and though now almost forgotten, it was formerly a place of some consequence. This tribe is numerous both in Dhat and Talpoora: formerly they were Rajpoots, but betaking themselves to commerce have fallen into the third class. They are now scribes and shopkeepers, and object to no occupation that will bring a subsistence; and as to food, to use the expressive idiom of this region, where hunger spurts at law, "excepting their cats and their cows, they will eat anything." The Lohana race of travelling

LOHANI.

merchants and money-lenders, are said to be descendants of Lohani or Luhur. He was the son of Miani, a herd of Ghor or Maskkon, east of Herat. The Lohana are numerous in Dhat and Talpoora, where they are scribes and shon-keepers. Three or four caravans annually travel between Deraband and Kabul, and into Calcutta to Bokhara and St. Malair in Russia, carrying coarse piece goods, salt, indigo, kinkhab, and fruit. Baber mentions them.—*Elliot's History of India, p. 362; Tod's Rajasthan.*

LOHANI, a mercantile race in Afghanistan professing mahomedanism. According to Vigne, the Lohani are descended from Lohani or Luhur, the son of Miani, a musulman shepherd, or goat-herd of Ghor, or Mushkon, a district east of Herat, who lived in the time of Mahmud, of Ghuzni. Lohani had two wives; Syri, by whom he had Mormut; and Turi, by whom he had five sons, Muma, Meya, Tatur, Panuch and Hud, who had no children. Muma had three sons, Yakub, Yasin and Hyder. The descendants of Yakub are called the Yakub Kheil. Yasin had two sons; Dowlut and Hassan. Hyder had four sons; whence the Zuku Kheil, Pura Kheil, Ibrahim Kheil, and Kurzi. The Lohani consider one or other of the names just mentioned, as the founder of their family. Those Lohani, who are descended from Meya, called themselves the Meya Kheil. The next are the Tatur Kheil, and the Panuch Kheil. Lohani himself was a wandering trader. There were Lohani, the sons of Miana, with Mahmud of Ghuzni, who returned with him after his victories in Hindustan. Mahmud's son was sultan Mahomed. Sultan Masud, who succeeded, had no sons; and about this time, the Lohani were placed at Derabund, which was given to them. From that time to this, they have traded between Hindustan and Kabul, and they are real men of business. Such is their own account. Taking them altogether, Vigne regarded the Lohani as the most respectable of the mahomedans, and the most worthy of the notice and assistance of British authorities. The Turkish gentleman is said to be a man of his word; he must, says Vigne, be an enviable exception; but Vigne otherwise solemnly believed that there is not a mahomedan, suni or shiah, between Constantinople and Yarkund, who would hesitate to cheat a Feringi, Frank, or European, and who would not lie and scheme, and try to deceive when the temptation was worth his doing so, and the contemplated risks of detection were neither prominent, numerous, nor soon to be apprehended. Lohani Affghans are a pastoral and migratory people, many of whom proceed

annually into India to purchase merchandise. They traverse the Gulair and Cheri passes, which unite in the Derabund. The Lohani from Calcutta, Delhi, Jeypoor, all take the route to their rendezvous at Derabund. A duty of five per cent. was first levied upon their merchandise at Multan. The merchants assemble in Derajah in April, and being joined by their families who have waited on the banks of the Indus, they pass into Khorasan where they remain during the summer.—*Vigne's, A personal Narrative*, pp. 32, 53-4, 118.

LOHAR, HIND. A blacksmith. The blacksmith is one of the five artizan castes of the hindoos and wears the zonar. The Taremk of the Central Dekhan, known as Bail Kambar in Kanarese, Ghissari in the Dakhani, Lohar in the Mahrati, is a wandering blacksmith.

LOHA'RA, a chiefship attached to Raipur, lying to the south-west between the Balod and Sanjari parganas. The zamindar is a Gond by caste; and the estate was originally granted in A. D. 1538 in return for military service, by one of the Ratanpur rajas.

LOHAR GAON, a valley separating the Bandair hills and Panua range. The basin of Lohar Gaon is of Lias limestone. See Bandair Hills.

LOHEA, see Tehama.

LOHECH of Avicenna, Ophiorrhiza mungos.

LOHEIA, a town, in lat. 15° 42', long. 42° 39'. Loheia has stood only since the 16th century. Its founder and patron was a mahomedan saint, called Shaikh Salei, who built a hut on the shore where Loheia now stands, and spent there the rest of his days as a hermit. The territory of Loheia is arid and barren. The harbour is so indifferent, that even the smallest vessels are obliged to anchor at a great distance from the town.—*Niebuhr's Travels*, Vol. i, pp. 252-253.

LOHIT, a tributary of the Brahmaputra, is navigable only two days' journey above Saddya, but a footpath leads along the banks to Brahma Khand, ten days' journey further up and 2,049 feet above the sea.

LOHITANGA, SANS. From lohita, blood-red, and anga, the body.

LOHRASB or Lohrasp, a king of the Medes, according to Mr. Masson, the patron of Zoroaster and of the Magian religion, whom he supposed occupied Bamian. It is surmised that the foundation of the city of Herat or Hari, was laid by Lohrasp, who was succeeded by Gushtasp. Lohrasp laid the foundations of Herat; Gushtasp erected many buildings thereon; Behman, after him, added

greatly to the town, and Alexander put the finishing stroke to it. Vigne remarks that if the traditions of the Persians may be credited, we should look to Bamian as the residence of king Lohrasp, the patron of Zerdusht and the Magian religion, but, as these traditions have been handed down to us only through the romance of Firdusi, it is not possible to say what credence they deserve.—*Mohan Lal's Travels*, p. 263.

LOHTI, HIND. An iron seller.

LOHU-GHAT, in lat. 29° 24' N., long. 80° 4' E., in Kamaon, east of Fort Hastings. The European bungalow is 5,649 feet above the sea. It lies 10 miles west of the Kali or Sardah river which bounds Nepal. It is not suited for invalids.—*Webb*.

LOH-ZAH, see Dyes, Liau-kau.

LOI KAT'HONG, a Siamese festival on the Menam river, held on the 15th day of the 12th month, when offerings of little rafts of plantain leaves, bearing lighted tapers are launched into the river.

LOIKOB, Aborigines of the east coast of Central Africa, divided into two tribes, the Wakuapi and the Masai who are often at feud. They are pastoral, nomade and predatory. They are handsome, tall, light complexioned, and their women are prized in Arab harems. They wear leather dresses. They kill all prisoners. Their sacred place is the mountain Kilimanjaro, which overlooks their land and fertilizes the soil by its streams. There dwells the Engai, their god. They practice circumcision.

LOISE-LEUR, see Manu.

LOJII, HIND. Symlocos cratægoides.

LOKA, SANS. Locum, LAT. A place, a sphere, and used to designate a region, as triloka, the three worlds, heaven, earth, and hell. In hindoo mythology there are fourteen spheres, exclusive of Naraka or Tartarus. Of these, seven are upper spheres, viz. :

Bhuloka or earth.

Bhuvor-loka, atmosphere or firmament.

Svar-loka or Swarga, heaven, the sphere of the inferior deities.

Mahar-loka, the region above the pole star, tenanted by saints.

Jana-loka, the sphere of the sons of Brahma.

Tapa-loka, the region of devotion, the abode of the Rishi.

Satya-loka or Brahma-loka, the region of truth and of brahmin, to which the pure are elevated.

The seven regions below the earth are habitations of the snake gods and are as under, in the order of their tale or descent, viz. :

Atala,	Rasatala,	Mahatala, and
Vitala,	Talatala,	Patala.

The vaishnava sectaries have instituted loka

LOTL.

of their own, as Vaikuntha, the sphere of Vishnu, and Golaka the region of Krishna.—*Wilson's Glossary*.

LOKA-PALA, in hinduism, the guardians of the world, are sometimes confounded with the deities presiding over the different cardinal points; but this is not quite correct, and they are more properly the divinities who were appointed by Brahma upon the creation of the world, to act as rulers over the different kinds of created things. Lists occur in several Puranas and in the Harivausa portion of the Mahabharat.—*Hindoo Theatre*, Vol. ii, p. 218. See Inscriptions.

LOKE, a mixed race near Mount Aboo. The name is probably a corruption of the hindi word Log, people. It is supposed that the Bhil race were the aborigines of Mount Aboo and the neighbouring hills, but at some remote time became mixed with marauding rajpoots from the plains and with the workmen who were so long engaged in building the Dilwarra temples. This mixed race called themselves Loke and are now in possession of almost all the land under cultivation. See Aboo.

LOKESHA, SANS. From loka, men, and isha, greatness.

LOKET, BENG. Common loquat, *Eriobotrya japonica*.

LOKI, see Sati.

LOKMAN, according to some authors, took up his residence at Saba, in Yemen, about 1750 B. C., and finding that the country was continually ravaged by impetuous mountain torrents while at other times parched from drought, he built a dam across it. It was provided with thirty sluices and according to Pliny, the town became the mistress of cities and the diadem on the brow of the universe. See Mareb, Saba.

LOKRA BAG, HIND. Hyana.

LOKU, SANS. From looch, to see.

LOLAN, AMBOYN. *Cassalpinia sappan*, Linn. Sappan wood.

LOLIA, see Graminaceæ.

LOLIGO, the Squid, one of the Mollusca. The Calamary, a species of *Loligo*, is luminous at night.

LOLIGO SAGITTATUS, is the Flying Squid.

LOLIGOPSIS, see Sepiadæ.

LOLIUM ITALICUM, Italian Rye Grass, affords fine fodder for cattle: is a useful cold-weather green crop, and is well worthy of extensive cultivation.

LOLIUM PERENNE, see Graminaceæ.

LOLIUM TEMULENTUM, see Darnel, Graminaceæ.

LO-LO, see India.

LOTLI, HIND. *Syringa emodi*.

LOMBOK.

LOLU, SINGH. *Cordia myxa*, Linn.
LOLUGA or *Nelika*, TEL. *Pterospermum heyneanum*, Wall. *P. suberifolium*, R., ii, 160.

LOMARIA, a fine fern of Java.

LOMARIA SCANDENS, the scandent Lomaria. The low lands near the mouths of rivers and nullahs, in Tenasserim, are often fantastically dressed with this species of lomaria which creeps up to the tops of the tallest trees.—*Mason*. See Ferns.

LOMAS RISHI CAVE, a Buddhist cave in Behar.

LOMBARD. Long beards gave a name to a nation, the Lombards. A Sikh is never so much offended as when you touch him by the beard, the great facial characteristic of manhood, never allowed by him to be profaned by the razor.—*Tr. of Hind.*, Vol. i, p. 303.

LOMBLEN, an island, consisting mostly of bold high land, 24 miles from Pulo Comba.

LOMBOK, also Chubai, Chabe, Ladamera, Lada China, MALAY. Chillies, Capsicum, Cayenne Pepper.

LOMBOK, a fertile and populous island, divided from Bali by a narrow strait. Mr. Crawford considers the Lombok language to have a strong affinity with the Javanese. This is the termination in an easterly direction, of the group of tongues which begins with Sumatra. According to Mr. Logan, Javan has a much broader, more forcible asperate and primitive phonology than Malay, and the Javan group embraces Sundan, Maduran, (with its dialect Bawian) and Bali. In Lombok are beautiful grass-green doves, little crimson and black flower pickers, large black cuckows, metallic king crows, golden orioles, the jungle fowl, the *Pitta concurna*, the *Megapodus gouldii*, small white cockatoos, the *Ptilotis honey-sucker* and the little yellow *Zosterops*. In a pond, at Gumong Sari in Lombok, the fish swim round after Mr. Wallace, expecting food. The princes of Mataram must be well-acquainted with the number of the population of their island, since the manner of raising the taxes and regulating the military services, as well as the forced labour, obliges them to maintain a kind of census. The population of the island must amount to more than 400,000. The whole men capable of bearing arms amounted to 80,000, which multiplied by 5 gives 400,000 souls. If these data are correct, there are on Lombok exactly 4,000 persons on a square geographical mile. According to races and origin, the population of Lombok consists as follows:—

4 Europeans	5,000 Bugi.
1 European (coloured)	20,000 Balinese.
10 or 12 Chinese.	380,000 Saksak.

All the Bugi reside upon the coasts, especially at Ampanan and on the north of the island. The population is divided amongst the different parts of the island as follows :—

North of the mountains	40,000
In the mountains on the south	10,000
Western half of the plain	220,000
Eastern do.	135,000

The Balinese population reside at Mataram and in the neighbouring parts, as at Ampanan, Karang, Assem, &c., in the event of an outbreak they can be more easily collected together for defence than if they were settled in all parts of the island. Small red fish (ikan mera) are imported from Makassar. Ivory, Kayu pelet and Kayu Kamuning, are imported by the Bugi from Sumatra and used for making the handles and sheaths of the kris, klewang, &c. Exports are to Bima, Timor, Sumba—rice, dingding, oxen. Imports of ponies, fish, slaves, sandal-wood, tali rami (thread of rami) wax. The rajah of Mataram is, by right of conquest, absolute sovereign of the island. The rajahs of Mataram are like their ancestors of Kawang, Assem and Beliling, members of the caste of Wasiya. Although absolute monarchs, they nevertheless, of their own accord, in all important matters, consult the principal gusti and ida of the country, some of whom are entrusted with the execution of what is resolved upon. These men may be considered as the ministers of the rajahs, if not de jure et nomine, at least de facto.

The rajah of Lombok has the title of Anak Agung, which means "son of heaven." The indigènes are called "Sassak." The people of Lombok believe that some men can turn themselves into crocodiles, which transformation they adopt in order to devour their enemies. The Sassak are a Malay race, hardly differing from those of Malacca or Borneo and have been converted to mahomelanism. But the ruling race are brahminical and from Bali. The men are jealous and strict with their wives, infidelity is punished by the couple being tied back to back and thrown into the sea, where crocodiles devour the bodies. Even a married woman accepting a flower, or betel from a stranger has been punished by death with the kris, and any one found without leave within the grounds of a house is krisied and his body thrown out to the street. The people frequently do a-mok, but it seems to be deliberately done. On one occasion a person doing a-mok killed 17 people before he could be killed. In war, a whole regiment will agree to a-mok, and then run on with such desperate resolution as to be very

formidable to men less excited than themselves. The Balinese dress, on Lombok, in the same manner as on Bali, and the Sassak nearly in the same way. For example, although mahomedans, they have uncovered heads. The Sassak women differ a little in their dress from the Balinese. In the first place they do not bind up their hair with a piece of white cloth, like the Balinese, but go bareheaded like the men. Some wear a short baju like the women of Sambawa and Makassar, others have the bosom naked, or covered with a slendang of a coarse stuff, striped red and black in the length. The sarong is almost always of blue or black cloth. The food of the people of Lombok differs in nothing from that of the people of Java. The Balinese, who may not eat beef, substitute for it pork. Both races eat buffalo flesh, goat's flesh, fish and poultry. The people of Lombok are neither more nor less superstitious, than all the other people of the Archipelago. It is Mt. Rinjani especially which makes an impression on the people, on account of the bad spirits which reside upon it. A travelling companion for example, told Mr. Zollinger not to shout upon the mountain because the bad spirits would become irritated, and not to take any stones from the ground, because they would resent it and play them some bad trick. Whoever wishes to approach the Segara Anak must be blessed, fasting, and have said his prayers and be clothed in white. As they approach it they must notice what appearance it presents to them. The more lengthened it appears to them, the longer time will they live. If it loom broad, they will quickly die. All these ideas are found however over all the Archipelago, round the great volcanoes, and in spite of all modifications which they have undergone, through time or local circumstances, they are all based upon the belief of a supernatural and malevolent power which causes and regulates the working of the subterranean fire. No religion, not even the christian, will root out these fixed ideas from this people. Impressive phenomena, like volcanic, sound louder than all reasonings in the ears of uncivilized and timid men. The Lombok rulers are hindoos, while their objects are mahomedan. On Lombok, wives may suffer themselves to be burned after the death of their husbands, they are not compelled to it. They have the choice of allowing themselves to be burned or krisied; the first is the more rare. A young beautiful and childless woman lost her husband, a gusti. The day after his death, his wife took many baths; she was clothed in the richest manner; she passed the day with her relatives and friends

in eating, drinking, chewing of sirih, and praying, about the middle of the space before the house. At four o'clock in the afternoon, men brought out the body of the gusti wrapped in fine linen, and placed it on the left of the two central platforms. A priest of Mataram removed the cloth from the body, while young persons hastened to screen it from the public gaze. They threw much water over the corpse, washed it, combed the hair, and covered the whole body with champaka and kananga flowers. They then brought a white net. Women brought out the wife of the gusti with her arms crossed. She was clothed with a piece of white liven only. Her hair was crowned with flowers of the *Chrysanthemum indicum*. She was quiet, and betrayed neither fear nor regret. She placed herself standing before the body of her husband, raised her arms on high, and made a prayer in silence. Women approached her, and presented to her small bouquets of kem-bang spatul, and other flowers. She took them one by one, and placed them between the fingers of her hands, raised above her head. On this the women took them away and dried them, on receiving and giving back each bouquet, the wife of the gusti turned a little to the right, so that when she had turned quite round, she prayed anew in silence, went to the corpse of her husband, kissed it on the head, the breast, below the navel, the knees, the feet, and returned to her place. They took off her rings. She crossed her arms on her breast. Two women took her by the arms. Her brother (this time a brother by adoption) placed himself before her, and asked her with a soft voice if she was determined to die, and when she gave a sign of assent with her head, he asked her forgiveness for being obliged to kill her. At once he seized his kris, and stabbed her on the left side of the breast, but not deeply, so that she remained standing. He then threw his kris down and ran off. A man of consideration approached her, and buried his kris to the hilt in the breast of the unfortunate woman, who sunk down at once without uttering a cry.—*Journ. Ind. Arch.*, No. ix, Vol. v, p. 537; No. viii, August 1858; *Keppel's Ind. Arch.*, Vol. ii, pp. 144, 145; *Wallace*, Vol. i., pp. 73, 156, 161, 172, 174; *The island of Lombok* by K. Zollinger, Esquire.

LOMPEN, DUT. —?

LOMRI, also Loomri, Noomri, DUK. *Vulpes bengalensis*, Shaw. A fox.

LON, HIND. Salt: hence Loni, the saline inflorescence on damp walls.

LONA, PORT., SP. Canvas.

LONA, SANS. *Portulaca oleracea*, also *Stipagrostis plumosa*.

LONAR, a salt pit.

LONCHURA, a generic name given by Colonel Sykes to some birds of Java, now arranged by authors into the genera *Erythrura* and *Munia*.

LONDON CLAY, see Clay.

LONG, DUK, HIND. *Caryophyllus aromaticus*, Linn. Cloves.

LONG CARDAMOM, ENG. *Elettaria cardamomum*, Wh. and Mat.

LONGEE or Lungi, HIND. Long pieces of cloth, made of silk or silk and cotton, used as sashes or turbands, or as a scarf thrown over the shoulders and upper parts of the body, or are wrapped around the lower part of the body. Some of them, the manufacture of Sind, are very beautiful and rich where the loom-made goods, consist of turban, dhoti, loongee, kamrband and sarree.—*Pottinger's Travels, Beloochistan and Sind*, p. 28.

LONG-EET, see Lang-eet.

LONGEVITY. Rabbits live 7 years; squirrels and hares, 8 years; a fox, 14 to 16 years; cats, about 16 years; a bear lives rarely more than 20 years; a wolf likewise 20 years; hogs the same; the rhinoceros lives but 25 years; cows live to about 25 years. A horse has been known to live 62 years, but the average duration is about 25 years. Elephants are said to live upwards of 100 years. Of the longevity of snakes nothing is known. The races occupying British India are short lived compared with those of Britain and advance more rapidly to old age, both physiologically and pathologically. Thomas Carn died 28th January 1858, aged 207; was born in the reign of Richard II, in 1381. He lived in the reigns of ten sovereigns. There died, in 1801, a Russian soldier who had served in the "thirty years' war," and who was nearly 200 years old. Saint Mungo, otherwise called Kentigern, founder of the Bishopric of Glasgow, a Scotchman, died aged 185 years. Others died as under:—

Douglas Gurgen.....	Swede,	120
Mittelstadt.....	German,	128
Maria Williams.....	Russian,	118

Joseph Surrington retained till his death the free use of all his senses, and of all his intellectual faculties. He left at his death a young widow and several children, of whom the eldest was 103 years of age, and the youngest 90 years. Of old Parr everybody has heard, though why he should commonly be cited as the most notable example of longevity it is not easy to say, seeing, as we have indicated, that not a few

LONICERA.

have lived to a much greater age than he did. Parr had seen nine kings succeed to the throne of England. At 103 years he attended to his occupation, and threshed in the barn. He was married at 120. At 152 the king called him to London, and treated him magnificently; but he succumbed in the midst of his triumph. The "post-mortem," made by the celebrated Harvey, showed that all the organs were perfectly sound, and that the death of the old man was but accidental, and the result of an indigestion. Douglas Gurgan took a wife at the age of 85, and had eight children. Mittelstadt married at 110 years, and had likewise several children. Maria Williams lost, for the first time, a tooth at the age of 100 years, but another came in its place. At 103 she lost a second, which was likewise replaced. In recent times a soldier at Berlin, the first to have conferred upon him the decoration of the Cross of St. George, was living in 1870, aged 130 years.

LONGICORNI, see Coleoptera, Insects.

LONG ISLAND, see King Island; Kishin Island.

LONG-LEAVED BASSIA, *Bassia longifolia*, *Willde.* Grows in the peninsula of India.

Piper longum,	LAT.	Pippallu,	TEL.

This kind of pepper is the produce of *Piper longum*, a perennial plant, a native of Bengal, Siam, &c. The fruit is hottest in its immature state, and is therefore gathered whilst green, and dried in the sun. It is met with in entire spikes about an inch long, possessing a darkish brown, or gray colour. It has a weak aromatic odour, an intensely fiery, and pungent taste, and its properties correspond closely with those of black pepper.—*Faulkner.*

LONG-PEPPER ROOT.

Pih-poh-mu,	CHIN.	Pipili-mul,	HIND.

Honeysuckle,	ENG.	Moulli-quedi,	TAM.
--------------	------	---------------	------

A twining villous shrub, native of the Neilgherries, found in many gardens of the Deccan where it grows in great luxuriance, it is easily propagated by cuttings or layers. White gives *L. ligustrina*.—*Jaffrey, Riddell.*

LONICERA SEMPERVIRENS, *DC.* *Syn.* of *Caprifolium sempervirens*.

LONICERA XYLOSTIUM.

Jin-tung,	CHIN.	Kin-yin-hwa,	CHIN.
-----------	-------	--------------	-------

Its flowers, stalks and leaves are valued by the Chinese as a dis-cutient application to carbuncles, abscesses, swellings, sores. Its dried flowers, smell like tobacco.—*Smith.*

LONKA, a deist sect of hindoos who worship the "One" alone, and "not in temples made by hands," which they never enter. The mountain top and sylvan solitude are deemed by them more fitting places to pour forth their homage. They credit the missions of the twenty-four tirthancara of the Jains, considering them as superior mortals, whose sanctity and purity of life gained them the divine favour and the reward of "mookht," or beatitude.—*Tod's Travels*, p. 357.

LONTAR, *MALAY.* *Borassus flabelliformis.*

LONTAR, the largest of the Banda group of islands. The Banda group consists of ten islands, the largest of which is Lontar or Great Banda. It is crescent-shaped, and Pulo Pisang, Banana Island, Pulo Kapal, and Ship Island lie in the hollow of the crescent and form the arc of a circle. Within this arc are three other islands, the highest of which is Gunong Api, next Banda Neira, N. E. of which is Pulo Krakka or old woman's island. Dr. Abreu, a Portuguese commander, was the first European who visited them. This was the nut-meg group, and for nearly a hundred years the Portuguese monopolized the trade. In 1609, the Dutch attempted to take these islands, but the war lasted 18 years, and the natives who survived all fled to the neighbouring islands. The Dutch had to cultivate these islands with slaves, and when slavery was abolished, with convicts, of whom in A. D. 1865 there were about 3,000. Almost all the island is covered with nut-meg trees, grown under the shade of the *Canarium commune*. Banda and its three islands enclose a secure harbour, and the water is so transparent, that living corals and minute objects are seen below. The inhabitants are much mixed, and about three-fourths are

mixed races, Malay, Papuan, Arab, Portuguese and Dutch. But the aborigines, doubtless were Papuans, and a portion of them still exists in the Ke islands, to which they emigrated when they first took possession of Banda. Of the birds, is a very handsome fruit-pigeon, *Carpophaga concinna*, which feeds on the mace and is found also in Ke and Matabello, and a small fruit-dove, *Ptilonopus diadematus*.—*Bikmore*, p. 221; *Waldace*, Vol. i, pp. 289 to 291.

LONTARUS DOMESTICA, syn. of *Borassus flabelliformis*.

LONTARUS SYLVESTRIS, *Rumph.*, syn. of *Corypha utan*, *Lam.*

LONTHOIR, see *JAVA*.

LONY, see *Kumbi*.

LOOAH-KAM, *Guz.*, *HIND.* Hardware.

LOOANGARH GOREE, a river near Melun in Almorah.

LOOBAN, *HIND.* Olibanum. See *Balsamodendron*.

LOO-CHIN, *Gong*.

LOO-CHOO or Liu-chn Islands, lie to the N. E. of the Patchu group and consist of one large island surrounded by smaller ones, the large island being of considerable size and well-peopled. It extends from lat. 26° 3' and 26° 53' N., and long. 127° 34' and 128° 23' E., being 58 miles long and about 10 or 12 miles broad. In language and physical form, the Luchu islanders resemble the Japanese, their buddhism being more imperfect and their manners more simple. The people in the small islands between the Luchu group and Formosa, are Japanese rather than Malay. Dr. Collingwood speaking of the Kebalan, of Formosa, to whom he showed a copy of the 'Illustrated London News,' tells us that he found it impossible to interest them by pointing out the most striking illustrations, which they did not appear to comprehend.—*Dr. Latham's Ethnology*; *Dr. Collingwood in Trans. Ethn. Soc. N. S.*, Vol. vi, p. 139; *Lubbock, Orig. of Civil.*, p. 29.

LOOHOO. Before Macassar, or Bone, had so much as a name, Loochoo was the most powerful, and the largest kingdom of Celebes: for in addition to Loochoo proper, most part of Bone, and Bolee Bolee, were under its sway. The Macassar empire, including Tello, and Sanderebony, before it was conquered by the Dutch, extended from Bolee Bolee, in the bay of Bone, to the point of Lassem, and thence to the point of Torathea or Tanakeke; also thence along the west shore to Tanete, or Aganonchee.—*History of Celebes*, pp. 3 and 4.

LOOCIAN, a race occupying the country between China, Siam, Cochinchina and Burmah. They are arranged into the Thauing

or black bellies, whose men at the age of fourteen to sixteen years, have their bodies tattooed over with four needles with figures of men, flowers, elephants, tigers, serpents and other animals. Sometimes a person falls sick or even dies under the process, but a young man cannot obtain a wife till he is tattooed. The Thauing Khao or White Bellies retain their skin untouched. Their boundaries are, on the north, the frontiers of China; on the south, the kingdom of Siam; on the east, they reach to Cochinchina and Tong King, and on the west, they touch the Burman empire.

LOOD, also *Loot*, *DUT.* Lead.

LOODII, *SANS.* *Cedrela toona*.

LOODIANAH, a district in the North-West of British India.

LOODI, one of the foreign tribes, in Sind: others are the descendants of Haroon, Mukrani, Loodi (now known as Loodia) Habshi, Sidi and Jungiani.

LOODOOMA, *BIOR.* Decaisnea.

LOOEE, *HIND.* A grey woollen cloth from Afghanistan.

LOOER, a river in Comillah.

LOOL, *HIND.* Flannel.

LOOKIMDER, a river near Jonkur in Gwalior.

LOOKKEE, *TEL.* In the Nalla Mallai, a fine grained wood, of a greyish colour; found in small quantity.—*Mr. Latham*.

LOOK KONG, or Landscape island, in the Gillolo Passage, in lat. 1° 45', long. 128° 10' E., is of moderate height, well-wooded and of pleasing aspect. See *Pulo Gassas*.

LOOKING GLASS PLANT, *ENG.* *Heritiera littoralis*, *Ait.*; *DC.*; *Roxb.*

LOOM.

Aba Aba Kudu, *MALAY*.

The hand-loom is in use in most parts of the South Eastern Asia and the Archipelago, but the fly-shuttle is rarely used. Both cotton and silk fabrics are woven.

LOOMRI or *Noomri*, or *Looka*, is a grand sub-division of the Baluch race, and is mentioned by Abul Fazil as ranking next to the Kulmani, and being able to bring into the field three hundred cavalry and seven thousand infantry. Gladwin rendered the name *Nomurdy*, and was followed by *Rennell*. The *Noomri* or *Loomri* also styled *Looka*, a still more familiar term for fox, and are affirmed to be of Jit origin.—*Tod*.

LOONA, *BENG.* *Aloua squamosa*.

LOONAR LAKE, in the circar of *Maiker*, soubah of Berar, about 45 miles north-west of Hingolie, in lat. 20° N., is at the bottom of a crater-like depression, about 510 feet below the level of the surrounding country, and is 3 miles in circumference with a depth

varying from 5 feet to 14, according to the season of the year. Former observers could not discover scoria or lava, but Dr. Bradley in 1851 is said to have found both. The Sichel hills terminate in the neighbourhood of Louar, near what appears to have been a vast crater in the centre of the great basaltic district. It is the only instance of a volcanic outburst discovered in this immense plutonic region of the Dekhan, and it is a nearly circular or oval depression, in a country composed of tabular and nodular basalt. From Lonar the basaltic district extends to the south as far as Beder; to the west, 200 miles to Bombay; and northward, to the banks of the Nerbudda, near the ancient cities of Indoor and Mhysir, reported to have been buried at a remote period under volcanic eruptions. To the east, the great basaltic country of Berar extends to near Hyderabad and as far as Nagpoor; and the Sichel range passes in a south-east by east direction to the confluence of the Wurdah and Godavery, and towards the eastern ghauts. Hot springs and streams, loaded with carbonate of lime, occur along the line of elevation of these mountains at Mahoor, Urjunah, Kair, Byorah, and at Badrachellum, a short distance above the pass through which the Godavery reaches the alluvial plains of the coast. The lake is about 510 feet below the level of the surrounding ground, in a crater of 5 miles in circumference; the bottom being about 3 miles in circumference and surrounded by luxuriant vegetation; springs of clear soft water occur close to the lake, which has evidently been extending its bounds lately, as numerous dead trees are standing within its margin, and a well of sweet water, protected by a wall, is now completely surrounded by the water of the lake. An intolerable stench of sulphuretted hydrogen is emitted by the lake during the heat of the day, and its waters prove destructive to vegetable life, though flocks of duck and teal dot the surface of the lake. There are two saline springs near the centre of the lake, and about $\frac{1}{2}$ mile apart. These never become dry. It is supposed that the muriate of soda from this source, coming in contact with the carbonate of lime which abounds in the vicinity causes the deposition of the carbonate of soda or natron salt in a greater or less state of purity. The depth of the lake near the salt springs varies from 6 feet during the hot months to 12 or 14 feet during the rains. The salt is raised by divers, who bring it up in their hands. It is much prized and finds a ready sale in both Berars, Nagpore, Kandesh, and Poonah, to which places it is carried in bamboo baskets and retailed by dealers. The lake was regularly

worked up to 1836, in which year 2,136 candies of the different salts were raised, valued at Rs. 60,081. In 1853, Major Johnston raised 35 candies, valued at Rs. 1,461-4-0. The sulphuretted hydrogen, especially during the heat of the day, rises in millions of bubbles to the surface. The carbonate of soda or natron salt deposit is raised by diving, the purest being found close to the springs, and the following are the names of the principal varieties: 1, Dulla, carbonate of soda containing 83·8 per cent. of soda; 2, Nimuk Dulla, nearly pure salt, containing 92·8 per cent. of chloride of sodium. Dulla and Nimuk dulla are used for dyeing silks, fixing colours, as medicine, and in the manufacture of hangles, of which there are two manufactories near the lake, where 600 or 700 are made by each man daily; 3, Khupul, contains 72 per cent. of carbonate of soda, is used in fixing the red dyes of cloths; 4, Pappree contains 72 per cent. of carbonate of soda, is used in making bangles, in baking the cake called papur, and in medicine as an antacid; 5 and 6, Bhooskee are neutral carbonates of soda containing 29 and 27 per cent. left as a deposit on the margin of the lake, and used in the manufacture of soap. The average quantity is 213 candies per annum, valued at Rs. 608.—*Carter's Geological Papers on Western India*, p. 33; *Drs. G. Smith and J. E. Mayer in M. E. J. R. of 1857*; *A Paper by Dr. Buist in Trans. Bombay Geogr. Society*.

LOOND, Loondkhor, see Khyber Pass. LOONEE, literally salt water river, is a term applied to several rivers in British India. One of the Loonee rivers rises in the Aravalli mountains, near Pokur, in lat. 26° 37', and long. 74° 46'. It runs west, nearly parallel with Aravalli range, and enters the Rann of Cutch, by two mouths, the principal of which is in lat. 24° 42', long. 71° 11', after a course of 320 miles. It receives the Rairee, 88 miles; Sokree, 130 miles, and about 19,000 square miles are drained. The river, notwithstanding the great width of its bed, in some parts of its upper course, appears to be scarcely anywhere continuously navigable, being full of micaceous quartzose rock, banks low, and little above the surrounding level. The Kaggar, which rises in the Siwalik, passes Hansi Hiasar, and flows under the walls of Bhutnair, at which place they yet have their wells in its bed. Thence it passed Rungmahal, Bullur and Phoolra, and through the flats of Khadal (of which Derrawal is the capital), emptying itself according to some below Ootch, but according to Abubirkat (whom Colonel Tod sent to explore in 1809, and who crossed the dry bed of a

LOO SHAI.

stream called the Kaggar, near Shahgurb), between Jessulmer and Rori Bakker. If this could be authenticated, it might be said at once that, united with the branch from Dura, it gave its name to the Sangra, which unites with the Looni, enlarging the eastern branch of the Delta of the Indus. Perhaps the most remarkable features in the desert, is the Looni, or Salt river, which, with its numerous feeders, has its source in the springs of the Aravalli. Of Marwar it is the barrier between the fertile lands and the desert; and as it leaves this country for the thul of the Chohan race, it divides that community and forms a geographical demarcation; the eastern portion being called the Raj of Sooe-Bali; and the western part, Parkur, or beyond the Khar, or Looni.—*Report, Royal Commission.*

LOONGEE, a pheasant? of the Himalayas.

LOONGI, HIND. A silken girdle, in use in Sindh or a scarf are worn by men. Loongies are of cotton, of silk, and of silk and cotton. Many of the borders of the loongees, dhotees, and sarrees are like plain silk ribbons; in some instances corded or ribbed, in others flat. The Saree, Boonee, Bafta, Jore, Ekpattn, Gomcha, &c., of Dacca, are now entirely made of imported British yarn.

LOONIA also Loomika, also Looniya, BENG. Small purslane, *Portulacca oleracea*.

LOO POO, CHIN. The government of China is conducted by the Nuy Ko, or Interior Council Chamber, in which there are four chief councillors, two of them Tartars and two Chinese, who bear the titles of Choung-thang and Ko-laou. The Tartar minister presides. The Loo-poo are six boards for the conduct of government business, and the provinces of the country are each under a governor, or, where two provinces are united, a Governor General.

LOORY, but correctly Nuri in Malay, and Nor in Javanese, is the generic name for "parrot." The sub-family of parrots, to which naturalists have given the name of *Lorius*, is not found in any island of the Archipelago west of New Guinea, nor at all in the Philippines. The loories of naturalists are, in fact, confined to New Guinea and its adjacent islands.—*Crawford's Dict.*, p. 222.

LOOSE FLOWERED ALPINIA, ENG. *Alpinia galanga*, Swz.

LOO SHAI, a race dwelling south of the Kookee, and south-west of the Komnaga in the Tipperah territory, in lat. 23° 30' N., and long. 92° 30' E. They dwell at the sources of the Kurnaphoola or Chittagong river. In the beginning of 1871, the Looshai made a prolonged raid on the

LOPISIP BARK.

North-East Provinces of British India, but were driven back by a large force of native soldiers.

LOOT, HIND. Plunder.

LOOTEE BAZAAR, literally signifies "plundering the bazaars or shops," but it implies no more than a general rising of the inhabitants. This ancient usage is still preserved in Persia.—*Malcolm's History of Persia*, Vol. ii, p. 6.

LOPHANTUS RUGOSUS?

Ho-liang. CHIN. | Ho-ken, CHIN.

Its rough leaves are used by the Chinese to scour metallic vessels; and are given in infusion, in disorders of the stomach and bowels.—*Smith*.

LOOT PUTIAH, HIND. The leaves of the garden cress, *Lepidum sativum*.

LOPA. The Lepcha of Sikkim and Lopa of Bhutan are buddhist Tibetans. The Lepcha are a dirty, good-natured people, resembling in character the Mongol, beyond the Chinese wall.—*Campbell*, 148.

LOPEZIA CORDATA, a genus of pretty plants, annuals and biennials, their colours are purple and red, raised from seed and grown in any good soil.—*Riddell*.

LOPHADÆ, a family of fishes which includes the Anglers, Fishing Frog, or Scabdevil, and the Frog-Fishes.

LOPHOBANCHII, an order of fishes, comprising,

1 <i>Solenostoma</i> ,	7 <i>Hippocampus</i> ,
1 <i>Pegasus</i> ,	14 <i>Syngnathus</i> .

LOPHOTIDÆ, a family of fishes of one genus *Lophotus*.

LOPHOPHORUS IMPEYANUS, the monal pheasant of the Himalaya, is double the size of the pheasant of Great Britain. The male has a crest of great beauty, head and throat has metallic green; wings and plumage, steel-blue, and tail, reddish brown. The hen bird is smaller, of a dull brown and white throat.

LOPHOSPERMUM SCANDENS, a beautiful climbing plant with large, purple, or rose-coloured bell-shaped flowers. This plant is of fast growth, and well-adapted for covering trellis work, easily grown from seed at the commencement of the rains, and lasts throughout the year; the soil should be rich and light. *L. scandens* and *L. hendersonii* are herbaceous climbing plants with pink bell flowers, raised from seeds and cuttings, require a sandy soil, or they will not flower freely; natives of Mexico.—*Riddell*; *Jaffrey*.

LOPHYRUS CORONATUS, see *Columbida*.

LOPHYRUS GIGANTIA, see *Agama*.

LOPISIP BARK, a dyo-wood of Celebes

and other islands of the Eastern Archipelago. Specimens of Lopisip bark, bunchong bulu wood, and the gaju gum (from undescribed plants), have been introduced into England. They are said to furnish excellent dyes in the Asintic islands. Native dyes from Arracan have also been imported, viz., thittel and the-dan, yielding red dyes; ting-nget and reros, affording dark-purple dyes; and thit nan-weng, a chocolate dye.

LOQUAT.

Eriobotrya japonica, Lindl. | *Mespilus japonicus*, Thunb.
Lu-kuk, CHIN. | Yang-ma, CHIN.
Yung-mai, " | Loquat, HIND.

This small tree of Japan and China, is now introduced all over the Deccan and in the Punjab: it also grows in great perfection in New South Wales. It bears fruit twice in the year, and is highly esteemed both for deserts and preserves. The finest fruit is produced at the second crop, at the end of the cold season, and requires protection day and night; from birds in the former, and flying foxes in the latter. The fruit is of a yellow colour, with thin skin, a sweet acid pulp, one or two seeds in the centre—sometimes more. The seeds grow easily, and the fruit appears to be capable of great improvement. In Ajmere, it is cultivated in gardens but does not thrive well. It is very common in China and is often mentioned by Fortune, who found it growing at one place, along with peaches, plum, and oranges, and at another, with the Chinese gooseberry "*Averrhoa carambola*," the wanghee "*Cookia punctata*," and the longan and leechce. In China, the fruit of *Citrus olivæformis*, *C. madurensis* are also called Lu-kuk. — *Fortune, Tea Districts*, pp 7, 30; *Drs. Riddell, Irvine, Med. Top.*, p. 195; *Voigt, Cleghorn, P. R.*, p. 81.

LOR, HIND. *Ehretia aspera*.

LORA, see Kaker.

LORAH, a river about 80 miles long, rises in the Shawl table-land, in lat. 39° 49', long. 67° 20', and runs south-westerly, until lost in the sands of the desert of Khora-an. In April the water which is briny is 7 or 8 yards wide and 2 feet deep. It is crossed on the route from Shawl to Kandahar.

LORANTHACEÆ, Lindl. An order of plants comprising, 1 genus and 2 species of *Loranthus*. Dr. Wight gives in *Icones*, however, *L. amplexifolius*, *L. capitellatus*, *L. elasticus*, *L. euphorbia*, *L. lageniferus*, *L. longiflorus*, *L. loniceroides*, *L. memecylifolius*, *L. neilgherrensis*, *L. tomentosus*, *L. wallichianus*. In Tenasserim many of the trees are covered with different species of the parasitical genus *Loranthus*, so abundant in most tropical climates; and the numerous small red flowers of one or two species in four forests

are quite ornamental. One species of *Loranthus* is called Kyee-boung by the Burmese. — *Mason*.

LORANTHUS FALCATUS.

Wotu, CAN. | Velaga badanike, TEL.
Badanike, Vadaniko, TEL.

Natives of Mysore sometimes use its bark in place of betel nut in conjunction with chunam, it tinges the saliva and mouth red. — *Buchanan, Mysore*; *Ains. Mat. Med.*, p. 269.

LORANTHUS LONGIFLORUS, Desy.

Pand, Beas, Kangra, Parand, Ravi, Beas,
Banda, Panjab, Amut, Sutlej.

A handsome parasite with branches sometimes 6 or 7 feet long, large broad leaves and orange-coloured flowers. It is found in the Punjab Himalaya, chiefly on the eastern rivers, from 1,500 to 3,000 feet, and occasionally higher. — *Dr. J. L. Stewart*.

LORCHA, a vessel in use in the Chinese seas, sometimes employed in war.

LORD, Dr. P. B., Author of Medical Memoirs on the plain of the Indus, in *Bom. Geo. Trans.*, 1836, 1838, Vol. i, 293. On the medicines found in the bazaars of Sind in *Bom. Med. and Phys. Trans.*, Vol. iv, 127. He was a Bombay medical officer, and was killed in battle at Purwandurra, in 1841.

LORD NORTH ISLAND, on the N. W. of New Guinea, in lat. 3° 23' N., long. 131° 20' E., small, low and woody.

LORD OF THE WHITE ELEPHANT, a title of the king of Burmah.

LORD OF THE OXEN, or Shora-Pati, a title of the king who drove Semiramis back across the Indus.

LORDS OF CREATED BEINGS. Menu describes these as being produced by one of the hindoo triad, but in a legend they are ascribed to the joint powers of the three great personified attributes of Brahma, Vishnu and Siva. They are, in places called Muni, in other passages they are considered as Brahmadia, or Prajapati, and as Rishi. — *Moor*, p. 91.

LORD'S PRAYER was published in 1548 in fourteen languages, by Bibliaudro; in 1591 in twenty-six languages, by Rocca (*Bibliotheca Apostolica Vaticana*, a fratre Angelo Rocca: Romæ 1591, 4to.); in 1592 in forty languages, by Megiserus ("Specimen XL. Linguarum et Dialectorum ab Hieronymo Megisero à diversis auctoribus collectum quibus Oratio Dominica est expressa:" *Frankofurti*, 1592); in 1593, in fifty languages, by the same author (*Oratio Dominica L. diversis linguis*," cura H. Megiseri: *Frankofurti*, 1593, 8vo.) The Bible has been printed and distributed in India in twenty-five different languages, in ten of which

LO-SHU.

between six and one hundred thousand copies have been printed, and in Tamil 1,560,950 have been issued since 1706, when the Bible was printed in that language. The Bible was printed and issued in Bengalee in 1796, and in Malayalum in 1816. The whole of the copies printed in the twenty-five Indian languages is 4,772,621.

LORI, or Ground Parakeets, the sub-family Platycercinæ of the family Psittacidae, and order Scansores or climbers, which may be thus shown :

Order I.—Scansores or climbers.

Fam. Psittacidae.

Sub-Fam. Cacteuinæ, 2 gen., 5 spec., viz., 1 Calyp-
torhynchus, 4 Cactus.

Sub-Fam. Psittacinæ, Parrots, 3 gen., 13 sp., viz.,
1 Coracopsis : 2 Tanygnathus, 10 Ptilinopus.

Sub-Fam. Platycercinæ, Ground Parakeets, 2 gen.,
2 sp., viz.,

1 Aprosmictus : 1 Platycercus.

Sub-Fam. Loricinæ, Lorics, 4 gen., 1 sub-gen. and
16 sp., viz.

Section i, tongue not filamented.

2 Electus, 3 Loriculus.

Section ii, tongue filamented.

3 Loricus, 4 Eos, 1 Trichoglossus. See Kama Loric.

A very handsome scarlet Loric was obtained by Macgillivray, closely allied to Loricus domicellus, a bird widely spread over the Indian Archipelago.—*Macgillivray's Voyage, Vol. i, p. 211.* See Loric.

LORICATI, see Cottus, Crocodilidæ, Dactylopterus.

LORICULUS ASIATICUS, see Birds, Loric.

LORIS GRACILIS, Geoff.

Lemur tardigradus, Schreb.

Stenops gracilis, Vander Hoven.

Nama-theivanga, SINGH. Tha-vanga, TAM.
Thei-vanga, TAM.

The Loris gracilis inhabits India and Ceylon. It is a species of a genus of mammals, belonging to the family Lemuridae. Its Tamil name thavangu, means "thin-bodied;" and hence a deformed child or an emaciated person has acquired in the Tamil districts the same epithet. The light-coloured variety of the loris in Ceylon has a spot on its forehead, somewhat resembling the "nānam," or mark worn by the worshippers of Vishnu, and, from this peculiarity it is distinguished as the Nama-tha. Its eyes are extracted by the Singhalese as charms and for love potions.—*Tennent; Horsfield.*

LORIUS DOMICELLA, see Psittacidae.

LOSH, HIND. Symplecos cratægoides.

LOSCHAD, RUS. Horse.

LOSHOON, BENG. Allium sativum, Linn.

LO-SHU, CHIN. As to the original of the Chinese characters, it is known that, in transacting business before the commencement of the monarchy, little cords were used, with

LOTUS.

sliding knots, each of which had its particular signification. These are represented in two tables by the Chinese called Ho-tu and Lo-shu. The first colonies who inhabited Se-chuen had no other literature besides some arithmetical sets of counters made with little knotted cords, in imitation of a string of round beads, with which they calculated and made up all their accounts in commerce.—*Astley's Collection of Voyages, Vol. iv., p. 194; Lubbock, Orig. of Civil., pp. 29-31.*

LOSHUN, BENG. Garlic.

LOSUR, HIND. Astrantia, sp.

LOT, by his younger daughter, begat Moab-Chemosi, Num. xxi, 29, was their particular deity. The other son was Ben Ammid.

LOTA, HIND. A small metal pot, made of brass or copper or iron tinned, used for drinking and ablution by hindoos and mahomedans.

LOTAK, HIND. Tribulus alatus.

LOTA-KHAR, HIND. Cyanide of potassium.

LOTA-SAJJI, HIND. The best kind of barilla.

The lotus is a very sacred flower among the hindoos; it enters into all the ornaments of brass vessels used in the temples; it is alluded to in the most popular poems, and the poets say, that the lotus was dyed by the blood of Siva, that flowed from the wound made by the arrow of Kama, the Indian Cupid, as in Midsummer-Night's Dream, Act ii.

Yet marked I where the bolt of Cupid fell

It fell upon a little western flower—

Before, milk-white, now purple with Love's wound

And maidens call it love-in-idleness.

The lotus flower is also considered an emblem of beauty; and in the Ratnavali, or, the Necklucce—a Sanscrit play written in the twelfth century, Vasantaka says to his lady-love: My beloved Sagarika, thy countenance is as radiant as the moon; thy eyes are two lotus-buds: thy hand is the full-blown flower, and thy arms its graceful filaments. In hindoo

theogony, the lotus floating on the water, is an emblem of the world: the whole plant signifies both the earth and its two principles of fecundation. Lotus is, however, a name given to three plants, the *Nelumbium speciosum* or Egyptian Lotus figured on the ancient monuments of Egypt and India. It is now extinct in Egypt but grows in the south of Asia and in the islands of the Archipelago. One lotus of the ancients was the *Melilotus officinalis*, and the lotus of the lotophagi is by some thought to be the fruit of the *Zizyphus lotus*, *Desfontaines*, but by Munby, supposed to be that of *Nitraria tridentata*. Pliny and Sprengel say the lotus of the lotophagi is the *Celtis australis*, *Linn.* Lotus leaves and fibres are supposed to be of great cooling efficacy in allaying the fever of passion.

Nymphaea lotus of India, the nenoufar of the hindoos and nufar of the Arabs is that usually called the lotus, its stem is extensively used as an article of food among the Kashmirians. When the plant has come to maturity, and the leaf has begun to decay on the water, the stem is tender, and when well-boiled is said to be palatable and nutritious. The plant or plants referred to by classical authors under the name of lotus is however a subject which has engaged the attention of numerous commentators as well as of botanists. To the difficulty of ascertaining the identity of a plant but imperfectly described, has in this case been added that of the same name having been applied to several very distinct plants. Fee, in his 'Flora de Virgile,' enumerates no less than eleven to which the name Lotus was applied. Among the herbaceous, are the *L. sativa* and *L. sylvestris* of Dioscorides; the first, he states, is also called *L. trifolium*; it is supposed by some botanists to be *Melilotus officinalis*, and by others to be *M. cœrulea*. Dr. Sibthorp has fixed upon *M. messauensis* as the plant. The *L. sylvestris* of Dioscorides, also called *L. libyon*, a native of Libya, and about two feet high, with leaves like those of *L. trifolium*, and fruit like that of feungreek, is thought to be the *Trigonella elatior* of Sibthorp, which he found in Asia Minor and in Cyprus. Both kinds are described by the Arabs under the names of *Handuchocha*, or *Hundkookee*, *Garch* and *Thush*.

The celebrated *D. lotus*, a native of Africa, and now common in the south of Europe, bears a small yellow sweetish fruit about the size of a cherry, and has by some been supposed to be the famous lotus of the lotophagi; but this is more likely to have been the jujube, called by botanists *Zizyphus lotus*. Lotus of the ancients is also supposed by Mr. Munby to be the *Nitraria tridentata* of *Desfontaines*,

and is called Damouch by the Arabs of the desert of Soussa near Tunis. Its berries have intoxicating qualities. The fruit of the *Zizyphus lotus* is dry and unpleasant, and that of the *Celtis australis* is unlikely to have been the article used by the Lotophagi.

The Lotus flower on the ancient monuments of Egypt, is that of the *Nelumbium speciosum*. It is now however extinct there, but Speke found the Nyanza thickly covered with them. The Nile was a sacred river: many of its plants, as the *Faba ægyptiaca*, a species of bean, and the lotus, were sacred also; and the former on account of its resemblance to a boat, and the latter from its well-known quality of always floating above the surface of the water, were adopted very generally as symbols of the ark. The Egyptian priests were accustomed to crown themselves with the lotus. From Iamblichus we learn, that a man sitting upon the lotus, surrounded with mud, was an emblem of the sun; and from Plutarch, that the sun was represented by the symbol of an infant sitting upon the same plant. "It is manifest," says Faber, notwithstanding the physical refinements of Iamblichus and Plutarch upon these hieroglyphics, that something more must be meant by them than the mere natural sun; and I apprehend that in both cases, the person, who sits upon the lotus, is the great solar patriarch Noah, and that, in the latter, he was represented as a child, in allusion to his mystical second birth. In the Japanese mythology we find the same symbol: the goddess Quamwon is represented sitting upon the same aquatic plant. In China, the deity upon the lotus in the midst of waters, has been long a favourite emblem: and the god Vishnu, in the hindoo mythology, is still represented in the same manner. In connexion with this diluvian emblem, Diana is mentioned by Strabo, Artemidorus and Pausanias, by the title of *Linnatis* or the maritime deity; in an ancient inscription in Gruter she is also called *regina undarum*, the queen of the waves; and Orpheus invokes her under the appellation of the preserver of ships. The Lily, of 1 Kings, vii, 26, the emblem of the Israelites is supposed to be the lotus. Lotus is the symbol of buddhism. The mystic lotus, with the hindoos is sacred to Lakshmi, the wife of Vishnu, hence called *Kamala*.—*Wilson's Hindoo Theatre*, p. 296; *Hind. Theat.*, Vol. ii, p. 276; *Chow Chow*, p. 199; *Eng. LOTUS JACOBÆUS, tolerably ornamental plants, closely allied to the *Cytisus argenteus*, and grown in a similar manner.

LOUGH DIVER, a name for *Mergus albellus*.

LOUKADA, TEL. *Bigelowia lasiocarpa, W. & A., 1344, Spermaceae stricta, R. i., 370.*

LOUK-KA. The green dye of China, the "louk-ka," "lo-kao," or "king-lok," was first made known to Europe in 1845, since which time, scientific men have prosecuted inquiries regarding it. Its price in China has continued steady at 24 dollars the catty. In China, the green cloths dyed by this material, are called liou-sai, but are known to the trade as so-lo-pou, green colour cloth, when dyed by the bark: nghion-lo-se (green nymphæa colour,) and nghion-lo-pou (green nymphæa cloth,) that is, cloth dyed with the lo-kao of the colour of the leaves of the nymphæa. Each piece of liou-sai, is one foot or one foot one inch broad, and in 1848, cost from 50 to 53 cents. In addition to the lo-kao, the French Consul, M. Montigny, sent one green dye stuff called pih-chou-elle, ten cattis of which cost 4,920 sapeques: and another called tong-loh, green paint said to be prepared from the no-me, fifty cattis of which cost 20,800 sapeques. Lo-kao or loukao, in Chinese signifies green glue or green lac, and all who have sent samples of the green dye itself, call it lo-kou or lo-kiao. In Canton it is louk-ko; in Fokien, liok-koa and lek-ko. The first considerable consignment of the green dye was received in Paris in 1853, since which date, it has become an article of trade. At the Universal Exhibition held at Paris in 1855, samples of green dye were exposed, and Dr. Royle subsequently stated that there are three kinds of the green dye of China or green indigo. The first from China, the second from the Burman empire, and the third from Assam. That from the valley of the Brahmaputra, in Assam, is called roum, and is extracted from a species of *Ruellia*. This plant, the specific name of which is not known, or a nearly allied species is cultivated with the same object in Pegu and Burmah. It is altogether different from the bila-roum, the product of the *Wrightia tinctoria*, R. Brown, which by some is supposed to be the *R. comosa*, Wall., the *Ebermaiera axillaris*, DeCand. Others point to the *R. comosa*, Roxb., which is the *R. eucoma*, Steudal., and the *Buterea ulmifolia*, DeCandolle. MM. Edan and Remi, in 1854, reported that they had procured a

very fine green from the fruit of the lo-za, but were unsuccessful in regard to the bark. Mr. Fortune informed Mr. Edan that without doubt the bark of the lo-za was employed to furnish the stuff with which to dye cloth green, and that the fruit was used in the preparation of green paint for paper. These points were repeated by M. Remi in 1855. All the experiments hitherto made with the bark and the leaves of the *Rhamnus chlorophorus* and *Rhamnus utilis*, have not been decisive. M. Persoz has succeeded in extracting a yellow dye from the bark of *Rhamnus chlorophorus* and the berries of the *Rhamnus utilis*, but he could not discover a trace of the green dye in the extracts prepared from the berries of both kinds, which were sent to him by the Agri-Horticultural Society of India. Nevertheless, the united testimony of Fathers Helot and Aymeri, MM. Arnaud-tizon, Edkins, Fortune and Remi, is to the effect that it is the bark of the branches, and perhaps also of the roots of the *Rhamnus chlorophorus* and *Rhamnus utilis*, but especially of the former, that gives to the green dye that brilliant colour which it assumes under the influence of artificial light. The fruit, at least that of the *Rhamnus chlorophorus*, probably yields a green colouring matter analogous to the bladder green, and differing from the true green dye both in colour and properties. The Chinese declare that other species of the same genus have dyeing properties. The Pe-piu lo-chou, is the *Rhamnus chlorophorus*, DeCaisne; and the hong-pi-to-chou, the *Rhamnus utilis*, but, until some European chemist shall have discovered traces of the green dye in some of the parts of the plants, the flowers, the berries, the seeds, the leaves, the bark or the root, it cannot be asserted that the plants are really those the Chinese use to dye their cottons with or from which they prepare the lo-kao. There are some European plants which dye a green colour, the blue-flowered Scabious, is used for that purpose in Sweden: the *Melissa officinalis* yields under the action of spirits of wine, a permanent green dye, and the *Mercurialis perennis* yields a permanent blue-green. The green dyes from the *Ruellia*; *Justicia tinctoria*, Lour.; *Adenostemma tinctorium*, Cass.; *Sansevieria late-virens*, Ham.; *Asclepias tingens*, Roxb.; *Melissa officinalis*, Linn., have not yet been examined. Various plants stated to yield a green dye, colouring matter have been examined, but in vain for the green dye of China, these are the *Arundo phragmitis*, Linn.; the artichoke, deadly night shade, wild chervil, ash tree, lucerne, *Lycopersicum esculentum*, Mill.; *Mercurialis perennis*, Linn., *Ronabea arborea*, Blanco;

the groundsel and the common field clover. M. Michel obtained tolerable greens from the berries of *Rhamnus catharticus*, Linn., and *Rhamnus alaternus*, Linn., but not improving by artificial light. He found that cloth taken out of the bath with a light mauve dye, and placed at night on the grass, had assumed towards morning and long before it was exposed to the rays of the sun, a deep green colour. A damp atmosphere and dew were found to increase the intensity of the tint. The lower side near the grass was scarcely at all coloured, and a cloth left all night in a dark room was found in the morning to be unchanged. M. Persoz found the fruit of a buckthorn to yield a pretty lilac or silk. The green fruit of the *Rhamnus infectorius*, Linn. (Avignon berries; *R. saxatilis*, Linn.), Persian berries of *R. alaternus*, Linn., and *R. amygdalinus*, Desf., afford a yellow colour. The fruit of the *R. frangula*, Linn., gathered in July and August before they are ripe, yield according to Dambourney and Leuchs, a fast and brilliant yellow; according to Buchoz, a green; and when they are ripe, in September and October, they dye a purplish blue without any mordant, and green, violet and blue-violet, or blue according to the nature of the mordant employed. Dambourney obtained on wool, from the juice of the ripe berries fermented, very fine and fast greens, varying from an apple to a dark-green. The colouring matter of the berries of the *R. infectorius*, is yellow before they are ripe, and dark-purple-red so soon as they have attained maturity. Buchoz notices similar peculiarity in the fruit of the *R. catharticus*, before ripening it yields a saffron-red; after maturity, a green, known as a bladder-green, and still later a scarlet. According to Waldstein and Kitaible, the green berries of *R. tinctorius* have dyeing properties similar to those of the fruit of *R. catharticus*, but more esteemed by the dyers. The inner bark of *R. infectorius* dyes yellow, when fresh: brown-red, when dry. The dry bark of the *R. frangula* yields a brown or dark-red, and the fresh a yellow dye, and its root as well as the bark and seeds of *R. catharticus*, a yellow and volatile colour named Rhamno-xanthine, which is dissolved by the alkalis and converted into a magnificent purple. The bark of *R. catharticus* and *R. alaternus* dye yellow; the wood of the latter species dyes dark-blue, and the root of *R. infectorius* a brown. The leaves of *R. alaternus* yield a yellow colour, and those of *R. frangula*, a greenish yellow. A mixture of the cuttings of *R. alaternus*, which yield a dark-blue, with the fresh bark of the same buck-thorn and of *R. catharticus*, *R. frangula*,

and *R. infectorius*, which contain a yellow colouring matter, ought to produce a green. The European Rhamni contain a volatile principle, and nearly the same changes take place in the colouring matter of the several species, from red to violet, to blue, to green, and to yellow. The lo-kao possesses similar qualities, and it is possible that the green dye, so remarkable when exposed to light, is a compound of blue and yellow having separately the same property and united in the bark of *R. chlorophorus*. But M. Rondot suspects that the supplementary yellow requisite to produce the green of lo-kao is not obtained from one of the Rhamni, but from the hoang-chi, the fruit of *Gardenia*, or the hoai-hou, the flower bud of the *Styphnolobium japonicum*. In 1855 when Mr. Robert Fortune was sent to China by the E. I. Company to procure tea plants for the nurseries in the Himalaya, he was particularly directed to give his attention to plants of that country stated to produce a green dye. Accordingly he sent seeds and samples to the Agri-Horticultural Society of Bengal, from which numerous plants have been forwarded to all parts of India. It seems established that the trees from which the green dye is prepared are two species of Rhamni, one wild, called by the Chinese white skin, and which grows in abundance in the vicinity of Kiating and Ningpo. The other is called yellow skin by the Chinese, is cultivated at Tsoh-kaou-pang, where some thirty men are employed in the preparation of the dye stuff. The flowers, leaves, roots, bark and fruit have all been indicated as the part of the plant from which the lo-kou was prepared. Mr. Fortune sent to India and to England plants of both the cultivated and wild species. The wild species is a shrub and is called hom-bi-lo-za, from the circumstance that when its bark is boiled in water, a white scum is formed, which subsequently passes to rose-hom-bi, meaning red-scum bark. The pe-pi-lo-chou, or *Rhamnus chlorophorus*, is cultivated between 25° and 36° of N. L., but more especially about the 30° and 31° of N. Lat. The hong-pi-lo-chou or *Rhamnus chlorophorus*, is mentioned as high as N. L. 39 and down to N. L. 30°. This seems the hardier buck-thorn and capable of withstanding the severe frosts of Tchi-li, but it is evident that both species exist in abundance in the northern parts of the province of Tche-kiang, over a space of 45 square miles.—*Report on the Green dye of China.*

LOUNG-KIO, a bird of Chinese Tartary described by M. Huc. It is about the size of a quail, of an ash colour, with black spots, its eyes of a brilliant black, and surrounded

LOVE APPLE.

with a bright sky-blue rim. Its legs have no feathers, but are covered with long rough hair, and its feet are not like those of any other bird, but resemble those of the green lizard, and are covered with a shell so hard as to resist the sharpest knife. This singular creature, which seems to partake at once of the character of the bird, the quadruped, and the reptile, is called by the Chinese Loung-kio, that is, Dragon's Foot. They generally arrive in great flocks from the north, especially when much snow has fallen, flying with astonishing rapidity, so that the movement of their wings is like a shower of hail. When caught they are extremely fierce; the hair on their legs bristles up if you approach them. — *Huc's Recollections of Journey*, p. 92.

LOUR, a river near Mattea Cottali in Sylhet.

LOUR, the inhabitants of Luristan, a Persian province joining the pashalik of Bagdad on the east, and extending to the Bachtiyari mountains. — *Baron de Bode's Travels in Luristan*; Sir H. Rawlinson's *Memoir Trans. Geog. Soc.*, 1839; *Ferrier, Caravan Journeys*, p. 8. See Lur, Luristan.

LOUREIRO, J. de. Father Loureiro, a native of Portugal, author of the *Flora Cochinchinensis*, 1 vol., 1790, resided for thirty-six years in the kingdom of Cochinchina, whither he proceeded as a missionary, but finding that Europeans were not permitted to reside there without good cause, he entered the service of the king as chief mathematician and naturalist. The *Flora Cochinchinensis* was published at Lisbon, in two volumes quarto, in 1790; and a second edition, edited by Willdenow, with a few notes, appeared in octavo, at Berlin, in 1793. In the herbarium of the British Museum there are several small collections, which are of great importance to the Indian botanist, especially one containing many of Loureiro's plants, which are not readily recognizable, at all events as to species, by the descriptions in the *Flora Cochinchinensis*. There are also considerable numbers of specimens forwarded to Sir Joseph Banks by Roxburgh, Hamilton and Russell, which are occasionally of use in determining the species described by Roxburgh. The British Museum also contains König's collections and manuscripts, Kämpfer's Japan and other plants, and Hermann's herbarium. — *Hooker and Thomson's Flora Indica*.

LOUSE-WORT, *Delphinium staphisagria*.
LOUZ, ARAB. *Amygdalus communis*, Sweet almond.

LOUZAN, MALAY. *Amygdalus communis*.
LOUZ UL MUER, AR. *Amygdalus communis*, *Lin.*, Bitter almond

LOVE-APPLE, or tomato, the *Lycopersi-*

LUBAN.

cum esculentum, is a native of South America and of a genus of the same family as potatoes. There are two sorts, single and double: they may be sown immediately the rains commence, in beds; afterwards transplanted in rows, two feet apart, and trailed upon sticks of a strong description. If the soil is good, they will grow to seven or eight feet in height. The double, which are the finest, if sown in June, ripen in October. The lower branches should be pruned, and a succession of crops may be kept up until April. The small single tomato, with a slight protection from the dry winds, will continue until the rains. — *Jaffrey*.

LOVE KLE, SIAM. Guava tree.

LOVE LIES BLEEDING, *Amarantus*.

LOVI LOVI, SINGH. *Flacourtia inermis*, Roxb.

LUAR, HIND. *Tecoma undulata*.

LUBAN, in lat. 13° 44' N., 101½ miles long, is the largest island of a detached group fronting the south-west end of Luzon and the north-west end of Mindoro. It is high in the middle but low at each extreme.

LUBAN, ARAB., DUK., GUZ., HIND., MAL., PERS. From Greek Libanos, Benjamin;

LUBBAY.

Otibanum; resin of *Boswellia thurifera*, frankincense; *Styrax benzoin*.

LUBANAH, HIND. A caste of agriculturists, also grain carriers, settled in Bagur and Kantul; they live in villages, sometimes mingling with other cultivators, and sometimes having a village exclusively to themselves. They are sudra hindoos, originally from Guzerat, and are a quiet and inoffensive race, differing widely from the Binjarri, though engaged in the same trade. The Lubanah are also cultivators, but follow no other occupations.—*Malcolm's Central India*, Vol. ii, p. 152.

LUBANI AOD, D.K. Benjamin.

LUBECK ISLAND or Bawean, one of the Carimon islands, is in lat. 5° 49' S., long. 112° 46' E., and is about 30 miles in circumference. See Lubek.

LUBAR, HIND. *Phytolacca decandra*.

LUBBAT-UT TUARIKII, see Abdul Latif.

LUBBAY are in large numbers on the Eastern Coast, chiefly between Pulicat on the north, and Negapatam on the south; their head-quarters being at Nagor, near Negapatam; the burial place of their patron saint Nagor Meer Sahib, to whose shrine numerous pilgrimages are made by the tribe. They are believed to be the descendants of mahomedans and hindoos, and are by some supposed to have come into existence during the mahomedan conquest, when numbers of hindoos were forcibly converted to the mahomedan faith, but the prevailing belief is that, like the Moplah of the Western Coast, they are descendants of Arab merchants and the women of the South of India. They are mahomedans and practice circumcision. Physically, they are good-looking, tall, well-made, and robust, are sometimes inclined to obesity, of light complexion and well-developed limbs, not unlike the Moplah of the Western Coast in their general configuration. The cranium is singularly and strikingly small; the eyes are slightly oblique and not wanting in expression; cheek bones prominent; lower jaw, large and heavy; beard in some instances full and long, but in most cases decidedly sparse. They generally wear the Loongee, a cloth loosely wrapped round the waist and extending below the knees; they also wear bright-coloured jackets, occasionally turbans; the most frequent head-gear being a skull cap, fitting closely to a shaved head. Like mussulmans they live freely on animals and vegetables, making use of all kinds of flesh meats, saving pork for which they have a religious abhorrence. Their language is Tamil, though some talk a little Hindoostanee. They are exceedingly industrious and enterprising in

LUCH-CH-HA.

their habits and pursuits, there being hardly a trade or calling in which they do not try to succeed. They make persevering fishermen and good boatmen. They are lapidaries, weavers, dyers, mat-makers, jewellers, gardeners, bazaarmen, grocers, boat-makers and owners, and merchants. As regards the leather and horn trade, they excel as merchants; in short, there are few classes of Natives in Southern India who, in energy, industry, and perseverance, can compete with the Lubbay. The Lubbays of Tinnevely are said to be descendants of Arab traders, who settled on the sea coast towns some three or four centuries ago, and formed connections with the lower caste Tamil women.—*Drs. Bilderbeck and Wilson in Mad. Govt. Pro.*

LUEK of Avicenna, *Cordia myxa*, Linn.

LUBEK, the old name of the island of Bawean, forming a portion of the residency of Sourabaya, lies about sixteen Dutch (forty-eight English) miles to the north of Ujong Pangka, in 5° 90 South latitude, and 112° 38' W. longitude (Greenwich), and contains about 36 square (Dutch) geographical miles, 44 English miles. It is one of the common islands and is about 30 miles in circumference. The country in general is very mountainous, and it is only near the sea that some plains are found, on the largest of which, about 3½ miles in circumference, the principal village Sangkapura is situated. The Bawean race are probably descendants of the Madurese, whose language with a few modifications prevails, though they differ from them in dress; but in this respect agree closely with the Bugi. The inhabitants of the dessa Dipanga employ the Javanese language.—*Journ. Ind. Arch.*, Vol. v, No. 7. See Bowcan, India, Jati, Lubek.

LUCIOCEPHALIDÆ, is a family of plants of one genus *Luciocephalus*.

LUCK, is the past tense and past participle of the Anglo-Saxon "*læccan*," to catch, and means anything caught. Thus the haul of the fisherman would be his "luck." At times almost fruitless, at times, so successful that the nets seem ready to break, such strange results are inexplicable to him except on the ground of some mysterious fate working in particular places at particular seasons. Thus to the fisherman, luck does not mean mere chance. His use of the word is not so far off the way in which it has been used in the early translation of the Psalter given in the Book of Common Prayer. In the last verse of the 129th Psalm it is said, "The Lord prosper you : we wish you good luck in the name of the Lord." Nevertheless his superstition comes out in the way he watches for omens of this good luck. Sometimes at the beginning of a voyage a turbot will leap out of the net upon the deck. Immediately the crew gather round it, intent upon watching it as it lies fluttering, gasping for breath. Should it manage to throw itself quite over, the augurs are delighted ; they will make a hundred pounds by the voyage. If by some extraordinary effort of nature it throws itself over again, their joy knows no bounds. An old fish-wife sells her first lot of herrings and the purchaser gives her a silver shilling. She spits upon both sides, and puts it away in the deepest recesses of her innermost pocket. That silver shilling was an omen of good luck, but it is not wise to parade her happy fate, lest some Nemesis should mar it in a moment, so she appears to treat it with contempt and hides it out of sight. The word used by the hindoo, for luck, is the name of the goddess Luchmi or Lakshmi, or from the Sanscrit word Luchmes. The hindoo phrase, she is the Lutchmee to her man, signifies that she is the source of good luck to her husband.—*Great Yarmouth and its Fishermen in Golden Hours ; Tr. Hind., Vol. ii, p. 344.*

LUCKAIREE, a small river of Banda.

LUCKIAH, a river near Moraparah in Dacca.

LUCKMUNA, Beng. *Atropa acuminata, Royle.*

LUCKNOW, the chief town of Oudh. It is about 50 miles from Cawnpore. Its population is estimated at 300,000. It was taken by the Indian rebels in 1857. It was entered

LUCON.

on the 25th August 1857 by general Havelock and Outram and was relieved by general Havelock on the 25th September 1857. The second relief of Lucknow was effected by Sir Colin Campbell on the 17th November 1857, its final capture occurred on the 19th March 1858. Lucknow was so named by Rama, in compliment to his brother Lachhman.

LUCKPUT, a fort 2½ miles in circumference on the bank of the Kooré river, at the western extremity of Cuch. The stones from which it was built, have been taken from Wagam-chaora-ka-Ghad, a ruined city of the Chaora Rajputs.

LUCON, or Luzon, the great group of the Philippines, although contiguous to the proper Indian Archipelago, differs materially in climate and the manners of its inhabitants. It extends over fifteen degrees from near lat. 5° to 20° north, and consists of many islands to which only Lucon and Mindanao are of great size. The bulk of the people are of the same tawny-complexioned, lank-haired, short and squab race, as the principal inhabitants of the western portion of the Indian Archipelago. The focus of the aboriginal civilization of the Philippines, as might be expected, has been the main island of the group, Lucon. This is a corruption of the Malay and Javanese word *lasung*, meaning a rice-mortar. The Spaniards are said to have asked the name of the island, and the natives, who certainly had none, thinking they meant a rice-mortar, which was before the speakers at the time, answered accordingly. In the Philippines are many separate nations or tribes speaking distinct languages, unintelligible to each other. The principal languages of Lucon are the Tagala, the Pampanga, the Pangasinan, and the Iloco, spoken at present by a population of 2,250,000 ; while the Bisaya has a wide currency among the southern islands of the group, Leyte, Zebu, Negros, and Panay, containing 1,200,000 people. Mr. Crawford tells us that it does not appear, from a comparison of the phonetic character and grammatical structure of the Tagala, with those of Malay and Javanese, that there is any ground for fancying them to be one and the same language, or languages sprung from a common parent, and only diversified by the effects of time and distance, and that an examination of the Bisaya Dictionary gives similar results. There are negroes in several islands of the Philippine Archipelago, especially of the principal island, Lucon, and in Negros, said to take its Spanish name from them.—*Crawford's Malay Gram. and Dict., Vol. i, p. 163.* See Archipelago, India, Luzon, Monsoon, Typhoon.

LUDZU COUNTRY.

LUCRUBAU, SEEDS.

Ta-fung-tze, CHIN.

Seeds of the *Chaulmoogra odorata*.

LUCULIA GRATISSIMA, one of England's common hot-house ornaments, grows in profusion on the dry micaceous rocks at the Tambur river in East Nepaul; also in Sylhet, its gorgeous heads of blossoms scent the air, and *Thunbergia convolvulus* and other climbers, hung in graceful festoons on the boughs.—*Hooker's Him. Jour.*, Vol. i, p. 193.

LUCULIA PINCEANA, makes a gorgeous show in the Khasia hills in October.—*Hooker, Him. Jour.*, Vol. ii, p. 286.

LUD or **Ludi**, a Semitic race, *i. e.*, the original inhabitants of Asia Minor, Pontus and Cappadocia as far as the Halys where the historical Lydians were seated. The race which settled west of Arphaxad, is the representative of the Semitics who went into Asia Minor and settled there, but afterwards passed the Halys, when they founded the Lydian empire. The Greeks were acquainted with the Patriarchs of this race, under the names of Ninus and Bel (Assur and Elam.)

LUDAR, Ban Ludar, HIND. *Abies smithiana*.

LUDDOO, HIND. A sweetmeat.

LUDDOO-BANDHNA, HIND. Folding hands, a mahomedan ceremony.

LUDEA, a river of Almorah.

LUDHIANA, a town, in L. 30° 55' 4" N long. 75° 50' 2" E, in the Panjab, district of Sirhind, near the left side of the Sutlej. The level of the Sutlej, 893 feet above the sea.—*Schl., Herm.* See *Loodhianna*.

LUDUMA, RHOT. *Decaisnea*.

LUDDUT, HIND. *Codonopsis ovata*.

LUDWIGIA DIFFUSA, *Ham.*; *L. jussieoides*, *L. oppositifolia*, *L. Perennis*, *Linn.*; *L. zeylanica*, *PERS.*, are syns. of *L. parviflora*, *Roxb.*

LUDWIGIA PARVIFLORA, *Roxb.*

<i>L. jussieoides</i> ,	<i>Wall.</i>	<i>L. oppositifolia</i> ,	<i>Linn.</i>
<i>L. diffusa</i> ,	<i>Ham.</i>	<i>L. zeylanica</i> ,	<i>Pers.</i>
<i>L. perennis</i> ,	<i>Linn.</i>	<i>Jussiaea caryophylla</i> ,	<i>Lam.</i>

Karambu, MALEAL. | Bun lubunga, BENG.

This plant grows in Bengal, the peninsula of India, and is common in stagnate water, in Tenasserim. It is used in medicine.—*Mason*.

LUDZU COUNTRY, extends westward beyond the Noutiang, and is inhabited by a tribe of that name. Their village consists of a dozen log-houses. The Ludzu are barbarous in their habits and mode of life. Except the christian converts, who have adopted the ordinary Chinese costume, and whose pursuits are those of industrious and peaceable cultivators, the rest of

LUFFAFA.

the tribe are a terror to their neighbours, against whom they carry on a continual warfare. In religion they sacrifice fowls to propitiate the evil spirit. In appearance they are darker than any others of the neighbouring tribes and wear their hair long. Their costume, consists of a girdle of cotton cloth or skins—at least, the warriors of the tribe, on their way to fight in Yunnan, had no other garments except a few of the leaders who wore cloaks of leopard, goat, or fox skins hanging from their shoulders. Their arms, like those of the other tribes consisted of knives brought from the Khamti country, on the borders of Assam, spears and cross-bows. They owe no allegiance and pay no tribute to the Chinese authorities, but occasionally serve as voluntary allies for the sake of plunder and could muster about 1,200 fighting men.

LUFFA, a genus of plants belonging to the natural order Cucurbitaceæ, which owes its name to the Arabic word for *Luffa egyptiaca*, viz., "louff," "loof."

LUFFA EGYPTIACA.

L. pentandra, *Roxb.* *W.* *Momordica luffa*, *Wild.* and *A.* *W. Ic.*

A remarkable kind of gourd: when quite ripe, within, it has no pulp but is dry and filled with netted fibres, very much interwoven. It is used in Turkish baths as a scrubber. It is a useful product, and if cultivated would probably find ready sale. It is of easy culture and should be trained on a raised mound, or platform, similar to the snake-gourd, &c.—*M. E. J. R.*

LUFFA AMARA, Roxb.

Luffa plukenetiana, *Ser.*, in *D. C. Prodrumus*.

Tito-dhundul,	BENG.	Kurella,	HIND.

Luffa amara,	FR.	Cheti bira,	"
Luffa bittere,	GER.	Cledu bira,	"
Kerula,	HIND.	Sendu birakai,	"

Every part of this plant is remarkably bitter, the fruit is violently cathartic and emetic. The juice of the roasted young fruit is applied to the temples by the natives to cure headache. The ripe seeds either in infusion or substance are used as emetics and purgatives.—*Roxb's Fl. Ind.*, Vol. iii, p. 715.

LUFFA BINDAAL, a climbing dioecious plant, a native of Hindustan, leaves toothed and 5-angled, male flowers in racemes; female flowers solitary; fruit round, echinate, with long, straight, ciliate bristles. It is considered in northern India a powerful drastic in cases of dropsy.—*Roxb. Fl. Ind.*, iii, p. 717; *O'Shaughnessy*, p. 546.

LUFFA BITTERE, GRÆ. Luffa amara.

LUFFAFA, AR., HIND., PERS. A sheet used in shrouding the dead, a cover, an envelope, properly *luffa*.

LUGHAR.

LUFFA FOETIDA, Cav.

Luffa acutangula, Roxb., *W. & A.*, *Racem.*

Ghia-tori,	"	Neti bira, Nune bira,	TEL.

Five stamened, much cultivated in the rains. It is a long gourd with a striped skin, considered by the natives a delicious vegetable. *L. pentandra*, *L. acutangula*, *L. clavata*, and *L. racemosa*, are cultivated or found wild in all parts of India.—*Gent. Med. Tep.*, p. 209; *O'Sh.*, p. 346; *Roxb.* See *Cucurbitaceae*, Gourd.

LUFFA PLUKENETIANA, *Ser.* in *D. C. Prods. syn. of Luffa amara*, *Roxb.*

LUFFA TENERA, *Vern.* Karwa turai, HIND., receives from Royle, the name of Kali-tori.—*O'Shaughnessy*, p. 346; *Powell's Hand-book*, Vol. i, p. 348.

LUFFE AMERE, *Fr.* *Luffa amara*.

LUGAR, HIND. *Hordeum hexastichum*.

LUGGUN, HIND. A large flat hollow utensil in the form of a basin.

LUGGUR or Laghar, the female; Juggur or Jaghar, male, a large sparrow-hawk, native of Sind, with dark eyes, trained for the season, and then let loose.

LUGHAN, see Kaffir.

LUGHAR, a loyal and well-affected tribe of Affghans who live near the Kosah tribe, partly in the hills and partly in the plains. Their country extends from Fidore southwards about 30 miles. In these hills is situated the town of Sukkee Lurwar, a place of some sanctity, and venerated by both hindoes and mahomedans. An annual fair is held here. The pass which runs by this point is one of the chief thoroughfares to Kandahar, and the route traverses the Khutran country to the westward. The Khutran and the Kosah were greatly favored by the government of Sawun Mull, who desired to use them as a counterpoise against other tribes. See Jellalabad, Khyber, Kabul, Kohistan.

LU-KEU.

LUGHMAN. Within the last three centuries there were people called Ghabar in the Kabul countries, particularly in Lughman and Bajur, and in the days of Baber there was a dialect called Ghabari. We are also told that one of the divisions of Kafiristan was named Ghabrak. But it does not follow that the people called Ghabar then professed the worship of fire.

LUHEA PANICATA. In Brazil the bark of this evergreen climber is used for tanning leather.

LUHUD-CHURNA, lit., filling the grave, a mahomedan ceremony.

LUHUPPA, a rude tribe near the source of the Irawadi. See India.

LUH-YING, of China, are the troops of the green standard. Accustomed as we are in other countries to see armies employed either in attacking foreign states, or in defending their own against invasion, the list of responsibilities imposed on the Luh-ying, as a police force, it is to be regarded in the light rather of an immense constabulary than of a fighting army. Some small bodies of it are detached on the west frontier to assist the Banner garrisons in maintaining the Imperial authority over regions subjected to it at a comparatively recent period.—*Wade's Chinese Army*, p. 73.

LUI-CHIEW-FU, see Tonking.

LUI, HIND. Flannel.

LUI-SHIN. According to the Chinese, Lui-shin is the spirit that presides over thunder, the Jupiter of the Chinese. This figure has the wings, beak and talons of an eagle. In his right hand he holds a mallet, to strike the kettledrums with which he is surrounded, whose noise is intended to convey the idea of thunder, whilst his left is filled with a volume of undulating lines, very much resembling those in the hands of some of the Grecian Jupiters and evidently meant to convey the same idea, namely, that of the thunderbolt, or lightning.—*Baron Macartney's Embassy*, Vol. i, p. xxxiii.

LUJJALOO, BENG. Sensitive plant, *Mimosa pudica*.

LUK, HIND. *Typha angustifolia*, also in Peshawur, &c., coarse rice, and also used to mean reeds and flags in a river, also in Bunnoo, coarse grass. See Lukh.

LUK, RUS. Onion.

LUK, is the Belooch word for a pass or defile, called Kohltul in Persian.—*Pottenger's Travels in Beloochistan and Sind*, p. 151.

LUKAT, HIND. The "loquat" or fruit of *Mespilus*, or *Eriobotrya japonica*.

LUK-CHAR, see Dyes.

LU-KEU. The Saughin river, is also

LULU.

called Lu-keu and Yung-ting. It flows a few miles to the west of Peking, over which stood the bridge which Marco Polo describes. The Venetian calls the river Pul-i-aangan, which, as Marsden suggested, looks very like the Persian Pul-i-saughiu or stone bridge, but as the name Sangkan-ho, (said to mean river of mulberry trees) is also recognized in Chinese books, the origin of the latter part of Marco's appellation seems doubtful.—*Kl. and Pauth*; *Marco Polo*, i, 34, in *Yule Cathay*, Vol. ii, p. 261.

LUKH, HIND. *Typha angustifolia*, a reed or flag, which is much used to make floor-mats, resembling the matting made out of *Typha elephantina* in the plains.—*Powell's Hand-book*, Vol. i, p. 517. See Luk.

LUKHEER, also Koot Lukheer, a dye wood or bark of Hindustan.

LUKIMPUR, see India.

LUKKEE, a range of hills in Sindh, length about 50 miles, runs S. E. from Juttee towards Hyderabad. The centre of the range is in lat. 26° N., long. 67° 50' E. Highest part 1,500 to 2,000 ft. Between Lukkee and Selwan the mountains have a nearly perpendicular face, towards the Indus, above 600 feet high. They are of recent formation, and contain a profusion of marine exuviae. Huge fissures traverse this range, and hot springs and sulphureous exhalations are of frequent occurrence.

LUKKEER, see Hot-springs, Khyber.

LUKMUNA, also Lakmani, BENG., HIND. *Atropa acuminata* and *A. mandragora*.

LUKOOCHA, BENG. Bread fruit tree, *Artocarpus lacoocha*.

LUKSHMI, a hindoo goddess, the Sakti or female energy of Vishnu, as the goddess of prosperity, she is styled Kannala.

LUKSHMI-CHARA, SANS. The latter word means deserted.

LUKSHMANA, SANS. The beautiful, from Lakshmi, a fortunate sign.

LUKUT is the chief tin-producing basin in the south of the Malay peninsula. It has a large population of Chinese, Malays and Binua, and its importance has induced the king of Salangor for some time to reside there. From Lukut, good Malay paths lead to the Langat on the one side, and Simujong on the other.—*Journ. Ind. Arch.*, December 1850, p. 754.

LULI, Guz. Anchor.

LULI, PEKS. A dancing girl, a kept woman, a common woman. See Gypsies.

LULLETPORE, in Bundelcund, noted for the ferruginous spherules which occur in the sandstone strata there.

LULLYE, MAHR. *Acacia amara*.

LULU, ARAB. A pearl.

LUMINOSITY.

LUMBA CÂRALA, DUK. *Momordica charantia*.

LUMBANG-NUT TREE, ANGLO-MALAY *Aleurites triloba*, Forst.

LUMBARI, also Lumbadi, and Lom-badi, chiefly migratory grain merchants, spread all over India, from the Panjab to Cape Comorin. The Lumbarri, are Carriers. In some districts they are addicted to thieving and robbery, and are believed to practice infanticide, human sacrifices, secret murders, witchcraft, sorcery. Their religion is a mixture of hinduism and mahomedanism, and their priests control the bands. Their dress, language, habits, and customs are peculiar. They are sworn to secrecy as to their habits, manners, doings and ceremonies, and do not let strangers into their secrets. The Lumbarri grain carriers pursue all the avocations of the Banjara, with whom, however, they do not eat or intermarry. The Banjara, of Berar, is a notorious plunderer. In the rainy season they make ghunny cloths, and engage in field labour. Their language is said to be intermediate between the Hindi of Marwar and the Mahrati. They do not eat nor intermarry with the Lumbari. The Lumbadi speak a dialect of the Hindi.

LUMBEEA, see Kunawer.

LUMBERDAR, HIND. Corruption of Numberdar.

LUMBODURA, a name of the hindoo god Ganesa, from SANS., lumba, long, and oodara, the belly.

LUMBOO ?—*Buchanania latifolia*.

LUMGUM, see Kuki.

LUMINOSITY of Sea water, which in the deep, is of a deep violet-blue, but often in the ocean are luminous sparks or points of light; also a soft liquid, general, and wide-spread, effulgence. Occasionally are moon-shaped patches of steady light and instantaneous recurrent flashes, and a milky sea is often seen. There are many minute ocean creatures, Entomostraca and others, which are luminous at night. Often the globular noctilucae are to be seen, they are $\frac{1}{15}$ to $\frac{1}{35}$ of an inch in diameter, and pyrosoma are also supposed to be causes. The cause of the milky sea is not known, but a bucket of water brought from one of the small Entomostraca, Megalopas, minute Medusæ, small Porpites, Pteropods, Annelids, Globigerinæ, &c., and all night the crustaceæ gave forth bright spots of luminous light. It is the small Crustacea (Entomostraca) and small Medusæ (Medusidæ) which seem to exhibit the more prominent luminous properties—the larger Medusæ (Lucernariidæ) as *Aurelia*, *Pelagia*, *Rhizotoma*, &c.—the *Physophorida*, the *Porpita* or *Velella*, nor the *Physalia*, or Portuguese man-of-war. The

LUMNITZERA RACEMOSA.

Protozoa, Noctiluca, however, retain their luminosity so long as they retain organic contractility. In the majority of cases of luminous Annelids, the light manifests itself in scintillations along the course of the muscles alone, and only during their contraction. With the glow-worm (*Lampyris*) there is neither combustion nor phosphorus, but the light is the product of a nervous apparatus and dependent on the will of the animal. The *Squalus fulgens* of the south seas gives forth a bright phosphorescent light, resembling that of the *Pyrosoma*. The *Geophilus fulgens* is a luminous centipede. A species of *Agaricus* of Australia emits light sufficient to show the time on a watch. The tunicated mollusc, *Pyrosoma*, gives forth a livid greenish phosphorescent glow. The *Salpa*, *Cleodora* and other points or dots are luminous. On the night of October 30th, 1772, Dr. Foster saw a very beautiful exhibition of this sort of sea-light, off the Cape of Good Hope, at a few miles distance from the shore, and while a fresh gale blew. Upon examining, like Mr. Forskal and Mr. Niebuhr, a bucket of the water on which it was displayed, he was convinced that it proceeded from living animalcules. Dr. Sparrmann observed, in the years 1772 and 1775, that the *Mollusca* and *Medusa*, both phosphorescent animals, were diffused in such masses near the surface of the ocean, and moved with such a rising and falling motion, as seemed perfectly adequate to the production of the phenomenon. The Noctiluca of the Ocean are so minute, if seventy of them ranged in a line would only make an inch, and millions could be contained in a wine glass.—*M. di Quatrefores, Kolliker* quoted by *Collingwood*; *Bennett's Gatherings*; *Niebuhr's Travels*, Vol. i., p. 441; *Hartwig*.

LUMNITZERA LITTOREA.

Pyrrhanthus littoreus, Jack.

A tree of Puto-Dinding and Penang.

LUMNITZERA RACEMOSA, Willd.

Jussiaea racemosa, Rottl.

Petaloma alternifolia, Roxb.

Combretum alternifolium, Herb., Madr.

Pyrrhanthus albus, Wall.

Bruguiera madagascariensis, Rheede, DC.

Yen-yai,

BURM. | Kara kundal, MALEAL.
" | "

This tree grows in Madagascar, also in salt marshes on the sunderbuns, in the delta of the Ganges, on the banks of salt water creeks in the Konkan, on the western coast of India, and Malay peninsula. Its strong and durable wood is used for posts and other purposes in house-building, but, in Calcutta, chiefly for fuel.—*Roxb. Fl. Ind.*; *Voigt*.

LUNAR DYNASTY.

LUMPEN, GER. Rags.

LUMRI, the country of the Bulfut tribe of Lumri, extends in the direction of Karachi until, parallel to Tatta, they are met by the Jukia, another Baloch tribe. The Bulfut boast of comprising twelve thousand khana, or families, and as many fighting-men. The Bulfut tribe of the great Lumri community, are denominated Lumri Barani in contradistinction to the Lumri tribes of Las, called Lassi. In the public records of Sind they are called Namadi, by which designation they are mentioned in the treaty between Nadir Shah and Mahomed Shah of Delhi. There are two important divisions, the Bappakhani, and the Amalani. The Lumri are addicted to the use of opium.—*Masson's Journeys*, Vol. ii, pp. 152-155. See Kelat, Loomri, Noomri.

LUMUT, see Tin.

LUN, HIND. Salt.

LUN, HIND., or luni of Murree hills, *Cotonaster bacillaris*, Indian mountain ash.

LUNA, also Moba, BENG. Anona squamosa.

LUNA, see Chandra, Lunar races.

LUNATIC.

Majzub, Majnun, Dowana,	ARAB HIND. " "	Lunatico, Alunddo, Paiti,	ITAL., SPAN. " "	TAM.
-------------------------------	----------------------	---------------------------------	---------------------	------

In Asiatic countries, lunatics are numerous. St. Luke viii, 27, mentions that there met him out of the city a certain man, which had devils long time, and wear no clothes, neither abode in any house, but in the tombs. A deranged person at liberty in the streets is almost a singular object in Britain, but it is a very common sight in India, where such unfortunate beings wander about in all manner of dresses, frequently without any dress at all; some perish while wandering from place to place.

LUNAK or Luniya, a pot herb, *Portulacca oleracea*, also *P. quadrifida*, *Chenopodium album*, and *Suaeda fruticosa*.

LUNAR DYNASTY, the Rajput races, sprung from the moon, Soma, or Chandra, through Yadu or Jadu, are called Yadu or Jadu. It has eight branches, of which the Jhareja and Bhatti in Cutch and Jeysulmir are the most powerful. The dynasties which succeeded the great beacons of the Solar and Lunar races, are three in number; 1st, The Suryavansa, descendants of Rama; 2nd, The Induvansa, descendants of Pandu through Yudishtra; 3rd, The Induvansa, descendants of Jarasandha, monarch of Rajgraha. The Bhagvat and Agni Poorana are the authorities for the lines from Rama and Jarasandha; while that of Pandu is from the Raj-Tarin-gini and Rajaoli. The existing Rajput tribes

LUNAR DYNASTY.

of the solar race claim descent from Lava and Cush, the two elder sons of Rama ; and Col. Tod does not believe that any existing tribes trace their ancestry to his other children, or to his brothers. From the eldest son, Lava, the rana rulers of Mewar claim descent : so do the Birggujar tribe, formerly powerful within the confines of the present Amber, whose representative now dwells at Anupshehr on the Ganges. From Cush, descended the Cushwaha princes of Nirwar and Amber, and their numerous clans. Amber, though the first in power, is but a scion of Nirwar, transplanted about one thousand years back, whose chief, the representative of the celebrated prince Nala, enjoys but a sorry district of all his ancient possessions. The house of Marwar also claims descent from this stem, which appears to originate in an error of the genealogists ; confounding the race of Cush with the Causika of Canouj and Causambi. Nor do the solar genealogists admit this assumed pedigree. The Amber prince in his genealogies traces the descent of the Mewar family from Rama to Sumitra, through Lava, the eldest brother, and not through Cush, as in some copies of the Poo-rans, and in that whence Sir William Jones had his lists. Whatever dignity attaches to the pedigree, claimed by the Amber prince, whether true or false, every prince and every hindoo of learning, admit the claims of the princes of Mewar as heir to ' the chair of Rama ; and a degree of reverence has consequently attached, not only to their person, but to the seat of their power. When Madajee Siudia was called by the rana to reduce a traitorous noble in Cheetore, such was the reverence which actuated that (in other respects) little scrupulous chieftain, that he could not be prevailed on to point his cannon on the walls within which consent established ' the throne of Rama.' The rana himself, then a youth, had to begin the attack and fired a cannon against his own ancient abode. Bryant, in his Analysis mentions that the children of the Cushite Ham used his name in salutation as a mark of recognition, and ' Ram, Ram,' is a common salutation in the hindoo countries ; the respondent often joining Seeta's name with that of her consort Rama, ' Seeta Rama.' In the early ages of the Solar and Lunar dynasties, the priestly office was not hereditary in families ; it was a profession ; and the genealogies exhibit frequent instances of branches of these races terminating their martial career in the commencement of a religious sect, or gotra, and of their descendants reassuming their warlike occupations. Thus, of the ten sons of Ikshwaku, three are represented as abandoning

LUNGAMU.

worldly affairs and taking to religion ; and one of these, Canin, is said to be the first who made an agnihotra, or pyreum, and worshipped fire, while another son embraced commerce. Of the Lunar line and the six sons of Proorwa, the name of the fourth was Reh ; " from him the fifteenth generation was Harita, who with his eight brothers took to the office of religion, and established the Causika gotra, or tribe, of brahmins." In the very early periods, the princes of the Solar line, like the Egyptians and Romans, combined the offices of the priesthood with kingly power, and this whether brahminical or buddhist. Many of the royal line, before and subsequent to Rama, passed great part of their lives as ascetics ; and in ancient sculptures and drawings, the head is often adorned with the braided lock of the ascetic, as with the diadem of royalty. Ferishta, also, translating from ancient authorities, says, to the same effect, that " in the reign of Mahraje, king of Canouj, a brahmin came from Persia, who introduced magic, idolatry, and the worship of the stars : " so that there is no want of authority for the introduction of new tenets of faith. Even now the rana of Mewar mingles spiritual duties with those of royalty, and when he attends the temple of the tutelary deity of his race, he himself performs all the offices of the high priest for the day. In this point a strong resemblance exists to many of the races of antiquity.—*Tod's Rajasthan, Vol. i, pp. 27-46.* See Pandu dynasty, Chandra Vansa, Magadha, Mlechha, Solar race.

LUNA RASA, SINGH. Muratic acid.

LUNAWARI, in Guzerat, its chieftain is of the Bagela race. See Kormarpal.

LUNCTA, see Kuki, Lunkta.

LUNDI RIVER. Babar Khana, is the name of the tract of land lying between the Lundi Nala on the north, and the Tabra-nala and Gau Nala on the south. It includes Kachakot, and extends about one mile on each side of it to the east and west, embracing the great mound of Seri-ki-Pind on the north-west, and the Ganga group of tops and other ruins on the east.—*Cunningham's Ancient Geog. of India, p. 116.* See Khyber.

LUNG, a piece of cloth, generally of silk and cotton mixed ; sometimes of silk and gold, used as waist-cloths, and supposed to be the Zouæ of the Periplus.—*Burton's Scinde, Vol. i, p. 101.* See Loongi, Lungi, Dhoti.

LUNG, BENG., HIND. *Eugenia caryophyllata.*

LUNGA, HIND. In Kangra, a method of rice cultivation by sowing seeds.

LUNGAMU, SANS. Dabba chettu, Tel. *Citrus medica, L.* "The citron," but Heyne calls it the clove orange, and the citron he

LUNIA.

makes Likucha, but Wight and Brown make Likucha a syn. of Lakucha.

LUNGAR, HIND. Salt-makers, qu. ?
luniyar.

LUNGEH, PERS., HIND. Waist-cloth.

LUNGA, see Daood-putra.

LUNGGAR, HIND., (lit. anchor), a string of flowers or leaves ; Lunggar-nikalua, a mahomedan ceremony.

LUNGGOT, Lunggota, or Lunggoti, a strip of cloth worn on the lower part of the body it passes between the legs. See Lungoti.

LUNGGREE, a large shallow pan.

LUNGHOTI JOGI, or Juggai jogi. See Jogi or Yogi.

LUNGI, HIND. Argus pheasant.

LUNGI, HIND. A cloth worn by mahomedans on the lower half of the body ; a petticoat, a scarf. It is the dhoti of the hindoos.

LUNG-KHA, the dialects of the Lung-Khe and Shindu, have special affinities with the Kyan, Khy-ong and Kumi. The Kun language also pertains to this group. The more eastern tribes, such as the Lungkha (perhaps the Lunkta, a branch of the Kuki) of the upper Koladan, and the Heuma or Shindu, and the Khou or Kun who are amongst the feeders and beyond the Koladan, are too little known to be referred with certainty to any particular branch of that family, although it is probable that the latter are allied to the Kuki, Kumi, &c. The Lung-kha are said to be composed of an offshoot of the Heuma of the Shindu (Sheutu, Tseindu or Shiandu) and two tribes called Lung Khe and Bowng jwe which it subdued. Captain Tickell says that the feeders of the Mi-Khyoung, the principal eastern affluent of the Koladan, descend from masses of high hills about lat. 21° 50' N., inhabited by the Kun. See India.

LUNG NAOU HEANG, CHIN., or dragon's brain perfume. Borneo camphor, product of *Dryobalanops aromatica* of Borneo and Sumatra.

LUNGOTI, HIND. A narrow piece of cloth worn in India by hindoos and mahomedans, which is passed between the thighs and tucked in, before and behind, to a waist string. It's object is to conceal the parts, and it is worn by the men and boys of all the races in British India, whose habits of life necessitate their appearing uncovered in public. The women and girls of British India, however poor, never wear the Lungoti, but girls wear, suspended from a string, a silver or gold ornament, shaped like a leaf of *Ficus religiosa*.

LUNGU, BENG. Clove tree, *Eugenia caryophyllata*.

LUNKA-SHIJ, BENG. *Euphorbia tiracalli*.

LUNI, HIND. *Cotoneaster obtusa*.

LUNIA, HIND., SANS. *Portulaca oleracea*.

LUPUS AUREUS.

LUNI-SOLAR, see Lunar dynasty, Vicramaditya, Vrihaspati or Varahaspati.

LUNIYA, HIND. *Portulacca oleracea*.

LUNKA-MIRICH, BENG. Red pepper, *Capsicum frutescens*.

LUNKA-SHIJ, BENG. Spurge, *Euphorbia tiracalli*.

LUNO, SINGH. *Allium copa*, Linn. Onion.

LUNU MIDELE, SINGH. The common bread tree of the western parts of Ceylon. A cubic foot of its wood weighs 15 feet, and it is said to last 8 to 20 years. The small sticks and branches are used in common buildings, and as out-riggers for dhonies and fishing boats ; the timber for pannels of carriages, buoys, targets, &c.—*Mr. Mendis*.

LUNUS, see Chandra, Saraswati.

LUP, or Luff, HIND., is as much as two hands joined can hold ; but in Benares, Delhi and the Doab, it means only one handful : in Scotch, Luff or Loof, signifies the hollow of the hand, and hence is derived the term Love, used in the scale of the Game of Whist, when the adversaries score none. It originally meant that they have so many love (luff) i. e., so many in hand.—*Jameson's Scottish Dict.* ; *Elliot Supp. Gloss.*

LUP, see Kelat.

LUPA LUPA, MALAY. Fish-maws.

LUPAR RIVER, see Kyan.

LUPEA TRANQUEBARICA, Edw.

Lupea pelagica, Leach. | *Lupeagladicator*, Fabricius.
L. sanguinolenta, Edw.

LUPINUS ALBUS.

Zurnish. HIND. | Turmuz, HIND.

Said to be brought from Egypt, and used as a carminative. Said to be useful in leprosy and internal heat.—*Powell's Hand-book*, Vol. i, p. 342.

LUPINUS BICOLOR. These flowering plants blossom during the latter end of the cold season, and should never be sown until the rains are over. Some of the species are very delicate, but the small blue, white lupin, rose lupin, and Egyptian, flower freely. Some of the species are very common in Egypt, and grown for food, the seed being ground into flour. Is propagated by seed, and should be sown in pots ; and if in beds, about one foot apart.

LUPINUS COCHIN-CHINENSIS, Lour.
Syn. of *Crotalaria retusa*, Linn.

LUPINUS TRILOBATUS, Cav. Icon.
Syn. of *Cyamopsis psoraloides*.

LUPPOLI, or Bruscandoli, It. Hops.

LUPITA, HIND. *Lanicum semiverticillatum*.

LUPUS, LAT. The Wolf. See *Canis*.

LUPUS AUREUS, *Kampfers*, Syn. of *Canis aureus*, Linn.

LUR. The Lur of Luristan are a great family, their principal divisions being the tribes of Koghilu, the Lek and the Kurd. They are not of Arab or Turkish descent, but seem to have always occupied the hilly country which runs from the south-east to north-west of Persia. See Lour, Luristan, Mamaseni.

LURAH, HIND. of Kuhat, an inferior land.

LUREN WOOD, of Java, resembles the nangka, but is rare, though in some tracts it furnishes the only timber: it is used in the neighbouring islands, particularly in Sumatra.

LURI, or Lur tribes. See Gipsies, Luristan, Zingari.

LURI BAZURG is occupied by the Bakhtiari.

LURISTAN extends westward for about 270 miles, from the borders of Fars, in 31° 51' N. latitude to those of Kirmanshah, about 34° 5', with an ordinary width of about 70 miles; and a superficies of nearly 19,500 square miles. Being along the Bakhtiari range, it is chiefly mountainous, although there are some plains toward the opposite side, which are well-watered by the numerous affluents of the Karun, the Dizful, and the Kerkhah rivers. The province is divided into Luri buzurg and Luri kochuk, the latter being westward of the river Dizful, and the former near the plains of Khawan and Ahshar on the borders of Assyria. The Wali (anciently the Atabeg) resides in Khorramabad, which is the seat of this government: here a fort occupies the crest of an isolated rock, which rises in the centre of a precipitous pass; and the town is on the south-western face, near the commencement of the rich plain. This place probably represents the Diz Siyah, or Koh Siyah, which originated the title Cossæan. The latter, or Luri Buzurg, is generally known as the Bakhtiari country; which, like the other portion, was subject to the atabegs, whose fastness, Mungashit, occupies a detached mass of scarpèd rock which is deemed impregnable. This part of the country contains two grand fire-temples; one near the ruins of Manjanik, (probably that of Marin, and the story of Abraham and Nimrud is traditionally with this spot,) and the other called Masjid-i-Sulimani Buzurg, on the river Karun, one of the temples of Diana. It contains also the ruins of several cities; such as Manjanik (near Mungashit,) probably representing Seleucia: Mal Amir, or Eidij, and Susan, on the Karan (Shushan, and also called Daniel-i-Akbar); and among the ruins is an abundance of arrow-head inscriptions. The last-mentioned town is supposed to represent Elymais, or Sosirate, the capital of the province from whence the hardy Cossæi spread their conquests over Susiana and the dis-

tricts eastward. The Elymæans inhabited mount Zagros, which is on the southern confines of Media, and overhangs Babylonia and Susiana. The mountainous region extending from the Turkish frontier on the west, to the dependencies of Behbahan on the east and south-east, is known by the name of Luristan, (the country of the Lur tribes) which is divided into the greater and the lesser, or Luristan-Buzurg and Luristan-Kuchuk. According to ancient writers, it would appear that since the remotest ages of the world, these mountains have constantly been the seat of an uncouth and warlike race of men, who set at defiance the authority of the Medes and the Persians, and in whose fastnesses, Alexander of Macedon on the eastern extremity, and, at a later period, Antigonus on the western boundary, met with such unforeseen impediments and strong opposition at the hands of the mountain clans. So far at least we know, that we must look to this region for the site of ancient Elymais. The first pages of the Holy Scriptures teach us that the land of Elam was a powerful and warlike kingdom under Chedorlaomer, in the early period of the world. It is in the fastnesses of the Elymites that Diodorus Siculus, Justin, and Pliny place the rich temples dedicated to the goddess Anaitis, which tempted the cupidity of the Seleucids and of the Parthian monarchs. Luristan-Buzurg, or what the Persians call the Fars-i-Kadun, is occupied by the strong tribe of the Bakhtiari, and one may infer that the Bakhtiari are the ancient occupiers of the soil. Their dialect, with some modification, is said to be common to all the tribes of the Zagros range. The principal tribes are the Lur (of whom the Bakhtiari form part,) the Lek, and the Kurd. At the time of the Afghan invasion of Persia, in the beginning of the 18th century, Kassim-Khan was a Bakhtiari chief. The two principal tribes of the Bakhtiari are, the Ch'har-lang and the Haft-lang. The Faifeh, a tribe of the Ch'har-lang, is subdivided into tireh or shafts. These wild tribes profess outwardly the muhammedan creed, and are of the Shiah sect, like many other Persians, and as indifferent to matters of religion as the generality of the nomadic tribes of Persia. The Bakhtiari bear a very bad reputation among the Persians. The chief occupation of the Bakhtiari, like those of all nomadic tribes, consists in tending large flocks of sheep, which form their chief support and greatest source of wealth. These flocks, during the winter season, retire to the warm plains of Arabistan, and on the approach of spring are driven by slow marches over the mountains into the plains of Fereidan and Ch'har-Mahal.

Independently of the advantages, which the Bakhtiari together with the Kashgai, a powerful Turkish tribe from Fars, reap from the wool and the milk of their flocks, the sale of their sheep is an abundant source of income to them in summer. The Bakhtiari have a hardy race of horses, of a middle stature, about the usual size of the Arab horse, and a good deal of the blood of the latter runs in their veins. They are exceedingly fleet, sure-footed, and soft-mouthed, very manageable also, and capable of climbing up mountains with the agility and fearlessness of mountain-goats. Among the richer Bakhtiari are many Chab-Arab horses, which are taller than the Nejd-Arab, and resemble more those of the island of Bahrain. The Chab-Arab horse is justly prized in Persia, and Baron de Bode never witnessed a greater display of beautiful Arab-blood horses than on the plains of Mal-Amir at the camp of the Bakhtiari chief Muhammed Taghi-Khan; for at the Court of the Shah of Persia the Turkoman horses are preferred to the Arab; and among the former the Tekch breed is the most esteemed for its size, power, and faculties of endurance. In appearance the Bakhtiari look rather fierce, owing, probably to the mode of life they lead; the features of their face are cast in a rough mould; but although coarse, they are in general regular. Their black eyes look wild and expressive. The complexion of their face, as well as the other parts of the body which happen to be exposed to the sun, is exceedingly dark, with some nearly of a mahogany colour. The two black tufts of hair behind their ears give them, if possible, a still darker appearance. The Bakhtiari are muscularly built, and are chiefly of a middle stature. It will have been seen from the above that Luristan, or the land of the Lur, embraces the greater portion of the mountainous country of Persia, extending from the Turkish boundary on the west, to the limits of Isfahan and Fars on the east and south-east. These mountains are occupied by an uncouth and wild race of men, bearing different appellations, but apparently springing from one original stock,—the old Zend. The low country, lying to the south of this chain of mountains, with the towns of Shushter, Dizful, and others, together with the land of the Cha'b-Arabs, is denominated Khuzistan or Arabistan. Shushter is greatly fallen from its former importance. Ahvaz, the winter capital of the Arsacids or Parthian kings, is a heap of ruins. The plough is levelling with the soil, the only remaining mounds which point to Joudi-shapur; while Susa, the rival of Babylon and Ecbatana, the vernal residence of the King of Kings, hides

its ancient ruins under thick grass and waving reeds as if ashamed that common mortals should see how low it has fallen from its pristine greatness. Even prior to the dawn of profane history, before the sun of Nineveh and Babylon had risen in the east, Elam, as Scripture tells us, was already a nation; whilst in later days, the same country, under the name of Elymais, attracted towards its rich temples the cupidity of the Greek and Parthian conquerors. Luristan is divided into two provinces. Luri-buzurg and Luri-kuchuk, or the greater and the lesser Luristan. The former is the mountainous country of the Bakhtiari, stretching from the frontiers of Fars to the river Dizful; the latter is situated between the river and the plains of Assyria, being bounded to the north and south by Kirmanshah and Susiana. The province of Luri-kuchuk is again divided into two districts, Pesh-koh and Pusht-i-koh, the country before and behind the mountains, Cis and Trans-Alpine Luristan, referring, of course, to the great chain of Zagros, and Pusht-i-koh thus represents the Massabadan of the geographers, except that perhaps at present its northern frontier is somewhat curtailed. The Luristan mountains west of Irak, between Shuster and Isfahan, and from Shuster to near Kirmanshah, are occupied by the Bakhtiari tribe who often wander to other parts. The Mehmasani have branches in Seistan, and the hills of Luristan. Luristan-kuchuk is bounded on the north by Burnjird and Kermanshah; the river Dizful separates it on the east from the Bakhtiari of Luristan-buzurg, but the boundary line on the south and west is much more uncertain, as the Lur tribes, in their winter migrations, disperse with flocks over the plains of Dizful, lying to the southward of their mountains, and meet with the wandering Arabs on the Turkish frontier on the west in the vast Assyrian plains. Luristan-pesh-koh, lies east, and Luristan-pusht-i-koh, west of the Great Zagros chain. Luristan-kuchuk is, thus, divided into Pesh-koh and Pusht-i-koh.

The four principal tribes who occupy the former are the

Silasile,	} Lek tribes.	Amalah,	} Lur tribes.
Dilfun,		Bala gheriveh,	

The Silasile and Dilfun, who belong to the Lek race, amount to about 30,000 Khanes or families, of which the latter constitute the greater half, although the former are reckoned the more powerful of the two, probably also the more unmanageable. The Amalah were formerly very numerous, but have been much reduced since Aga Muhammed Khan, the founder of the present Kajar

dynasty, transplanted them into Fars. After his death, it is true, the greater part returned, but their force was broken. A portion of the Amalah Ilijat was found by De Bode encamped at the foot of Mount Istakhr, in the plains of Persepolis. They are styled worshippers of violence, who always submit tamely to any sort of authority, good or bad : whereas the other Lur tribes cannot easily brook oppression. Their number is held to be between 2,000 and 3,000 families, but it appears to be rather underrated. The Balagheriveh, although not strong in a numerical point of view, as they do not exceed 4,000 families, are reckoned a very troublesome tribe. The Pusht-i-koh tribes who bear the name of Feili, are less numerous than those of Pesh-koh ; Maj. Rawlinson estimates them at 12,000 families. They consist of the Kurd, Dinarvel, Shuhon, Kalhur, Badrai, Maki. Independently of the tribes mentioned in Pesh and Pusht-i-koh, there live in the plains of Huru, between Burujird and Khorremabad, the Bajilan and the Beiranevened, who belong to the Lek family. The Lur, or Luristani, as they are sometimes called, like their Bakhtiyar neighbours, are greatly addicted to plunder.—*Baron C. A. De Bode's Travels in Luristan and Arabistan*, Vol. ii, pp. 4-7, 61-4, 69-71, 76-88, 90-93, 270, 286, 289, 290, 293. ; *Ferrier's Journ.*, p. 498 ; *Rawlinson*, Vol. ix, part i, p. 86 of the *Royal Geographical Journ.* ; *Strabo*, xi, pp. 522, 524, and xvi, p. 744, in *Euphrates and Tigris*, by Col. Chesney, p. 206.

LURKA KOL, see Kol.

LUS, is not much higher above the sea, than Sind. Its population may amount to twenty-five thousand souls, of which nearly one-third are wandering families, who change their places of residence as convenience or inclination prompts : they are all of one tribe, though known by the four different appellations of Numri, Judgal, Jokhya, and Jeth, which latter is the most commonly used term, and literally applies to a husbandman : the habits of these people are indolent in the extreme, and they are fond of smoking bhang (cannabis sativa) and other intoxicating drugs, and loitering away their time in idle amusements.—*Pottinger's Travels in Beloochistan and Sind*, pp. 29-30. See Kelat, Las.

LUSBAH, see Khuzistan, or Arabistan.

LUSCINIA, a genus of birds, the species of which, *L. philomela*, and others are known as nightingales. In southern Asia, the birds familiarly known as 'Bulbuls' must not be confounded with the Persian Bulbul, which is a species of true nightingale (*Luscinia*), a genus very closely related to some of the small thrushes of America. There are no

true nightingales wild in India ; but the 'Shama,' *Cercotrichas macrourus*, undoubtedly the finest song-bird of this part of the world, is not unfrequently designated the Indian Nightingale, a misnomer which only leads to confusion. It is common to India and the Malay countries ; there is a second species (*C. luzoniensis*) in the Philippines, and a third (*C. erythropterus*) in Africa. The *Orcetes cinclenchyna* is also termed Shama in the Madras Presidency. The esteemed Indian songster is le Merle tricolor de longue queue of *Levaillant*, *Oiseaux d'Afrique*, pl. 114.—*Mr. Blyth*. See Birds.

LUSHANNO, HIND. *Oxalis sensitiva*.

LUSHINTON, General Sir James Law, G. C. B., died on the 29th of May 1858. Was the son of the Rev. James Stephen Lushington, vicar of Newcastle-upon-Tyne, and prebendary of Carlisle Cathedral. He was brother to the Right Honorable Stephen Rumbold Lushington, who was for many years chairman of "ways and means" in the House of Commons, and subsequently Governor of Madras. He was born at Bottesham, Cambridgeshire, in 1779. He was in the military service of the East India Company as colonel of the 3rd Madras Light Cavalry, and was made a general in the army in 1854. He was elected a director of the East India Company in 1827, and was deputy chairman in 1836-7, and chairman in 1838-9. He represented Petersfield, Hastings, and Carlisle at various times in the Commons House of Parliament.

LUSHOON, BENG. Garlic.

LUSHTO, see Affghan, India, Languages.

LUSIAD, a book written by an exile from Portugal, the Grotto, in which he resided, is only a brick and mortar enclosure between two rocks, there is no view from it to the sea, nor of anything else, except the tops of some straggling trees growing in the shrubbery below.—*Frere's Antipodes*, p. 244.

LUSORA, BENG., HIND. *Cordia myxa*, *L.*

LUSPA, a river near Rilkote in Almorah.

LUSSUN, GUZ. Garlic.

LUSTRAL CEREMONIES are deemed very important by brahmins, and are attended to, as prescribed in their books, with a degree of minute particularity that cannot but appear ridiculous to those not interested or informed on the points to which such lustrations are supposed to have reference, indeed there is no end to lustral ceremonies ; to which the Romans also gave the greatest attention. Images are frequently bathed with water, oil, &c. Lingas are constantly washed. It may be matter of opinion, whether the goddess Nandina of the Romans, who presided over the lustral purification of infants on the ninth day of their age, has any probable connection

LUSTRAL CEREMONIES.

with Nandi, a hindoo attendant on the Linga and Yoni—objects peculiarly connected with lustral ceremonies,—or with Nandina, a cow. Nandina, was, from her office, a form of Diana, who appears identified with Devi, whose relationship to Nandi is known in some ceremonies dedicated to her, the ninth day is particularly marked. In a great many hindoo ceremonies, lustrations make a part: spoons and the argha are therefore in extensive use. The argha in a circular form, is called Putra, and is an attribute to Devi: it is sometimes called pana patra, and is seen in many drawings borne by her and others of her family, apparently both as a drinking and ceremonial utensil. The lustral spoons are called Srava and Druvā, in Sanscrit: by the Mahrattas and other hindoos, Pulaphi and Achwan; and have different forms according to the rites or objects of adoration. One of the spoons represents Naga, the holy serpent, overspreading Ganesha; on the other, the Naga overspreads the image of a deity; and on another, the spread hood of the snake appears to cover Hanooman. The argha, is a vessel shaped like a boat, used by the hindoos in lustrations; it is of spout-like form, so that liquids may be poured from it. Lustral ceremonies are deemed very important by brahmins, and are attended to as prescribed in their books, with the most minute particularity. The hindoo Sth'nanam, after child-birth, is performed on the 16th day. In this purificatory rite the mahomedans adhere to the Hebrew forty days. Amongst the hindoos, the Sth'nanam is the religious rite of purification, and ordinarily performed once daily, in the early morning: their evening ablution not involving the head, but from the neck. The Abhiangama Sth'nanam, is that, generally twice a week, in which the head is anointed with oil, and corresponds to the anointing of the Jewish ceremonial, and to the Indian mahomedan's Sar-Nahana, or head-washing, of which perhaps the initiatory, head-washing rite of certain craftsmen in Britain is a remnant: as, possibly may, similarly, be the feet-washing of the British marriage ceremony. In Britain, the bride's feet are washed, and in the south of India, the engaged son-in-law performs the ceremony palal-kal-kazhu-viradu (TAM.) of washing his intended father-in-law's feet. The lustration of the Jews, is described in Mark vii, 2-4, where he mentions that when the Pharisees saw some of the "disciples eat bread with defiled, that is to say, with unwashed hands, they found fault; for the Pharisees and all the Jews except they wash their hands oft, eat not, holding the tradition of the elders. And when they come from the

LUTRA NAIR.

market, except they wash, they eat not; and many other things there be, which they have received to hold, as the washing of pots and pans, brazen vessels and of tables." And, up to the present hour, the hindoo ritual is almost identical. Along the banks of the Ganges, at every large place, crowds of men and women are to be seen at certain hours of the day, bathing close together in a state of nudity. In Japan, there are bathing houses, in which, at Hakodadi, both men and women of the lower ranks assemble. Mr. Hodgson tells us that on one occasion at Yedo, the bathers of both sexes indiscriminately sallied out to see them pass, from some twenty of their common cells, in all the natural simplicity of our first parents' costume before their expulsion. On another occasion when Mr. Alcock went, preceded by a band of music, to the Governor's Yumun, all the bathers of both sexes came out, unabashed and without the slightest idea or reflection that they were naked, to gratify their curiosity by a good long gaze on the novel spectacle. But, latterly, if a European attempt to draw the curtain before the bath-house, he is received with storms of abuse, and told very plainly to go about his business.—Moore, p. 394; *Wanderings of a Pilgrim*, p. 265.

LUTAIN ? HIND. Willughbeia edulis.

LUTA-MUHOORIE, BENG. Digera muricata.

LUTCHI KOTTE ELLE, TAM. Pisonia motindifolia.

LUTCHIMAN TERTA, see Oriza sativa.

LUTI, PERS. A buffoon, distinguished by his four-pointed hat or fool's cap.—Ouseley's *Travels*, Vol. i, p. 184

LUTI-AM, BENG. Willughbeia edulis, R.

LUTIANA, ASSAM. Alstonia scholaris, R. Br., Don.

LUTKUN, BENG., HIND. Bixa indica, B. orellana.

LUTKUN-MAHBUN, HIND. A silk twist for the choontee.

LUT PUTIAH, DEK. Water cress.

LUT QUA, CHIN. Baccanua pierardi, Bu.

LUTRA CHINENSIS, Gray.

Lutra indica,	Gray.	Lutra vulgaris.
L. tarayensis,	Holys.	

This Chinese otter. It has a near resemblance to the otter of Europe.—Horsfield.

LUTRA NAIR, Fr. Cuv.

Nir-Nai,	CAN.	Jul-Majjar, or Water	
Datwai Bekh,	"	cat,	MAHR.
Pani-kutta, or Water	"	Hud; Hada,	"
dog,	DUKH.	Anjing Ayer,	MALAY.
Otter,	ENG.		

The Indian otter; it is found in both Peninsulas of India and in Nepal.—Horsfield.

LYCOPERDON.

LUTRA SIMUNG, *Raffles*.

Lutra barang, *Fischer*. | Mustela lutra, *Marsden*.
Anjing ayor, *MALAY*. | Simung. *MALAY*.

An otter of Sumatra, *Horsfield*.

LUTRARIA, see *Pyloridea*.

LUTUMUR, see *Khyber*.

LUTUNG, see *Simiadae*.

LUVUNG, *Guz*, *HIND*. Cloves.

LUVUNGA, *BENG*. *Eugenia* caryo-
phyllata, *Thun*.

LWAY-LOHUG, a Karen tribe met by
Mr. Tracey dwelling south of the Ka-khyen,
on the edge of the table-land west of lake
Nyoung Ywe, two degrees north of Toum-
ghoo. They dress like and are doubtless a
branch of the Red Karen.—*Mason, Bur-
mah*, 641.

LUZ, *HEB*. Sweet almond, see *Louz*.

LUZAR, *BURM*. A log of a certain length.

LYCAON, see *Canis*.

LYCHAIS CORSICA, and *L. fulgens*,
flowering plants, scarlet, white. The first is
an extremely showy flower, and ornamental
either in a border or pot. It seldom exceeds
eighteen inches in height, and after flowering,
if cut down, will shoot out and blossom again.
The seed should be sown either in or after
the rains—moderate care is all that is neces-
sary.—*Riddell*.

LYCIUM, a genus of plants of the natural
order Solanaceae, the night-shade tribe, of
which *L. barbarum*, *Linn*, of Asia, Africa
and Europe; *L. chinense*, *Mill*, of China.
L. europeum, *Linn*, of the Himalaya, are
known to occur in the Himalaya and China.

LYCIUM EUROPEUM, *Linn*.

Kangu, Kungu, *BEAS*. *Mral*, *PANJAB*.
Ganger, *HIND*. Chirchitta.

A small thorny plant of the Panjab,
browsed by camels and goats and used for
fuel and wattling.—*Dr. J. L. Stewart*.

LYCODIDÆ, a family of fishes—com-
prising, 9 Gen. of *Lycodes*, 4 *Gymnelis*, 1
Uronectes.

LYCODONTIDÆ, a family of reptiles,
comprising—

Lycodon aulicus, *Linn*, Ceylon, S. India, Calcutta,
Burmah, Andaman.

Lycodon striatus, *Shaw*, Anamallies.

Lycodon anamallensis, *Günth*, Anamallies.

Tetragonosoma effrene, *Cantor*, Penang.

Leptorhiza gara, India.

Ophites sub-cinctus, *Boc*, Penang.

Ophites albofasciatus, *D. & B*, Malabar, Sumatra.

Cercaspea carinata, *Kuhl*, Ceylon.

LYCOPERDON, one of the Fungi. *Pol-
yporus oblectans*, Geaster limbatus, Geas-
ter mammosus, *Erysiphe taurica*, a *Boletus*
infested with *Sepeodium mycophilum*, *Sele-
roderma verrucosum*, an *Æcidium*, and a
Uromyces, both on *Mulgedium tataricum*,

LYCOPODIUM.

about half-a-dozen agarics, one at an alti-
tude of 16,000 feet above the Nubra river,
a *Lycoperdon* and *Marchella semilibera*,
which is eaten in Kashmir, and exported
when dry to the plains of India, make up the
list of fungi in the Panjab.

LYCOPERSICUM, the Tomato, or Love-
apple, the produce of South America, a genus
of the same family as potatoes, a delicious
vegetable, cultivated in many gardens. There
are two sorts, single and double; may be sown
immediately the rains commence, in beds;
afterwards transplanted in rows, two feet
apart, and trailed upon sticks of a strong
description. If the soil is good they will
grow to seven or eight feet in height. The
double, which are the finest, if sown in June
ripen in October. The lower branches,
should be pruned, and a succession of crops
may be kept up until April. The small
single tomato, with a slight protection from
the dry winds, will continue until the rains.—
Riddell. See Love apple.

LYCOPERSICUM ESCULENTUM, *Mill*.

Solanum lycopersicum, *Linn*.
Pomum amoris, *Blackie*.

Wal-mangi,	Bombay.	Thak kali,	HIND.
Kha yan nya phung BURM.		Tamati,	MALAY.
Love apple, Tomato, ENG.		Maha rata tamati,	SINGH.
Wolf peach.		Sini Takali pallani,	TAM.
Thah kah,	HIND?		

The tomato is used as a vegetable.

LYCOPODIACEÆ, *DC*. The Club
moss tribe of plants comprising 2 Gen., 7 sp.,
viz., 6 *Lycopodium*; 1 *Isoteles*.

LYCOPODIUM, an inflammable pow-
der used in fire-works, obtained from a com-
mon moss-like plant.—*Waterston*.

LYCOPODIUM, or Club moss. A genus
of plants belonging to the natural order Lycopodiaceae. It has 1-seeded 2-valved cap-
sules, or 3-valved containing powder. The
green woods of Tenasserim southern pro-
vinces are often carpeted with the club moss,
or ground pine. Mr. Fortune, when travelling
on the hills of Hong-Kong, a few days after
his first arrival in China, met with a most
curious dwarf *Lycopodium*, which he dug up
and carried down to Messrs. Dent's garden,
"Hai-yah," said the old comprador, when
he saw it, and was quite in raptures of
delight. All the other coolies and servants
gathered round the basket to admire this
curious little plant. I had not, says For-
tune, seen them evince so much gratifi-
cation since I showed them the "old man
Cactus," *Cereus semilis* which I took out
from England, and presented to a Chinese
nurseryman at Canton. On asking them why
they prized the *Lycopodium* so much, they
replied, in Canton English, "Oh he too much
a handsome; he grow only a leete and a

LYMNÆA HOOKERI.

lects every year; and suppose he be one hundred year old he only ~~is~~ high," holding up their hands an ~~inch~~ or two higher than the plant. This little plant is really very pretty, and often naturally takes the very form of a dwarf tree in miniature which is doubtless the reason of its being such a favourite with the Chinese."—*Mason*; *Fortune's Wanderings*, page 95. *L. aristatum*, *cernuum*, *Hookeri*, *imbricatum*, *phlegmaria* and *Wildernowii* occur in India. See *Ferns*, *Chirita sinensis*.

LYCOPodium CLAVATUM, of the British moors, grows at Chakoong in the Lachen Lachooing valley, Sikkim, and amongst mosses, the superb Himalayan *Lyellia crispa*, with the English *Fumaria hygrometrica*.—*Hooker*, *Him. Jour.*, Vol. ii, p. 19.

LYCOPodium WILLDENOVII, see *Edgworthia chrysantha*.

LYDIAN, and other languages of lesser Asia, and perhaps also the Thracian and Macedonian tongues were altered to the Hellenic or Pelasgic Greek. See *India*, *Lud.*

LYDD, the Diopolis of the Greeks.

LYE BRAHUI, the tamarisk.

LYELLIA CRISPA, grows at Chakoong in Sikkim, in the Lachen Lachooing valley, it is one of the most remarkable mosses in the Himalaya mountains, and derives additional interest from having been named after the late Charles Lyell, Esquire, of Kinnordy, the father of the eminent geologist.—*Hook.* *Him. Jour.*, ii, p. 19.

LYGODIUM SCANDENS, one of the most elegant climbers on the Tenasserim coast is a terrestrial species of fern, easily recognized by its habit of running over other plants, and by the fringed margin of its leaflets, from which it is sometimes called "fringed fern." An allied species is found in the United States.—*Mason*, *Tavoy*.

LYLAT-UL-QADAR, ARAB. The Night of Power, occurs on the 27th night of the month Ramzan. Mahomedans sit up all night, burning frankincense-pastiles, repeating a particular prayer called "Nafil," reciting in praise of the Almighty, reading the Koran, and proclaiming the Azan. It is a period of great solemnity.—*Herkh*.

LYLA, a mohurrum faqeer.

LYL-O-NUHAR, see *Tasbeeh*.

LYLAT-UL-MOORABAK, the blessed night.

LYMNÆA HOOKERI, *Recc.* The waters of the Lachen in Tibet contain many shells of this species of *Lymnæa*. This is the most alpine living shell in the world, many specimens being from nearly 17,000 feet elevation.—*Proceedings of the Zoological Society*, No. 204; *Hooker*, *Him. Jour.*, Vol. ii, p. 156.

LYTHRUM FRUTICOSUM.

LYMO, CHIN. Printing, in China, is by a system of stereotype, the types being made from the pear tree wood, called by them *ly-mo*. Their paper is made from refuse paper, rags of silk and cotton, rice-straw, the liber of a species of *morus*, but principally of bamboo.

LYN-WAAT, DUT. Linen.

LYNX. The Caracal, or Indian lynx, called the Siah-gosh or black-ear, has immense speed, runs into a hare as a dog into a rat. It often catches crows as they rise from the ground, by springing five or six feet into the air after them. It is an eastern custom of great antiquity of training certain feline animals, as the Chita and the Caracal or Siah-gosh; the Lion, too, as it would appear, was trained in ancient times; and in Britain the Otter is still abundantly employed in fishing for its master, as Cormorants are in China. On the plains of Chinese Tartary or Tehungaria, Mr. Atkinson passed what he designates "large flocks of wild Turkeys"; by this term, of course, Bustards are meant; and doubtless the European *Otis tarda*. Elsewhere, whilst among the Kalmuk of the border of the Onlam-koun desert, he remarks:—"Noticing at no great distance several flocks of large birds feeding on the plain, a Cossack and myself started in pursuit, accompanied by two Kalmuk leading horses. The Kalmuk gradually approached the birds by going round in a circle, and we were all well sheltered by the horses. At length the men stopped, the Cossack and myself lay flat on the ground, and having obtained a good sight, two of the flock were presently stretched dead on the plain. As the others did not fly far, our pieces were re-loaded, and we again approached the birds with equal success; but this time the flock went far away. We now gathered up our game and ascertained them to be four fine Bustards. Next morning the party were still more successful; for two Deer and eight Bustards were added to the larder. In the same vicinity "Pheasants" were obtained; probably the true *Phasianus colchicus*, or perhaps the kindred race of the Hindoo Kish. See *Felis*.

LYNX-STONE, ENG. Amber.

LYN-ZAAD, DUT. Linseed.

LYPODIUM SCANDENS, see *Ferns*.

LYRIOCEPHALUS SCUTATA, see *Agama*.

LYSIAS, see *Greeks of Asia*.

LYTHRACEÆ, *Lindley*. The Loosestrife tribe, comprising, 11 genera, 21 sp., viz.,

1 <i>Rotalia</i> ;	2 <i>Lythrum</i> ;	1 <i>Grislea</i> ;
2 <i>Arceuthia</i> ;	1 <i>Cuphea</i> ;	5 <i>Lagerstrœmia</i> ;
3 <i>Ammannia</i> ;	1 <i>Glinoria</i> ;	1 <i>Dubanga</i> .
3 <i>Nesaea</i> ;	1 <i>Lawsonia</i> ;	

LYTHRUM FRUTICOSUM, *Linn. Syn.* of *Grislea tomentosa*, *Roze*.

LYTHRUM HUNTERI.

LYTHRUM HUNTERI. Hunter's Loose-strife, is, a native of the East Indies. The leaves are opposite, the calyx tubular and 6-lobed, the stamens 12, and the style subulate. The petals, six in number, are of a very beautiful red-colour, and are used for dyeing in India. The hardy perennial species of *Lythrum* are handsome garden-flowers ;

LYTTA VESICATORIA.

they grow in any common soil, and are easily propagated by dividing at the root. The seeds of the annual kind require to be sown in most situations in the spring.—*Don Dichamydeous Plants* ; *Babington, Manual of British Botany*.

LYTTA GIGAS, see *Cantharides*.

LYTTA VESICATORIA, see *Cantharides*.

M. The letter of the English alphabet has representative letters in Arabic, Persian, Urdu, Sanskrit, Hindi, Marhatti, Gujarathi, Bengali, Uriya, Telugu, Tamil, Kannada and Malayalam. Some nations, however, are unable to sound the letter M; and in its place they use a B. On a mummy from Memphis and on the sarcophagus of Amyrtæus we find the name of the god Ammon Ra written Oben-Ra and this is the spelling used on a plate of ivory found among the ruins of Nineveh, to which distant city the Egyptian style of Art had made its way two centuries earlier.—*Sharpe's History of Egypt*, Vol. I. p. 200

MA. HIND. Mother, a respectful address to a woman.

MA-ABAR, mentioned in Briggs' *Ferrieta*, Vol. I. p. 373, means the place of crossing over, a place of passage or ferry, and has very generally been supposed to be Malabar, as well from the resemblance of the names as from the position of the latter country in reference to Arabia; but there is no doubt that the appellation really applies to the tract on the Eastern coast of the peninsula extending north from Rameshwar.

It is possible that this Arabic name was originally a corruption of Marawa, the name of the hindu state which adjoined Adam's Bridge, and the chief of which state was called Setu Pati, "the lord of the bridge." Ritter puts Ma-nbar on the west coast, and Lassen (iv. 888) says that the name with Ibn Batuta signifies the southernmost part of the Malabar coast, but both learned authors are certainly wrong. Kunstmann, again, says "it has been recently pointed out that the name applies neither specially to the south-west coast nor to the south-east, but to the whole southern apex of the peninsula." It is, however, clearly used for the south-east coast, as Abulfeda precisely says, it commences from Cape Comorin.—*Elphinstone's History of India*, Vol. II. p. 47. Gillemeister, pp. 56 and 185 quoted in *Yule's Cathay*, Vol. I. p. 80, 81. See Marsden's *Marco Polo*, p. 626 note.

MAAJUN, any intoxicating confiture made of hemp, butter, charas, or dhatura seed, mixed up with sugar and sweetmeats. Maajun is used by the natives, generally of the higher classes, for the three purposes of Kaif (intoxication), Kuwwat (aphrodisiac tonic) and Iusak. *Burton's Sindhi*, p. 170. See Majoon.

MAAL: HIND. *Populus balsamifera*.

MAALIM. AR. A seaman, a sailor.

MAAM-POO, TAM. Mango.

MAA-PHAL, DUK. Galla, properly Maphal.

MAASH, AR. HIND. Food, livelihood. "Bad-maash," an evil liver; *Be-maash*, without employ, Madad-i-Maash, aid to subsistence, a pension.

MAAT KOLUPOO. TAM. Tallow.

MAAZAM, son of Anrungleb, on ascending the throne assumed the title of Bahadur Shah. He defeated and slew his brother Azam in a battle near Agra and died in 1712 at Lahore, aged 72, after a reign of 5 years. He was succeeded by his son Ferokhsir.

MABALI, or Mahabali, a king who was trodden down into hell by Vishnu in his Vamana-avatara.

MABALIPURAM. See Mahabalipuram; Seven Pagodas.

MA-BAP. HIND. Father and Mother.

MACACUS, a genus of mammals, of the family Simiada; of which there are several species in India, the Malay Peninsula and Eastern Archipelago.

Macacus Assamensis. McCLELLAND.

Macacus pelops, HODGSON.

A native of Assam, of a bluish gray colour, dark brownish on the shoulder. This is a very different species from the tropical kind seen in Nepal. On arriving at Lamteng, in Sikkim, Dr. Hooker saw a troop of large monkeys gambolling in a wood of *Abies brunoniana*; this surprised him, as he was not prepared to find so tropical an animal associated with a vegetation typical of a boreal climate.—*Hooker Himal. Jour.*, Vol. II. p. 37.

Macacus cynomolgus. LINN.

Simia cynomolgus, LINN.	<i>Cercopithecus cynomolgus</i> , MULLER.
the male.	gu,
S. aygulah, L. female	
Hare lipped monkey, Eng	Jakko of Sailors, Eng
Egypt Monkey,	Kra,
The common Macac, "	MAJUN.

MACAO.

This monkey occurs in the Nicobar islands, Tenasserim and all over the Eastern Archipelago. It is intelligent, good natured, docile and easily trained to the performance of amusing tricks. In advancing age it becomes sullen, morose and mischievous. There are many varieties of it, and Dr. S. Muller regards *M. auratus* of Belanger, and *M. carbonarius* of F. Cuvier as varieties of this Macac.

Macacus nemestrinus. LINN.

<i>Simia nemestrina</i> , LINN.	<i>Inuus nemestrinus</i> , ERXL
" <i>platypygus</i> , SCHREB.	Papio "
" <i>carpolegus</i> , RAFFLES	" "
Pig-tailed monkey, ENG.	Bruh sepotong, SUMATRA
Broh, PENANG.	" <i>selapi</i> , "
Bruh, SUMATRA.	" <i>putih</i> , "

This Macac occurs in Penang, the Malay Peninsula, Sumatra, and Borneo. There are three varieties of it. It is good natured and intelligent. The natives of Sumatra have taught it to climb the cocoanut palms and throw down the fruit, to select the ripe from the unripe fruit and pluck no more than its master desires.

Macacus pileatus. SHAW.

Bilawah, SINGH

This appears peculiar to Ceylon.

Macacus radiatus. GEOFFROY.

<i>Cercopithecus radiatus</i> , GEOFFR.	<i>Cercopithecus toque</i> , GEOFFR.

Kerda of GHATS	Madras monkey.
Bonneted monkey, ENG.	

When young, this monkey is wild and inoffensive, and soon acquires a knowledge of various feats of agility and tricks. It is the most inquisitive and mischievous of its tribe and its powers of mimicry are not surpassed by any other. With age it becomes more sullen and less amenable to discipline.

Macacus Rhesus. AUDEB.

<i>Cynocephalus rhesus</i> , LATR.	Rhesus, AUDEB.
	Maimon, BUFFON
Papio rhesus, OGILBY.	
Bandar, HIND.	

A native of Bengal, Nepal, Assam. It is docile and affectionate.—*Jerdon's Mammals of India*, p. 12. *Horsfield and Moore's Mammalia Catalogue*.

MACKOE, HIND. *Solanum nigrum*. qu. Makai?

MACAO city, called Gaou or Ou-Moon by the Chinese, is in lat. 22° 11' N. and long. 113° 33' E., 18 miles east of Canton. It is regularly built on a high peninsula, which terminates the island of Macao to the southward. There are several forts

MACARANGA TOMENTOSA.

on the hills round the city. It is a salubrious locality and under the Government of the Portuguese. Macao stands upon a promontory belonging to the island of Sheang-shin, a narrow isthmus separating them. At one period the Chinese had a fort, most carefully guarded, at this spot, to prevent foreigners from visiting the interior. The town is built upon two hills, which meet at right angles. In the sixteenth century, Macao was given up to the Portuguese by the emperor of China, as a reward for services performed by them, when they joined their forces with those of the Chinese, against some daring pirates, who then, infected the neighbouring islands. It seems that they had temporary shelter on shore. The most interesting object now to be seen at Macao, is the cave of Camoens, the author of the *Lusiad*; Camoens wrote this exquisite poem at Macao, where it is asserted by contemporaneous authors he had been banished for some political offence. The cave, in which folks say the poet wrote the *Lusiad*, is situated at the summit of a rock, over which is erected a very elegantly tasteful temple, in which is placed a fine bust of Camoens; on the walls are inscribed some of his choicest lines in the original, to which is also added, a Chinese translation: some of these lines are descriptive of the boundless sea lying beneath: and the visitor is at a loss whether most to admire the truthfulness of the description, or the sublimity of the prospect.—*Horsburgh. Davies' Chinese. Sirr's China and the Chinese*, Vol. I, p. 127.

MACAQUE. FR. the Macac monkey. See *Macacus*. Simiadæ.

MACARANGA INDICA.—R. W.

Vutta thamar, TAN | Putta thamar, MALEAL.

This tree grows on the Neilgherries and is common in Travancore. It produces a light crimson coloured gum which is used in medicine, and for taking casts.—*Drury's Useful Plants*.

Osyris peltata, ROXB. W. Ic | Boddi chettu, TEL.

This is marked by Voigt as a shrub of the Circars. The Telugu name indicates it as a tree. All the young parts of this plant are covered more or less with soft resinous adhesive matter, smelling strongly of turpentine.—*Voigt*.

MACARANGA TOMENTOSA.—W. Ic.

Kanda-gas, SINGH.

This tree is very abundant in Ceylon, up to an elevation of 3,000 feet. It grows, also in Travancore and exudes a gum of charac-

MACASSAR.

ter similar to that of *M. Indica*.—*Thw. En. Pl. Zeyl.*, p. 274. *Drury's Useful Plants*.

MACARONI.

Baglura, PERA. | Siwin, HIND,
Suin, HIND. | Simian, "

The macaroni in use by the people of Persia and India, is prepared by themselves. That used by most European households in India is imported—though cooks also make it for ordinary use.

MACASSAR. The Macassar race differ from the Bugi or Wugi, in having larger and more open features, as well as in the peculiar ruddiness that is mixed with the brown tincture of his skin. The hair is suffered to fall down and float loosely upon the shoulders, and has a red tinge, oftentimes, by way of correspondence with the rest of the person. The truth of this circumstance has been questioned, because red hair and a dark complexion were thought incompatible with each other. Such an opinion is, however, not affected by this instance, for here the hair is not yellow nor orange, but its ends have a deep red hue, while the rest is black. The little boys and girls of the Macassar race seen running about in troops, are often very handsome, while the lineaments of the latter are sometimes not only faultless in design, but they have withal a shade of thoughtfulness and melancholy, which is rightly esteemed to be the last touch and finishing stroke of personal beauty. These promises of future loveliness vanish before maturity, perhaps for the want of education, which, while it bestows unfading charms upon the mind, tends to model and perpetuate all the perfections of the body. In some of their productions of skill, as in the manufacture of gloves and baskets, the workmanship for delicacy and fineness cannot be surpassed. Their writing character is the same as the Bugi, with a deficiency of three or four letters. Many can read, and all would learn, if they had books. They value themselves as being of a more ancient and noble stock than the Bugi, but they esteem it creditable to understand that language, so that a translation of the Scriptures in this admired and far-famed dialect would serve for almost the whole of the humanized portion of Celebes. It is said that Dr. Leyden translated a Gospel into the Bugi. The more curious plants of Macassar, are the *Mirabilis jalapa*, and the *Damasonium indicum*. The gomuto is very common.—*Journ. of the Ind. Arch.*, October 1852, p. 575, Vol. VI, No. 10. *Voyage of the Himmlah in 1857, By the late G. Tradesant Lay, Esq. Singapore Free Press 1837.*

MACE.

MACASSAR STRAIT is about 354 miles in length, from the south end of Great Pulo Laut, to Point Kanniungan, and generally from 135 to 105 miles wide.—*Horsburgh*.

MACASSAR OIL, this is supposed to be the oil of the *Carthamus tinctorius* seed, the safflower. See Oil.

MACASSAR POISON. *Hernandia sonora*.

MACAW TREE, is the *Acrocomalia scolocarpa*, Mart. The value of the Macaw tree of the West Indies is chiefly owing to its fruit, which yields an oil. In the process of extraction the fruit is slightly roasted and ground to a paste, first in a mill and then on a levigating stone. This paste, having been heated, and mixed with 3-10ths of its weight of boiling water, is put in a bag, and pressed between two heated plates of iron, it yields about 7-10ths or 8-10ths of oil. The oil, if discoloured, can be purified, when melted, by filtration. It is then of the consistence of butter, of a golden yellow hue, has an odour like violets and a sweetish taste. If well preserved it will keep several years, if spoiled, it loses its golden hue and delightful aroma. It is frequently sold in the shops as 'palm oil' and enters largely into the composition of toilet soaps. It might be usefully introduced into the East Indies.—*Seeman*.

Mace is the aril or arillas of the nutmeg and forms around the shell of the nutmeg. It has a pleasant aromatic smell, and a warm bitterish pungent taste, it is a favourite medicine of the hindu physicians, who prescribe it in the slow stages of fever, &c. It is imported into India from Singapore, Batavia, and the Banda Islands. Mace is fleshy, branching, and when recent of a bright scarlet colour, but in the process of drying it changes to yellow, orange yellow, or what is considered best, golden yellow, and becomes transparent and horny. It is prepared by drying in the sun for some days. The aril is sometimes flattened out, and dried in a single layer, but frequently it is pressed together, in which case it forms two layers. The Dutch sprinkle mace with salt water prior to packing it in sacks. As

MACHA-RANG.

There are two kinds of nutmegs, so are there two kinds of mace, the produce of the same plants; thus, there is true or cultivated mace, and false or wild mace, but London dealers distinguish three sorts of true mace:

Penang Mace is flaky and spread and fetches the highest price. The annual quantity produced in Penang is about 130 piculs (of 133½ lbs. each.)

Dutch or Batavian Mace, is a fleshy sort; scarcely fetches so high a price as the *Penang mace*.

Singapore Mace, is a somewhat inferior kind."

Wild or false mace.—The mace of the male or false nutmeg is distinguished from the true mace by being formed of three or four regular bands united at the summit. The chemical properties of this article are analogous to that of the true mace, but the oil is so inferior in proportion, that the male mace is but of little commercial value. Owing to its comparative cheapness, false mace is used in India only among the poorer natives. It is procurable in most bazaars under the name of "Ramputri," is of a dark red colour, and deficient in flavour and aroma. Under the microscope, mace presents a structure very distinct from that of the nutmeg itself. Much difference is observed in the quality of samples. The duty on genuine mace is 2s. 6d. the pound. The imports into Great Britain between 1847 and 1851 ranged from 16 to 34 tons; of which only 8 or 9 tons were retained for home consumption. —*Faulkner*. *M. E. J. R. Food and its adulteration*, p. 412. *McCulloch's Commercial Dictionary*, p. 770, *Mason's Tenasserim*. *Powell's Hand Book*, Vol. p. 302. *Poole's Statistics of Commerce*, p. 221.

MACE OIL.

Jaiwantry, or Jai-putri-ka tel, HIND. | Wassa Wasitali, SINGH. | Jaiputri talum, TAM.

A brown coloured, highly fragrant, almost solid oil, largely used as a liniment.

MACEDONIANS. There were Grecian military colonies established at Alexandria ad Caucasum, Arigæum, and Bazira, and garrisons at Nyssa, Ora, Massaga, Peneclautis and at Aornis, a mountain range, supposed to be the mountains of Mahaban in the Pir Panjal or Mid Himalayan range. MACHIN, or Maha-china, "Great China," the name by which Hindus anciently styled the Great Empire of China, and still vernacularly used by them. But it is often used pleonastically coupled with Chin to denote the same thing, "Chin and Machin," a phrase having some analogy to the term Sind and Hind, used to express all India, also similarly to Gog and Magog, applied to the northern nations of Asia. The use of a double assonant name, sometimes to express a dual idea but often a single one, is a favourite oriental practice. As far back as Herodotus we have Crophi and Mopbi, Thyni and Bithyni; the Arabs have converted Cain and Abel into Kabil and Habil, Saul and Goliath into Talut and Jalut, Pharaoh's magicians into Rissam and Rejam, of whom the Jewish traditions had made Jaannes

MACKINTOSH.

and Jambres, whilst Christian legends gave the names of Dismas and Gestas to the penitent and impenitent thieves in the Gospel. Jarga and Nargah was the name given to the great circle of beaters in the Mongol hunting matches. In geography we have numerous instances of the same thing; e. g. Zubulistan and Kabulistan, Koli Akoli, Longa Solanga, Ibir Sibir, Kessair and Owair, Kuria Muria, Ghuz and Maghuz, Mastra and Castra (Edrisi), Artag and Kartag (Abulghazi), Khanzi and Manzi (Rashid), Iran and Turan, Crit and Meerit (Rubruquis), Sandor and Candor (Marco Polo), etc.

The name of Achin in Sumatra appears to have been twisted in this spirit by the mahomedan mariners as a rhyme to Machin; the real name is Atcheh. In India, such rhyming doublets are not confined to proper names; to a certain extent they may be made colloquially, at will, upon a variety of substantives. Thus chunki-anki means "chairs" simply (chunki), or, at most, "chairs and tables," lakri-akri, "sticks and stakes."—*Quatremere's Rashid*, pp. 213—246, *D'Avezac*, p. 534; *Prairies d'Or*, l. p. 399, in *Yule Cathay*, p. cxix and cxx.

This tree, one of the Urticaceæ, grows to the height of thirty or forty feet, a yellow dye is obtained from the wood, known as Fustic wood in commerce. It has been introduced into the Agri-Horticultural gardens Calcutta.—*Jaffrey, Voigt*.

MACNAGHTEN, Elliot, formerly of the Indian Bar, Chairman of the E. I. Company, fourth son of the late Sir Francis Workman Macnaghten, formerly a Judge of the Supreme Court at Madras from 1809 till 1815 and at Calcutta from that date till his retirement in 1825, and brother of Sir William Macnaghten, envoy at the court of shah Shooja-ul-Moolk, who was killed at Kabul, December 24, 1841; and also of Mr. Francis Macnaghten, of the Bengal Civil Service, sometime Secretary to the Board of Trade, and third Government Agent at Calcutta. Mr. Elliot Macnaghten was for many years an officer of the Supreme Court at Calcutta. He returned to England in 1839. He was elected a Director of the Hon. East India Company in 1842, and filled the office of Chairman in 1852-53. Mr. Macnaghten was born April 1, 1807.—*Illustr. News*.

MACOWA, an island in L. 16, 58 E. 41° 20' E.

MACROB KHAN, was the governor of Cambay at the time of Sir Thomas Roe's embassy, and is well known for his inveterate hostility to the English. Properly Makarrab Khan.—*Cal. Rev. Jan.* 1871.

MACPHERSON, Sir John, came to Madras at the age of 22 and served the Nabob of the Carnatic in various capacities. He returned to England, secured a seat in Parliament, but returned to Calcutta as second member of Council. His economy of the public monies obtained for him a baronetcy, and on the resignation of Warren Hastings he held the government for 23 months.

MACPHERSON, Major Samuel, a Madras officer, eldest son of Dr. Macpherson, Professor of Greek in King's College, Aberdeen, was born in 1806. While engaged in the Trigonometrical Survey of Orissa, he became acquainted with the Khonds, one of the many remarkable tribes that lingered in the most unknown in the fastnesses of the vast Indian Peninsula. This race, practising

MACRODACTYLÆ.

horrible rites, the origin of which is lost in the darkest antiquity, were known to offer up periodical human sacrifices to the deity who presided over the fields and gave them fertility, and he entered upon the task of reclaiming this race, and succeeded in calling public attention to them by a report on their history and condition, addressed to the Indian Government. Lord Dalhousie, afterwards named him political agent at the Court of Scindiah, where his character, his conciliatory demeanour towards the natives, and his consideration for their feelings, gained him the entire confidence of the maharajah and of his enlightened minister, Dinkur Rao. This influence proved of the utmost value during the mutiny. Compelled to fly from Gwalior after the massacre of the British officers there, he still continued to direct, from Agra, the councils of Scindiah, and kept him faithful and steadfast in his allegiance to the British Government, when threatened in his very palace by an exasperated soldiery and a furious mob. Through his sagacious advice the powerful contingent of the maharajah was induced to remain inactive at Gwalior, in the most critical moment of the rebellion. He died on the 15th April 1860. *The Madras Daily Times and Spectator, Thursday, July 19, 1860.*

MACREIGHTIA BUXIFOLIA, PERS.

Kaloo-habaraleya-gaša. SINGH.

Of this there are four varieties α , β , γ , δ . *microphylla*; δ . *angustifolia*; var. α , and β . grow in the hot drier parts of Ceylon, var. δ . in the Ambagamowa district, and near Ratnapoora. Var. δ . on the banks of rivers.—*Thw. En. Pl. Zeyl.* p. 183.

MACREIGHTIA OBLONGIFOLIA, Thw.
A small tree of Ceylon, near Ratnapoora, and in the Singherajah and other forests between that place and Galle.—*Thw. En. Pl. Zeyl.* p. 183.

MACROCLADUS, Sr.

Yen khyen, Buam. | Karen cabbage palm ENG.

A wild palm is found in many parts of the Tenasserim Provinces, which the Karens often cut down for the unexpanded bunches of young leaves found in its summit, and which has the taste of cabbage. The tree does not, however, belong to the same genus as the cabbage tree of America, but from the imperfect specimens of its fructification that Dr. Mason saw, appears nearly related to Griffith's genus *Macrocladus*.—*Mason.*

MACRODACTYLÆ, a tribe of birds,

Fam. *Halidæ*, 7 gen. 15 sp. viz.

1 *Porpyrio*; 1 *Gallicrex*; 8 *Porzana*; 1 *Ortygometra*; 2 *Rallus*; 1 *Gallinula*; 1 *Falica*.

MACROPODIDÆ.

MACROPHthalmus, a genus of the crustacea, viz.

Macrophthalmus transversus, Edw. Pondicherry.

" *parvimanus*, Edw. Mauritius.

" *depressus*, Edw. Red Sea.

MACROPIPER METHYSTICUM, its root, or rhizome, is used, in the south Seas, in the preparation of the "ava" drink. It is chewed, spat in a bowl, and allowed to ferment and drank. In the Samoan islands, the large ava-bowl is made from the tamannu, *Calophyllum inophyllum*, and occupies a conspicuous place.—*Capt. Elphinstone Erskine, Islands of the Western Pacific*, p. 46.

MACTRA, a species of *Mactra*, or sand clam, is fished up near Macao.

MACROPODUS PUGNAX, *Cantor*, Plakat of Siam, occurs numerously at the foot of hills at Penang. Like the rest of the family it is capable of living for sometime out of water. The Siamese inhabitants with whom a variety of this species is a great favourite, keep the fishes in jars with water, where the larvæ of musquitos is their food, and denominate them 'Pla kat,' Pla, fish; kat, a fighter. The real fighting fish, however, the exhibition of whose combats is a popular amusement with the Siamese, appears to be a variety of the present species, produced by artificial means, like the varieties of the golden carp of China, and Dr. Cantor names it *Macropodus pugnax*, *Var.* When the fish is in a state of quiet, with the fins at rest, its dull colours present nothing remarkable. But if two are brought within the sight of each other, or if one sees its own image in a looking glass, the little creature becomes suddenly excited, the raised fins and the whole body shine with metallic colours of dazzling beauty, while the projected gill membrane, waving like a black frill round the throat, adds something grotesque to the general appearance. In this state it makes repeated darts at its real or reflected antagonist. But when taken out of each other's sight, both instantly become quiet. A gentleman at Singapore was presented with several by the king of Siam. They were kept singly in glasses with water, fed with larvæ of musquitos, and lived for many months. The Siamese are as infatuated with the combats of these fishes as the Malays are with their cock fights, and stake on them considerable sums, and sometimes their own persons and their families. The license of exhibiting fish fights is farmed, and affords a considerable annual revenue to the king of Siam.—*Cantor.* See Fishes.

MACROPODIDÆ, a tribe of *Brachyurus* Decapodous crustacea, of the Order Deca-

MACROTOMIA.

podas of Milne-Edwards, Legion Podopthalmiens, as under—

Tribe Macropodidae.

- Egeria arachnoides*, Edw. Coromandel Coast.

 „ *indica*, Edw. Indian Ocean.
Doclea ovis, Edw. do.
 „ *hybrida*, Edw. Coromandel Coast.
 „ *muricata*, Edw. E. Indies.

See Crustaceæ.

MACROPTERIGINÆ, a sub-family of Birds of the Family Cypselidæ, as under—

- Sub-fam.* Cypselinæ, 3 gen. 11 sp. viz., 3 *Acanthylis*, 6 *Cypselus*, 2 *Collocalia*.
Sub-fam. Macropterigiinæ, 1 gen. 3 sp. viz., 3 *Macropteryx*, *coronatus*, *klecho*, *comatus*.

MACRORHAMPHUS SEMIPALMATUS.—*Jerdon*. This wading bird is larger than *M. griseus*, with the three anterior toes connected at base by membranes, of which the inner is equally developed with that connecting the middle and outer toes of *Himantopus candidus* and *H. leucocephalus*, the outer being rather more so. Bill exactly as in *Scolopax*, its terminal fifth smooth and tumid in the living bird, becoming shrunken and pupillous soon after death. Length 13 in.: of which the bill to forehead measures $2\frac{1}{2}$ in.; expanse of wings 21 inch; closed wing $6\frac{1}{2}$ in.; tail $2\frac{1}{2}$ in. tarse $1\frac{1}{2}$ in.; middle toe and tail $1\frac{1}{2}$ in.; hind toe and nail $\frac{3}{8}$ in. Bill dusky, dull caraneous towards the base of the lower mandible; legs and toes lead coloured.—*Mr. Blyth's Report*.

MACROTARSIS, a genus of birds of the Family Charadriadæ, thus;

Fam. Charadriadæ.

Sub-fam. Cursorinæ, 2 gen. 2 sp. viz., *Cursorius coromandelicus*, *macrotarsius bitorquatus*.

Sub-fam. Esacinae, 2 gen. 2 sp. viz., 1 *Esacus*; 1 *Edicnemus*.

Sub-fam. Vanellinæ, 4 gen. 6 sp. viz., 1 *Hoplopterus*, 1 *Sarciophorus*, 3 *Lobivanelus*.

Sub-fam. Charadriinæ, 2 gen. 2 sub-gen. 10 sp. 1 *Squatarola*, 2 *Charadrius*, 1 *Eudromias*, 6 *Hiaticula*. See Birds, p. 517.

MACROTOMIA. Of this genus, the *Bonthamia* D. C., and *Macrotomia euchroma* H. F., et T.: occur in the N. W. Himalaya.

The *M. euchroma* is the *Lithospermum enarmon* of Royle, and the *Onosma echioides* of Linnaeus. The Rattan-Jot or Gao zaban. The bruised root of one or other or both is locally applied to eruptions, and is sent to the plains as the official rattanjot, *Potentilla Nepalensis*, which is also used, in dyeing wool. Royle assigned rattanjot to Li-

MADAN.

thospermum vestitum (See *Geranium nodosum*.) In Lahoul, Spiti, and Kanawar, it is used by the Lambas to stain images, and as a red dye for cloth, being applied with ghi or the acid of apricots.—*Dr. J. L. Stapart, M. D.*

MACROURA, or *Macrura*, the scientific name for that section of Crustaceans which have the abdomen, usually called the tail, long, in contradistinction, from that section (*Brachyura*, which have the tail short. The common lobster is an example of a *Macrurous* Crustacean, and the common crab of a *Brachyurus* Crustacean.—*Eng. Cyc.* See Crustaceæ.

MACROXUS, *Scirpus rufoniger*.

MACULLA, is the principal commercial depot on the south coast of Arabia. It is in lat. $14^{\circ} 30' 40''$ N. and long. $49^{\circ} 6'$ E. Maculla and Shuhum are the two principal slave ports on the southern coast of Arabia. The slaves from Zanzibar and from the Somali and Denkali coasts were annually brought there. On the 14th May 1863, Brigadier Coghlan, concluded an engagement with nakib Sitah-bin-Mahomed of Maculla and nakib Ali Najee of Shuhur, in which they agreed to abolish and prohibit the export and import of slaves.—*Horseburgh. Treaties, Engagements and Sunnuds*, Vol. VII. p. 308.

MAD. AR. rise, extension. Mad-o-Jazr, flood and ebb: Mad is often used in the complimentary phrases of letters as *Mad-o-zillaho*,—may your shadow increase.

MADA GHETTU. TEL. *Avicennia tomentosa*, *Lim.*

MADAD. AR. HIND. a compound of betel leaf and opium.

MADAD, AR. aid, assistance, *Madad-i-maash*, an addition to ones means, a pensionary aid. Ya Ali madad, Help oh! Ali.

MADAGASCAR, a great island off the S. E. coast of Africa from which it is separated by the Mozambique channel.

MADAKPOR, a migratory race of the Central Dekkan, known also as the *Kelikatr*.

MADAL, See *Dyos*.

MADALA, *Maleal*. *Madalam Pallam*, TAM. *Punica granatum*.

MADAN a race of Arabs, well known along the banks of the river. They are fixed, not migrating like other Arabs; they exist upon the produce of their immense herds of buffaloes which, with a few sheep and cows, form all their property. They live in huts formed of split reeds, along with the animals that form their support, and which they scarcely exceed in intellectual endowments. It is from the notorious un-

MADANA SEKU.

couthness and brutality of their habits that the other tribes of Arabs give the name of Madan, that is, ignorant, from two Arabic words, signifying not wise.—*J. B. Fraser*, p. 79.

MADAN a village with turquois or frozah mines, in the declivity of a mountain, two miles from the village. The frozah stratum was not plentiful in this mine; it appeared in some places in very narrow seams. There are many different minerals intermixed with the frozah, and most part of the rock contained iron ore, which sparkled when broken. The frozah is cut by means of a small wheel, which is turned by one hand while the stone is applied by the other, till sufficiently polished. It is then fixed to the end of a small piece of stick, with sealing-wax and exposed for sale.—*Mohan Lal's Travels* p. 174-175.

MADANA, a name of Kama, the hindu god of love. In the hindu religion, festivals are held on the 13th and 14th of the month Cheyt, in honour of Kama, the god of love. Madana, he who intoxicates, with desire, Kama, are both epithets of the god of love. The festivals on the 13th and 14th are called Madana triodasi (thirteenth) and chaturdasi (fourteenth). On these days, the rajpoots of Oodyapur sing hymns handed down by the bards, "Hail! god of the flowery bow, hail! warrior with a fish on thy banner, hail! powerful divinity, who causeth the firmness of the sage to forsake him. Glory to Madana, to Kama, the god of gods; to him by whom Brahma, Vishnu, Siva, and Indra, are filled with emotions of rapture." There is no city in the East where the adorations of the sex to Kama deva, are more fervent than in Oodyapur, the city of the rising sun.—*Tol's Rajasthan*, Vol. I. p. 577.

Rubia tinctorum,	LAT.	Man-jisti,	TAM. TEL.
Pantyyar,	MALEAL.		

Madder is the product of the long slender roots of the *Rubia tinctorum*, a plant of which there are several varieties. The principal supplies of it are obtained from Holland, Belgium, France, Turkey, Spain, and the Balearic Isles, the Italian States, India and Ceylon. The best soil for it is dry, fertile and deep sandy loams, the roots are long and fibrous. It is propagated by dividing and transplanting the roots, but it grows from seed, and between the years 1847 and 1851, the imports ranged from 8000 to 13,000 tons, valued from £25 to £55.

MADDI CHETTU.

the ton, and it requires three years to come to maturity. It is, however, often pulled in eighteen months without injury to the quality; the quantity only is smaller. When the soil is impregnated with alkaline matter, the root acquires a red color; in other cases it is yellow. The latter is preferred in England, from the long habit of using Dutch madder, which is of this color, but in France the red sells at two francs per cwt. higher, being used for the Turkey-red dye. Madder does not deteriorate by keeping, provided it be kept dry. It contains three volatile coloring matters, madder purple, orange, and red. The latter is in the form of crystals, having a fine orange red color, and called Alizaine. This is the substance which yields the Turkey red dye. A field may be planted with madder, and fed off by cattle for three or four years, without any detriment to the roots which are afterwards as good for dyers' uses as those cultivated in the ordinary way. The flesh, milk and bones of animals fed upon madder, become tinged. The dyers of India use the clay root (*Hedyotis umbellata*) and the Aal root (*Morinda citrifolia*) and the Munjeeth *Rubia cordifolia* as substitutes. *R. cordifolia*, the munjit of India is a variety of *R. tinctorum*. It has white flowers, is a native of Siberia, but is cultivated largely about Assam, Nepal, Bombay, Sind, Quetta, China, &c. A small quantity is exported from China and India; about 338 Indian maunds were shipped from Calcutta in 1840, and 2,328 in 1841. It fetches in the London and Liverpool markets from 20s. to 25s. and 30s. per cwt., duty free; 405 tons were imported into Liverpool from Bombay and Calcutta in 1846, and 525 tons in 1850, but none was imported in 1851 and 1852. It was remarked in 1851 by the Jury at the great Exhibition, that this is a valuable dye-stuff, and hitherto not so well appreciated as it deserves, for some of the colours dyed with it are quite as permanent as those dyed with madder, and even more brilliant. Its use however is gradually increasing, and it is unquestionably well worthy the attention of dyers.—*Simmonds. McCulloch's Commercial Dictionary* p. 771. *Home News. Poole's Statistics of Commerce.* See Dyes.

MADEBA, the Medaba of the Scriptures where Joab gained a great victory over the Ammonites and Syrians. (1 Chron. xix. 7-14.) *Robinson's Travels. Vol. II. p. 190.*

MADDI CHETTU or Muluga chettu TEL. (*Morinda tinctoria*?) The roots are sold in the bazaar as a red dye, and were sent to the Madras Exhibition of 1855, so named, from Rajahmundry, Masulipatam,

MADEIRA WINE.

Bellary, Kurnul, Bangalore and Salem. The plant grows in black cotton soil but not more than 3 or 4 feet in height, being constantly dug up for the roots.—*Dr. Ains. in Flor. Andhrica.*

MADDI CHETTU, TEL. *Terminalia glabra, W. and A.*

MADHAVI TIGE, TEL. *Hiptage madablota Gertn.—Geortnera racemosa, R. Br.*

MADHURNAKAM or (V. Bappayi), TEL. *Carica papaya, L.*

MADEGA. TEL. KAE. a prodial slave race in the Peninsula of India, the Chakili or Chaklar of the Tamil people and the Alhang of the Mahratta nation. They are leather manufacturers, shoe-makers, executioners. They are very humble people, regarded as out-castes, dwell in the outskirts of villages and in many places are almost slaves. They are, in general, black with slender lower limbs. They are largely addicted to robbery. They eat the creatures which die of disease. They have certain territorial rights in the soil and are begar coolies. Their right to dead carcasses is often disputed by the Dher or Pariah and continued litigation results. In the years 1866 to 1868, the Dher or Pariah and the Madega or Mang of the village of Dongopra, 25 miles west of Beder were litigating on this point and none of the men would come as begar till it was settled. Col. Tod tells us that the blangi or scavengers of Ramkhaira mortgaged their rights in the dead carcasses of their town to a professional brother of Laisrawun.—*Tod's Rajasthan, Vol. I, p. 624.*

MADEIRA WINE. So called from the island bearing that name, where it is made. Madeira, once on every table, has now ceased to be used in India. The character of this wine, famous for centuries, was first damaged during the wars with France at the close of the 18th and opening of the 19th centuries, when the high prices tempted many merchants of Funchal to throw inferior wines into the market, and this long continued. It has been said that the island never produced more than 70 pipes of first kind of wine but in 1825, 14,432 pipes left the island. In the Autumn, of 1852, the vine fungus, the Oidium Tuckeri, appeared. It settles on the leaves in the form of fine white powder, drying up the leaves, preventing them inhaling carbon and exhaling oxygen, the leaves are thin and the plant falls and dies. In 1864, only 2085 pipes were exported and in 1865, probably not

MADHERI.

one pipe of wine left the island.—*All the Year Round*, September 24, 1864.

MADDEKHON. Gr. *Bdellium*. Commiphora Madagascarensis.

MADERA DEL BRESIL. Sp. Brazil wood. *Cesalpinia sappan*. *Lin.* *Rozb.*

MADERI. See Mahabharata.

MADETIYE. SINGH. *Adenanthera pavonina*.—*Willd.* Under these names, Mr. Mendis describes a tree of the western side of Ceylon, a cubic foot of which weighs lbs. 56, and is said to last 30 years. It is used in common house buildings. The tree produces a red seed which is roasted and eaten.

—*Mr. Mendis.*

MADRYA. See Marble.

MADHA HIND. SANSC. Honey; Sweet; any intoxicating substance; the Saxon Mead.

MADHAKI. HIND. a hukka to smoke opium in.

MADHAVA and Sayana, two commentators of the Vedas of the 14th century.

MADHAVA, a name of Krishna.

MADHAVA. SANSC. from ma, the goddess Lakshmi, and dhava, husband

MADHAVA CHARYA, frequently named Ananda Tirtha, the founder of the Dvaita philosophy. He was a reputed disciple of Sankara, and author of the Sarva Darsana Sangraha on the modifications of the Hindu Religion.

MADHAVA CHARYA or Brahma Sampradaya, a small sect of vaishnava hindus in Southern India founded by Madhava-charya, a brahmin, son of Madhige Bhatta, born A. D. 1199 in Tuluva. Wilson says he lived in the 13th century. At Udipi, Madayatata, Subrahmanya, and other places, he established temples, and eight mathas in Tuluva, below the ghats. The superior gurus of the Madhava sect, are brahmins and sanyasis or profess canonical observances: the disciples who are domesticated in the several mathas, profess also perpetual celibacy: lay aside the brahminical cord, carry a staff and a water pot, go bareheaded and wear a single wrapper stained of an orange colour with an ochry clay. They are usually adopted into the order from their boyhood and acknowledge no social affinities nor interests. They regard Vishnu as the Supreme Spirit, as the pre-existent cause of the universe, from whose substance the world was made. The sect in Karnata, are presided over by eight swami or spiritual heads.—*Wils. Gloss.* See Brahma Sampradaya; Brahma Chari.

MADHERI. TAM. *Anisomeles malabarica*.—*R. Br.*

MADHYAMICA.

MAD'HIAMU. SANSC. the moses of the Greeks; the middle; between; as in the Sanscrit slokam,

Aria vartaha punia Bhumi hi.

Mad'hiam Vindhya Himava yoho.

MADHU. SANSC. Honey; anything sweet; anything intoxicating. Madhu is one of the poetical names of Krishna, viz., the intoxicator, (from Madhua strong drink, and Madhu, the bee, perhaps originating our mead.) Amongst the hindus, a new born infant has a little honey put into its mouth as a ceremonial rite, called Madhu prasana. Several of the drinking races of India and Asia still use the cup or piala to welcome the coming guest. Colonel Tod tells us regarding the love of strong drink and indulgence in it to excess, so deep rooted in the Scandinavian Asi, and German tribes, and in which they showed their Celtic origin, that the Rajpoot is not behind his brethren either of Scythia or Europe. Though prohibited by ordinances which govern the ordinary hindu, the Rajpoot welcomes his guest with the nunnwar picala, or 'cup of request,' in which they drown ancient enmities.—The heroes of Odia never relished a cup of mead more than the Rajpoot his madhya; and the bards of Scandinavia and Rajwara are alike eloquent in the praise of the bowl, on which the Bardai exhausts every metaphor, and calls it ambrosial, immortal, "The bard, as he sipped the ambrosia, in which sparkled the ruby seed of the pomegranate, rehearsed the glory of the rajput race." Even in the heaven of Indra, the hindu warrior's paradise, akin to Valhalla, the Rajpoot, has his cup which is served by the Apsara, the twin sister of the celestial Hebe of Scania. "I shall quaff full goblets amongst the gods," says the dying Celtic warrior, "I die laughing," are sentiments which would be appreciated by a Rajpoot. Cups in use with the Tibetans are made of maple knots produced on the maple by the Balauphara.—*Tod's Rajasthan*, Vol. I, p. 377. *Wilson's Glossary.*

MADHUBEE. BENG. Hiptage madablotia.

MADOOKA. SANS. *Bassia latifolia*.

MADOORKATI. *Papyrus pangorei.* A sedge, extremely common about Calcutta, and very extensively employed in Bengal

MADRAS.

for making the elegant, shining useful mats for which the capital of India is famous, and which are frequently imported into Europe. Strips of this sedge are suited for plaiting.

—*Royle*

MADOOWA, a temporary building: Amongst the superstitious ceremonies of the races in Ceylon are a variety of forms for the recovery of the sick, 1 *daana*; 2 or "the food offering," the harvest-home of the Singalese and horn-pulling, a rite in honour of *Pattino*, performed to drive away pestilence. But the principal ceremony is the *Dawal madoowa*, which is celebrated on a larger scale, and frequently performed on behalf of a whole village or district which has been afflicted by cholera or the fever so much dreaded by the natives. It takes place in a "madoowa," or temporary building constructed of branches, and decorated with white cloths and garlands; and it generally lasts throughout seven days, on each of which offerings are made of wild flowers and fruit, together with rice and money.—*Tennant's Christianity in Ceylon* p. 231-35.

MADORIUS, RUMPH. *Calotropis gigantea*.

MADRA, also *cherru narranji*, *Citrus aurantium* *Linn.*

MADRA, the ancient name for *Bhootan*.

MADRAS, a town on the Coromandel Coast, lat. 13° 4' N., lon. 80° 14' E., and the principal town of the Presidency which bears its name. It is a large town on the sea board with a fortress called Fort St. George; the population is estimated at 450,000 and is composed of British and their descendants, mahomedans and hindus of various races, and nations. It is high water at full and change 7h. 34m. and the rise of the tide at the springs is 3½ feet nearly. In January 1841, a light house was erected with a flashing light. The flag staff in the Fort is in about lat. 13° 4' 10" N., and the Observatory in long. 80° 17' 21" E. The N. E. monsoon prevails with heavy weather from the middle of October till the beginning of December and violent gales sometimes occur in May. Cyclones also occur, and do immense damage. Those of 1807, 1828, 1836, and 1847 were very violent. Underlying the sands and clays of Madras and all along the sea coast, is a bed of dark blue tenacious clay, containing numerous fossils of existing species. The language spoken at Madras is the Tamil, which is the tongue of the people southwards to Cape Comorin, westwards to the ghat leading into Mysore, southwards through Coimbatore, and in the southern parts of Travancore. In the Madras presidency, the languages spoken

MADRAS.

are Tamil, Telugu, Canarese, Malayalam. The Telugu language begins a few miles north of Madras, as far as the eastern boundary of Mysore which it follows up to that of the Mahratta country, thus including, in its extent, the Ceded Districts, Kurnool, the greater part of the Hyderabad dominions and a portion of the Nagpore country and Gondwana.

In 1864-5, there were 15,838,828 acres under cultivation, the land revenue was £4,181,645. In 1868-9, the area under cultivation, was about 16,202,696 acres, and the population 26,089,052 of whom 1,502,134 are mahomedans and 414,096 christians. The Madras Presidency is recognised to consist of the Northern Circars, on the coast of the Bay of Bengal, from the Chilka lake to the Kistnah river. The Carnatic from the Kistnah river to Cape Comorin. The Balaghat, or more elevated region in the interior of the peninsula composed of the Bellary and Cuddapah Collectorates: and Canara and Malabar are alluvial tracts on the western coast. These are ancient political divisions, but indicate also differences of race and languages. The Madras Presidency for revenue purposes is arranged into twenty districts, there are 3,227,726 farmers and subtenants, holding 2,297,158 single or joint farms; each district ranges from 4,000 to 12,000 square miles in extent. Under the ryotwarc system, the peasantry pay an average of Rs. 2½ per acre. Of the ryots on the rent roll only 420 pay upwards of £100 a year of rent to Government, only 1,627 from £50 to £100, only 5,641 from £25 to £50, and only 77,408 from £10 to £25. Of all the rest, forming about 90 per cent. of the whole, 118,672 pay less than £5 a year, 431,569 less than £3 and 1,197,157—the great majority—less than one pound a year. Only one country of Bengal—Chittagong—presents a parallel to it, and there Government has long tried to induce the miserable peasantry to accept a fee-simple tenure. Mr. Maltby, Acting Governor, in a minute on Sir W. Denison's proposal to remove the poverty and agricultural ignorance of the ryots by model farms and imported machinery observed that the surest way of promoting improvement is to render land valuable and attract capital to it by such methods as fixing a light and permanent assessment, giving security of title, enlarging the means of irrigation and facilitating the conveyance of produce." Mr. Pycroft, with similar wisdom, said—"the main remedies are the lowering of the land assessment where unduly high and placing it on a permanent footing, security of tenure, develop-

MADRAS.

ment of internal communication, extension of irrigation, reduction of the interference of subordinate revenue officials, cheaper and more prompt administration of justice and diffusion of education."

The area is estimated at 140,726 square miles, and the total population including that of the town of Madras at 26,539,052. By the quinquennial census taken on the 1st March 1867, the population of the Presidency, exclusive of the city of Madras, was found to be 26,089,052 thus classified:—

Hindoos 21,172,822 | Christians 414,096
Mahomedans 1,502,134 |

The population of the city of Madras is supposed to be about 450,000, thus classified:—

Races.	Nos.	Death rate per 1000.
	1866.	1867.
Europeans and East Indians.	17,219	38.1
Hindoos	365,576	30.6
Mahomedans	67,205	29.9

The approximate area and population of the Madras Districts including the city is

Districts	Square miles.	Population
Madras city	27	450,000
Ganjam	4,457	1,235,790
Vizagapatam	18,935	1,934,558
Godavery	7,535	1,427,472
Kistna	7,227	1,296,652
Nellore	4,516	1,168,664
Cuddapah	9,177	1,144,759
Bellary	11,496	1,304,988
Kurnool	7,470	776,857
Madras	2,183	804,263
North Arcot	15,146	1,787,134
South Arcot	4,779	1,261,846
Tanjore	3,735	1,731,619
Trichinopoly	3,565	1,006,826
Madura	8,790	1,916,399
Tinnevely	5,116	1,521,168
Coimbatore	8,470	1,430,735
Salem	7,601	1,619,333
South Canara	4,206	839,688
Malabar	6,259	1,856,378

The water supply of the several districts is somewhat varied. The average annual rainfall during a period of five years ranged from 17.57 inches in Bellary to 146.31 inches in South Canara.

The total area of the Presidency may be estimated as 130,000 square miles, being thus more extensive than Great Britain and Ireland and about the same size as the present kingdom of Prussia.

Ryotwary lands...16 million acres (actual.)
Inam lands... 4½ million acres (actual.)
Zemindary lands...5½ million acres (estimated)
Malabar & Canara...2¼ million acres (estimated)

exclusive of Madras city, there are 184 souls to each square mile, while only one thirty-third part of the vast area of 130,885 square

MADRAS.

miles is cultivated. The proportion of the irrigated land applies to the production of any crop, but rice is very limited.

The Madras Districts range from 4,000 to 19,000 square miles in extent. The Districts of Ganjam, Vizagapatam, Godavery and Kistna are on the north-east coast, to the east of the Central Provinces and Hyderabad. The other east coast districts are Nellore, Madras, Chingleput, South Arcot, Tanjore, Madura and Tinnevely, the last named being situated in the extreme south of the peninsula. To the west of Madura and Tinnevely, and on the west coast of the peninsula, are the Travancore and Cochin territories governed by feudatory rajahs. North of these states, on the same coast, are the Madras districts of Malabar and South Canara. The central districts of the presidency are those of Coimbatore, Trichinopoly and Salem, between Malabar and Madras, and those of Bellary, Kurnool, Cuddapah and North Arcot between Hyderabad and the Mysore country, which intervenes between Canara and Bellary and Nellore.

The Madras Presidency may be described as of three parts—the Telugu country of the North, extended northwards from, and including, Nellore; the Tamil country of the South, and the Canarese and Malayalam districts of the Western or Malabar parts of the peninsula.

In the Southern division, where the mahomedan influence had been very weak, the land was held by cultivating village communities who paid rent direct to the old hindu sovereigns.

In the third or Western division, the village or communal gives place to the individual right to land free of all rent to the State, known as Jannm or birth-right. Malabar was prosperous, owned chiefly by wealthy capitalists; but Canara had been over-assessed, prior to British occupation. The extent of land under cultivation in those portions of the Madras Presidency held on ryotwary tenure, has risen from about ten million acres in 1855, to sixteen millions acres in 1865. In 1868-69 the area under cultivation increased by 202,696 acres.

Mr. Dalryell, Secretary to the Madras Government, estimated that there is produced an annual supply of 129 million cwt. of grain for the support of the population, or more than 5 cwt. for each person, being more than $1\frac{1}{2}$ lbs. per diem, whereas a family of five can subsist upon 7 lbs. per day, without difficulty; and three acres of superior land, supposing one acre to be irrigated, or four acres of unirrigated land would support such a family for a year.

MADRE DE CACOVO.

Its soil is chiefly silicious, and the cultivation is carried on by a multitude of little tanks.

The produce of an acre of the best rice land varies from 1080 Madras measures (= about 30 cwt.) in the Southern districts to 1,200 measures (= about 33 cwt.) in Godavery and Kurnool; and the worst rice lands yield 8 to 14 cwt. The revenue in 1868-69 was £7,507,081 and the expenditure £6,598,163.

In the Military administration of the South of India, the Madras army holds all the Madras civil provinces, also the feudatory states of Mysore, Travancore and Hyderabad, also the Central Provinces, parts of the Sagar district, all British Burmah, the Andamans, Straits Settlements, Labuan and Hong-Kong. The Madras Presidency is ruled by a Governor in Council with a Commander-in-Chief, a member of the Council. In its earlier years the Madras government underwent many violent changes. In 1774, the governor, Mr. Wynch, was deposed by orders from the Court of Directors. In 1775, Lord Pigot was appointed, but in 1776 he was deposed by his Council, and confined—He was restored but in April 1777, he died. In 1770, Sir Thomas Rumbold was appointed governor of Madras, but dismissed in January 1781. In the beginning of the present century much agitation occurred whilst Sir George Hilario Barlow was Governor, and in 1860 Sir Charles Edward Trevelyan was removed from the Governors office. India has furnished from amongst its Civil and Military servants many who have risen to distinction as statesmen, soldiers and financiers; amongst those of them from Madras may be named the great Lord Clive, Governor-General of India, Sir Thomas Munro, Governor of Madras, and Sir John Malcolm, Governor of Bombay. As botanists the missionaries—Rottler and Koenig, and Drs. Roxburgh, and Wight laboured in the Madras Presidency, Dr. Jerdon author of the Birds of India and of the Mammals of India was a Madras medical officer; and Dr. Russell and Dr. Day described the fishes of the coasts. Its chief hills are the Neilgherries, the Shevaroy and Palneys and its chief rivers, the Godavery, Kistnah, Tumbudra and Cavery.

MADURA.

MADREPORIDÆ, a family of zoophytes in which the polypes have ten short tentacles and a stony polypidom, sometimes branched and arborescent, sometimes developed in a leaf-like or fan-like form. They exist in all the warm seas. *Mangin, Mysteries of the Ocean, London, 1868.* See Zoantheria.

MADU, BALI. JAV. Myrrh.

MADUKA, SANS. *Bassia latifolia*.

MADU-KAIL, the Tamil name of a Malabar and Canara tree, the wood of which is yellow and very small; its grain is close and heavy: it is not of much use or value.—*Eldy, Forests of Malabar and Canara.*

MADU KARRE MARAM, TAM. *Randacumetorum*.

MADURA, a revenue district in the south of the peninsula of India, in the Madras Presidency, containing 1,756,791 inhabitants. It has the Pulney hills rising 6,000 to 8,000 feet high, the Sirroo-mallee between Madura and Dindigul 3,500 feet in height. In this district are the two large zemindaries of Shevaganga and Rannad, and to the latter belongs the island of Ramisseram to which hindoo pilgrims largely resort. Madura town was the chief seat of the ancient Pandyan kingdom. This city was also once famed as a seat of braminiel learning, and the Pandyan palace with a hundred granite pillars built by Trimul Nuck is still standing. It formed the southern part of the Regnum Pandionis of Ptolemy, the Pandi Mandalam of the modern Indians, its capital was the Madura of Ptolemy, and was the royal residence of the ancient monarchs.

Pandiya, probably a word of Sanscrit origin, is the Pandion, the Oi Pandiones, of the Greeks, and was the titular name of the dynasty of Madura, the race were styled Pandyi, Pandiya, the king, the Pandyan or Pandiya Deva. Two embassies were sent by the Pandyan king to Augustus, the first of which he received at Tarragona, the second is mentioned by Strabo. The friendship of the Romans was sought by only one other hindu prince, O Kerobothros, the king of Chera or Kerala, who was also a Dravidian. The city and district were the scene of many operations during the competition for India in the middle of the 18th century between the British and the French.

Its chief streams are the Omraoti and the Vijay. The slopes of the Pulni hills and Cumbum valley contain valuable timber. South of the great granite tract of Bellary and Mysore about Trichinopoly and Madura, are limestone beds, both

MADURA ISLAND.

fossiliferous and non fossiliferous and it is from these volcanic, plutonic and aqueous rocks that building stones are drawn. In Tinnevely and Madura, are valuable marbles. In Madura was a dangerous sport called "jalicut" it consists in making a bull infuriated and then letting him loose with cloths or money tied to his horns which become the property of any person who can succeed in removing them. Since the year 1855 a prohibition existed against the sport being indulged in, and in 1859 certain village servants were dismissed by the late magistrate for permitting it within the limits of their jurisdiction.—*Orme, Friend of India Dec. 17. Temminck's Hindoostan, Vol. II. p. 7.*

MADURA ISLAND, is of an even appearance and moderately elevated, its N. W. point is in lat. $6^{\circ} 55\frac{1}{2}'$ N. long. $112^{\circ} 51\frac{1}{2}'$ E. and its east point in lat. $6^{\circ} 59'$ S. long. $114^{\circ} 11\frac{1}{2}'$ E. It is the most important of a line which runs along the northern and eastern coasts of Java. It is the principal of a group composed of more than seventy-five; and is separated from the great island by a strait, not more than a mile or a mile and a half wide which serves to form the capacious harbour of Surabaya. It has the appearance of being a continuation of Java, a point to which Malay manuscripts refer and has usually passed into the hands of its most powerful sovereigns. In length it is about ninety-one miles, in breadth thirty-one, with a regular outline. Its formation is calcareous, though the lower districts are marshy, and covered with woods. In great part uncultivated, it offers a remarkable contrast with the extensive agricultural country in its neighbourhood. The chief products are, salt, which is to be obtained more abundantly than anywhere else in the Archipelago; the edible nests of the sea-swallow, cotton, tobacco, coffee, pepper, and mace. Scarcely sufficient rice is grown to support a population of 300,000, which is somewhat dense in comparison with other parts of insular Asia. Few animals are found, and none peculiar to Madura. The island is famous, however, for its breed of cattle, and supplies from its rich pastures provisions to many of the agricultural and seafaring communities of the neighbouring regions. The meat, when cured, resembles, but is far superior to, the jerked beef of South America. The people are similar to the hill-men of Java, and from them the Dutch recruit the live of their native army with the best troops in their service.—*Horsburgh, Raffles History of Java, Earl, Eastern Seas. Temminck, Comp d'Éil, sur les Possessions*

MAG. GUV. *Phascolus radiatus*.

MAGADAMBOOM. TAM. A Travancore wood, of a white colour, specific gravity 0.462, used for light work generally.—*Col. Frilh.*

MAGADHA, a class of bards of Central India, who recite history. The bards and Charan of Rajputana and Guzerat are a peculiar race. The Bhat or bard of India are of three sorts, the Magadha or historians, the Sata or genealogists, and the Bandi or court minstrels, whose duty, in older times, it was to salute the king or chief, in the early

MAGADHA.

morning, wishing him long life and prosperity. These are the bards and minstrels of Central India. The bards [from their sacred character were often employed as convoys of travellers and their property, in tandahs or caravans. Throughout Rajputana they are regarded as a sacred order, and as the hereditary guardians of history and pedigree. They chant their own verses, or legends from the mythology of India.—*Hindoos*, p. 75.

MAGADHA, the territory of which this is the ancient name, corresponds with that part of the present Bahar which extends along the south of the river Ganges, in power from B. C. 350 to A. D. 450. The country is now known as Bahar. The capital was Rajagriha. The kings of Magadha were of six dynasties, viz. that of Barhadraha; of the line of Pandu, the first of which was Jarasandha, a co-temporary of Yudishtira and Krishna, according to Sir William Jones, B. C. 3101, according to Professor Wilson in the reign of Sahadeva, B. C. 1400, Parkshita was born and the great war ends, and in the reign of Ripanjaya, B. C. 915, a Buddha was born.

The Sunaka dynasty, kings of Bharatkanda of Magadha kings, reigned 128 years.

The Saisnaga or Sesnag, reigned 360 years, and we find amongst them, B. C. 415, Nanda, Mahapadma, (B. C. 1602 Jones, 360 Wilson) regarding whom it was said he will bring the whole earth under one umbrella; he will have eight sons, Sumalya and others, who will reign after Mahapadma. He and his sons will govern for 100 years. The brahman Kaulilya will not root out the nine Nanda.

The Maurya dynasty, governed 137 years, the first of whom, according to Wilson, B. C. 315, and 1502 Jones, was Chandragupta, the Sandracottus of the Greeks.

The Sunga dynasty, reigned 110 years, the first of whom Pushpamitra, (B. C. 178) put his master, the last of the Maurya, to death.

The Kanva dynasty, reigned 45 years. The first was B. C. 66 Wilson, Kanva named Vasudeva, who usurped his master's kingdom.

Magadha is mentioned so early as in the Atharvan Veda, and is met with so late as the seventh century when Chinese pilgrims speak of it under the scarcely intelligible name of Moki-a-to. The present appellation of Behar is from Vihara or a monastery of the buddhists whose most reputed convent was at Behar the place where Buddah obtained the law.

MAGAR.

The Anga race had their abode about Bhagnipore and the Maghada race in the South Behar. At the time the At'harvan Veda hymn was composed the country beyond the Soane was considered not strictly Indian. Our present knowledge of the languages belonging to the Arian class does not enable us to determine whether they are developments of some tongue, of which the Sanscrit is the cultivated representative, and of which Magadhi and Pali at the era of Asoka and the introduction of buddhism into Ceylon, was a spoken form, or whether Sanscrit has been superinduced upon some aboriginal tongue, as it has been demonstrably though in much smaller quantity upon the Tamiloid languages of the South, and as French has been introduced into Anglo-Saxon. Certain it is that in every Arian tongue, a considerable and apparently primitive element is found which is not traceable to Sanscrit and which in Gujarati is reckoned at one-third of the whole language. *Tr. of Hind.* Vol. I. p. 218. *Elphinstone's History of India.* Vol. I. p. 393. *Thomas Prinsep's Antiquities.* Vol. II. p. 240, 468. *India in the 15th Century.*

MAGADOXA in Lat. 2° 2', L. 45 25, E. See Mukdeesha.

MAGAIH. A tribe of agriculturists in Bahar, probably a vernacular form of Magadhi, or native of Magadha.

MAGALHAES FERDINANDO-de, more generally known by his Spanish designation Magellanes, in the year 1520 set out on a voyage of eastern discovery, passed through the straits which bear his name, discovered Mindanao, and died in Mactan, on 26th April 1521, from wounds received in action. Only one of his fleet, the Vitoria commanded by Elcano, a Biscayan returned to Spain. Magellan had become disgusted with the Portuguese service, and he offered to Charles V. to discover a passage to India by the West, in order to divide the rich traffic of the Spice Islands. He passed the straits in S. America, which have since gone by his name, in 1520; and entering the south Pacific Ocean, arrived in a few months at the Philippine Islands, of which he took possession in the same name of the Spanish monarch. Barbosa fell three days after Magellan, and in twelve days more, the people waylaid and murdered twenty-four of his companions.—*Bikmore*, 308. *Chufield's Hindustan*, p. 37.

MAGAR, a Bhot race occupying the lower levels on the banks of the Kali in Nepal: they use a monosyllabic language, like the Tibetans, Chinese, Burmese and Siamese

MAGHAZZI.

with an alphabet of Indian origin; they abstain from beef: drink to excess, and have an Indian priesthood. They are divided into twelve thum, supposed to be descendants of 12 different male ancestors. They do not marry in their own thum. This practice occurs in Australia, North and South America, Africa and Europe. They reside in the valleys.—*Dr Latham's Ethnology*.

MAGAR-BANS, HIND. *Bambusa arundinacea*, a solid bamboo, called a male bamboo.

MAGDAR, HIND. PERS. Wooden clubs or Dumb-bells, known in England as Indian clubs, used in India for exercise in developing the muscles of the arms and chest.

MAGEATA or Rosaniline. Punjab dyers call these dyes "shishi ka rang," literally "bottle color," because the crystals are imported in little phials.

MAGELLOO ——— ? *Vitex altissima*.

MAGH, the tenth month of the Hindu year, when the sun enters Capricorn.

MAGGHASSI, See Jell.

MAGH, PERSIAN, a fire worshipper, also a wine drinker or tavern keeper.

MAG'H commonly applied by Europeans to the natives of Arakan, particularly those bordering on Bengal, or residing near the sea, and to the people of Chittagong. The Arakanese however disclaim the appellation, and restrict it to a class whom they hold in utter contempt, the descendants of the Arakanese who were settled at Chittagong and Dacca, by Bengali mothers, the origin of the word is unknown but it is also written Magh, Mug or Mugh.—*Wilson*.

MAGHA, an Indian sage, the offspring of the sun, *Pooche*.

MAGA BIRA or Moga bira, Anisomeles malabarica, *R. Br.*

MAGHADAM-POO, TAM. Flower of *Mimusops elengi*.

MAGHADI ——— ? *Cucurbita lagenaria*.

MAGHAL, HIND. *Populus balsamifera*.

MAGHZ, HIND. the brain, *Char-maghz Juglans regia*.

MAGHAVAN, another name for Indra. See Veda.

MAGHAZZI. There are numerous Baluch tribes east of the Indus, and those in Bhawalpore and the Punjab, are said to be Rhind. The question of the original countries of these tribes is still undecided. The Baluch and Brahui, are sub-divided into an infinite number of tribes, who take their names from the chiefs under whom they serve, the district or country to which they belong, or the traditions whence they derive their descent.

MAGH-MELA.

Lt. Pottinger mentions that the Baluch partakes considerably of the idiom of the Persian and at least one-half of its words are borrowed from that language, but greatly disguised under a corrupt and unaccountable pronunciation. The Brahuiki, on the contrary, is so dissimilar in its sound and formation, that he did not recollect to have marked it in a single expression in any way approaching to the idiom of the Persian.

There are two languages spoken in Baluchistan, the Baluchiki, a Hindi tongue of the Arian or Sanskrit stock in which the Persian, Sindi, Punjabi, and Sanskrit words recur, and the Brahui, which belongs to the Scythic or Turanian or Tamulian stock. The Brahui language, spoken by the mountaineers in the khaship of Kelat, in Beluchistan, contains some Dravidian words and a considerable infusion of unquestionable Dravidian forms and idioms. Considered as a whole Dr. Caldwell regards this language as derived from the same source as the Punjabi and Sindi, but it unquestionably contains a Dravidian element, derived from a remnant of the ancient Dravidian race having been incorporated with the Brahui. The discovery of this element beyond the Indus river, proves that the Dravidians like the Aryan, the Græco-Scythian and the Turco-Mongolian, entered India by the North West route. The Brahui state their forefathers came from Halab, Aleppo. The Butani is a clan of the Baluch Maghazzi tribe, which has been located in Kachi for a long time.

The contour of the people of these two classes is as unlike, in most instances, as their languages, provided they be descendants of a regular succession of ancestors of either; but the frequent inter-marriages which take place amongst them have tended in some degree to blend together the peculiar characteristics of both, that in many families, and even whole tribes, such have ceased to exist. The Baluch, in the first instance, branch from the original class of that name, into three principal tribes, called Nharooi, Rind and Maghazzi. The Nharooi, principally inhabit that portion of Beluchistan, which lies to the westward of the desert, and there are likewise khel of them at Noosky and in Seistan.—Dr. Caldwell's *Comparative Grammar*.

MAGHIDAM MARUM. TAM. *Mimusops elengi*.

MAGH-MELA. HIND. a sacred fair held at Allahabad. Every twelfth year, an unusually great gathering takes place at the Magh Mela of Allahabad which is then called the Koombh Mela. So great is the crowd

MAGI.

of people that the rolling stock on the East Indian and Delhi lines has been found insufficient for their conveyance, and numbers of pilgrims are detained at railway stations.

MAGHRAB. AR. the West: applied to Western Africa and its people, the common plural is *Maghrabin*, generally written 'Mogrebyn.' The form of this word in the singular seems to have given rise to the Latin 'maurus,' by elision of the Ghain, to Italians an unpronounceable consonant. From *maurus* comes the Portuguese 'moro,' and the English 'moor.' When Vasco de Gama reached Calicut, he found there a tribe of Arab colonists, who in religion and in language were the same as the people of Northern Africa,—for this reason he called them 'Moors.' This was explained long ago by Dr. Vincent (*Periplus*, lib. 3), and lately by Prichard. *Maghrabin* or *Westerns*, then would be opposed to *Sharkiyyin*, *Easterns*, the supposed origin of 'Saracen.' The word *Saracens* came to us through the Greeks (Ptolemy uses it), who have no such sound as sh in their language, and the Italian which, hostile to the harsh sibilants of Oriental dialects, generally melts sh down into s. So the historical word *Hash-sh-shiyyin-lemp-drinker*, was civilized by the Italians into 'assassino.' The *Maghrabi* dialect is known to be the harshest and most guttural form of Arabic. It owes this unenviable superiority to its frequency of 'Sukun,' or the quiescence of one or more vowels 'Klab,' for instance, for 'Kilab,' and 'Msik' for 'Amsik.' Thus it is that vowels, the soft and liquid part of language, disappear, leaving in their place a barbarous sounding mass of consonants.—*Burton's Pilgrimage to Meccah*, Vol. I, pp. 274, 293. *Natural History of Man*.

MA-GHWAY. A pagoda called the 'Emerald Couch' standing in the town of Maghway on the Irrawaddy, is reputed to contain a relic of the bed of the last Buddha, Gaudama.

MAGHWE. See Volcanoes.

MAGHIZ. HIND. the brain, the kernel of a nut, fruit, &c., &c. hence

Maghzak. HIND. the mango.

Maghz khubaji. HIND. apricot kernels.

Maghz-pipal. HIND. or Filfil-i-daraz, Piper longum or Chavica Roxburghii.

Char-maghz.

MAGI were the priests of the Persians, Bactrians, Charismians, Arians and Sakæ. In Burmah, Arracan, Ceylon, and Siam, the sacred language of Buddha is called Maga.

MAGNESIA.

The Magians were considered as gods, according to Diogenes Laertius, (in *Proem*, p. 2, Lond. 1664) who notices their reverence for Fire, Earth, and Water,"—*Ous ka apop eira, kai ger, kai 'odap*. But Herodotus had, before him, mentioned sacrifices offered on mountains to Jupiter, by the ancient Persians, and their worship of the sun and moon; of the earth, of fire, water, and of the winds; he adds, also, that they learned from the Assyrians and Arabians, to adore Venus, Urania, or 'celestial,' which the Persians called *Mitrd*. Strabo, like Herodotus, declares that the Persians neither erected statues nor altars, "they regard," says he, "the Heavens as Jupiter, and reverence the Sun, which they call Mithra. The Moon, also, and Venus, Fire, the Wind, and Water." Yet in a previous passage of the same book, if the text be correct, he had affirmed that Mars alone was worshipped by the Persians. What they called Jupiter, says Herodotus, was the whole compass or circuit of heaven, which Strabo, as above quoted, confirms. From both authors, it appears, that the Persians did not attempt to embody, under the human form, an object of such materiality as the celestial expanse. But Clemens Alexandrianus, gives us reason to believe that some of their idols resembled human beings, and the statue of Venus, *Tanis Tis Appoditis tanaidos* mentioned by him, represented, without doubt, the female divinity more correctly named Anaitis, that Venus, we may suppose, whom the Persians learned to worship from neighbouring nations, as Herodotus had already declared.

The Magism of the Chaldees as it prevailed about B. C. 2234, when a Median dynasty sat on the throne of Babylon, was a modification of the doctrines of Zoroaster.—*Herod.* Lib. I. 131. *Strab. Geog. Lib. XI.* ed. Xylond, p. 847. *Basil.* 1571. *Protrept.* Sect. V. in *Onseley's Travels*, Vol. 1, p. 108. *Bunsen*, III. 583.

MAGILAM, TAM. *Punica granatum*.

MAGINDANAO, an island of the Eastern Archipelago. The people use the Tagala alphabet of the Tagala nation, of the great island of Lucon. The Ladronecs or pirates of the Eastern Archipelago consist wholly of the inhabitants of the free mahomedan states in Sumatra, Lingin, Borneo, Magindanao and Sulu.

MAGIR. MAR. Syn. of Odina woodier.

MAGNESIA. ENG. IR.

Talc earth, Calcined		Bittererde, Talkerde,	
Magnesia,	ENG.		GER.
Magnésie,	FR.	Magnesia usta,	LAT
Gebrauchte magnesia,	GER.		

MAGNETIC NEEDLE.

A soft white powder used in medicine. It is prepared by burning the carbonate of magnesia, also from the bitters of sea water after the crystallization of common salt.

MAGNESIA CARBONAS.

Magnesia alba,	Kohlensaures Bitter-
sub carbonas,	erde, GER.
Carbonate of Magnesia,	„ Talkerde, „
de Magnesie, FR	

This forms a constituent of the dolomitic or magnesian limestone which is found largely in Southern India near Trichinopoly. Very fine silicious and Magnesian Earths, such as rottenstone, alkaline loam and armenian bole, occur near Soudoor, Bangalore and Cuddapah.

MAGNESIA LOZENGES. Carbonate of magnesia six ounces, sugar three ounces, nutmeg one scruple. Pulverize and with tragacanth mucilage make into lozenges.—*Berg. Pharm.* p. 435.

MAGNESIA SULPHAS.

Sulphate of Magnesia,	Sulphate de Magnesie, FR.
Epom Salts,	Schwefelsaure Bit-
Violated Magnesia.	tererde, GER.

This is a medicinal salt, valuable as a cathartic. It is usually made from the bitters of sea water, but could be prepared from the magnesite of Southern India. Bitters is the liquid that remains after sea salt has been obtained from sea water by boiling.

MAGNESIÆ SUBCARBONAS. See *Magnesia alba*.

MAGNESIÆ, FR. *Magnesia*.

MAGNETITE, Carbonate of magnesia, occurs in acicular crystals, massive, and in powder. Its colour is usually white, occasionally grayish and yellowish. The massive varieties are found amorphous, reniform, nodular, and stalactitic. Fracture splintery, or flat conchoidal. Its hardness exceeds that of calc-spar. It is dull, nearly opaque. Specific gravity 2.8. It is found in several parts of Europe, as Styria, Moravia, Spain, and Silesia, in Peninsular India, and at Hoboken, in New Jersey, North America near Trichinopoly and near Hoonsoor. Its analysis by Rammelsberg gives—

Carbonic Acid	...	52.214
Magnesia	...	47.786=100

—*Eng. Cyc.*

MAGNET. ENG. GER. Native Loadstone. Magnetic iron ore, of which there is an abundance in the peninsula of India. It is largely used in the manufacture of iron, or wootz steel.

MAGNETIC NEEDLE. More than a thousand years before our era, a people living in the extremest eastern portions of Asia had magnetic carriages, on which the moveable

MAGNOLIA DISCOLOR.

arm of the figure of a man continually pointed to the south, as a guide by which to find the way across the boundless grass plains of Tartary; nay, even in the third century of our era, therefore at least 700 years before the use of the mariner's compass in European seas, Chinese vessels navigated the Indian Ocean under the direction of magnetic needles pointing to the south. The Greeks and the Romans knew that magnetism could be communicated to iron, and that that metal would retain it for a length of time. The great discovery of the terrestrial directive force depended, therefore, alone on this, that no one in the west had happened to observe an elongated fragment of magnetic ironstone, or a magnetic iron rod, floating by the aid of a piece of wood in water, or suspended in the air by a thread, in such a position as to admit of free motion.—*Humboldt's Cosmos*, Vol. I. *Curiosities of Science*, p. 194.

MAGNOLIA, a genus of plants of the Natural Order, Magnoliaceæ. The *Magnolia conspicua*, called by the Chinese "yu-lan," has been cultivated by the Chinese since A. D. 627. It attains a height of 30 or 40 feet in its native country, but reaches only 8 or 10 feet in English gardens. It is a very showy tree, having white flowers sometimes suffused with purple, which give out a most delicious perfume. It blossoms in England during the dreary months of February and March, and is distinguished from the other species by the flowers appearing before the leaves. It is not quite so hardy as the American species.

M. grandiflora. The Great-Flowered Magnolia, or Laurel Bay, is an ever-green tree, reaching sometimes a height of 70 feet. It has been introduced into China from America and promises to be a very ornamental tree.

M. purpurea, the Purple-Flowered Magnolia, an ornamental shrub, is a native of Japan, and seldom attains a greater height than 10 feet. The bark when bruised has an aromatic odour. The flowers are more or less purple without, and always white within. The genera *Talauma* and *Magnolia* have the very singular property of dropping their seeds out of the back of the seed vessels when ripe, allowing them to hang down, each suspended by a long extensible elastic cord, composed of delicate spiral vessels.—*Forster's Tea Districts*, p. 16. *Eng. Cyc.*

MAGNOLIA DISCOLOR, D. C. VENT.

M. purpurea, CLER. | *M. obovata*, ROY.

This species of *Magnolia* grows in Japan and China. It is a shrub with large dark, purple rose coloured inodorous flowers.—*Roth. Voigt.*

MAGNOLIACEÆ.

MAGNOLIA EXCELSA. WALL. the white-flowered magnolia. A native of Nepal and Sikkim. Near Darjeling, it forms a predominant tree at 7,000 to 8,000 feet; and in 1848 it blossomed so profusely that the forests on the broad flanks of Sinchul and other mountains of that elevation, appeared as if sprinkled with snow. The wood is highly prized in the neighbourhood of Patna for all sorts of joinery work, it being at first of a fine greenish colour, but changing to a fine yellow and the grain very close. It is sold at Patna under the name of "Champ."—*Hog, Vegetable Kingdom*, p. 25. *Hooker Him. Jour.* vi. p. 125.

MAGNOLIA CAMPBELLII, HOOKER. The purple-flowered magnolia hardly occurs in Sikkim below 8,000 feet, and forms an immense, but very ugly black-barked, sparingly branched tree, leafless in winter and also during the flowering season, when it puts forth from the ends of its branches great rose-purple cup-shaped flowers, whose fleshy petals strew the ground. On its branches, and on those of oaks and laurels, *Rhododendron Dalhousiae* grows epiphytically, a slender shrub, bearing from three to six white lemon scented bells, four and a half inches long and as many broad, at the end of each branch. In the same woods the scarlet *Rhododendron R. arboreum* is very scarce and is outvied by the great *R. argenteum*, which grows as a tree forty feet high, with magnificent leaves twelve to fifteen inches long, deep green, wrinkled above and silvery below, while the flowers are as large as those of *R. Dalhousiae*, and grow more in a cluster. Few plants exceed in beauty the flowering branch of *R. argenteum*, with its wide spreading foliage and glorious mass of flowers.—*Hooker Him. Jour.* Vol. I. p. 125.

MAGNOLIACEÆ. The Magnoliad tribe, a natural order of plants which occur in America, China, Japan, N. Holland and N. Zealand. Fine trees or shrubs with large, beautiful, often strongly odoriferous flowers. The Indian species are ranged under five genera, viz. *Micheelia*, *Manglietia*, *Aromadendron*, *Sphenocarpus* and *Talauma*. The first of these numbers 22 forms or, if Wallich's *Magnolia panchana* be no *Micheelia* only 21, viz. 7 from Nepal, 5 from Java, 3 from Ceylon, 2 from the Khassya Mountains, 1 from the Neilgherries, 1 from the Pulney Mountains, 1 from Malabar, 1 from Pegu, 1 from Amboyna, and 1 from Chilimori. *Manglietia* has 3 species, 1 from Nepal and two from Java, *Aromadendron* and *Sphenocarpus* each 1 species, the first Javanese, the latter Kassyan, and *Talauma*, 2 Javanese-Molucca forms. The genus *Bucklandia* is

MAH.

interesting in a physiological point of view, from the woody fibre being studded with those curious microscopic discs so characteristic of pines, and which when occurring on fossil wood are considered by geologists conclusive as to the natural family to which such woods belong. But not only does the whole natural order to which *Bucklandia* belongs, possess this character, but also various species of *Magnoliaceae* found in India, Australia, Borneo, and South America.—*Hooker Him. Jour.* Vol. II. p. 185. *Voigt. p. 11. Royle Med. Med.*

MAGOG, one of the alliterative words, in *Gog and Magog*, applied in Scripture to the northern nations of Asia. The Arabs and Persians write these two words, *Yuj-o-Mayuj* and like the names *Urjan* and *Surjun*, *Durd-Durelra*, are instances of the alliteration of which eastern races are so fond. "Chin and Machin" used to indicate Chinese countries, is a phrase analogous to *Sind* and *Hind*, used to express all India, though *Sind* and *Hind* are capable of divorce. The use of a double assonant name, sometimes to express a dual idea but often a single one, is a favourite oriental practice. As far back as *Herodotus* we have *Crophi* and *Mophi*, *Thyni* and *Bithyni*, the Arabs have converted *Cain* and *Abel* into *Kabil* and *Habil*, *Saul* and *Goliath* into *Talut* and *Jalut*, *Pharaoh's* magicians into *Risam* and *Rejam*, of whom the Jewish traditions had made *Jannes* and *Jambres*; whilst Christian legends gave the names of *Dismas* and *Jesmas* to the penitent and impenitent thieves in the Gospel, *Jarga* and *Nargah* was the name given to the great circle of beaters in the Mongol hunting matches. In geography we have numerous instances of the same thing, e. g. *Zabulistan* and *Kabulistan*, *Koli Akoli*; *Louga Solanga*; *Ibir Sibir*; *Kessair* and *Owair*; *Kuria Muria*, *Ghuz* and *Maghuz*, *Mastra* and *Castra* (*Edrisi*), *Artag* and *Kartag* (*Abulghazi*), *Khanzi* and *Munzi* (*Rashid*) *Irau* and *Turan*, *Crit* and *Meerit* (*Rubnaquis*), *Sondor* and *Condor* (*Marco Polo*), etc. The name of *Achin* in *Sumatra* appears to have been twisted in this spirit by the mahomedan mariners as a rhyme to *Machin*,—the real name is *Atcheli*. In every day conversation in India such alliterations occur as *Choki Oki*, a chair; *Kursi-Gursi*, a chair, *Chavigavi*, a key, *Kili-Gili*, a key.—*Quatremere's Kashid*, pp. 243—246; *D'Arceac*, p. 534; *Prairies d'Or* i. p. 399.

MA-GYI, *Burm.* *Tamarind* tree.

MAGZ-KADU, *Hind.* *Cucurbita pepo*.

MAGZ KHUMANI, *Hind.* apricot kernels.

MAH, *Hind.* *Phaseolus radiatus*.

MAH, *Pers.* a month. *Mahwar* monthly.

MAGYAR.

MAHA, *Hind. Sans.* great. *M. R. S.* are letters prefixed to all addresses on letters to hindus. They are the abbreviation of *Maha Raja Sri*. *Maha-rajah* is the highest title of a hindu prince or ruling sovereign, under that of *Chakravarta*, which means an emperor.

Maha-Muni means a great saint: *Maha-rajah*, great rajah; *maha prubhahu*, great lord. *Maha* is thus largely used as an honorific affix to men but it is also prefixed to the hindu gods and goddesses, as *Mahadeva*, *Maha-lakshmi*, *Maha-Vishnu*, and *Maha-Kali*; *Maha-bal-Eshwar*, is the great god *Bal*. *Maha-Deva*, the great god, is the usual appellation of the hindu deity *Siva*.

MAHA-BELI. A monarch named in hindu mythology, *Vishnu*, as *Vamana*, in the form of a dwarf, obtained the recognition of *Maha-Beli*.

MAHA-DEVA. A title given to *Siva*, by his followers of the saiva sect, who acknowledge *Siva* as their great or supreme god. Similarly they style his consort *Parvati* or *Bhawani*, *maha-devi*, or great goddess.

MAHA-INDRA, the hindu god of the elements, the personification of the sky, the god of thunder: the king of immortals and the lord of the firmament, the chief of the devata or sura.

MAHA-KALI, a name of the hindu goddess *Bhawani* or *Parvati*.

MAGOR, a Nepaul tribe.

MAGOT, a monkey tribe closely allied to the *Silenns* veter.

MAGOUNG, an old kingdom of the Indo-Chinese nations also called *Pong*. See *Maha radza weng*.

MAGOZIRA, *Hind.* *Dubia Umbellifera*.

MAG'R, *Hind.* *Crocodile*.

MAGRAHDI, high lands from which water runs off quickly; equivalent to *Thalli*.

MAGRABA, *Hind* *Hemidesmus Indicus Rheede*.

MAGRHA, *Hind.* *Nigella sativa*.

MAGURA, a fish in the Colombo lake, said to grunt under water when disturbed. *Bishop Pallegoix* in his account of *Siam* speaks of a fish resembling a sole, but of brilliant colours with black spots, called by the natives *dog's tongue*, which attaches itself to boats and gives out a very sonorous and even harmonious sound.—*Jenn. ii.* 470.

MAGYAR, a race dwelling in Hungary, in Europe. The *Tartar*, *Manchu* and *Tungus* races belong to one great stock. The *Turkoman*; the *Tshude*, the *Fin*, the *Laplander* and the *Magyar* present another stock closely united, and both these families are originally connected with one another. These nations, who may probably be reduced to

MAHABALIPURAM.

two families, one centering in the Altai and the pasture land towards the Himalaya and the other having its centre in the Ural Mountains, have acted in the history of civilization a most powerful episode by conquest and destruction. They appeared in the fifth century as the Hun, a scourge to Romans and Germans. They produced Chengiz, Timur, and Mahomed II. They destroyed the Persian empire, subdued Hindustan and they still sit upon the throne of Byzantium and upon that of China. They seem destined to partake only by conquest in the higher civilization of the surrounding nations, older or younger ones, the Chinese presenting the one extreme, the Iranians the other. Little disposed to learn from them as neighbours or subjects, they become more or less civilized by being their masters, they cannot resist the inward force of the civilization of their subjects although they repel it as an outward power. These tribes appear also as the once subdued substratum of Iranian civilization. So in the north of Europe, where the Finnic race preceded the Scandinavians. See Chengiz. Hun. India. Timur.

MAHABALESHWAR, in lat. $17^{\circ} 55' 4''$ N., long. $73^{\circ} 38' 7''$ E., a lofty group of mountains in the northern portion of the Western Ghats, 4,600 feet high, and a sanitarium for Bombay. Rain fall has 250 inches. Mahabaleshwar hill has a traveller's bungalow. In India there are many plateaux, which, for the most part, lie in the Dekhan, Mysore, and Malwa; they are well defined, but of low elevation, and very limited in extent as compared with those of the Andes or Turkistan. Among the most important are Mahabaleshwar (4,500 feet), Amarnatuk (3,590 feet), and Kondikonda (3,070 feet).

The following are the heights on Mahabaleshwar.

Bangalo Clifton.....	4,292 ft. Schl., <i>Ed.</i>
Mean elevation of the Mahabaleshwar plateau.....	4,500 „ <i>Syk.</i>
Highest point on a rock, E. of Beckwith's monument....	4,712 „ <i>Bomb. Cat.</i>

The following points were measured with the aneroid.

Source of the Krishna.....	4,110 ft. Schl. <i>Ad.</i>
Yenna lake.....	4,070 „ „
Southern border of the Mahabaleshwar plateau.....	3,510 „ „
Eastern border of ditto ditto.....	3,330 „ „

MAHABALIPURAM, or Seven Pagodas between Covelong and Sadras, south of Madras, have been described by Dr. Babington in Vol. XI, Trans. B. A. S., p. 258; by

MAHABAN.

Messrs. Chambers and Goldingham in A. R. Vol. I, p. 145, and V. p. 69, by Mr. Charles Gubbins in Bengal As. Soc. Journal, and these reports have been compiled by Major Carr. The Mahabalipur caves are entirely brahmanical, and have been excavated after all the other series were finished. They are seven monolith temples and consist of chambers cut out of the solid rock, and with figures and inscriptions in an ancient character, only one of them is now on the land. In an ancient legend, relating to the destruction of the city of Mahabalipuram, and the Seven Pagodas, on the coast of Coromandel, by an earthquake and inundation during an early period of hindu history, it is stated that Hirancheren, a gigantic prince or demon rolled up the earth into a shapeless mass and carried it down to the abyss: whither Vishnu followed him in the shape of a hog, killed him with his tusks, and replaced the earth in its original position. Its pillars show a remnant of the cushion capitals of Elephanta. The inscriptions are in Sanskrit of the eighth to tenth century. The character used in the Inscription is Kutila or Gaur. Siva is mentioned. The inscriptions are little more than names applied to the figures in the sculptures. They are described in the Transactions of the Royal Asiatic Society.—Vol. II p. 617. *Fergusson's Rock Cut Temples of India*, Vol. III, p. 499.

MAHABAN, a celebrated peak or mountain in the Pir Panjal or Mid Himalaya is supposed to be Aornos of the Greeks. The Himalaya mass of mountains from the crest of the Karakoram range to the plains of the Punjab, has an average breadth of 250 miles. The Mahaban, or Black mountain is forty miles up the Indus from Attock. Around it, the Berzoti and other Afghan tribes gathered and fought against the British from 1860 to 1868. The Mahaban mountain is at least fifty miles in circuit and from 7,000 to 10,000 feet high. There are few school-boys who have not read, in the easy Greek of Arrian, the story of the invasion of India, the last of the Persian provinces, by Alexander the Great. Leaving a corps of ten thousand infantry and four thousand horse, to stand fast, in the spring of 327 B. C. he led an army of 120,000 foot and 15,000 horse, composed of Asiatic mercenaries and Greeks, through the Hindoo Koshi to Cabul. Despatching thence a strong division by the Cabul valley to the Indus to prepare a bridge, he marched by the upper road into the Yuzufzai country, according to his usual policy of leaving no enemy behind him. Driven out of their other fastnesses the

MAHABARATA.

highlanders took refuge in Aornos which was fabled in the Greek camp to have thrice defied Herakles himself. Winter was at hand or had actually come on, but, discovering the one difficult path which led to the fort at the top, Alexander and Ptolemy at the head of two divisions, each following the other, drove out the enemy in four days, by making a mound across a broad and shallow hollow which separated them from the besieged. Leaving all the hill country subdued behind him the invader crossed the Indus probably in March 326 B. C. Three theories as to the locality of Aornos have, however, been held, and defended with no little ability, by General Court and the late missionary Loewenthal, by Genl. James Abbott and by General Cunningham. The Mahabun most nearly corresponds in height and in its position on the Indus with the ancient description. The height was from 11 to 16 stadia, or from 7,000 to 10,000 feet; Strabo represents its base as washed by the Indus near the spot whence that river issues from the Himalayas. The Mahabun, too, supplies best the very object—shelter with wood and water—sought by a comparatively large population, such as Rance-gat would have failed to accommodate, fleeing from a resistless invader. The Chinese pilgrim, Hwen Tsiang, who visited it, makes no mention of a fort on the top. But he was there nearly a thousand years afterwards or in 630 A. D. Hwen Tsiang's account is interesting in itself. He describes the Mahabun as a great mountain which derived its name from the Mahayana monastery in which Buddha, under the name of Sarvada rajah, had dwelt in a former life. Thence the pilgrim descended to the Masura monastery, now the large village of Sura in the Chaumba valley, ten miles to the north-west of the Muchae peak. Whether Mahabun be Aornos or not it has had a curious history, from the day when Hwen Tsiang all the way from China worshipped Sakya-Muni.

MAHA-BANOO, daughter of Yezdegird, became a fugitive and Colonel Tod supposes she may have found a husband, as well as sanctuary, with the prince of Sanrashtra. He thinks, however, she may be the Soobhagana, mother of Silladitya, whose mysterious amour with the 'sun' compelled her to abandon her native city of Kaira.—*Tod's Rajasthan* Vol. I. p. 239.

MAHABARATA, an epic poem, or a collection of ancient lays, of different dates, in the Sanscrit language. The Puranic legends tend to show that the language of the Mahabharata, is not in its older form, but, as it has come down to us, has been the subject of

MAHABARATA.

various rescensions, the latest of which can scarcely be fixed later than the third century B. C. The two great *Epopeia*, the Mahabharata and Ramayana are generally believed to have been composed no wide interval after the laws of Manu. It is doubtful whether either of them was composed as a whole, and the Mahabharata was undoubtedly a compilation of popular lays on national events. The main story in each belongs to a post-Vedic, or rather Upa Vedic age, when the Arians had pressed far into the Peninsula. That of the Mahabharata describes the internecine war of two closely allied tribes the Kuru and Pandu, for the supremacy of the holy land of the Doab, with Hastinapura, the modern Delhi, as its capital. The war fought by the Kaurava and Pandava kinsmen to gain possession of the lands near Hastinapura, lasted 18 consecutive days and terminated in the complete destruction of the Kaurava. The war was conducted by a series of challenges and personal combats, which would seem to have been described in ballads, and then subsequently gathered together and embellished by a Vaisnavya hindu. The Pandava family were supported by the advice of their Yadava kinsman Krishna, who was brought up as a worshipper of Vishnu, and seems to have actively opposed the worship of Siva and of Indra, and the Vaisnavya compilers of the Mahabharata have interwoven the story of the battle with innumerable legends regarding Krishna, whom they deify as an incarnation of Vishnu. In addition to falsifications, exaggerations and embellishments, geographical, religious, moral, mythical, legendary, scientific and physiological dissertations, are interpolated, interwoven and forcibly intermixed. The book is very large, and has never been translated but extracts from it were discovered by Mr. Wheeler in the library of the Bengal Asiatic Society, and formed the foundation of his history of India, which is an interwoven commentary on the war. Portions of the interwoven materials seem to relate to the life of Christ, portions are taken from the Koran, and buddhist elements also are found in it. The war celebrated as the "Maha Bharat" a contest between the lines of Pandu and of Kuru, two branches of the reigning family was for the territory of Hastinapura probably a place on the Ganges, north-east of Delhi, which still bears the ancient name. The family itself was of the lunar race, but the different parties were supported by numerous allies, and from some very remote quarters. Krishna, who was an ally of the Pandu section, though born on the Jamna,

MAHA-BRAHMANA.

had founded a principality in Guzerat: among the allies on each side are chiefs from the Indus, and from Kalinga in the Deccan; some, the translators are satisfied, belonged even to nations beyond the Indus; and the Yavana, most orientalists consider to apply, in all early works, to the Greeks. The Pandava were victorious but paid so dear for their success, that the survivors, broken-hearted with the loss of their friends and the destruction of their armies, abandoned the world and perished among the snows of the Himalaya, and Krishna, their great ally, is known to have been killed in the midst of civil wars in his own country. Some Hindu legends relate that his sons were obliged to retire beyond the Indus; and as those Rajputs who came from that quarter in modern times to Sind and Kutch are of his tribe of Yadi, the narrative seems more deserving of credit than at first sight might appear. The more authentic account, however (that of the "Maha Bharat" itself), describes them as finally returning to the neighbourhood of the Jamna. The story of the "Maha Bharat" is much more probable than that of the "Ramayana." The date of the war was probably in the fourteenth century before Christ.

In this epic poem the original traditions of the Pandava appear now and then, and show that the races among whom the five principal heroes of the Mahabharata were born and fostered were by no means under the source of the brahmanical law, as in the case of Draupadi whom the five Pandu brothers took as their one wife.

This poem is interesting to astronomy, because it records the first eclipse of the sun mentioned in any of the Sastras. Modern European commentators suppose that it was written in the year 786 of the Christian Era, and that the date of the Eclipse which it records is the 25th October in the year 945 before Christ, and therefore anterior to that transmitted to us from the Chaldeans, which was observed on the 19th March A. A. Christum 720.—*Wheeler Hist. of India*, Vol. 1. passim. *Elphinstone's History of India* Vol. I. pages, 173, 174, 390, 391 and 392. *Muller* p. 47.

MAHABHARA-VACHA. SANS. *Alpinia galanga*, *Suz.*

MAHA-BRAHMANA, S. A great brahman, but applied contemptuously in Bengal to a low class of brahmins who officiate at funeral rites, and are the first feasted after the period of mourning; also a brahman who performs religious ceremonies for sudras and mixed castes.

MAHA'DEO.

MAHABUREE BUTCH, BENG. HIND.

Amomum zerumbet.

MAHADAN SINGH. *Calyptranthes cumini.*

MAHADEO-KA-PHUL, HIND. *Daphne cannabina.*

MAHA'DEO or **MAHADEVA**, hills in the Hoshangabad district, the finest in the whole Satpura range, and at one point rise to a height of 4,500 feet above the sea. It is in this cluster that the very remarkable group of rocks known by geologists under the name of the Mahadeo sandstones attains its greatest development. Here the sandstone mass presents a thickness of 2,000 feet, and the finest of all those striking vertical escarpments which characterise this formation is seen on the south face of the Mahadeo block, where it rises from the flat ground of the Donwa valley. The summits of the Pachmarhi hills, as seen from the Narbada valley, present a huge grotesque outline, which bears marked contrast with the ordinary contour of the basaltic range. These hills are entirely isolated from the main Satpura range by scarps and precipitous ravines, and are almost encircled by the Dehwa and Sonbhadra, which rise in the valley to the south of the range, and unite on its north side. Nothing can be prettier than the plateau itself varied like a park with glades and clumps of trees, watered by a stream that runs winding down nearly its whole length, and curiously sheltered from the winds and storms by a rim of low rocks that bound it wherever it borders upon the outer face of the hills. Mr. Driberg compiled a very complete grammar and vocabulary of the Mahadeo dialect of the Gond language, and the dialect of the Saounee Gonds was noticed in a paper by Mr. Manger. Chouragad, the highest summit of the Mahadeva hills rises to an altitude of 4,200 feet above the sea; the usual height of the range, which, entering the Nagpur territory from Gawilghur, passes by Dewaghur towards Shiwani, is not above 2,000 feet, though in the east of the same chain, where it goes under the name of the Langi Hills, some of the peaks attain an elevation of 2,300 and 2,400 feet. At Nagpur the country has fallen to a level of 1,000 feet. On the west, however, it immediately rises by 200 or 300 feet in a succession of eminences. The Mahadeva group of rocks consist of a series of sandstones, often ferruginous, generally speaking irregularly though strongly bedded, and of great thickness. These form the lofty and boldly scarped range of the Pachmarry or Mahadeva hills, and to this group Dr. Oldham gave the name of Mahadewas. In one or two places they

MAHA'DEO.

seem to pass upwards conformably into sandstone holding remains of large mammalia, and probably of Sewalik date. This group is markedly separated from the coal-bearing group below, and as compared with it is also characterized by the comparative absence of trap dykes or other exhibitions of igneous rocks. Upon these, in parts of the district, rest the great spreading sheets of trap rocks forming the continuation of the immense basaltic field of the Deccan. Four and five distinct flows could readily be traced in paces. And advertng to the occurrence of the beds containing shells (Physa, Paludina, Unio, &c.) which are found between these flows (the intertrapean lacustrine formation, of Carter) the evidence derived from the Nerbudda district proves that this alteration was entirely due to the subsequent overflowing of the heated mass of the trap above, and to the disturbances consequent on the exhibition of such powerful force as must have accompanied the production of these immense flows of lava. These shelly beds seem to have been formed by tranquil deposition during the intervals between the successive flows of igneous rock, and to have been broken up indurated and baked by the succeeding outbreak. The following gives a summary view of these groups in descending order, omitting all the more recent divisions:—

Groups.	Mineral character.	Age, &c.
Mahadewa group...	Sandstones, with a few shaly beds, for the most part pebbly, often striped with ferruginous bands.	Geological age unknown, a few vegetable fossil stems, &c.
Damoodah group...	Shales, sandstones, coal, for the most part thinly bedded and regular, often greatly cut up by trap dykes. In Cuttack, however, there are no trap rocks.	Age not thoroughly decided, probably Jurassic, fossils chiefly vegetable, name taken from the locality where series is most fully developed.
Vindhya. Bundair, Rowah, Kymore,	Sandstones & shales, Limestones, shales and sandstones. Sandstones & limestone.	Age unknown, probably very ancient, seen all along Vindhya range, into Behar and to the Ganges at Monghyr. Probably also in the Khasia Hills possibly only two subdivisions

MAHADEVA.

Sub-Kymore group.

Crystalline limestone pseudo-gneiss (name proposed by H. B. Medlicott, Esq.) micaceous schists, and quartzites, red and green and white.

Highly probable, though not yet thoroughly proved, that these are only the continuation downwards of the Vindhya groups subsequently altered.

Granite, gneiss, hornblende-rock, greenstone, &c. In the bituminous shales of the Mahadewas we have the following fossil plants: *Tryzygia speciosa*, *Vertebraria indica*, and a species of *Phyllothea*, a fragment of which is figured by Dr. McClelland as *Poacites minor*. (Geol. Surv. Tab. XVI. f. 4.) In the carbonaceous shales of Umret, besides the *Phyllothea* now alluded to, is another stem, but unfurrowed, which seems to resemble McClelland's *Poacites muricata*, (Tab. XIV, f. 6.) In the laminated sandstone of Kamptee, in addition to *Vertebraria* and the two *Poacites* as above, *Tæniopteris*, perhaps of the same species, as at Rajmahal, and McClelland's *Pecopteris affinis*, (Tab. XII, f. 11. b.) which is a well marked species with a tripinnate frond.

In all these localities the genus *Glossopteris* abounds. Nagpore seems to have outstripped North Eastern India in *Cyclopteris* and several other vegetable remains, but is decidedly behind in regard to the *Cycadaceæ*. The only specimen, procured is a small fragment from the sandstone of Kamptee, the leaflets of which are narrower than a minute blade of grass.—*Carter's Geological Papers on Western India* p. 248.

MA-HA-HLÆ-GA-PHYOO BURM. *Bauhinia acuminata*, Linn. Ma-Ha-Hlæ-ga-wa. BURM. *Bauhinia tomentosa* Linn. Ma-Ha-Hlæ-ga-nee. BURM. *Bauhinia purpurea*, Linn.

MAHADEVA, an appellation of the hindu god Siva, which means the supreme god, and Siva is often styled Eshwara or lord. The worship of Siva seems to have been introduced into India; about the beginning of the Christian era, and apparently came from the west and embodied the sun-worship and the physiological philosophy of Baal. Colonel Tod tells us that there are numerous temples in Rajasthan of Baalim; and that Balpeor (Mahadeo) has several in Saurashtra, all representing the sun. It does not appear that the saiva sect, worshippers of Siva, ever persecuted the vaishnava, worshippers of Vishnu, but its followers in India far outnumber those of the vaishnava faith. Saivism is almost a polytheistic creed, and its sect go to any vaishnava temple while on no consideration would a

MAHA DEVI:

vaishnava sectarian enter a saiva temple. Mahadeva is frequently painted blue or rather of an ashy colour. Obelisks and pillars are symbols of Mahadeva, as of Horus of the Egyptians, more especially pyramids and anything conical. Mahadeva's vehicle, is Nandi, a white bull, on which he is frequently seen riding. In his temples it is represented, sometimes of vast dimensions, couchant. It is very commonly met with in brass, &c., with and without the other symbols of Siva. Mahadeva has a blue throat, hence named Nilakantha, and, in one sculpture, leans on his Sanivasi's crooked staff, with half-closed eyes musing and listening to the divine minstrelsy of the six gandharva, playing and singing before him. They are called Apsarasa, and Devangana. Their band is composed of a tambourine (tamra) cymbals, or castanets, (tal.) not visible, being behind the person of the tamra player; a vina, or lute; and a stranga, played with a bow like a violin. The other two females hold a fan of feathers, (pamkla,) and a chowrie of peacock's feathers similar to that borne by one of the female attendants behind Mahadeva.

Mahadeva has Parvati, the mountain nymph, as his sacti, or female energy and in the figures of Mahadeva and Parvati, commonly called "Gouri Sunkur," Parvati is seated on Mahadeva's knee with the bull Nandi at his feet, and the Sinha or lion at her feet. The hugaet, are a vira-saiva sect, whose sole object of worship is the lingam. Benares is a great site of the saiva worship and there is a celebrated temple of Mahadeva at Karikal four miles south of Hardwar.

MAHA DEVI. Devi, the goddess, is a title given to Lakshmi, Saraswati and Parvati, but the latter is commonly called Mahadevi. The mythological origin of these three goddesses is thus described in the Varaha Purana, translated in Colonel Vans Kennedy's researches on the mythology of the hindus, &c. In consequence of the distressed situation of the gods from the oppression of the Asura, Brama hastened to Kailasa to Siva. Siva in thought summoned Vishnu, who instantly stood between them, and the three gods viewing each other with delight, from their three refulgent glances sprang into being a virgin of celestial loveliness, who bashfully bowed before Brama, Vishnu, and Siva. They said "who art thou? lovely one! and why art thou thus distinguished by the three several colors of black, white and red?" She replied, "from your glances was I produced; and do you not know your own omnipotent energies?" Brama then praised her, and bestowed on

MAHALA.

her this blessing: "Thou shalt be named the goddess of the three times, Morning, Noon, and Evening, the Preserver of the Universe; and under various other appellations shalt thou be worshipped, as thou shalt be the cause of accomplishing the desires of thy votaries. But, oh, goddess! divide thyself into three forms, according to the colours by which thou art distinguished." On hearing these words she divided herself into three forms of a white, a red, and a black colour. The white was Saraswati, the sacti of Brahma; the red was Lakshmi, the beloved of Vishnu; and the black, Parvati." This account differs widely from other accounts of the origin of these goddesses, but consistency is out of the question in hindu mythology. Parvati is now generally understood by the appellation of Devi, or Maha Devi. Nevertheless, by the vaishnava sect, Lakshmi is also thus called, to whom they attribute, as the saivas do to Parvati, the production of Kali, Kali Ratree, Chandrika, &c.—*Cole, Myth. Houl.*, p. 95. *Moor's Hindu Pantheon*, p. 65.

MAHAHMAH, See Malwa.

MAHALI, This Nepal tree, and also the Dhutola tree are species of plums; the former bears abundance of beautiful flowers.

MAHAJAN, HIND. a merchant.

MAHAJLU. URIA. *Lygodium scandens*, used as a twine for tying beams.

MAHA KALI. In Hindu mythology, Eternity. This deity is a representation of Siva and, in the Elephanta Caves, he is represented with eight arms. In one, he holds a human figure.

MAHA-KALIA, SANSC. the conjunction or opposition of the sun and moon. See Cala.

MAHA-KALA SANHITA a book translated by Captain Edward Warren. See Yavana.

MAHA-KALI, a name of the hindu goddess Kali.

MAHA-KAROMBA. SINGH. *Carissa carandas*, Linn.

MAHAL. AR. a house, a section of a town. Mahallat fem. pl. women's apartments. Women. Mahal, a ward of an Indian town, which is regulated, with a view to its police, in a manner, very similar to what it is in Europe. Mahal is also applied to a district or sections of country, as the Bara-mahal of the Salem district of the Madras presidency. It is also equivalent to a fort or killa, and to ghar or country.—*Malcolm's History of Persia*, Vol. II. p. 177. *Malcolm's Central India*, Vol. I. p. 216.

MAHALA, Mahali or Mahalya, MAR. A term of courtesy affixed to the names of barbers.

MAHANUDDY.

MAHA-LAKSHMI, a name of the hindu goddess Lakshmi, the sacti of Vishnu.

MAHALALAT, AR. in Arabic medicine. Discutientia.

MAHA LIMBO. URIA. *Cedrela toona* Kozb. Cor. W. & A.

MAHA-MAGHA, (commonly Maman gum), i. e., the occurrence of the full moon in or about the asterism magha with other astronomical incidents, which occur once in twelve years and which time is auspicious for bathing, especially at Combaconum.

MAHA-MARRI. HINDU lit. great death, a plague which appeared in the Kumaon and Gurhwal hills and on one occasion extended to the Rohilund plains. It was believed by the people to be contagious.

MAHA-MEDA. TEL. *Erythrina Indica* Lam.

MAHA-MERU, a fabulous mountain of extraordinary height, in the extreme North of India.

MAHAMRAH was captured on the 26th March 1857.

MAHANA a river in the Hazaribagh district in the Bengal Presidency.

MAHA-NAMA, See Sripada.

MAHANUDDY river rises near Aaring in the native state of Nowagunda, in lat. $20^{\circ} 20'$, lon. $82^{\circ} W.$, 30 m.; N. E. 110 m., S. E., 300 m., into the Bay of Bengal by numerous mouths. Length 520 m. It receives the Hutsoo, 130; Anrag, 117; Tell, 130; Bang Nudce, 60 m. About 46,000 sq. miles are drained. The Mahanuddy river in the rainy season is about 56 feet above the sea in L. $34^{\circ} 37' N.$, L. $88^{\circ} 19' E.$ From July to February, navigable for boats for 460 miles. The Mahanuddy river collects a great body of water. Its course is through countries containing the diamond mines of Sumbalpoor and extensive trap and gneiss formations. It is one of the largest and most important rivers in the Central Provinces; it rises about twenty-five miles south of Raipur, in a mountainous region which bounds the Chattisgarh plateau on the south and divides it from the Bastar country. Then again, struggling through masses of rocks, the river flows past Sambalpur. There its course is less obstructed, but it is occasionally interrupted by mighty rocks—the terror of boatmen—standing up in mid-stream, and realising the exact notion of Scylla and Charybdis. Thence it passes by Binka and Sonpur, at which latter place it is joined by the Tel. Below Sonpur the Mahanadi, taking an easterly course, pursues a tortuous way, cribbed, confined, and tossed about between ridges and ledges, and crags of rocks for many miles, yet still

MAHANANDA.

struggling and rushing onwards with some velocity, till passing Bod (the capital of a state of that name) it reaches a place called Dholpur. After this its troubles and vicissitudes among the rocks come to an end, and rolling its unrestrained waters along, it makes straight for the range of the eastern ghat mountains. There it pierces the mountains by a gorge, about forty miles in length, slightly inferior in grandeur, but equal in beauty, to the gorge of the Godavari. Amarkantak, a great plateau, forms the watershed of the Mahanadi, Son, Tons, Johilla, and Nurbudda. The rivers, though large and full of water even half way from their mouths are very irregular in the slopes of their beds, and are disturbed by frequent rapids, so that, owing to these impediments, increased still further by the rocky character of the river beds or their banks, navigation is limited for the most part to the lower portions of their course. Cocanada and False Point harbours are nearly similar; the only difference is, in the entrance to the latter which has been blocked up by the silt of the Mahanuddy and sand banks. The internal harbour is small, but is like a perfect lake. Both Cocanada and False Point harbours have been formed by the action of the S. W. monsoon driving along, towards a north easterly direction, the waters of the Godavery and the Mahanuddy, when they are saturated with silt during that season of the year.—*Ann. Ind. Ad.*, V. XI. p. 349. *Carter's Geological Papers on Western India*, p. 2.

MAHANADI. A stream of comparatively small importance, which must not be confounded with the larger river of the same name, that rises in the southern hill-ranges of the Raipur district. The lesser Mahanadi rises in the Mandla district, and flows into the Son after a course of about one hundred miles, during a portion of which it forms the boundary between Rewa and Jabalpur. Coal is found on its banks near Deari, where there is also a warm spring.

MAHANUDDY, a river of Malwa, runs near Huzroopoor, Nawabgunge in Purneah.

MAHANANDA, tributary to Ganges. Near Darjeeling, in the Sikkim hills, lat. $26^{\circ} 57'$, long. $88^{\circ} 20' S.$, 40 miles; S. W., 60 miles; S. E., 50 miles; S., 20 miles; S. E., 40 miles; S., 30 miles.—Length, 240 miles. It is navigable during the dry season for craft of 8 tons as far as Kishengunge, for those of much larger burthen during the rains. The Ganges receives as tributaries, the Ramgunga, Gumti, Ghogra, Gundak, Kosi and Mahananda, from the left bank; and, from the right bank the

MAHI SAKSHI.

Kali, the Kali Nadi, Jamna and Sone. Another dividing stream of the Ganges is the Matabbanga. In its course of sixteen hundred miles through the plains, the Ganges receives eleven rivers, some of which are equal to the Rhine, and none smaller than the Thames, besides as many others of lesser note. It is owing to this vast influx of streams, that the Ganges exceeds the Nile so greatly in point of magnitude, while the latter exceeds it in length of course by one-third.

MAHA NARAM. SING. *Citrus decumana*.—*Linn. W. & A. Roxb.*

MAHA-NIM. HIND. *Melia azaderachta*.

MAHA NIMBA. BENG. *Melia semper-virens*.

MAHANIMBA. HIND? *Citrus decumana*?

MAHA NOOGA-GASS. SING. *Ficus indica*.—*Linn.*

MAHA NOWERA. See Kandy.

MAHANT, The head of a religious establishment of the mendicant orders of the hindus. The superior of a monastery or Mat'h.

MAHANTI. URUYA. A man of the writer or accountant caste: ? the caste itself is Mahayajna.

MAHAPADMA. See Magadha, Nanda, Saishunaga.

MAHAP-MANIK. See Kattyawar.

MAHA PRASADHA is the distribution to all present of the food that had been offered to hindu idols.—*Wils.*

MAHA PURUSHYA or great men, a hindu sect, in Assam, who follow the doctrines of Damudhar, Gopul and Hari-Deb and regard Vishnu as the sole god. They are arranged into "grihi" or lay-men, who worship images of Vishnu and Krishna and of the Salagramma, and the "Udasin" who are interdicted all image worship. The generation has passed away, who saw the remarkable Mahapurush at the Ghosaul's of Kidderpore. He was apparently a man about forty years of age, with a very fair complexion, and jet-black hair. He did not eat or drink anything nor speak a word, but remained in a sitting posture.

MAHA-PUS-WAEL. SINGH. *Entada purantha*.—*De Cand. W. & A. Roxb.*

MAHAPUTRA JIVI or putrajivi TEL. Patrajivi roxburghii, R.

MAHA SAKSHI or Maisakshi or Meshakshi-kusuma, a gum-resin found in druggist's shops which is said by Ainslie to come from Arabia. The word means buffalo's eye and is said by Wight to be a kind of bdellium. In the bazaars at Madras, the Pansari or druggists, if asked

MAHARAJAH.

for maisakshi, will produce gugul, which is the same as the Arabic muql.—*O'Sh. 287. Mat. Med. ii 216 8vo.*

MAHAR. amongst the Mahratta people a helot or predial slave race, small numbers of whom are dwelling on the outskirts of villages, being regarded by hindoos as impure. They are the Dber of India, generally, the Holier of the Canarese people, and the Paraya of the Tamil race, the pariah of Europeans. They eat the carcasses of horned cattle that die of disease, and have small grain allowances from the farmers, whom they help in the fields—being generally part of the balotta, or municipality, of which they are the guides, messengers and watchmen. They are wholly illiterate, and though dwelling amongst hindoo sects for two or three thousand years, they are not hindoos in religion, nor have they become mahomedans or christians, but are shamans, fetichists, polytheists, spirit and demon worshippers. They are free spoken, liberal minded race. They believe in metempsychoses. The word is pronounced M'har, but is written variously M'her, Maho, Mow, Mhar. See India.

MAHA RADZA WENG or Radza weng, BURM. Chronicles of kings. These are found in the kingdoms of Burma, Pegu, Arracan, Manipoor, the old state of Pong or Magoung, and indeed in all the Indo-Chinese nations, even in such small states as Tavoy and the Shan principalities of Zimmo and Laboung.

MAHARAG or Arad Island, is a very low island on the west side of the Persian Gulf.—*Horsburgh.*

MAHARAJAH. SANS. A hindu ruler, also the highest titular honor given to a hindu. The title Maha-Rajah or great king, in the Puranas and Hindu books, was originally applied to the sovereign of a vast monarchy which in the second century, comprised a great part of India, the Malay Peninsula, Sumatra and the neighbouring islands. There are now in the feudatory states in India, several hindoo rulers by whom the title of maha-rajah has been assumed, or been given by the British, the maharajah of Gwalior, of Indore, of Travancore, of Vizianagram, Gwalior is the capital of the maharajah Sindiah.—*India in 15th Cent.*

MAHA RAJAH, an honorific appellation for the head Gosai or chief priest of a sect of hindus styled the Rudra sampradayi, also Vallabha Acharya also Gokulastha. The sect arose about the fifteenth century from the teachings of Vallabha Acharya, a Tilinga brahman, and his doctrines are best known as those of the Gokulastha gosai, the title of

MAHARAJAH.

its teachers, who are usually in Bombay being maharajah. The doctrine of Valabha was that privation was not sanctity, and that the duty of teachers and disciples was to worship the deity not in nudity and in hunger, but in costly apparel and choice food. The followers of this sect are very numerous and opulent, the merchants and bankers, especially those from Guzerat and Malwa belonging to it. Their temples and establishments are numerous all over India but particularly at Mut'hara and at Bindrabau, but at Sri Nat'h Dwar, at Ajmir, is the most celebrated and most richly endowed of all the Gosain establishments. The disciples who are devout, make the three-fold 'Samarpana,' tan, man, d'han, of body, mind, wealth, to the guru, whom many of the Bhattya race regard as an incarnation of Krishna, whose worship, as the Bala Gopala, they follow. Of the thousands of religious sects which have thrown the pure and Vedic religion of the hindus into inexplicable chaos, there is none which has been so prominently and so notoriously brought before the public at large as that of the Valabha-chari, by the disclosures made by the great libel case of 1862. The major part, both male and female, of the sect who acknowledge the authority of the maharajahs are so completely enslaved by their vile practices, are so dead to their enormity, that nothing apparently can shake their morbid torpor. In the present day there are about sixty or seventy maharajahs in India, who are spread over the cities of Hindostan. Of these, the maharajah at Sreejee is said to be the chief, and he has a great temple near Oodoypur. The maharajahs appear to read the Purans and preach sermons to the people, but they are generally engaged in worshipping the sacred images. In other words the people worship the maharajahs and the maharajahs only worship the images. When the people wish to worship a maharajah, they fetch him to their houses, offer him flowers, wave a light round him, present him with money, and prostrate themselves at his feet. The maharajahs on their part worship the gods much in the same way, only that, in addition, they bathe and dress the images, a ceremony which is dispensed with in the worship of the maharajah. Again, on certain occasions it is customary to worship the idol by swinging it; and accordingly at these swinging festivals, swinging the maharajah is a religious ceremony which is performed by the female members of the different families of the disciples. Whilst the maharajah is swinging he throws the red

MAHARAJAH.

powder called gular amongst his devotees, and some of it falls upon the necks and breasts of the women. This appears to be a peculiar privilege of the maharajah; for if any one else threw gular upon women, it would, excepting on the Holes festival, be regarded as an insult. Besides these rites, nautch dances are occasionally given by the maharajah, but in a different part of the temple to that which the idols are placed. Moreover the female devotees occasionally visit the maharajah's family in a separate zenana in the temple. The maharajahs have temples in Bombay, and sometimes there are several residing in the island. One however, is a permanent resident in Bombay. This man's ancestor, Gokulnathee maharajah, originally visited Bombay, in 1811. On that occasion all the Vaishnava sect of the island collected in a body, and requested His Holiness to settle permanently with his family, 'for the purification of their souls,' offering at the same time to build a temple for him, and to make arrangements to meet his expenses in connection with the temple. Accordingly, to secure a permanent income which should not press heavily upon his devotees, a tax upon articles of trade was determined upon; and all the vaishnava merchants, who in Bombay possess a monopoly in almost every important article of trade, solemnly bound themselves to add to the price of every article they might buy or sell. The result is that about 162,000 Rs. are raised every year for six different maharajahs of whom the maharajah of Bombay receives about half a lakh per annum.

According to the doctrines of the Walabha-charya sect, every maharajah is considered as the husband of his female devotees; but as reason and conscience rebelled against the doctrines, and the law of moral and religious progress was fulfilled, in 1855 their followers held a meeting at which it was resolved that none of their daughters or wives should be allowed to resort to the maharajahs for worship, except at certain stated hours, when the maharajahs would be necessarily occupied in ceremonies at the temple. It will be impossible for any respectable Bania or Bhattia to frequent a Wallabacharya temple without exposing the honour of his family to suspicion. Many amongst them no doubt, have been as ignorant as the public in general were before the trial took place of the debauched habits of the maharajahs; or, if they knew what was done, they considered such practices to be sanctioned by their religion. Bold and earnest words fitly concluded Sir Joseph Arnould's judgment:—"It is not a question of theology

MAHARASHTRA.

that has been before us; it is a question of morality. The principles for which the defendant and his witnesses have been contending is simply this—that what is morally wrong cannot be theologically right—that when practices which sap the very foundations of morality, which involve a violation of the eternal and immutable laws of right, are established in the name and under the sanction of religion, they ought for the common welfare of society, and in the interest of humanity itself, to be publicly denounced and exposed. The defendants have denounced and have exposed them. At a risk and at a cost which we cannot adequately measure, these men have done determined battle against a foul and powerful delusion. They have dared to look custom and error boldly in the face, and proclaim before the world of their votaries that their evil is not good, that their lie is not the truth. In thus doing they have done bravely and well. It may be allowable to express a hope that what they have done will not have been in vain—that the seed they have sown will bear its fruit—that their courage and constancy will be rewarded by a steady increase in the number of those, whom their words and their example have quickened with thought and animated to resistance, whose homes they have helped to cleanse from loathsome lewdness, and whose souls they have set free from a debasing bondage.”

MAHARAJPUR. A large and populous village in the Mundla district immediately opposite to Mandla, at the confluence of the Narbada and Banjar. Its ancient name is said to have been Brahmamitra, but in A. D. 1737 raja-maharaj Sa founded the present village and its name was then altered to Maharajpur.

MAHARAJPUR in $L. 25^{\circ} 53' 9'' N. L. 78^{\circ} 13' 3'' E.$ in Bundelkhand, S. of Gwalior. The Hill station is 1,097 ft. above the sea.

MAHA-RANA, means Great Prince, the title by which the rulers of Odeypoor are always distinguished.—*Malcolm's Central India*, Vol. I. p. 342.

MAHARASHTRA, the Mahratta country. In this province in ancient times Tagara was famed as a commercial mart. Its locality is now unknown but it has been supposed to be Deoghur the modern Dowlatabad now a mean village beneath the fortress. The race now occupying Maharashtra, is known as the Mahratta. The men are robust, and generally employed as cultivators: The women are not well-featured nor well-shaped. In the ‘Sareda Tilaka,’ a monologue of later date than the play of Mrich’

MAHA SIVA RATRI.

chakati which was of the 1st century of the Era but still of comparative antiquity, there is a curious and amusing description of the various women of India, distinguishing each by her nationality.

‘There goes the maid of Gurjara (Guzerat), blooming as with perpetual youth, having eyes like the chakora, of the complexion of the yellow Rochana, and a voice musical as that of the Parrot. She wears anklets of silver, large earrings set with pearls, and her bodice is buttoned below the hips with gems.’

‘The matron of Maharashtra proceeds yonder, her forehead stained with saffron, and with silver chains upon her feet; she wears a coloured veil, and a girdle round her loins.’

A Chola female (south of India) approaches, whose cheeks are tinted with saffron, and whose dress is embroidered with the buds of the lotus.’

The bodice which buttons below the hips, is certainly unknown at the present day, either in Guzarat or elsewhere in India; and as no single cloth, as a scarf, or the present ‘Sare,’ could be buttoned, we can only presume that the garment was cut out and sewn in the fashion of a long tight-fitting robe, as in use among Persian women of the present time.

MAHASER. A carp, and other rivers of India.—*Hooker, Him. Jour.* p. 398, Vol. I.

MAHASEWA, SURATISSA, in Ceylon. See Inscriptions. p. 382.

MAHASIAMBALA. SING. Tamarind.

MAHA SIVA RATRI. One of the greatest festivals in the hindu calendar occurs about the middle of February. Various legends are given in connection with this festival, but public opinion among the hindus, is in favour of the following. Ravana, king of Lanka, undertook a pilgrimage to Mount Meru, the residence of Siva, and there put himself through a course of the most rigid penance, and supplicated the god by fasting and prayer. Siva appeared to him and asked him his desire. The king replied that he had only one request to make, and that was that none of the gods should be permitted to invade his country, and that they should not have power either to conquer or slay him. Siva, in reply, gave him a lingam of stone and commanded him to take it to his country, and there build a temple over it to his honor. He further enjoined him not to place it on any carriage but to carry it himself. He was also not to set it down anywhere on the road, for if he did he would never, the god said, be able to lift it off the ground again.

MAHAVIRA.

An implicit obedience to these injunctions would obtain for him a favourable answer to his prayers. When Ravana had started from Mount Meru with the lingam, the other gods supplicated Piliyar after this wise:—"This Ravana has been a constant source of annoyance and trouble to us; and now that he has obtained, from Siva, this lingam as a protection from our power, he will become yet more arrogant and troublesome. You must, therefore, devise some means of depriving him of the lingam before he reaches the country." Piliyar acceded to this request, and summoning Varuna, he desired him to enter into the stomach of the king of Lanka and 'become water, so as to fill him.' This Varuna accordingly did. Ravana, when the watery element filled him began to feel exceedingly uncomfortable and dropsical, and looked out for some shady retreat where he might rest a while till the waters had subsided! Piliyar, at this moment, assumed the form of a brahmin child and appeared to him. Ravana, on seeing him, asked him to carry the lingam for a few minutes.

MAHASU. The ridge and slopes of Mahasu, in the alpine Panjab, which were formerly covered with the finest timber, present localities for planting that are hardly surpassed any where on the hills. Its forest has disappeared and vast terraces of potato cultivation have taken its place. The crest of the Mahasu ridge is, according to Captain Herbert, 9200 feet. On the very summit of the ridge, there are a few trees of *Quercus semecarpifolia*, the alpine oak of the western Himalaya, an European looking and partially deciduous species, and of *Picea webbiana* or Pindrow, the silver fir of the Indian mountains, a dark sombre-looking pine, abundant in the forests of the interior. These trees may be adopted as the characteristics of the sub-alpine zone, in every part of which, from 9,000 to about 12,000 feet, which is the highest limit of tree vegetation in the western Himalaya, they abound. On Mahasu they are entirely confined to the crest of the ridge, and form no part of the forest below.—*H. Cl. Panj Report*, p. 25. *Dr. Thomson's Travels in Western Himalaya and Tibet*, p. 33, 35.

MAHA TITA. BENG. *Chiretta*; *Andropogonis paniculata*.—*Wall.*

MAHA TOBALEO. SING. *Crinum asiaticum*, *Wild. Herb.*

MAHAUL. HIND. *Pyrus kumaonensis*.

MAHAVAN. See *Vedas*.

MAHAVIRA from Maha great, vira a man: the last and greatest of the Jaina saints.

MAHAZAR.

MAHAWANSO. A metrical chronicle in Pali of the dynastic history of the island of Ceylon, from B. C. 543 to A. D. 1750; discovered and translated by Mr. George Turnour. The authorities differ as to the length of Chandra Gupta's reign, which some make thirty-four years, and others only twenty-four. The Mahawanso gives thirty-four years, the Dipawanso and the Vayn Parana give only twenty-four years. This difference may, perhaps, have originated in two distinct reckonings of the date of his accession, the one party counting from the death of Nanda Mahapadma, in B. C. 325, and the other party from the conquest of India, in B. C. 315. Some assumption of this kind is clearly necessary to reconcile the different authorities, unless, indeed, we take the only alternative of adopting the one and of rejecting the other. At this period the capital of India was Pataliputra or Palibothra, which was situated on the Ganges, at the junction of the Erranaboas or Alaas River. The former name has already been identified with the Sanskrit *Hiranyabahu* an epithet which has been applied both to the Gandak and to the Son. But the latter name can only refer to the Hile-an of the Chinese travellers, which was to the north of the Ganges, and was therefore undoubtedly the Gandak. Indeed this river still joins the Ganges immediately opposite to Patna—that is, "the city," or metropolis, as its proper name (Patana) implies; the junction of the Son is some nine or ten miles above Patna. But as there is good reason for believing that the Son once joined the Ganges at Bakipur or Bannipur, immediately above Patna, it is quite possible that the Erranaboas may have been intended for the Son, and the Alaas for the Gandak. According to Megasthenes, Palibothra was eighty stadia, or nearly nine miles in length; and fifteen stadia, or one mile and two-thirds in breadth. It was surrounded with a deep ditch, and was enclosed by lofty wooden walls, pierced with loop-holes for the discharge of arrows. Arrian, India x. and Strabo xv. both quoting Megasthenes.—*Sir J. E. Tennant's Ceylon*. See India, Inscriptions, Sripada.

MA HA YUG. See *Yug*.

MAHA-WELLI-GANGA, the Ganges of Ptolemy, rises near Adams Peak, in Ceylon; it traverses more than one-third of the mountain zone, and drains upwards of 4000 sq. miles, flows into the sea near Trincomalee, after a course of 134 miles.—*Sir J. E. Tennant's Ceylon*.

MAHAZAR. AR. A representation. Mahazarnama, a written statement.

MAHIJAH.

MAHE, one of the Seychelle group, is about 16 miles long and 4 broad. Its anchorage is in lat. $4^{\circ} 35'$ S. and long. $55^{\circ} 38'$ E.—*Horsburgh*.

MAHE FORT, in lat. $11^{\circ} 41'$ N., is near the mouth of a small river, 4 or 5 miles south of Tellicherry.

MAHENDRA, son of Asoka, king of Magadha, in B. C. 236, converted Ceylon to buddhism. The earliest recorded voyage down the Bhagaruttee was made in the age of Asoka, who sent his son Mahendra with a branch of Buddha's sacred peepul tree on a mission to the king of Ceylon.—*Tr. of Hind. Vol. I. p. 20.*

MAHENDRA a chain of mountains extending along the eastern side of the peninsula of India between Orissa, the Northern Circars and Gondwana. Near Ganjam, is the Mahendra Mallai.

MAHENDRA is another name of Indra. See Morn.

MAHENDRA GUPTA. See Inscriptions.

MAHENDRA PALA DEVA. See Inscriptions.

MAHERA, in Guzerat. Its chief is of the Bagela race. See Komarpal.

MAHESH, on the Ganges is famous for being the scene where Juggernaut and his brother Balaram, having fasted the whole day, pawned a bracelet with a shopkeeper to procure some food. The ornament was missed by the Pandas (priests) on their return to Pooree, and they came to release it from the shopkeeper.—*Tr. of Hind. Vol. I. p. 5.*

MAHESHA. See Lakshmi, Parvati, Siva.

MAHESH-ASUR. In the sculptures of the hindus, at the Burabur Caves, Durga saying "Mahesh-Asur," is the principal and most often repeated.

MAHESWARA (the great lord) one of the five great lords or faces of Siva. See Schesra, Arjuna.

MAHESWARI. See Sacti.

MAHESVATI. See Schesra, Arjuna.

MAHI, Persian, a fish.

MAHI CHANDRA. See Inscriptions.

MAHI a river that rises in the district of Malwa, and after a course of 350 miles, disembogues into the gulf of Cambay.

MAHIDDHAJA. See Inscriptions.

MAHIDPUR, in lat. $23^{\circ} 30'$ N. long $75^{\circ} 38'$ E., in Malwa, 23 miles N. of Ujein. The mean height of the village above the sea is 1,600 feet.—*Scott*

MAHIDPORE, battle of Mahidpore, on the 21st Dec. 1817 fought and won by the British in war against the Mahrattas.

MAHIJAH. HIND. generic term in the Bari Doab high lands above river inundation.

MAHMOOD.

MAHI KANTA. See Kol.

MAHIN. HIND. *Tephrosia sp.*

MAHI PALA. See Inscriptions.

MAHI RUBIAN. Dried shrimps, from the coast of Sindh, also an undetermined drug, in appearance consisting of dried up pieces, having a grey color.

MAHISAKS'HI. TEL. *Amyris commiphora*.

MAHITARIYAL, see Pran-nathi.

MAHI-ZAHRA. PERS. *Cocculus indicus*, ENO.

MAHILU. HIND. *Bauhinia racemosa*.

MAHMAH KIATUN. The Euphrates rising near the shores of the Black Sea, and in its course to the Indian Ocean, almost skirting those of the Mediterranean, at one time formed the principal link connecting Europe commercially with the East. It has two great sources in the Armenian mountains, and the most northern of these sources is situated in the Anti-Taurus, 25 miles N. E. of Erz-Rum. The branch from thence takes at first a westerly direction, and after passing within seven or eight miles of the capital of Armenia it is joined by two small feeders. Its first large tributary however, is the Mahmah Khatun, which runs into it down the plain of Tehran.

MAHMAN. In Guzerat is a numerous race, called Mahman, or, in conversation, Mehman. Many families of this sect, live in Bombay, and are a very useful, hard-working, trusty people.

MAHMOUDIAH CANAL in Egypt excavated by Mahomed Ali, runs from Alexandria to the Nile.

MAHMOOD. Commonly called of Ghazni, a brave, experienced, prudent sovereign, distinguished in war and as a civil administrator. He cultivated learning and promoted architecture. He founded a university at Ghazni. He ruled from A. D. 997 to A. D. 1030, in which period he extended his dominions from the Persian Gulf to the Sea of Aral and from the mountains of Kurdistan to the banks of the Sutlej. Mahmood son of Sabaktagin, put aside his elder brother Ismael in A. D. 997. In A. D. 1001 he made his first campaign against the hindus of India. In August of that year, he met Jeypala, at Peshawar, with 10,000 horse, and totally defeated him. He then subdued the rajah of Bhatnair a chief under the rulers of Lahore. Mahmood's third expedition was against Daood, governor of Multan, whom Anangpal had instigated to revolt. Mahmood then turned his arms against Anangpal, who formed a coalition with the kings of Ujein, Calinjar, Gwalior, Kanuj, Delhi and Ajmir. It was the largest army that up till then had

MAHMUD.
